"With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in, to bind up the Nation's wounds, to care for him who shall have borne the battle and for his widow and orphan, and do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

In honoring the memory of our first Republican President of the United States, I can conclude in no better way than to paraphrase Lincoln's own tribute to George Washington:

"To add brightness to the sun or glory to the name of Abraham Lincoln is alike impossible. Let none attempt it. In solemn awe we pronounce the name, and in its naked deathless splendor, leave it shining on."

Protect the Employment of Glassworkers

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1948

Mr. HAND. Mr. Speaker, I continue to be disturbed by the effects of international trade agreements on the great glass industry in my district. This industry has a substantial amount of capital invested in a number of fine modern plants and employs upwards of 9,000 of our citizens. They are threatened now with pending trade agreements in Mexico. They suffered as a result of the Geneva Conference, as I knew they would when we delegated all of our tariff authority to the Executive in 1945. I warned of this situation then in a speech in the House. I repeated my warning on April 29, 1947, in another speech in the House, which I am incorporating herewith.

Mr. Speaker, I shall continue my efforts to protect these workers and this industry from unfair foreign competition. My fears are shared by Mr. Harry H. Cook, the president of the American Flint Glass Workers' Union of North America, who on December 20, 1947, said to me:

We are fearful that our American industry and the American glass workers will become the victims of importation as a result of the present tariff legislation.

I see no reason to change the position I took in my speech of April 29, 1947, which follows:

RECIPROCAL TRADE ACT

Mr. HAND. Mr. Speaker, I have long been troubled with the ultimate effect that the Reciprocal Trade Act will have on the industry of America and its labor force. When Congress extended this act in 1945 for an additional 3 years, and provided that tariffs might be lowered by another 50 percent, we abdicated our control over tariffs and delegated all our responsibility to the executive department. It was for this reason that I then spoke against the passage of the bill and voted against it, and in the 2 years that have passed since then, during which I have given continuous study to the question, I have not changed my mind.

I represent the Second Congressional District of New Jersey, which comprises Atlantic, Cumberland, and Cape May Counties. This is the home of many substantial industries. Food processing and the manufacture of clothing is carried on extensively. Commercial fishing is of great importance; and primarily, so far as tariff questions are concerned, the district, particularly Cumberland County, is one of the most important producers of glassware in the United States.

There are today between 9,000 and 10,000 workers occupied in the production of glass products in this district. The glassware manufactured here varies from ordinary containers to intricate apparatus for laboratory use, and represents a sales volume between $30,000,000 and $35,000,000 per annum.

The actual labor involved represents from 25 percent of the cost of fully automatic machine-made containers to 89 percent in the production of glass apparatus for laboratory or industrial use.

The average hourly wages, on a basis of a 40-hour workweek, range from $0.985 to $1.644.

During the past 10 years, wage rates have increased 107 percent for male workers and 135 percent for female help. The plant and equipment investment per worker averages about $4,000.

I would like to say in passing that the labor relations in this industry in my district have been for the most part exceptionally good, and the combination of excellent management and high-grade workers made an important contribution of vital materials to the United States during the war.

This essential industry and other important businesses in my area are threatened by the power of the Executive Department to manipulate and decrease tariffs. The International Conference at Geneva, which began April 8, can spell the difference between the continuance and discontinuance of this and many American enterprises.

Mr. Speaker, I do not believe in the exclusion of foreign products, and I recognize the necessity of cultivating foreign trade, but there are some specified industries which by their very nature require reasonable and adequate protection; and require, in my judgment, that that protection be guarded and provided by the elected representatives of the people in Congress, and not by the State Department, which, in its zeal to cultivate our foreign relations, often neglects our domestic welfare.

It is for this reason that I have introduced a bill to restore to Congress at least the right of veto of tariff treaties which are harmful. I think the bill is necessary, and I hope it will have the prompt attention of the Ways and Means Committee and of the House. It does not interfere with the international conference about to proceed, and it does not retard foreign trade. It merely restores to the Congress, where it rightfully belongs, ultimate authority over tariff questions, the protection of the American worker, and American industry. This bill is brief and reads as follows:

"A bill to require approval by Congress of executive agreements with respect to the reduction of tariff rates before the same become effective

"*Be it enacted, etc.*, That on and after the effective date of this act no Executive agreement which contains any provision for reduction of tariff rates shall become effective until such agreement shall have been filed for a period of 90 days with the Clerk of the House of Representatives and with the Secretary of the Senate. If during such period of 90 days the Congress shall, by joint resolution, disapprove the agreement, it shall not thereafter be executed and shall for all purposes be void."

Mr. Speaker, the Constitution gives the Congress jurisdiction over the regulation of foreign trade, custom duties, and tariffs. When Congress passed the original Reciprocal Trade Act in 1934, as well as the exten-

sions of that act, it abdicated its responsibility under the Constitution, and departed from a program which had been in effect in this country for many years.

It is my feeling that Congress should take action to restrain or delay the negotiating of reciprocal treaties which are about to be undertaken. If agreements are made now, they should be very flexible. World conditions are changing rapidly, and trade agreements must reflect such changes.

If the United States is to help in mending a torn world, we must maintain a sound productive economy within our own borders. Domestic producers and manufacturers must be in a position to compete in the domestic market on an equitable basis with foreign products of similar character. An equitable tariff cannot be considered a barrier to trade; it has the opposite effect. Fair competition is stimulating to business. At this time nearly all of the other countries of the world with whom the treaties are to be negotiated have nationalized industry, and for us to believe that the free enterprise of this country can compete with nationalized industry in other countries is fantastic, unless adequate safeguards are provided. Before negotiating treaties we should have definite assurances as to wage scales that are going to be maintained abroad, agreements that governments will not use their nationalized industries to pour foreign products into our country to the great detriment of our own labor and industries.

Another matter of great concern is the question of protecting certain key industries in the United States which have made it possible for this country to wage two successful wars. Tariffs should not be lowered on the products of these key industries, as they are indispensable to our national existence and our very life. Most of these industries are highly specialized and require the highest type of both skilled and unskilled workers. Labor costs are one of the most important factors, and we must not subject these industries to foreign competition that would render them impotent. While at the present time labor and industry seem to be far apart on many of their problems, their interests dovetail on tariffs, and many labor unions throughout the United States have joined in the protest against the lowering of tariff rates and have filed briefs with the Reciprocity Information Committee. One prominent union, representing thousands of workers, stated in its protest:

"We are not opposed to imports even though those which are competitive with the products of our own American workers We are opposed to the entry into America's market of competitive articles, delivered at total wholesale costs, duties paid, which are less than our costs of production.

"We do not seek any monopoly. However, we will not knowingly or willingly permit any Government officials to deprive us of our work opportunities, and make us dependent on either the charity of the Government, our relatives, or our friends in order to satisfy the theories of some or to add to the riches of others.

"We contend that with the changed conditions which now exist in Germany, Japan, Czechoslovakia, and other foreign countries, which in former years were the major source of supplies for American distributors of foreign hand-made glassware articles, there is no definite way at this time of knowing what the production costs of competitive hand-made glassware articles are or will be in the immediate future in those countries.

"In addition, it is of interest to have in mind that millions of dollars worth of the latest American automatic machinery has been installed in these foreign countries, at little or no cost to the operators of such machinery and that their future cost of production will soon be much lower than it has been in former years.

"One does not have to be equipped with a college training or recognition as an economist to realize that tariff rates which permit of competitive foreign-made products being delivered into America's market at less than American costs of production would soon result in the closing down of America's factories and unemployment for those American workers dependent upon such factories and workshops for their livelihood."

On the other hand, the American Tariff League which represents several hundred industries was very fair in its brief filed with the committee which stated:

"Currently the world's economy is chaotic. The United States is at present engaged, as are other countries, in endeavoring to catch up with a demand for goods created by wartime shortages. We do not have any general surplus for export and it will take considerable time to reconstruct and improve our domestic facilities to meet domestic needs and create an exportable surplus. During this chaotic period, we respectfully submit, it is unwise to complicate the situation still further by a mass revision of our tariff.

"Indeed the league believes it is unfair at this particular time to expect domestic producers to furnish to the committee for reciprocity information the kind of statistical and informational material which the committee ought to have in its work of correlating information about domestic production, imports, foreign costs, etc."

It is quite apparent that Congress should adopt a definite policy in connection with reciprocal trade agreements. It should:

First. Pass a resolution calling for a delay of at least 6 months before any new treaties are entered into, during which time a further study of world conditions could be made.

Second. Pass suitable legislation protecting the key industries of the United States which have helped win two wars.

Third. Provide that treaties would not be extended under the favored-nation clause unless all of the nations that would benefit from such an extension would agree to increase wage rates so that the commodities produced in the foreign countries would be on an equal basis with the commodities produced in this country. A study should be made to determine how far the foreign countries with whom we are to negotiate treaties are going in the nationalization of industries and ascertain the effect that such nationalization will have on the treaties to be executed.

I am including a memorandum entitled "History of Scientific Glassware in America" which, I think, is pertinent to this subject:

"HISTORY OF SCIENTIFIC GLASSWARE IN AMERICA

"At the time of the Allied embargo in 1914, the manufacturing of scientific glassware in this country was negligible, being limited to small shops working largely on repairs or filling shortages of import orders. Along with certain chemicals, drugs, dyes, and optical glassware, laboratory glassware had, up to this time, been a complete German monopoly.

"Unlike the other industries mentioned, for some reason the German firms did not see fit to even establish an American subsidiary for making scientific apparatus. As a result, when the blockade became effective and imports were shut off, there was, in England and America, a real crisis.

"England immediately called together her glass manufacturers and scientists and, in addition to establishing and subsidizing a school of glass technology, she placed all scientific glassware under the safeguarding of Key Industries Act.

"Late in the spring of 1917 the Council of National Defense called together in Washington a group of American glass manufacturers, and from that meeting a new American industry was born.

"No promises were extracted, but each plant took upon itself the development of suitable glasses, the training of men, and the necessary capital that was required to meet what would otherwise have been a serious situation, not only to our War Department, but to every major supporting industry requiring the smallest degree of scientific research or control.

"At the signing of the armistice there were at least 15 factories producing blown chemical ware and double that number fabricating and graduating laboratory apparatus.

"Early in 1919, before central Europe was in a position to enter the American market, there was a flood of Japanese glassware, which demoralized the entire market. This was so serious that in June 1919 this industry, the importance of which was still fresh in the minds of both our Government officials and scientists, was picked out as one of the few industries that should come under the administration's emergency tariff consideration.

"In spite of the Tariff Acts of 1922 and 1930, the industry was carried on by a decreasing number of plants, who practically subsidized these departments. Under June of 1933, previous to the devaluation of the dollar, imports from Germany, Czechos'ovakia, Italy, and Japan were seriously curtailing the American production of this small but important industry.

"This industry is highly specialized and requires the highest type of both skilled and unskilled workers and this branch of the glass industry is still considered by the War Department and Public Health Service as one of the critical industries, the supply of which must be assured.

"Because it is an industry whose labor cost is the important factor, the controlling element of foreign competition is, therefore, the standard of wages paid in these countries, further amplified by the unstable currency condition in both Europe and the Orient.

"At the outbreak of World War II, this industry was in a position to rapidly expand and furnish the Army and Navy medical services, as well as the Public Health Service, with enormous quantities of items that were required in the war effort. Such production would have been impossible if the industry had not been continued after the First World War, as modern science and medicine are entirely dependent upon scientific apparatus."

Mr. Speaker, I close by repeating that whatever ultimate changes it would seem wise to make in our tariff laws, it is, at the very least, necessary to immediately restore to Congress the veto right over agreements negotiated by the executive department, which may be regarded by the Congress as improvident. Congress has no right, in my judgment, to shirk its responsibility in this regard. My bill will again clothe Congress with the power and responsibility which belongs to it.

Mr. BATES of Massuchetts. Mr. Speaker, will the gentleman yield?

Mr. HAND. I yield to the gentleman from Massachusetts.

Mr. BATES of Massachusetts. I think the gentleman ought to be complimented for the very splendid statement he is making this afternoon in calling to the attention of the House and the American people the real danger that lies before us insofar as foreign trade is concerned. While we all agree that we ought to do what we can to rehabilitate Europe, we must defend our own industries from this type of foreign competition, particularly from those totalitarian governments that are being established on the Continent of Europe and elsewhere, and who are taking over the industries completely and subsidizing them and then later on, through reciprocal arrangements, are hoping to deluge this country with the cheap products of those countries in competition with our own labor.

Mr. HAND. I am in complete accord with what the gentleman has said, Mr. Speaker, and I know he has in mind, among other things, the every disastrous effects that unwise agreements would have on the great fishing industry which he represents and which to a certain extent I represent, together with shoes and textiles.

I am particularly interested in glass, which is particularly vulnerable in the present state of the law. I think if we restore the situation so that Congress can have the final say, the ultimate veto power, so to speak, on these unwise agreements that may be negotiated, that that will go a long way to solve the problem.

Mr. BATES of Massachusetts. The Committee on Ways and Means has given serious thought to many of those problems in the continuous hearings they have been holding over a period of days and weeks and will continue for some time to come, and I hope from that there will come some solution along the lines suggested, that others will have something to say other than the executive department of the Government.

Mr. HAND. I thank the gentleman. Both the gentleman and I have testified before the Committee on Ways and Means.

Betrayal

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1948

Mr. KLEIN. Mr. Speaker, under leave, I am inserting in the RECORD an editorial from the New York Post of February 25, written by my friend, Ted Thackrey, co-publisher of the Post, who has headed the editorial very simply, "Betrayal."

In a few sharp words Mr. Thackrey has summed up the reaction of millions of American citizens to the statement presented for the United States to the United Nations Tuesday.

The text of the editorial follows:

BETRAYAL

(By T. O. Thackrey)

Stripped of platitudes, the statement of the United States before the United Nations Security Council yesterday canceled out the plan for the partition of Palestine the United States fought to secure last November 29.

This is betrayal, though quick study of the statement does not disclose it—as it was intended not to disclose it.

The statement is intended to make us believe the United States is merely seeking a method of carrying out the partition decision.

The United States asks the Council to determine whether there is a threat to peace; it offers to consult with the other great powers on the formation of an international army to enforce the peace, if it is found to be threatened; it pledges to support whatever action the Council takes.

This has the sound of a constructive policy, particularly when coupled with intimations that, if the Council decides an armed militia is required to enforce the peace, a way would be found to supply arms.

It was intended to sound constructive.

But it was betrayal.

The first of the significant statements—an outrageous statement containing the very essence of betrayal—was this from the United States:

"The Council's action * * * is directed to keeping the peace and not to enforcing partition."

But if enforcement of the partition decision is not the business of the Council, the only United Nations organ empowered to use force, then it is the business of nobody and is meaningless.

The United States statement is not content with nullifying the partition decision by conspiring to negate any possibility of its enforcement, however; it goes further.

"The Charter does not empower the Security Council to enforce a political settlement whether it is pursuant to a recommendation of the General Assembly or of the Council itself" is what the United States delegate said.

This statement terms the action of the General Assembly a recommendation, which it is not, rather than a decision, which it was.

It also embarks on the most dangerous of all concepts—that whether the General Assembly, or the Security Council, or both, reach political decisions, the United Nations under no circumstances is empowered to enforce them.

Since every question involving a threat to peace is a political question, what the United States has actually said in its anxiety to avoid enforcement of the partition decision is that no decisions can be enforced.

This is another way of stating that the way to nullify any decision is for the opposed group or groups to attack, threaten the peace, and then have the Security Council maintain peace by nullifying the decision that caused the attack.

The United States also proposes a five-power Security Council Commission to study the Palestine problem.

This commission supersedes, of course, the Palestine Commission empowered by the General Assembly to implement a decision which we now deny was a decision.

What really was done at Lake Success yesterday by the United States was to do these things:

1. Kill the partition decision reached by the General Assembly.

2. Take the whole Palestine problem away from the Assembly and place it effectively in British and Arabian hands for "settlement."

Next, we shall, no doubt, see the spectacle of the United States urging that Great Britain be begged to remain in Palestine "to keep the peace."

It would have been more honest to state flatly that we have placed our foreign policy in the tender hands of the British Foreign and Colonial Offices, and have empowered the Nazi-Arab war criminal, the ex-Grand Mufti of Jerusalem, our new secretary of state for Palestine.

If no other course can restore us to honor, perhaps it is not too soon to raise the question of impeachment.

Address of Hon. Mary T. Norton, of New Jersey

EXTENSION OF REMARKS
OF
HON. EDWARD J. HART
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1948

Mr. HART. Mr. Speaker, at the Jefferson-Jackson Day dinner held in the city of Washington on February 19, 1948, among the distinguished speakers, headed by the President of the United States, was our able colleague the gentlewoman from New Jersey, Hon. MARY T. NORTON, who is also the Democratic national committeewoman for the State of New Jersey. Although not present at the Washington dinner, I have heard many compliments uttered by some of those who were there, addressed toward the speech of the gentlewoman from New Jersey, Representative NORTON, which follows herewith:

Tonight, we, and Democrats everywhere, are honoring Thomas Jefferson and Andrew Jackson, one the founder of the Democratic Party, the other the great defender of Democratic ideals. The Democratic Party has come a long way since the days of Jefferson and Jackson and we want to see that party, which combines the ideals of these two great patriots, continued and strengthened throughout the coming years with distinction and honor. Through the years, and particularly the last 16, the Democratic Party has made a great contribution to our country. It is, and always has been, the party of the people, a progressive party that has been responsible for most of the humane laws on our statute books; laws which have as their objective prosperity for the farmer, a living wage for the working men and women of America, security for the aged, and higher standards of living and education for all of our people. These, and many more laws have been enacted under the leadership of a great President, Franklin Delano Roosevelt, and they will be continued and improved under the able leadership of President Truman.

However, all that we have gained in the last 16 years will be lost and the welfare of the common man, who is the bulwark of this Nation, will not be improved if we do not reelect our President and return a Democratic Congress. That, I can promise you, and, if you need proof I can refer you to the record of the Republican Party in the Eightieth Congress and challenge you to point to a single outstanding act of this Congress to benefit the people of America or of the world. The Republicans have had their opportunity in the 14 months that they have controlled Congress and how miserably they have failed. Even the Marshall plan, which should be nonpartisan, and which would do so much to establish a lasting peace, is being jockeyed around and made the same kind of a political football that succeeded in destroying the League of Nations following World War I. Are we to go through that same agony again? I say that we cannot if America and Europe are to survive and, whether we realize it or not, the survival of civilization itself is at stake this time. Make no mistake about that. We are faced with a tremendous responsibility and we must meet it. I know the Democratic women will do their part, particularly those women whose sons have made the supreme sacrifice in the late war. They know the price paid for war in tears, in suffering, and in sacrifice. We know the Democratic Party is responsible for the United Nations and the Marshall plan, which we hope will go far to end wars, and we know that if either or both is to survive, we must reelect President Truman and a Democratic Congress. This, I believe, will be the No. 1 reason why women will support the Democratic Party this year.

Another, and very personal, reason is that the Republicans in Congress voted 9 to 1 to destroy OPA and brought about the highest food prices in our times. This will be remembered on election day—and there are 2,000,000 more women than men eligible to vote this year. Some people claim the women helped to elect the Republicans in 1946. Well, if they did, I know they have bitterly regretted it. It is true that women were tired of restrictions, tired of standing in line to buy food, and they foolishly thought the Republicans could improve conditions. They wanted a change. Well, they got it, and what a change it has been. When we had to stand in line with coupons, we were treated fairly, and, although we fed a great Army and supplied our allies with food, we were still able to get our share of food at

reasonable prices, and feed our families properly because the price of food was controlled through the entire war. We did it through OPA, but the record shows that the Republicans destroyed OPA. If you need proof, I call to your attention a statement made on February 5, 1948, in my own State by Senator WHERRY, acting majority leader of the Senate, before the Middle Atlantic Lumberman's Association, and I quote, "I do not need to remind the membership of this association that it was the Republican leadership in the Senate and House that was responsible for ending OPA." Now that price controls are gone, we can look longingly at the nice cuts of meat and other foods, which only the rich can afford to buy.

Yes; women have had enough and I predict they will come back to the party that gave the workers enough to eat at fair prices, a chance to live, to educate their children, to save for their old age, and to enjoy some of the comforts of life. Mr. President, we women are going to be a great factor in your reelection this year and we shall elect a Democratic Congress to support you in your program. This is a challenge and we shall meet it. And, it would be a good idea and strengthen our organization, if it were suggested to the leaders of our party that women be given a greater share in the policy-making councils of our party, particularly young women.

I want to see more qualified women recognized for what they are worth. Women are willing and anxious to work but we are human and when the election is won, we do not want to be forgotten until the next election. We ask an opportunity to serve with our men. That is all. We need more women in the State legislatures and in Congress. There are all too few. We want to apply our housekeeping talents to serve America and when our sons are called upon to fight, and if need be die for our country, we want to have something to say about the rules. Two million more women than men eligible to vote could, properly organized, do much to make the rules.

And, finally, Mr. Chairman, we want to assist in carrying on the ideals of that great President who gave his life to maintain freedom and justice in a war-torn world and to help his worthy successor, who has carried on a very difficult job with vision, ability, and great integrity. President Truman has presented to Congress a 10-point program which will go far in establishing at home and abroad the ideals for which so many of our young men fought and died and we owe it to him and to them to do everything in our power to bring about the realization of that program so that we can continue our high standard of living with freedom and justice to all.

Mr. Chairman, the Eightieth Congress will go down in history as the Congress that destroyed OPA and brought about the highest prices in generations—the Congress that has placed political expediency above the welfare of America—the Congress that promised much and accomplished nothing. We should not find it too difficult to elect Democrats this year.

National Foundation for Infantile Paralysis

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, February 27 (legislative day of Monday, February 2), 1948

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement in the nature of a report by the Honorable Basil O'Connor in connection with the work of the National Foundation for Infantile Paralysis.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

FOR 10 YEARS THE MARCH OF DIMES HAS MARCHED ON

The National Foundation for Infantile Paralysis, incorporated under the laws of the State of New York, on January 3, 1938, grew to its present size and usefulness during what was probably the most turbulent decade the world ever had known. Scarcely a year after it was formed for the purpose of making the fight against infantile paralysis Nation-wide in character, war broke out in Europe. For almost 4 years of the 10, the United States was fighting in that global war. Yet the National Foundation, created with the dimes and dollars given by millions of Americans, emerged from an ideal set down on paper, took on flesh and blood, strengthened, became an active, potent force in the life and health of the country.

In the 10 years from 1938 to 1948 the national foundation gave financial assistance to an estimated 88,000 polio patients; helped increase the number of hospitals admitting acute polio cases from about 300 in 1938 to 717 in 1948; trained some 1,300 professional workers urgently needed in hospitals and laboratories through scholarships and fellowships; authorized grants for 540 research and education projects in 83 institutions in 29 States.

As a result of the tremendous public interest in the fight against infantile paralysis, the cooperation and advice of medical and public health authorities and the practical, fluid organization of the national foundation's 2,738 local chapters, that enabled them to act swiftly as needs arose in all parts of the country, there is today better care for polio patients, less permanent deformity and crippling and vastly diminished panic in time of epidemic than at any time in the Nation's history

The present structure of the national foundation and many of its current activities were matters of evolution. Policies necessarily were dictated by need and experience. But as each year demonstrated new needs and added to the young organization's experience, additions and changes in the program were possible with minimum delay.

From the first the advice and counsel of medical authorities were provided for. On June 21, 1938, the first board of trustees and medical advisory committee were appointed. Thenceforth all allotments of money for research, education, and medical care programs were made with the advice of committees composed of physicians and scientists who were specialists in the various related fields. In this way the lay organization was kept up to date with medical findings and procedure.

It is estimated that leaders in 24 specialty fields—from chemistry to mechanical engineering, from psychology to internal medicine—play their parts in the quest for knowledge to overcome infantile paralysis today. Few, if any, new projects could be undertaken at present without duplication, if indeed qualified personnel could be found to engage in them. The problem in polio research today is lack of personnel. Properly trained new workers in this field were not produced during the war years.

The national foundation today is conducting the most intensive and comprehensive attack on a single disease ever launched by a private agency anywhere in the world. The number and size of its scientific efforts have multiplied and grown with each year, despite even the difficulties attendant upon war years. For instance, in the first 21 months of the decade there were 45 grants and appropriations amounting to about half a million dollars for research and education. In the last 12-month period ended May 31, 1947, there were 87 grants and appropriations, totaling almost $2,000,000.

Eminent specialists engaged in national foundation research and the institutions with which they are connected offer assurance of the use of the best minds in a wide variety of fields for this particular attack. Furthermore, these men and women, celebrated in the world of science, have chosen their work because of deep personal interest in the problems involved, bring to it a tacit promise of continuation until final victory is achieved.

RESEARCH

Polio research requires the skills, abilities, and experience of a great many diversified scientists, each approaching the problem from a special vantage point to form a circle converging on the ultimate truth. Since no one can tell in advance from which source will come the vital clue, the national foundation deliberately has brought to bear on the problem representatives of many specialties, each engaging in specialized research. This process of far-flung exploration has a bearing on similar quests for knowledge directed at other unsolved diseases. National foundation scientists are undertaking to determine the fundamental nature of living organisms, of which the virus remains the most mysterious. When this fundamental knowledge is gathered, it may well speed the day of control of many diseases, perhaps all disease. Who knows but that the answer to cancer or tuberculosis or the common cold may be found in the course of seeking a solution to infantile paralysis?

Already byproducts of research financed by the national foundation have made most important contributions to the understanding and control of a group of diseases known as the encephalitides. In the course of national foundation work came the application of the oximeter, a clinical device to measure oxygen in the circulating blood, thus allowing with increased safety surgical operations such as that for blue babies, heretofore considered extremely dangerous. And new, improved artificial extremities—soon to be distributed to war veterans—evolved in part from studies supported by national foundation funds.

Many advances have been made since 1938 in the polio field itself, although no human preventive vaccine as yet has been discovered. Treatment of the disease has improved as a result of research, even the treatment of bulbar polio, a serious type of the disease affecting the nerve centers of breathing, swallowing, and circulation, and accounting for most polio deaths.

AN ARMY OF WORKERS

To accomplish all this, an increase in our army of professional workers was an obvious necessity. Through its education program the national foundation financed the training of 893 physical therapists; 106 medical social workers; 87 hospital and public-health orthopedic nursing supervisors, teachers, and head nurses; 58 health educators; 35 sanitary engineers; 30 virologists; 27 orthopedic surgeons; 18 public-health physicians; 22 medical-record librarians; 7 pediatricians. More are being added each year. Many important universities and medical schools have received assistance from the national foundation, making this training available.

The United States Public Health Service alone has received grants totaling $348,400 for fellowships in health education, the specialized training of health officers, and sanitary engineers whose services are employed by Federal, State, and local public-health agencies.

The national foundation's grants for public-health research and training alone, total about $2,400,000.

LOCAL CHAPTERS

In the field of patient care, the 10 years have brought many changes. The first chapter of the national foundation, for example, was recognized on May 12, 1939. Today the 2,738 local chapters, manned largely by volunteers, provide financial assistance for patients unable to meet the full costs of polio care and to assist local treatment centers to obtain professional staff and special equipment needed for the modern care of this disease. The chapters receive half of all net receipts of the annual March of Dimes. At the end of the last fiscal period, May 31, 1947, the chapters had spent about $32,000,000 for service to polio patients in their own areas.

The local chapters have become the liaison group between patients and patients' families and official agencies. In time of epidemic, there are many and diverse services the chapters render. For example, through national headquarters they are able to obtain medical specialists, orthopedic nurses, physical therapists from all parts of the country, to augment local hospital staffs. They can obtain without delay iron lungs, hot-pack machines, and other supplies urgently needed. In many communities, without these supplemental services, patients would not have been as well cared for, since the budgets allowed, many local health authorities are predetermined before the summer polio season, and official funds are not available in an emergency. Chapter funds may be spent for services and equipment dictated by emergencies, without waiting for meetings of legislative bodies.

The services of chapter volunteers in arranging transportation, housing, and other details for visiting professional workers, as well as their unpaid work in hospitals and homes have helped to mitigate the effects of nursing and other hospital personnel shortages. There can be no monetary value placed upon the beneficial influence of enthusiastic, well-informed volunteers.

AID OF THE RED CROSS

From the time of the establishment of the chapters of the national foundation to the present, new services for polio patients have been added each year. In 1940, the American Red Cross for the first time recruited nurses for polio epidemics. This recruitment now is part of the disaster service of the Red Cross. Approximately 4,000 nurses have been recruited, their salaries and transportation costs paid by the national foundation.

In 1943 the first advance of funds from national headquarters to supplement dwindling chapter resources in time of epidemic was made. Chapters whose treasuries are depleted by unusual demands due to outbreaks promptly receive advances to guarantee adequate treatment of all polio patients, regardless of age, race, creed, or color, wherever they are. A total of $10,701,397 had been advanced to chapters by October 1, 1947.

PREPAREDNESS FOR EPIDEMICS

In 1944 the first of a series of preparedness meetings attended by representatives of all State and local agencies, including chapters, was held in Columbus, Ohio. Its purpose was to prepare, in advance, for handling any epidemics the State might experience. These meetings are in keeping with national foundation policy to work with and supplement, where necessary, the activities of official health agencies. A thorough survey and discussion of facilities and personnel available, a plan to be put into operation when and if necessary, and working agreements among all those who have a part to play in handling any emergency are the major steps of such meetings. There are 32 in 21 States up to now.

In 1945 teams of professional experts, experienced in the care of infantile paralysis and ready to make emergency visits to stricken areas on short notice, were set up in four strategic geographical areas: Harvard University, Boston; D. T. Watson School of Physical Therapy, Leetsdale, Pa.; Northwestern University, Chicago; and Stanford University, Palo Alto, Calif. Emergency epidemic aid units, whose expenses are paid by the National Foundation, have gone out 13 times in 3 summers to help local hospitals organize polio care.

Also in 1945, recognizing the critical shortage of qualified physical therapists whose services are so important in the modern treatment of infantile paralysis, the National Foundation launched a $1,267,600 physical therapy training program. Scholarships had been offered through the American Physiotherapy Association since 1942, but the number was tremendously increased in 1945. Almost 1,000 scholarships and fellowships have been awarded in this field, and 684 students had completed their training by October 1, 1947. This represents an increase of about 25 percent in the supply of qualified physical therapists in this country. More than 600 have been recruited by the National Foundation to serve in epidemics since 1943.

THE PEV'S

In May 1945, the Polio Emergency Volunteers were organized. These units consist of women who take brief courses in bedside care of polio to prepare them to assist nurses and physical therapists—without compensation—in hospitals and homes. About 2,000 PEV's were trained in 1945; there are 9,000 now.

On August 6, 1946, an equipment depot was established at Des Moines, Iowa, to assemble iron lungs, hot pack machines, and other equipment urgently needed by epidemic communities in the middle western area that was hard hit that year (1946 saw the largest number of reported polio cases since 1916—more than 25,000 new victims). Today there are five equipment depots located in the transportation centers of Boston, Columbus, Ohio; Atlanta, San Antonio, and Denver, where equipment will be ready to serve all parts of the country during 1948.

Sharing of medical knowledge has become more widespread each year. Last September a clinical conference on polio was held at the Georgia Warm Springs Foundation, to review progress in medical treatment of infantile paralysis since 1927, when Warm Springs came into being. In July 1948, an international conference of physicians will be held in New York City, for the purpose of pooling medical information in both the research and treatment fields. Representatives of 60 nations have been invited by our State Department to attend. The conference theme is: "Polio—World Problem."

The national foundation is concerned with all aspects of the fight against infantile paralysis. In the words of Dr. Thomas Parran, Surgeon General, United States Public Health Service:

"Every year infantile paralysis adds more names to the thousands, mostly defenseless children, who have been crippled by its treacherous attacks. An epidemic disease such as this can be controlled only by a well-organized campaign on a Nation-wide scale. This the national foundation has prosecuted vigorously."

Ten years, in world history, is but a moment. To mothers and fathers it is half their children's lives as children. What has been done in the 10 years just ended gives a picture of progress, though much more remains to be done in the years ahead.

Lincoln Day Address by Hon. Edward J. Thye, of Minnesota

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Friday, February 27 (legislative day of Monday, February 2), 1948

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Lincoln Day address delivered by the Senator from Minnesota [Mr. THYE] at Olympia, Wash., on February 10, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is such a genuine pleasure for me to be here in this capital city of the State of Washington, and I feel so much at home in the Pacific Northwest, that I find the reception you have accorded me to be like a welcome home.

I can think of no place where I should rather speak at an event that commemorates the birthday of Abraham Lincoln than right here in Olympia. I like the spirit of this great State of yours, the friendly western good will, the enterprise and initiative, and the faith in America and American ideals which it seems to me you reflect. It is that spirit which is going to carry a Republican Party—the party of Lincoln—to victory. Thus I am especially glad to be present at a rally of Republican men and women of the State of Washington.

There is an added satisfaction, also to be in the home State of HARRY CAIN, whose friendship I have enjoyed and whose qualities of leadership and conscientious endeavor I have admired so much during our first year together in the Senate. I look forward to becoming even better acquainted with your State when I visit Tacoma tomorrow and Everett on the actual anniversary of Lincoln's birth, February 12.

We face such critical problems in this country today—and such great opportunities—that it is unfortunate that in the Nation's Capital a smugly negative attitude has been created by a Democratic administration that has been in power so long that it has become incapable of assuming the vigorous leadership that will carry the American people forward. Its members are so singularly busy carrying water on all shoulders and blaming everything on the Republican Congress that they have succeeded only in creating a situation in Washington that handicaps constructive legislation.

To solve the complex problems of our times—to meet the challenge of large responsibilities—there must first be a new spirit in national leadership. It must be expressed through a party of principle, and not a party of expediency. It must be honest and forthright. It must have ideas and vision, and the vigor to make them effective.

I believe the party of Lincoln has these necessary attributes and that the American people will recognize that fact next November when they will decree a well-earned vacation for those who have become self-satisfied, careless, and cynical in public office.

I

One of Abraham Lincoln's most famous remarks ran something like this: "You can fool all the people some of the time, and some of the people all the time, but you cannot fool all the people all the time." I

should like to apply that formula to some recent happenings:

1. When they are struggling against the threat of inflation and the hardships of high costs of living, the American people are not going to be fooled into believing that the only solution is more rationing, more controls, more government, and more red tape.

2. When they seek full production to relieve shortages and provide for their unsatisfied needs, the American people are not going to be fooled into believing that the way to do it is to heap taxes high and curtail iniative and enterprise by more Government controls.

3. When they hear the President say that industry must expand and that at least $50,000,000,000 should be invested to improve production facilities, the American people are not going to be fooled into believing he intends to encourage such essential expansion since he repeatedly recommends policies that deprive business of the use of venture capital with which to expand.

4. When they see a Republican Congress cut $3,000,000,000 from the executive budget the American people are not going to be fooled by the Democrat charge that this is a phony cut, especially if Government bureaucrats at the same time complain that the reason their agencies are not giving better service is because Congress has reduced their funds.

5. When they see the Federal budget balanced for the first time in 15 years simultaneously with the appearance in Washington of the first Republican Congress in 15 years, the American people are not going to be fooled by administration claims of exclusive credit for this accomplishment.

6. When they see no control applied to exports of scarce oil and steel and other critical items needed by the people during a time when the President had ample powers to exercise such controls but neglected to do so, the American people are not going to be fooled by the administration's obvious efforts to shift the blame to Congress for the inflationary threats that are aggravated by shortages.

No, Lincoln was right. "You can't fool all the people all the time." The American people are quick to sense when their vital needs are made the football of politics.

There is a great opportunity for a strong, young, vigorous Republican Party in this period of our history. It must be a party that appreciates the public good and recognizes the power and ability of our people. It must be a party that knows where it wants to go and how to get there, just as Lincoln did in his day. It must be a party that has "an abiding faith in the American people."

II

I think the Republican majority of the Eightieth Congress has shown that abiding faith in the American people.

1. The Republicans in Congress have shown their confidence in the power and ability of the people by refusing to succumb to the unimaginative thinking which places such undue faith in bureaucratic government and discounts the spirit of initiative and enterprise on the part of our citizens. They remember what Lincoln said: "The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot do so well, for themselves, in their separate and individual capacities. In all that the people can individually do as well for themselves, government ought not to interfere."

2. The Republicans in Congress believe that an economy of abundant production is both economically sound and necessary. They know that this is the real answer to inflation and high prices which can mean profits only for the few. Scarcity means there is not enough to go around at a fair price and at that point it favors the rich and those with high incomes against the wage-earner and those of moderate incomes. Only the few profit from scarcity and high prices at the expense of the many.

3. The Republicans in Congress know that without a balanced relationship of fair dealing and understanding between our economic groups the free enterprise system cannot be made to work. That is why they passed the Labor-Management Relations Act of 1947 to supplement the old Wagner Labor Relations Act which had denied certain rights to employers and needed revision also to assure freedom and democratic procedures for workingmen. These changes have been made with full appreciation of Labor's great contribution and with the expectation that given a fair chance the new law will safeguard the interest of both labor and management and help build a stronger Nation.

4. The Republicans in Congress have not forgotten that it was under Lincoln that the Homestead Act of 1862 was passed, opening the door of opportunity to courageous youth and sturdy immigrants in the sweep of settlement westward to the Pacific. They have not forgotten that it was under Theodore Roosevelt that the Reclamation Act of 1902 was passed and the Government undertook to champion the cause of irrigation. They have recognized the vital importance of continuing the vast reclamation projects in 17 western States, and appropriated $142,000,000 for this purpose with still more generous provisions contemplated to continue this great constructive program bringing new resources into productive use.

5. The Republicans in Congress have recognized that with the disappearance of our once great land frontier, new opportunities for the future are to be found in such development of our potential resources as your own great Columbia River Basin project here in Washington. The $30,000,000 which was appropriated by Congress last year in the regular and special sessions—the highest appropriation ever made in any one year for the Columbia River improvement—clearly indicates the interest of Congress in this project. I do not believe that the importance of this remarkable resource to your State can be overestimated. I do not think I am wrong in calling it your greatest physical resource.

6. The Republicans in Congress have realized the tremendous importance of capital in expanding production. They know that prices are high because too many people with money are competing with one another for the available supply of goods, and that to get prices down and stop the inflation, goods must be supplied in such abundance and at such prices that the sellers will compete with one another for the consumers' dollars.

There must be encouragement of venture capital to supply the worker with more efficient tools and machines, to develop new companies and new industries, to give our expanding population opportunities and jobs. Taxation has become so burdensome as to destroy initiative.

We must never lose sight of the fact that the fundamental achievement of America is based on individual initiative and the right of man to own property. When Lincoln said that "property is the fruit of labor" and "that some should be rich shows that others may become rich, and hence is just encouragement to industry and enterprise," he described a profound principle of our American system that has had far too little encouragement in recent years.

7. The Republicans in Congress have recognized our responsibility and obligation as a Nation—strong, solvent, and free—to provide a stabilizing force in the world as war-torn and devastated nations seek to find their way back to stability and peace.

Our immediate obligation is to take an active part in the rehabilitation of western European countries as they seek to reestablish sound governments based on human rights and freedom. This cannot be brought about easily. It will cost us appropriations to assist in this rehabilitation. It will need to be properly safeguarded and administered. Yet we cannot escape the alternative which may be chaos in government in western Europe and absorption of these nations into communism.

The Marshall plan, as it is now known, could as well be called the Vandenberg plan. It was the able, distinguished Republican Senator, ARTHUR H. VANDENBERG, who said even before the war ended in 1945: "We still propose to help create the postwar world on a basis which will stop aggressors for keeps, and, so far as humanly possible, substitute justice for force among free men. We propose to do it primarily for our own sakes." Senator VANDENBERG's brilliant speech in the Senate in January 1945 really started the thinking on the European question which has culminated in the Marshall plan and formed an important link in the bipartisan foreign policy.

Our humanitarian recognition of Europe's need does not mean that we should go about it without careful planning and proper safeguards. I am in full sympathy with the basic purposes of the proposed assistance to the 16 western European nations, but I believe that Congress has a fundamental obligation to scrutinize the program realistically and carefully, and I am confident this can and will be done without dangerous delay. However, I am anxious that it shall be done with the spirit that motivated Abraham Lincoln when he called upon the American people at the close of the Civil War "to do all which may achieve a just and lasting peace among ourselves and with all nations."

III

As we consider all of these economic problems, we realize how important are our human resources. Take the field of labor-management relations, for example. You and I must remember that with our vast expansion as a Nation our industries have grown away from the small plants of only a few men where the executive knew his men by their first names, knew their families and all the living conditions, and there was a feeling of mutual interest between the owner and the worker. With industrial growth in our complicated machine age and its vast corporations, the personal relationship between worker and management ended. Too often management acted as if it were elevated far above the average worker. In the strained relationship that resulted there was a fertile field for radical labor leadership which sometimes has exploited the honest, sincere workingman. There are many fair-minded men in Congress who want to see a better and a closer relationship between management and labor. We cannot progress without that sound understanding.

We are really such a young Nation that it seems only yesterday that our mothers and fathers blazed trails out across the wilderness. As a Nation our people have been builders, but we have also exploited our resources. We have exploited our soil and forests, failing to provide sufficient care so that future generations might have some of those resources with which to work. We have carelessly exploited our lands when there was always the chance to move into new areas. Now those areas are all occupied. Fortunately, there lies within the people themselves an even greater challenge to seek by educational opportunities and social

benefits a richer and a better American life. Such problems as providing adequate housing, eliminating slums in our crowded cities, and in providing schools and jobs and security present a challenge to our thinking and planning as a people.

We have a greater responsibility to future generations to see that we do not continue to exploit our resources by poor management. As I have come out across this country and seen the splendid forests, I have likewise observed the cuttings that have been made and note you have done some of that with the vast timber resources of Washington, just as we in Minnesota ruthlessly cut our beautiful pine with no thought of the future. It is only because of the splendid work of present-day members of the lumber, pulpwood, and paper industries, cooperating in the sincere effort of State and Federal Governments, that we have started to rebuild our forests. With proper forest-fire protection and management we can see for future generations a profitable business from the timber as well as from the lesser trees that will provide the raw supply for the wood byproducts and paper.

In the care and the management of the fertility of our land, we have been ruthlessly destructive, also. In the relatively brief life of this young Nation we have destroyed the topsoil of more than 282,000,000 acres of land, and another 700,000,000 acres are in danger. All of it comes on in such a gradual way that we do not realize that yields are diminishing and that the black topsoil is gradually eroding down the hillsides and into the streams. I have flown over much of the United States, often flying at a low altitude, and I have particularly noticed the change in the color of the land as it approaches the hilltop, knowing full well that the topsoil has gone. I have been down in the older areas of the southeast and have noted where some of the land had lost all of its fertility and had become so badly eroded that it seemed a useless attempt to continue its tillage. Yet, through soil conservation practices, we have secured some recoveries by proper contour farming and strip cropping to tie the soil back and get it into a grass crop. With such good management it has been possible to completely reestablish a splendid production.

We cannot continue to use our coal deposits and our oil deposits in the generating of power. We must harness our waters as this source does not deplete or wear out. It is constant. Power must be developed in order that our industrial needs may be met in an economical way. Only in this manner will we be able to continue to develop opportunities for our constantly increasing population. Only in this way can our economy be expanded so that we are able to meet the demands upon us because of the huge national debt incurred during the mechanical war in which we were engaged. As we develop the great resources in our Nation, we will be able to maintain the leadership that is ours today.

These years of crisis ahead lay down a challenge to the party of Lincoln for clear thinking and courage and vision as our Nation assumes its destined place in a world that is struggling to rebuild and restore what years of war have laid waste.

Only a strong America, enjoying economic and social health, can undertake this great task. Only an America that is well informed and united in spirit can do it. Only an America that commands the respect and goodwill of the world can do it.

Ours is the great opportunity as a party to provide the vital leadership that will inspire a rebirth of this historic spirit of America.

Electoral Votes Are Subject to State Powers

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, February 27 (legislative day of Monday, February 2), 1948

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the RECORD a very interesting article entitled "Electoral Votes Are Subject to State Powers," written by Mr. Arthur Krock and published in the New York Times of February 27.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ELECTORAL VOTES ARE SUBJECT TO STATE POWERS

(By Arthur Krock)

WASHINGTON, February 26.—Nothing in the Constitution or in any high court ruling thus far interposes a legal bar to the proposal of Governor Tuck to the Virginia Legislature that Presidential electors chosen by the popular majority in November shall be free to vote for any citizens they may wish for President and Vice President. And the act of February 3, 1887, specifically makes each State the absolute and final judge in any dispute that may arise over how its electoral vote shall be cast.

VIRGINIA'S POSITION

Whichever candidates for elector Virginia or any other State may choose in 1948 are not legally bound to support the nominees of any national political convention. They are not morally bound unless they pledge such action in advance, which is the prevailing custom, and this moral obligation is the stronger when the names of the electoral candidates appear on ballots that also carry the names of the candidates of one of the national party conventions. Governor Tuck's proposal, if accepted by the Virginia Legislature, will clinch the electors' legal right of free choice by omitting from the State's ballots the names of the national convention nominees. In many States these do not appear anyhow, but in Virginia they do; hence the law requiring this must be repealed to assist the Governor's purpose.

Its larger design, of course, is to withhold the electoral votes of Virginia from the Democratic national candidates, if desired, and yet permit a set of electors to be chosen who belong to the Democratic Party and have been nominated by the party organization in the State. The design will be plainly stated to the voters of Virginia, and, if they favor it by giving a majority to such a slate of candidates for electors, the moral obligation will be wiped out and every constitutional and statutory requirement be met.

THE 1912 PRECEDENT

The clearest precedent is to be found in South Dakota in 1912. There the Republican organization seceded from the national party convention before President Taft had been renominated, and its candidates for elector announced that if chosen in November they would register the State for Theodore Roosevelt, the Bull Moose Party candidate (no Bull Moose electoral slate having been nominated). In that knowledge, the voters chose the Republican candidates for elector over the Democratic, and South Dakota's vote was cast for Roosevelt without the slightest challenge of legality. Not a letter in the Constitution offered support for a challenge, and the act of February 3, 1887, allowed no room for it at all.

The present majority of the Supreme Court might entertain a plea against the Virginia plan, if it proceeds to a full climax, but on some basis which no legal student of these matters consulted by this correspondent today could conceive. It might find some way to order State electors to cast their votes for the national candidates of the party with which they are locally affiliated, even though the final State power under the act of 1887 had previously been invoked to bind the electors otherwise. If the names of such national candidates had appeared on the same ballot with the successful candidates for elector (which Governor Tuck proposes to forestall in Virginia, and other southern Governors will follow suit), the Supreme Court might have some footing, though the authorities canvassed today do not think so. But they are unanimous in the opinion that if the names of the convention candidates do not so appear the Supreme Court would have no jurisdiction and could not enforce an order even if one were issued.

SOUTHERN THREAT MATERIALIZED

This legal situation, the consequence of retaining the archaic system of directly electing Presidential and Vice Presidential electors instead of party nominees, renders Governor Tuck's message of the highest importance and materializes the threat of southern Democrats to prevent the election of President Truman if he is nominated. If several other States join in the Virginia plan, as they are expected to do, the democratic organizations which are sure to carry them can, as in 1824, throw the Presidential election into the House if the contest elsewhere is close. In the House they would then have a veto on the candidates for President, and this would undoubtedly be used against President Truman if he is nominated on the civil rights platform which is the immediate occasion of the southern democratic revolt. But if elsewhere there is a landslide either way the ultimate effect of the movement is not calculable in advance except that it would not transfer the Presidential choice to the House.

THE PROBLEM

The possibility of a democratic landslide elsewhere, however, is so remote that Governor Tuck's proposal is accepted by all politicians as the grave development it is.

Bolting, especially in the South, has meant oblivion for Democratic leaders, but on those occasions the organizations were regular. Half-bolting, which this move would be, supported by the organizations, would be a very different matter.

If Virginia and other States adopt the electoral plan, the chief problem of the Democratic organizations will be how to send delegations to the national party convention and yet remain morally unbound by the decisions of its majority, like the South Dakota Republicans in 1912.

Political Conditions in Czechoslovakia

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Friday, February 27 (legislative day of Monday, February 2), 1948

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD editorials re-

garding the Communist conquest of Czechoslovakia; one from the Manchester Union, of Manchester, N. H., and two from the New York Times.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Manchester (N. H.) Union]

NOW CZECHOSLOVAKIA

One sees in the Communist coup in Czechoslovakia the operation of the same program followed by the Soviets in the absorption of other countries behind the iron curtain.

This program consists of four distinct steps, cleverly designed to disguise the process of Soviet domination. The first step is to form a coalition government in which the Communists must be included, no matter how small their initial strength may be. This is followed by the inflexible demand that the Communists must control the ministry of the interior, under which the domestic police in European countries operate.

Then in due time when the Communist grip on the police is considered adequate, the charge of plotting against the state is trumped up against other parties in the government that resist Communist dictates, as a pretext for an assault upon them and their ejection from the government. This gives the Communist minority in the government an excuse for seizing control, backed by the overshadowing presence of a Russian army somewhere in the offing.

What has happened in Czechoslovakia is not new. It runs perfectly true to form. It is the same thing that has happened in Hungary, Bulgaria, and Rumania, and that we may expect to happen again and again as the program of Soviet expansion works itself out.

True, the Western World has been more deeply shocked by the death of democracy in Czechoslovakia than it was by the submission of Hungary, Bulgaria, and Romania to Soviet dictation. The Czechs are traditionally a democratic people. They set up a republic after World War I with Western help and they made democracy work even beyond the most sanguine expectations. Democratic peoples elsewhere cannot but be saddened at seeing this brave, freedom-loving people hamstrung and hoodwinked into bondage.

Moreover, Czechoslovakia has a strategic importance in the fight for freedom in Europe far beyond Hungary and the two Balkan states. It lies at the center of the political framework of Europe, a fact that the Soviets have certainly not overlooked.

The question is: What is the Western World going to do about it? Will it stand by and see one free nation after another fall like pins in a bowling alley before Soviet machinations? The world is faced today with a new method of conquest, bloodless usually, but nonetheless effective in its operation. What nation will be next in the march of communism? One may believe that others are listed for Communist absorption in due time following Czechoslovakia.

Will the next in the list be Greece, Italy, Austria, or France? Time will tell unless the Western World awakes and decides to meet the challenge to freedom with something more than words. Let there be an end of chatter about an understanding with Russia. A sharp line of division has been drawn across the world by Moscow, and only firmness and force can stop the slow Communist attrition that blots out a free nation in a day as in Czechoslovakia.

[From the New York Times of February 26, 1948]

RED TRIUMPH IN PRAGUE

As the result of a Communist revolution which has forced President Benes to acquiesce in something that was "not in complete accordance with his wishes," Czechoslovakia has today become a totalitarian police state under a Communist dictatorship and the last flickering lights of freedom that shimmered through the iron curtain are going out.

The new dictatorship is still thinly disguised by a government which, like the governments of other east European countries, contains a few non-Communists, among them Jan Masaryk, the son of the democratic founder of the Czechoslovak state, and himself a professed adherent of a rapprochement with the west. But these figures only serve as window dressing, insofar as they are not merely time-serving opportunists who have climbed on the Communist bandwagon. Their survival will depend entirely on their complete compliance with Communist orders. For Moscow has long since announced that in its war against the western imperialists there can be no middle position. In Communist eyes any opposition to the dictates of the party leadership becomes treason, punishable by death.

There are still two factors in the situation that must be clarified. One is the exact position of President Benes, who has postponed or cancelled his announced broadcast to the nation and remains personally incommunicado in his palace, surrounded by armed police and troop contingents. The other is Parliament, which must give the new government a majority to make it technically constitutional. But these factors can no longer change the course of events. For the Communists have already seized power through the Communist-controlled police and army, and through their action committees. They have taken over both central ministries and local governments, have purged the opposition parties, arrested more than a hundred on charges of plotting against their rule, suppressed freedom of press and speech, occupied factories, and broken up counter-demonstrations with rifle fire. Communists, once in power, do not resign because of a mere adverse vote.

As a result, Czechoslovakia, already tied to Russia and her satellites by military alliances, has now become an integral part of the vast totalitarian bloc that stretches from the Baltic to the Adriatic, and from the Oder, or perhaps the Elbe, to the Bering Strait. One more nation has been engulfed by the tide of Russo-Communist expansion. Soviet Deputy Foreign Minister Zorin, who "happened" to be in Prague during the coup d'état, can now take his place besides Vishinsky and Zhdanov and Dekanozov and Tito and Dimitro as a conquering commissar who can report to Stalin that another country has been brought into the fold. This means not only the collapse of the world of Tehran and Yalta, in the same manner that Hitler's seizure of Czechoslovakia meant the collapse of the world of Versailles, but also a further shift in the balance of power in Europe.

Communist seizure of Czechoslovakia rounds out a new Russian empire which has not only extended dominion over an additional 100,000,000 people and their armies but has also gained a tremendous additional war potential. It has gained the "little Ruhr" of Silesia, turned over to Russia's polish puppet. Now it has also gained the Skoda armament works—the Krupps of the east. It has long been an axiom of European politics that whoever controls Bohemia has at least a good chance to control Europe. It is an ironic sidelight on postwar history that Russia's latest prize was put on its feet by nearly a quarter of a billion dollars advanced by the United States.

When Hitler seized the Sudetenland he announced that this was his last territorial claim in Europe. It was a lie to lull the west to sleep. Moscow has disdained to disguise its own intentions. There is no reason to expect that Czechoslovakia will be the last target of Russo-Communist expansion.

[From the New York Times of February 27, 1948]

THE PATTERN OF CONQUEST

Shocked by the Communist coup d'état in Czechoslovakia into their first joint action on Russo-Communist expansion, the Governments of the United States, Britain, and France have condemned what they characterize bluntly as the establishment of a one-party dictatorship disguised under the cloak of a Government of National Union. They are conferring on the advisability of refusing to recognize this new regime. But neither of these steps, reminiscent of similar protests against Hitler's methods, will stop the course of events. Nor will they dispel the fear that is stalking through Europe, where other nations feel themselves to be the next potential victims. But they do reveal that the last stubborn illusions are falling, that world opinion is at last beginning to crystallize, and that out of this process is emerging the realization that appeasement still carries its own penalty, and that doing business with Stalin is just as dangerous and as profitless as it was with Hitler.

Like Hitler, Stalin has been taking over one country after another, sometimes by direct conquest, as in the cases of Lithuania, Latvia, and Estonia; sometimes by traitorous fifth columns backed by Russian troops or commissars, as in the cases of Poland, Yugoslavia, and Albania, Bulgaria, Rumania, and Hungary, and now Czechoslovakia. Today, Stalin's acquisitions already amount to more than four times those of Hitler prior to the war, and, like Hitler, he is reaching out for more.

Equally striking is the virtual identity of the methods by which both the Nazis and the Communists attained power, as exemplified especially in Czechoslovakia, whose "directed" democracy was comparable with that of the German Republic. Both began as small parties able to flourish under ultra-democratic proportional representation, but determined to use democratic methods only for the destruction of democracy and making no secret of the fact. Hitler served early notice that once he was in power heads will roll, and Gottwald, his Czech counterpart, told Benes and his followers long ago that he would "break their necks." Despite this, both Hitler and Gottwald were made heads of government with the cooperation of the parties they had vowed to destroy. And once in office, they undertook to capture the state from within.

First they took over the police and made it a party instrument for the extension of their power and the terrorization of the opposition. Then they neutralized the army by putting in command officers loyal to themselves, and, in the case of Czechoslovakia, pledging the army to loyalty to the Soviet Union. With these two instruments of power in hand, they began to regiment the population. They took over the ministry of propaganda, or information, and with it control of the radio and the film industry. They restricted freedom of the press by taking control of the supply of paper and by compelling all journalists to join a union under Communist control. They took over control of industry—Hitler by organizing it into associations under Nazi domination, Gottwald by nationalizing it and organizing an armed workers militia to guard it. They conscripted labor, put all labor unions into one labor front under their control, and thereby obtained control of every worker's job and livelihood, with power to penalize any worker who dared to oppose them. Finally, national socialism in Germany and communism in Czechoslovakia resembled each other even in the matter of a racial policy;

Hitler turned against the Jews in the name of pan-Germanism and the Slav Communists against the Germans and Hungarians in the name of pan-Slavism.

It seems amazing that, having seen these things happen in Germany under Hitler, the Czech leaders and parties, still dedicated to democracy, should have permitted them to happen in Czechoslovakia—going along step by step, making one concession after another, until they were powerless to resist.

That in itself is a warning to all countries still under the delusion that they can cooperate with Communists without signing their own death warrant.

Stalin's Step Toward War

EXTENSION OF REMARKS
OF
HON. TOM STEWART
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Friday, February 27 (legislative day of Monday, February 2), 1948

Mr. STEWART. Mr. President, I ask unanimous consent to place in the Appendix of the CONGRESSIONAL RECORD a very timely editorial which appeared in the Knoxville News Sentinel, Knoxville, Tenn., on February 25, 1948.

This editorial accurately and truthfully points out that the Red seizure of Czechoslovakia strikes a familiar communistic chord and it is the same old story of communistic treachery and betrayal.

Certainly, it is running true to Soviet form and anyone who has observed the Stalin finesse sees definitely the same old pattern being cut.

This editorial points out that we should act quickly on the Marshall plan and that we should strengthen the United Nations. It also shows the importance of strengthening ourselves here in America from within. America should have no patience with communism. It is the most dangerous enemy of the civilized world today. It challenges the right of free people to remain free. This is a timely editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STALIN'S STEP TOWARD WAR

Red seizure of Czechoslovakia has been only a matter of time ever since Yalta. One by one, Stalin has picked off the nations of eastern Europe. Now only little Finland is left in the twilight zone of phony freedom.

It is the same old story of Communist treachery and betrayal, of the Soviet stab in the back. It has been repeated in so many places, Stalin's method and purpose should be known to all the world. And yet there are still a few even in America who call themselves non-Communists like Mr. Wallace, who profess to believe that democracy can be saved by appeasement.

Stalin has played it precisely like Hitler and the Japs—only with more skill. No Nazi or Jap fifth column ever operated with the insidious perfection of the Soviet agents who have taken over eastern Europe and who have bored so deeply into Italy, France, and China.

If the analogy holds, Stalin will go on until he provokes a world war; until his cheap victories over smaller nations end in his final defeat by the strong democracies he is trying to destroy.

There is one chance that he may be stopped without such a war. If the remaining free countries can transform their economic weakness into strength through the Marshall plan, and if they can combine in an effective defense pact under the United Nations, Stalin may retreat when faced by greater power.

But, whether he retreats or advances to war, the protective unity of the free nations now rests chiefly on American economic strength and military preparedness. That much at least is clear.

Hardwood Court Fiesta

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to include the following article, written by Henry Lesesne and published in the Christian Science Monitor of February 21, 1948, describing the annual Southern Textile Basketball Tournament at Greenville, S. C., an event unique in the sports world in that it is the largest basketball tournament on earth and all participating teams represent textile communities in the South:

HARDWOOD COURT FIESTA—GREENVILLE, S. C., HAS SOME BIG BASKETBALL NAMES AND KEEN TOURNAMENT COMPETITION

(By Henry Lesesne)

Basketball in the South Atlantic States is hardly the popular sport it is in some parts of the country from both a player and spectator point of view. This makes it all the more surprising that the region boasts the largest basketball tournament in the country under a single roof, and each year it is getting bigger and bigger—1,000 players, 100 teams now.

Even so, there was a time in the Southeast when basketball was not nearly as popular as it is today. In the years after World War I, the semipro teams of the textile communities were not able to schedule nearly all the games they desired with the schools and colleges. So the athletic or recreation directors of a few mills in the Carolina foothills hit upon the happy thought of a regional industrial tournament, both as a means of providing competition and promoting interest in the sport.

Their first tournament in 1921 attracted only six teams. It went by the ambitious name of the Southern Textile Basketball Tournament. But each year it grew fairly steadily and today overflow crowds of customers come a long way to see and enjoy the spectacular play, the matchless spirit of competition, and the clean sportsmanship among the teams, men's and women's from the textile communities.

For 4 days every year, at about the time spring is coming to the coast and moving up slowly to the Appalachian foothills, Greenville, S. C., is probably the most basketball-conscious city in America. You can't get a hotel room and the players from a six-State area seem to be everywhere in their smart uniforms. They are interested in basketball, yes; but they are also renewing old friendships and making new ones. Many of them come back year after year. And proudly they wear their banners—names, many of them, that are household words in textiles, names familiar to everyone who reads advertisements.

From early morning until far into the night the games, usually two at a time, sometimes three, are in progress at big Textile Hall in downtown Greenville. It is a field day for the visiting sports scribes from the principal textile cities. The games are usually fast and it's not uncommon to see a husky youngster or blond bombshell toss a spectacular one-hander. Often almost as many women's teams as men's participate.

The Southeast is essentially a baseball country rather than a basketball country, and it is not surprising that some of the big drawing cards at the basketball tournaments are big names in baseball for whom the customers from textile communities root all summer.

For instance, there's Earl Wooten, who plays basketball for nearby Pelzer, but is an outfielder for Washington and Chattanooga. He came up in the community, played high-school and sandlot baseball. And for the Pelzer basketball team he'll play a long stretch of games averaging 25 points or better. Though of average height, he's fast as a shuttle on a loom and usually a tournament sensation.

Or there's Virgil Stallcup of the Cincinnati Reds, who played with Jersey City last year. He wears the Ware Shoals, S. C., insignia at Greenville. Or there's Marion Rackley, St. Paul outfielder, who spends his winters in a nearby textile community. These are just a few of the baseball stars who hail from the immediate vicinity of Greenville who also play in the basketball tournament. The players come from a six-State area and among the men's teams there are any number of baseball stars.

And the crowds? What, for instance does a spectator do when there are two games being played side by side simultaneously? He simply goes to the side of the big Textile Hall that the game in which he's most interested is being played, or if he wants to limber up his neck muscles he can try keeping an eye on both. Basketball even of the collegiate variety seldom draws an impressive crowd in the South, but 5,000 or more spectators watch the games at Greenville, and on the night of the finals there is really no place in town large enough to hold them all.

There's seldom, if ever, any rowdiness and not much of the old alma mater spirit. The people are just home folks, most of them from small towns and communities in the valleys who come to watch their hard-fighting young people, men and women both, doing their best to excel in a sport they love. A typical crowd is usually spotted with names well known in the textile industry. For the industry naturally takes a pride in the tournament, and mill owners and executives follow the careers of the mill teams closely.

Still, the amazing growth and success of this largest of industrial basketball tournaments is the envy of some college associations. It has always been self-supporting and has never once gone in the red. It is managed by the Southern Textile Athletic Association, headed by C. T. Thomas, of Greenville. The association's work down the years has been not only to sponsor the basketball tournament but also other activities that take in all fields of textile athletics in the southern area.

There are small basketball tournaments confined to certain areas within the States. Reference was made a moment ago to baseball consciousness in the textile communities. There are also many textile baseball leagues covering small areas: amateur leagues and semipro leagues. Now in the

making is a baseball tournament for the textile communities on the same grand scale as the Greenville basketball tournament. It should be an even greater success than the hardwood carnival.

For over the years there has been no greener pastures for the big-league baseball scouts than the small communities of the Southeast. A glance at the big-league baseball rosters shows a surprising number of players from the region.

In a small area of which Greenville is the center there's Ernie White, of the Boston Braves, who comes from Pacolet; Bill Voiselle, also of the Braves, who calls Ninety-Six home; Buddy Lewis, of the Washington Senators, from Gastonia; Lew Brissie, Athletics pitcher, from Ware Shoals, just to name a few from textile communities. Brissie, an ex-GI, was injured in Italy, but made a strike-out record for the Sally League last year, playing with Savannah, and Connie Mack says he has more on the ball than Lefty Grove did when he moved up to the majors. In winter, Brissie attends Erskine College, near Ware Shoals, as a day student.

Larger textile mills and many of the smaller ones all have planned recreation programs and facilities for every sports or outdoor activity in the alphabet. Many of the facilities are modest—about what you'd expect in a community elsewhere of the same size—but some of them are picture-book sort of things you would expect at a resort. Look in almost any one of these towns in the Carolinas or Georgia or Alabama and the chances are you'll find a fairly well-known baseball player who considers it more to his liking and pocketbook to head up the athletic program in a mill town, sometimes the same town in which he grew up and played sand-lot baseball.

A mill may send any number of teams it desires to the tournament if they meet requirements. But the idea is, of course, to send teams that will win.

It's not all a matter of trophies, or even dollars and cents. Pride in achievement, nor the zest for living and work and play, can't be computed that way.

Lincoln Day Address

EXTENSION OF REMARKS

OF

HON. EDWARD O. McCOWEN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. McCOWEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Lincoln Day address delivered by me to the Kiwanis Club, at Ripley, Ohio, Thursday, February 12, 1948:

ABRAHAM LINCOLN

"Abraham Lincoln, his hand and his pen,
He may learn to write but God knows when."

So wrote 9-year-old Abraham Lincoln on the back of a black old shovel with a charred end of a burned stick as he lay on the floor of a log cabin in front of a low fire. This instance is a slight illustration of the natural originality of the boy, to become sometime immortal.

He was born about 3 miles south of the present site of Hodgenville, Ky., in what is now Larue County, February 12, 1809, 139 years ago this morning. But Abraham Lincoln never saw Hodgenville. Yes, Lincoln was born in a log cabin. But, it is not necessary to be born in a log cabin to become President. Millions of Americans have been born in log cabins who never became President. But, one writer said, "A log cabin is as good a place to be born in as anywhere else if a man intends to be President." Andrew Jackson, William Henry Harrison, Millard Fillmore, and James A. Garfield were born in log cabins, and so were other great men. There were lots of log cabins in those days.

William Henry Harrison was probably the first Presidential candidate to capitalize on being born in a log cabin, for you doubtless remember from reading your histories that William Henry Harrison was called the "hard cider and log cabin candidate." You know they wheeled little log cabins around from place to place where speeches were made in Harrison's campaign. If I may digress a moment, I might remind you that William Henry Harrison was clerk of the Hamilton County, Ohio, courts at Cincinnati. And this region also is the immediate bailiwick of Gen. U. S. Grant; so you see southern Ohio has had some great men. A number of others could be named.

When the lack of modern conveniences and sanitary arrangements are known as they were in those days of Lincoln, isn't it a wonder that there are very many Americans today? Or did such an environment help to produce a hardy race? Although he could trace his line no further back than to certain ancestors in Berks County, Pa., research disclosed a lineage reaching back to Samuel Lincoln, who came from Hingham, England, and settled in Hingham, Mass., in 1637. The Lincolns were pioneers. Lincoln thought his ancestors were Quakers, but they were not. They were Baptists.

Both of Lincoln's parents were born in Virginia and both came to Kentucky in early childhood. The story that they were first cousins is without foundation. The families of both were poor. They were of decent, average American stock. There was nothing in either of the parents that would lead us to expect so great a son; neither was there apparent any marked disqualification for such a high honor.

As some of you may have noticed when you travel on Route 50 to Washington, D. C., on Allegheny Front Mountain, well toward the top, is a sign on which is inscribed, "About 6 miles beyond the saddle Nancy Hanks the mother of Abraham Lincoln was born." As you stand near the sign on the side of the road, you will see the saddle, which is a long, graceful, curving dip along the ridge of the opposite mountain. You stand with reverential awe as you let your imagination fly swiftly back to that event and note its eternal importance. It presaged the end of slavery in the United States and the preservation of the Union.

No; Nancy Hanks was not a blond. She was tall, dark, and sallow. Her hair was dark brown, almost black. Her eyes were small and gray. Calling to mind the pictures of Lincoln, can you not see that his eyes were like hers? She had a prominent forehead, which her relatives said indicated unusual mental ability; she was above medium height and weighed about 130 pounds. Isn't it important to portray her picture, when we are reminded that Lincoln believed he inherited his qualities from his mother? He had this in mind when he said, "God bless my mother; all that I am or hope to be I owe to her."

Lincoln said that he had not controlled events, but had been controlled by them. William E. Barton, one of Lincoln's biographers, said, "We cannot understand Lincoln apart from his environments; neither can we understand his environments without a knowledge of the growing personality of Lincoln." I think that all of us can agree with those statements. If so, it would seem fitting and proper to sketch his environments briefly. Thomas Lincoln, Abraham's father, had grown up literally without education. He changed his occupation several times, moved his residence frequently, made nothing of his poorly chosen farms, and bequeathed little to his son besides life itself. His first wife, Nancy Hanks, was the mother of Abraham. She, like her husband, was illiterate.

Abraham Lincoln's early boyhood was spent about 8 miles from his birthplace on Knob Creek—a place of natural beauty. The uncertainty of land titles caused the family to move soon, at a time when Abraham was only 7. The Indiana woods was their destination, and here the family of four—mother, father, Abraham, and Sarah, his sister—lived very poorly with little more than a hut to shelter them the first winter. It was not long before Nancy Lincoln became ill, was without medical care for a week, and died in October 1818. We know how Lincoln as a boy grieved over the loss of his mother. You have read that pathetic story with tears in your eyes.

Thomas Lincoln's second wife, Sarah (Bush) Johnston, of Elizabethtown, Ky., widow of Daniel Johnston, came with her three children to the cabin.

Abraham's stepmother became an important factor in his rearing. She cleaned things up in the cabin and around it in a hurry and made Thomas do his share of the work. She was a masterful woman.

Lincoln's youth was that of an easy-going backwoods youth; he did hard labor on the homestead and performed odd jobs for neighbors. He shunned vociferous camp meetings of the time and used his leisure for self-improvement by the reading of a few good books, among which were the Bible, Robinson Crusoe, Pilgrim's Progress, Aesop's Fables, William Grinshaw's History of the United States, Weem's Life of Washington, and various other biographies and books of verse. Lincoln had very little formal schooling; in all, his attendance at school would not exceed 1 year.

The one-teacher kind of a school that he attended was known as a blabb school. Have you heard of the blabb schools? The children had to spell or read out loud when they studied so the teacher would know when they studied. He marched around among the pupils and hit those that were not blabbing.

Lincoln grew up without the frontier vices, shunned liquor, and was free from dissoluteness and profanity. The river entered largely into his early life. Of course, you had read of how he got his big barge over the dam and about his trip on a flat boat to New Orleans. Since his relations with his father were not altogether happy, he welcomed the day when he could shift for himself.

In 1830 the Lincolns again moved. This time to Macon County, Ill. Abraham was now 21 years of age and remained with his family only long enough to help with the building of a new cabin and to assist with the rough tasks of the following winter. The 6-year period 1831–37 was spent in earning a living by working in a store until "it petered out," managing a mill, doing odd jobs, acting as village postmaster, traversing the country as deputy surveyor, all of the time reading law, studying grammar, widening his acquaintances, following the trend of national politics, and laying the foundations for a wide personal influence. It is of interest to know that during this period he served in the Black Hawk War.

In 1834 Lincoln was chosen to the State legislature, where he served during four successive terms, 1834–41, first at Vandalia and later at Springfield. He gained his first political training in this frontier legislature where party maneuvers were spirited. National issues were of great concern to him. In these early days as later, he avoided associations with abolitionists; he nevertheless did not want himself to be thought of as in positive support of slavery.

Lincoln moved from New Salem to Springfield in 1837 and was so poor that his surveying instruments had been attached to pay a debt. Having been licensed as an attorney September 9, 1836, he began the practice of law in Springfield and formed a partnership with J. T. Stuart, a man of influential family, who was an able lawyer and prominent in Whig circles. While in New Salem he had courted Ann Rutledge, who died August 25, 1835. He married Mary Todd in Springfield on November 4, 1842, after a troubled courtship. It is difficult to say what degree of happiness attended their marriage. Their first son, Robert Todd, was born August 1, 1843, and was their only child to grow to manhood.

In the year 1847–49 Lincoln served one term in Congress where he had the distinction of being the only Whig from Illinois. Most worthy of comment in his career as Congressman is his attack upon President Polk for having begun the Mexican War. This deeply offended the people of his own State, as also did his stand in regard to slavery. On January 10, 1849, he read a proposal to abolish slavery in the National Capital. Although the Whigs nationally were successful in the election of 1848, the party lost out in Lincoln's own district. With a sense of futility he said goodbye to Washington; and while the slavery crisis was shaking the country, he returned to Springfield and sadly resumed his law practice.

As a lawyer Lincoln rose to front rank in his own State. He was associated with capable partners—John Todd Stuart, Stephan T. Logan, and William Herndon. An important and extensive practice in the State supreme court and in the Federal courts made him a familiar figure throughout the State. He became popular for his aptness at political speeches and for his humor and story telling. Such qualities as common sense, shrewdness, effectiveness before a jury, his reputation for honesty, searching thoroughness for investigation, familiarity with pertinent judicial doctrines, ability to get at the core of a controversy made him more than a country lawyer.

Lincoln was a man of individuality. Of more than average height, 6 feet 4 inches, uncommon length of arms and legs, rugged face which revealed character whose depth was not easily sounded, his manner of dress and appearance was apparently of no concern to him.

In the agitation which swept the country with the repeal of the Missouri Compromise, Lincoln emerged from political inactivity. A new tone appeared in his speeches and he narrowed the contest to one phase of the slavery question, making it a suitable party issue. In 1856 he became identified with the new Republican Party. The Illinois State Republican Convention met at Bloomington May 29, 1856, and excited anti-Nebraska Democrats, Whigs, and Abolitionists were pouring into the city. When the convention got under way, Abe was on the platform, there were calls for a speech. Lincoln unwound his long legs, came forward and began to speak. Reporters who started to take down his words forgot to use their pencils. I quote:

"He stood before the throne of eternal right and unburdened a penitential and inspired soul." "We must make this a land of liberty in fact, as it is in name. We shall say to the Southern disunionists, 'We won't go out of the Union and you shan't.'"

The grandeur of the speech was talked of by those who heard it until it became a legend. Because no word of it was recorded by newspapermen, it became known by the romantic name of the "Lost Speech." It put Lincoln in line for the Presidency.

Successful in getting the Republican senatorial nomination in 1858, he delivered at a Republican State Convention in Springfield on June 16, 1858, his famous "House Divided" speech. This revealed his position on the slavery question. He denounced the Dred Scott decision as part of a proslavery conspiracy to recognize slavery even within the free States. Then followed a series of debates with the leading Democrat, Douglas, in the senatorial campaign in which he showed his strength as a leader and politician. Lincoln's campaign was effective in that his party carried districts containing a larger population than those carried by the Democrats, but unequitable apportionment gave Douglas a majority in the legislature, insuring his election.

As a figure of national prominence now, Lincoln's name was mentioned for the Presidency. Named as Illinois' choice for the Presidency at the State convention, he was nominated at the National Convention at Chicago because he was a candidate who was not too radical or too conservative and who could avoid offense.

The National Convention was held in a large hall called the Wigwam with a seating capacity of 10,000 people. Lincoln's manager had nailed Indiana and Pennsylvania for Lincoln. A terrific roar followed the nomination of Seward. Lincoln was nominated in a speech that wound up with the statement that Lincoln was a man who could split rails and maul Democrats, and the convention went wild. On the first ballot, Seward led with 173½ votes with Lincoln in second place with 102 and Cameron with 50. On the second ballot, Cameron withdrew, giving his votes to Lincoln. The score now stood, Seward 184½ and Lincoln 181. The convention was filled with excitement over the dark horse from Illinois. As ballots were called on the third vote, the suspense grew tense—231½ for Lincoln, making him need only 2½ more votes to give him the nomination. A man in the Ohio delegation leaped on a chair and shouted, "Mr. Chairman, I rise to change four votes from Chase to Lincoln." A moment of utter stillness, and then an explosion of 10,000 terrific whoops. Ohio had made old Abe the Republican President of the United States. That night all Illinois celebrated. At far-off Washington, Senator Douglas said, "There won't be a tar barrel left in Illinois tonight."

During the ensuing campaign, he stayed quietly in Springfield and avoided political speeches. He was chosen President by pluralities in enough States to give him a considerable electoral majority, but in regard to the whole popular vote, he was a minority President.

In the period between his election and his inauguration, Lincoln continued his political silence and made no speeches or public statements as to his policies. During this time the Southern Confederacy was formed. Lincoln never doubted the Federal Government's authority to maintain itself. In his inaugural address, he disclaimed any intention to interfere with slavery in the States, advised observance of all Federal laws and pleaded for the preservation of the Union.

To a man inexperienced in executive matters, the duties that fell upon him as President brought many pressing problems which had to be dealt with immediately, such as the Fort Sumter crisis involving the issue of civil war. Often during his administration, he faced a hostile Congress and at times seemed almost deserted. Abolition demands required his utmost tact. The pressure of military duties was great. Throughout this trying period he demonstrated that he was able to deal fairly with his enemies, maintain cooperation in his ill-assorted Cabinet, and respond to criticism with humor and understanding.

As the Great Emancipator, it must not be thought that he suddenly struck the shackles from millions of slaves by the stroke of the pen. A preliminary proclamation given out in September 1862, and the proclamation of January 1, 1863, served chiefly to pave the way for effective liberation of the slaves through State action and through the antislavery amendment to the Constitution.

Lincoln's manners as President were out of the ordinary and unconventional; his habits were irregular. He labored continually under a great strain and often felt extreme mental weariness. He made very few public speeches during his years in the White House and confined himself to his inaugurals, the Gettysburg Address, November 19, 1863, and his last speech, April 11, 1865.

Lincoln received a sweep of the electoral votes in the election of 1864 in spite of opposition within his own party. Paying great attention to the last military phase of the war, President Lincoln visited the Army and remained with General Grant at City Point from March 24, 1865, until April 9, 1865, except for a 2-day visit to Richmond. He returned to Washington on the day that Lee surrendered. He did not experience the ensuing struggle for reconstruction, for he was assassinated on the night of April 16, 1865, in the Ford Theater by John Wilkes Booth. After lying unconscious all night, he died the following morning. Funeral services were held in Washington and the burial was in Springfield.

Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. IVOR D. FENTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. FENTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution on Lithuanian independence adopted by the Federated American Lithuanian Societies and Clubs, citizens of the United States, at a meeting held on February 15, 1948, in St. George Auditorium, Shenandoah, Pa.:

Whereas following World War I the nations of the world found the cause of Lithuanian freedom and independence to be just and her people to be worthy of self-government and political independence; and

Whereas the Republic of Lithuania was thereby established and accorded political recognition by all of the independent governments of the world; and

Whereas, during its existence as a free and independent nation, the Republic of Lithuania made progress and flourished and proved its ability of self-government and to be a worthy member of the community of nations; and

Whereas, in the recent global struggle which began in 1939, the United States of America and Great Britain proclaimed certain principles of freedom and justice to all nations and expressed this in the Atlantic Charter and Four Freedoms, to which the U. S. S. R. officially subscribed; and

Whereas, in violation of these principles, Soviet Russia on devious pretexts and in conformity with a secret agreement entered into with Nazi Germany in 1939, by overwhelming military forces, occupied Lithuania in 1940 and now arbitrarily deprives this Republic of its independent political life and membership in the community of nations of the world; and

Whereas, since this predatory occupation of Lithuania, the U. S. S. R. pursued and continues to pursue a ruthless policy of planned liquidation, deportation, and dispersion of the Lithuanian people in order to destroy the Lithuanian national entity which constitutes a crime of international magnitude; and

Whereas the crime of genocide which the U. S. S. R. is perpetrating upon the defenseless Lithuanian nation violates all principles of human rights, international law, all the covenants and agreements entered into between the U. S. S. R. and the Lithuanian Republic and the avowed war aims of the Allied Powers and expressed in the Atlantic Charter and the "four freedoms"; and

Whereas we recognize and acknowledge that the representatives of the people, the Congress of the United States was not consulted and had no part in the infamous secret agreements whereby innocent nations were committed to communism, and its peoples exposed to the throes of slavery and Siberian deportation and possible extinction: Therefore be it

Resolved, That we petition the Government of the United States to renounce, denounce, and repudiate all such secret agreements that violate human rights; and be it further

Resolved, That we request our representatives at the United Nations to demand that the General Assembly of the United Nations take steps and proper measures to make Soviet Russia conform to the United Nations Charter and other international agreements and covenants; that the U. S. S. R. armed forces, puppet regimes, and terrorist police forces be withdrawn from Lithuania and other invaded countries and that their deported nationals be returned to their homes and families; and be it further

Resolved, That we petition the Government of the United States to initiate proper and firm measures for the purpose of rendering effective aid for the restoration of the violated sovereignties of Lithuania and other European countries; and be it further

Resolved, That a copy of these resolutions be presented to our Senators, Hon EDWARD S. MARTIN and Hon. FRANCIS J. MYERS, and to our Representative in Congress, Hon. Dr. IVOR D. FENTON, with a request to have them read into the CONGRESSIONAL RECORD and to have them forwarded to other officials for presentation to the proper authorities of the United Nations.

AMERICAN LITHUANIAN SOCIETIES AND CLUBS,
A. J. STANISKAS, *Chairman*.

Attest:

W. J. KRENCEWICZ,
Secretary.

Foreign Gifts and Loans

EXTENSION OF REMARKS
OF
HON. MAX SCHWABE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. SCHWABE of Missouri. Mr. Speaker, under leave to extend my remarks, I include the following radio address given by me February 27, 1948, over the network facilities of the National Broadcasting Co.:

The Marshall plan is nothing new. It is merely a proposal to extend the New Deal foreign hand-out policy.

Since the end of the war we have sent abroad nearly $22,000,000,000. Contrary to expectations, it has gone for the most part to help entrench Socialist elements that have squandered this huge assistance, which we were told would be used for the reestablishment of freedom, politically, socially, and economically.

Our people are now led to believe that the Marshall plan is something new, but it is only a proposal to carry on the existing program of gifts and loans to foreign countries. I would be for the program if I thought it would do what is claimed, bring peace, reconstruction, and freedom to the nations. But it is not a plan to aid starving European people. When the sponsors of the program keep talking about starving people they are dishonestly playing on our heartstrings.

You see, our Government extracts dollars from our taxpayers and gives the dollars to foreign governments who in turn use these dollars to purchase goods and sell them to their own people. We do not send the goods to the people of the foreign countries directly. These gifts are government to government subsidies. European government leaders will be able to refuse food and aid to citizens who do not support their socialistic programs. For example, England insists that she will need at least a billion United States dollars in 1949, yet Parliament was told that the Beveridge cradle-to-the-grave plan will be put into operation in July, with all its social and financial costs. We are subsidizing the Socialists' program of England and preventing their returning to sound finance.

When President Truman presented the Marshall plan to Congress he asked for what he himself has called "police state controls." He and many others contend that the European recovery program will make such controls necessary. Official propaganda may make them politically necessary. The sacrifices required by the Marshall plan are likely to be so great that most Americans will be unable to carry the load. It would thus be necessary to put this burden of billions on the backs of our greatest wealth producers. Under price control they would be asked to produce without hope of profits. This would kill their incentive to produce and dry up supplies of investment capital. Our houses and factories would wear out. What would our workers do then? The Marshall plan can thus cause the break-down of the American economy, which is now the backbone of the world's hopes. It might be the last billion that would break our back and pull the whole world down into chaos and dictatorship. Neither Europe nor America wants this—only the Communists.

Private loans for genuine recovery are advisable if we would say to these countries that before they get a cent they must throw off their socialist controls and adopt private enterprise and free labor. The trouble is, our present leaders are not going to make such a request because our own leaders are not private enterprise minded. In short, Socialist thinkers, a similar group of planners, are in control over here as well as in the European countries. Why gamble further our precious freedom by this gigantic hand-out to finance hostile economic systems? Is it not ridiculous to tax private enterprise at home to finance socialism abroad? Are you willing to mortgage your children in an attempt to lift the standard of living in foreign countries to the point where we are dragged down to their level? This is the pay-off of world socialism or communism.

Make no mistake about it, those of you who believe in the American way of life, freedom and opportunity, the Marshall plan has little to do with feeding starving people or with European recovery. The starving people and economic recovery are being used as a shield or a blind so that you will unwittingly approve as a taxpayer the financing of not a four year but a permanent worldwide planned economy. A planned economy is dictatorship—look at Russia today. It is a planned economy.

For eight long months you have been hearing glowing words and promises for the Marshall plan. All this oratory reminds me of a wise old Englishmen who said: "It is not important what men say, nor the way in which they say it; it is what they propose to do."

This Englishman was, of course, just restating a solemn truth phrased long ago by the Man of Galilee when he said to his disciples, "By their fruits ye shall know them."

The people who have been spouting the oratory and making the promises for the Marshall plan are the same people who have been strutting across America making promises to you for 10 years. What have been the fruits of their promises? To determine whether their promises for the Marshall plan are worth considering, let us look at the record of these global planners.

In 1940 the clique now promoting the Marshall plan was demanding a peacetime draft army. They claimed that by having a peacetime draft we would keep out of war. Was that promise true or false?

In 1941 the Wall Street crowd now promoting the Marshall plan told you that lend-lease would keep us out of war. Was that promise true or false?

In 1942–43 the present promoters of the Marshall plan were telling you that we were fighting for the Atlantic Charter and that would be the law everywhere. Was that promise true or false?

In 1943–44 the Marshall plan promoters were promising the "four freedoms" to the whole world. Was that promise true or false?

In 1944–45 the Marshall plan promoters were telling us that Russia was a great democracy and a friend of America. Was that promise true or false?

In 1944 the Marshall plan promoters were telling you that UNRRA, into which the United States poured $2,750,000,000, was going to bring about recovery in Europe and was going to help prevent communism in Europe. The record shows that hundreds of millions of UNRRA went to Tito's forces. Was that promise to stop communism in Europe with UNRRA funds true or false?

In 1945 the present promoters of the Marshall plan told you that Bretton Woods, into which the United States has poured some billions of dollars, would insure world peace and make it unnecessary to send more hand-outs abroad. Was that promise true or false?

In 1946 the promoters of the Marshall plan drove through a hypnotized Congress the British loan. They promised that that hand-out would bring recovery to England and make further aid unnecessary. Was that promise true or false?

In 1947 the clique now promoting the Marshall plan asked for $400,000,000 for Greek and Turk aid and said it was to relieve human suffering and distress in those lands and that it would stop communism there. Was that promise true or false, or are they now wanting more money and conniving to start a shooting war?

The answer, friends, to all the foregoing questions is that in each and every case the promises made by the promoters of the Marshall plan have been utterly worthless. They have not made good on a single promise.

Now let me ask you a question. If a man came to you and said that he was an expert chauffeur and 10 times in a row you provided him with a new car and every time he wrecked it and each time his accident put some of your family in the hospital, wouldn't you conclude that he was either a deliberate liar or was deliberately wrecking the cars? Would you continue to provide him with new cars to smash up and injure your children, simply because he continued to claim that he was a good driver and the next time he would get there safely?

No, my fellow Americans, the simple truth is that this administration has been playing

into the hands of the Communists from the date Mr. Roosevelt recognized the infamous Communist regime in 1933. And this administration, through the Marshall plan, will continue to play into Stalin's hands.

This program, the so-called Marshall plan, is not to stop communism. This program will promote communism by underwriting and propping up the Socialist dictatorships of Europe. These Socialist dictatorships are blood brothers with communism. The only difference is that Socialists enslave the people by degrees while the Communists, who don't get direct American hand-outs to sweeten the transition, make the change-over from freedom to despotism at one stroke.

Further than that, this program will continue the deterioration of the American currency and cause the cost of living to go higher and higher. Lenin said that the surest way to overthrow the existing social order was through debauchery of the currency.

The Marshall plan will cause prices in this country to go higher and higher. It will cause shortages in critical items like steel and oil; it is already causing black markets and a demand for regimentation of the people. It is laying the foundation for the shackles of a police state in America in peacetime. The very name, Marshall plan, on this program, should be a give-away, because General Marshall was one of the architects of the Tehran, Yalta, and Potsdam agreements. All those deals have played into Stalin's hands.

Adolf Hitler said that by clever and sustained propaganda an entire people can be made to believe that heaven is hell and the most miserable existence is paradise. Is that deadly trick being played upon the American people by the same propaganda methods? You are being told the Marshall plan is to bring about peace but on the floor of Congress it is being openly conceded that the Marshall plan is lend-lease for another war.

The situation reminds me of one of the incidents that took place in 1944. Roosevelt was seeking the so-called Polish vote in America. A slogan to fool voters of Polish descent was spread over the Nation. Here was the way it read "Vote for Roosevelt; save Poland."

At the very time the slogan was ballyhooed, Poland had already been sold down the river to Stalin. We know that now. So it will be with the Marshall plan. They tell you the Marshall plan is to bring peace. At the very time they make you that promise, the Marshall plan is promoting undeclared war.

Just as in the case of Poland, the administration is promising peace while promoting war. This means that there is only one thing that can save the people of America. If your sons and daughters are not again to die on far-flung battle fronts all over the world, the Marshall plan must go into the ash can.

America must again fulfill her role as the light of the world—making the world better by the Christian virtues of persuasion and example, not by guns and bribery.

More Facts on UMT—The Sugar Coat Name for Conscription

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 30, 1948

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I am including a recent news story appearing in the Omaha World Herald and a recent article appearing in the Christian Century:

[From the Omaha (Nebr.) World Herald]

UMT PLAN ASSAILED BY EXECUTIVES

A group of Omaha business and professional men, all members of the American Legion, Thursday expressed opposition to universal military training.

The men represent no organization, but spoke as private citizens, they said.

Victor E. Spittler, attorney, said he contacted the group.

"I felt that some of us who oppose UMT should speak up," he said. "I believe the opinions of these men carry weight.

"I think UMT is a departure from the American way of life and another step toward totalitarianism. If you agree to conscripting youth in peacetime you can't object to conscripting labor and capital. This all adds up to dictatorship. We were supposed to be fighting dictatorship in the last war. I'm opposed to big government and regimentation."

TELLS OF DEFERMENT

Said W. O. Larson, Omaha real-estate man and member of the metropolitan utilities district board: "I can't go for UMT. I spent 5 years on a selective-service board in the last war. I know how people with influence in Government were able to get their sons or the sons of their friends deferred. In my opinion, UMT will not work in a democracy because there are too many ways politicians can do favors for people."

George J. Cleary, vice president of Mutual Benefit Health and Accident Association: "I'm solidly opposed to the plan. I like Representative HOWARD BUFFET's idea. I think we ought to know where we are going before we get into UMT. I believe we are being pressured into something that just isn't necessary."

Daniel J. Monen, vice president of the Omaha National Bank: "Conscription of youth in peacetime will, through interruption of study in science and engineering and democratic processes, do more damage than good. A future war will not be won by squads right and squads left."

OPPOSES COMPULSION

Denman Kountze, president of Midstate Underwriters, Inc.: "I'm thoroughly opposed to compulsory training. My reasons are so many and varied it would take an hour to list them."

James Wells, executive of Scott Tent & Awning Co., and World War II Signal Corps captain: "I am against the compulsory part of UMT. I think it violates the concepts of freedom we have always held. If UMT is put into effect it should be by constitutional amendment and not by the staff of the Army."

[From the Christian Century]

UMT IS CONSCRIPTION

With characteristic vigor, Dr. Daniel A. Poling is campaigning in behalf of universal military training. He spoke in Omaha on January 14 to a meeting to which the American Legion invited church and civic leaders. Particular pains were taken to invite members of the Christian Endeavor and of the Baptist Young People's Union to the Legion Hall to hear him. But a story which appeared on the front page of the Omaha World Herald the same evening pointed out that neither the Nebraska Christian Endeavor Union nor the Baptist Young People's Union was committed to UMT. It also carried the information that a poll of 152 ministers and rabbis in Omaha showed 92 opposed, 45 in favor, and 15 undecided.

On January 17 Dr. Poling was in Washington, where he got a friendlier reception at the Women's Patriotic Conference on National Defense, in which the principal organization is the American Legion Auxiliary. According to the Associated Press, he informed the embattled women that "in universal training, trainees are not in the service, they are not in uniform, they are not under the Articles of War. They are not subject to Army court martial and could not be sent out of the country. Should another crisis arise, it would still require a special act of Congress to induct them." He vigorously denied that such training would be "peacetime conscription" and complained that great confusion is arising because people have not read the report issued last May by the President's Advisory Commission on Universal Training, to which Dr. Poling was appointed as a Protestant minister.

It is a fact that a considerable number of people are puzzled by all the hullabaloo over military training, but we doubt that Dr. Poling has laid his finger on the cause. That seems to be, in part at least, the language of H. R. 4278, "a bill to enact the National Security Training Act," which differs so widely from the descriptions of it given to the public by its advocates. It is that bill, and not the report of the President' commission, which the American Legion and its friends seek to make law. Dr. Poling's statements give rise to the suspicion that he may not have read the bill himself.

This bill states in its preamble that "to provide for the common defense * * * every male citizen of the United States and every other male person residing in the United States owes to our country an obligation to undergo training which will fit him to contribute to its protection in time of emergency." It sets up the National Security Training Corps, "to be composed of trainees who shall be inducted into it only for training as hereinafter provided, and who shall be organized, administered, and trained * * * by appropriate departments and agencies of the United States. As used in this act, the term 'department concerned' means the War Department or the Navy Department, or such other department or agency as may be appropriate. The terms 'military training' or 'military training program' as used in this act means the training for duty with the armed forces of the United States."

Such language has quite a different tone from that used by Dr. Poling. In the first place, the training is universal. In the second place, it is military. In the third place, it is conducted under the Army and Navy. The other departments referred to may have jurisdiction only over conscientious objectors, as section 206 of the bill shows. The statement that the young men trained under this bill are "not in the service" is eyewash, because the National Security Training Corps will be a branch of the Army and Navy, which handle every detail of its administration. It is true that its top echelon of authority is the National Security Training Commission, but even that is under the President in his capacity as Commander in Chief of the military arm of government. One of its three members "shall be a member of the armed forces." The bill states that "the operation of the program, as it applies to all persons qualified for any form of military training, shall be the direct responsibility of the several service agencies." Not in the service? Nonsense.

Dr. Poling states that the trainees "are not in uniform." Section 105 of the bill states that "the President shall prescribe the uniform to be worn by the trainees, which uniform shall include a distinctive insignia." So the truth is that the trainees will be in uniform, a military uniform, which will differ from that of other branches of the armed services only as they differ from each other. Persons who advocate this measure should read the bill.

Dr. Poling states that trainees are not under the Articles of War, which is the law of the military service, and will not be court-martialed. The fact is that if this bill passes they will be under a detailed system of law which is incorporated under title II, chapter III, of the bill as a Code of Conduct. We have not had opportunity to compare the wording of this code with the Articles of War, but the language of this section of the bill leaves no doubt that the law it prescribes is military and not civil law. "All trainees * * * shall, from the time of actual induction * * * be subject to the provisions of this code," says section 303. The code provides that discipline shall be imposed by direct command of officers or by national security training courts. These courts shall be "composed of five officers of the service," says section 304. If this is not what soldiers know as a court martial, the difference is so slight that it is invisible to the naked eye. Appeals from decisions of such courts are taken to higher officers.

Some of the long list of offenses and punishments described in this code of military law are startling. The bill prescribes that induction into the corps occurs when the trainee takes an oath to "bear true faith and allegiance to the United States of America" and to "obey the orders of the President of the United States and the orders of the officers appointed over me according to law and the rules of the code of conduct of the National Security Training Corps." Refusal to accept actual induction "shall be in violation of this act and as such is liable, upon conviction in a civil court, to punshment of a fine of not more than $2,000, or by imprisonment for not more than 1 year, or both." Trainees who have finished their first 6 months of basic training and who refuse to go through with the second 6 months "shall be punished by a fine of not to exceed $500, or imprisonment for 6 months, or by both such fine and imprisonment."

This section clearly reveals the compulsory nature of this form of military service, but the heaviest penalties—5 years' imprisonment and $10,000 fine, or both—appear in section 212, which seems to cover the same offenses, as well as others. This section deals with registration, classification and induction. It says in part: "Any person who shall knowingly make, or be a party to the making of, any false statement or certification as to the fitness or liability or nonliability of himself or any other person for training under the provisions of this act, or rules or regulations made pursuant thereto; or who otherwise evades registration, induction, or training or any of the requirements of title I of this act, or who knowingly counsels, aids, or abets another to evade registration or training or any of the requirements of this act, or of said rules and regulations * * * or any person selected for training under this act who shall refuse to complete the training as prescribed under this act, shall upon conviction in the district court of the United States having jurisdiction thereof be punished" as indicated above. What does this mean except that if a trainee leaves camp before he has completed his year, he is subject to this heavy penalty? And if he goes home and is taken in by his family, doesn't it say that both his father and his mother are also subject to imprisonment for 5 years and a fine of $10,000, or both, for receiving their own son?

There are, besides, pages upon pages in the law prescribing heavy penalties for desertion, aiding deserters, striking an officer or "offering" violence against an officer, "collective insubordination," including slowdowns or "any concerted action in the nature of a strike" ($2,000 fine or a year's imprisonment or both for that), failure to aid in suppressing such insubordination or failure to report it to officers when the trainee has reason to believe it may be contemplated, losing Government property, and so on. Then there follow 18 sections, starting with absence without leave and carrying through to "all disorders and neglects to the prejudice of good order and trainee discipline," which carry the sweeping and unlimited penalty that the trainee "shall be punished as a national security training court may direct." Anyone familiar with the capacity of 18-year-olds to get into trouble will find it hard to read these sections of the law without wondering how large a portion of the boyhood of the Nation faces the prospect of spending some time in jail.

Section 383 permits punishment of trainees for crimes of which they are not guilty and concerning which they have no knowledge. It provides that where damages are done to property and "where the offenders cannot be ascertained, but the organization or detachment to which they belong is known, stoppage [of pay] to the amount of damages inflicted may be made and assessed in such proportion as may be deemed just upon the individual members thereof." No democratic civil court would or could follow this principle of collective guilt for the acts of individuals. This is military law, which is essentially despotic and undemocratic. Of what value is such discipline to men who are citizens of a democratic society?

Dr. Poling's main attack in his Washington speech was aimed at the people who denounce universal military training as conscription. He says that this is not conscription and that the difference between universal military training and conscription is basic. We fail to follow his logic. Here is a plan to draft young men between the ages of 17 and 20. It is universal in its application. Its purpose is military training. Its uniformed trainees are members of a corps which is in fact and in organization a branch of the armed forces, under the commander in chief. There is not a line in the bill which says that they may not be sent out of the country. They are under military law. The corps is administered by military officers. In the event of war, Congress could act in 5 minutes to sweep aside the flimsy civilian camouflage under which the National Security Training structure is masked. But even this would not be necessary. The corps is committed to obey the orders of the Commander in Chief of the Armed Forces, just as other branches of these forces are.

It is possible, of course, that Dr. Poling may not have a copy of H. R. 4278 at hand, and that he is too busy making addresses under the sponsorship of the American Legion to read its 82 pages. He may not even have a dictionary in his briefcase. So we quote a definition of conscription from Webster's New International Dictionary of the English Language, second edition, which was published in 1940: "Conscription, n., a compulsory enrollment for military or naval service; a draft." Conscript, a transitive verb, is defined as "to enroll by compulsion for military service; to draft." Conscript, the noun, is defined as "one compulsorily enrolled to serve as a soldier or sailor; a recruit secured by compulsion."

So Dr. Poling is wrong. UMT is conscription. It is peacetime conscription. The trainees are conscripts. The attempt to make universal military training appear to be anything else than conscription is deliberately dishonest. It is a specious evasion of the plain and universally accepted meaning of an English word. The confusion that this evasion has created in the public mind concerning universal military training is calculated to get the people of America to accept one thing in the guise of something else. That confusion is rapidly clearing up as the people come to understand the real nature of the system which the militarists are trying to impose on them.

This is peacetime conscription and it must be accepted or rejected as such. We believe it should be rejected.

Token China Aid Is Not Enough

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of February 23, 1948:

TOKEN CHINA AID IS NOT ENOUGH

The State Department under pressure has changed its no-aid-to-China policy. But unless it is prepared to go much further and faster in getting help to China, there is little prospect that the new policy will be more than a cruelly deceptive gesture.

Secretary Marshall now says the Communist armies may take the rest of Manchuria and north China; and that this soon would make our position in Korea untenable and our position in Japan insecure. So there is no longer any official question that American security interests are involved.

He now urges $570,000,000 in the next fiscal year for nonmilitary aid, and points out that supplying these civilian goods will release Chinese funds for purchase here of other essentials. That is, military materials. The State Department says army supplies are going forward; that some were loaded on Chinese ships at Saipan last week, that 150 transport planes are being readied, that low-cost contracts for surplus ammunition from the Marianas and Hawaii were signed last month and will be filled rapidly.

Finally Secretary Marshall emphasizes the lack of training of Chinese Nationalist troops and the inability of their officers to get maximum results without expert military advice—such as he gave to little avail when in China in 1946.

So in theory Washington favors the sending of military supplies and American military advisers, with such experts as Generals Wedemeyer and Chennault considered absolutely imperative to enable Chiang Kai-shek to halt the Red advance. The many congressional and other friends of China aid are now relieved of the time-consuming task of proving the obvious wisdom of this policy. They now can concentrate on getting it applied effectively.

As for munitions, the contracts already made are mere tokens. Far larger amounts are required, plus the men and the ships to guarantee quick delivery. Planes are of little use without spare parts and military equipment.

In the case of military advisers—the most desperate need of all—we suggest that the American military mission now cooling its heels in China be assigned to that duty at once. Washington implies that the Nanking government does not want such advisers, but Nanking indicates that it does. This absurdly costly confusion would be clarified within a few hours if Washington would lift its reported order to its military mission to refrain from advisory activities.

The Chinese Government certainly shares with Washington the blame for the impasse which has so long paralyzed effective cooperation for mutual benefits. But that is all the more reason for both parties now, in view of the vastly greater Communist military threat, to forget old feuds and face-saving maneuvers and to work together.

Czechoslovakia

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1948

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by George E. Sokolsky:

THESE DAYS

(By George E. Sokolsky)

There are always men, great and small, who are certain that they can do the impossible. You have known them; the man who can run the banks of the country differently and better; the man who can operate the United States Steel Corp. better than Ben Fairless; the man who never laughs when he sees a play by George Bernard Shaw; the man who knows precisely how to manage the newspaper you are now reading better than its publisher.

Among the statesmen, such a man runs his head into a stone wall of historic fact.

Such a man is Eduard Benes, President of Czechoslovakia, who conceived the brilliant idea of looking both east and west simultaneously. This Janus-faced policy was supposed to be the smartest ever conceived and the Czechs have been inordinately proud of their achievement.

It was designed to make it possible for Czechoslovakia to be a western nation while at the same time it was an eastern nation.

Czechoslovakia was to have a free economy while at the same time it permitted their own Communists to select the premier, to accelerate a Communist propaganda and to become what is called a majority parity, changing the freedom of western European economics into the slavery of Marxism.

The first sign that the Czechs had that they were not in control of their own affairs was when Jan Masaryk at the San Francisco conference served as a diplomatic valet to Molotov. That was the tip-off.

Masaryk is not a Communist but he could work with them if it suited him. He is an opportunist.

The second sign was when Czechoslovakia wanted to join the nations of western Europe that were to meet to consider the Marshall plan. Russia told Czechoslovakia to stay away.

And Czechoslovakia stayed away. That was the second tip-off, and it was an unmistakable one. Whether one is for or against the Marshall plan, it was to be admitted that the nations of western Europe that met at Paris to set up the program represented, together with Spain, all that is left of what might be called western civilization in Europe.

Czechoslovakia, which rightly belonged at the conference, was not present. Czechoslovakia there and then became a part of the Russian world.

Benes at that point could have appealed to the United Nations to judge between him and Stalin, between the right of a sovereign nation to form its own foreign policy, to determine its own economic policy, without interference from outside.

Stalin did interfere in the internal affairs of Czechoslovakia, and Benes took it.

He probably thought he had another trick up his sleeve.

Maybe he thought that Masaryk had another trick up his sleeve. Maybe he thought that he could outwit a steam roller that is not to be resisted by speeches.

So now it has come at last. Russia is moving on Czechoslovakia as it moved on Hungary, as it moved on every Balkan country except Greece. This is war by propaganda—war by treachery and the utilization of quislings.

What Hitler planned at Munich, what traitors did in every country into which the German armies marched, was petty larceny compared with the horrible miseries that Stalin is bringing to country after country.

And there is no stopping him at any particular point as long as the western powers lack the will or daring to stand up to him even on the basis of their opposition to Hitler. Czechoslovakia is only another step in the march to Europe's death.

There are men who serve Russia in every country: Togliatti in Italy; Thorez and Duclos in France; Gottwald in Czechoslovakia.

Who is the man in the United States who, in pursuit of personal power and personal advantage, is playing this silly game of believing, like Benes, that he can evade becoming the prisoner of those who are willing to feed his vanity, supply him with a claque to applaud his platitudes, to cheer his every gesture, while he, Janus-faced, looks both east and west, playing both ends against the middle?

It would seem to me that Henry Wallace is the Eduard Benes of America—albeit a less graceful one.

Truman Permits Vital Security Program To Bog Down

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. SHAFER. Mr. Speaker, the present political administration has been drumming up a feeling of urgency among our people by making it seem that there is danger of a war with Russia. Every time a new plan for spending American tax money overseas is O. K.'d in the White House, a new incident of some kind is publicized from overseas to scare Americans into making the appropriation.

We in Congress, as most of us realize, are kept busy digging to get the truth. Frequently, we see evidences of chicanery and half-truth or lies by innuendos and omissions, in the testimony of prominent Democrats and in the stream of propaganda issued by one or the other of the Federal departments.

I, for one, am going to get all the information possible into the hands of the people, for only through knowing the facts can the average man make up his mind about what policies he wants our Government to follow. Let the people know. That should be our watchword.

As we know, and I repeat, the administration has been leaving the hint, clearly and unmistakably, that there is danger of a war, that we are in an emergency period. It has used this old and familiar technique to promote any of a dozen projects in Congress, notably universal military training, the so-called Marshall plan, and the Greek-Turk drain.

Now, as chairman of a subcommittee of the House Armed Services Committee, I am in a position to know that the administration has fallen down on one of the most important bases of a strong and prepared America—stock piling of strategic materials.

Enacting new laws ostensibly to make America strong will be meaningless if we do not have good administration of laws already in effect.

Approximately 3 years ago, Congress passed the stock-piling law, which was designed to assure us that we never would be caught short on strategic materials such as natural rubber, molybdenum, industrial diamonds, and many others, in case of another war. Ample funds were voted by Congress to start this program.

Now, after 3 years, we might legitimately ask, in view of the emergency attitude fostered by the executive branch of the Government, how are we getting along on strategic stock piling? Since the official reports are labeled "confidential," I do not feel free to give exact figures of the so-called Stock-piling Board, but I have read the latest report and I am amazed that the administration could have the effrontery to suggest other measures while failing to see that the stock-piling legislation works.

Of something more than 65 strategic materials included in the stock-piling program, only two or three are in full supply in this Nation. On several of the acquistion programs, the stock pile is as big as the program contemplates for this time, in other words, up to schedule. But in more than 60 strategic metals, minerals, and materials, we are not up to schedule on our stock piling.

What good would it do to have millions of men under arms, or trained to fight, Mr. Speaker, when the minerals and metals and materials needed to supply these men were not available through poor administration of a law passed by Congress? An army is no more efficient than its lines of supply, and the lines of supply cannot be kept filled unless the minerals and metals and materials needed to make the implements of war are available.

After Pearl Harbor, as we all can remember clearly, this Nation faced a rubber emergency of the first magnitude. We were caught short in respect to a vital commodity. A hasty and, of course, expensive synthetic rubber construction program was undertaken and carried through in the nick of time. But there were still widespread dislocations. Motorists had to make old tires work long after these tires should have been junked.

Now you and I would think that the executive branch of the Government would have learned a lesson from this. But apparently not. Today, the armed services have not stock-piled rubber in anything like the quantities they should

have, although the militarists keep talking war, war, and more war. We have the synthetic plants, to be sure, but we still need plenty of natural rubber, or would need it in case of a major war.

The administration of our stock-piling program is in such a mess that the Government's right hand doesn't know what its left hand is doing. Merely to acquire a little natural rubber, the bureaucrats have to pass an order through 6 or 7 different boards, councils, or committees. There is no one person in authority to move fast if the occasion demands.

Not long ago, I am reliably informed, the Government had a chance to acquire 20,000 tons of natural rubber at a fair price. Under existing procedures, if the price of natural rubber is higher than 18 cents a pound, the Government does not buy. If it falls under that figure, the Government can buy. This rubber I am talking about was for sale below 18 cents a pound and the Government wanted to buy it. But by the time the idea was kicked around by 6 or 7 groups in the Government, and finally was approved, the bureaucrats learned that the rubber already had been sold to a private company.

This kind of run-around and slipshod administration is one of the big reasons why the whole stock-piling program is in such a mess. Yet, we are continually being urged to pass new legislation with the implication that there is a threat to our security somewhere or the other.

As a matter of fact, as we all know, the President originally this year was going to ask for $660,000,000 for the stock-piling program. But the Bureau of the Budget, one of the President's own personal agencies in the executive department, cut the figure down to $225,000,000. That is, relatively, chicken feed compared to the billions we are talking about shipping overseas for foreign nations and considering the billions we are throwing away in other pretty obvious ways. Yet, that is the total amount Congress is being asked to appropriate for one of the most important and vital programs for national security imaginable.

Mr. Speaker, I do not believe we are going to have another war in the next decade. I am not in favor of another war, with Russia or any other nation. I was against our entry into World War II until we were forced into it, and I will be against world war III. But one thing is certain: If we are going to have a war, or even if we are not, we should be prepared. A lot of people want to get prepared in obvious ways—by having kids march around with rifles on their shoulders and waving flags. That is one way of being prepared, but it did not help France in 1940, and it will not help us in the atomic and guided-missiles war of the future. Another way of being prepared is to have adequate stock piles of every kind of metal, mineral, precious and semiprecious jewelry, a strong industrial system, and a scientifically trained and alert citizenry. That is the way I want to be prepared for war. You can have the parades. Give me the strategic materials. Wars are won by real force, not apparent force.

The Russians, and every other civilized people, can learn very easily the state of our unpreparedness. Not because of any laws we in Congress do or do not pass, but merely by checking up on our industrial capacity and the strategic materials available to us. They will not be influenced one way or another by any show of strength we make, as long as they know we lack strength in the most vital parts of our industrial and military anatomy.

Death of Hon. Thomas M. Hederman

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, February 27, 1948

Mr. RANKIN. Mr. Speaker, I have just received the sad news of the passing of Hon. Thomas M. Hederman, owner and editor of the Clarion Ledger at Jackson, Miss.

In his passing my State loses one of its finest and most valuable citizens; a true patriot, and Christian gentleman in every sense of the word.

The last editorial he ever wrote had reference to my services here. It appeared in the Clarion Ledger on Wednesday morning, February 25. He sent me a copy of that editorial together with a personal note which was mailed on the morning of February 25. He passed away that afternoon.

It is impossible for me to express my heartfelt gratitude for this last expression of a true and loyal friend. My heart goes out to his bereaved loved ones in their hour of sorrow.

His life was gentle, and the elements
So mixed in him, that nature might stand up
And say to all the world this was a man.

The editorial referred to follows:

HIGH PRAISE OF HOUSE COMMITTEE AND MISSISSIPPI'S JOHN RANKIN

"The most important and most useful committee in Congress is the House Committee on Un-American Activities," Frank C. Waldrop declares in a full-column editorial page article in the Washington Times-Herald.

And when Mississippi's Representative JOHN RANKIN in 1945, by a smart, bold, and foresighted move, caused that committee to be made a permanent House committee, Mr. RANKIN justified his career as an American citizen right there, Waldrop states further:

"When the history of our times is finally written," he predicts, "that committee will undoubtedly be described as the key to the survival of the American Republic.

"Why? Because in days when it was dangerous and unpopular to describe the conspiracy of the Communists for what it is and always has been, that committee of the House stuck to the job."

Mr. Waldrop reviews the whole history of the committee, from the time of its creation in 1938 with Martin Dies as chairman. He tell how the New Deal hated the committee and grew also to fear it. How Dies was attacked and ridiculed but fought back valiantly until breaking health forced his resignation. (JOHN RANKIN was the target of similar threats and ridicule by the same groups.)

"The second great moment in the career of the committee came when Representative JOHN RANKIN, Democrat, of Mississippi, moved at the moment when Congress was organizing in January 1945 that the House Committee on Un-American Activities be made a permanent branch of the House.

"RANKIN justified his career as an American citizen right there.

"Dies was gone. Matthews was gone. Stripling was headed for the Army. The Communists and fellow travelers were panting to get their hooks on the committee's files that had by then grown to enormous size. Once those files were transferred out of Stripling's hands, they felt, the whole war would be won.

"But they figured without RANKIN, and he outsmarted them all, to save an invaluable storehouse."

We take pleasure in noting this article not only because it gives Mississippi's JOHN RANKIN deserved praise and credit but also because of its tribute to the much-maligned Martin Dies.

We think many Mississippians will find it interesting. And, as the times become more critical and the menace of the Communist plots and activities becomes clearer to all, many others in Washington and over the country will endorse this statement that this committee may be described by historians as "the key to the survival of the American Republic."

Problem in Korea—Opportunity in Japan

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, February 27, 1948

Mr. JENISON. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I desire to call to the attention of Members of Congress an editorial appearing in the New York Daily News and the Washington Times-Herald this week. It points out anew the obvious truths present in an interesting article written by Gen. Bonner Fellers, military secretary to Gen. Douglas MacArthur and later secretary-general to the Allied Council for Japan. The article, written for the current issue of Nation's Business, has already been included in the Appendix to the RECORD through the good offices of my distinguished colleague, Hon. ABE MCGREGOR GOFF, of Idaho.

The editorial follows:

PROBLEM IN KOREA—OPPORTUNITY IN JAPAN

Russia pulled a fast, though not unexpected, one the other day, when a radio station in Pyong Yang, capital of the north Korea Russian zone, announced creation of a thing called the Democratic People's Republic of Korea.

This outfit, of course, is a Moscow marionette which will dance to any string Joe Stalin jerks. According to United States occupation authorities in Seoul, capital of southern Korea, the infant "republic" has an army well equipped with Russian arms, ammunition, and light planes.

The birth of the new "government" throws the spotlight on our problem in Korea, and it is a first-class one. We've been occupying the southern part of that peninsula since

soon after VJ-day, pursuant to an understanding with Russia that Moscow and Washington would pull their troops out of there when an independent Korean Government should be solidly established.

The United Nations Korean Commission is badly worried over this development and is warning of a possible new world war, originating in Korea, unless the Little Assembly can do something in a vigorous way to prevent it. The Little Assembly has no armed forces. Russia wants us out of there—and has much heavier fighting strength on the unhappy peninsula than we have.

What we'll finally do is anybody's guess. Meanwhile, it seems to us a highly attractive opportunity is beckoning in Japan, whose islands bracket Korea.

This opportunity is set forth in detail in a long and interesting article in the current Nation's Business magazine by Gen. Bonner Fellers, military secretary to Gen. Douglas MacArthur during the war and later secretary general to the Allied Council for Japan.

General Fellers discusses the vile atrocities Japs inflicted on captured Americans from the Bataan death march to the end of the war. He asks none of us to forgive those crimes, and probably none of us ever will. But he does offer an explanation for them which seems sound.

He blames the atrocities on three things, mainly—the cheapness of human life in the overpopulated Orient; the Shinto religion, which preaches nothing about a decent regard for one's fellowman; and the fact that the Japanese warrior caste taught the soldiers that they belonged to the master race and were duty bound to kill off, torment, or enslave all non-Japanese, especially white ones.

MAKE PEACE WITH JAPAN

All that, says Fellers, is gone. The militarists are discredited; atrocity instigators are still being jailed or executed. Christianity is making heavy inroads on Shintoism. Tetsu Katayama (Socialist) was Japan's first Christian premier. He was succeeded Saturday by Hitoshi Ashida, head of the Japanese Democratic Party.

The native Communists are doing their best to take over Japan for Russia. MacArthur has given them every leeway, every possible bit of rope to hang themselves. Meanwhile, MacArthur keeps the Russians in Toyko Allied occupation councils firmly under his thumb.

MacArthur says that the Japanese Government is now strong enough to keep the Reds where they belong if United States occupation forces are pulled out.

Fellers says that "the new Japan, provided we don't blunder, will eventually emerge as a Christian democracy and a stanch friend of the United States." Japan, incidentally, has 80,000,000 people.

The country is now one big poorhouse which is costing us $300,000,000 a year to feed. It can relieve us of that bill only by getting back on its feet economically.

MacArthur's prescription for quick Japanese recovery and firm United States-Japanese friendship is, as reported by General Fellers: Conclude a peace treaty as fast as possible, with or without Russian participation, and then withdraw United States occupation forces; and virtually forget reparations.

If we can make fast friends and potential allies of the Japanese, it seems by all odds that we'd be fools not to try. And if anybody should know how it can be done, MacArthur should.

How about serious consideration of these suggestions in United States Government circles? We're aware that the Marshall plan is taking up the time and energies of most of the statesmen; but can't some of them please give thought to the possibility of making 80,000,000 real friends for the United States at reasonable cost and at a spot on the world map where we need all the friends we can find?

New York Democratic State Committee Asks Active Support of Palestine Partition

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, February 27, 1948

Mr. KLEIN. Mr. Speaker, I am inserting in the RECORD under previous leave the statement issued by Paul E. Fitzpatrick, chairman of the Democratic State Committee of New York, which asks full support of the United Nations decision for partition of Palestine and for lifting the arms embargo and enforcing the UN determination:

Support of the United Nations' partition of the Holy Land by lifting the United States embargo against the shipment of arms to Jews in Palestine is essential to world peace, Paul E. Fitzpatrick, Chairman of the Democratic State Committee, declared today in a four-point program submitted to the New York State congressional delegation.

Such positive action, Mr. Fitzpatrick pointed out, would go far toward backing up President Truman's declaration February 12 that the United States is supporting the UN settlement, and would reinforce Secretary George C. Marshall's statement the day before that no change in our policy of support is contemplated.

Emphasizing that American troops are neither necessary nor desired, the New York State chairman strongly urged that the United States also support UN proposals for a voluntary police force, and clearly warn Great Britain against any "scuttling" of the partition.

His recommendations supplemented a proposed joint resolution introduced in the New York State Legislature Tuesday by the Democratic Party, calling on Congress to lift the arms embargo.

Mr. Fitzpatrick's complete statement follows:

"The New York State Democratic Committee is heartily in accord with President Truman's statement that the United States support the United Nations' settlement of the Palestine issue. We welcome the assurance from Secretary of State George C. Marshall that this Government contemplates no change in support of that decision.

"We are convinced that such support is essential to the future if not the very life of the United Nations as an instrument for the peaceful settlement of disputes. We also believe, however, that such support must be positive and real for those defending the United Nations' decision against aggressors who would ignore that decision and nullify it.

"We therefore respectfully but strongly recommend that the members of the New York State delegation in Congress actively support a program that would:

"1. Bolster the United Nations in this, its first important decision, lest its effectiveness for peace be destroyed.

"2. Lift the United States arms embargo so that Jews can defend the decision of the United Nations within Palestine against Arab aggression.

"3. Inform the British Government clearly that this Government will not tolerate scuttling of the partition.

"4. Support proposals by the UN Palestine Commission made to the Security Council that a voluntary police force be sent into Palestine. It is not necessary to send United States forces, for Palestine does not want American troops.

"The New York State Democratic committee sincerely believes that the above program is the only real way to back up President Truman and reinforce Secretary Marshall, in their aim to safeguard the United Nations and world peace."

Taxes Discourage Production

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 27, 1948

Mr. CURTIS. Mr. Speaker, for the benefit of the gentlemen holding the inverted theory that by taxing the initiative out of business the Nation will be led to new levels of prosperity, I have an interesting answer. This is not a communication from John Jones, owner of a multimillion-dollar corporation, but from the editor of the progressive semimonthly, the Nebraska Farmer.

Here is what Editor Tom Leadley has to say in an editorial published February 21, 1948:

TAXES DISCOURAGE PRODUCTION

Somewhere in the murky haze surrounding ing our incomprehensible level of Federal spending, debt, and tax burdens, the planners have missed a vital point in human nature, if not in economic law.

That is the effect of high taxes in discouraging individual initiative and maximum production.

Many big wheat growers in western Nebraska and Kansas were reported to be little concerned about the effect of the dry fall on their 1948 wheat crop. They don't care whether or not they raise a crop. The reason is because they will be about as well off without it. Their bins are already full of 1946 and 1947 wheat crops on which the Government will collect a major part of the selling price if sold in any one year. Maybe they would have 50 to 75 cents a bushel left net. By spreading their sales over a longer period, they keep their income brackets at a lower level and will have about as much left by that means as they would have by raising a new crop.

Probably to a lesser degree thousands of wheat growers are in a similar frame of circumstances and mind. It all works out to discourage production of a vitally needed food crop because income-tax rates are almost confiscatory. But curtailed production won't feed a hungry, starving world, nor permit production to catch up with demand and thus lower prices.

The effect is about the same in business. Proprietors don't have much enthusiasm for risking money for expansion of their business with Uncle Sam getting the lion's share of profits in corporation and individual income taxes. Instead, the normal inclination is to play safe, even curtail production, and by charging all the traffic will bear, try to offset lower volume and high taxes by higher and higher prices.

At the same time this high-tax burden closes the door to new business that would provide additional competition, and normally force prices to reasonable levels. Thus there is something to be said for the theory that lowering income taxes will result in lower prices and in an equally high and much sounder level of general prosperity through greater volume of sales, profits, and employment. This will bring more tax revenue to the Federal Government, as was proven after World War I.

Our Government and Higher Education

EXTENSION OF REMARKS

OF

HON. DAYTON E. PHILLIPS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. PHILLIPS of Tennessee. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I am inserting an address by W. I. Jones, administrative secretary, Lincoln Memorial University, delivered at Harrogate, Tenn., February 16, 1948:

OUR GOVERNMENT AND HIGHER EDUCATION

(By W. I. Jones, administrative secretary, Lincoln Memorial University)

Mr. Chairman and gentlemen, one of the reasons why our great country is today the citadel of freedom, the pantry, the treasury and the arsenal of all free peoples, is that from the beginning we have built schools and churches along with our factories and railways. While we were developing agriculture and commerce, science and industry, we have been developing character and knowledge; producing young manhood with keen eyes, steady nerves and the "know how" that is unsurpassed anywhere in the world. We built and equipped laboratories for scientific exploration, libraries for study and research; opened vast stores of knowledge for those who desired to excel. In all this we did not neglect physical and spiritual development for the well-rounded man or woman.

For a good many years, prior to World War II, there was a gradual increase in the percentage of high school graduates seeking a higher education. Universities and colleges were finding themselves crowded but were gradually expanding to meet the needs and it is quite probable that gradual and normal expansion of facilities would have met the problem of increased enrollment. There has been a gradual awakening, on the part of parents and young people, to the need of higher education. During the past 50 years there has been an increase of about 90 percent in our population. At the same time enrollment in our colleges has increased over 260 percent. It is claimed that only 2 percent of our population are college-trained but that this 2 percent make up 86 percent of the leadership of service in the business and professional world. We may, therefore, conclude that the matter of providing facilities for increasing this 2 percent of college-trained people is of prime importance. Through the years this gradual increase placed a heavy strain on the institutions of higher education. However, through taxation, endowments, private subscriptions and from whatever source, facilities were enlarged, so that expansions for the most part, met the needs created by increased enrollment.

Then came World War II. Suddenly colleges and universities found themselves with only 25 percent of the normal potential student pool to draw from. Male high-school graduates were taken out for war duty. Half of the female graduates went into war plants, industry, or the armed forces, leaving only about half of the female high-school graduates, or one-fourth of the whole, to keep our great institutions going. Some institutions became training centers for the armed forces, holding up the income for a while, but acting as a hypodermic, easing the pain before the operation.

Institutions of higher learning were, therefore, faced with a long period of curtailed income from student fees. Also, the scarcity of material and labor and the lack of finances made it impossible for colleges and universities to keep their buildings and equipment in normal repair. Leaking roofs, broken windows, damaged plaster, and faulty heating and lighting had to wait. Laboratories, libraries, dining halls, fire-fighting and all other equipment suffered. Everything, from typewriters to heating plants, had to wait. Taking millions of our young people to war had a devastating effect on our colleges and universities. It had a damaging effect on our young people themselves. Let us take the mythical John Doe, age 18. John was graduated from high school with honors and made application to a college to become an engineer. But he was called to the colors, and as he left us we said, "Now, don't worry, John, when you come back we will send you to college." For 3 years John braved the weather, the heat of battle, the hunger, and hell of war, and then one day he came home and prepared to go to college, and realize his great ambition to become an engineer.

But other things had happened. Universities and colleges had not been able to expand. In fact, they were in worse condition than when he left for the war. Also, by then, the normal crop of high-school graduates were applying for admission to college, and these were sufficient to fill these institutions to capacity. Too, 3,000,000 other John Does had come back and were applying for admission. Also, the girls who left high school for war work had come home and wanted to go to college. Added to all this was another factor. Many parents found themselves with more money than usual and decided to give their children an education. All these factors reveal tragic conditions. Not only John Doe, but over 1,000,000 others equally ambitious and who had been promised an education, received the discouraging news, "Sorry, we have no room."

This situation was the fault of no one in particular. Our first duty was to win the war. Be it always to the credit of John Doe and all the others, that they were patient in the realization of what happened, and have adapted themselves to the situation. There was, however, a realization that something had to be done and in a hurry. Educators, public officials, civic leaders, business and professional men began to study the problem. On August 8, 1946 the Congress made available $75,000,000 with which to increase temporary facilities on the campuses of colleges and universities, to enable them to increase student enrollment. Each institution was asked to make known its needs to the United States Office of Education. After a "finding of need" was established, the Federal Works Administration, through the Bureau of Community Facilities, undertook to make facilities available to colleges and universities. As needs were established vast Army camps and equipment were dismantled, moved to the campuses and reerected as temporary buildings. These installations included dormitories, libraries, dining halls, gymnasiums, classrooms, and offices. Also, much equipment was given including office equipment, refrigeration, cafeteria, fire-fighting, laboratory and industrial machinery. This program was carried out with dispatch and efficiency in a way that relieved the tension and made it possible for many more students to be enrolled and added to the effectiveness of the instruction to all who were in classes.

The program carried out under Public Law 607 was of a temporary nature but was most effective. Buildings in camps were needing paint and repairs. A few years and they would have been a total loss. Equipment was also rusting and becoming a liability. To turn these vast resources into effective, if temporary, assets to higher learning was a wise and valuable decision. Distribution was made on an equitable basis, taking into account the number of veterans enrolled, the actual need in each case, and the ability of the institution to meet the need in question. Statistics show that 1,777,028 veterans approved by the Veterans' Administration are enrolled in institutions of higher learning and that 3,000,000 already approved have not yet enrolled.

Lincoln Memorial University highly appreciates the effective aid given in this great emergency. The first aid received was a supply of desks, typewriters, and filing cabinets, replenishing worn out equipment that could not be found on the market. We also needed refrigeration to stop spoilage of food and safeguard the health of our students. This need was met. Through the war our fire fighting equipment had deteriorated beyond repair or use. Every building was a hazard. A fire engine and a number of extinguishers were supplied, removing that danger. For a number of years we had needed a gymnasium but the large number of veterans wanting to become coaches and athletic directors made this a must. Due to this need and other factors, we were awarded the sports arena at Camp Forrest which is now being rebuilt on the campus, with concrete block walls and brick veneer, making it into a permanent building. These and other valuable items have enabled Lincoln Memorial University to be effective in its courses of instruction given to veterans, and for which we are grateful. We have found, without exception, that all Federal agencies participating in this program have been fair and have striven to establish the need and meet it regardless of race, creed, or color.

This use of surplus properties gave temporary relief at a minimum cost. A total of $75,000,000 was spent, enabling an increased enrollment of thousands of students in colleges and universities. Veterans and nonveterans, who were enrolled benefited from this relief. This was a small expenditure for so great a result.

That brings us up to now. What of the future: Institutions of higher learning must face realities. In the first place, there is certain to be an increase in the percentage of new high school graduates entering college and the increase in population will normally swell the enrollment in colleges and universities. From reliable sources it is estimated that the peak of veteran enrollment will not be reached until 1951, and that the veteran enrollment will not end until about 1960. That factor plus normal increase from high schools, plus problems that may arise due to military training in the future, and all add up to a continuing demand beyond the ability of institutions to handle. Also, shortly the temporary buildings erected will no longer be of service and this depreciation will lessen the ability of schools to continue their present capacity. It is claimed that 1,200,000 veterans are now enrolled in institutions of higher learning and that the peak has not been reached. Whether the peak has been reached or not, it is true that veterans will be enrolled for 8 or 10 years, that there will be a normal increase in non-veteran enrollment, and that all institutions of higher learning will be filled to capacity with thousands unable

to enroll. Many veterans are yet in high schools and will go on to college later.

Looking toward a permanent solution of the educational stresses, a bill, S. 971, has been introduced in the Senate and H. R. 2845 into the House, calling for an appropriation of $250,000,000 to be made available to public and private (nonprofit) institutions on a matching basis for the erection of permanent buildings, such as laboratories, libraries, and classrooms. Such an aid would go far toward a solution of the problems of today. It is hoped that the amount will be increased to $500,000,000 on a matching formula, which would give $1,000,000,000 to institutions of higher learning to build facilities for the present and the future. From authentic records we learn that some temporary buildings were erected at a cost of $8 per square foot, with the average being $4.27 and the Government paying it all. It is estimated that new and permanent buildings can be erected at a cost of $11 per square foot, which shows that the cost to the Government would be $5.50 per square foot for permanent buildings instead of the $4.27 for temporary ones, the other half to be paid by the institutions themselves.

Federal authorities state that the proposed $250,000,000 will provide facilities for two-sevenths of the veterans now unable to enroll for lack of room. By doubling the amount four-sevenths could enroll. Nor will this money be wasted after the veterans' program is finished. This Nation must step up its educational facilities to keep pace with other nations. As a matter of security, our chemists, engineers, and scientists must be second to none. Whether in war or peace, we must invest in a well-educated citizenship ready at all times to measure arms with students from all other lands.

It is safe to predict that the present number of veterans will require from 8 to 12 years for the end of their educational program. Then their sons and daughters will wish higher education. Too, there may be other wars, in which case our educational institutions will be bulwarks in national defense. It is claimed that wars are being fought more and more in laboratories and test tubes. That agriculture and transportation, physics, chemistry, steam, steel, and electricity are now the weapons we will use. That being true, it is as important to have laboratories, libraries, and classrooms as it is to develop defenses against the atomic bomb. Added to these is the necessity of developing strong and intelligent men and women to use the weapons we create. For these reasons we hope the Congress will give immediate and careful consideration to an appropriation large enough to ease the strain of today and meet the needs of tomorrow.

Institutions of higher learning cannot do these things of themselves. The cost per student exceeds the income per student. By the time most institutions keep up repairs, pay present salaries, and replace worn-out equipment, they cannot meet the complete cost of new buildings needed. It is believed that from present resources, plus what can be raised from private subscriptions, colleges and universities could match appropriations from the Government and realize the improvements needed. When we realize the potential strength in peace and in war of a powerful, technically trained young American manhood and womanhood no cost is too great, and when we think of the dangers of this age in electronics, in bacteriology, in all phases of science, we realize that the maximum in education becomes a must.

In the 1,700 institutions of higher learning, projects of expansion are already planned for $180,000,000 for 350 projects for public institutions. Add to this proposed project that is needed and we have a necessary expansion program of over $1,000,000,000 for the next 3 or 4 years. It is presumed that from funds already raised and to be raised, plus tax appropriations for public institutions, half of the billion-dollar program can be raised. If, therefore, the Government could or would supply the other half, a greatly improved program of education could be realized in time to give full benefits to veterans in their junior and senior years, and for those now enrolled and the full 4 years for those yet to enroll.

It has been shown by Federal officials that the $250,000,000 would, on a 50–50 basis, enable construction of 42,500,000 square feet of space for veterans, or two-sevenths of the 141,000,000 square feet of space needed today. An appropriation of $500,000,000 would provide for four-sevenths of the needed floor space and, while not meeting the full need, would go a long way. Let us now fulfill our promise to young John Doe that he will have a chance to complete his education. Above housing, bonuses, or unemployment relief stands this promise to give opportunity to the 3,000,000 who want to go to college and cannot.

The question has arisen as to whether these Federal funds should go to public institutions or be shared with private, non-tax-supported institutions. It has been stated officially that today 40 percent of all veterans in higher institutions of learning are in private institutions. From the beginning of education in this country, private schools have pioneered, carrying their full share of the load. Another principle involved here is that the veteran may enroll in the school of his choice, and to deny the private school assistance would work an injustice both on schools and veterans. The private (non-tax supported and nonprofit) school has been and will continue to be a great source of educated leadership and an asset to the country in great emergencies.

There is another principle involved, S. 971 states that, "no department, agency, or officer of the United States shall exercise any supervision or control over any institution of higher learning to which a grant may be made hereunder nor shall any conditions or requirement be imposed, either in the grant agreement or otherwise, which shall in any way prescribe or affect the administration, personnel, curriculum, instructon, methods of instruction or materials of instruction of such institution."

This is important, it preserves the freedom of instruction called "academic freedom." In the distribution of surplus property under the emergency program the Office of Education and the Bureau of Community Facilities carried out this principle fully, and there was no discrimination as to race, creed, or color. Relief was given on the basis of proven need after the "finding of need" had been duly executed. In carrying out the provisions of S. 971 it is hoped that the same basic principles will be followed as prevailed in the distribution of surplus property under the program of temporary relief. In this way all institutions of higher learning can present a solid front. In this way by 1950 most of the three and one-fourth million students who will apply, can find accommodations.

This great need rises above political expediency. The future of this Nation in peace and in war depends upon training of our young people in the "know how" of living. This is particularly true of the sciences. To survive we must have chemists, engineers, physicians, and leaders in management second to none among the nations. Of what use will be the billions of dollars spent on relief, on hydroelectric power, on agricultural development, on our armed forces, unless we make provisions for the full development of our greatest resource—the young manhood and womanhood of America? The function, therefore, of our Government is not to restrict, hamper, or control education, but to assist institutions of higher learning in providing opportunity to every student in every part of our country to become an asset to our Republic. Our institutions cannot do this alone. Our Government cannot do it alone. But all of us, the Government, public and private institutions working together, sharing the load together, can meet the greatest challenge we have had in the history of our country.

Rent Control and Communism

EXTENSION OF REMARKS
OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. RANKIN. Mr. Speaker, as I stated on the floor in making my fight against the extension of rent control, it is a long step toward the very communism our alleged leaders presume to fear.

Under the Constitution, we cannot "take private property for public use" without just compensation. But under the Rent Control Act we are taking private property for private use without just compensation and without any constitutional authority at all.

The next step toward communism would be price fixing and the rationing of purchases—together with the so-called civil-rights program which certain demagogs are now trying to foist onto the American people, in order to placate small groups of organized racial minorities.

At this point I am inserting a letter which I received from New York this morning, and which I hope every Member of Congress will read, especially the ones who voted for the extension of rent control.

You are going to get many such letters as time goes on, I hope.

The matter referred to follows:

HON. JOHN E. RANKIN,
House of Representatives,
Washington, D. C.

MY DEAR MR. RANKIN: I have seen in today's newspapers the fight that you put up against the rent-control bill in the House of Representatives. Congratulations, Mr. RANKIN, and keep up the good work. I would like to tell you my story in short: In 1945 in order to get an apartment I bought a three-family house and moved in on the second floor, the only apartment available in the house. For the down payment of $5,000 I used all my life savings and sold my life insurance policies. In the 3 years that I owned this house my wife and I have got heart trouble and high blood pressure through the aggravation caused by the tenant on the first floor. He is making our lives miserable in every possible way and is the most undesirable tenant I have ever seen. We are both over 50 years of age and both go to work in order to make ends meet. Our physician has advised us to move on the ground floor, so we have offered 2 months' rent to our tenant to vacate the apartment. He expects 1 year's rent to move out, we cannot afford that. He earns $6,000 a year and his wife is a New York City school teacher.

Would it be possible through your gallant fight to add an amendment to the new rent law where an owner of a two- or three-family house, sick and under his doctor's advice, can move in his own house on the ground

floor, where there are no war veterans involved?

After we bought the house we found out the former owner sold the house on account of this first-floor tenant. Do we have to do the same thing in order to get a ground-floor apartment and get peace in the house?

My apartment on the second floor is also registered with the OPA so I am not for the money, just for our health.

I thank you from the bottom of my heart for whatever you can do and keep up the gallant fight, I remain,

Respectfully yours.

Statement of Hon. Charles E. Potter, of Michigan, Before Dirksen Subcommittee of Appropriations, February 25, 1948, in Connection With Forest Service Hearings

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, February 27, 1948

Mr. POTTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the Dirksen subcommittee of the Committee on Appropriations handling the Forest Service:

Gentlemen of the committee, I am appearing before you today on behalf of the State of Michigan, which at one time held an enviable position among the timber-producing States of our country. Michigan still boasts some 19 million acres of forest land, a considerable portion of which, however, is neglected second-growth timber—not because we do not recognize the need for the acceleration of research and reforestation programs but because the moneys sought in the past have not been forthcoming to the extent necessary. Within the scope of funds available, the Forest Service has done a commendable job in its established fields of endeavor also in our State.

We have in Michigan many wood-using industries which now must import much of their lumber and pulpwood. If our reforestation and other forest programs were accelerated, it would not be many years before those industries could again secure a considerable portion of their lumber from Michigan forests.

Our State of Michigan Conservation Department, with the aid of moneys made available through the Clarke-McNary fund, has been able to establish a commendable record in protecting our forests from fire. Fire losses have been something like a tenth of 1 percent of our total acreage. It is hoped that no reduction will be made in the fund as set up in the budget.

We have some 30 forest districts of which Michigan finances 24, the other six being Norris-Doxey districts where foresters provide assistance and technical advice to farmers who are woodland owners and thus encourage better wood management. These six districts receive 50 percent of their financing funds from the Government under the Norris-Doxey Act of 1937. Expansion of this technical advice to the other 24 districts is badly needed. We have 181,000 small owners whose total forest ownership equals seven and three quarter millions of acres—a very significant proportion of the total forest area in our State. Adoption of progressive cutting practices on this area would do much to safeguard the future of our timber supply and industries. An expansion of the Norris-Doxey program would be of immense help in accomplishing this. I, therefore, urge that budget figures for farm and other private forestry activities be increased.

The development of research centers under Federal leadership, and in cooperation with the State agencies, is one of the important steps in getting the basic facts we need to solve our very vexing forestry problems. We appreciate the fact that this program has been favorably considered on a national basis by your committee in the past. We feel, however, that we ought to expand the plan rapidly. I want to stress particularly that a research center for central and southern Michigan is badly needed. We can assure the committee that if one is established, it will get the warmest support and cooperative assistance from existing State agencies—the Michigan Department of Conservation, its universities and colleges.

We are also interested in establishing for the Lake States a field utilization service unit to work with the Madison Laboratory and our Lake States Experiment Station at St. Paul. Our reasons for this support are based on reports from other territories on the usefulness of such a unit and the contention of our industrial groups that the work of the Madison Laboratory can be brought to the attention of the wood industries by the activities of a utilization service unit. It is also a responsibility of this unit to bring the problems of the industry to the attention of the laboratory for solution.

To date, the Lake States is the only major timber-producing area that has been denied such a utilization service unit. In this connection, I respectfully call your committee's attention to the testimony on behalf of such a unit presented by Dr. Grover C. Dillman, president of the Michigan College of Mining and Technology, Houghton, Mich., during the Forest Service hearings of March 1945. Your attention is also directed to the correspondence from Dr. Dillman and Prof. Hereford Garland, director of the forest products research division of the same college, which I referred to Mr. DIRKSEN under date of February 2, 1948.

The cost of establishing such service is minor indeed compared to the billions we are appropriating for overseas relief and rehabilitation. It is, therefore, respectfully asked that an appropriation of $30,000 be earmarked for the establishment of a forest utilization service unit for the Lake States area even though it may mean the budget figure be increased by this amount.

If we continue to supply foreign countries with the fruits of our natural resources, it certainly becomes of greatest necessity that we do everything possible to conserve and further develop those resources. Foresight is better than hindsight—also in the field of forest conservation. Too long have we economized on forest-conservation programs. Our children may well some day denounce us for our foolish economy.

Youth

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 27, 1948

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article which I heard given by Mr. Wendell Noble on Newscope. I thought this such a fine article that I wrote Mr. Noble requesting that he send a copy to me and I would like the entire membership of this Congress to read this quotation:

YOUTH

Youth is not a time of life. It is a state of mind. It is not a matter of ripe cheeks, red lips, and supple knees. It is a temper of the will, a quality of the imagination, a vigor of the emotions. It is a freshness of the deep things in life.

Youth means a temperamental predominance of courage over timidity, of the appetite for adventure over love of ease And this often exists in a man of 50 more than in a youth of 20.

Nobody grows old merely by living a number of years. People grow old only by deserting their ideals. Years wrinkle the skin, but to give up enthusiasm wrinkles the soul. Worry, doubt, self-distrust, fear, and despair—these are the long, long years that bow the head and turn the growing spirit back to dust.

Whether 70 or 17, there is in every being's heart the love of wonder, the sweet amazement of the stars and starlike things and thoughts, the undaunted challenge of events, the unfailing childlike appetite for what next, and the jog and game of life.

You are as young as your faith, as old as your doubt, as young as your self-confidence, as old as your fears, as young as your hope, as old as our despair.

In the central place of our heart there is a wireless station. So long as it receives messages of beauty, hope, cheer, courage, grandeur, and power from the earth, from man, and from the infinite, so long are you young. But when the wires are all down, and the central place of your heart is covered with the snows of pessimism and the ice of cynicism, then you are grown old—very old, indeed. And may God have mercy on your soul.—ANONYMOUS.

The Powers of the President as Commander in Chief of the Armed Forces

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 27, 1948

Mr. MARTIN of Iowa. Mr. Speaker, the Washington newspapers of the past few days have carried the news that President Truman's aides doubt that he has authority to commit American forces to Holy Land use. This discussion raises the very question that has been uppermost in my mind throughout the years that universal military service and universal military training have been before Congress for consideration. I have studied this issue for many years and the practically unlimited powers of the President as Commander in Chief of the armed forces of the United States under our Constitution is one of the main points on which I have always based my opposition to compulsory and universal military service as a peacetime policy while at the same time I vigorously support universal military training.

Many years ago I searched the writings of recognized authorities in this field to determine what powers the President can exercise as Commander in Chief of

the armed forces and I included some of my findings in my arguments against compulsory military service in peacetime. I will set out here a portion of my previous discussion from the CONGRESSIONAL RECORD of April 12, 1946, in the hope that my discussion on this point may be of some help to Congress and to President Truman in their study and consideration of this important issue:

This point in my analysis of this legislation has to do with the division of powers between the President and the people as represented by Congress. Selective service places men in the armed forces of the United States. Universal military training does not. Selective service brings men as soldiers and sailors involuntarily within the command of the President, as Commander in Chief of the armed forces. This power over all men in our Nation is very essential in wartime, but it should be carefully examined and thoroughly understood before it is adopted as a peacetime policy.

I have been impressed with the wide divergence of views with reference to the powers of the President as Commander in Chief of the armed forces of the United States in peacetime. It is extremely important at this time that we examine as carefully and thoroughly as possible the extent of these powers. At the outset of my search for information, I was very much impressed when I found in reading the book, The Making of the Constitution, page 530, by Charles Warren, the following statement:

"On August 27, 1787, another power suggested by the committee was granted to the President, without debate (so far as appears from Madison's notes) that of 'Commander in Chief of the Army and Navy of the United States and of the militia of the several States when called into the actual service of the United States.' Such a power had been vested in the State Governors in practically all the State constitutions; and in some the Governor had few powers or functions other than military."

That is why they did not debate the matter very thoroughly in the Constitutional Convention. So going back to the Constitutional Convention you cannot find any very great light on the division of power between the President and the Congress in the matter of national defense. The wording of the Constitution, of course, is quite general.

I was very much impressed in reading the annotations of the Constitution of the United States to find so few references therein to discussions of the peacetime power by our Supreme Court. In some of these cases, the statement is made that Congress has the power not only to raise and support and govern armies but to declare war and that it has therefore the power to provide by law for carrying on war. The Court in these cases states further that the command of forces and the conduct of campaigns are powers derived from the Constitution, but inasmuch as neither is defined by that instrument, their extent must be determined by their nature and by the principles of our institutions. The Court states also that the power to make the necessary laws is in Congress and the power to execute is in the President, and each includes all authority essential to its due exercise "but neither can the President, in war more than in peace, intrude upon the proper authority of Congress, nor Congress upon the proper authority of the President" (*Ex parte Milligan* (4 Wall. 2, 139 (1866)); *Swaim* v. *United States* (28 C. Cls. 173, 221 (1893)), affirmed 165 U. S. 553 (1897)).

I have made a very brief search for authoritative statements with particular reference to the powers of the President as Commander in Chief of the armed forces of the United States in time of peace. My purpose in making this small contribution to the discussion at this time is to impress upon the House the importance of the full exercise at this time of such powers as the House may wish to exercise in restricting the power of the President.

Prof. Edward S. Corwin, on the President's Control of Foreign Relations, states:

"I conclude that the Presidential power under survey (the right to perform acts of war without congressional authorization where the question is as to his right to take measures which are technically acts of war in protection of American rights abroad) is somewhat analogous to the so-called right of self-preservation at international law. Theoretically the power is a defensive power and reserved for grave and sudden emergencies. Practically, the limit to it is to be found in the powers of Congress and public opinion."

Elihu Root, in a famous debate in the Senate in 1912, had the following statement to make:

"In my judgment, there is no law which forbids the President to send troops of the United States out of this country into any country where he considers it to be his duty as Commander in Chief of the Army to send them, unless it be for the purpose of making war, which, of course, he cannot do.

"Doubtless, Congress could by law forbid the troops being sent out of the country; doubtless Congress has not done it; and I apprehend that any Congress which undertook to do it would find a general protest from the people of the United States against depriving the Commander in Chief of the Army of the power to protect our citizens under those circumstances which exist widely throughout the world, in countries whose governments have not the power to maintain order within their jurisdiction. From time immemorial it has been the practice of civilized nations to send troops into those countries whose governments were too feeble or too ill-organized, too deficient in power to enforce their laws and protect foreigners."

This has primarily to do, of course, with protecting our own citizens abroad.

Prof. Clarence A. Berdahl, in his book, War Powers of the Executive in the United States, has the following to say:

"An eminent authority (Elihu Root) thinks that Congress could probably by law forbid the troops being sent out of the jurisdiction of the United States in time of peace; but in time of war the authority of the President is recognized as being absolute as to where the war is to be conducted, whether to await the onslaughts of the enemy and wage a purely defensive war within the boundaries of the United States, or to send the armed forces of the United States out of the country to carry on an offensive war in the enemy territory, in the territory of an ally, or perhaps even in the territory of a neutral."

William Howard Taft, in one of his lectures on Our Chief Magistrate and His Powers, had the following to say:

"The President is the Commander in Chief of the Army and Navy, and the militia when called into the service of the United States. Under this he can order the Army and Navy anywhere he will, if the appropriations furnish the means of transportation. Of course, the instrumentality which this power furnishes, gives the President an opportunity to do things which involve consequences that it would be quite beyond his power under the Constitution directly to effect. Under the Constitution, only Congress has the power to declare war, but with the Army and the Navy, the President can take action such as to involve the country in war and to leave Congress no option but to declare it or to recognize its existence. This was the charge made against President Polk in beginning the Mexican War. War as a legal fact, it was decided by the Supreme Court in prize cases, can exist by invasion of this country by a foreign enemy or by such an insurrection as occurred during the Civil War, without any declaration of war by Congress at all, and it is only in the case of a war of our aggression against a foreign country that the power of Congress must be affirmatively asserted to establish its legal existence.

"What constitutes an act of war by the land or naval forces of the United States is sometimes a nice question of law and fact. It really seems to differ with the character of the nation whose relations with the United States are affected. The unstable condition as to law and order of some of the Central American republics seems to create different rules of international law from those that obtain in governments that can be depended upon to maintain their own peace and order. It has been frequently necessary for the President to direct the landing of Naval Marines from United States vessels in Central America to protect the American consulate and American citizens and their property. He has done this under his general power as Commander in Chief. It grows not out of any specific act of Congress but out of that obligation, inferable from the Constitution, of the Government to protect the rights of an American citizen against foreign aggression, as in the Kotza incident, cited by Mr. Justice Miller in the Neagle case. In practice the use of the Naval Marines for such a purpose has become so common that their landing is treated as a mere local police measure, whereas if troops of the Regular Army are used for such a purpose, it seems to take on the color of an act of war.

"Thus it would be difficult to explain the landing of our Army in Vera Cruz by force as anything but an act of war to punish the government of Huerta in Mexico for its refusal to render what was deemed by President Wilson as a proper apology for a violation of our international rights in the arrest of some of our sailors. This act was committed before authority was given by Congress, but the necessary authority for it had passed one House and was passing another at the time, and the question as to the right of the Executive to take the action without congressional authority was avoided by full and immediate ratification.

"In Nicaragua in my administration an insurrection had led to the immurement of American citizens by insurrectos and the threatened destruction of American property. The President of Nicaragua, whom we had recognized and whose minister we had received, called upon us to protect our own citizens and their property because he was unable to render them the protection which their treaty rights gave them. This led to the landing of marines, and quite a campaign, which resulted in the maintenance of law and order and the elimination of the insurrectos. This was not an act of war because it was done at the request and with the consent of the lawful authorities of the territory where it took place."

The Importance of Farm Parity Prices

EXTENSION OF REMARKS
OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. ROBERTSON. Mr. Speaker, after a long program of farm support prices, recently we have witnessed a tremendous nose-dive in the prices of farm commodities. Were it not for the support program, in all probability the nose-dive of 2 weeks ago could have led us on to genuine danger.

We have now seen conclusively the value of the parity program, especially on farm products. We must ever be mindful of the fact that only with a satisfactory price on farm products will the prices of industrial products, wages of labor, and so forth, have a permanent setting. Everything is dependent upon the farm.

With the thought in mind that perhaps there are some Members of Congress and many citizens in the country not thoroughly familiar with how the farm parity works, I am including herewith an article taken from the United States News of February 27, dealing with the technical aspect of how the farm parity program works:

WE'VE BEEN ASKED HOW FARM PARITY PROGRAM WORKS

The prices of many farm commodities must be supported by the Government at 90 percent of "parity." This support can be extended by the Government to almost any product of the country's farms. The power to support prices runs until January 1, 1949. Before Congress goes home it will be pressed to extend the price-support program to January 1, 1950, with chances strongly favoring such an extention.

Many questions are raised about price supports as a result of the recent break in prices of several farm commodities. There are questions about the definition of parity. Other questions relate to how the Government may fulfill its obligation to support prices, and to the exact commodities that either are being supported or may be supported.

Costs of supports can run into big figures if a farm price decline continues. That cost will fall on taxpayers who, in effect, are committed to underwriting a minimum level of farm income. If prices go on declining taxpayer pressure will be on the side of ending or modifying the Government commitment to uphold farm prices. Pressure from farming regions, however, will be on the side of continuing controls, and probably broader controls. The result could be a planned operation of the agricultural industry in the future.

Just what is parity price? Parity is the price of a bushel of wheat or corn, or of a unit of some other commodity, that will return to the farmer the same volume of things that he buys as it would have returned back in an earlier period, usually 1910–14. It is a sort of purchasing-power guaranty. And, of course, parity prices of various farm products can rise or fall from time to time as the cost of things a farmer buys rises and falls. The parity figure and the price-support level for a commodity usually are fixed at the beginning of the marketing year. In some cases these stand for the entire support period, in others they are revised to reflect changes.

Does Government guarantee parity? It does not guarantee full parity. The guarantee is to support five "basic" commodities at 90 percent of parity and a sixth, cotton, at 92.5 percent of parity all through 1948. A simple act of Congress can extend that guaranty beyond 1948. The guaranty also is to support 14 other so-called Steagall commodities at 90 percent of parity. The Government asked farmers to increase production of these commodities during the war emergency. In addition, the Secretary of Agriculture is empowered to support, in his discretion, the prices of almost any farm commodities with available funds.

What commodities are affected? Basic commodities in the price-support program are corn, wheat, cotton, tobacco, peanuts for nuts, and rice. Steagall commodities are hogs, eggs, chickens, turkeys, milk, butterfat, dry peas, dry edible beans, soybeans for oil, peanuts for oil, flaxseed for oil, American-Egyptian cotton, potatoes, and sweetpotatoes. Support for wool also is mandatory.

Cattle need not be supported, but can be. Support programs for other farm commodities, which the Secretary of Agriculture can support in his discretion, already are announced for this year or were in effect last year. These include dried fruits, flax, hemp, certain seed, sugar beets, sugarcane, rosin and turpentine, grain sorghums, and tung oil.

How are prices supported? Two methods are used. The first is to make loans to farmers, through the Commodity Credit Corporation, at the guaranteed price. If the price goes up, the farmer can pay off the loan with interest, and sell the commodity at the higher market price. If the price goes down, the farmer can let the Government have the commodity, but he keeps the money he got through the loan and pays no interest.

The second method of price support is Government purchase of products at the guaranteed price. These purchases can be made directly from the farmer, who sometimes stores the commodity on his farm or delivers it to a warehouse or to the Government. Also, the Government can buy farm products through dealers, cooperative associations, processors, and others.

Can the Government buy directly in the markets? Yes. The CCC can go into the commodity markets to buy farm products at anytime. These purchases can be either to support falling prices or to acquire commodities for foreign export or for other purposes. Thus, if a commodity began to fall below the support level, CCC would be likely to buy on the market in a move to check this decline. At the same time, it also might make direct purchases or loans so that producers could withhold this commodity from the market. Sometimes purchases might have the double purpose of holding prices at support levels and filling the Government's need for certain commodities.

How are loans made? CCC can make loans directly to farmers. But often it allows a farmer to make arrangements for a loan from a bank or other lending agency, with a supported commodity as collateral. Then the CCC guarantees the loan, assuring the lender 100-percent protection against a loss. Details of making loans vary for the several support programs.

Who bears any loss? The Government, and the taxpayer finally. But, in some cases, commodities bought by the Government through price-support programs have been resold later without a loss. The war gave the Government the opportunity to dispose of quantities of cotton and grains without having to take expected losses. Some recent losses have been taken in supporting the prices of such commodities as wool and potatoes. Losses could rise and amount to big sums if the Government bought large supplies of commodities to support prices, and later should be forced to sell at less than the buying prices.

How does the Government dispose of these commodities? The Government can sell to foreign governments, or to United States agencies, for relief abroad. It can direct these commodities into such channels as school-lunch programs. There are some restrictions, however, against returning commodities to competitive markets at less than the original support prices paid by the Government. That is, they cannot be dumped on the domestic markets.

How are price supports financed? The Commodity Credit Corporation, which finances most of the price-support program, has authority to spend or lend more than $5,000,000,000. Some of this already is tied up, but Congress from time to time appropriates money for the agency to finance specific programs. For example, the Department of Agriculture's appropriations each year specify that a certain amount of customs receipts shall be used for farm programs. These include purchase of commodities for school lunches, diversion to new uses or new markets, and for humane purposes. Purchase of these products also can be made an additional step in supporting farm prices.

The Government, thus, has far-reaching powers that can be used to support farm commodities against sharp price declines. Greater use of these powers may be called for this year. But Congress will decide whether to continue the price-support program—and in what form—after 1948.

How Can Peace Be Maintained in Palestine

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, on February 10 it was my privilege to have appeared on Town Meeting at Philadelphia along with Senator WARREN G. MAGNUSON, a former Member of this House and Messrs. Cecil Hourani and Moshe Shertok. Our topic for debate was How Can Peace Be Maintained In Palestine. Pursuant to permission already granted I am inserting the opening statements by my colleagues and myself made at that meeting and the opening remarks by the moderator, Mr. George V. Denny:

During my freshman days at college, sophomores studying physics used to put this question to us: "Do you know what happens when an irresistible force meets an immovable body?"

I puzzled for along time over this question until somebody told me the answer. The answer was: An inconceivable smash.

On November 29, 1947, the United Nations, led by the United States and Soviet Russia, rendered its decision on the partition of Palestine, which was designed to prevent an inconceivable smash between the irresistible force of Zionism and the immovable position of the Arabs. Your Town Meeting has devoted several programs to the Palestine question during the past few years, and we turn to it again tonight as we approach the eventful day when the British occupation ends and the power of the United Nations to keep the peace will meet its first real test.

Authorities on this subject differ greatly over the possible outcome. Should the proposed new Jewish state in Palestine be allowed to work out its own salvation in the face of the threats of the Arabs not to accept the United Nations decision? Or, should the United States and Russia, through the instrumentality of the United Nations, having taken the lead in the partition action, send in troops to keep the peace?

What should be done now to prevent the present clashes from breaking out into full-fledged warfare?

Our first speaker tonight has been the head of the political department of the Jewish Agency in Palestine since 1933. He was only 11 years old when his parents took him to Palestine to live in a purely Arabian village not far from Jerusalem. He completed his education after the First World War at the

London School of Economics. Then he returned to Palestine to become assistant editor of Davar, a Hebrew labor daily. During World War II he was responsible for the recruiting of over 20,000 volunteers in Palestine for the service in the armies of the United Nations. It is a pleasure to welcome back to Town Meeting, Mr. Moshe Shertok. Mr. Shertok. [Applause.]

Mr. SHERTOK. A discussion of the Palestine problem today cannot be gained from fundamentals. The problem has been discussed inside out for years past. For fully 8 months, it was under examination by the United Nations. The solution urged by the Arabs that the whole of Palestine should become an Arab state with the Jews remaining forever a minority under Arab rule was rejected just as it had been rejected by the Permanent Mandates Commission of the League of Nations throughout its existence, by the British Royal Commission in 1937, and by the Anglo-American Commission in 1947.

On the other hand, the United Nations were unable to accept the solution advocated by the Jews. The Jewish immigration and settlement proceeded unchecked until the whole of Palestine became a Jewish state. What the United Nations Special Committee recommended and what they essentially approved with a majority of two-thirds plus seven was a compromise solution to divide Palestine in two and to set up two states, one Arab and one Jewish.

The Jews have accepted the compromise. The Arabs are trying to defeat it by bloodshed. They are out to enforce their own solution, the one which the Assembly has rejected, by methods which the Charter condemns.

When the question of peace in Palestine is now posed, it must not be forgotten that peace and justice are inseparable. The verdict of international justice has most authoritatively been pronounced. It decreed the reestablishment of the Jewish state and the admission of the Jewish people as an equal partner to the family of nations.

The Jewish state is to embrace only a fraction, exactly one-eighth, of the area originally set aside for the Jewish National Home. In the remainder one Arab state already exists and another, the eighth Arab state of the Middle East, is to be set up.

If this settlement is implemented, stability and peace will eventually prevail. The very existence of the Jewish state will compel the acceptance of the fact by its neighbor, while its own self-interest will force it to seek friendly contacts with them.

But if the decision is flaunted, if the Arab states set out to crush the long-cherished hope of the Jews for independence by brutal force, the Jews will never submit. They will defend every square foot of the territory assigned to them by the United Nations. Volunteers will rush to their help from all countries where Jews live.

Above all, the authority of the United Nations will suffer a shattering blow and the peace of the world will be endangered by the collapse of the international machinery for settling disputes.

The issue is one of burning urgency. So far, the Jews of Palestine have withstood the onslaught. Every attack on their settlements was beaten off with heavy losses to their attackers. In military prowess, in organization, and in tactics, the Jewish settlers have proved greatly superior to their adversaries.

The boomerang effects of the aggression on the economic condition of the Arab population have been disastrous, but the odds against the Jews are mounting, encouraged by the United Nations passivity, the invasion of Palestine by bands from outside is proceeding apace.

The British Government, out to obstruct and defeat the United Nations plan, continues to supply arms to the Arab states, prevents the Jews from importing arms by sea blockade, and disarms the Jewish defenders inside the country. The effect of the British policy is to enclose the Jews in a death trap.

Defenselessness invites aggression. Let the Jews be enabled to acquire arms for their defense and to set up their militia—that is a first condition. But in the face of concerted Arab aggression from outside, their force alone may not suffice.

Moreover, the target of attack is United Nations authority, not only the Jews. The United Nations decision was adopted in the teeth of very violent threats to defy it. Now that the threats are materializing, the challenge must be taken up by the nations of the world.

The difficulty of setting up an international force is nothing as compared with the crisis which the world will eventually have to face if the Jews are left to fight it out alone with all the hordes converging on them from all sides.

Responsibility is in the habit of pursuing those who flee from it and avenging itself on those who shirk it. Failure to undertake even a slight effort of prevention may in the end entail an extremely costly cure.

Whatever happens, the Jews of Palestine will not retreat and the Jews of the world will not let them down. But it is up to the great international organizaion to uphold its decision if it wants to survive. [Applause.]

Moderator DENNY. Thank you, Mr. Shertok. Our next speaker is a graduate of Oxford University in England, who taught for 2 years at the American University at Beyrouth, and held a commission in the British Army from 1943 to 1946 when he was elected secretary of the Arab Office in Washington, which position he now holds. I take pleasure in welcoming to our platform, Mr. Cecil Hourani. Mr. Hourani. [Applause.]

Mr. HOURANI. Mr. Shertok has argued that peace can be maintained in Palestine by implementation of the United Nations plan to partition Palestine. My first remark is that the question should have been, "How can peace be restored in Palestine?" because today there is no peace there. There has been none ever since November 29 when United Nations made the recommendation which more and more people are coming to realize was a mistake—the recommendation to cut up tiny Palestine into an Arab state, a Jewish state, and an international regime for Jerusalem.

Why did the United Nations recommendation to partition Palestine disturb the peace so gravely that more than 1,000 people have already been killed there? Because the decision was taken against the wishes and interests of the vast majority of the population of the country who are the Arabs.

The Arabs refuse to accept partition for the same reason that you American citizens would refuse to agree to the establishment of a non-American State on any portion of your territory, or would refuse to allow any section of your population to secede from the majority and establish its own sovereign State.

Senator MAGNUSON, you will remember that when the Southern States of your American Union tried to secede, you did not allow them to. Imagine that the movement for secession had been financed from outside, that its purpose had been to allow thousands of foreigners to come into the country to change it from being an American land into something else. You will then understand exactly why the Arabs object to partition.

Partition is a gesture of despair, not of hope. It separates, instead of bringing together. It erects new walls between peoples at a time when mankind is striving to break down barriers.

Many delegations in the United Nations, including that of the United States, voted for partition, because they had been led to believe that it would bring peace to Palestine. Events have proved that they were mistaken. What has happened since partition was recommended is far worse than what was happening before, or what would have happened had partition been defeated.

The United Nations recommendation only inflamed the hopes of the Jews on the one hand, and enraged the Arabs on the other. The result is the present bloodshed.

It should have been obvious to the United Nations that partition could never succeed, unless a considerable section of both Arabs and Jews were prepared to accept it. That has proved not to be the case. There are many Jews and even many Zionists who do not accept partition, and the entire Arab population of Palestine, without exception, as well as the entire Arab and Moslem worlds, rejects partition. Not one Arab has been found who will have anything to do with it.

Partition, therefore, could only be implemented by the use of force against the Arabs. But that defeats its whole purpose—which was to bring peace. To send an international police force to Palestine to implement partition would be like asking a man, who has put a bomb in a house and blown up half of it, to come along with another bomb and repair the damage. All he could do would be to blow up the rest of the house.

What is needed now is not arms and police forces, but a new approach. Mr. Shertok, you have painted a picture of the Arabs in revolt against the United Nations, and you have argued that the future of this organization depends upon the implementation of partition. If you will allow me to say so, that is a false picture. It is not the Arabs who are attacking the United Nations. It is the United Nations which has made a recommendation, which if implemented would rob the Arabs of Palestine of more than half of their country.

The United Nations would not be destroyed if it has the moral courage to admit an error. It will only be destroyed if it insists in a course of action which has now been shown was made on false assumptions. If the United Nations now tries to implement partition by force, it will be adding oil to the flames of violence in Palestine instead of putting them out.

Since the United States of America took the lead in pushing partition through the United Nations, she should now take the lead in helping the United Nations to reconsider and reverse its decision before it is too late. This it can do—

1. By refusing to send her troops or to take the initiative in the formation of an international force to coerce the Arabs of Palestine.

2. By refusing to allow arms or ammunition or money to go to Palestine to be used in acts of violence.

3. By taking the initiative in referring the problem back to the United Nations for reconsideration, and then supporting a unitary solution which really takes into account the interest of all the people of Palestine, the majority of whom do not accept partition. Once partition is dead, peace can be restored to Palestine. [Applause.]

Moderator DENNY. Thank you, Mr. Hourani. Now we're going to hear from the senior Senator from the State of Washington, a Democrat, the Honorable WARREN G. MAGNUSON, a veteran of World War II, who was elected to the Senate in 1944, after having served four consecutive terms as a Member of the House of Representatives. Welcome back to Town Meeting, Senator WARREN G. MAGNUSON. [Applause.]

Senator MAGNUSON. Thank you, Mr. Denny. Dr. Hourani, in his discussion, stated that the situation in Palestine now was somewhat like the situation here in America, when several States tried to secede from the Union. It's true, Dr. Hourani, we did not allow those States to do that. We fought a war over that, because we had formed within the Constitution, the United States.

Now, in an effort, in an attempt to achieve world peace, we have formed the United Nations. [Applause.] The United Nations have made a decision. He suggests a reconsideration. Why, this Palestine matter has been reconsidered, not once but 500 times. [Applause.]

I believe that the United Nations should enforce its decisions just as surely as we did [applause]—just as surely as we did when we fought a war, to keep this Nation and the United States intact.

Now, a few days ago, the world was shocked by the assassination of its most peace-loving citizen. Today, the Hebrews in Palestine are practically as defenseless against possible extermination as was India's great leader.

In Palestine today, violence, bloodshed, and murder are the order of the day. Yet there are police forces in Palestine. There are troops in Palestine, but any semblance of order is rapidly disappearing.

The British are surrendering their mandate on May 15. That's about 90 days from now. That is the date set to proceed in full scale, again, with some of Hitler's old tricks.

Time is slipping away fast. There is a strong possibility that within 90 days, unless we do something, we might witness all the stakes in Palestine washed away in blood.

What are those stakes? They're the stakes, Dr. Hourani, of 800,000 Hebrew pioneers, and the lives of hundreds of thousands of peaceful and innocent Arabs who will also fall victims to this bloody conspiracy.

But more is involved. At stake is the future of the United Nations and the honor and the faith of the United States of America and all 52 other nations. [Applause.]

The Hebrews of Palestine have no arms or ammunition except for the paltry arsenals of the underground groups. The United States has refused to allow materials of war to go to either Hebrew or Arabs. But we imposed this embargo after we transferred to the Arab league states $37,000,000 worth of surplus war materials and nothing to the Jews. Quantities of British arms are being supplied to the Arabs. Warfare of this kind would clearly mean annihilation.

There are many reasons why warfare of this kind must be averted in Palestine. Among the most important is this: The coming partition of Palestine was the first major decision ever made by the United Nations. What happens in Palestine will be the test. Destroy that decision and we will diminish a thousandfold the chances of ever making any United Nations decision stick. [Applause.]

Americans, particularly those Americans who have followed the long, torturous, and sometimes confusing struggle of the Hebrews for a national homeland support the United Nations compromise because they believe it is justice. They know that the Arabs have seven states in the Middle East alone; that the Hebrews whose national territory is Palestine have none. They want peace maintained. So we should make two things completely clear tonight.

First, the Hebrews of Palestine are asking only for one thing: The opportunity to defend their own lives in their own country. I propose that we give them that chance by lifting the embargo as long as the other side has arms.

We might guarantee a well-regulated militia that might be necessary to the security of a free state. The right of people to keep and bear arms that shall not be infringed is one of the tenets of our own American democracy—one of the things that you people here in Philadelphia know so well; one of the things in which you have many national shrines.

Second, we should call on the United Nations to make its first order of business the enforcing of peace in the Middle East. The United Nations must demonstrate that it will not be bamboozled or black-mailed by a wanton band of mercenaries who answer the solemn decision of the world with threats of warfare, and, even today, in the newspaper suggested that on the 15th of this month that may happen.

How? By using America's moral force within the United Nations to uphold our promise to all the nations that join with us in this decent attempt to form a world peace. [Applause.]

Moderator DENNY. Thank you, Senator MAGNUSON. Now, let's switch to the other branch of our National Legislature and hear from Congressman LAWRENCE H. SMITH, a Republican, from Racine, Wis.; a member of the House Foreign Affairs Committee; a veteran of World War I; and a national executive committeeman of the American Legion. Congressman SMITH. [Applause.]

Congressman SMITH. Thank you, Mr. Denny. Mr. Shertok says we can't begin now to discuss the fundamental issues in this controversy; that we can't turn back now. He and Senator MAGNUSON advocate armed conflict. That's war. This is the essence of their argument:

I believe that peace is impossible for Palestine under partition. This fact is obvious to all. The action by the United Nations Assembly will fail, (1) because it is unfair and lacks moral justification; (2) because it lacks legal authority.

I take no partisan position on this question. I contend for a principle. If the position of the parties were reversed, Mr. Hourani, my argument would be the same.

As a nation, we have always stood for fair play. Partition as recommended by the United Nations Assembly ignores the wishes of two-thirds of the people who live there and who are Arabs and they, incidentally, have been in Palestine for 1,300 years. [Applause.]

The records of the Assembly meetings fail to indicate that any effort was made to bring the Arab and the Jew together; no suggestion as to a middle ground which might provide a working plan. This in spite of the stated objectives of the United Nations Charter to exercise the principles of justice when a breach of peace threatened.

Our Nation has always carried the torch for equal rights and self-determination. Not so long ago, President Truman said, "We shall approve no territorial changes in any part of the world unless they accord with the freely expressed wishes of the peoples concerned."

In view of this language, Senator MAGNUSON, how can the United States now approve a partition which denies the principle of self-determination?

High-level Government officials and influential private citizens are reported to have exerted considerable pressure for the adoption of the partition scheme. Congress has a responsibility to investigate this situation. I hope it will, so the integrity of the United States may be protected and, Senator, I hope you will join in this request.

Now, by what legal authority did the Assembly act? In effect, it recommended the establishment of an independent state which shall forever be under the jurisdiction of the United Nations administration. The functions of government are not in the people who live there. Permanent sovereignty is in the hands of a joint economic board without responsibility to the people.

Peace cannot be secured under these circumstances. If the parties refuse to cooperate, then blood-shed and violence will continue until the rights of the people are recognized.

I repeat again that the partition of Palestine lacks moral justification and legal authority, and it is contrary to the American spirit of fair play. Already, the United States is being asked to lift the embargo on arms. Next will come the request for our military services. Yet, it was the understanding that partition was to be achieved without resort to force.

A request for military force will be made to Russia, also. Now this means war—nothing less. It will place Russia in the Middle East where she has aimed to go for centuries, and here lies our national interest.

The danger—yes, the threat—to our oil supplies is obvious to everybody. Our policies in Greece and in Turkey are likewise in jeopardy. Secretary Forrestal recently called attention to that situation.

We are spending billions of dollars to stop the march of communism in western Europe, under the Truman doctrine. We have tried to keep the door locked against communism in Greece and in Turkey. In Palestine, we open the door wide and invite them in.

It is common knowledge that Communists are infiltrating into Palestine. The old Trojan horse technique is in operation again. All this is a part of the scheme to put Russia in the Mediterranean without firing a shot.

Time is running out, but it is not too late for reasonable men on both sides of this controversy to work out a compromise. This is a job for the United Nations. If it fails, there is little hope that it can survive the stormy years ahead. [Applause.]

Moderator DENNY. Thank you, Congressman SMITH.

Gift Loans to Europe Mean Big Commissions to Ex-New Dealers

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. SHAFER. Mr. Speaker, George Washington, the Father of our Nation, warned in his Farewell Address against the "insidious wiles of foreign influence." He advised us to be "constantly awake" toward such influence and he asserted that "the great rule of conduct for us in regard to foreign nations is, in extending our commercial relations, to have with them as little political connection as possible."

Today, I want to warn the Congress against the insidious wiles of Americans who have sold themselves and their country out to foreign influence. They are not in Paris, in Rome, in Berlin, or in London. They are right here in Washington, born in America and nurtured in our traditions. Yet, like the American Communists who recently were indicted for refusing to answer questions before a congressional committee, somewhere along the pathway of life these other Americans either have cynically decided to sell out the United States or have been hoodwinked by cleverer men.

I am sure that many Members of Congress have seen in the Washington Times-Herald of recent date the names of these Americans who have succumbed to the insidious wiles of foreigners and have sold their birthright for what amounts to a mess of pottage. On February 19, 1948, under the heading "Ex-New Dealers now work for nations seeking United States aid," there was a

list of former Goverment officials registered with the Department of Justice as foreign agents. On February 21, 1948, under the heading "Currie among ex-New Dealers prospering as foreign agents," there appeared another list.

Reading these two articles, the authenticity of which cannot be questioned, we see the names of the following former officials of the Federal Government among those listed with the Department of Justice, as required by law, as agents of foreign governments:

Lauchlin Currie, formerly one of the nine young men with a "passion for anonymity," who resigned his post as administrative assistant in the White House in June 1945 for "urgent personal considerations." He was making $10,000 a year on the Federal pay roll. Now, as a director of Robert Nathan and Associates, he is listed as representing Poland and France, while his association with the Inter-American Construction Co. entitles him to a listing among agents of Argentina, which Government paid Inter-American $1,100,820 in advance for services to be rendered.

Included in the list is the name of Robert Nathan, a long-time advocate of planned economy, who is using the knowledge of Government finance he acquired under the New Deal for the advancement of the French and Polish Governments in return for fees as high as $20,000 for 6 weeks' work.

On down the list is the name of Oscar Cox, who used to be a buddy of Harry Hopkins, had ready access to the White House for years during the regime of Franklin D. Roosevelt, and was classified as a lend-lease expert. Cox must have been really an expert on lend-lease, for he is hard at work for, and is being well paid for his work, in behalf of Costa Rica, France, and Italy.

Harry Dexter White, who never has objected to being described as "the father of the international monetary fund," and who for years served as assistant to Treasury Secretary Henry Morgenthau, is on the Department of Justice list as a representative of the Bank of Mexico—at a stipend of $18,000 annually.

Randolph Feltus, formerly also on the staff of the United States Treasury and a favorite of the pinks around Washington and New York, picked up a $20,000 fee in 1947 for services rendered during the time when that Soviet satellite was attempting to get $600,000 from Uncle Sam in the form of a gift-loan. Feltus probably had a lot to do with the maneuvering of the recent, but not yet announced, decision of the World Bank to lend Poland millions of dollars to renovate its coal mines so that, in case of another war, the Russians will have plenty of fuel to power their industry to make guns and tanks to kill American boys.

On Feltus' pay roll is one Robert T. Miller, who was permitted to resign from the Department of State in 1946, and whose name appears often on the files of the House Un-American Activities Committee.

On the list also are the names of John W. Pehle and Lawrence S. Lesser, who resigned from the United States Treasury in 1946. They now represent France and Rumania, both trying to take money away from the American taxpayer and give it to European interests.

Everywhere you turn, when you hear about attempts to get American money funneled into foreign pockets, Mr. Speaker, you run into the law firm of Covington, Burling, Rublee, Acheson & Shorb. Not long ago, you will recall, Dean Acheson, one of the darlings of the Truman administration, was in the State Department as an Under Secretary. He resigned a few weeks ago and now represents many foreign governments. No wonder, less than a month ago, he appeared before the Senate Committee on Foreign Relations and endorsed the so-called Marshall plan down to the dotting of an "i" and the crossing of a "t."

Mr. Acheson, it will be recalled, was in the Department of State during the time this Federal Government gave or loaned more than $1,600,000,000 to Russia, or Russian satellite countries, according to Senate Document No. 112, issued December 15, 1947. Yet, in that same period Mr. Acheson must have known of the Nazi-Soviet collaboration recently bared by the Department of State, and, although he may plead stupidity, he could not possibly have been so stupid as not to have guessed that Russia was going to play us for every dime she could get and then tell us, in effect, to go to hell.

What did Mr. Acheson do to protect America from being double-crossed by Russia? You know the answer to that one. He did nothing. But, behind the scenes, the law firm of Covington, Burling, Rublee, Acheson & Shorb were busy getting every kind of fee possible out of all the countries possible to funnel all the American money and goods possible out of the United States and into the foreign nations.

Besides Mr. Acheson, let me name some more names in that law firm of Covington, Burling, Rublee, Acheson & Shorb. I feel very keenly, Mr. Speaker, that Congress ought to subpena every member of that law firm when the so-called Marshall plan is before our Foreign Affairs Committee, and question them closely about all the money they have made in propagandizing and lobbying and finagling to get American money and materials into the hands of Russia and Russian satellite countries.

On the foreign registration files are the names of Edward G. Burling and John G. Laylin. Burling, formerly of the Immigration Service, and Laylin, formerly of the Treasury Department, are members of the law firm of Covington, Burling, Rublee, Acheson & Shorb.

Looking further through the list, you find the name of Donald Hiss, a brother of Alger Hiss, who also is connected with Covington, Burling, Rublee, Acheson & Shorb. Donald Hiss is a former State Department legal adviser and an active member of the Washington Committee of Democratic Action.

Altogether, so far as I know, the firm of Covington, Burling, Rublee, Acheson & Shorb, and its various partners, represent, or have represented at times, the Governments of Iran, Poland, Denmark, and Greece. By now the firm probably has picked up a few more clients among foreign nations as a result of Mr. Acheson's all-out endorsement of the Marshall plan, or the so-called European recovery plan.

Mr. Speaker, if George Washington were alive today and serving as President and heard of former officials of his Government serving foreign governments here as lobbyists and propagandists and agents, he would rebuke them in stinging terms. If the veterans of America, the millions of farmers and plain workingmen, could know of the intrigue in which these former so-called friends of the common man, took part, they would never support any measure these men endorsed in any shape, form, or fashion.

The only thing that protects these men from the scorn they rightly deserve from Americans is that it is difficult to get the news out in America. Many newspapers carry it, but not enough of them are interested in exposing the enemies of America who would sell us short. I say that we ought to be warned against the insidious wiles of foreign influence and also the insidious wiles of men who pose as Americans but are foreign agents in disguise. They will sell us out for mere cash. We must not let them betray us. We must expose them at every turn, until the people, being forewarned, can be forearmed against the insidious influence of men who would do anything for a dollar.

Mr. Speaker, under leave to extend my remarks, I include the aforesaid articles from the Washington Times-Herald:

[From the Washington Times-Herald of February 19, 1948]

EX-NEW DEALERS NOW WORK FOR NATIONS SEEKING UNITED STATES AID—JUSTICE FILES REVEAL HIGH FEES GIVEN FOR HELP CONCERNING MARSHALL PLAN

(By James Walter)

How numerous ex-New Dealers, most of them refugees from the State and Treasury Departments, are using their bureaucratic know-how to help European governments climb aboard the Marshall-plan gravy train was revealed yesterday by the Justice Department.

Files in the foreign-agents registration section of the Justice Department disclosed that scores of Roosevelt administration protegees, as well as many domestic Communists and fellow-travelers, have hired themselves out for salaries as high as $3,000 weekly to the 16 nations which are slated to share in the spoils of the European recovery program.

ROBERT NATHAN ON LIST

Top names on the list include Robert Nathan, a long-time advocate of the "planned economy" favored by Henry Wallace and the CIO; Earl Browder, temporarily deposed boss of the United States Communist Party; Oscar Cox, former White House intimate and lend-lease expert, and Alger Hiss, a protege of Dean Acheson during the latter's reign in the State Department.

Browder, despite the fact that he was ousted as top-dog United States Commie several years ago, is momentarily expected to resume leadership of the party with the personal backing of Premier Stalin. Meanwhile, Comrade Browder has listed himself as a literary advisor to the Soviet Union at a decidedly capitalistic salary.

Nathan is using the knowledge of Government finance he acquired under the New

Deal for the advancement of the French and Polish Governments in return for fees as high as $20,000 for 6 months' work.

COX WORKS FOR THREE

Cox, who was buddy-buddy for years with Harry Hopkins, Roosevelt's Svengali, is hard at work for the governments of Costa Rica, France and Italy, in the last two of which Communists are particularly strong.

Harry Dexter White, who has been described as the father of the international monetary fund, and who served as an assistant to Treasury Secretary Morgenthau, pulls down $18,000 yearly from the Bank of Mexico.

Randolph Feltus, a favorite of Florida's Senator Pepper, gets $3,000 a week from France and the Netherlands governments and received additional fees from the East Indies and Borneo. He also has an expense account of $500 a week.

FELTUS' $20,000 FEE

Feltus picked up a $20,000 fee from the Polish Government in 1947 for services rendered during the time when the Soviet satellite was trying to promote a $600,000,000 loan from Uncle Sam. Feltus, in turn, has his wife, Ann, on his pay roll and also one Robert T. Miller, who was permitted to resign from the State Department in 1946, and who appears often on the files of the House Un-American Activities Committee.

So steady has been the stream of ex-New Dealers from Uncle Sam's pay roll to that of the Marshall plan recipients that some Government bureau chiefs fear their organizations are falling apart.

John Pehle and Lawrence S. Lesser, along with White and Feltus, resigned from the United States Treasury March 26, 1946. Pehle had been in the office of the general counsel and was Director of Foreign Funds Control from 1940 to 1944. Lesser, an attorney with the Treasury Department, joined Pehle in setting up a law firm after the pair had quit the United States Government. They currently represent France and Rumania.

Donald Hiss, a brother of Alger Hiss, also is connected with Acheson's law firm of Covington, Burling, Rublee, Acheson & Shorb, The firm now represents Denmark, Greece, and Iran. It formerly represented Poland, too.

Donald Hiss was a former State Department legal adviser and is an active member of the Washington Committee for Democratic Action. His wife is a member of the League of Women Shoppers.

[From the Washington Times-Herald of February 21, 1948]

CURRIE AMONG EX-NEW DEALERS PROSPERING AS FOREIGN AGENTS—AIDES BURLING AND LAYLIN ALSO ACTIVE; FULL LIST TO BE DISCLOSED NEXT WEEK

(By James Walter)

Lauchlin Currie, whose passion for anonymity helped to qualify him as one of Franklin D. Roosevelt's top administrative assistants, currently is indulging a lucrative passion for representing foreign governments in their one-way financial deals with Uncle Sam, a search of Justice Department files disclosed yesterday.

For urgent personal considerations, Currie resigned his $10,000-a-year White House post in June 1945. As a director of Robert Nathan & Associates, he is now listed as representing Poland and France, while his association with the Inter-American Construction Co. entitles him to a listing among agents of Argentina, which paid Inter-American $1,100,820 in advance for services to be rendered.

MORE NEW DEALERS LISTED

Two more former New Dealers whose names repose in the foreign-registration files are Edward B. Burling and John G. Laylin. Burling, formerly of the Immigration Service, and Laylin, formerly of the Treasury Department, are partners in the law firm of Covington, Burling, Rublee, Acheson, & Shorb, which represents Poland, Denmark, Greece, and Iran.

Commonly known as Dean Acheson's law firm, the aggregation specializes in arranging loans for the countries it represents through the Export-Import Bank and the International Bank for Reconstruction and Development.

Representative STEFAN, of Nebraska, chairman of a subcommittee on appropriations, said last night he would make public the full list of persons registered as foreign agents in his report to Congress next Wednesday. Beyond predicting his report would be very illuminating, STEFAN declined to discuss it. From other sources it was learned the report deals with $500,000,000 in appropriations for four divisions of the Government's executive branch.

SHAFER SEES GAIN

Representative SHAFER, Republican, of Michigan, characterized the disclosure that many former New Dealers were registered as agents of foreign powers as evidence that these men have been making big business out of our foreign loan program for their own personal gain.

"It has been big business ever since we started making the loans and these disclosures merely back up what I've been saying all along," SHAFER said. "These men, Acheson, Currie, Harry D. White, Oscar Cox, Randolph Feltus, John W. Pehle, Donald Hiss, Nathan, and others, have turned our foreign aid program into big business at great personal gain."

Meanwhile, Capitol Hill puzzled last night over how a Washington lawyer, Martin Popper, of 1731 Harvard Street, NW., managed to breach Russia's Iron Curtain in 1946, a year before his legal firm of Wolf, Popper, and Wolf was paid $1,000 for a month's service to Poland.

In his registration statement Popper said he visited France and Russia in connection with the establishment of an international bar association. The lawyer is national executive secretary of the National Lawyers' guild, which the House Committee on Un-American Activities has called subversive. The same group also was called subversive by the New York committee which investigated municipal civil service.

COMMITTEE WAS A CLIENT

The firm assisted in the defense of the Joint Anti-Fascist Refugee Committee which Attorney General Clark has branded subversive and lately has been aiding the 10 Hollywood writers who were cited for contempt of Congress. Popper, himself, is a member of the executive board of Henry Wallace's political action committee.

Justice Department records show that Popper visited Russia during a trip he made as an observer to the Nuremburg trials in Germany.

Americanism Week—Jaycee Program

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include a speech I made at Cleveland, Tenn., February 20, 1948, at a meeting sponsored by the Cleveland, Tenn., Junior Chamber of Commerce as part of the Americanism Week of the Jaycees:

I congratulate you upon Americanism Week. Throughout the Nation more than 2,000 active Jaycee Clubs have emphasized the great privilege of being an American. They have pointed out however, that every privilege carries a responsibility. You have done a good job of talking about the virtues of freedom, opportunity, and progress, exemplified by our American system.

Sometimes when one hears the grumbling and criticism of our Government and of our public officials we wonder about the future of our Nation. Wouldn't it be well to concentrate and talk more of what's right with our country rather than what's wrong with it? Constructive criticism is fine and always needed, but let's be certain we have a better solution before we condemn those things our Government is doing.

Sure, we all love America, but are we doing what we can to protect her? You may say, "I'm just one person—what can I do?" Suppose everyone said that? There must be a reawakening of individual responsibility. I think I see signs of such an awakening. This program tonight, the keen interest of young people throughout the land are heartening signs.

The truth is, our country is fine and there is nothing fundamentally wrong with it or with our people. We are, to be sure, entering a new era. We can make this the greatest era in our history if we will. America has only one-sixteenth of the earth's population but she produces nearly 40 percent of the world's goods. Her people own 46 percent of the world's electric power, 48 percent of its radios, 54 percent of its telephones, 59 percent of its steel capacity, 60 percent of its life-insurance policies, 85 percent of its automobiles, and 92 percent of its modern bathtubs.

Yes, it is statistically true that in the 150 years of her dynamic, adventurous life, America has made more progress than all the other nations have made in 6,000 years. What has she got that the rest of the world has not?

She has only 6 percent of the world's area. Other nations have more land and more people. Some are more richly endowed with natural resources. Several enjoy a general level of health, education, political freedom, and native ingenuity approximately comparable to our own. Carry the comparison on down the line, and you will be forced to the conclusion that the one thing which America has that the other nations lack is the American desire for freedom and of opportunity. Personal freedom and the chance of every boy and girl to get ahead.

Contrast this with other systems. Capitalism and communism stand at opposite economic poles. Communism—born of poverty and hunger—seeks to perfect a system for the equal distribution of a scarcity of goods, so that ultimately no man has enough of anything. Capitalism—born of hardship and toil—seeks to provide such a plentitude of goods that, ultimately, all men may have enough of everything. Communism is content that no man should be rich. Communism strives on keeping people poor. Furthermore, communism is just as arbitrary and despotic as was fascism. There is little difference except in the technique of the leaders.

Economically speaking, the system which provides the greatest good for the greatest number is the system which provides the greatest supply of goods for the greatest number. By any standard of comparison that system is free American capitalism. It has enabled every American worker to produce and to possess more than six times as many goods as the average worker outside the United States. No other system has equaled, or closely approached, that record.

During the war one nation, single-handed, outproduced the combined powers of the Axis. The nation was America.

No one must assume that because we have the world's most enlightened civilization and productive power that our future is easy. Greatness brings responsibility. The call for world leadership has been beckoning us for 50 years—we are just now hearing it. If light and peace are to come to the world this Nation will furnish them. We cannot escape the power and the responsibility of the American flag.

In the world today either we are going to succeed and have a period of peace or the Soviets are going to succeed and drag the world into one of its darkest ages. Our Government understands this and through a bipartisan policy is doing something about it.

We appeased Russia as long as there was a chance of agreement through that course. The Greek-Turkish loan was notice that we would stand our ground—the emergency aid program was to hold the fort against communism and to help our friends until a recovery program could be put into effect. Through the Marshall program we hope to unite 16 European nations with us in holding the mantle of freedom and peace. This program must and I believe will succeed—then a third step is necessary. Through American leadership we must work out with those other democracies a common purpose for the future. We must stand together with determination to prevent chaos and warfare. We hope, of course, that other peoples under new leadership may join in this noble undertaking, but we cannot depend on this. This means eventually a kind of federation or union of free and peace-loving nations—common defense measures, trade, exchange of ideals, understanding of one another's problems and of assistance when a friend is in trouble.

This is where the Jaycees come in, new leadership is required. You are training your members not only to help in local communities, but to take leadership in national and international problems. Training for leadership is your motto. Through your organization more than 200,000 young men are going forward to see that the force and character of this Nation is used in the interest of world peace. The Nation needs you. Your interest is another ray of hope. I know you will carry on and show the world that we are capable of meeting the destiny which has come to America.

Universal Military Training

EXTENSION OF REMARKS
OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Alonzo F. Myers:

THE PRICE ASKED FOR UMT

(By Alonzo F. Myers, chairman, department of higher education, New York University)

No intelligent decision on the question of universal military training can be reached until we have considered carefully what it would cost.

The President's Commission on Universal Training predicted the annual cost would be $1,750,000,000. However, Hanson W. Baldwin, New York Times military analyst, estimated between three and five billion would be required annually. When a similar training system was put in operation in Australia it cost almost twice as much as its sponsors had predicted.

To the direct expense must be added the indirect cost of withdrawing more than 750,000 young men each year from the labor force, apprenticeship training, and higher education. Economists have estimated almost $2,000,000,000 a year would be lost to the Nation in this manner.

It would appear then that $3,000,000,000 a year would be a very conservative estimate as to the total cost of a universal military training program. Before we add that sum to the $10,000,000,000 already appropriated to the Military Establishment for the year let us try to visualize what it would represent in terms of our civilian educational program.

According to the latest survey of the United States Office of Education, the total expenditure for education in this country during the school year 1943–44 was $3,522,007,441. This included all elementary and secondary schools, colleges and universities, professional schools, teachers' colleges and normal schools, schools for the delinquent, blind and deaf, the mentally deficient, and Federal schools for Indians.

The money we would spend for 2 years of UMT would represent more than the total value of all existing facilities for higher education in this country. According to latest Government statistics the entire value of land, buildings, equipment, endowments, and other funds of institutions of higher education in the country is slightly more than $4,500,000,000.

Three years of UMT would consume more than enough money to double the present public-school facilities in the Nation. Value of all land, buildings, equipment, permanent and sinking funds, for the public schools in the entire country, is less than $9,000,000,000.

According to the Director of the Budget, the administration advocates that UMT be given priority over aid-to-education legislation. If the present plight of the Nation's schools is overlooked in the rush to set up a compulsory military training program, we shall pay dearly for such a policy. I do not question the necessity of developing and training the minds and bodies of our youth, but if they are to be prepared to serve their country in time of peace or war we dare not siphon off billions into a military training program at the expense of our basic educational needs.

The validity of such a conclusion seems to be thoroughly established by the following factors:

Approximately one-third of all men called up by selective service during World War II were rejected because of physical, mental, and educational deficiencies. The majority of these men could have been fit for military service, if they had received the proper nutrition, medical care, and educational opportunity in childhood and youth.

A sample study during 3 months of 1942 showed that 38 of every 1,000 registrants were rejected for illiteracy. In some States rejections for educational deficiency ran as high as 74 per 1,000 among whites and 258 per 1,000 among Negroes. States with low per capita expenditures for education produced the highest percentage of these disqualified men.

The outcome of any future war will be decided in the scientific laboratories of our colleges, universities, and industries. The day is long since past when military strength can be reckoned in number of men under arms. A few dozen scientists can turn out weapons more dangerous than millions of marching men.

Yet our Nation today is confronted with a grave shortage of scientists. Diverting billians of dollars into a UMT program and interrupting the studies of our potential scientists for a year's time would contribute further to this dangerous deficiency.

The President's Scientific Research Board reported recently that the drafting of science students during the war was a major factor in producing a loss of 40,000 scientists and research engineers. Because of the dearth of qualified men the Atomic Energy Commission has had difficulty in carrying out its research, while the Army's guided missile program is only three-quarters staffed.

The field of medical research—so vital to the health of our people—has experienced a drastice reduction in qualified personnel. Between 1941 and 1945 the number of persons receiving doctor of philosophy degrees in the basic medical science dropped from 548 to 217. Federal agencies engaged in medical research report deficits in personnel up to 40 percent. Important projects are gathering dust for lack of competent men to tackle them.

The crisis in science can only be met by greater support for our schools, colleges, and universities. Our entire educational structure—from first grade through the graduate and professional schools—has suffered a terrible set-back due to the war. Putting that system back on its feet should be a number one priority in any security program.

Those who say we must have UMT to keep ahead of Russia, even though it means skimping on our educational budget, ought to be reminded that last year the Soviet Union devoted twice as much of her income to her schools, colleges, and basic research programs as did the United States.

During the war hundreds of thousands of teachers left our public schools. Present salaries are too low to attract the needed men and women to instruct our children. The average salary for teachers and school officials during 1945 was only $1,846. Today we need 78,000 qualified teachers.

There is an urgent need for new school buildings. The Office of Education predicts that our high-school population in 1960 will be 50 percent larger than in 1943–44, due to the sharp upswing in wartime birth rates. To replace obsolete structures and to provide for this new crop of children we must spend $10,000,000,000 on new public-school facilities within the next decade. If we put out $30,000,000,000 on UMT during the same time our school-building program is certain to be slighted.

Our colleges and universities are literally bursting at the seams, yet an estimated 250,000 qualified men and women, eager to attend, were turned away during the past year. Those who managed to squeeze in are being cheated out of the full benefits because of shortage of professors, lack of adequate facilities and the feverish, crowded atmosphere of the postwar academic program.

In the field of science alone we would require 15,000 more instructors, including 4,500 with doctor's degrees, in order to meet the prewar student-teacher ratio.

The percentage of income derived from endowments has been declining for many years. Our institutions of higher learning are having to depend more and more on public funds for their support. If we give the military first priority in our tax funds, our schools are bound to suffer.

We are wasting an enormous amount of human talent because qualified young people cannot afford the expense of a college education. A recent study in New York State showed that 59 percent of high-school students in the top fourth of their classes fail to attend college, if their family income is less than $5,000 a year. In Pennsylvania a survey revealed that 105 of each 1,000 high-school graduates entered college, but 174 of each 1,000, with the same mental abilities as the other group, could not attend due to lack of funds.

With the $3,000,000,000 we would spend on UMT each year we could provide free $500 annual scholarships for a million of these capable young people who cannot afford a college education. We would have enough left to raise the average public-school

teacher's salary $1,000 a year, provide $1,000,000,000 worth of new buildings and facilities for our public schools each year, and expend $500,000,000 on our colleges, universities, medical schools, and other institutions of higher learning. Within a 10-year period such an annual expenditure would more than double the present value of our entire system of higher education.

In a survey conducted by the National Opinion Research Center a cross-section of the American public was asked the following question: "If the Government had $2,000,000,000 a year to spend, would you rather have it spent on a program of better regular education in the schools, or on a program of compulsory military training in the Army or Navy?" Sixty-nine percent of those expressing a definite opinion favored the regular education system, while only 31 percent preferred military training.

Civilian education and military training are both competing for available funds. If we decide to spend $3,000,000,000 every year for UMT, we cannot expect to appropriate a similar amount in addition to what our schools are already receiving.

We must make a choice. The clear-thinking Americans who answered the public-opinion poll have indicated a wise course for the Nation to follow.

Steel Plow and Iron Curtain—One American Farmer Can Produce As Much As Six Russians—Equipment and Methods Help Him Do It

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. HAGEN. Mr. Speaker, I wish to call the attention of the Congress to the interesting article entitled "Steel Plow and Iron Curtain" by Herrell DeGraff, professor of agricultural economics, Cornell University, which appeared in the November 1947 issue of Steelways, published bimonthly by the American Iron and Steel Institute.

It is a story of the United States and Russia and the lead we hold in the vital race of food production, of the advantages we enjoy, of the supremacy we can keep, provided we never forget how it was achieved. The story is authored by Herrell DeGraff and Arthur Bartlett.

It follows:

One of my ex-GI students was speaking, the other day, of a country in which he spent some time during the war—a country which had put up a briefly valiant but futile struggle against invasion. "They fought the way they farm," he said. "Plenty of determination and brute strength, but with methods and equipment strictly from the Dark Ages."

It was an acute observation, which only a farm-bred soldier would have been likely to make. We are no longer a Nation of farmers and it is easy for nonfarmers to miss the fact that most peoples fight—and live—just about the way they farm. A country's way of farming constitutes a reasonably accurate barometer of its whole level of accomplishment, in peace or war.

The reason is very simple. Food is the first essential of life. The more people it takes in any country to produce the food to keep the country alive, the fewer are available to produce goods and services.

In other words, the farm is, and always has been, the irreplaceable foundation of the structure of society. If it takes four families on the land to produce enough surplus over their own requirements to feed one nonfarm family, then only 20 percent of a population is free to produce other things. Only as each farmer, by using more efficient methods and equipment, increases his production, are more hands and brains freed for other tasks.

We have moved so far and fast in this direction in the United States that most of us take food more or less for granted, and tend to overlook these elementary facts. Yet their implications are so far reaching that we cannot afford to overlook them much longer. They contain the key to the whole complicated world situation of today.

Back in 1943 Wendell Willkie performed a great service to the people of this country when he crystallized our realization of "one world." We had come to realize that war in Europe or creeping invasion along the southeast coast of Asia or even a squabble in Chaco were, after all, our concern in the United States; that we were, indeed, citizens of one world in which our acts affected others and the acts of others affected us.

Now with confusion and concern we see an iron curtain drawn down across Europe and pressing westward. A curtain that has shoved out to enclose a half score of nearby neighbors and threatens to extend farther. The one world has fissioned into two. We don't like it. We worry about it. We even wonder: Must there be another war? If we are spared that, as we all must hope, we still realize that we face, at least, an economic and political rivalry which may be a showdown struggle between our way of life, our system of government, and those of the Soviet Union.

We start this struggle with a tremendous advantage—the basic advantage of an agricultural system which makes Russia's look like a 14-year-old boy pitted against a brawny blacksmith in a weight-lifting contest.

Let's look at some over-all figures. First, Russia is the vastest nation in the world. She extends from 20° east longitude to 170° west longitude. She contains one-sixth of the land area of the world and the sun never sets upon her territory. The area of Russia is more than two and one-half times as great as that of the United States. She has a population one-third greater than ours, not counting the many recently brought within her influence.

But, at least agriculturally speaking, the strength of Russia ends with those figures. She has about the same harvested-crop acreage as the United States, but from our similar acreage we harvested, prewar, one and one-half times as much agricultural production as she. I am using prewar figures, for which I have drawn heavily on the writing of N. Jasny, a United States Government economist who was with the Foreign Economic Administration during the war, because, even if we had the information, it would hardly be satisfactory to draw a comparison between Russian and American agriculture today. Russia was far more disrupted by the war than we were. Her agricultural production from the thirties has been much reduced; ours has been vastly expanded. Even in the late thirties, however, our output of farm produce exceeded Russia's by 50 percent.

The most important reason for this greater total production is that the territory of the United States is far more favorably situated than the vast area of Russia. If anyone on the day of creation had staked out 3,000,000 square miles of desirable territory, he could have done much worse than to have driven his stakes in Florida, California, Washington, and Maine. Where the heat of the Tropics leaves off, the United States of America begins. Close to where the cold of the North sets in, the United States of America leaves off. Enclosed is a vast area of temperate productive lands, none of it too hot, little of it too cold, little of it too wet, but some of it too dry.

Russia suffers from being north. The port of Odessa on the Black Sea lies in the latitude of Duluth, Minn., and Aroostock County, Maine. Russia extends on north. Vast areas are too cold for agriculture. Vast areas are unproductive, spruce-forest soils. Vast areas beginning in the Ukraine and extending on east into Siberia are some of the most productive soils in the world, but they don't get adequate or evenly distributed rainfall. Too cold and too dry characterize vastly more of Russia than of the United States.

Our truly significant advantage, however, is not indicated in the total production figures, favorable as they are. The important thing is that each worker in American agriculture turned out, in those prewar years, six times as much production as each worker on the land in Russia. We have to go back to shortly before the Civil War in this country to find the time when the American farmer's productivity was as low as the Russian farmer's output in 1938.

Russia has made claims, which many of us have read, to have the most mechanized agriculture in the world. It is, of course, a gross exaggeration, though it is true with respect to a few operations. For example, 71½ percent of all spring plowing was performed by tractors in Russia in 1938. We fell far short of that figure. About half of Russia's grain acreage was harvested with the combine in 1938, and again, except for our wheat crop, we fell far short. But aside from these few operations, the vast bulk of Russian farm work is performed, not with tractors, not with machines, but by hand. The Russian farm worker in the late thirties had less than one-half horsepower in the form of draft animals, tractors, trucks, or stationary motors. The average American farmer at the same time used more than three horsepower in tractors and horses alone.

The Russian farmer worked 63 hours to grow and harvest an acre of corn. Our farmers used 27 hours on the average—only 16 in the Corn Belt—and produced double the Russian yield per acre. Russians used 330 hours to raise and harvest an acre of cotton. Our cotton producers worked 91 hours on an acre. Russia farmers worked about 47 hours to raise and harvest an acre of wheat. Our farmers worked 9 hours and the wheat yielded more bushels per acre. Russian farmers worked 530 hours to raise and harvest an acre of sugar beets. Our farmers worked 92 hours. They worked 265 hours to raise and harvest an acre of potatoes. Our farmers worked 68 hours. They worked 460 hours a year to care for a dairy cow. Our farmers worked 140 hours and produced twice as much milk per cow. On the Russian farms producing poultry, one person cares for about 500 birds. Our poultryman takes care of 1,500 or more.

Back in Civil War times, when the efficiency of our agriculture was similar to that of Russia today, we had hardly more than started using equipment as we now know it. McCormick's reaper was in use, but not widely so. The basic horse-drawn tools had been introduced, and were coming into use. Since then, however, we have been through a prolonged agricultural revolution. Soil science has been developed and applied to a previously unknown degree. Crop and livestock improvements have shot far ahead. Pest control has made unprecedented progress. Most important of all, the American farmer, using machines, mostly of steel, supplied by an aggressive American industry, has never since that time ceased to expand the effectiveness of his work.

In 1862 Ezra Cornell, the founder of Cornell University, in his presidential address to the New York State Agricultural Society, made a plea for the improvement of farm livestock. The cows of New York dairy farms were then producing almost precisely what the Russian cow produces now. He saw no reason why cows could not be twice as good as they then were. Not only has that goal been achieved but actually American husbandry has gone on to exceed it by one-third or more.

Here, then, in the great vitality and productiveness of American agriculture, has been the basis of the rising strength of the Nation and the rising standard of living of the American people. Since 1850 the percentage of the United States labor force engaged in agriculture has declined at a nearly constant rate of 6 percent per decade. We now use only one-sixth of the Nation's productive effort directly on the land; we produce enough to provide the best standard of food living to our people that is enjoyed by any nation, possibly excepting New Zealand, and still ship 10 percent of our farm products overseas.

As the productivity of the American farmer has expanded other workers, no longer required to produce the basic foods and fibers, have been able to shift to producing the thousand and one other things that add up to our high standard of living and that make our Nation so strong. As a result, the standard of living of our people has increased at the rate of 2 percent a year for the past 100 years. We have gone on to produce more autos for more people, more refrigerators, more radios, more telephones, more nylons, and more eggs for breakfast than are enjoyed by any other people in the world.

If agricultural progress has made possible our industrial society, it is just as true that our industrial economy, in turn, has made possible the expanding effectiveness of the farmer. For example, a few years ago a young chap of my acquaintance left promising nonfarm employment to return to his boyhood home in the dairy land of central New York. It was a little farm carrying 12 cows producing an average of 6,000 pounds each—just average sort of cows. And the cows were the only source of farm income. He knew scientific farming and he knew how to apply American methods of production. Within 4 years he brought up that farm to carry 20 cows instead of 12, with an average yield of 9,500 pounds of milk per head instead of 6,000 pounds. He added a flock of poultry to the farm. Four years after he took over the business he turned out a volume of production four times that of his predecessor.

He did all this with no more help than his father had used. He used machines instead. He wired electricity into his building, and used this "cheapest of all hired hands" to run a milking machine and pump water and do other jobs that would have required much hand work. He bought a manure spreader and a small tractor. He hauled hay with a buck rake. He cooled milk with electricity instead of tugging ice into the ice house all winter and out all summer. In 4 years' time he nearly doubled the farm's net worth.

Here is the record of another farm. It is 405 acres on the prairies of Illinois. All but 18 acres are in cultivation. The farm produces 200 acres of corn, 75 acres of soybeans, 60 acres of oats, 25 acres of hay, and the rest is in rotation pasture. A couple of years ago, when I saw the records of the operation, it had produced these crops and, in addition, fed 125 head of cattle to 12,000 pounds of gain and raised 165 hogs to 34,000 pounds live weight. It is a business capitalized at well over $100,000, and two brothers run it without any hired help.

How can two men handle so much business? Obviously, they could not do it without machinery. The farm is equipped with two tractors, four-row planting and cultivating equipment, combine, pick-up baler and corn picker. The steel industry and its allied industries, making possible such machines of ever-increasing efficiency, constantly reduce still further the manpower needed to produce food, and thus release still more men to devise and produce still more ways to build still higher the level of our civilization and accomplishment. It is an interlocking, self-priming system, and the end is nowhere in sight.

Why has it worked so much better for us here in the United States than for any other country? The answer is clear. It is because here individuals have had freedom to work and to enjoy the fruits of labor. Under that freedom we have built an economic system that has vastly stimulated production, individually and in the mass. It is a system in which capital, in the form of tools and production facilities, has constantly increased our enormous production per man, whether on the farm or elsewhere. The farmer's incentive to use more and better machines is that through them he can make his capital work for him, and thus be able to buy more of all an expanding civilization offers. So it works through the whole society—if it is allowed to work.

The Socialists and Communists, in recent years, have adopted the slogan, "From each according to his ability, to each according to his needs," as if they had the only answer to that sound aim. It ought to be obvious enough that it is we who have been outstandingly successful in that respect, not Russia with her Stakhanovist system to speed up the accomplishment of a worker. And we can still get "from each according to his ability" if we will continue to maintain our free productive system.

In the past two decades we have done much to compromise the private-enterprise system. We have done all kinds of damnably foolish things in the field of restrictive economics. For 10 years before the war we were telling farmers that they had to restrict production because they produced too much. One would think we expected to become more wealthy by cutting down on the production of wealth. We have told the workman that he could work only 40 hours a week. Who knows if everyone wants limited work hours and enforced idleness as against the opportunity to work? We have built up a system of economic controls based upon decisions by committees. Committees are made up of individuals who, like other individuals, can be wrong. And when they are wrong, they are wrong for everybody.

To finance a planned economy and a committee system of economic control, we have in recent years piled a progressive income tax upon American production. It works to discourage the producer because he gets penalized for producing another dollar. It works also to discourage production from the nonproducer because by getting the essentials of life without working, he is made more indolent still. We have drained off for government use dollars of personal and business earnings which should have gone back into the expansion of our capital facilities. We have so discouraged capital investment by the tax burden upon earnings and by the application of restrictive economics that the labor force of the country has been increasing faster than the production facilities for them to use. Capital per person has been decreasing.

This is cause for concern. It is more disturbing than any immediate challenge from the Russians or their system.

Whatever else may be hidden behind the iron curtain, we know it hides great weaknesses. Our strength is in plain sight: The steel coming from our mills, the machines from our factories, and the production from our farms to make it possible to get from each according to his ability, in increasing measure, the stuff of life.

Russia's challenge is not to a shooting war—not yet, at least. It cannot become so unless and until she wins the war of steel plows and the general productive efficiency which they symbolize. That is a war in which we are far ahead. We can lose only by forgetting how we got there.

Will You Buy the Marshall Plan?

EXTENSION OF REMARKS
OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Henry J. Taylor:

[From Cosmopolitan Magazine of March 1948]

WILL YOU BUY THE MARSHALL PLAN?

(By Henry J. Taylor)

Look in your cupboard, coal bin or clothes closet. There you will see the future workings of the Marshall plan.

Look at the prices in the grocery store. Ask yourself why it is hard to build a house or get a car. What are you paying for milk? For meat? Ponder tonight the connection between the steel famine and your own job security, the oil shortage and this country on wheels, the machinery scarcity and the problem of new production to whip inflation. Now you and I are ready to think about the Marshall plan.

For the Marshall plan—officially known, since Secretary Marshall disavowed that title, as the European recovery program—does not mean dollars. It means goods—mostly the same goods that America itself needs.

Never before in the history of the world has a relief proposal like this subsidy-in-goods been assembled.

It means the difference between the products that 16 European nations (chiefly Britain) believe they need and the products they can produce or buy in the next 4 years—with America donating that difference.

We American people are already paying the bill for the Government's postwar relief programs abroad at the annual rate of $376 per United States family. By this proposal the bill would be built up to $862 per American family by 1951.

Accordingly, the pocketbook, the personal welfare, and the future of every American citizen are directly involved in the question: Will you buy the Marshall plan?

Knowing that every farm, every home, every factory, every pay roll, prices, pensions, taxes, individual security, and the basic stability of the United States are all directly affected, it is up to each of us to be honestly informed and to answer. For now is the time the question must be decided in Congress in accord with the will of the people.

What is our will? Given the facts, we can find our own way to this answer for both our own good and also the good of the hard-pressed world. But we need to know the plain, unvarnished truth. And, at the moment, propaganda rules the roost.

It is not enough to say we want to help Europe—the needy, the heartworn, and weary. Everyone agrees about that. In the past 4 years of war unnumbered men have died to give humanity another chance. We who remain cannot say good-by to their efforts—not when we remember that they said good-by to life itself. But to humanity, in the end, it is results—not pronouncements—which count. And in these critical

times we cannot indefinitely postpone getting real results from anything we do for relief and recovery abroad.

The war has been over nearly 3 years. After all, something must be wrong with the way we have aided Europe so far, or the gigantic postwar aid already given would have helped more than it has and possibly won us more friends.

Our world-recovery donations ($22,000,000,000 since the end of the war) have failed to achieve their promised objectives. If they had not failed we would not now be called upon to send so many new billions.

But when earlier expenditures fail to deliver promised results, attention is generally distracted from the failures by making new promises and putting the objectives on an even wider base. New labels are sought, new slogans concocted, new arguments advanced. Generalities about the future smother the facts and fiascos of the past.

What are the chief arguments usually advanced for our buying the latest plan now that it is no longer merely an idea with good objectives but has become a specific piece of proposed legislation, presented on in all-or-nothing basis?

1. We must protect western Europe from the Communist menace.

2. Our own economic self-interest (i. e., avoiding a depression) is involved.

3. We can afford to be generous on this scale on a humanitarian basis.

Before we examine the validity of these arguments, let's see how and where the "plan" really began.

It began in London. I was there when it started. While it was being put together abroad, I journeyed to most countries involved: England, France, Italy, Greece, Switzerland, Belgium, Luxembourg, Holland, and Germany. I went to Paris while it was finally being thrashed out there. I came home and saw it finished in Washington, D. C.

Much of the European story behind the headlines and public speeches has not been told. The facts about the birth of the plan abroad, the inside inter-European commitments and cross-trades, the amazing contradictions in the program itself—all are vital, but smothered. The effect on us in our homes and work places is certainly not clearly understood. So come to London for the real beginning.

In January 1947 British Foreign Secretary Ernest Bevin notified Secretary Marshall that new large-scale American aid for England was necessary or Britain would suffer economic collapse by June.

He made a request that was kept "top secret." He asked for the equivalent of five and a half billion dollars over the next 4 years. The 1945 Congressional grant of $3,750,000,000 was being consumed at twice the rate anticipated. It was passing through the British economic system without long-term effect.

Bevin's preliminary appeal for a new loan was not made known to either the American or British public. Even the forthcoming crisis itself, foreseeable from the inside, was played down until it burst full-blown in July. Meanwhile, this is what was happening:

In a series of January dispatches to London, Secretary Marshall told Bevin that in his opinion Congress would not again appropriate a large, new fund for Britain except possibly as part of a general economic program for European recovery. Congress had objected to the original British loan because it did not represent a rounded European solution.

Throughout February, Bevin replied that the British Government understood this objection, in principle, but—as at the time of the original 1945 grant—England could not wait for such a widespread program.

In London you could see that a feeling of being bogged down permeated the British Foreign Office. Bevin needed action. He got it. He implemented his claim for separate aid by suddenly announcing that Britain was so hard-pressed that she would have to withdraw immediately from Greece.

Bevin ruffled tempers in the State Department, for he announced this in Washington and London at the same time, and publicly. But the American agreement to take Britain's place in Greece (with Turkey later included) and to vote $400,000,000 for this purpose, was the answer.

Revealed March 12 as the Truman doctrine, this was, in fact, a stopgap substitute for new, large and direct aid for England, which it was clear Congress would not grant.

Prospective British withdrawal from obligations in western Germany, and the assumption of these occupation costs by America were agreed to at the same time. But this part of the agreement remained "top secret," and announcement was withheld until November.

Nevertheless, British insistence on straight separate aid did not slacken. The pressure was increased throughout the spring, not only on President Truman and Secretary Marshall but also on most members of the United States Cabinet, and especially on Secretary of the Treasury Snyder. That pressure had reached a climax by June 1.

On June 5, Secretary Marshall made his now famous commencement speech at Harvard. He was speaking primarily to England—a fact fully realized by Bevin but lost on the British and American public alike—when he said, in three sentences, that further large-scale American aid could be expected only as a part of a general coordinated European program. With that, Secretary Marshall dropped the subject. But when Mr. Bevin tagged it the Marshall plan the force of a great American name was lent to the subsequent European proposals.

I was in London when the British Ambassador in Washington confirmed the fears of the British Government that England had lost her priority on American assistance. At that point what has since been called the Marshall plan became really the Bevin plan. It became Secretary Bevin's responsibility to construct an outline for American aid to other countries in such a manner that approximately the same amount of aid would go to Britain as if the separate aid, asked for in January, had been judged agreeable to Congress.

This Mr. Bevin accomplished in the Paris meetings of 16 nations during July, August, and September, which I went to Paris to observe.

Mr. Bevin's January appeal to Secretary Marshall for $5,500,000,000 went into the Paris plan from the outset, and stayed there.

France and Italy objected strenuously to the British proportion. But they played along with England's big long-term proportion in exchange for a bird-in-hand understanding that England would support immediate United States stopgap aid for them amounting to $685,000,000.

Mr. Bevin agreed. The British Government went on record with Secretary Marshall as urging $685,000,000 American stopgap aid for France and Italy, $227,000,000 to Italy, $458,000,000 to France. They got $540,000,000 in stopgap aid on December 19.

Now the time has come to act on the long-range presentation—predominantly aid-to-Britain, plus the additional collateral reliefs.

The overshadowing aid-to-Britain feature was kept carefully under wraps, a fact first noted by Washington newspaperman Peter Edson.

Page after page of other statistics are supplied in the official presentation to Congress. But in all the 131 pages, the percentage of American aid allocated to each country and the predominate share scheduled for England are not revealed. It required a separate investigation to obtain for this article the official figures showing where our billions would go, country by country.

Here are the facts:

England	$5,348,000,000
France	3,701,000,000
Italy	2,913,000,000
United States-British Zone Germany	2,499,000,000
Holland	2,436,000,000
Belgium-Luxemberg	1,419,000,000
Austria	713,000,000
Denmark	582,000,000
Ireland	497,000,000
Greece	473,000,000
Norway	234,000,000
Portugal	150,000,000
Iceland	38,000,000
Turkey	18,000,000
Total	21,021,000,000

Sweden and Switzerland are in for nothing. Actually they expect a favorable trade balance of about $176,000,000. This means net requests for over $20,000,000,000 from Uncle Sam. The difference between that figure and the announced 17,000,000,000 is to be made up chiefly by the International Bank and Monetary Fund, which is also 80 percent United States taxpayers' money.

England's $5,348,000,000, which is one-third of the $17,000,000,000 in the Marshall plan, is exactly the amount asked for by Bevin in January 6 months before Marshall attempted to answer England at Harvard University.

That, in brief, is the background of the plan. Now let us consider the arguments advanced for its support.

Is the threat of communism in western Europe a valid argument? If so, Britain's 32 percent share in the funds must be automatically excluded from this claim. No one has even suggested that the British people are on the verge of voting Communist under any circumstances.

This is admittedly and equally true of 9 more among the 15 other countries involved: Ireland, Iceland, Denmark, Portugal, Belgium, Luxemburg, the Netherlands, Sweden and Switzerland. These represent another $5,000,000,000; a billion dollars to Ireland and Denmark alone.

The Communist problem in two other countries involved, Austria and Greece, is commonly conceded to be military, not economic. This means that anticommunism appeal for us to buy the plan, is largely confined to France and Italy, where communism has been consistently losing ground in the grass roots for over 2 years; and western Germany where the last Communist vote was 7 percent, Turkey 4 percent.

Once revealed on a country-by-country basis, the anti-Communist angle in the overall "all or nothing" $17,000,000,000 presentation takes on a different aspect. And, in any case, few military men would care to argue that dollars alone would be effective if the Red Army marched.

What about the argument that America's economic self-interest is involved, that we must export to avoid depression?

We are in a fight against inflation. Yet nothing could be more inflationary than vast exports at public expense, not repaid, striking us squarely in our shortages.

Our exports in 1947 totaled $14,500,000,000, chiefly free. Our balancing imports were $5,500,000,000; an over-export gap of $9,000,000,000. We know, or should know, these exports are abnormal.

Our real trouble today is that the home demand—to say nothing of foreign gifts—is far in excess of our ability to produce.

We need not worry about a falling off in demand for things we can't produce. We should not buy that idea. If there is to be a decrease in our exports—and that appears to be the thing the foreign-relief planners and other prophets of our domestic doom seem to fear—this is the best possible time

to absorb the reduction. They should either admit this fact or else not claim they are trying to fight inflation. Both contentions cannot be true. If there is really going to be "boom and bust," all we have to do is ship enough goods abroad for which we won't be paid to assure it. We went on that ride once before—after the last war.

And the argument that we can afford to be this generous on a humanitarian basis? This is the major claim on which the issue must be decided and changes in the commitments made or not made in the plan.

It is the direct cost at home and the results abroad which must be considered.

Our civilization is founded on compassion and charity. The deep and honest desire of the American people is to help people abroad as much as we can within good and generous limits. No other nation in the history of the world has ever regarded the rest of the world in this light. That is another reason why we can be proud we are Americans. But this does not permit continually giving Europe a blank check on our resources or on our lives.

Further, why are we not told clearly a little-known fact about our official charity; namely, that our aid does not actually reach people abroad as a free gift, as millions of Americans suppose.

By and large, the people abroad buy from their governments or middlemen what our Government sends free. They do not receive our gifts as charity. Their governments, and others overseas, pocket the difference. Practically none of the official donations of the United States Government end up as charity to the wretched. That is why so much of our vast aid is unknown to individuals in Europe.

In our own Government, who finally constructed the Marshall plan? Who wrote the President's presentation?

Clark Clifford and Charles Murphy, young White House advisers, did the actual writing. A young task force put the program together, directed by Under Secretary of State Lovett.

"We started to figure this thing out on the back of an envelope, and it got slightly out of hand," explains Charles Kindleberger, 37, a State Department adviser on financial policy.

Earlier reports by the Krug, Harriman, and Nourse committees were purely advisory, and the vital administrative features recommended in the Harriman report were ignored. The names of the actual planners hardly carry national prestige. These are the men in the Washington task force who came up with the final answers: Charles Bonesteel, 3d (State), Frank Southard (Treasury), Frederick Northrup (Agriculture), James Boyd (Interior), Philip Kaiser (Labor), Col. Raymond M. Cheseldine (Army Civil Affairs), Thomas Blaisdell (Commerce), Burke Knapp (Federal Reserve), and a special State Department planning group consisting of William Bray, Lincoln Gordon, Ernest Gross, Arthur Kimbell, Charles Kindleberger, Paul Nitze, William Phillips, Harold Spiegel, and Walter Surrey. Nearly all are in their thirties. Theirs was the program which was finally taken to Congress with the request for a 4-year commitment and $17,000,000,000—all or nothing.

Will the plan, if adopted, be ably administered? No one can say, but we will have to do better than we have been doing. Look at the way we have handled our No. 1 problem—Germany.

As working people in America, our dole to Germany is costing us about a billion dollars a year.

The Marshall plan countries surrounding Germany—Switzerland, Holland, Denmark, Sweden, France, Italy—whose economies are interwoven with Germany's productivity, suffer through the German paralysis. So most are among the 16 nations now asking us for aid. With Germany on a dole, they must ask us for a dole too.

Accordingly, in restoring the productivity of Europe, it is only common sense to begin with Germany—the sector most demoralized and over which we have large control—yet with all safeguards against German rearmament of any kind.

Since we say the Marshall plan is dedicated to European recovery, and Secretary Marshall himself speaks of German peace-production recovery as the crux of the problem, our public may suppose that at last we have changed our original "scorched earth" policy in Germany. But fantastic as it may seem, at the same time that one set of hands in one of the 20 separate buildings that house the State Department in Washington was writing the Marshall plan for Congress, another set of hands in another building was writing a new and sweeping directive for further dismantling peace-production machinery in Germany.

In our own western area over 600 nonwar German industrial plants are now to be dismantled, scrapped, or removed as reparations under this new 1948 dismantling policy. Some 30,000 German workers have been withdrawn from production to carry out this new dismantling program.

The paralysis we are maintaining in Germany hits Italy more seriously than any other country in western Europe. Accordingly, Congress was called upon to vote Italy $227,000,000 stopgap aid in December, and the Marshall plan emphasizes, with nearly $3,000,000,000 more, the difficult situation there.

With one hand we choke off German peacetime productivity in the center of Europe and deal out a dole; with the other hand we enlarge the dole to Germany's neighboring countries. It seems one hand doesn't know what the other is doing.

Europe's recovery problem is primarily a production problem. Any program we enact, in order to succeed, must be administered here and abroad by hard-headed, realistic, production-minded Americans especially qualified for the gigantic task and operating as a selected agency for this complex effort.

Instead, nine departments are directly involved in a setup so confused, conflicting, intertwining, and unworkable that the official organization chart itself is utterly bewildering—even to the men who drew it. Said one of them to me, "It looks like Gracie Field's biggest 'aspidistrat in the world'."

If we haven't learned anything administratively from the $22,000,000,000 we've already spent, we had better learn something, and make the necessary administrative changes, before we spend $17,000,000,000 more; an amount equal to practically the entire profits of all American industry here at home last year.

Some farm aid to Europe is doubtless indicated, but is it not reasonable to suggest that any further congressional appropriation be limited to 1 year? We should not be committed for a longer program since we cannot know what our friends abroad may ar may not do for their own self-help or what may develop here at home. Further bills can always be passed, when and if needed.

The Marshall plan means $7,000,000,000 of taxes in 1948 from all of us beyond what we would otherwise pay.

Some say that if a billion dollars of the new aid is handled by the International Bank (80 percent United States money), the taxes may be "only" $6,000,000,000 additional this year. But the plan calls for $6,800,000,000 in the first 15 months. This sum is nearly two-fifths of the total sum paid in personal income taxes by everybody in America this year. It almost equals the income taxes paid by all American corporaions. It is about 70 percent as large as our entire national defense budget already voted. Yet it excludes new and forthcoming "little Marshall plans" for Latin America Asia, the Middle East, and Indonesia, the patterns for which it will establish.

It does not seem to take into account the fact that there's a limit to the number of failures Americans can absorb.

At some point our leaders failed, or we would not have suffered as we did in the depression. At another point our leaders failed, or we should have been so strong on land and sea and in the air that there could have been no war, and certainly no Pearl Harbor.

Now they fail again if they do not see that the future peace of the world depends on the internal strength of the United States. And they fail yet again if they squander our strength so we are weak when the chips are down.

Address of Hon. Clinton P. Anderson, Secretary of Agriculture

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. Clinton P. Anderson, Secretary of Agriculture, at the Jefferson-Jackson dinner, Statler Hotel, in Washington, Thursday, February 19, 1948:

If you can believe what the Republicans and their helpers say about a fellow these days, I ought to be putting on a magic show instead of making a talk.

Look at commodity prices. Senator TAFT proclaims that the administration tried to force up the price of grain at great cost to consumers. Congressman ANDRESEN declares that we forced down the price of grain and ruined the market for his voting farmers in Minnesota. And our own "Pappy" O'DANIEL says that the Secretary of Agriculture and he alone is responsible for rising prices. Thus you see the power of this great Democratic administration. We push the market up and pull it down at the same minute of the same hour of the same day.

Joshua commanded the sun to stand still and that was regarded as quite a feat in those days. But now the Democrats command the market to stand still, to rise, and to fall—all at the same time.

So I thought I ought to bring along my magic lantern and give you a little demonstration of how it works. But the National Committee felt that since this banquet was in honor of Thomas Jefferson, we should have something scholarly, and since it was in honor also of Andrew Jackson, we should have something of service to the common people. The law establishing the Department of Agriculture where I work stipulates that it shall gather and diffuse among the people useful information. Therefore, the committee, knowing of my close contact with scientists, suggested that I present scientific information here tonight.

So I decided that I would talk about the identification and control of Republicans. Whenever a new bug, beast, or blossom is discovered, the species has to be captured, classified and controlled. Captured, classified and controlled; that's the CCC of agriculture that you hear so much about.

Now to identify Republicans for you, any proper scientist would bring along his specimens. But the national committee would

not permit me to have living specimens. Hence I could have no specimens at all because no Republican would be caught dead in this distinguished gathering. However, I can give you evidence of some fossils. If you think there are no fossil remains of Republicans, you need only go to the home State of the distinguished chairman of these banquets—the Honorable Wilson Wyatt. In the State of Kentucky you will find that a Republican Party grew and blossomed and gave promise of long, fruitful life. But since the election of last fall, it is as dead as Julius Caesar and doesn't even have a Mark Antony to come and speak at its funeral.

In determining the exact species, microscopic examination is often essential. Occassionally you will find an AIKEN or MORSE who does not fit into the Republican pattern, a specimen that can best be described in scientific language as a mutation or a sport. Or there may be rare and exotic—sometimes military—specimens which classify neither as Republican or Democrat and successfully confuse the experts. But we also encounter a few of those border-line cases which the expert recognizes as throw-backs—specimens which classify themselves as Democrats for election purposes, but who display Darwin's theories in reverse by evolving to a lower stage of life and adhering to Republican ideals. But it is not my purpose to concern myself with mutations, sports, exotic specimens or throw-backs, but to deal with more stabilized forms of republicanism.

One characteristic common to the Republican species is the desire to win an election and win it quickly. Republicans have been hearing so much about atomic energy and the possibility that one great explosion of bombs could destroy the world that they are overanxious. Bob Hope, in his priceless discussion a few nights ago, summed up this predicament with persuasive eloquence when he said that the Republicans were afraid that the world would go out just as they got in.

But the world is not going out and they are not coming in.

As to habitat, the Republican species can live anywhere in the Nation. One great region is almost completely free of them, but the process of eradication meets with occasional reverses in other parts of the country. In 1936, with only Maine and Vermont in the Republican fold, it looked as if the species might disappear as did the dinosaur, the cohippus, and the Whigs. But 10 years later the restraints, the burdens, the inconveniences, and annoyances of war had made possible a fresh outbreak in many States, even in that happy hunting ground of Missouri.

This year Dr. Gallup has been making some allergy tests and finds very little reaction on most exposed surfaces. Specifically, he has found no Republican Presidential candidate who stands a chance of election.

But I hasten to give you some further means of identification. Republicans cling to lofty aims. They believe in reducing the public debt and reducing taxes at the same time. When you search for economic specimens, don't look on the top of hills; you will usually find them back of depressions. Perhaps I should remind you that you can spot them by their vision which seems to be a little impaired right now. They have a myopic condition which has become more apparent since they have been looking under every rug and into every corner for a morsel of inside information. I have had a chance to study this condition at close range. Their myopic impairment persuades them that only Republicans make money in commodity trading without special help. Only last Monday the biggest speculator of the month was to appear before a Senate committee for examination. But he didn't appear. Nobody questioned him. Nobody badgered him. Nobody accused him of having inside information. He had a simple defense. He was a Republican, and like the priest and the Levite, they passed him by on the other side of the road without a glance. There was no good Samaritan to look at his wounds.

There is another way by which you can identify the species, and that is by its mating call, which during the vote-getting season sounds like "me tooooo! me too! me tooo!" Why, only a few days ago that noted Ohio farmer, ROBERT TAFT, visited Nebraska and discoursed upon farm plans. He was in favor of parity, but a different kind of parity. He wanted the farmer to have equality with other groups of society, but to use his words, "at a much less percentage of parity than 90 percent." We don't know exactly what he means, but we suppose that the level which he would establish will be measured by the extremity of his need in the Philadelphia convention.

But he did lay out a farm plan and it was a pretty good farm plan, because it followed in fairly accurate what the Department of Agriculture had laid down before congressional committees this last spring and fall as the essentials for a long-term agricultural planning. That program had been reviewed by the Senate Agricultural Committee and it had published a very fine report following almost exactly the pattern of testimony by the Department of Agriculture. And so Candidate TAFT sounded the mating call to the Nebraska farmers, "Me too!"

Before applying control methods you must know something about the life habits of the specimen on whom you have designs. Don't be misled if in examining your specimens you find them covered by the hard shell of conservatism. No, just as surely as the spring warms the soil and starts the sap to running in the trees, then in every even-numbered year the hard shell of the cocoon begins to itch and the little larva within it tries hard to shuck it off and don the shiny wings of liberalism. TAFT, with the shiny wings of liberalism, is the new look for 1949.

Now, I give you one final identifying mark. You will find all Republicans harmonious. It's a little divided harmony, but why not? Every orchestra must have its sections of wind and brass and someone to beat the drum.

Well, once you have learned to classify and identify your specimens, control is no problem. All we have to do is give them a good dusting during the voting season. It takes some work but the results are guaranteed. We, in the Department of Agriculture, had a share in developing an insect eradicator called DDT. We also developed a weed killer called 2,4–D. In the light of this experience, I now suggest that we shake the dust off our feet and mix with it a good dose of H. S. T. This powerful ingredient is certain to be lethal to all Republican hopefuls. This product we guarantee—to control the GOP, use H. S. T. For H. S. T. is Harry S. Truman.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF

HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. FALLON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me on February 22, 1948, over Station WBAL, Baltimore, Md.:

Ladies and gentlemen, as a member of the Public Works Committee of the House of Representatives I have been very much interested by the daily debates which have ensued during the past week in reference to the proposed St. Lawrence waterway and power project.

The St. Lawrence waterway project has been before the Congress a number of times during the past 50 years. Until last year, however, the navigation aspects of that project have been urged upon the Congress without any effort to place the proposal on a sound economic basis. In other words, it has been proposed to spend over $300,000,000 out of the Federal Treasury to open the improved St. Lawrence waterway free of charge to the ships of all nations and to have Uncle Sam foot the greater portion of the bill, a much smaller part being allocated to Canada.

In my opinion the St. Lawrence seaway has lacked justification through the years and still lacks it. The official records are filled with factual material supporting this premise. In testimony offered before the Senate committee this week it was indicated that the cost to complete this undertaking would be close to seven hundred and seventy-five million. This is the estimated cost by the Army engineers. However, the actual cost is unknown but in the end it will probably reach a billion dollars. For such projects have almost always exceeded their estimates. For example—and I could cite many more if I had the time—the estimated cost of the Panama Canal was one hundred and fifty million, whereas when completed the cost was three hundred and seventy-five million—a difference of two hundred and twenty-five million. If we are going to make such a vast expenditure as this seaway would cost we could with this money improve 85 percent of our own American harbors.

Throughout the hearings during which the proposal to complete this project has been under consideration by Congress, there has been unanimous opposition on the part of the members and employees of the railroads of the United States. Many of these railroads are major trunk lines which feed the port of Baltimore millions of dollars in exports. I am informed concerning their attitude and am safe in asserting that probably without exception they are all opposed to the establishment of another great medium of waterway transportation. They are opposed because of their definite belief that the waterway will divert millions of tons of revenue freight from railroads serving the areas from which the waterway is expected to attract its business and that this will result in a substantial reduction of railroad jobs. During the past year railroad employment has decreased and security of railroad employment especially for younger men in the service is extremely precarious. During the war the railroads demonstrated their indispensability to our national security. In order to maintain efficient and save railroad transportation the country must have a trained personnel available to carry on the work of transporting the country's freight and passengers at all times. To the extent that the uncertainty of continuous employment will be increased by the establishment of a seasonal facility, which the seaway closed to navigation 5 months of the year unquestionably would be, the stability of railroad employment will be decreased and the availability of men to carry on that work in times of emergency diminished. In my judgment this is one factor of the problem that should be given most serious attention in the consideration of the national-defense phase of the matter. In the light of unsettled, uncertain, and unpredictable international conditions this country cannot afford to establish additional transportation competing agencies which will undermine and injure those already in existence.

The volume of bulk freight which would be diverted presents a serious issue for American railroads. And for seaboard ports such as Baltimore which specializes in this cargo

and have built up expensive facilities and services to handle it. Millions of tons of freight annually would be diverted from existing transportation routes. The jobs of nearly 30,000 men in the port are at stake in this matter.

By latest figures from the Department of Commerce, Baltimore handled the second largest amount of foreign commerce among all the ports of the United States in 1946, and this record was excelled in 1947. Should the seaway go through there is indicated a prospective diversion from Baltimore of over a million and a half tons of cargo or nearly 10 percent of the port's average annual total of foreign and domestic commerce.

It is only too obvious that Baltimore can ill afford such losses and it is hardly fair to the interests of our State to ask her to do so. Baltimore is a great city chiefly because it is a great port, and as the greatest asset to the city and State of Maryland, the port influences the welfare of every business and of every citizen. Its national significance is even greater than its local importance and for 235 years it has served this country well and faithfully. It is to the Nation's interest, as well as our own, to keep the port active and busy through the full 12 months of the year as was conclusively proved in the recent war when almost overnight we in Baltimore were called upon to provide the facilities for handling an almost incredible volume of war materials and supplies.

Baltimore has long been the principal seaboard service harbor for the Central West because it is the closest port geographically to the interior cargo areas of the United States. Over one hundred million dollars is invested in terminals and warehouses by private interests. Baltimore's investment of fifteen million in piers and three million in channels and the Federal investment of nearly twenty million in harbor dredging are all largely based upon the handling of interior business. Of the port's normal average annual commerce of about twenty million tons valued at over a billion dollars (of which eight million tons valued at two million is foreign trade) A substantial part is inland rail-haul business. The Government collects from ten to twenty million a year in customs duties based to a great extent on goods shipped to the interior. The four thousand deep-sea ships which annually visit our port are influenced largely by inland movement.

The seaway proposal threatens many of our port commodities which have been leading factors in the development of the harbor and for which facilities have been provided costing millions of dollars. Grain, steel, woodpulp, and packing-house products are leading examples. Other materials both in- and out-bound for which special handling equipment has been created in Baltimore at large cost. It is now proposed to divert from the Atlantic seaboard and ship through the long and torturous seaway route.

By injecting the idea of self-liquidation into the present discussion of the project the proponents apparently seek to make it less objectionable in the eyes of the public. However, a most superficial examination of the records to date leads to the inevitable conclusion that no assurance can be given that the project will ever be self-liquidating.

There has been no assertion by any responsible governmental agency that the imposition of tolls is feasible. A check of all steamship companies operating under the American flag fails to reveal a single steamship company among them that would utilize the seaway if constructed. Who then is to pay these tolls that are to make the project self-liquidating? Obviously many foreign ships would use it, particularly tramp ships with low-operating costs, and take from American flag lines hundreds of thousands of tons of this country's export and import freight.

In the brief time allotted to me it is impossible for me to deal thoroughly with this subject. I have, however, exhaustively examined each phase of the project, its economic effects, and its relationship to national defense. On the basis of the testimony I have heard I find it impossible to concur in the opinion that the project is economically sound. In my judgment this proposal threatens the welfare of the port of Baltimore, as it does that of every other major harbor on the Atlantic and Gulf seaboards. It is an ill-advised project, which cannot be justified on any sound basis of national or regional economy. At this time, with the high price of materials and the extreme doubtfulness as to its effect, I cannot agree that such vast expenditures as are involved should be undertaken. To me, no phraseology about agreeing "in principle" to charging of tolls can change the grim prospect that it will be an economic millstone about the necks of the people of the United States, which will drag doubly hard on the million people in the port of Baltimore district. I shall with all sincerity and all the emphasis I can command urge the defeat of this resolution.

Cost of ERP to Third Michigan Congressional District

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. SHAFER. Mr. Speaker, how much will the New Deal's recovery program take out of the pockets of the citizens of Michigan's Third Congressional District?

According to the Legislative Reference Service of the Library of Congress, it will cost, if the Marshall plan is adopted, $312.14 for every man, woman, and child.

That means that citizens of the congressional district who I have the honor to represent will pay an equivalent of their school, township, county, and State taxes for 25 years to finance the European recovery program.

The New Deal's ERP has already cost the citizens of Michigan's Third Congressional District $51,861,917, according to the Library of Congress. If the Marshall plan is adopted it will cost an additional $36,583,577, or a total of $88,445,494. On a per-capita basis, based on the 1940 census, this means $312.14 for every person residing in the district.

Can Kalamazoo County afford to send $31,240,532 to Europe? Can Calhoun County afford to send $29,405,461, and Eaton County $10,651,466, and Hillsdale County $9,080,777, and Branch County $8,067,258?

Indeed, it is difficult to conceive the true meaning of a figure as large as $17,000,000,000, asked for ERP under the Marshall plan. But it is not difficult to realize that $312.14 per pocketbook, in addition to other current high costs of living, would destroy practically every taxpayer in the Third District.

As someone has well stated, "providing relief to Europe is a gamble at its best. It is no sure method of stopping communism, or socialism, or war. But it is a sure method of overtaxing the American citizen and a sure method of further inflating prices."

A big question to be decided, therefore, is whether the gamble on peace in Europe is worth destruction by taxation and high prices at home.

Under permission to extend my remarks, Mr. Speaker, I include a table furnished me by the Legislative Reference Service of the Library of Congress of the cost of the New Deal's European recovery program for Michigan's Third Congressional District:

Cost of foreign aid to the Third Congressional District of Michigan, by counties and principal cities

	Population 1940	Share of foreign aid, July 1, 1945 to June 30, 1947 (population × $183.03), based on $24,099,211,087	Share of foreign aid proposed by Marshall plan, 1948–52 (population × $129.11), based on $17,000,000,000	Share of total foreign aid provided and proposed, 1945–47, 1948–52 (col. II plus col. III) ($312.14 per capita), based on $41,099,211,087
Branch County	25,845	$4,730,410	$3,336,848	$8,067,258
Coldwater City [1]	7,343	1,343,989	948,055	2,292,044
Calhoun County	94,206	17,242,524	12,162,937	29,405,461
Albion City	8,345	1,527,385	1,077,423	2,604,808
Battle Creek City	43,453	7,953,203	5,610,217	13,563,420
Marshall City [1]	5,253	961,457	678,215	1,639,672
Eaton County	34,124	6,245,716	4,405,750	10,651,466
Charlotte City [1]	5,544	1,014,718	715,786	1,730,504
Hillsdale County	29,092	5,324,709	3,756,068	9,080,777

[1] County seat.

Source: Sixteenth Census of the United States, 1940, Population, vol. 1, pp. 506–508.

NOTE.—The 1940 population figure for the continental United States is used because later figures are not available for every local unit. Population of the Nation (excluding armed forces overseas) has grown from 131,669,275 in 1940 to 143,382,000 (estimated) by July 1, 1947. If the latter figure is used, the per capita cost of foreign aid between July 1, 1945, and June 30, 1947, is $168.08 rather than $183.03.

Merger Menace and the Steel Industry

EXTENSION OF REMARKS
OF

HON. ESTES KEFAUVER
OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. KEFAUVER. Mr. Speaker, on the floor of Congress and throughout the Nation we are hearing a great many complaints about the recent increase in the price of steel. Several investigating committees and the Department of Justice are looking into the reasons for the recent and rather unexpected boost in steel prices. Considerable interest and concern is cast about the fact that all of the major steel companies found the same price increase necessary and gave notice of the increase at the same time. It is, of course, wholesome that this matter should be looked into. At a time when we are trying to hold the line against inflation a substantial price raise of steel makes this job much more difficult.

I submit, however, that the investigating committees of Congress and the Department of Justice are not getting at the basic reason for the recent price increase. The reason is the dominant position in the industry which has been gained by the United States Steel Corp. The dominant position enables the United States Steel Corp. to set the pace and the lesser companies inevitably follow along. The condition is the result, in a substantial degree, to the merger program of the United States Steel Corp. during the past 20 years. This acquisition of competing steel companies has been the result of the failure of Congress to plug the loophole in section 7 of the Clayton Act. Section 7 of the Clayton Act was intended to prevent monopolies from being created by the acquisition of a corporation by its competitor. It prohibited the acquisition of capital stock of a competitor where the result would be a monopoly. Means of evading section 7 was discovered in 1927 through the acquiring of physical properties of a competitor rather than the capital stock. Since that time section 7 of the Clayton Act has been a dead letter and this fact has enabled the United States Steel Corp. to acquire a substantial number of competitors.

The situation and the remedy is described in an editorial which appeared in the Washington Post of February 26, 1948. Under leave to extend my remarks, I wish to include this editorial, which is as follows:

MERGER MENACE

Between 1940 and 1946, says the Federal Trade Commission, more than 1,800 manufacturing and mining concerns with assets exceeding $4,000,000,000 disappeared because of mergers and acquisitions. And the trend continued during 1947. This merger movement, taking the form principally of purchases of the assets of smaller concerns by big firms, has been facilitated by the ineffectiveness of the Clayton Act, which, as interpreted by the courts, deprives the Federal Trade Commission of power to prevent a company from purchasing outright the assets of another company unless the resultant merger creates a monopoly. Since the FTC does have the power under the Clayton Act to prevent acquisition of a company's stock by another company, if the purchase would merely lessen competition or tend to create a monopoly, the result has been encouragement of industrial concentration by the merger route.

The FTC has long urged Congress to amend the Clayton Act as a means of enabling it to proceed against corporate mergers brought about through purchase of assets. A bill amending the act with that purpose in mind, the Kefauver bill, has been reported out by the House Judiciary Committee but is at the moment bottled up in the Rules Committee. The proposal has been the subject of extensive hearings, resulting in revision of the bill originally introduced. The Federal Trade Commission also made an exhaustive study of the merger developments of recent years, emphasizing the threat to free enterprise of current trends. Congress should certainly be afforded an opportunity at this session to pass on the merits of this measure, which aims to protect the interests of small business from unfair competition and monopolistic encroachments.

The postwar growth of mergers furthering the concentration of wealth and income in the hands of giant concerns emphasizes the need for plugging those loopholes in the antitrust laws that hamper the FTC's efforts to deal effectively with the merger problem. And it makes it all the more imperative for Chairman ALLEN of the Rules Committee to take the Kefauver bill out of cold storage and give Congress a chance to examine it.

Mr. Speaker, I invite the Department of Justice and the congressional committees that are investigating the present steel-price raise to consider the merger record of the United States Steel Corp. It is as follows:

The United States Steel Corp., in acquiring the different combinations in 1901, issued its stock aggregating $76,968,994 in exchange for the promotion stock given the underwriters who promoted the various consolidations which the steel corporation afterward absorbed. And the steel corporation paid its own underwriters stock of the steel corporation aggregating $73,997,500. Thus, more than $150,000,000 of the stock of the steel corporation ($41,845,600 preferred and $109,120,890 common) was issued, either directly or indirectly for mere promotion or underwriting services.

Immediately following the organization of the steel corporation, it apparently made no effort to secure control of any of the large iron and steel concerns which competed with it other than the Shelby Steel Tube Co., as hereinabove stated. However, in December 1902 the corporation acquired the entire capital stock of the Union Steel Co., which had been an exceptionally aggressive competitor. That company had theretofore absorbed the Sharon Steel Co. and had acquired the entire issue of the capital stock of the Sharon Ore Co., the Sharon Coke Co., the Sharon Sheet Steel Co., the Donora Mining Co., the Republic Coke Co., the River Coal Co., and control of the stock of the Sharon Tin Plate Co., and the Sharon Coal & Limestone Co. This acquisition cost the steel corporation over $30,000,000.

In January 1903, the steel corporation acquired, through a subsidiary, Troy Steel Products for $1,000,000. This purchase gave the corporation additional blast furnaces, steel works, and rolling mills. The plant was never operated and was dismantled in 1907.

In 1904, the corporation acquired the Clairton Steel Co., a fairly important concern, at a cost of nearly $11,000,000.

In 1907, the steel corporation acquired the Tennessee Coal Iron & Railroad Co. at a cost of nearly $49,000,000. By this acquisition, the steel corporation eliminated a competitor of growing importance with its manufacturing plants in Alabama. The acquisition was made at the time of the panic of 1907 and was claimed to be important in averting a disaster of the financial stability of the country. The acquisition made the steel corporation the most important steel factor in the southern region.

In 1908, the corporation acquired the plant and equipment of the Shoen Steel Wheel Co., which manufactured about 200,000 wheels per annum.

In 1924, the Cyclone Fence Co. was acquired by the corporation.

In 1930, the properties and business of three major companies were purchased by the steel corporation, namely Atlas Portland Cement Co., Columbia Steel Corp., and Oil Well Supply Co. The corporation stated that the value of the properties, plants, business, net current and working assets acquired by these purchases amounted to $91,000,000.

The steel corporation produced cement as a byproduct of slag, and its own Universal Portland Cement Co. had by 1928 a production of approximately 15,000,000 barrels from its three plants at Chicago, Pittsburgh, and Duluth. By the acquisition of the Atlas Portland Cement Co. with its seven cement plants located in the States of Pennsylvania, Missouri, Alabama, New York, and Kansas, it acquired plants whose annual total production was over 19,000,000 barrels, which makes it today much larger than any other cement manufacturer in the country.

The Columbia Steel Corporation was a combination of Columbia Steel Co., with plants in Portland, Oreg., and Pittsburg, Calif., and the Utah Coal & Coke Co. which controlled extensive coal properties in Utah. In 1923 it had acqufred the Llewellyn Steel Co. of Los Angeles. It owned large properties in Utah estimated to contain 40,000,000 tons high-grade iron ore and 60,000,000 tons of coking coal, with rail connections.

Oil Well Supply Co. was an established organization operating throughout the United States and abroad, which dealt in large quantities of steel pipe, wire rope, and other products used in the development and operation of oil and gas properties, such products having been similar to those manufactured by subsidiaries of the steel corporation. The Oil Well Supply Co. also handled a complete line of equipment and machinery of its own manufacture and of the manufacture of others for use in the development and use of gas and oil properties.

In 1936, the corporation acquired the Virginia Bridge & Iron Co. property, with its three plants at Roanoke, Va.; Memphis, Tenn.; and Birmingham, Ala.

In 1937, the corporation acquired the Gerrard Co., Inc., manufacturer of machines for tying containers with wire.

In 1939, the corporation acquired properties of Boyle Manufacturing Co., of California, manufacturer of sheet-metal products such as barrels, tanks, etc.

In 1940, the corporation acquired the Savannah Wire Cloth Mills, manufacturers of screen wire.

In 1943, the corporation acquired the physical assets of the Moise Steel Co., at Milwaukee, Wis.

Later in the same year, the corporation, through a subsidiary, acquired the Petroleum Iron Works Co. of Texas, a subsidiary of American Republics Corp. Petroleum Iron Works made steel containers.

In 1944, the corporation made three reported acquisitions. First, it acquired the capital stock of the Gunnison Housing Corp.,

a producer of prefabricated houses. Next, through a subsidiary, the corporation acquired the Witte Engine Works, manufacturers of Diesel engines for oil-well pumps and other uses. Finally, in August of 1944, the corporation acquired the Bennett Manufacturing Co., a steel-drum manufacturer.

In 1945, through its cement producing subsidiary, Universal Atlas Cement Co., the corporation acquired the Wabash Portland Cement Co.

Also in 1945, the corporation, again through a subsidiary, acquired the Neilson Pump Co., a producer of subsurface pumps.

In May 1946, the corporation made its biggest acquisition in recent years when it bought, with Department of Justice approval, the Geneva, Utah, steel plant from the WAA. This plant had cost $200,600,000, but was sold to the corporation for $47,500,000.

In June 1946, the corporation acquired from the WAA the rolling mills and steel works at Homestead, Pa. This plant had cost about $86,500,000; the corporation paid $44,100,000 for it.

Also in June 1946, the corporation acquired from the WAA blast furnaces at Braddock, Pa. These furnaces had cost $22,600,000 to build; the corporation paid $14,400,000.

In the same month the corporation acquired an electric steel and heat-treating plant at Duquesne, Pa., from the WAA. This plant had cost $10,800,000 and was sold to the corporation for $6,500,000.

The corporation's last purchase from the WAA in June 1946 was a blast furnace at Duluth, Minn. The cost of this furnace had been $7,600,000, while the price to the corporation was $1,800,000.

In March 1947, the WAA sold the corporation a town site at a coal-mining property in Dragerton, Utah, for $1,600,000. The cost of this property was listed at $4,200,000.

Also in 1947, the corporation attempted to acquire the Consolidated Steel Corp. at Los Angeles, but has been challenged by the Justice Department. The United States Supreme Court on December 22, 1947, agreed to review the case; so far as is known at this time no decision has been handed down.

On January 9, 1948, WAA approved the sale to the corporation of an aluminum reduction plant at Torrance, Calif. This plant, which had originally cost $12,900,000, was sold to the corporation for $4,200,000.

A New Housing Policy

EXTENSION OF REMARKS
OF

HON. WILLIAM G. STRATTON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. STRATTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a speech prepared for delivery by my colleague, the Honorable RALPH A. GAMBLE, chairman, Joint Committee on Housing, at the annual meeting, National Association of Home Builders, Wednesday afternoon, February 25, 1948, Stevens Hotel, Chicago, Ill.:

A NEW HOUSING POLICY

At the outset let me say that, in my opinion, what we need is a national housing policy. We have never had one. We do not have one now. I hope our committee, in collaboration with the House and Senate Banking and Currency Committees, may develop one. Given a national housing policy, legislation is simple.

The trouble with most discussions of the housing problem of which I have heard or read is that the approach is made, either from a personal, a business, or a class standpoint. Out of this diversity of opinion has developed our present situation, in which he who speaks the loudest, the most frequently, and who applies the most pressure is supposed to get the most attention.

If the Joint Committee on Housing accomplished nothing more than to center attention on the common interest, it would make a substantial contribution. I hope and expect that it will accomplish far more. The subject on which I was asked to speak is: A New Housing Policy. Our Committee has not yet made its report—and will not until the time set in the authorizing resolution, which is March 15. So what I have to say here today should not be regarded as foreshadowing our recommendations, but as simply reflecting my own opinions.

To address the National Association of Home Builders is about like speaking to a combined gathering of realtors, mortgage bankers, and general contractors, with not a few important materials' dealers thrown in. From a relatively weak and diffused group of small operators, you have so expanded in size and so magnified your influence, both through external circumstances, and your own progressiveness, that you are today potentially tne greatest power in the building industry. How shall this power be applied?

As individual enterprisers all of you must be aware that business growth comes, not so much through the prevention of bad conditions, as through the promotion of good ones. It comes far less from developing skill in the art of grinding one's own ax, as it does from thinking of the people as a whole. If those of you who are convinced that the world's direst need is a rise in the interest rate or an increase in authorized insurance under section 608 of title VI of FHA, regard what I have just said as angel patter, let me observe that a Congressman sometimes knows more than he is credited with knowing. We get to be Congressmen—and remain such—only as we anticipate or approximate what the people want.

What do the people want? In general, they want a little more assurance on the part of business that business is interested in the common welfare. I read in a New York financial paper the other day that many of the large corporations—including manufacturers of essential building materials—were worried because the profits they made last year were too large. But well might they be concerned.

I personally have no doubt that Congress will take additional action in the extension and increase of insurance for loans under section 608 of title VI of FHA. No one can predict what will happen to the interest rate; personally, I hope it will be held where it is, or even reduced, as it well could be, were the great aggregations of private capital now virtually in hiding to emerge and go to work. What I mean is that the inflationary operation of section 608 is a threat to your industry, and consequently to the country, and that what the self-styled stewards of private capital (such as accumulated insurance funds) fail to do, will most certainly be undertaken by Government, if pressure is applied by minorities at the right time, and if the generally mute majority does not find more unselfish spokesmen among the leaders in private enterprise.

Please do not misunderstand what I have just said, but I hope you take seriously to heart that there is a tremendous demand that additional 608 moneys go into rental housing.

I do not believe that public housing is a dead issue. I do not believe that an artificial boom in dwelling construction can substitute for the kind of substantial construction which has many times averted a depression. I do not believe that labor relations can be made all right merely by saying so. I do believe that the kind of thinking you do at this convention will be a strong factor in what Congress does on public housing. I do believe that, unless you as a group pay more attention to the kind of materials used, and the construction methods followed, in Government-financed housing, we all will have reason to regret such oversight. I do believe that, in your organized dealings with labor, there must be recognition of the good faith of organized labor itself. I do believe, too, that by telling your grievances to labor, as frankly as you demand that they express their grievances to you, you will have done more than you might believe possible to combat the trend toward socialization.

Last year 854,500 new dwelling units were started, 835,000 were completed. I congratulate you home builders and private industry on this record. This year, the minimum should be 1,000,000. If we are to make any appreciable reduction in the accumulated shortage, that figure should be increased. How much it can be increased depends upon a series of steps which, if intelligently taken, will in themselves be correctives of greater value than large amounts of new construction prosecuted without regard to underlying causes.

I am personally convinced that were municipalities simply to enforce their safety and sanitary codes, some shortages could be immediately done away with, and the artificial demand for public housing somewhat abated.

There is no necessity to wait until the sweet by-and-by for the 2,000 localities to modernize and harmonize their building codes. Any division of private enterprise that can be as articulate as realtors and builders are in opposing what they regard as undesirable legislation can certainly be far more active in urging legislation which is universally acknowledged to be desirable for the public.

It is well known among you mortgagee-realtor-home builders that public housing advances slum clearance as its principal objective—its principal housing objective. Here in Chicago, early last November, we held a hearing of our committee. One of our most helpful witnesses was Philip M. Klutznick, president of American Home Builders, whose partner, I believe, is president of the Chicago Metropolitan Association of Home Builders. Without agreeing to all that was said on that occasion by Mr. Klutznick, I commend the following as being of very great value to you. "We must stop thinking of slum clearance and urban redevelopment as housing problems," he said. "Undoubtedly there is a housing aspect, but essentially they are problems in municipal solvency." Now, as most of you undoubtedly know, Mr. Klutznick was formerly Commissioner of the Federal Public Housing Authority. It appears to be quite possible for him to reconcile his views on improved housing, with his significant individual enterprise. It should be equally possible for you to reconcile your views as builders for profit with the unquestioned demand that something be done—not merely to erect great and costly castles for the poor on former slum sites, but to put former slum land to work in the creation of wealth, thereby making some progress, at least, in the age-old battle of preventing the unfortunate and the incompetent from slipping deeper into a social morass.

Do you gather, from what I have just said, that housing is primarily a local problem? And if the locality is incapable of financially meeting its responsibilities, or insensible to them morally, that housing then becomes a State problem? No better illustration is possible as to how municipality and State can work together than that which we find here

in Chicago. I may be wrong, but it is difficult for me to recall more than a few realtors, bankers, or builders who came forward with proposals other than those which would immediately benefit their own particular type of enterprise.

Now, where does all this lead us? Simply to the conclusion that, if we suspect public housing to be a Trojan horse for socializing society, we should do something more than object. May I ask you to do this something, back in your home town? And to do it quickly? This something is to examine your home town's finances. Build your own business wth your right hand, if you will, but devote at least the skill of your left hand to public service. It may be that your home town through bad management, is incapable of solving its housing as well as its slum clearance problems. If so, lend it a hand through the State. I do not suppose that all States will be as sympathetic to the proposal that they buy back influence with their own municipalities as is being done in Illinois, but the responsibility is present none the less. And I predict that unless the States do accept this responsibility, your problems of socialized competition will rapidly multiply.

Revert for a moment to the synonymous terms of urban redevelopment and slum clearance. Those proponents of what is loosely and inaccurately termed "public housing," who are really the advance agents of socialized society, would have the people believe that a benevolent and inexhaustibly rich Federal Government is the answer. Therefore they urge the ceaseless appropriation of countless billions of dollars by the Government for housing, added to the twenty billions to which the United States Treasury is already committed, either directly or by contingent liability. The fact is that the Federal Government gets by far most of its income from the cities themselves. The delusion that Government is a producer, and therefore the inexhaustible source of appropriations, must be dissolved. We are trying to do this nationally, but it can best be achieved locally.

You can rest assured that the Republican-controlled Eightieth Congress is private-enterprise-minded. This committee is predominantly private-enterprise-minded. But you will have to help us to help you. Let me sum up:

First, see well that the type of construction you are doing under Federal aid merits commendation, not condemnation—and there have been many evidences of bad construction brought to our attention and the committee has seen a lot more over the country. It will come back to plague the GI.

Second, apply, as the Housing Committee has, constant pressure to your building-material resources to reduce their prices.

Third, devote the energies of your local groups to putting the local community's finances in order, and thereby reducing taxes.

Fourth, join with other groups in urging the Illinois plan of urban redevelopment—which is just another word for slum clearance—and thereby help the local community to increase its production of wealth.

Fifth, recognize that there is a need for housing in the lower-income groups, which can be met, on progressively lower-income levels, through some such device as limited-dividend corporations, successfully employed for a number of years by New York State.

In conclusion, let me say one more word on labor. Perhaps what I have to say on this point deserves to rank as the sixth and most important recommendation. If management and labor agree, we need have no fear as to the continuance of our private-enterprise system. You know of this Housing Committee's attitude toward labor. We chose to seek their cooperation, just as we have sought yours. At our hearings I have noted a reluctance on the part of builders to speak publicly on the subject of labor practices. I have also noted a reluctance on the part of labor to correct certain practices until they were publicly called to their attention and proved. Now, to my simple way of thinking, neither attitude is correct.

A few weeks ago I had the privilege of meeting informally in Miami with the members of the executive council of the building-trades department of the AFL. At this meeting a number of questions were directed to me, and because of their significance, I asked the help of the Bureau of Labor Statistics, which, not incidentally, but directly, have been most helpful and cooperative. H. E. Riley, Chief of the BLS Construction Statistics Division, writes me under date of February 5, as follows:

"The congressional Joint Committee on Housing is faced with a number of significant questions regarding labor costs, about which unfortunately very little reliable information is available. Questions recently raised on this subject, and some comments on them follow:

"(1) What has been the trend of labor costs in housing construction over the past 5 or 10 years?

"Labor costs in construction are affected by wage rates, labor efficiency, and labor utilization as controlled through proper management of the job, adequate equipment, regular flow of materials, etc. We do not have a measure of labor costs which takes into consideration all of these factors. Testimony prepared by the Bureau of Labor Statistics for the committee includes some data indicating that there has been relatively little change in recent years in the proportion of site labor cost to total construction cost in housing. Studies made in 1940 showed that site labor constituted about 32.3 percent of construction cost. In 1946 labor at the site accounted for about 31 percent. During the period from January 1940 to October 1947 average hourly earnings in building construction increased by 79 percent. Wholesale prices of building materials increased by 96 percent between 1940 and October 1947. The residential construction cost index published by the Housing and Home Finance Agency showed an increase of 79 percent between 1940 and July 1947. If these various figures are accepted as substantially accurate, they suggest that labor utilization was better in 1947 than in 1940, otherwise the combination of a 79 percent increase in hourly earnings and a 96 percent increase in building materials costs would have resulted in an increase of more than 79 percent in the construction cost index.

"(2) What has happened to the spread between labor costs and other principal costs in dwelling construction and with selling prices of homes?

"We have no information on selling prices of houses which can be related to the construction cost elements. The report of the Flanders subcommittee cited selling-price data developed by United Industrial Associates, a private organization. This information was obtained by analyzing newspaper advertisements. Aside from the dubious validity of the source of material, we have no way of relating construction cost data to the selling prices obtained from that source.

"(3) Information has been requested concerning labor cost increases since 1939 or 1941 in the manufacture of gypsum products.

"The measurement of labor costs in manufacture involves the same considerations as were noted in the comments under question 1 regarding labor and management efficiency. Our data on average hourly earnings do not extend back of 1946.

"(4) What percentage of the total construction cost in housing is represented by direct and indirect labor costs?

"It has been noted above that construction labor accounts for between 30 and 35 percent of construction cost. Total materials costs represent roughly 50 percent of construction costs, while the direct labor cost in industries producing materials represents at the outside around 75 percent of the cost of material delivered at the site. This means that the nonconstruction labor costs in housing construction would account for 35 to 40 percent. Therefore the total labor cost, including site construction labor and the cost of industrial labor in producing materials, would constitute about 70 percent of construction cost. This estimate excludes labor costs remotely involved in materials production. For example, the estimate of labor costs excludes the value of raw materials in their natural state, interest charges on capital of the materials producers, profits of the materials producers and distributors, and promotional costs. Promotional costs, of course, include salaries of employees in advertising firms, etc. These are not counted as labor costs in the above estimate.

"In summary, using the definition of direct and indirect labor costs as above described, it is believed that the total labor costs do not exceed 70 percent of construction cost and perhaps is closer to 60 percent under present conditions."

In behalf of the public interest I urge that the National Association of Home Builders and the Building Trades Department of the American Federation of Labor work out some cooperative means of face-to-face discussions of their mutual problems. Perhaps this could be accomplished by the appointment of committees by local home builders and local building trades councils. It is incredible to me that this was not done a long time ago. To meet once a year simply to discuss questions of wages and hours, and then not to see each other for 12 months simply doesn't make sense. The construction industry, next to agriculture, is our biggest industry. In its relations with labor, mutual trust and respect, the will to live and let live, above all to produce the best that is possible in the public interest, transcend all else. If this viewpoint is adopted and put into effect, I predict our housing problem will quickly disappear, and with it will also disappear a very real threat to private enterprise and to the American way of life, in which neither capital nor labor is all, but in which each plays its indispensable part.

These are only my views as a member of the House-Senate Joint Housing Committee, whose lease on life expires March 15 when we file a report and pass out of existence. We have tried to be factual after over 7,000 pages of testimony. If you don't agree with me write for a copy of the testimony and try to keep awake reading it. Thank you for inviting me to come to Chicago to meet with you.

Résumé of Veterans' Legislation Approved by the Eighteth Congress

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. VAN ZANDT. Mr. Speaker, from time to time discussions are held concerning benefits and privileges granted to our veteran population by the Eightieth Congress.

On February 21 Speaker of the House JOSEPH W. MARTIN, JR., in an address to the Veterans of Foreign Wars of the

United States at the Statler Hotel, Washington, D. C., enumerated the benefits to veterans enacted by the Eightieth Congress.

For the information of the Members of Congress, I am inserting, at this point, a portion of Speaker MARTIN'S speech, commenting on what the Eightieth Congress had done to recognize the debt of gratitude the American people owe to the veterans of the United States.

Speaker MARTIN'S remarks are as follows:

Now I want to speak for a moment about what the Eightieth Congress has done to recognize the debt of gratitude we owe to the veterans of the United States. In broad general terms, you already know we stand for every educational advantage for the veteran it is possible to give him.

We have already passed a bill in the House of Representatives to lower tax rates. More than 71 percent of those reductions go to those in the lower-income brackets.

We are moving to reduce the debt as rapidly as practicable in order to take off of the veterans and their children as much of that service load as possible.

Here I would like to point out some of the accomplishments which have been achieved by the Eightieth Congress for the benefit of the veterans.

The Eightieth Congress did not have the benefit of a great publicity machine. But in spite of turbulent world problems much was accomplished for veterans. Following are the measures passed by the Eightieth Congress:

Public Law No. 5, to extend the time limitation for reinstatement of national service life insurance policies.

Public Law No. 34, to provide for renewal for a fifth 5-year period the 5-year level premium term insurance plan for World War I veterans.

Public Law No. 36, to grant officers of the Army and Navy Nurses Corps comparable rank, pay, and allowances with officers of the Army and Navy.

Public Law No. 82, to permit husband and wife to combine their armed services credit for homestead purposes.

Public Law No. 85, authorizing $35,500,000 to complete temporary reuse housing for veterans.

Public Law No. 115, increasing the revolving fund in the Veterans' Administration from $1,500,000 to $3,000,000 for the purpose of making non-interest-bearing loans to disabled World War II veterans taking vocational rehabilitation courses.

Public Law No. 126, extending until January 1, 1948, the time during which alien fiancées of veterans may enter the United States without being subject to immigration quotas or visa regulations.

Public Law No. 161, to extend for another year the authority to purchase automobiles for World War II veterans who are leg amputees or have suffered the loss of use of a leg.

Public Law No. 213, to permit the admission to the United States of racially inadmissible alien spouses of veterans.

Public Law No. 254, to provide for the cash payment of terminal-leave bonds any time after September 1, 1947.

Public Law No. 270, to provide a 20-percent pension increase for veterans of the Civil War and Spanish-American War.

Public Law No. 310, to restore the tax exemption status of those members of the armed services removed from former American possessions during captivity by the Japanese.

Public Law No. 314, to authorize the acceptance by officers and enlisted men of the armed services of medals and decorations tendered them by cobelligerent and neutral nations of World War II.

Public Law No. 316, to permit retired armed services personnel to represent veterans organizations in claims before the Veterans' Administration.

Public Law No. 325, to make mandatory on Federal agencies the rulings of the Civil Service Commission on appeals by veterans for reinstatement.

Public Law No. 337, to improve the Army and Navy medical services.

Public Law No. 338, to increase the minimum allowances payable to disabled veterans undergoing vocational rehabilitation under Public Law No. 16.

Public Law No. 350, to provide cash in lieu of terminal leave for veterans.

Public Law No. 365, to provide additional pay of $100 per month for officers of the Army Medical Corps and Navy Medical Corps.

Public Law No. 367, to refund income tax so paid by any member of the armed services who died on active duty for the year in which death occurred and for the years during which he was in the armed services.

Public Law No. 377, to provide full subsistence allowances for veterans taking on-the-farm training.

Public Law No. 396, to extend veterans' preference benefits (civil service) to widowed mothers of certain ex-servicemen and ex-servicewomen. Approved January 19, 1948.

Public Law 398, to increase by 20 percent the pensions payable to veterans of Indian wars and the dependents of such veterans. Approved January 19, 1948.

Public Law No. 411, to increase the subsistence allowances to veterans pursuing full-time educational training courses under the GI bill of rights. The measure increased such allowances from $65 to $75 a month for single persons, from $90 to $105 for veterans with one dependent, and to $120 for veterans with more than one dependent. The increased allowances will go to about 1,500,000 veterans and cost around $217,000,000 a year. Approved February 14, 1948.

S. 1393, to raise the ceilings and allowances payable to veterans undergoing training on the job is in conference. The Senate voted to increase the ceilings from $175 to $200 a month for a veteran without a dependent and from $200 to $250 for a veteran with dependents. The House voted to increase ceilings $250 for a veteran without dependents, $325 for a veteran with one dependent and $350 for a veteran with more than one dependent.

Hospital facilities for disabled veterans must be adequately expanded. No disabled veterans must ever be allowed to suffer for a lack of hospital care.

Abraham Lincoln and Hawaii

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Friday, February 27, 1948

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Harry Frantz, United Press staff correspondent, pointing out the interest which President Lincoln had in Hawaii, even though at that time Hawaii was an independent monarchy and not a part of the United States:

WASHINGTON.—Advocates of Hawaiian political advancement often cite Abraham Lincoln among the illustrious friends of the Hawaiian people, although his presidency occurred when the mid-Pacific islands were still a kingdom and today's campaign for statehood could not have been predicted.

The slavery question and the War of the States monopolized most of the Emancipator President's days in the White House, but official records reveal many indications of his deep interest in affairs of the Pacific region and his more than casual sympathy for the Hawaiian people.

"In every light in which the state of the Hawaiian Islands can be contemplated, it is an object of profound interest for the United States," President Lincoln once said.

Virtually it was once a colony. It is a haven of shelter and refreshment for our merchants, fishermen, seamen, and other citizens when on their lawful occasions they are navigating the eastern seas and oceans. Its people are free, and its laws, language, and religion are largely the fruit of our own teaching and example.

According to an official collection of Lincoln documents, these remarks were made to an envoy from the Hawaiian Islands, June 11, 1864, but name of the envoy was not noted. The House of Representatives' report on the present statehood bill quoted similar remarks by President Lincoln in a letter to Elisha Allen, Envoy Extraordinary from the United States to Hawaii, in the same year.

That President Lincoln's friendly disposition toward the Hawaiian people was reciprocated is indicated by communications from Honolulu at the time of Lincoln's death in 1865, officially published in Diplomatic Archives.

A memorial meeting at Lahaina, island of Maui, presided by M. Ilihie, with D. Kahawlilio as secretary, adopted a resolution expressive of the sympathy of Lahaina, and deploring the assassination of the great, the good, the liberator Abraham Lincoln.

"Yet live his mighty deeds, victory, peace, and the emancipation of those despised," said the communication.

In 1863, the United States elevated its diplomatic representative before the Hawaiian monarchy from the rank of Commissioner to that of Minister. During Lincoln's Presidency Thomas J. Dryer was Commissioner from 1861 to 1863, and James McBride served as Minister Resident from 1863 until 1866.

In those years, the chief diplomatic tasks were to avert the possible use of Hawaiian ports by Confederate privateers, negotiation of a reciprocity treaty, and attention to seafaring matters that grew out of Honolulu's position on trans-Pacific routes to China and Japan. Depot needs of United States naval craft already had foreshadowed the future importance of the islands in mainland naval defense.

Lincoln's Secretary of State William Seward with a notably friendly attitude toward the Hawaiian Government twice declined to "intervene" in Hawaiian domestic matters, once in connection with proposed changes in the constitution, and once in reference to a customs dispute.

"The interpretation of their own revenue laws is the prerogative of the Hawaiian Government, and the application of them must be left to their own sense of equity," wrote Secretary Seward to the United States Minister at Honolulu.

Lincoln except for the Civil War might swiftly have advanced plans for an Atlantic-to-Pacific canal on the Nicaraguan route, a trans-Pacific cable, and a general broadening of Pacific commerce. These matters are frequently mentioned in state papers of the period. Officials of the time were keenly aware of the importance of Hawaii in the commerce, communications, and military strategy of the entire Pacific area.

In his last state of the Union message to Congress on December 6, 1864, President Lincoln said that a rebellion in China had been suppressed, "with the cooperating good of-

fices of the United States Government and other western commercial states.

"China seems to be accepting with hearty good will the conventional laws which regulate commercial and social intercourse with the United States.

"Owing to the peculiar situation of Japan and the anomalous form of its government, the action of that empire in performing treaty stipulations is inconstant and capricious. Nevertheless, good progress has been effected by the western powers, moving with enlightened concert. Our own pecuniary claims have been allowed or put in course of settlement, and the Inland Sea has been reopened to commerce. There is reason also to believe that these proceedings have increased rather than diminished the friendship of Japan toward the United States."

Home Rule in the District of Columbia

EXTENSION OF REMARKS
OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. AUCHINCLOSS. Mr. Speaker, under the authority granted me to extend my remarks in the RECORD I am very pleased to include therein a thoughtful and constructive letter which I have received from Mr. Joseph W. Cheyney, who is now living in Gaithersburg, Md.

Mr. Cheyney is a native-born Washingtonian and is very much interested in the proposed legislation for home rule and the reorganization of the District government, and his letter carries a great deal of interesting historical information as well as constructive suggestions for the improvement of the act, H. R. 4902.

The subcommittee of the District Committee which has this matter under consideration will most certainly give Mr. Cheyney's suggestion its closest attention and we are indeed very grateful to him for his interest. I am sure the Members of the House will be interested to read this well-written and informative letter.

GAITHERSBURG, MD., *February 24, 1948.*

Hon. JAMES C. AUCHINCLOSS,
Chairman, Subcommittee on District of Columbia and Home Rule.

DEAR REPRESENTATIVE: The Congress of the United States is always deeply impressed and influenced by precedents; therefore the emphasis should be placed on restoring local self-government to the inhabitants of the District of Columbia—a fundamental right, which, by acts of Congress of the United States, they enjoyed for 70 years—from 1801 to 1871. This will inform your fellow legislators that you are asking them to do again what our forefathers did before.

If you will take the 1929 Code of Law for the District of Columbia and begin at page 449 and read through to and including page 495, you will have a complete picture of what the Congress has done to perpetuate and provide for the exercise of the right of the inhabitants at the seat of government of the United States to have their own local self-government.

During the hearings you were told that James Madison (in the Federalist) wrote that a municipal legislature for local purposes will of course be allowed the inhabitants of the seat of government of the United States. This promise was faithfully kept, for by section 16 of the first act of Congress concerning the Territory of Columbia (February 27, 1801; 2 Stat. 103, ch. 15) it was enacted:

"That nothing in this act contained shall in anywise alter, impeach, or impair the rights granted by or derived from the incorporation of Alexandria and Georgtown, or of any other body corporate or politic, within the said District except as far as it relates to the judicial powers of the corporations of Georgetown and Alexandria."

(Georgetown in the Maryland part; Alexandria on the Virginia side of the District of Columbia.)

Whatever construction may be placed upon the "exclusive legislative" clause of the Constitution concerning the District of Columbia or the seat of Government of the United States, it is plainly evident that the Congress in former times did not believe that it deprived the inhabitants thereof of the right of local self-government. Able expositors of the Constitution have agreed that it means no more than that no State could have jurisdiction over the seat of Government of the United States; and the tenth amendment to the Constitution should be held to be a limitation upon the clause, so far as local self-government for the District of Columbia is concerned. By acts of our forefather legislators in Congress, they certainly so observed it.

Then in 1802 (by act of Congress May 3) local self-government was provided for the city of Washington. Pages following in the 1929 code set before you how the Congress liberalized the local governments in the District of Columbia by enlarging home rule and vesting more powers in the District of Columbia municipalities. There is impressive illumination in section 7 of the act of Congress, May 3, 1802, incorporating the inhabitants of the city of Washington as a municipality. At the very beginning of that section 7 the corporation so created shall have full power and authority to pass all bylaws and ordinances. The word "by" comes from an old Norse word that means "town," so that bylaws in connection with city ordinances are "town laws." They are not legislative laws in the sense that Congress and the State legislatures enact "legislation"; and there is no delegation of legislative power when the Congress provides for a home rule council to make municipal laws for the District of Columbia. The United States Supreme Court has said that "the District of Columbia is a municipal corporation, and as such it may be invested with legislative authority; but it can exercise only such powers which are expressly conferred by statute, which must be of a strictly municipal nature." (Cases are cited in S. Doc. No. 154, 68th Cong., 1st sess., which contains a synopsis of decisions of the Supreme Court of the United States from its establishment to December 1, 1924. See p. 239.) Note particularly that "powers granted must be expressly conferred by statute" and "must be of a strictly municipal nature." You will find such an enumeration of powers in section 7 of the act of Congress, May 3, 1802 (pp. 450–451, 1929 Code, D. C.). These mean that acts of a District of Columbia council may not include such as are exercised through a State legislature or the Congress and are not properly municipal town laws. This would not permit the Public Utilities Commission and similar agencies to be regulated by a District of Columbia municipal council. To comply with the above quoted court limitations, your bill will have to continue the District of Columbia as a municipal corporation to justify its existence through municipal powers granted thereto.

I think that the strongest argument for the abolition of the commissioner form of government of the District of Columbia is that an Army officer (while still in the Army of the United States) is one of the Commissioners of the District of Columbia who make municipal ordinances, disguised as regulations. By section 3 of the Temporary Organic Act of the District of Columbia (p. 474, 1929 Code, D. C.) he is designated as "an officer of Engineer Corps of the Army of the United States" and shall perform the duties heretofore devolved upon the Board of Public Works, abolished under this act by the act of Congress wiping out the legislative assembly under the Territorial Act for the District of Columbia. His duties are itemized in that section "and he shall not be deemed by reason of anything in this act contained to hold a civil office under the laws of the United States" In section 2 of the Permanent Organic Act for the District of Columbia (p. 477, 1929 Code, D. C.) he shall not be required to perform any other duty. As the above provisions of the Temporary Organic Act for the District of Columbia are not inconsistent with the Permanent Organic Act for the District of Columbia, they are presumed to be still in force. Certainly it does not seem proper that a Commissioner, limited to engineer duties, should be both a United States Army officer and a municipal legislator at the same time. A change to a civilian engineer to perform the duties of a United States Army officer certainly would be an improvement in a local government by the people of the District of Columbia.

It should be particularly emphasized that as citizens of the States of Maryland and Virginia, these people of the seat of Government of the United States had the right of local self-government before the Territory of Columbia was ceded to the Congress and Government of the United States—before we had a Constitution—and the mere act of cession did not take them out of the Union or deprive them of their freeman right to have and retain local self-government. Corroborative of that is that the act of 1801 concerning the Territory of Columbia expressly continued in force the laws of Maryland as they then existed and the laws of Virginia as were then in force, except the judicial powers. A great and inexcusable wrong would be undone by a change now to local self-government for the people of the District of Columbia. They would be set free from the stigma that they are subjects of the Congress of the United States, now governed at its will and pleasure, for neither Maryland nor Virginia had any authority over their freemen citizenry as would justify either State to consign them to the vassalage of subjects.

By the change to local self-government the people of the District of Columbia would feel that they are no longer mere subjects of the Congress. Are they subjects now? By section 1 of the Act of Congress of June 11, 1878 (the Organic Act of the District of Columbia, p. 477, 1929 Code, D. C.) said: District and the property and persons that may be therein shall be subject, etc. Then read what the United States Supreme Court once said: "The United States, under the present Constitution, cannot acquire territory to be held as a colony, to be governed at its will and pleasure. And may establish a local government * * * in respect to the rights of persons or rights of property" (*Dred Scott* v. *Sandford* (19 How. 373)). The Court meant territorial form of government but our forefathers went further and perpetuated and enlarged local self-government (or home rule) in the District of Columbia for 70 years.

Section 17 of the act of Congress establishing the Territorial form of government for the District of Columbia (p. 471, 1929 Code D. C.) sets forth what the local legislative assembly could not do, while the charter of the city of Washington (1802), by section 7, pages 451, 452, 1929 Code, District of Columbia, specified what the city council

could do, including to "lay and collect taxes." It would be informative to read both lists.

A very important part of said section 17 of the Territorial Act is a prohibition against "granting to any corporation, association or individual any special or exclusive privilege, immunity, or franchise whatsoever." Such a prohibition might well be in your bill for home rule for the District of Columbia, as it would do away with the favoritism now shown the bands of irresponsible public lobbyists who presume to represent large sections of the District without lawful authority and other cliques here (not responsible to the people) who are ever seeking to further their own selfish interests at public expense.

Your attention is called also to section 34 of the act of Congress establishing the Territorial form of government for the District of Columbia (p. 473, 1929 Code, D. C.) in which you find "and the Constitution and all the laws of the United States which are not locally inapplicable shall have the same force and effect within the said District of Columbia as elsewhere within the United States." The Supreme Court of the United States declares: "When the Constitution has been once extended by Congress to Territories, neither Congress nor the Territorial legislatures can enact laws inconsistent therewith." (In re Ross, 140 U. S. 464; *Downes* v. *Bidwell*, 182 U. S. 251). Does it not seem to be a great wrong when Congress took away the right to vote from the inhabitants of the District of Columbia?

All necessary safeguards to prevent fraud in elections should be included in your bill. There should be no election by minority vote, but run-offs should be required when the candidate for any office does not receive a majority of the votes cast.

You might also use the wording (as necessarily modified) found in section 18 of said Territorial Act of 1871 (p. 471, 1929 Code, D. C.): ["For good and sufficient cause,] (add) all acts of the legislative assembly [District of Columbia municipal council] shall at all times be [liable] (not subject) to repeal or modification by the Congress of the United States, and nothing herein shall be construed to deprive Congress of legislation over said District in as ample a manner as if this law had not been enacted." No veto power is vested in the Congress of the United States, nor can it approve by inaction. It must disapprove, modify, or repeal by positive legislative act in the usual and regular constitutional course. The above modified language of section 18 settles a disputed point.

My purpose in writing is to send you such information of a conclusive nature as will mightily help to accomplish your laudable purpose. I am sincerely grateful to you for all you have done and are doing in behalf of the disfranchised subjects of the District of Columbia.

It seems to me that if such parts of this letter as you may verify and approve as helpful could be made into an extension of remarks by you or by your able assistants and placed in the CONGRESSIONAL RECORD, you would have a very forceful argument to influence your fellow legislators to favor and vote for home rule for the District of Columbia. They will then know that it is a restoration of a right that never should have been taken away.

I was born in Washington, D. C., have lived there the greater part of my life, and have advocated a return of local self-government for the District of Columbia since 1890 in local newspapers and at congressional hearings. Due to heart trouble, I have been staying with a relative in Gaithersburg, Md., since last May, but I still have interests in the District of Columbia that would be affected by a change in the government to home rule, and I believe it would be highly beneficial to all the people living therein, all the sniping at it, and selfish interests opposing it to the contrary notwithstanding.

Hoping and praying that you will win gloriously in your efforts to restore local self-government to the people of the District of Columbia.

Gratefully and respectfully submitted.

JOSEPH W. CHEYNEY.

Federal School Support

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. HARVEY. Mr. Speaker, with permission of the House, I should like to have inserted in the Appendix of the RECORD an editorial that appeared February 22, 1948, in the Richmond (Ind.) Palladium-Item:

FEDERAL SCHOOL SUPPORT

Let the Government sober up from its spending spree, and the local communities will have enough money to finance their schools.

The bright boys at Washington cannot see that the dollars they are taking from the incomes of the people back home are the dollars that should be used for local purposes.

The National Education Association says school support is "inadequate" and schooling opportunities are "unequal."

Its executive secretary uses that as a reason why the Congress should give $300,000,000 Federal aid to needy school districts.

The Federal bureaucrats would like to put the schools under their control. If Federal school aid is granted, another group of bureaucrats will be added to the Federal pay roll.

The more functions and services the bureaucrats are allowed to perform, the more they will build up their power.

The vast army of men and women who are on the Federal pay roll is a drain on the income of the people.

The bureaucrats are not producers. They are not working in our shops and stores. They are not helping to run our railroads or operate our utilities.

They are not adding to the national income through their work. But they are living off the country. Part of our incomes is used to pay their salaries.

The move to extend Federal aid to the schools is in line with the program of the bureaucrats. It is a big question whether more expensive schools will give better education.

The motive behind the demand for Federal aid is the desire to strengthen big Government at Washington and to give the bureaucrats more power.

Address of Harrington Wimberly, Vice Chairman, Federal Power Commission

EXTENSION OF REMARKS

OF

HON. PRESTON E. PEDEN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. PEDEN. Mr. Speaker, on October 30, 1947, the Honorable Harrington Wimberly, Vice Chairman, Federal Power Commission, delivered a very able and far-sighted address before the sixteenth annual association of the National Reclamation Association at Phoenix, Ariz.

Under leave to extend my remarks in the RECORD, I include this address, which very thoughtfully discusses the important problem of conservation and development of our water resources:

It is with considerable personal satisfaction that I am privileged to address this gathering of leaders from our Western States who are devoting their time and energies to a most worthy cause—the conservation and utilization of the Nation's more important natural resources—our lands and the waters of the countless streams that father our mighty rivers.

If you will pardon a brief personal reference, I wish to note that my active interest in the preservation of water resources to the end that they will be dedicated to the welfare of the greatest number predates many years my membership on the Federal Power Commission. My entire life has been spent in a section of the country where every drop of rain that falls that can be impounded or otherwise preserved for future use is a blessing.

It is my natural inclination to look first to the benefits that can be achieved by returning to the land, to the fullest extent feasible, the waters that drain from it. I know how very useful a little water can be at the right time. I am fully aware of the struggle that land owners often experience before an irrigation dream becomes a reality. During the past years I have witnessed at first-hand what often is required to secure for a section the lasting benefits of a Bureau of Reclamation project.

Today, however, my subject for discussion is not so much irrigation and water conservation as it is the related and often bitterly debated question of Federal jurisdiction over the Nation's rivers. Of course, some will charge that I ought to include the tiny streams in the same category with the rivers, but it is my intention to keep as far as possible from the highly controversial aspects of this problem. Certainly, it would not be helpful at such a meeting as this to suggest issues that might cloud the broader objectives of this convention.

There is one thing that I do wish to emphasize. It is something that gives me no trouble and I do not think needs be much of a problem to anyone. I refer to the interest and the direct responsibility of the National Government in the waters of our navigable rivers and their tributaries. I want to make it as clear as I can that my conception of the basic jurisdiction of the Federal Government in these matters has not changed since I left my newspaper office in the town of Altus, in southwest Oklahoma, to become a member of the Federal Power Commission.

I have heard this subject of jurisdiction debated in my State from all angles, and in the end the compelling argument would prevail, that no region and no locality can do a complete job of conservation of its water resources without invoking the jurisdictional authority and receiving the aid of the National Government.

The realistic situation as I have tried to interpret it need not cause alarm or excite prejudices. We are in a period of progressive thinking and action when there is an acute realization of both Federal and State responsibilities over the control and utilization of water resources. Of practically no river basin can it be said that the responsibility for adequate comprehensive and wise use of water in the public interest is solely a matter of Federal responsibility and most certainly it is not a responsibility that a State alone can assume. There is, we all must recognize, a proper and necessary role to be played by all governmental agencies

and neither State nor Federal Government can infringe upon the rights and responsibilities of the other without jeopardy to the interests of the people as a whole.

It has been charged by some that the "encroachment"—and bear in mind I emphasize the quotes—of the National Government has been fostered by the Federal Power Commission among other agencies. A review of the history of the long and often disheartening struggle for Federal water power legislation which would effectively operate in the interests of the people refutes any such misconception. As laymen, as I am sure most of us are, there can be no mistake in our minds regarding the powers granted and implied in the Constitution to the Congress to control, regulate, and develop the navigable rivers and their tributaries. The Congress exercised such jurisdiction long before the passage of the Federal Water Power Act of 1920 and in so doing it was repeatedly upheld by the Supreme Court. As you also know, the assertion of jurisdiction by the Federal Power Commission over water power plants has also been consistently sustained by the Supreme Court.

Briefly, the first national legislation dealing with streams had to do with permitting and removing obstructions to navigation within the inland waterways.[1] Nearly 60 years ago, and continuing for more than 2 decades thereafter, Congress followed a policy of virtually giving away to private interests for an unlimited time extremely valuable water power sites on many of our rivers. This policy of permitting private exploitation, with few limitations, and without payment, supervsion, or control, was followed generally until a sharp awakening occurred in 1908 when President Theodore Roosevelt vetoed a license extension bill for a water-power site on the Rainy River in Minnesota.[2]

Later there were lapses back to a "give away" policy until President Taft on August 24, 1912, vetoed the Coosa River bill authorizing the Alabama Power Co. to build a dam at Lock 18, and firmed up our present-day conception of the public's interest in our water resources.

The veto messages of these two Presidents did not deal with jurisdictional questions. It was largely a matter of whether the public interest was paramount to the exploitations by private interests. A private company, said President Theodore Roosevelt, was not required, under the legislation previously passed by Congress, to develop these resources in a logical and comprehensive manner and the rights of the general public were largely neglected.

These principles were crystallized in March 1908 when he appointed the Inland Waterways Commission to study the waters of the United States and formulate plans for their more complete use. I think it would be quite illuminating to some if I would quote portions of his letters to members of that Commission. These statements indicate clearly his conception of Federal jurisdiction and how it might be properly exercised, and these accepted concepts have not changed during the past 40 years. President Theodore Roosevelt wrote to the Commission, in part, as follows:

"Works designed to control our waterways have thus far usually been undertaken for a single purpose, such as the improvement of navigation, the development of power, the irrigation of arid lands, the protection of lowlands from floods, or to supply water for domestic and manufacturing purposes. While the rights of the people to these and similar uses of water must be respected, the time has come for merging local projects and uses of the inland waters in a comprehensive plan designed for the benefit of the entire country. Such a plan should consider and include all the uses to which streams may be put, and should bring together and coordinate the points of view of all users of waters.

* * * * *

"It is not possible to properly frame so large a plan as this for the control of our rivers without taking account of the orderly development of other natural resources. Therefore, I ask that the Inland Waterways Commission shall consider the relations of the streams to the use of all the great permanent natural resources and their conservation for the making and maintenance of prosperous homes." [3]

From that time until June 10, 1920 when President Woodrow Wilson signed the Federal Water Power Act creating the Federal Power Commission, the batle over public and private rights in water use of national streams raged in Congress and elsewhere. Many of you are already familiar with the hectic legislative history of this water power statute which finally resulted in expression of a definite and progressive congressional policy. Under this statute many valuable water power sites have been developed for public benefit by private power interests.

Too frequently in other fields arguments along jurisdictional lines have generated so much heat and aroused so much enmity that the public interest has suffered, and at times valuable resources have been irretrievably dissipated. As a member of the Federal Power Commission and a citizen of a State vitally interested in these matters, it is my earnest hope that in the future these unfortunate results may be avoided in the field of water control and use.

In addition to private power developments, our national policy has also considered public river improvements. In the long series of legislative acts evidencing Federal interest in the full utilization of water courses under comprehensive plans, the River and Harbor Act of 1927 [4] inaugurated the active start of another era in national planning and river control with necessary funds being supplied from the Federal Treasury. This statute enacted into law the recommendations of the Army engineers, as set forth in the famous House Document No. 308 of the Sixty-third Congress, first session, and called for detailed study and reports on all possible uses of the principal river basins subject to Federal jurisdiction.

The disastrous flood of 1927 in the Mississippi River Basin and the agitation which followed prompted Congress to pass the Mississippi River Flood Control Act of 1928,[5] and the Nation was finally on its way to the full utilization and adequate control of these great natural resources.

The purpose of this movement is not only to prevent loss of life and property, but to enable our citizens to live a more secure life, to have the use of available water for municipal and domestic purposes, to irrigate their lands, to convert the restless waters into electric power for industrial, residential, and farming purposes, and to improve transportation channels for low-cost water carriage.

Another important part of this program, and one that means so much to many of us in the plains country, is development of the recreational opportunities which are being opened up for hundreds of thousands of our citizens.

In more recent years the movement for such constructive work has gathered further impetus from the achievements and benefits which are increasingly in evidence. Although Federal expenditures for river and harbor improvement started in 1822, up to 1938 only $558,000,000 had been spent for flood control. By way of contrast, the expenditures for river and harbor work, up to 1938, amounted to a total of $2,432,000,000 after having started off with a modest expenditure of $530 in 1822. The last decade has shown us to be well on our way. Between 1939 and 1945, the United States spent over $728,000,000 for flood control, and over $604,000,000 for river and harbor work. The grand total for all such work shows the United States has spent over $4,324,000,000 through 1945 in furtherance of the objectives to which I have referred.

To the expenditures through the War Department for river control and development may be added the expenditures of the Department of the Interior. Up to June 30 of this year the Bureau of Reclamation had spent approximately $1,100,000,000, of which around $600,000,000 could be allocated to reclamation, and other expenditures going chiefly to power plants and power facilities, but including a number of other incidental purposes. We might also mention the Tennessee Valley Authority, whose tremendous achievements are of immeasurable value to the Nation as well as creating a new economy in the large area embraced within the Tennessee River watershed. Over $842,000,000 had been expended by the TVA up to June 30 of this year.

Referring to my earlier remarks, I want again to remind you that the assertion of Federal control over tributary streams has long been recognized as an appropriate exercise of constitutional authority. Judicial recognition of this authority has kept pace with the measures found by Congress to be necessary to advance or protect the general welfare. In 1899, the Supreme Court said that a provision in the River and Harbor Act of 1890 [6] extending Federal control to nonnavigable streams for the protection of lower navigable capacity was constitutional. In that case it was held that the Elephant Butte Dam in New Mexico, then under construction as a non-Federal development, would require Federal approval if it was found to impair substantially lower navigable capacity.[7]

It was not, however, until the United States constructed a flood-control and power dam in an admittedly nonnavigable stream, and its authority to do so was directly challenged, that the Supreme Court finally passed upon the question of the authority of Congress to construct multiple-purpose projects in nonnavigable tributaries. In this case, which involved the Denison Dam, located between Texas and Oklahoma on the Red River, the Supreme Court stated the obvious when it remarked, "Floods pay no respect to State lines."

This project was merely one of a series of reservoirs in tributaries of the Mississippi River which would serve the double purpose of keeping back large floods and relieving summer navigation from obstruction by allowing the surplus so retained to pass down in the season of low water.

The Court further remarked:

"There is no constitutional reason why Congress cannot, under the commerce power, treat the watersheds as a key to flood control on navigable streams and their tributaries. Nor is there a constitutional necessity for viewing each reservoir project in isolation from a comprehensive plan covering the entire basin of a particular river." [8]

Congress has stated on many occasions, and it is now quite generally recognized, that the national government is not confined in its protective and control measures to those sections of a stream which are navigable in interstate commerce, but that this jurisdiction extends to the very headwaters of such streams to the full extent necessary to promote and protect interstate commerce.

---

[1] E. g., River and Harbor Act of 1890, 26 Stat. 454, and the earlier river and harbor acts.

[2] Senate Doc. 438, 60–1, Apr. 13, 1908.

[3] S. Doc. 325, 60–1 (1908).

[4] Act of Jan. 21, 1927, 44 Stat. 1010.

[5] 45 Stat. 534.

[6] 26 Stat. 454.

[7] *U. S.* v. *Rio Grande Dam and Irrigation Co.* (174 U. S. 690 (1899)).

[8] *Oklahoma* v. *Atkinson* (313 U. S. 508 (1941)).

However, when we come to consider the exercise of this authority in connection with the effect upon State jurisdiction, we have a more difficult and more complex situation. But the solution in a proper manner of this problem will result in the general development of the great waterways of the United States for the benefit of the largest number of people, and with the least friction among all State and Federal agencies concerned.

With respect to the construction of multiple-purpose projects by the corps of engineers, it is the Federal Power Commission's function to pass upon the feasibility of power development and to recommend the installation of penstocks and appurtenant power facilities. In order that this may be done, it is necessary, of course, to know where the power can be marketed and the general economic picture which should be considered by Congress in authorizing construction. The Commission, therefore, makes appropriate recommendations in such cases submitting recommendations jointly with the Chief of Engineers to the Secretary of the Army.

Those projects which are constructed by the Bureau of Reclamation are the responsibility of that agency. The power-market studies and power-analysis possibilities at any particular site which must be made by the Commission for a variety of reasons, such as its licensed project work and its work under the Flood Control and River and Harbor Acts, have been found by the Bureau of Reclamation to be extremely valuable and of great assistance. With respect to the approval of rate schedules for sale of power from Government projects, the Federal Power Commission's participation is required for those projects constructed under the Flood Control and River and Harbor Acts and the Fort Peck and Bonneville projects.

In addition to Federal developments, there are many private and State power projects constructed under the Federal Power Act and so designed as to be best adapted to the most comprehensive plans for stream development and control. The Federal Power Act, as you know, and as the Commission was reminded only a couple of weeks ago by a large group of power companies,[9] is drawn upon lines designed to encourage private construction of water-power projects on streams subject to the jurisdiction of Congress under appropriate terms and in the public interest. It is important to keep in mind that the licensing of private power projects represents one means of securing comprehensive development of water resources without the expenditure of Federal funds.

Some concern was expressed by various State groups following the decision of the United States Supreme Court in the First Iowa case.[10] I do not find it difficult to follow the Court's analysis of the problem presented or to rationalize administration of the Federal Power Act in conformity with it, while at the same time giving full recognition to the rights and statutes of the several States. In reality, the Court no more than repeated what it had said in the *Oklahoma* v. *Atkinson Co.* case. The Court evidently had in mind the long struggle for the effective control of the waters over which Congress might constitutionally assert jurisdiction. Speaking of the effect the Iowa statute might have on the administration of the Federal Power Act, the Court said:

"We find that when that [Federal Power] act is read in the light of its long and colorful legislative history, it discloses both a vigorous determination of Congress to make progress with the development of the long-idle water-power resources of the Nation and a determination to avoid unconstitutional invasion of the jurisdiction of the States. The solution reached is to apply the principle of the division of constitutional powers between the State and Federal Governments. This has resulted in a dual system involving the close integration of these powers rather than a dual system of futile duplication of two authorities over the same subject matter."

At every gathering where water resources and their development is the subject of discussion the charge is made that the Federal Government and its agencies are exceeding proper and constitutional authority. The fear will probably always be expressed that our national resources are gradually being nationalized. I, for one, will always support every proper interest the States may have, but at the same time we want to make sure that private interests that would exploit are not confused with genuine public interests within the State. I will be perfectly frank in stating that, so far as I have been able to ascertain, the Federal Power Commission has not been guilty of inflicting or causing to be inflicted any real injury to any State in the administration of the Federal Power Act. Naturally, I am not in a position to ascertain first-hand all that has transpired in other fields where Federal jurisdiction has been invoked. But I do wish to point out that my own State of Oklahoma fought a losing battle to prevent the construction of the Denison flood-control and power dam, to which I have referred previously, and today a very large majority of the people of Oklahoma recognize that great project as a blessing that will be enjoyed in our time and one that will bring happiness and better living to our children and our children's children.

I would be the last to suggest that the States should sit idly by and leave all the planning and development of these natural resources to the National Government. State participation in all these activities is highly desirable, if not essential. But all must recognize that the States have a responsibility that can be carried out without wasting time at every turn to engage in a new jurisdictional battle.

There is a most promising experiment under way in the Missouri Basin and I am sure that every person who is intensely interested in the development of our water resources is hopeful of its accomplishments because it can be a pattern of cooperation in every section of the United States. Most of you know of the work of the Missouri Basin Inter-Agency Committee. Here we have an example of State and Federal groups striving toward a common goal without the conflicts of jurisdiction becoming an issue. The States have a right and duty to insist that their local interests and general welfare receive protection and consideration. Congress, acting through duly constituted Federal agencies, charged with specific responsibilities in connection with the general welfare, cannot properly be asked to limit constitutional prerogatives but the great undertaking so essential to progress and security in the 10 great States drained by the Missouri and its tributaries must go forward.

There are those present who have attended and participated in the meetings of the Missouri Basin Inter-Agency Committee during the past year. They can give an accurate and detailed account of the problems that have been faced and how they have been met by the Governors and their aides and other State representatives and Federal agency men sitting around the table in a cooperative and friendly atmosphere. It now appears that the committee will present to Congress a highly comprehensive and uniform plan with the proposal that the entire matter be heard by a single congressional committee. The Federal and State budgets will be coordinated and a unified front will be maintained. It is not as simple as this brief explanation might indicate but this is a bold and worthy step in the direction of eliminating most of the controversies between State and National Government that have had a disturbing and retarding effect in the past.

The entire Nation should be grateful to the Governors of the 10 Missouri Basin States for their participation in the successful endeavors of the Missouri Basin Interagency Committee. Special mention should be made of the Governors of Missouri, Montana, Nebraska, North Dakota, and Wyoming, who, as representatives of these 10 Missouri Basin States, have participated so diligently and wholeheartedly in the work of the committee. They have been guiding spirits in Federal-State relationships that might well serve as a model for all groups striving for comprehensive development of our water resources.

The Federal Power Commission has been represented on this interagency committee from its beginning by Mr. B. H. Green, regional engineer in charge of our Chicago office.

We also have regional offices in San Francisco, Fort Worth, Atlanta, and New York, where Regional Engineers L. S. Wing, W. F. Fairlamb, M. F. Hetherington, and D. J. Wait are always ready to assist in any way possible. These men are well qualified in their field and we hope they will serve to bring about closer cooperation with those of you who are in such intimate touch with water problems.

Finally, may I repeat that the matter of jurisdiction need not be an issue where all concerned have one objective—that of dedicating to the widest and most beneficial uses the waters of our streams and rivers. Unanimity and mutual confidence and recognition of the responsibilities of each State and Federal authority will achieve greater results in conserving our soil, irrigating the arid regions of the West and Middle West, controlling the floodwaters, developing the maximum of hydroelectric power, and protecting navigation on our inland waterways, than will dissention and discord.

In such a great and lasting program we must not give a second thought to the red herrings that will be dragged across our paths with never-ending regularity.

[9] During a hearing at Docket R-105 in connection with a proposal to amend the Commission's substantive rules.

Increase in Subsistence Pay to Student Veterans

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 27, 1948

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and enclosure from Hon. Samuel B. Pettengill, a former Member of the House from Indiana:

FEBRUARY 16, 1948.

Hon. ROBERT RICH,
House Office Building,
Washington, D. C.

DEAR BOB: The enclosed is a thoughtful letter from a YMCA employee, which I think you will be glad to read.

Sincerely yours,
SAMUEL B. PETTENGILL.

REGARDING INCREASE IN SUBSISTENCE PAY TO STUDENT VETERANS—SOME FACTS TO BE TAKEN INTO CONSIDERATION

(By a personnel worker)

The thinking public does not have much patience with the slogan, "A hero yesterday, a heel today," now used by veteran organiza-

tions, or by individuals in behalf of veterans, for the public is doing some thinking for itself, and is seeing conditions as they are, and facing facts, and drawing its own conclusions.

Right-thinking and right-hearted people think and feel that every consideration, and full and just compensation, are due every veteran (student and nonstudent) who suffered in any way from the ravages of war service, mentally or physically; who were maimed in any way; whose health is impaired in any way because of war service; who are now handicaped because of war service, etc.

But the public also thinks and feels that glaring facts should be taken into consideration by the Administration in Washington before any increase in subsistence pay to student veterans is allowed, since taxpayers' money is already being spent too freely by those who need to be more economy minded for the good of everybody concerned. The public knows that what it sees going on in its own town, city, and school is multiplied over the country.

Many student veterans ride to school (even a short distance) in a car, or jeep or motorcycle. Many of them belong to fraternities and have cars—as parked cars at fraternity houses, day and night attest. And many of these veteran students in fraternities drink, stay up half the night, or come in late or early, and keep the neighbors awake—and the neighbors do not fail to express themselves about all this. Nonfraternity student veterans do their share of drinking, too; and practically all of the student veterans smoke pack after pack of cigarettes. They all have money for liquor or cigarettes. And the student veterans have more money to spend on food than do many of the nonveteran students, some of the latter being unable to buy much meat, if any.

Countless numbers of ex-service men received monthly pay, full subsistence or maintenance, free dental and medical, etc., from the Government while in training and in service, and had a chance to save a good deal of money. Some were officers and drew good pay, and never left the United States, and had a chance to save money; and the veterans who are now students ought to be able to get by on the present gift of tuition, books, supplies, and $65 a month if single, or $90, if married.

A student veteran who did office work while in camps in United States, and overseas, said he was in England, France, Switzerland, etc., and did traveling he never could have afforded to do, and saved $1,500, then received other allowance from the Government; and felt the Government was doing too much for veterans at the expense of taxpayers in his family and on the outside. Such cases can be multiplied.

A student veteran told a personnel worker among students of his being on the GI bill, also of having received special money from the Government; said his room rent was less than $10 a month; that he worked at a place where his meals and cash pay amounted to about $20 a week, and figured his income ran from $175 to $180 a month.

A student said his friend—a student veteran under the GI bill—was also receiving a special allowance from the Government for a slight shoulder shrapnel wound that had long ago cleared up.

A student veteran who had just gotten his discharge said he had applied for the 20–52 unemployment pay despite the fact that in 6 weeks' time he would be enrolled in college under the GI bill.

(Close checking on the part of the VA might reveal that a good many veterans in and out of school are drawing disability pay long after a disability ceased to exist, or perhaps find some students under the GI bill drawing unemployment pay.)

Some student veterans have other financial interests or personal cash incomes and do not need even what they now get from the Government.

Many single student veterans are handling part-time work or odd jobs now and then to supplement their pay from the Government.

Many married veterans' wives are working, and in a vast number of cases both husband and wife are working, and their incomes are well over $200 a month, doubtless sometimes a good deal more than that amount.

Personnel workers know that some student veterans who apply for work turn up their noses at the mention of certain types of jobs offered them. They want light work, short hours, big pay. In other words, they want something for nothing, according to the growing spirit in this country because of the New Deal hand-outs.

The public feels that the able-bodied student veterans who cannot or will not economize and try to live within the Government allowances should be willing to do part-time work to supplement their Government pay (if they do not have personal incomes) if work is available and if free time from studies permits. Red-blooded men will do this when possible and not receive pay from the pockets of taxpayers who earn as little as $20 to $30 per week (with many obligations to meet from this small salary and the need of looking after their future); and many taxpayers who are on small monthly allowances, some faring far less well than many of the student veterans on the present rate of pay.

(Since writing the above paragraph a nonveteran student looking for work, having to make his entire way through school, said, "If I'd get from the Government tuition, books, etc., and $65 a month, I'd have no trouble getting along on that amount. I'd be satisfied.")

Increase in subsistence pay would mean that an army of student-veterans would marry before getting out of college because they could draw more pay as husbands, and thus greatly increase the housing shortage all over the country, and run rents and property costs higher. As is, many students, even freshmen and sophomores, marry before they have gotten part-time work, or found an apartment, and some even have to hunt for a room for a couple, after marriage.

A few months ago a youthful student-veteran said it was to his advantage to get married, for he'd get more money from the Government and his wife could work. He is still without a job—and in case of an addition to the family, there might be some rough sailing. A great many veterans who figured as he did soon found their wives expectant mothers, who had to give up their work—and there was also the problem of finding a place to stay, with a baby in the family.

A married student-veteran had to leave school and get a regular job, because, he said, a baby had come and his wife was so disagreeable and was always "griping" because of lack of money and conditions she did not want to put up with any longer.

It was recently stated over the radio that there were 31 divorces out of every 100 marriages last year. No wonder, with boys and girls marrying at such early ages, before they were prepared to take such a serious and important step, and when conditions were not conducive to happy married life and there were obstacles at every turn.

Several years ago a student was drafted just a few months before his graduation from college, and was greatly upset because he couldn't finish up and get his diploma before going into training, since he did not see any urgent need of his being taken out of school at that time. He was in training 1 year. Under the GI bill he went back to college (though he could have easily financed his way without outside help), got married, drew $90 a month from the Government, got work at the college, and his wife also got a job.

A present student veteran hadn't been in school long as a freshman, had a part-time job and was making his way satisfactorily when, to his great displeasure, he was drafted. When back to the campus on a furlough, he was still complaining about the break in his studies, unnecessarily, he felt, right after the war was over. At the end of the year's training he was back in school, and soon became engaged—in keeping with the early-age marrying spree that is growing all over the country.

People who thought it all right to give increased pay to student veterans on getting married right after the war, since they were in war service several years, with no chance to marry, are now asking the question, "Now that the war is way back in the past, where is the reason for the Government continuing to pay student veterans to get married, especially at the early ages of 18 to 22?"

The public does a lot of talking about the veterans—their attitudes and actions; the way the rich, as well as the needy, veterans receive money they do not need and should not take from the pockets of taxpayers who can ill afford to pay income taxes at all; the way they spend money; the way they drink; the way they turn down jobs they would have been eager to get before the war; the way they drive for more money, etc. It is often said that the veterans who endured and suffered most complain less and ask for less.

People—even veterans—think the New Deal administration catered to veterans for votes just as it catered to labor for votes. Ever since the New Dealers got into power, certain groups have pressed or fought for their particular selfish interests without giving any thought to the people at large, who have to bear the brunt of things.

It is often said that, as to legislation concerning veterans, the administration did not take into consideration the fact that it could not make up to every group or individual for what they lost or suffered because of the war. Some of those who were not in service lost loved ones because of the war; had heartaches and heartbreaks because of what happened to them or to their people in and out of service; some lost homes and small businesses during war years; some lost rents they depended on for a living—on one block in a city there were five large houses vacant, and after losing 2 years of rent, the owner of one of these houses sold the house for about half price, fearing the bottom had dropped out of the bucket; many rooming and boarding houses had to close, depriving many of a livelihood; workers put up with inconveniences and hardships of all sorts when they went to crowded industrial centers to do war work, then came back home without a place to live, or had to pay high rent, or live in crowded conditions that greatly affected their living; some people who had been living in houses or apartments for years were evicted by veterans who married young, or by unscrupulous owners or agents who cared more for the almighty dollar than for human beings. Everybody has to remember there was a war; that wars cost most everybody something, in one way or another; and that no government can make up to everybody for what a war cost him.

Antilynching legislation

EXTENSION OF REMARKS

OF

HON. R. WALTER RIEHLMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. RIEHLMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include two statements

made by the Honorable KENNETH KEATING on the Forum of the Air regarding proposed antilynching legislation:

Mr. GRANIK. Mr. KEATING, you are the author of an antilynching bill. Why do you feel that there is a need for Federal legislation on this subject?

Mr. KEATING. In less than 50 years lynch mobs have caused the deaths of over 5,150 persons in the United States. This has happened while many States have on their statute books State laws against murder and other violence. The simple fact is that in many States these laws are not enforced.

The fourteenth amendment to the United States Constitution provides that no person shall be denied by any State the equal protection of the laws. Then it gives to Congress the power to enforce, by appropriate legislation, the provisions of this article.

On top of that, this Nation has signed the United Nations Charter, agreeing to promote, among other things, universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, language, or religion. Certainly one of those fundamental freedoms must be freedom from violence and from the fear thereof.

It seems to me, therefore, our clear duty as a Nation to enact Federal legislation to end the abuses which some States continue, by inaction at least, to condone.

In order to maintain our domestic tranquillity, as well as our position of world leadership, it is essential that the basic human rights embraced within the civil rights proposals be safeguarded and strengthened.

Racial superiority, religious intolerance, false pride of national origin are the concepts we have just sacrificed the finest of our youth and uncounted wealth to destroy.

Yet we permit to exist in this great country conditions which belie the lofty ideas and principles we proclaim. So long as lynch mobs are allowed, to seize and murder American citizens because of the color of their skin, so long as others can only peer at the ballot box through the bars of the dollar sign, so long as jobs are denied because of religious faith, our material achievements profit us nothing. To gain the world, we must not lose our own souls. No nation can retain greatness which sacrifices righteousness.

Peace

EXTENSION OF REMARKS
OF
HON. PORTER HARDY, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1948

Mr. HARDY. Mr. Speaker, I had the pleasure of hearing an address by Rear Adm. Richard E. Byrd on the subject of Peace. Admiral Bird discussed particularly the role of the United Nations as an agency for bringing about a just and lasting peace of the world. The address was presented at a banquet of the Society of Virginia at the Statler Hotel on the evening of January 29, at which Admiral Byrd was tendered the Society's Gold Medal of Achievement for his Arctic and Antarctic explorations. I commend the reading of this address to every Member of the House:

PEACE

I

My old friend Rixey Smith has asked me to discuss peace. It is a subject I have studied all my life, but my interest was much quickened when, as a young ensign in the Navy, I served aboard the Presidential yacht the USS *Mayflower*, as one of the aides to that great Virginian and great prophet of peace, Woodrow Wilson.

In discussing peace tonight I will attempt to fit it into the whole-world picture and to take the element of time into consideration; in other words, the long-term view. That seems to be the only way I can tackle the problem. And I think that is bad news for you Virginians who have to listen to me.

There is a very great emphasis placed today on the preservation of peace, which, of course, is as it should be. But there is one thing which we know to be more important than the preservation of peace and that is the preservation of freedom. But freedom, that is in grave peril the world over, has no chance whatever of survival if the peace is lost and a Third World War is to be fought with atomic and chemical weapons. The danger of war now is very slight, but we have only 4 or 5 years to secure the peace. (It always irritates me when some of our sages returning from visits to Russia make the flat statment: "There is no danger of war with Russia" without any reference to the danger that will exist when Russia gets rehabilitated. A year is no more than a few days in the life of a great nation, and relatively an even shorter time in the life of the human race.)

Time is running out. It is later perhaps than we think. Only a few years of grace now remain to the world before other nations, totalitarian nations, will possess the atomic bomb and bacteriological weapons that may be just as devastating as the bomb.

And when that time comes, Christianity itself will be imperiled because freedom is the implementation of the spirit and essence of Christianity. Make no mistake about it—a totalitarian dictator sees in the idea of a Divine Being a rival with which he finds it most difficult, or impossible, to compete. The dictator must establish the state as God, with himself as the state.

And so, the world over, people of good will who are liberty loving, decent, kindly, and well meaning, are in a titantic cold struggle against an evil minority to prevent the destruction of that great trinity—peace, liberty, and freedom of worship.

I am going to start with a premise that there is nothing wrong individually with the Russian people. They are simply misled. There has been so much criticism of Russianism that I would like to show that the potentialities for the development of a very powerful and dangerous Russia have been made possible by a fundamental and gravely serious problem that mankind as a whole (and Americans in particular) has itself created. It is important that we face this truth. I am greatly puzzled by the failure of international leaders to face the truth.

II

Please bear with me while I attempt to isolate the devastating germ that is causing our troubles—our world disease. We must discover this germ and develop a culture with which to inoculate mankind for its destruction. How can we cure the disease by giving all of our time to fighting the symptoms only, which means acting for expediency's sake, haphazardly, spasmodically, and inadequately, as we neglect the long-term remedies. There are, of course, urgent, pressing matters that must be attended to with the utmost vigor. But if the world's peace loving leaders act from expediency to the neglect of the long-term absolutely essential remedies, there is not the slightest chance to preserve freedom in the world. As I see it, it is just plain stupidity and futility to blame Stalinism for all of our troubles.

We have witnessed at the beginning of the twentieth century the dawn of a new era, the technological era, where man has made lightninglike advances in material progress with his scientific and mechanical genius while he neglected the science of human relations, which thus stood still as his spiritual self suffered a sickness and went backward under the deteriorating influence of our material progress.

The technology of the twentieth century, by suddenly shrinking the world, created an interdependence of human relationships that was so great that man was unprepared to cope with it. The mechanism of our economic organization and group and national relations became so delicate and complicated that it made war not only obsolete but very dangerous to the progress of the human race.

Thus we who went through the First World War learned how disruptive was such a war to the delicate mechanism of this new kind of civilization. The great confusion that resulted from that war was a very poisonous soil for the growth of freedom as it was a very fertile soil for the growth of tyranny. The masses of the people became too confused to guide their own destinies and so democracies began to go down like torpedoed ships.

Thus we learned that it was not just wars alone that threatened freedom, but that our own technological progress created a fundamental hazard to the human race, even without wars. But with war added to our troubles, the result was devastating.

Then, following World War I, we witnessed the human race, and more particularly the Americans, joyously creating ever better machines that shrank the world with an ever increasing acceleration, which meant increasing complexity and confusion. The task of ruling ourselves by slow democratic processes thus became increasingly difficult.

And then, of course, more and more destructive became the weapons of warfare, and we who love freedom, didn't stop to consider that the more devastating the destructive power of weapons of war, the more it worked against freedom to weaken it, and on the side of tyranny to strengthen it.

When the United States discarded Woodrow Wilson's League of Nations and followed George Clemenceau's idea of power politics, World War II became a certainty. Thus it was inevitable that some tyrants, such as Hitler and Mussolini, should use our new devastating technological weapons to blitz the world.

And to top it all, the United States developed and dropped the atomic bomb on Hiroshima. In that fatal instant we leaped ahead tens of centuries into an even more sinister era, which placed liberty in an even greater peril by our utter unpreparedness to cope with it.

To sum up: Our worldly material sciences have made incredible advances while our science of human relations has stood still and our spiritual progress has actually gone backward.

III

And now, where do we stand today? Our isolation is suddenly gone—destroyed. From several worlds, as it was before the twentieth century, we suddenly have become one world, and we are unprepared in the field of human relations and the spiritual realm to coordinate and integrate the nations of that world.

In short, we destroyed the isolation of nations long before nations were ready for integration.

This greatly shrunken world puts groups and nations right up against each other. When nations are, in effect, jammed up against each other—running athwart of each other's prejudices, hates, ambitions, and misunderstandings—they eventually find themselves at each other's throats. This illustrates how difficult General Marshall's task is.

Is it not ironical that man has himself created an environment in which he, as a free man, is unfit to survive.

This new kind of environment calls for such things as universal good will and understanding, the brotherhood of man, kindliness, give and take, and common decency. In short, it calls for the application of the Golden Rule.

If the major trouble with people is people, can we put all the blame on the dictators? Their success is a symptom, a dangerous sympton, of our fundamental problems.

How can we solve that problem and eradicate the evil that is striking us down until we know exactly the nature of that evil.

And so that is why I have painted this picture rather carefully to show that our greatest problem is not with such things as chemical warfare, atomic bombs, and other davastating weapons, but with man himself. This fact must, I believe, be realized and acted upon if there is the remotest chance that we shall achieve peace and succeed in holding in leash warlike dictators.

Our predicament is such that many things must be done, immediately, vigorously and simultaneously, on a wide front. Adequate education is the great long-term need.

And now, before giving my opinion as to some methods of meeting this predicament, I would like to make a short introductory statement.

IV

When after World War I this Nation refused to join the League of Nations, it was discouraging to see the various nations of the world play their handicapped and fumbling parts on the world stage. During that period it was my misfortune to be in a position to look behind the scenes of the tragedy that was being played and to witness some of the grevious mistakes of weakness and appeasement made in secret negotiations by honorable, well-meaning men. But it is not my object to attack those men. We have had enough criticisms that are purely negative.

My object is to attempt to give something constructive, however small it may be, that is calculated to strengthen the arm of President Truman and General Marshall and the Congress where they are on the right track.

So devastating was the nature of World War II, and so great the loss of life and human degradation and misery, that the masses of the people of the world seemed at long last to be convinced that it was absolutely essential that war be abolished as an instrument of national policy. In the organization of the United Nations, the star of hope for lasting peace was lifted high in the heavens.

Subsequently the people of the world were greatly fortified in this hope by the barrage of statements made by many great leaders of the day concerning law and fair play and justice for the proposed UNO. Naturally the people believed and many still believe that an effective instrument for peace was achieved.

And yet the sad fact is that there wasn't the slightest chance of obtaining a really workable organization at San Francisco. But there was no one to tell the people the whole truth.

V

More than anything else, it was the veto formula of the UNO that makes it unworkable. This formula gave any one of the five great nations the power to veto any punitive action against any act of aggression that might occur anywhere in the world. And, further, it allowed, and it still allows, a veto of any change in this veto formula, and thus crystallized, and still crystallizes, the UNO solidly in its impracticable shape. I feel that I have a right to make this statement now because before the San Francisco meeting I protested to our leaders as strongly as was in my power against the veto formula. What I particularly dwelt upon was the ability of one of the Big Five to veto any change in the veto formula. This formula provides a shield for the strong nations and is in the nature of a mockery for the weak ones. I made a plea then and I make it again now for protection and justice for the smaller nations.

Any provision for the exercise of power by one or several great nations over any weaker nation and a veto to make that power permanent is certainly the opposite to justice. It is more akin to the law of the jungle than it is to civilized law. It means that the weaker nations of the United Nations are subject to penalties, and even to punishment, without fair representation. It is, in fact, akin to the might-is-right idea.

The advocates and framers of the veto formula claimed that the United States Senate would not ratify any UNO that contained an amendment to this power to veto any change in the veto formula. I denied then, and I vigorously deny now, the truth of that contention. I know that several Senators flew to San Francisco bent upon an effort to amend this veto formula. There were other Senators who felt the same way.

I believe that if history tells the truth, it will have to record the shocking fact that the United States and Great Britain are responsible, along with Russia (and I can't blame Russia too much), for that part of the veto formula, that gives any one of these three great nations the power, by itself, acting alone, to prohibit, in fact actually completely to block progress or growth and development of the UNO, even though at its birth it was dwarfed by the might-is-right idea.

Even though I will be guilty of repetition, I want to make the issue upon which I stand absolutely clear. I know too well the subtlety and sophistry of the arguments made by those, who from a sense of guilt, or even for perfectly honest reasons of expediency, desire to becloud the issue and hide forever the truth about what really happened at San Francisco. That issue is the right given in the Charter of the UN to Russia acting alone (Great Britain and the United States have the same right) to prevent by veto any change in the veto power of the great powers. The intent was clear: to prevent any change in the Security Council's totalitarian idealogy; for who could be stupid enough to think that Russia, so long as she has the veto power, would fail to veto any change in the veto formula that would make the UN less totalitarian and more democratic? And who could blame her?

At San Francisco a fanatical, communistic imperialism (ideological and expansionist) plus a fear born of mistrust of free enterprise nations sabotaged the good judgment of the Russian leaders. Fear for the life of the British Empire sabotaged the good judgment of the British leaders. Fear of not getting Russia into the UNO, combined with a lack of faith in the common sense of the Senate and people of this Nation, sabotaged the good judgment of the American leaders. (This is oversimplification of course, but the general idea conveyed I believe to be correct.)

Now I want to pause here to say that I do not recommend the abolition of the UN. I recommend strongly that it be amended so that it can be saved. That, as I see it, is the only way it can be saved.

VI

Before I give my suggestions for peace, I would like to lay down several assumptions.

1. That there is little danger of war as long as Russia is as weak as she is today.

2. That the Russian people are just as fine people as exist in the world and that they would value liberty and freedom and the American way of life if they knew about it and could get it.

3. But that the philosophy of a dictator such as Stalin is that the end justifies any means whatsoever, and that such things as logic and reason and justice are not to be considered if they interfere with his plans.

4. That Russia, well within 5 years, will possess the atomic bomb.

5. That the moment Russia possesses an adequate supply of atomic bombs and is rehabilitated from the ravages of World War II is the moment that the danger to freedom the world over becomes very grave.

6. That the Russian people do not have freedom and have no conception of the American way of life because they do not have freedom of the press and will never have freedom of the press as long as men like Joseph Stalin are at the helm of Russia. Nor will Russia's satellites enjoy freedom of the press.

7. That freedom of the press is the mark of liberty and the completely controlled press by a dictator is the mark of slavery.

8. That no normal human being would of free choice elect to live under a police state that utilizes gestapo methods.

9. That the Russian leaders are imperialistic and fanatical crusaders to extend communism by infiltration.

10. That Stalin considers that an orderly western Europe and an orderly Far East and a workable United Nations are undesirable because they work on the side of democracy and freedom and that therefore he must do all possible to create a world-wide confusion, which is the most fertile of all soils for tyranny.

11. That I do not believe that this Nation, if it becomes (and it may so become) an oasis in a desert of world communism, could preserve its American way of life.

12. That Communists in the United States and in other nations give their allegiance to Stalin instead of to their own native land. That, therefore, they are a menace to freedom.

13. That democracies cannot stand wars, just as dictatorships cannot survive with long periods of peace. That, therefore, dictatorships are more naturally warlike than democracies.

14. That the Marxist philosophy holds that the capitalist countries will eventully attack Soviet Russia. If Stalin really believes this we can forgive him some of the things he has done. We must remember that we did not always, in prewar days, treat Russia with all the consideration we might have. Let's be honest about this.

15. That Russia is very unlikely to make any satisfactory settlement with free-enterprise nations so long as there is confusion in western Europe. With western European solidarity Russia would probably find some kind of settlement to her advantage.

16. That appeasement of dictators by free-enterprise nations by the sacrifice of their most sacred principles has gotten these peace-loving nations into their present dangerous position. Such appeasement leads inevitably to war. General Marshall knows that and he should be backed up in his courageous course. If this Nation and Great Britain are too timid to protect small nations that are still free from reprisals from Russia for daring to resist aggressive communistic infiltration, then those nations will continually be mortally afraid to offend Russia and will lose their respect and friendship for us. Great moral strength and courage behind what the ages have taught us is right is the dire need of the hour. But this does not mean that we should be careless about or indifferent to fair play and justice when dealing with any nation. Justice and fairness are in fact what we profess and in the end must live by.

VII

Based on these assumptions and other statements I have made tonight, I submit the following suggestions for peace:

A. That first and of great importance is that the people of democratic nations in general, and this Republic in particular, be kept thoroughly informed, where practicable, of all moves for peace. I believe that General Marshall has been doing just that.

Never again must the millions of free people be betrayed by keeping them absolutely ignorant of the real meaning of the problems and the issues and their settlements that are being made by the leaders of democracies for a peaceful world.

B. That the nations of western Europe be shown the dire need of and encouraged in the formation of a federation for economic collaboration and coordination, collective security, interchange of information, and mutual understanding and education. And that representatives from China and the British Commonwealth of Nations be invited to attend the deliberations of the federation.

C. That a settlement with Russia is very desirable. But that such a settlement must not be in the nature of appeasement nor above all the sacrifice of principles that will provide a breathing spell for Russia to continue, by peacetime aggressive infiltration, to rub out freedom in weaker nations and thus to spread communism.

D. That a temporary answer to "might is right" is "right plus might." That, therefore, this Nation keep itself physically strong and that it encourage other peace- and freedom-loving nations of the world to do the same. The purpose of this is to hold in leash the power-mad aggressive leaders of dictator nations until the world can achieve a workable United Nations organization. We know that what dictators respect most is strength and power and that there is nothing for which they have more contempt than military weakness or any kind of weakness. But I conceive of strong armaments as being an emergency measure. Armament races have never achieved peace and probably never will. Thus, in the long run, physical strength alone is but an uncertain prop upon which to lean for the achievement of lasting peace. And let us not forget that it would not take many years for an armament race to bankrupt the world.

E. That the veto formula of the Security Council of the United Nations be amended.

1. But there are other considerable changes aside from the veto formula that are necessary to remake the UN into a sufficiently strong and workable instrument of peace. As I have said, there is no adequate provision within its structure to enact laws for its growth and development. We must admit that the power of one of the big five to veto any change in the veto formula appears on the face of it almost an impossible hurdle to get over. But it is not impossible; it must not be impossible. Without a workable UN, there is, I fear, little hope in the long run for the preservation of freedom in the world.

2. Here is one way, I believe, is to be possible to change the UN. The General Assembly to be given power to enact world law but only in the fields necessary for keeping the peace. It should not have authority to enact law affecting the political, economic, or religious systems of the member nations, but only on such matters as the control of weapons of mass destruction, limitation of armaments, and provision for, and government of, an international police force. These laws should apply to individuals in any nation so that a Hitler who commenced to rearm his nation for warlike purposes would be subject to be indicted, punished, and tried as soon as his acts were discovered by the international inspection force.

3. The leaders of the powerful democratic nations seem reluctant to relinquish even a tiny bit of sovereignty, and the leaders of the dictatorial nations are determined not to relinquish any sovereignty whatever. It is this matter of sovereignty that is blocking peace and endangering freedom. And it must be admitted that it may become the nemesis of liberty and Christianity. On this planet, which we have shrunk until it is one world, freedom cannot live so long as any nation that is powerful and mighty uses that power to put its heavy heel down on the rights of weaker nations.

4. In the early days this Nation had its troubles with individual sovereignty. In a community or a town where each individual had the right to do as he pleased, order and peace and safety were found to be impossible. This I will call intense individualism. The western pioneer cities before the establishment of law and order show what happens when individuals can do as they please.

5. And in the first part of the twentieth century we saw what evils selfish capitalism could create and of later years we have seen what damage aggressive narrow-minded minorities can do to this Nation. I will call this intense groupism. These groups are now being curbed in the democratic way.

6. But some powerful nations are not yet curbed and still demand the right to do as they please and to hold themselves above any law of God or man. I will call this passionate nationalism. It has ever been the world's greatest war monger.

7. Just as individuals and groups within a nation have learned that they cannot achieve internal harmony and peace until they relinquish the right to do as they please; so the nations of the world cannot achieve world peace until the strong nations relinquish the right to commit at their pleasure depredation upon the weaker nations.

8. This question of sovereignty over a sovereign power plagued the original 13 States. The Articles of Confederation under which they organized required unanimous consent. This in effect gave any State the right of veto. Yet this hurdle was overcome when the necessity of solidarity was realized and the Constitution was substituted for the Articles of Confederation.

9. To give the General Assembly of the United Nations the law-making power, it would be necessary to change the system of representation from the present one-nation one-vote rule to a system by which each nation would have a number of votes fairly representative of its relative position in the world. Several formulae have been devised for making such apportionment in relation to a nation's population, productive capacity, natural resources, literacy, and similar factors.

10. Only with such balanced representation in the Assembly could all the powerful nations be expected even to consider amendments to the veto power in the Security Council.

11. The Security Council, with an amended veto, should be made the executive of the United Nations with the responsibility of enforcing the laws passed by the Assembly. The use of any police force that might be decided upon, would be limited to the fields in which the United Nations is given power to legislate.

12. The permanent Court of International Justice should be given compulsory instead of optional jurisdiction over international disputes and all cases arising under the laws enacted by the assembly. The international police should be charged with the enforcement of the decrees of the court.

13. Senate Resolution No. 24, and House Resolution Nos. 59–68, now pending in Congress, state that it is the sense of the Congress that the President should immediately take the initiative in calling a general conference of the United Nations pursuant to article 190 for the purpose of making the United Nations capable of enacting, interpreting and enforcing world law to prevent war. I believe that these resolutions should be passed, and that if they are passed, the President will instruct United States delegates to advocate the calling of such a conference, and that if called, amendments like the above will be submitted to the member nations for ratification. No veto can be exercised to prevent the calling of such a conference. If any country should refuse to ratify the amendments when submitted to them, the nations favoring them would be free to withdraw from the present organization and set up the amended one without the adherence of those nations which might elect to stay out. Agreements arrived at at the San Francisco conference permit nations voting for such amendments to withdraw under these circumstances. Such action would closely follow that which was taken when our own Constitution was adopted. The previous Articles of Confederation forbade amendments except by unanimous consent. Nevertheless, the Constitution went into effect when adopted by only nine of the States.

14. We must do all possible to keep Russia in the UN. If the Soviet Union should elect to stay out of a strengthened United Nations, I believe that in the course of a few years she would follow the example of Rhode Island and North Carolina, which originally remained out of our Federal Union. The Soviet leaders would probably find it very uncomfortable to continue in isolation, to conduct an atomic armaments race against a union of the non-Communist part of the world, when the alternative would be to join and participate in a workable United Nations that could protect the Soviet Union and all other member nations from any kind of external aggression. Russia need not then fear aggression. Nor need we with a workable UN fear giving to Russia the oil and the access to the sea (warm water) that she needs. If we do this Russia may remain in the UN. If she agrees to a workable UN on condition that these concessions be made, then such concessions would be steps toward freedom. At this point I pause to admit that dictators in the past have been given to the habit of breaking agreements. Perhaps this weakens my contentions, but I submit that breaking a law established by the great family of nations would be a more serious step than breaking an agreement made between two or three nations.

F. That this Nation do all within its power to prevent the spread of communism throughout the world. President Truman and General Marshall should be backed up in every way possible, short of war, and short of giving so much to Europe and Asia that our own economy will be disrupted. It is clear that a serious collapse of our national economy would lose for this Nation and all other freedom-loving nations the battle for world freedom, and the American way of life. The great point is, How far can this Nation go without bringing about economic disaster. This point will, I am sure, be considered carefully and prayerfully. It would seem that our aid to Europe and Asia should be kept in a flexible status, so that this Nation can correct any mistakes that might bring about our own economic collapse. All other freedom-loving nations should be asked to do their part for Europe and China according to their capacity to help.

G. I have said that keeping this Nation and other democratic nations physically strong is an emergency measure. The aid to Eurasia is also an emergency measure. The establishment of a workable UN is both an urgent emergency step and long-term measure as well. Even with these three moves carried out efficiently peace is still not secured. The very long term absolute necessity, as I have pointed out, is for man to learn to cope with and fit himself into this dangerous environment that he has created with his scientific and mechanical genius. Within the Nation intense individualism and intense groupism must be abandoned. They make for internal discord and lack of solidarity and unity, just as intense nationalism has always been, and still is, I repeat, the greatest cause for war. If we are to survive as free beings, we must learn that the well-being of individuals depends upon the well-being of other individuals; that the well-being of groups is

dependent upon the well-being of other groups; and that the well-being of a nation depends upon the well-being of other nations. Selfish minorities cannot impose their will upon all the other people of a nation without hurting themselves as well.

H. I repeat that man will not be willing to change his infinitely complex environment or even consider putting an end to his shrinking of this world with an ever-increasing acceleration, which means ever-increasing complexity. That, therefore, he must fit himself into this environment since he flatly refuses to fit the environment to himself. As certainly as the sun rises and sets freedom will be lost unless man achieves this goal. I have been told many times by political leaders that it is impossible for man to change his age-old attitude and selfish practices in time to save freedom.

I. But I would like to say emphatically that I believe it can be done. Man can achieve the necessary universal good will and feelings of brotherhood for his fellow man by eradicating fear. He is afraid of starvation, and he is afraid of the destruction of his family unit, and he is afraid of sudden death from tyrants in peacetime and from combat in wartime. And he is afraid of the chaos that breeds all these things. And now I come to the most important point that I can make, and I wish that I could get this truth to every human being in the world: That man can change his hates and selfish practices only by getting rid of the above-mentioned fears by protection under some system that operates by law, backed by force, to achieve fair play and justice for small nations. I make this statement with all the force at my command.

J. Thus we see that due to the chaos that exists in the world within nations and between nations, those nations are working at cross purposes. There must be, I submit, a common purpose for all mankind, just as there is a common purpose for the cities and States of the United States.

K. Therefore, the world must be united by integrating it behind a common global purpose by means of a workable method. The only common global purpose that is conceivable to me is the achievement of the design of creation, which I take to be a chance for human beings the world over for the enjoyment of liberty and the pursuit of happiness. And the workable method I take to be the utilization of Christian principles, which is the same golden rule that Buddha and Confucius taught.

L. This method calls for the expression of the decency that is in man through organization. It is the effective implementation of the good will that individuals in the world possess in abundance, by means of law and order to suppress the evil that unfortunately predominates when there is no law—when confusion or chaos rules. The human race can no more implement its good will when living in a state of chaos than the decent citizens of early western towns could achieve local peace until they achieved order and law. This method, in short, calls for the mobilization of decency to save men from destruction by the technological Frankenstein monster that his genius has created. Only the comparatively few Communists among the Russians would refuse to vote in the direction of decency if they had the chance.

And now in conclusion:

M. I have tired to show that nations can change their ancient hates and selfish practices but that such a change can only be effected under the encouragement and protection and deterrents of international law and justice. That applies to the weak as well as the strong nation. That, as I see it, is how mankind can develop its potentialities for spiritual growth and strength into an implement of checks and restraints of the evil that would destroy peace and freedom. Thus can mankind go forward under God to its destiny.

Commercial Fisheries—Canada Expands While United States Shrinks

EXTENSION OF REMARKS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. BLAND. Mr. Speaker, my attention has been called to an address by Hon. James A. MacKinnon, Canadian Minister of Fisheries at East Coast Fisheries Conference, Quebec, Canada, February 3–5, 1948.

I am impressed by the fact that while our appropriations for, and interest in, our fisheries seems to be in process of reduction, yet our competitors north of us are increasing their expenditures. It seems very shortsighted that our commercial fishery appropriations should be severely cut while our chief competitor is reorganizing and expanding.

I hope that all Members interested in our fisheries will take notice. We have incurred an enormous debt in the World War. We must expand our business in commerce and in our fisheries. All that Mr. MacKinnon advocates for Canada applies all the more to us.

Commenting on Mr. MacKinnon's speech, the National Fisheries Institute at Washington, D. C., which is always alert to the best interest of our fisheries and diligent to promote them, says:

Mr. MacKinnon is the Minister of Fisheries in Canada, the same status as a member of the Cabinet in the United States. Recognizing the growing importance of fisheries, particularly in the international field, Canada is losing no time to protect and advance her fishing industry. Mr. MacKinnon was formerly Minister of Trade and Commerce. He has just returned from a 15,000-mile trade tour in Africa and other parts of the world. Canada is looking to the future and leaving no stone unturned to build and protect her fisheries.

Meanwhile, let us review the situation on our side of the border. For lack of funds the Fish and Wildlife Service can no longer mail the daily Market News Reports—efforts are being made to secure a deficiency appropriation from Congress. But this is just one blow. The Commercial Fisheries Division of FWS, the main Government unit servicing our fishing industry, is struggling along with reduced personnel, on just barely half the appropriation they had last year. The House reduced the appropriation last year almost 80 percent, but in the end some items were restored, so that the appropriation for commercial fisheries work ended up with only a 50-percent cut. Trained personnel have been dropped, statistical records which are essential for Government use in international treaty-making are becoming disorganized. What a parallel. Canada expands while United States shrinks.

Mr. MacKinnon spoke as follows:

As Minister of Trade and Commerce I have been associated over a fairly lengthy period with the Canadian fishing industry on its export marketing side. Fisheries have always had an important part in our export trade As a matter of fact, 70 percent of the products of Canadian fisheries are sold in markets outside Canada.

At the present time I believe problems of marketing, rather than production, are the chief concern of the fishing industry of this country. Canada has experienced years of abnormal demand for food products of every kind. There has been an outlet for all the fish Canada could supply. Today the world is still in need of food but many countries in urgent need of supplies have not the means with which to buy. This points up our problem which officials of the department have been discussing and will possibly discuss with you further.

In regard to the market within Canada for fish, the prospects are favorable. Domestic buying power is at a high level. There is no sign of an early reversal in the upward trend of business activity generally. Meat and possibly some other foods which compete with fish are in relatively short supply. Fish should, therefore, obtain a higher share of the food business than has formerly been the case. I do not mean that a large volume of increased sales will come to the industry automatically. There will need to be a continuance of dependable quality in the product, energetic selling efforts as well as efficient handling of products at every stage of distribution, if full advantage is to be taken of improvement in domestic-market conditions.

Fishing and agriculture are the two great national food-producing industries. Annual conferences are held with representatives of the Canadian Council of Agriculture meeting with Federal Department of Agriculture officials as well as with members of the Federal Government. The usefulness to the agricultural industry generally of these discussions, held regularly and on an official basis, has been demonstrated. I realize that it is not always possible to apply to one primary industry what has been proven successful in the case of another. For instance, it is not practical in the case of fisheries to set up annual production targets or goals as has been done in agriculture. But I believe something like the same conference procedure could be adopted with benefit to the fishing industry. Progress in this connection is being made. Our east and west coast regional conferences are a step in this direction. Another step is the practice of the Fisheries Department in submitting annually proposed regulations to groups in the industry for study and comment.

As to exports, 1948 promises to be another good year in the United States market. The United States, of course, is the best single customer for the products of our fisheries. Recent official market surveys in that country indicate that food supplies this year are likely to be somewhat less than in 1947. The same market examination shows that the demand in the United States for fish will continue to be strong. There is a distinct possibility that fish prices in the United States will rise in the first half of the present year above the level reached in the corresponding period of 1947.

The marketing situation elsewhere for some of our fish and fish products is less definitely favorable. Unsettled world conditions and problems of international exchange becloud the future so far as the general flow of Canadian goods abroad is concerned. Last year, as you know, post-UNRRA purchasing by the Federal Government relieved the situation. Buying on the part of a number of European countries under the Marshall plan may develop during this year. All these factors present problems and their complete solution does not rest with one authority or even one country in this modern, complex, and highly interdependent world.

The Federal Government will, however, proceed vigorously to find satisfactory outlets for Canadian fish production. Preparations are now under way to establish in the Department of Fisheries a special market service, one feature of departmental reorganization and expansion. I believe that the functions of the Department of Fisheries should be concerned with more than administration, important as those duties may be.

The Department should also be a service organization, designed to assist as well as to regulate. The chief aim of this new marketing service will be to assist the fishing industry in developing profitable outlets for its products. It will put under way research activities and make available market reports and other information useful to the fishing industry generally. This service will be integrated with the Fisheries Prices Support Board and, of course, will work in close cooperation with the Department of Trade and Commerce. I am satisfied that as this program develops its benefits will be widely and rapidly felt.

One of the chief difficulties experienced in setting up this new service, has been the matter of finding men available and qualified to fill senior administrative positions. We are hopeful that this obstacle will soon be overcome but any assistance which the industry can volunteer in this connection will be appreciated. The senior appointments in this marketing service will be of prime importance—from your point of view as well as from ours. We need competent men for these positions.

This same personnel difficulty has also retarded some department plans. I think, however, I should say that the record shows that very considerable progress has been made in the past year. Everyone here from the maritimes is already familiar, I am sure, with what has been done to expand and strengthen our field force in those provinces. The same sort of thing has been done in British Columbia. In the matter also of strengthening our staff in Ottawa progress has been made and is continuing to be made. The whitefish inspection staff in the midwest has also been strengthened. Certain important adjustments have been made in the department with a view to better coordination of work and greater efficiency in operation. Plans are in preparation to add to the effectiveness of various branches of departmental service—plans, for instance, such as those for further improvement in our marine patrol service in the interest of conservation. This service is essential if the fishermen's livelihood is to be safeguarded.

I have rather closely followed the development of commercial fishing in our northern lakes, particularly in Great Slave Lake, recently, and in Athabasca and other lakes for a longer period. Great Slave is one of the continent's largest bodies of fresh water. It had never been fished commercially, however, until 1945. For that matter there had been no commercial fishing anywhere in the northwest territories previous to 1945. Each year since, however, fishermen employed by an Edmonton company have been sending to Canadian and United States cities several million pounds of lake trout and whitefish. The interesting thing to me about these operations is the fact that individually wrapped consumer packages of fish fillets are processed by fast-freezing equipment operated on barges, and the product is transported by air to Canadian and United States buyers. I have, personally, seen these operations. Because of this development, the productive map of Canada is being expanded and a new area of enterprise is being opened up for the first time. I am mentioning this interior fishing not in an attempt to detract in any way from the great fishing centers of the St. Lawrence and the two coasts but by way of contrast, as it were, to emphasize the extent of Canada's principal fishing areas.

I have passed over a good deal of reorganization detail but I think I should say a word in particular about the establishment of the economics division. The Canadian fisheries' position would be strengthened if there could be a more adequate stream of authoritative information in the field of fisheries' economics. Certainly in these times we cannot trust hit-or-miss knowledge of economic conditions in our fisheries and the different factors affecting the operations and progress of the industry generally. In the operations of the industry and in the establishing of departmental policy, something better is required as a guide to proper action.

It is the job of the economics division to build up, by trained and careful research, a continuing body of economic facts relating to the fisheries and their development—to discover, assemble, and interpret accurate data for the benefit of industry and government alike. This division services both the department and the Fisheries Prices Support Board, and through them it will also serve industry. It operates both at headquarters and in the field. Members of its staff have already been at work for some time in fishing areas in different parts of Canada.

The Fisheries Research Board were anxious to have the services of Mr. D. H. Sutherland, who has been assistant deputy minister of the department. This is being arranged, and we believe that this move will improve the administrative liaison between the Fisheries Research Board and the department.

Mr. Sutherland's transfer to the board position means a new assistant deputy minister. Anticipating the question which I am sure is in some minds, perhaps I might answer right now that we don't know who the new assistant deputy will be. All I can say is that we would like the appointment to be made as soon as possible, and when it takes place we will follow it with a closer coordination of several administrative branches of the department under the assistant deputy.

We visualize the department as an agency of service to the fishing industry rather than simply concerned with administration. That is what is being sought through the present process of reorganization and expansion. All its plans and adjustments are directed to making the department an instrument of service.

Communism

EXTENSION OF REMARKS

OF

HON. WILLIAM C. COLE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast by Jack Beall on communism:

Good evening. Recently, I have been trying to show that the Communist International teaches and demands mass disloyalty and treason of its followers to all nations except the Soviet Union. I have used their own official documents to show it.

What I want to demonstrate today is the direct control by the Communist International, in Moscow, of all activities of the American Communist Party. In other words, what I have to say tends to prove that Communists are agents of a foreign power.

Right now Congress has before it a bill that would force Communists to register their names as agents of a foreign government. I hope all of you who feel strongly on this point will write in to your Congressmen to support the Mundt bill. It deserves support.

For one thing, the passage of the Mundt bill will force a legal test of this whole thing—a test which has never been put up to the Supreme Court in this form. Communists have been doing their utmost to prevent any clear-cut ruling by the Supreme Court, holding that they are, in truth and in fact, and as a matter of law, a subversive outfit which serves a foreign power. It is high time we had just such a ruling and one of the best ways to get it is through enacting a statute along the lines of the Mundt bill. The same thing is true of the Cole bill, which would bar a subversive party from the ballot.

Well, what is some of the evidence of Communists being agents of a foreign power?

Again, I go to a fundamental document—the Constitution and Rules of the Communist International. That provides that all parties calling themselves Communist Parties throughout the world shall be merely sections of the Communist International, with headquarters in Moscow. Section III says the executive committee of the Communist International—which is generally called the ECCI—"gives instructions to all sections (or parties) and controls their activities." It adds: "The decisions of the ECCI are obligatory for all sections" and the ECCI has the right to annul or amend decisions of party congresses and central committees of individual parties and make decisions which are obligatory for them."

This is so plain on the face of it that there can be no argument. The executive committee of the Communist International in Moscow runs the Communist Parties all over the world. Whoever runs the executive committee runs the Communist Parties in the United States and in 60 other countries. Of course, the Politburo, with Stalin at its head, runs the ECCI and makes decisions purely in the interest of the Soviet Union. Therefore, how can there be any question but what Stalin and the Politburo of the Soviet Union run the Communist Party in this country?

And they have it rigged so that the Russian party can never lose control. They have the right to annul or amend decisions of the individual parties throughout the world. They can expel whole parties which disagree with them, as well as individuals, and only the Russian party can instruct its representatives to the world congress. They can send out their representatives to the various parties throughout the world and, actually and practically, the representative can overturn their decisions. One man, sent out from Moscow, mind you, can absolutely control the decisions of the Communist Party of the United States of America. Listen to the testimony of Ben Gitlow—a former general secretary of the party in this country. He is talking about what Communists call the CI Rep—the Communist International representative. Incidentally, Gerhart Eisler stands accused of having been the CI Rep to this country at one time—the top secret figure who transmitted orders from Moscow.

Here is what Gitlow says about the CI Rep:

"A representative of the Communist International to the United States was the boss of the party. In other words, he could step into the central committee of the party and say, 'I, as a representative of the Communist International, using my mandate, order the American party to do this thing and that thing and something else,' and that had to be carried out. In other words, he was commander in chief of the party while in the United States. * * *

"If he happened to be in the minority in the vote—when he wanted the minority to be a majority—all he had to do was to impose his power and mandate, as a CI representative, and then his view would prevail. Generally, American Communists never take a position in opposition to the representative of the Communist International. They know his special powers in the country."

Apparently the whole thing of the special powers of the CI Rep to order things around to suit Moscow and overturn a majority vote of the American party came to a head back in

1929. Over in Russia, Stalin was engaged in purging another one of the older Bolshevists, who might threaten him. This time it was Bukharin, one of the most brilliant theoreticians of communism. As usual, there were great repercussions of the struggle here in America. Jay Lovestone, the head of the party here, and various others, were suspected by Stalin of sympathizing with Bukharin. So Stalin set out to depose Lovestone. He sent a letter to William Z. Foster, letting all Communists know that Foster was Stalin's candidate. But back in 1929, this still wasn't enough. The party had not yet learned its lesson of absolute obedience to Moscow. Before the national convention of the American Communist Party was held, Foster had only from 5 to 10 percent of the votes. It appeared that Foster wasn't going to get the job after all.* So the Communist International sent a cable directing the American party to elect Foster and also ordering that Lovestone, an American citizen, mind you, be removed and deported from America, to work in Moscow. The party still resisted but Lovestone and his followers did go to Moscow, where a sort of trial was held. Stalin made several speeches. Molotov laid down the doctrine that from then onward, when Moscow sent over a CI Rep, he (quoting Gitlow) "shall have full power and complete control over the American party and his decisions shall be binding, with veto power over any kind of decision the party might happen to make."

This was made an order of the International and, says Gitlow, it "established the complete bossism of Stalin over the American Communist movement."

Lovestone and his henchmen were kept in Moscow for months while Stalin's agents went to New York and completely reorganized the party in the United States along the lines laid down by Moscow. The only compromise was that Stalin picked Earl Browder instead of Foster. Later on, when the American party would have liked to kick Browder out, Stalin came to his rescue and kept him in.

There may be those who say, "Yes, but all that is changed now—the Communist International has been dissolved. It no longer interferes in American affairs." Well, that is a subject all by itself and I am not going to get sidetracked on it now. There is a wealth of evidence that the Comintern was dissolved only on paper and that it kept right on doing what it had always done, but not so openly. I will cite only one example of their direction of American affairs—while the Communist International was supposedly not even in existence. During the war, Browder had been the head of the party here and had been following the united front tactics. They coincided, of course, with American policy, we being wartime allies of Soviet Russia. Russia wanted to help us get out production and set up a second front. Up through Tehran, the attitude of cooperation between the two countries still persisted but soon a most significant thing happened.

A French Communist named Jacques Duclos, known to all Communists, everywhere, as a representative of the Communist International, wrote a piece in a French periodical. It came out in April 1945, the month in which President Roosevelt died. It told the initiate that the season of Soviet-American good will and cooperation was over with and it did it in a single phrase: The Tehran Pact, said the Duclos article, was only a diplomatic gesture. At the same time it attacked Earl Browder, the symbol of the Communist united front. It called Browder a revisionist and said that he should be supplanted. Now, mark you, Earl Browder, the head of the party here, was accustomed to 30-minute ovations from the faithful when he appeared at Madison Square Garden to make speeches. But so subservient was the American party to the whim, will and word of Moscow—even from a somewhat concealed source, this French Communist named Duclos—that it turned on Browder overnight. Browder even began beating his own breast and uttering mea culpas. He withdrew from the secretary generalship, and he said a very significant thing when he did so. He said this condemnation of him by Duclos, undoubtedly represents the opinion of all leading European Marxists. Of course, the leading European Marxists are Stalin, Molotov, Vishinsky, et al.

It shows the absolute servility of the American Communists to the edict of Moscow. Just a few words in an obscure French journal, but from a right source—an old Comintern representative—could overturn the leadership of the American Communist Party. But doesn't it show something else? Doesn't it show that the Comintern—the Communist International that was supposedly dissolved—was still operating at the old stand?

I want to give you some testimony of Louis Budenz, the former Communist and former editor of the Daily Worker, where he had a front-row seat.

Budenz said before the House Un-American Activities Committee, in November 1946: "Browder and Foster have no life except that which is granted them by Moscow, no political life of their own. I want to illustrate this by what happens in the Communist Party, to show how this works out. For instance, Browder used to go back and forth to Moscow and every time he came back there was a new line. A classical case that I remember * * * was when a conference on unemployment insurance was going on, in January 1935, and they (meaning the Communist Party) were denouncing the idea of a Labor Party. The Communists were fighting tooth and nail against it when, lo and behold, Browder arrives on a ship from Moscow, rushes to Washington and declares that anyone who is against the Labor Party is anathema; that anyone who is opposed to the Labor Party is opposed to the interests of the workers and the labor movement. And the Communists flip-flopped over and became just as enthusiastic, in 2 minutes, for the Labor Party as they had been bitterly opposed to it, all along before.

"Now, we are all sensible people. We know that Browder did not go to Moscow for the fun of it. He went to get the line on the Labor Party and he came back with it. That happened over and over again."

Budenz gives another rather amusing picture of the feverish search of the Communists for the one true party line, direct from Moscow, so that they could veer with it and not be thrown off when it took a sudden turn. He depicts the search for the true gospel in the pages of the two great Moscow newspapers, Pravda and Izvestia, which get to this country 10 days or 2 weeks after publication.

"If there is anything that would give you a picture of a Communist leader," says Budenz, "it is his feverish search, every day of what Pravda or Izvestia says, to make sure he has the proper sensitivity regarding the line that must be followed for that day or for that period. If there are some lapses, it is largely due to difficulties of communication or the time element."

As a clincher to all I have been saying, let me give you just one more quote to show that the Kremlin dog wags the American Party tail.

Here is Browder speaking in 1939:

He said there is "no single instance where the Communist Party of the United States has ever disagreed with the Communist line in Russia."

How could this be mere coincidence?

This is Jack Beall saying good night from Washington.

Taxes and Government Extravagance

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. HAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcasts:

CONGRESSMAN HAND ON TAXES AND GOVERNMENT EXTRAVAGANCE

(A series of three radio broadcasts)

I

As I suggested in last week's broadcast, the House passed the tax-reduction bill without difficulty, but I am bound to say I was surprised by the actual vote of 292 to 120, which was a larger margin that I expected, and larger than would be necessary to override another Presidential veto. The bill has been sent to the Senate, and I regret to report that it will be delayed there for some time. However, while there will be an unfortunate delay, I think there is no doubt whatever that the Senate will pass a tax-reduction bill in some form by spring. It is possible that they will have to substantially reduce the cuts which the House has proposed in order to get enough Democratic votes to override an expected veto.

It is a shame that bargains of this kind have to be made at the expense of the taxpayer. Under the Constitution the House is the body which is charged with raising revenue, and this is the fifth time in recent months that the House has overwhelmingly voted for tax reduction, only to find their efforts foiled by vetoes and the lack of a working majority in the Senate.

The House bill provides substantial relief to all taxpayers, and relief, which in my judgment, the people need and the Government can well afford. Tax reductions range from 30 percent to 10 percent according to the size of income. Briefly, persons with net income of $1,000 or less after exemption get a 30-percent reduction in their tax bill, and 20 percent on any excess up to $1,400. Those with net incomes from $1,400 to $4,000 get a reduction of 20 percent. Those with net incomes in excess of $4,000 get a reduction of 20 percent on the first $4,000 and 10 percent on income in excess of that amount. In addition, exemptions are increased from $500 to $600 which alone will take millions in the lower brackets off the tax rolls entirely; and additional exemptions are allowed for taxpayers over 65 years of age. This latter provision has been criticized as discriminatory, but the cold facts are that persons in that age group, as a rule, suffer greatly impaired earnings, and are the most seriously affected by high living costs which, indeed, affect all of us.

In addition to affording very substantial relief to those who are in the lower brackets, the merit of the bill is that it provides reasonable relief for the great middle class of this country, earning, say, between $2,500 and $5,000; and some encouragement for those in the upper brackets.

Those who advocate a definite soak-the-rich program overlook two basic facts:

1. That if all of the income of all the really rich was confiscated, it would run the Government but a very few days.

2. That some promise, at least, of tax relief must be given to those who have spare capital, in order to give them some incentive for investing money, because it is only through the investment of capital that jobs are created. The livelihood of everyone depends upon the prudent investment of capital which will not be invested if tax

rates continue on a wartime confiscatory basis.

I wish that time would permit me to give you a number of examples of tax savings to the average citizen, which are effected under this bill. Millions who paid taxes last year will be exempt entirely this year. A married couple with two dependents earning $2,500 will pay about $13 under this bill as against approximately $100 under the present law, because under this bill, as you know, the benefits of the so-called community property States will extend to all taxpayers, thus eliminating an unjustifiable discrimination. And, as I have said, older persons are especially benefitted.

The President's proposal to greatly increase corporate taxes overlooks the fact that it would probably reduce employment, and unquestionably increase prices, because the corporations that make the goods of the country will, of course, pass their burdens on to the consumer.

Despite charges that you have heard to the contrary, this tax reduction can be effected without disturbing the operations of Government, without impairing the Government's foreign program, and with due allowance to the orderly reduction of the national debt. I hope the Senate will not change it too drastically and that the President will have the good judgment to finally agree with Congress that reasonable tax relief is needed and is entirely practicable this year.

II

I think it will be agreed that one problem of paramount importance this year is to make a real beginning on the problem of the drastic reduction of Government expenditures. Like Mark Twain's observation about the weather, everybody talks about it but nobody does anything.

It has been calculated that Federal, State, and local taxes take as much as 30 percent of the average income. Another way to put it is that all of us work possibly 1 day out of 3 for the tax collector.

The cost of food is extremely high, but the cost of Government is even higher. The Federal budget alone costs us as much or more than our food bill. Moreover, in every item of food that we buy, a substantial part of the price is in taxes. The citizen who pays a small income tax, or perhaps none at all, and who pays no local real-estate tax, sometimes thinks that the tax burden is none of his concern. That is a great mistake. Every time he goes to the corner store to buy a loaf of bread, he helps to pay the taxes of the merchant, the baker, the flour manufacturer, the taxes of the farmer who grows the wheat, and innumerable other taxes that are imposed along the way—and it will be found that a very substantial part of the 16 cents paid for the bread finds it way into the hands of the tax collectors for the local, State, and Federal Governments.

The President's budget of nearly $40,000,000,000 is about four times as high as the peacetime budgets under the Roosevelt administration. Of course, there are reasons why it is necessarily higher. The cost of national defense, the cost of adequate care for veterans of the war, and the interest on the public debt are three reasons why we cannot escape from higher budgets. But that is not to say there is any justification for multiplying the expense of Government four times. That is the result of waste, extravagance, inefficiencies, and above all the psychology of spending and spending, which has taken hold of governments generally.

It is obvious that if we are going to maintain a sound economy at home, pay off our crushing national debt, and lift an intolerable burden from the backs of our taxpayers, we are going to have to cut out waste, and extravagance, and unnecessary services, and furthermore (and this I want to particularly emphasize), we are going to have to cut out even those expenditures and services which are desirable, but not imperative. In other words, first things must come first, and second things, even though we are used to them and would rather like to continue them, and find them convenient, must go if we are to truly economize.

With the exception of civilian employees in the Army and Navy, which obviously have been reduced since the war, the number of employees of many departments of the Federal Government have actually increased since the war.

Therefore, I am keenly disappointed at the action taken on the first appropriation bill of the year. It was passed last week by a top-heavy vote, but I felt bound to vote against it, and did. The committee told us that they had saved $56,000,000 under the budget estimates, and they did, but the fact still remains that the bill provided appropriations of $196,000,000 in excess of the moneys spent in 1947. The President's emergency fund, for example, last year was $500,000. This year the President asked for $1,000,000. The committee thought they were economizing when they reduced the request to $700,000, but the simple fact is they raised the item $200,000 over last year. This is a sort of petty-cash account which Presidents for many years did not find necessary at all. And so it goes with almost all the 27 agencies covered by the bill. The committee cut down their extravagant requests, but still appropriated more than the previous year.

Let me reiterate that if we are to cut the budget, and we must, we will have to do it far more drastically, far more courageously, and far more radically than action on this first bill would indicate.

III

At the risk of harping too much on the same problem, I ask your leave to again emphasize the importance of continuing the fight against Government extravagance.

You will recall that last week I said I was disappointed with the first appropriation bill passed by the House this year. I charged that although the committee had reduced the extravagant claims made by the agencies that they had nonetheless approved appropriations almost 200 millions in excess of the requirements of the preceding year, which is surely economizing backwards. In the intervening week my charge has received strong and welcome support. Senator HARRY F. BYRD, of Virginia, speaking on the same subject a day or two ago, said: "Too frequently Congress is satisfied with itself when it whittles the Executive's budget request, but actually allows increases over the previous year. This is the case with the * * * (appropriation) bill reported to the House last week."

Senator BYRD was right, as he mostly is. I have had occasion before to pay tribute to him as an outstanding member of the Democratic Party, who has done highly useful work in exposing extravagant expenditures and unnecessary Government pay rolls.

Speaking of Government pay rolls, the situation is still relatively unimproved. Personnel in December 1947 was close to the 2,000,000 mark, and although a net reduction has been made in the last 6 months, an analysis of that reduction indicates that less than 1 percent of total savings may be attributed to a real effort on the part of the executive department to economize. The reminder of the reduction is either seasonable, or results from a liquidation of war agencies, which have no possible right to a continued existence.

The discouraging fact is that in nearly half of the agencies there has actually been an increase in the number on the pay roll.

Now, more than 2 years after the war, it is startling to discover continued increases in the vast pay-roll army. A notable offender is the Post Office Department, which increases its pay rolls very substantially month by month, and which added almost 1,700 new employees from November to December. The pay of postal employees needs to be brought more nearly in line with present living costs, and this could be better done if the Department would not continue to pad its pay rolls with thousands of employees not needed for the efficient conduct of its business. It is no wonder that the Post Office anticipates an operating loss running into millions and is planning a general increase in postal rates to partly relieve the deficit.

On the basis of the President's requests, the budget for fiscal 1949 would provide employment for 2,010,000 persons, who would be paid more than $6,000,000,000. And it is to be assumed that thousands more will be added to implement various foreign programs—and this fact stands out in bold relief—exclusive of civilian employment in the Army, Navy, and Air Force, Federal employment has increased 60,000 over the peak of wartime employment in June 1945.

The primary blame for this obviously rests on the executive department, which plans and does all of this hiring, but Congress cannot evade the responsibility for not putting a stop to it—because after all, with its control of appropriations, its historic control of the purse strings, it can and most certainly should call a halt to an orgy of waste and extravagance which continues almost unabated, and will continue until we say "No" in a loud and certain voice.

Now that the break in the price of commodities gives us reason to hope that the ever-increasing cost of foodstuffs has broken, it is more than ever time for us to cut the price of Government, which is always an important factor in living costs generally.

We do not set our sights nearly high enough. We talk about cutting two or three billion from the present budget, and we should think in terms of a minimum cut of five billion. We talk about reducing employees in the thousands, and we should talk about reducing them in the hundreds of thousands. It is practical, and with a will it can be done. Listening to the people of my district, I know they insist it be done.

A Bow to Sea Isle City and Mayor Bill Haffert

EXTENSION OF REMARKS

OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. HAND. Mr. Speaker, Mr. Max Leuchter, the publisher and editor of the Vineland Times Journal, recently published in his interesting column an article entitled "A Bow to Sea Isle City and Mayor Bill Haffert."

The bow was a well merited recognition of a man who is a first class citizen, a newspaper publisher, the publisher of a well known farm magazine, and who has been a friend of mine for many years.

The significance of the article, however, is its brief reference to Mayor Haffert's town meetings, which are modeled after the town meetings of early New England, and which are an interesting and valuable experiment in true democratic government. It is for this reason in particular that I include herewith a part of the article referred to:

If Charles K. Landis could have been present at the recent town meeting held at Sea

Isle City, he would have been very proud of the resort town which he founded, and which, as in Vineland, honors his memory in naming its main street Landis Avenue. The town meetings in Sea Isle City are the inspiration and the initiative of Mayor William A. (Bill) Haffert, newspaper and farm-magazine publisher and prominent Rotarian. Bill believes that the Sea Isle City commissioners should be guided in all major decisions by the direct opinion of the city's residents, and he has held six town meetings since 1945.

Vineland has more than a pasing interest in the welfare of Sea Isle City. Quite a number of residents of this area spend many summer week ends there. In our opinion, no south Jersey beach equals the Sea Isle City in its gentle slope seaward. Given any kind of an opportunity, Sea Isle can grow into a wonderful home resort, minus the bluff and bluster of the more highly advertised and pressurized coast places. Its residents have shown unusual honestly and courage in turning down a financial windfall. We hope that potential residents, seeking year-around homes at the shore in the future, will respond to this friendly invitation by the people of Sea Isle City. With new homes will come additional ratables, with which the city commissioners can improve beach-front facilities.

The report of the town meeting, as carried in the Atlantic City Press, stated in conclusion: "T. Leyard Blakesman, chief of the New Jersey State Bureau of Planning, a guest at the meeting, declared that it was the finest example of real democracy at work that he had ever seen."

To Mayor Bill Haffert, whose faith in the good judgment of his fellow townsmen caused him to revive a good, old-fashioned, colonial custom of liberty-loving New England, and make it work in a south Jersey municipality—our admiration and congratulations. To Sea Isle City, which wants to be honest with its friends and visitors, good luck and prosperity!

MAX LEUCHTER.

Low-Cost Housing

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, March 1 (legislative day of Monday, February 2), 1948

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a proposal for a low-cost housing plan prepared by a constituent of mine which I think merits careful reading by the Members of the Senate.

There being no objection, the proposal was ordered to be printed in the RECORD, as follows:

A LOW-COST HOUSING PLAN

It has come to our attention that the Government is in the process of trying to sell the land and houses under the jurisdiction of the Vancouver Housing Authority, McLoughlin Heights, Vancouver, Wash.

Homes under $1,000 sounds unbelievable but is a working reality with the proper cooperation of Government agencies—mainly the Public Housing Authority and Reconstruction Finance Corporation. Therefore, we urge the careful study of the plan herein stated.

PUBLIC HOUSING AUTHORITY PLAN

Floyd S. Ratchford, executive director, Vancouver Housing Authority, McLoughlin Heights, Vancouver, Wash., has set forth his plan in a series of personal interviews with us. The plan consists of dividing the McLoughlin Heights area into large plots and having the land and the buildings appraised and the property sold to interested builders or investors for redevelopment. This area of 832.15 acres has 3,394 single construction demountable houses, 493 family units in row houses, three schools, a fire station, two large general store buildings, a recreation area, and administration buildings.

An 11-acre plot containing 85 houses was used as an example of what the investor would be required to do. The land would be sold to an investor at $600 per acre. The 85 units would be sold at an appraised value according to respective accommodations—a 2-bedroom house having a value of $650. The investor would be required to replot the area into lots so that only 41 units would remain in the 11 acres, and the additional 44 units would have to be moved to some other plot of land purchased by the investor. It was suggested this other land could be made available through War Assets Administration. The 41 units remaining on the 11 acres would each be moved intact from its original site to a new location and placed on a concrete-block foundation and rebuilt to conform with FHA specifications and the city of Vancouver specifications, as it was further planned that the city of Vancouver would incorporate each redeveloped plot into the city.

A description of the remodeling of a sample house in the McLoughlin Heights area and the cost of remodeling is shown in an enclosed pamphlet published by the Vancouver Housing Authority. The cost of this two-bedroom converted house is $5,559.

Two other such units in the McLoughlin Heights area have been remodeled to such an extent that the selling price would reach $8,800 and $9,200, respectively. Therefore, it can be assumed that the pamphlet does show a conservative figure at $5,559.

FALLACIES IN THE PLAN OF THE HOUSING AUTHORITY

1. The McLoughlin Heights area is very well planned and does not need any moving or shifting around of the houses. As the area now stands, it is far, far better than can be found in many city residential areas, including some of the adjoining areas in the city of Vancouver. The city has an ordinance requiring 5,000 square feet to each Vancouver city lot. The 11 acres to be taken into the city on March 1, 1948, have 85 houses. This will average out to 5,637 square feet per lot; actually, however, some lots will fall slightly below the requirement and some will run a little larger. It can, therefore, be reasonably assumed that the area would be taken into the city as it is now laid out. Any objections on the part of the city can be handled in a democratic manner, namely, by public reaction and opinion.

2. The appearance of the house, after a remodeling job, alone costing $4,509.29, is improved only slightly more than could be done by a coat of paint.

3. These remodeled houses would have to sell for $5,559 plus title insurance, and any expert's opinion is that they are not worth as much as $3,500.

4. The added utility room is not heated and could scarcely be used in the winter months without an additional expense for heating equipment.

5. The hardwood floor used in the sample remodeled house was of inferior quality.

6. The change of the wall structure is not worth the tremedous cost for remodeling the same.

7. Private capital will not support such a fantastic plan as that proposed for the remodeling of the McLoughlin Heights area. Any capital support would give only 50 cents on a dollar, therefore requiring $2,780 for down payment.

8. The amount of building being done in the Portland-Vancouver area has created a heavy demand upon building materials, and a shortage of material already exists in this locality. The amount of material necessary to remodel these 3,394 homes (and they are being used as homes at present) would create such an additional demand that it would only tend to increase building material prices, which are already too high, and also to create a severe shortage of material for other homes being built in this vicinity. It is a known fact that material shortages have caused many builders to take up to a year to complete a single home.

At a cost of $16,000,000 for remodeling no new homes are to be created in this area, and therefore no housing shortage for this area will be solved, but rather the proposed remodeling will only divert the material that could be used for other new homes.

9. The public housing areas provide the only rental housing that the average veteran can afford. Remodeling or transfiguring these areas at present inflationary prices would completely deprive them of shelter.

OUR PROPOSED PLAN

A careful study of the housing situation in the Portland-Vancouver area and information received from a recent survey, sponsored jointly by the city of Vancouver and the PHA, proved the immediate necessity for a workable low cost housing plan—one that would keep us away from the road that leads to inflation. We have that plan and urge the Government to consider our proposals. We feel confident that our proposals will receive a tremendous amount of favorable public reaction. There are many similar projects over the Nation, therefore this plan can help solve thousands and thousands of housing problems.

We propose that the housing authority make this McLoughlin Heights property available in units of one house to each eligible purchaser with rules to be set up as to eligibility and priority similar to those stated below:

Eligible purchasers will consist only of persons who do not own a home in the Portland-Vancouver area.

First priority: First 2-month period held for sale to present occupants.

Second priority: Second 2-month period held for sale to veterans in need of a home.

Third priority: After 4 months open to low-income families in need of a home.

We suggest also that a deed will not be issued until 1 year after date of purchase, and resale of said property will not be permitted during the first year, except in case of death or some other unforeseen circumstances that would require or cause the purchaser to move from this area. The sale, in that case, would be handled by the PHA under the regular priority system with a fair charge being made for rental and damage. This clause would prevent racketeering in the purchase of these low-cost homes.

Mr. Ratchford informed us that the investor would receive a two-bedroom house with refrigerator, electric range, hot-water heater, and heating stove for the price of $650; a three-bedroom house for $720. We, therefore, propose that the buildings, equipped as stated, be made available to the eligible purchasers at the same price.

We propose that the three schools, fire station, playground or park area, and administration buildings be given as communal property to the city of Vancouver on condition that the area be accepted into the city limits, or to a new city of the McLoughlin Heights area to be chartered if Vancouver refuses admittance of the area as it now stands.

The price of the land was set at $600 per acre to an investor. If this land value was divided between the 3,394 houses and 2 general stores, it would make the price of each average-sized lot about $147. With care and good judgment, lots larger than average would be priced a little higher and lots smaller than average would be priced a

little less. This plan is reasonable as it would automatically pay for the area occupied as communal property mentioned in the previous paragraph. It is only fair for the property owners to pay for the communal property as they would benefit directly by it.

The 498 row units would be sold as salvage at the present appraised value and removed from the area.

Buildings now used as business establishments would be sold by sealed bids.

The land has to be plotted and surveyed by a staff of competent engineers. Abstracts and title insurance will have to be drawn up for each piece of property. This cost could amount to as much as $50 per house. The buildings turned over as communal property have some value and the administration of such an undertaking would be high. Someone has to pay for all this so we propose that a handling fee of not greater than 15 percent be charged. Therefore it can be concluded that a two-bedroom house would have a selling price as indicated below:

House (two-bedroom)	$650.00
Lot	147.00
Total	797.00
15-percent handling cost	119.55
Total cost to purchaser	916.55

It is easy for one to sit and dream of some splendid, magnificent, superresidential area, but in the face of reality, one must accept the facts. Our Nation lacks any home plan whereby the lower-income group can acquire a home at some nominal fee that would not be injurious to their future well being. Many of our potential home buyers can ill afford to pay more than $916.55, and very few home buyers can actually afford to sign themselves into indebtedness for the rest of their lives and thereby bring about want and hardships to their families. There are undoubtedly many veterans who cannot even afford a home with a down payment of $916.55. Therefore, we urge that these low-income people be given a chance by making some small down payment with the remainder financed by RFC and paid back in regular monthly installments amounting only to a low-rent rate of $25 to $50 per month—the only rate an average veteran can afford to pay.

In the past veterans have strongly criticized WAA for their handling of surplus Government supplies and the making of surplus supplies available only in carload lots—quantities too large for the individual consumer. Let's get behind this program of single-package units with a push and let the veterans know that their Government is for them by giving them a chance to start out with a home and a clear outlook for the future.

ALTERNATE PLAN

Should the Government be unwilling to carry out our plan, we propose that the property in the McLoughlin Heights area be made available to us (a committee of veterans) financed by RFC, and we will agree to carry out this program or some similar program that could be agreed upon. We believe we could handle the entire plan more cheaply than the Government and charge a handling fee of about 10 percent plus 1 percent added for each calendar quarter until the sale is consummated. This additional 1 percent handling charge per calendar quarter would reimburse us for interest charged by RFC.

Example

FIRST QUARTER PERIOD, OR FIRST 3 MONTHS OF SALE

House	$650.00
Lot	147.00
Total	797.00
10 percent handling charge	[1] 79.70
1 percent handling charge	7.97
Selling price	884.67

SECOND QUARTER, PERIOD FROM 3 TO 6 MONTHS AFTER SALE OPENS

House	$650.00
Lot	147.00
Total	797.00
10 percent handling charge	[1] 79.70
2 percent handling charge	15.94
Selling price	892.64

[1] Handling charge covers the expense of plotting, land surveying, abstract or title insurance, communal buildings, and administration of the program.

The following statistical data from a recently completed survey of the city of Vancouver and its environs is given for your information:

Population of city of Vancouver	20,871
Population in housing areas adjacent to Vancouver	19,342
Total population of Vancouver and housing areas	40,213
Number of households planning to buy or build in or adjacent to the city of Vancouver before 1950	1,991
Total number who now live in public housing areas who plan to build	5,120

These figures are astounding and should cause a great deal of concern. It must be kept in mind that this survey does not include the 415,000 population of the city of Portland, Oreg., just across the river from Vancouver. If the ratio for new homes according to population were to run the same, there would be over 20,000 households planning to build in and around Portland before 1950.

One other fact must be taken into consideration. The survey only indicates the number planning to build and does not indicate the number of low-income households who would plan to build if they could afford to do so.

All these figures taken into consideration would indicate the tremendous demand for the McLoughlin Heights homes to be made available at low cost and also indicates the financial soundness for RFC support.

The plight of the occupants, the veteran, and the low-income group, who cannot afford to pay present inflationary prices, should be of the greatest concern to our Nation. Since there is a complete lack of an effective housing program for this group and our plan would in some degree alleviate this condition, we urge your utmost consideration and approval.

Respectfully yours,

JOSEPH H. SELLIKEN,
Committee Chairman, Portland, Oreg.

Fair Employment Practices Bill

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Monday, March 1 (legislative day of Monday, February 2), 1948

Mr. CAPPER. Mr. President, I send to the desk, and ask unanimous consent that there be printed in the RECORD an able editorial which appeared in the Chicago Defender, under date of February 28, 1948, on Senate bill 984. In my opinion it has such merit that it should be brought to the attention of the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOOD BUSINESS SENSE

A group of distinguished business leaders, including the celebrated Nelson Rockefeller, Paul Hoffman, Beardsley Ruml, and Eric Johnston, called upon the Congress last week to pass the Ives-Fulton FEPC bill.

In a telegram addressed to Senator VANDENBERG and Congressman JOE MARTIN, the businessmen declared that discrimination in employment operates against the best interests of the country in that it results in an unsound use of manpower and retards the development of purchasing power.

Besides the purely economic reasons advanced by the business leaders, they charged that such discrimination is "undemocratic and inhuman, * * * that it weakens the position of the United States in the eyes of the world."

Realistically, they wrote: "In our judgment the Ives-Fulton bill if enacted into law will substantially advance the cause of nondiscrimination in employment. * * * We do not believe that passage of this bill will eliminate prejudice in America, but it will be an effective step along the road."

The sound, truly American position taken by these eminent leaders of business cannot be dismissed as an empty gesture made by soft-headed do-gooders. These men are realists who do not permit sentiments and emotions to influence their judgment. They know that job discrimination weakens the economic structure of our society and artificially circumscribes business opportunities.

The purchasing power of the Negro will be immeasurably increased when our workers enjoy equality of opportunity and this purchasing power will turn the wheels of business and industry. Business cannot prosper in the long run without adequate markets.

Today, despite the limitations imposed upon us, the annual purchasing power of Negro Americans is far greater than the annual income of many foreign countries where American business is now seeking to establish beachheads. These facts the business leaders know well.

The strong economic and moral arguments which were advanced last week by these businessmen should inspire the Congress to speedy action on the fair employment practice legislation. These arguments cannot be negated by the windy pronouncements of filibusterers who appeal to prejudice instead of reason.

Los Angeles City Council Endorses H. R. 4999 and S. 1988 To Clarify Title of Tidelands

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

OFFICE OF THE MAYOR,
LOS ANGELES, CALIF., *February 26, 1948.*

Hon. GORDON L. McDONOUGH,
Member of Congress,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN McDONOUGH: May I take the liberty of calling to your attention

the pending bills, S. 1988 and H. R. 4999, now before subcommittees of the Senate and House Judiciary Committees, which have for their purpose the declaration of title of the several States to the 3-mile marginal belt along the coast.

As you doubtless know, these so-called tideland bills are not merely of State concern, but of vital importance to Los Angeles and other port cities of California, as well as all cities throughout the country having property interests in harbors, or any tide or submerged lands and inland waterways. The recent decision of the United States Supreme Court has cast a cloud upon the title of the State of California in and to its tidelands and inland waters. The statement of the United States Attorney General that there is no intention to acquire submerged lands in ports, harbors, and rivers is no guaranty for the future. The legal principle being once established the United States Department of Justice may at any future time take improved city property just as is now being done with reference to lands seaward of the low tideline and within the 3-mile limit that has always heretofore been regarded as the property of the States. The city of Los Angeles derives its title to its harbor and its beaches from the State of California and with full reliance thereon has invested many millions of dollars in the development and improvement of Los Angeles Harbor, as well as its extensive beaches, and the future of these valuable public facilities is now in serious jeopardy.

The Council of the City of Los Angeles has adopted a resolution on this subject, a copy of which I enclose herewith. I fully endorse the resolution and ask that you give these bills your personal consideration and active support.

With sincere appreciation on behalf of the city of Los Angeles for your kindness in this matter, I am,

Sincerely yours,

FLETCHER BOWRON, *Mayor.*

Resolution urging the adoption by Congress of S. 1988 or H. R. 4999 or similar legislation

Whereas the State of California has heretofore granted to the city of Los Angeles all its right, title, and interest in and to all tide and submerged lands, whether filled or unfilled, within the boundaries of the city of Los Angeles; and

Whereas by the expenditure of many millions of dollars obtained from general obligation bonds of the city of Los Angeles and from revenues from the operation of Los Angeles Harbor in San Pedro Bay, the city of Los Angeles has created, built, and improved a large modern harbor which is devoted to serving the commerce of the United States, southern California, and the city of Los Angeles, and which is indispensable to the United States and the citizens of Los Angeles and southern California for purposes of national defense and the maintenance of a merchant marine; and

Whereas said Los Angeles Harbor is located upon tide and submerged lands in San Pedro Bay; and

Whereas the city of Los Angeles has expended large sums in establishing and maintaining public beaches and other public recreational facilities on tide and submerged lands within the city of Los Angeles in Santa Monica and San Pedro Bays, and has in contemplation a program of further extensive improvements and additions to such recreational facilities; and

Whereas the Supreme Court of the United States, in *United States* v. *California* (Original 12, October term 1946) has determined and decided that the State of California and its grantees do not own the marginal sea, lying seaward of the ordinary low water mark, exclusive of bays, harbors, and other inland waters; and

Whereas the Attorney General of the United States is now endeavoring by petition in the Supreme Court of the United States to establish that a large part of Los Angeles Harbor is not inland water, is not owned by the city of Los Angeles, and was not owned by the State of California; and

Whereas the Attorney General of the United States is now endeavoring by petition in the Supreme Court of the United States that Santa Monica Bay, seaward of the ordinary low water mark, may not be a bay or inland water, but may be within the marginal sea and hence may not be owned by the city of Los Angeles or the State of California; and

Whereas the Attorney General of the United States has refused to recognize any legal distinction between the rights of the United States in and to the marginal sea and in and to bays, harbors, and other inland waters, and hence has refused to concede that the State of California and its grantees are even the owners of bays, harbors, and other inland waters, though that question was not actually in issue before the Supreme Court of the United States in said proceeding entitled *United States* v. *California;* and

Whereas the ownership and use of a portion of the tide and submerged lands, heretofore used and occupied by the city of Los Angeles in the interests of commerce, navigation, and fishery, are jeopardized by the said recent decision of the Supreme Court of the United States, and the said petition of the Attorney General of the United States to have a portion of Los Angeles Harbor declared to lie within the marginal sea; and

Whereas a cloud upon the title of the city of Los Angeles in and to any and all of the tide and submerged lands lying within its boundaries, in both San Pedro and Santa Monica Bays, over which tide and submerged lands the State of California and the city of Los Angeles have exercised all rights of sovereignty, ownership, and control since 1850, in reliance upon decisions of the Supreme Court and acts and conduct of Congress and of departments and officials of the United States, has been created by the policies recently adopted by the Attorney General of the United States and by other Federal departments and bureaus; and

Whereas the future and further development and improvement by the city of Los Angeles of the tide and submerged lands within its boundaries in the interests of commerce, navigation, fishery, and recreation has been, and will continue to be, impeded and hindered, and local and civic interests have been, and will continue to be, adversely affected, until the uncertainties of title and ownership engendered by said decision of the Supreme Court and said policies adopted by the Attorney General and other Federal departments and bureaus have been dispelled: Now, therefore, be it

Resolved, That the Congress of the United States is hereby memorialized and earnestly urged to adopt and pass S. 1988 and H. R. 4999, being bills to confirm and establish the titles of the States to lands and resources in and beneath navigable waters within State boundaries and to provide for the use and control of said lands and resources, or similar legislation; and the Committee on the Judiciary of the Senate of the United States and the Committee on the Judiciary of the House of Representatives of the United States are hereby earnestly urged and requested to report favorably upon S. 1988 and H. R. 4999, respectively, or upon similar legislation; and be it further

Resolved, That Arthur W. Nordstrom, assistant city attorney, be, and he is hereby, authorized and empowered to represent and speak for this council and the city of Los Angeles in behalf of such legislation before said Committees on the Judiciary and any subcommittee thereof that may hold hearings relative thereto.

I hereby certify that the foregoing resolution was adopted by the council of the city of Los Angeles at its meeting held on the 10th day of February 1948.

COUNCIL OF THE CITY OF LOS ANGELES,
WALTER C. PETERSON, *City Clerk.*

Constantine Brown Scores State Department Policies

EXTENSION OF REMARKS
OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, March 1 (legislative day of Monday, February 2), 1948

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very instructive and enlightened article entitled "State Department Scored for Patched-Quilt Policy," written by Constantine Brown, and published in the Washington Star of yesterday.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE DEPARTMENT SCORED FOR PATCHED-QUILT POLICY—ANALYST SAYS LEGISLATORS LACK CONFIDENCE IN EXECUTIVE BRANCH AND THE GULF BETWEEN THEM GROWS WIDER

(By Constantine Brown)

Never in the memory of old-timers in Congress—not even during the bitter debate on the Versailles Treaty—has there been a greater gulf between the legislative and executive branches of the Government.

At no time has there been greater lack of confidence on the Hill in the actions and activities of the State Department.

In the last 12 months Senators and Representatives have become more aware—and almost vocal—about the failings of the State Department, which in turn is irked by "indiscreet" questioning by Congress of its actions.

DIFFERENT DURING THE WAR

During the war Congress was acquiescent, resigned to voting anything the administration demanded without asking questions. When some "rebels" wanted to know the whys and wherefore of the executive branch's actions, they were answered with the statement that even communication of such explanations in executive sessions would be damaging to the conduct of the war and our relations with the other allies. The "rebels" had to let it go at that.

Today the United States has undertaken global economic obligations and regional political and military commitments greater than those assumed by the old Roman Empire. Yet the conduct of these affairs, which vitally affect every American, is in the hands of people who either are confused or uncertain over how to handle the ship of state in the world's present international tempest.

After the brilliant feats of American armed forces, we found ourselves at the end of 1946 in a situation which indicated clearly that although we had won the war militarily we had lost it politically.

Administration leaders realized full well that after having contributed to the war effort to the tune of about 1,200,000 casualties and more than $73,000,000,000 in lend-lease, UNRRA, and other help to our wartime associates, the American people would react unfavorably to another armament race leading to a probable third world war.

DECIDED TO BUY FRIENDSHIP

Because of a misconceived policy of appeasement toward Russia in the year following VJ-day it became obvious to most observers in Washington that we would not have peace in our time. Not daring to reveal the monumental diplomatic blunders committed between 1941 and 1945, the administration had to find a solution. The solution was to spend more of the taxpayers' money to buy friendship and thus stem the Soviet drive for world domination.

The top officials of the State Department decided to counter Moscow's drive by promising large amounts of goods, money, and raw materials to governments which would resist communism.

These policy framers had not progressed in their mental processes since World War I, when communism first made its appearance in many parts of Europe. At that time it was contended that poverty tended to breed communism and that nations which suffered privations adopted most easily the neo-Marxist doctrines of Lenin and his followers.

American policy framers and their advisers—young self-seeking career diplomats—refused to realize that Stalin had adopted a new brand of communism which was in no way different from nazism. They also realized that nations do not "go" Communist, but are coerced into the Russian fold by terroristic police methods.

In order to slow down Russia's march, it was proposed to spend billions of the taxpayers' money in all kinds of economic and financial schemes. But because of the fear of justifying Moscow's charges that we were warmongers and militant imperialists, there was a distinct reluctance to listen to experienced voices in Europe and Asia which said that a really strong American military force and supplies of military equipment for the nations on the periphery of the iron curtain would be as much help as food and machine tools for the peoples menaced by the Red avalanche.

It was only in the spring of 1947 that we decided timidly to support Greece and Turkey. The Truman doctrine, which clearly stated that America would assist those countries to maintain their sovereignty and independence, was the first practical approach to the problem. Later, in December, last year, the same promise was made to Italy in a somewhat nebulous statement from the White House.

But strange as it may seem to the man in the street, while we adopted this attitude toward Europe, we refused to extend it to the Far East, where Russian activities are as energetic as in Europe.

PRESSURED INTO AIDING CHINA

We promised the benefits of the Marshall plan to the 16 European nations, provided, of course, that they maintain their democratic forms of government. In regard to China, however, the State Department insisted after months of passivity that Generalissimo Chiang Kai-shek should include Communists in his government in order to get the full benefit of America's global bonanza.

Under pressure from Congress, the State Department produced a plan of assistance to China amounting to $570,000,000. But at the same time—while the matter was being discussed in Congress—America's Ambassador to Nanking, Dr. John Leighton Stuart, reiterated the demand that General Chiang should broaden the government by including some of the Moscow puppets. Dr. Stuart's statement is reliably stated to have been drafted in main outline—if not altogether written—in the State Department.

There is not a single top military man in the Department of Defense—and, for that matter, not a single realistically minded civilian entrusted with national defense—who is not convinced that China, and especially Manchuria, is of utmost military importance to the defense of this country.

The conduct of America's foreign affairs since last year has been in the hands of one of our ablest tacticians, General Marshall. But the fact that he is a distinguished tactician and logistical expert does not mean that he is also a far-seeing statesman. Although diplomacy and military strategy are interwoven closely these days, General Marshall's military training makes him an indifferent diplomat with a strong distaste for anything political.

Throughout the war—when General Marshall was a member of the Joint and Combined Chiefs of Staff—he tried to avoid participation in any discussions which were flavored with international politics. General Marshall accepted his first diplomatic job as Special Ambassador to China as a chore because his Commander in Chief demanded that he give up his retirement and attempt to settle the Chinese crisis, which some State Department experts ascribed to General Chiang's dictatorial ambitions.

General Marshall did not fare well in his first attempt at diplomacy because he had espoused the idea of the "experts," namely, that the Chinese Communists were mere agrarian "reformers," as they had been identified by State Department ideologists and "liberal" newspapers and magazines in this country.

However, the Secretary of State is not used to failure.

NOT USED TO FAILURE

General Marshall agreed to succeed Secretary of State Byrnes out of loyalty and obedience to the desires of his Commander in Chief.

It is probable that in his own heart General Marshall did not think he could do the job as well as he did his wartime job as Army Chief of Staff. He must have been aware that the conduct of America's foreign policies in the midst of Moscow's dark intrigues and conspiracies is the most difficult job any American citizen ever undertook in the history of the Republic.

As a military man General Marshall realized how little actual force we have to implement a policy of direct and forceful talk to Moscow. Because of this disadvantage he is compelled to accept the suggestions of a few advisers whom he chose when he went to the State Department and must follow a patched-quilt policy.

It is this lack of a "straight line," accompanied by failure to provide Congress Members with the vital information to which they consider themselves entitled, that has produced the gulf between the executive and legislative branches of the Government.

Connecticut Ranks High in New Who's Who

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Sheldon Garber, United Press correspondent, pointing out that Connecticut has 76 out of every 100,000 residents included in the anniversary edition of Who's Who. This article appeared in the Hartford (Conn.) Daily Courant of Tuesday, February 24, 1948:

STATE RANKS HIGH IN NEW WHO'S WHO—HAS 76 OUT OF EVERY 100,000 RESIDENTS IN ANNIVERSARY EDITION

(By Sheldon Garber)

CHICAGO, February 23.—The editors of Who's Who in America issued their fiftieth anniversary edition today with a soothing word for readers not to feel too badly if they don't find their names in it.

The chances are you won't. The odds are better than 3,000 to 1 against you getting your name into the blue book of famous people, the editors said.

About 5,000 persons, including Crooner Frank Sinatra, actress Paulette Goddard, cowboy Roy Rogers, and radio's Mrs. Nussbaum, are among the newcomers who made the grade in the 1948–49 edition. More than 100 wartime officers of the various armed services were dropped because they "automatically" lost their prominence when they left service.

FORTY-ONE THOUSAND ONE HUNDRED AND NINETY-FOUR LISTED

Wheeler Sammons, publisher of Who's Who, got his name into the new edition. But he gave himself only 8 lines among the 41,194 famous persons the book lists.

The editors said graduates of small colleges have a four times better chance of getting listed than those of big colleges. An analysis of the vocations and professions listed disclosed 35 explorers, 7 bridge engineers, 8 diabetic specialists, 15 impressarios, 27 criminologists, 2 magicians, and 52 astronomers.

All the names that go into the book are "screened" by a five-man editorial board whose primary job is to see that the people are "not the best but the best known."

The oldest person in the book is 97-year-old Calvin F. Adams, a Massachusetts engineer. The youngest is 11-year-old Margaret O'Brien, Hollywood screen star.

The most space is given to Thomas J. Watson, president of the International Business Machine Co. It cost the publishers $50 to print his biography, taking 201 lines.

President Truman's data cost only $5 to publish.

Connecticut has the largest number for each 100,000 population listed in the new book, 76.3.

American Foreign Policy Respecting China

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Monday, March 1 (legislative day of Monday, February 2), 1948

Mr. TAYLOR. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article on our foreign policy in China by Alexander H. Uhl, which appeared in the newspaper PM on Sunday, December 21, 1947.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHINA: FOREIGN POLICY BY BLACKMAIL

(By Alexander H. Uhl)

WASHINGTON.—Despite the obvious reluctance of the State Department, the United States of America is now being driven toward an all-out policy of help to Chiang Kai-shek against the Communists with the possibility that within a matter of months new tensions will develop between the United States of America and the U. S. S. R. over China.

What has happened during the past 2 weeks is that by an extraordinary pressure campaign on the part of a few Republican Congressmen, plus an assist from the Luce publications, Secretary of State Marshall is being forced into a China policy contrary to his own recommendations and the advice of many China experts in his Department.

WHAT IT MEANS

The shift in policy—if the Chiang Kai-shek admirers have their way fully—means

not only economic help to the Nationalist Government, but military help in every phase needed to crush the Chinese Communists. This policy has long been opposed by China experts for two reasons:

That should the United States of America give all-out help to Chiang, the Russians are likely to retaliate by extensive help to the Chinese Communists. Should that happen the China problem by degrees may enter a phase directly involving the United States of America and U. S. S. R. in the Chinese civil war.

That the Chinese situation by its very magnitude and complexity is different from the situation in western Europe and that help poured into China under present conditions is a gross waste of American taxpayers' money for the benefit of a handful of Chinese profiteers.

HOW IT WORKS

The technique by which the Department has all but been stripped of its policy-making power so far as China is concerned might well be called foreign policy by blackmail.

It has been marked by State Department fear that if it did not placate Congress on China, its requested appropriations would be cut. And it has been marked, too, by a smear campaign against the China section of the Department with all but open accusations that Communists influence has been behind its decisions.

No one who has been at the hearings of the past week, particularly those of the Senate Appropriations Committee, could fail to be convinced that the Department was being bullied and threatened into a policy in which it has no faith. And that unless Secretary Marshall blows up, it will find itself doing things in which it does not believe.

TOP ACTORS

The two men who have played the most important role in this GOP foreign policy for China, are Representative WALTER H. JUDD, Republican, Minnesota, former missionary in China and long one of Chiang's greatest defenders, and Senator STYLES BRIDGES, Republican, New Hampshire, who has come along on the China ride somewhat belatedly but with considerable vehemence.

BRIDGES isn't even a member of the Senate Foreign Relations Committee.

Senator ARTHUR H. VANDENBERG, Republican, Michigan, who has long opposed the Department's China policy—he thinks we should help Chiang, too—has played a somewhat more modest role and has been willing to be more patient with Marshall than have JUDD or BRIDGES.

SOME MANEUVERS

It was JUDD who put through an amendment authorizing $60,000,000 for China in the House interim aid bill even though the State Department preferred to bring in a separate China program after the first of the year.

The Senate knocked China out of the bill, but Senator BRIDGES, as chairman of the Appropriations Committee, got it back to the tune of $20,000,000. He held a series of hearings that for a one-sided presentation of the case makes a first-class scandal.

He invited Lt. Gen. Albert C. Wedemeyer, author of the highly secret Wedemeyer report, to testify and got exactly what he wanted. Wedemeyer did not reveal his report on China, but he spared no pains to make it clear that he thought we hadn't been treating Chiang right and that we ought to be giving him military and economic aid as part of our stop-communism policy.

LOADED TESTIMONY

Then BRIDGES invited William C. Bullitt, former Ambassador to Moscow and an ardent supporter of Chiang, to testify. Bullitt reiterated much of what he wrote in his China article in Life, ending with sharp criticism of the China desk in the State Department and suggesting that a military man like Gen. Douglas MacArthur ought to be sent to China.

Finally BRIDGES invited Clare Booth Luce, president of the American China Policy Association, which follows the Luce line on help to China. Mrs. Luce couldn't come, being absent in California, but Alfred Kohlberg, chairman of the board of directors of the association, came, and turned out eminently satisfactory from BRIDGES' viewpoint.

THROW 'EM OUT

He accused some members of the China desk as being lovers of Moscow, but thought that everyone who didn't agree with an aggressive anti-Communist policy in China should be thrown out of the Department.

What was striking about these hearings is that none of the China experts in Washington who are strongly opposed to any more aid to Chiang, particularly military aid, was invited. The anti-Chiang side of the picture never even got a chance for a hearing.

There were hints, for example, that some malign influence had been working on the Export-Import Bank for its failure to attend to the $500,000,000 credit to Chiang earmarked more than a year ago for Chinese reconstruction.

WHAT IT'S ABOUT

Yet, apparently, it never occurred to BRIDGES to call representatives of the bank to say why they had not voted the loan, although it has long been known that they turned thumbs down on it because they saw no chance of ever getting their money back.

The State Department now finds itself caught between GOP determination to help Chiang on the military as well as economic front and its own concern over the wisdom of plunging again into further intervention in the Chinese civil war.

Behind this concern are two factors:

To talk about "working the Communists out of China," as Bullitt does, is no small-scale operation. That operation in Greece with its 20,000 to 25,000 guerrillas is proving a difficult enough task. But China represents even more than a localized civil war, since the Communists control territory in which there are perhaps 100,000,000 people.

Although the State Department admits that the Russians in all likelihood turned over captured Japanese weapons to the Communists, Secretary Marshall has insisted repeatedly that there is no evidence of any large-scale help to them.

BULLITT DENIES IT

This Bullitt denies, insisting that the Russians are now manufacturing and shipping arms and ammunition to the Communists.

At any rate what seems clear is that open American intervention on the side of Chiang may produce more open and more direct aid to the Communists by the Russians. In a competition of that sort there is no telling where it would stop.

Again, nationalist China has received about $3,000,000,000 in aid of one kind or another in the past 6 years, much of it since VJ-day, yet conditions in China today are admittedly deteriorating more rapidly than ever.

CORRUPTION UNIMPORTANT

Men like JUDD concede inefficiency and corruption in China, but contend that these are relatively unimportant before the fact that Chiang is firmly anti-Communist and therefore on our side.

Actually this has not been the only criticism directed against new aid to China. What has played an important role, is that Chiang by a campaign of terrorism has destroyed the Democratic League, the very group upon whom Marshall pinned great hope in a reorganization of the Chinese regime.

Probably the most striking example of the role of corruption is what happened to the $500,000,000 granted China in 1942 with virtually no strings attached.

SPECULATORS' FIELD DAY

Part of this loan was used to buy gold and it wasn't long before speculators were having a field day. When the gold was all but gone, the Government finally clamped down on any more sales.

Premier T. V. Soong was forced out of office on that deal, the head of the Central Bank was impeached and other officials were arrested. But the gold was mostly gone into private pockets.

The break-down in Nationalist morale has been so severe in the face of corruption that a considerable amount of the military equipment used by the Communists has been obtained from units outfitted and trained by the United States of America and there is real fear that new equipment may go the same way.

There is no doubt that the State Department would like to find some way of helping Chiang hold the Communists. Marshall, himself, has promised Congress a $300,000,000 program beginning next year, averaging $20,000,000 a month for 15 months.

ECONOMIC PROGRAM

This program was originally designed to be economic, and the big problem the State Department has been trying to solve is how to get it used constructively rather than be swallowed up by corruption and inefficiency. Now all the indications are that in addition, military help will be demanded by Congress and probably obtained.

Actually the State Department's throat was cut on its China policy by President Truman himself in his speech last March on aid for Greece and Turkey. With that clearly avowed anti-Communist policy, Chiang's supporters have been drumming steadily on the logic that if we help Europe to stem communism, we must equally help the Far East.

The result is that the basic problems of China—land distribution, usury and exploitation by war lords and landholders—are not even mentioned any more.

Wallace Acts for War

EXTENSION OF REMARKS

OF

HON. EDWARD J. DEVITT

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. DEVITT. Mr. Speaker, the St. Paul Pioneer Press for February 27, 1948, contained a splendid editorial entitled "Wallace Acts for War" which I submit for inclusion in the Appendix of the CONGRESSIONAL RECORD:

WALLACE ACTS FOR WAR

It is time to stop mincing words on this occasion of Henry A. Wallace's visit to the Twin Cities and to recognize bluntly that, judged by his acts, Wallace is for war.

He talks as plausibly for peace in our time as Neville Chamberlain did in 1938 at Munich. Many peaceful people want to believe and do believe that Wallace is serving peace now as Chamberlain was thought to be then. Wallace may even have convinced himself completely of the practicability of his methods, though it is hard to see how a mind trained in science and schooled in politics could be so naive.

But in reality Wallace's method, if followed, would lay the basis for World War III just as clearly as Chamberlain's in 1938 laid the basis for World War II. The method is the selfsame one of appeasement. Confronting democracy again is the force of dictatorship. The difference between aggressive communism and fascism is nil. Each concession given the one is being followed up by a new act of war, just as was the case with the other.

The Communists' seizure of Czechoslovakia is inherently an act of war now just as Hitler's seizure was in 1938. Russia's arming of the Greek Communists is incipient war. Appeasement with the Middle East's oil while this country and Britain and western Europe face an oil emergency would court war for that resource. And today's applause by Russia's fifth column of Communists in this and other democracies for each new concession to dictatorship that is put forward under the luring guise of peace is ominous, just as the similar applause of Hitler's fifth columnists in the democracies turned out to be an omen of war.

Henry Wallace is the Neville Chamberlain of world war III. He even has under his arm a deceptive token of peace to substitute for Chamberlain's umbrella, and this is the callow Senator GLEN TAYLOR, of Idaho.

And if the pooled political power of the Communists and the well-meaning but deluded pacifists of this country should be able to make appeasement the foreign policy of this country, the path to world war III would be opened. Perhaps even the time schedule of it could be foretold almost with the definiteness and accuracy with which Ambassador William E. Dodd once foretold from appeasement the coming of World War II. At the rate she now is traveling, Russian readiness appears less than a decade away.

And if war should come again as a result of appeasement, it would find Russia through her puppets astride the same resources in Poland, Rumania, Bulgaria, and Hungary that Hitler coveted and the Communist forces possessed of the same strategic assets in Czechoslovakia that Hitler won through appeasement. Due to the weakness of western Europe and Britain, and strife or weakness elsewhere, there would be no strong ally available for this country anywhere in the world. And the war that would sear the peaceful cities and lovely countryside of this and other nations would make even the scourge that appeasement in the 1930's turned loose on Europe and Asia look like a pink tea.

Regardless of Wallace's motives, that is the kind of fire with which he and his course of appeasement are playing for this country and the world. His words are those of peace. But his acts invite dictatorship to advance, as it just has advanced in Czechoslovakia, along the path to world war III.

Recipients of Earned Social Security Benefits Are in Misery Because of the High Cost of Living—Congress Must Provide Relief

---

REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. VAN ZANDT. Mr. Speaker, when I first came to Congress in 1939 there was talk of amending the Social Security Act. While it is true that some minor changes were made in the law, we are still just talking about the major amendments that will bring needed relief to millions of recipients of earned social-security benefits.

Mr. Speaker, since 1939 we have heard the excuse that delay is necessary in order that certain committees should study the subject. We have had the excuse that a board of actuarial experts similar to those employed by insurance companies should study the financial structure of the social security fund and the possible impact of such amendments.

We have been told in the name of economy it has been necessary to postpone liberalization of benefits under the Social Security Act. This waiting policy has long run its course and the American people are sick and tired of such dilly-dallying over a matter that concerns the health and welfare of millions of our citizens.

We, in the Congress of the United States, should be ashamed of our actions in pouring out billions of dollars to foreign nations, while we turn our backs to the needs of our fellow Americans, who, by the sweat of their brows, have made this Nation possible. These same American citizens contributed to the prosperity of our Nation only to witness it being dissipated by international hand-outs to foreign nations without any hope of a dollar ever being repaid.

Approximately 2,000,000 persons are receiving benefits under the Social Security Act. There are 875,000 retired workers over 65 years of age, who get approximately $25 a month. Two hundred and seventy thousand of their wives receive a half allowance, or about $13 a month. Thus, a man and wife receive about $38 monthly.

There are 135,000 widows with young children who receive $20 monthly; 165,000 aged widows of deceased workers get $20 a month; 10,000 aged dependent parents receive about $13.50 a month; 525,000 children of deceased workers get $13 a month.

We have been told time and again from this floor of the sufferings of people in Germany, Korea, France, Italy, England, and other foreign nations. We have had Members of Congress tell us that foreign citizens were not obtaining sufficient food to provide the necessary calories. What about our own American citizens?

Let us forget about the rest of the world for a moment and devote our attention to the plight of the average retired citizen, who is receiving earned social-security benefits. If you consider the average retired couple in your congressional district, you will find that they are receiving on an average of $38 monthly. Let us ask ourselves, in all sincerity, Could my mother and father exist on $38 a month in the face of present living costs? The answer is so obvious that even a school child of tender years can reply to such a question.

Let us consider the widowed mother and the $20 monthly she receives under the Social Security Act. Who in this Congress will deny the fact that a person cannot live on $20 a month? Many are in ill health by reason of age alone and their plight is rendered more serious on that account.

A recent Government report states that only 1 out of 10 Americans past 65 has enough independent income to live. Ten million Americans are past that age. Some are supported or aided by relatives. The report says 3,500,000 have to keep on working.

We could discuss at length the misery and suffering that is being borne with patience and fortitude by the elderly citizens of America. However, there are two age-old sayings, "Talk is cheap," and "Actions speak louder than words." These eternal truths should be borne in mind as we study the attitude of Congress with respect to the need of amending the Social Security Act.

All we have heard is talk during the past several years when it concerns amendments to the Social Security Act. As evidence of our failure to act, it is a known fact that each succeeding Congress has witnessed the introduction of dozens of bills that year after year die in committee. At the moment there are numerous bills in the House Committee on Ways and Means, designed to amend the Social Security Act. It is the same old story, we must make a study of the situation and consult actuarial reports. Delay. Delay. Delay. It is the only answer we get.

Mr. Speaker, I propose to do something practical about this situation. For that purpose, I have introduced a bill, H. R. 5636, embodying two simple amendments, not over six lines in length that will do a world of good in providing welcome relief to millions of recipients of earned Social Security benefits.

My bill is a short cut, providing definite and speedy relief, whereas cumbersome omnibus bills languish and eventually die in committee, with the result that such action shatters the confidence and hope of millions of good American citizens.

The first amendment increases the amount a retired person may earn while receiving earned Social Security benefits. Under the existing law, a recipient who earns over $15 monthly in outside employment is denied Social Security benefits. I propose to increase the amount he may earn from $15 to $40.

I am informed by the Social Security Board that this particular amendment will have little effect on the social-security fund. In fact, it will permit retired persons to receive earned social-security benefits and augment the amount received by securing part-time employment. The net result is to contribute to their health and well-being by building up their morale and self-respect. The Social Security Board informs me that such an amendment will result in no more than 3-percent increase in the total disbursements of the social-security fund.

The second amendment contained in H. R. 5636 revises the benefit formula in the following manner. At the present time, when an employee retires his benefits are computed by taking 40 percent of the first $50 of his monthly wages and 10 percent on the remainder, with a percentage of the total credited for his years of service.

My amendment changes this formula to allow 40 percent on the first $100 and 10 percent on the remainder with the

percentage now added for years of service remaining the same as under the existing law.

As an example, let us consider the case of a retired employee, who has an average monthly salary of $200 and who has been employed for 10 years.

Under the present formula, 40 percent of the first $50 provides $20 and 10 percent on the remainder an additional $15, making a total of $35. His 10 years of service is credited at 1 percent for each year or 10 percent, which amounts to $3.50 additional. This retired employee receives as benefits $38.50 monthly.

By comparison, my amendment would give this employee 40 percent of the first $100 or $40, plus 10 percent of the second $100 or $10, making a total of $50, to which 10 percent is added for his 10 years of service, making a total of $55 as his monthly benefit.

I am inserting at this point in my remarks a table of benefits, illustrating the effect of my amendment as compared with the amount received as benefits under the present law.

Average monthly wage	Basic benefit			10 years' coverage			20 years' coverage		
	Present law	Proposed revision	Increase	Present law	Proposed revision	Increase	Present law	Proposed revision	Increase
$100	$25	$40	$15	$27.50	$44.00	$16.50	$30	$48	$18
$150	30	45	15	33.00	49.50	16.50	36	54	18
$200	35	50	15	38.50	55.00	16.50	42	60	18
$250	40	55	15	44.00	60.50	16.50	48	66	18

The above table shows the increases in the benefits for the retired workers, which will be about $16 for the majority of the retired individuals at present, although averaging probably about $13, because of the fact that some persons have wages below $100 or have been in the insurance system less than 10 years. Likewise, increases will be made for eligible wives of retired workers, amounting to about $7 on the average. Also, the change in the benefits will be passed on to the survivor beneficiaries, with the increase amounting to about $7 on the average for the eligible children, and to about $10 for the widow beneficiaries.

Mr. Speaker, having introduced these amendments, I want to emphasize that the cost is negligible and that the impact on the social security fund will be at a minimum.

According to the Social Security Board, there are adequate funds available and no increase in payroll tax will be necessary in the future to cover the cost of these amendments.

The present rate of pay-roll tax, based on wage levels today, is producing an annual income to the social-security fund, far in excess of the cost of present-day benefits, including the cost of my amendment.

I am inserting, at this point, a table furnished me by the Social Security Board, showing transactions for the period 1941 to 1947, inclusive. The table is as follows:

TABLE 5.—*Operations of the Federal old-age and survivors' insurance trust fund, fiscal years 1941–47*

[In millions]

Fiscal year	Fund beginning of year [1]	Transactions during year							Fund at end of year
		Income			Disbursements				
		Total	Appropriations [2]	Interest on investments	Total	Benefit payments	Administrative expenses	Net increase in fund	
1941	$1,745	$744	$688	$56	$91	$64	$27	$653	$2,398
1942	2,398	967	896	71	137	110	27	830	3,227
1943	3,227	1,218	1,130	87	177	149	27	1,041	4,268
1944	4,268	1,395	1,292	103	217	185	33	1,178	5,446
1945	5,446	1,434	1,310	124	267	240	27	1,167	6,613
1946	6,613	1,386	1,238	148	358	321	37	1,028	7,641
1947	7,641	1,623	1,459	163	466	426	41	1,157	8,798

[1] Totals shown in this and other columns do not necessarily equal the sum of rounded components.
[2] Include 100 percent of contributions which are automatically appropriated to the trust fund, and reimbursements equivalent to any additional payments arising from the extension of survivors insurance protection to certain veterans of World War II (Social Security Act amendments of 1946).

You will observe that the net funds on hand at the end of the fiscal year 1941 amounted to $2,398,000,000. Each year there has been a steady increase, with the result that at the close of the fiscal year 1947, after all expenses were paid the social-security fund amounted to $8,798,000,000.

Mr. Speaker, as I said in my opening remarks, it is necessary that we do something immediately to relieve the suffering and misery of those receiving earned benefits under the Social Security Act.

The cost of my proposed amendments is about 3 percent of the billions of dollars unexpended in the social-security fund. My amendments will add nothing to the national debt and requires no increase in taxation from any source.

Here is an opportunity for us to do something for millions of our own American people. We have spent months pondering over the plight of foreign nations and, with Congress adjourning in June, we should move immediately to consider our own people without any further pussyfooting or side-stepping.

We have granted retired civil-service employees increased benefits. The retired Army and Navy personnel have received similar increases. At the moment we are considering increases in salaries for postal employees and other Federal employees because of the inability of these groups to meet present-day living costs.

The recipients of earned social-security benefits and those receiving old-age assistance through the various States are the victims of our neglect.

I hope that action will be taken in the various States to increase old-age assistance benefits and that our Federal Government will sanction such action by increasing Federal appropriations to the several States for that purpose.

At the moment we have an opportunity to consider my amendments as the first step in liberalizing social-security benefits to those who have earned them by reason of their employment.

I sincerely hope that all of you will join me in getting prompt action for this group of forgotten Americans.

Six Months of Taft-Hartley

EXTENSION OF REMARKS
OF
HON. ROLLA C. McMILLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. McMILLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

SIX MONTHS OF TAFT-HARTLEY

Congress enacted the Taft-Hartley labor relations law over the Presidential veto in late June 1947, and a considerable section of organized labor immediately denounced the law as a "slave labor" act.

Six months later the opposition of organized labor has subsided to some extent although the legislation is an issue in various congressional primary elections. There is less public sympathy for the opposition chiefly because the dire predictions of labor leaders have failed to materialize.

Meanwhile the law seems to be working. Various provisions are being tested in the courts, the usual democratic procedure in such cases. The labor unions have been doing some housecleaning. Communist influences have been ousted and the unions are working to eliminate jurisdictional differences among themselves.

Strikes are at a record peacetime low for a dozen years and secondary boycotts have declined. Although certain union labor leaders protested that the purpose of the Taft-Hartley law was to break the unions, no victim has been reported.

In fairness it must be noted that the law has been in effect during the season of the year when strikes are infrequent. Various strikes have been threatened later in the year. And many union contracts were signed in advance of the effective date of the Taft-Hartley law. A considerable body of organized labor is employed under contracts which do not embody the provisions of the new act. Furthermore, certain unions are working without contracts, and so are beyond the jurisdiction of certain provisions of the Taft-Hartley law.

Another reason, and a good one, why employers and unions seem to be getting along these days is that they are feeling each other out while, at the same time, they wait for interpretation of the courts and by Government agencies.

Altogether the labor situation is hopeful. The Taft-Hartley law is not perfect legislation and there must be changes in some major provisions. Those changes will come as a result of court decisions and of experience in applying the new law to actual conditions.

Report on Fuel Conditions in Massachusetts

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 1, 1948

Mr. HESELTON. Mr. Speaker, under leave heretofore granted to me, I wish to extend my remarks in the Appendix of the RECORD to include a current report on fuel conditions in Massachusetts, under date of February 27, 1948, from George F. Hines, special representative of the Commonwealth of Massachusetts.

In general, you will note not only the optimism expressed in the report but also the note of caution in the third paragraph, which I repeat for emphasis:

It is the considered opinion of all dealing directly with the situation that while another severe or prolonged cold spell will immediately create another critical shortage, the emergency will not be so widespread, not involve so many consumers, and be of shorter duration.

I also wish to emphasize the following paragraph:

The principal danger spots at the moment are the Fall River area, north of Boston, and the western part of the State, but these sections are receiving special attention.

As I have reported, there has been some real concern about the so-called spot shortages in the western part of the State, but there has been excellent cooperation and a minimum of real hardship. I sincerely hope that will continue.

Finally, I call your attention to the opinion expressed that the supply of gasoline is going to be short this summer. This is a matter which, I think, deserves immediate attention and constructive effort, and I propose to get all the available facts for your consideration just as soon as possible.

COMMONWEALTH OF MASSACHUSETTS,
OFFICE OF SPECIAL REPRESENTATIVE,
Washington, D. C., February 27, 1948.

REPORT ON FUEL CONDITIONS IN MASSACHUSETTS

Congressman JOHN W. HESELTON,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN HESELTON: Massachusetts has passed through the worst period of this winter's fuel shortage in the opinion of George Rockwell, State emergency fuel coordinator and his staff of volunteer area and local coordinators and oil-industry advisors.

The recent 10 days of mild weather was most helpful in relieving the extremely tight and constant demand for emergency supplies and the splendid team work built up between suppliers, distributors, and local cooperating agencies has enabled the State to catch up a little on the problem.

It is the considered opinion of all dealing directly with the situation that while another severe or prolonged cold spell will immediately create another critical shortage, the emergency will not be so widespread, not involve so many consumers, and be of shorter duration.

The large independent distributors, who have been the cause of principal concern throughout the last 2 months, are now in better shape, at least temporarily, as the result of help received from the large suppliers. On this top level the only problem that remains is to provide these distributors with regular sources of supply.

The State Fuel Co. is O. K. to March 3 on kerosene and to March 10 on No. 2. The White Fuel Co. has been able to borrow considerable quantities of both kerosene and No. 2. Hartols tanker has arrived.

Generally speaking, supplier and large distributors report that their stocks are at low levels because the mild spell has permitted them to increase the amounts in householders' tanks a little higher than the dangerously low levels under which they have been operating for the past 6 weeks.

In other words, the big fellows have pushed out their stocks into the consumers' tanks so that they have slight reserves to meet any sudden sharp drop in temperatures. All dealers are trying to build up their in-stock positions. On the consumer levels the situation changes every day. Emergency fuel coordinators still are receiving emergency calls, but not so many.

Kerosene continues to be the most critical shortage and the most dangerous. Through March and April, when the weather moderates and the consumption of No. 2 declines in homes a further increased demand for kerosene is expected as householders shift from their central heating plants to keeping the chill out of the houses by running their kitchen kerosene ranges.

In Boston all kerosene users are being adequately supplied and every consumer has "got by." Emphasis has been placed on providing kerosene for the poorer sections of greater Boston and the other large cities. In this connection the bank of emergency supplies made available to the fuel coordinator by the large suppliers has been a great help.

To summarize: Massachusetts has successfully met this crisis so far with no householder reported cold. No relief stations have been established, and there have been no Red Cross alerts, but on several occasions distress has been avoided by very narrow margins. The danger is not yet over. The return of extremely cold weather will immediately precipitate another crisis, but everyone is hopeful that with the approach of spring further drastic steps will not be necessary.

To show how critical the situation was, one incident is related. A family in Wellesley was completely out of oil and no immediate relief was possible for a few days. The Wellesley volunteer fuel coordinator invited the distressed family over to his home to spend the week end.

The principal danger spots at the moment are the Fall River area, north of Boston and the western part of the State, but these sections are receiving special attention.

On the whole Atlantic coast, stocks of both kerosene and No. 2 are still very low. Suppliers are borrowing well into March stocks and depending on more moderate weather to see them through. Reports of spot hold-up prices continue to be received in Washington of small dealers charging 48 cents for kerosene in Baltimore and 35 cents in Detroit, but these are quite unique. One of the remarkable phases of the entire country-wide shortage has been the relatively small amount of chiseling on prices.

It is reported here that Michigan, Wisconsin, and Minnesota are still very short areas. Considerable quantities of oil have been shipped by the long-rail haul from west Texas, Kansas, and Montana into the upper Middle West, and there has even been all-rail shipments of oil from Oklahoma to New England. In most cases the companies are taking a licking on this long, all-rail movement of tank cars.

Appeals for users of heating oils to continue to conserve are still being made. At the moment the country's supply of available gasoline is as good as last year, although there is every evidence that the supply of gasoline is going to be short this summer.

In Massachusetts discussions are being held as to how long it will be necessary to maintain the emergency fuel coordinator's organization. No provision has as yet been made to maintain a permanent State or local set-up to plan for the gasoline shortage expected late this coming summer or for next fall when it is expected heating oils will be as short as they are in the winter now ending.

I hope this information is of assistance to you.

Yours very truly,
GEORGE F. HINES,
Special Representative.

How To Write Your Congressman

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, March 1 (legislative day of Monday, February 2), 1948

Mr. WILEY. Mr. President, the March 1948 issue of the magazine, Successful Farming, the magazine of farm business and farm homes, contains an article which I prepared on how American farmers should write their Congressmen. In this article I presented certain suggestions which are applicable not only to farmers, but to all other groups, in presenting suggestions and requests for assistance to their legislators.

I ask unanimous consent that the text of this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW TO WRITE YOUR CONGRESSMAN—OUR UNITED STATES LEGISLATORS NEED YOUR HELP IN SHAPING THE NATION'S POLICIES; HERE'S HOW TO WRITE YOUR CONGRESSMAN

(By the Honorable ALEXANDER WILEY, United States Senator from Wisconsin)

The voice of the American people is expressed in the form of hundreds of thousands of letters which find their way to the desks of United States Congressmen each year. The messages are varied. They range from personal inquiries to expressions of views on current legislative questions.

As efficient congressional letter-writers, farmers hold their own, or beat the best records of any other group in the country. Occasionally, however, we receive a letter such as the following one, which was written by a Georgia farmer to his Senator:

"STONE MOUNTAIN, GA.

"Hon. RICHARD B. RUSSELL,
"Senator of Georgia.

"DEAR SENATOR: I wrote to you for some information on medicinal herbs and you have sent me a whole batch of bulletins on chicken raising. I know all I want to know about chickens; what has chickens got to do with medicine herbs?

"On March 18, 1894, 44 years ago, I wrote to my Congressman for information on pecan trees and their care, and he sent me bulletins on Belgian rabbits and guinea pigs. What

has rabbits and guinea pigs got to do with pecans?

"I am an old man, 72 years old. Old enough to know better than to write to a Senator or Congressman, but I heard such a nice talk over the radio during the Home and Farm Hour that in a moment of weakness I sat down and wrote to you for which I most humbly beg your pardon for bothering you. I did not want bulletins about chickens. I am so disgusted and outdone. Two times, 44 years apart, I get the same kind of a deal. Serves me right.

"Thank you? I haven't anything to thank you for; there are seven votes in this house and we have made it a rule not to miss a chance to vote on important Government or State elections.

"Respectfully.

"Only two times in all my life did I ever write to a Congressman or Senator."

Most farmers who write their Congressmen have much better luck than our Georgia friend did, for Congressmen who don't correspond with their constituents efficiently don't continue in office long.

Moreover, farmers do place a much higher value on letter writing to their legislators than did this particular fellow. Farm people are becoming more aware of the fact that letter writing to the United States Congress pays off in advancing the welfare of American agriculture as a whole, and in protecting their personal interests.

Around 300 letters reach my desk daily from farm people alone.

Of course, we can't answer all these inquiries—and, believe me, they come in on every subject. For instance, you'll get a kick out of this letter which Representative HOMER D. ANGELL, of Oregon, received:

"DEAR SIR: I thought I would write you this letter for it is very important matter to take up in Congress. You see it like this. I would like to get marry and I cannot get a wife so I thought I would write to you to see if you could help me out and get a wife.

"I am a young man about 40 years old and have not been marry, it seem that I cannot get a wife. I would like to get a wife about 21 or 24 years old. I am a signel man and I want home and have a family. It would be kind of you to help me out very much.

"Sincerely."

Do you see what I mean?

IMPORTANCE OF CORRESPONDENCE

I have operated a dairy farm in Barron County, Wis., for over 30 years, which is a lot longer than my 8 years in the United States Senate. From experiences on the farm and in the Congress, I am particularly interested in seeing to it that there is even closer contact between the men who work the soil and their elected representatives.

I well remember how, back in the 1930's, Wisconsin farmers were getting 90 cents per hundredweight of milk, which cost them $1.80 per hundredweight to produce. I remember the disastrous foreclosing of mortgages on countless farms. Those times must never come back.

One of the factors which will help guarantee against situations like this is capable letter writing of American farmers to their legislators—helping to assure Congress' understanding of the farmers' problems.

KINDS OF CORRESPONDENCE

We might note that there are two principal kinds of farm letters to Congressmen:

1. In the first or departmental type, the farmer asks specific assistance from the legislator for the purpose of getting something done at a Government agency.

The farmer may write, "Please contact the Veterans' Administration to speed up their handling of my application for a farm loan," or "Please contact the United States Tariff Commission and find out what's what on discussions of tariff reduction on these agricultural products." This kind of question involves work of some Government bureau.

In departmental correspondence, you can also include farmers' requests to their legislators for agricultural yearbooks, for farmers' bulletins, or for applications for fish planting.

2. In the second, or legislative type of letter, the farmer isn't asking for specific assistance from some Government agency, but is presenting his views on a current affair or bill. He may write, "Please vote for the Smith amendment to the Jones bill for the raising of parity prices," or "Please vote against S. 1000, which would impose needless restrictions on soil-conservation funds," or "Please vote against the nomination of Mr. John Jones for the farm post."

Through correspondence such as this, a Congressman can get a fair view of how the folks back home are thinking on matters of national interest.

HOW TO WRITE GOOD CORRESPONDENCE

How can you be sure you are writing good letters to your Congressmen, and how can you improve on them? There are certain standards you might follow in sending either a departmental or a legislative letter.

The standards are quite simple, and are already quite universally followed, with some exceptions. Here they are:

(1) Correct addressing: Your letter should be sent to either of your two United States Senators, or to the Representative from your home district—particularly if you are writing for some specific assistance. Of course, if you are writing on a national problem, you have every right to express your views to out-of-State legislators; however, your views probably will carry more weight with your own legislators.

We might note, too, when writing on a purely State-wide problem, that some folks misaddress their letters by sending them to their United States Senator, instead of to their State senator in the State capital. Your United States Senators are located in the Senate Office Building; your Representatives in the House Office Building. When addressing them there, it is helpful to include the postal zone: Washington 25, D. C.

If you are writing your legislators during a period when you know Congress is not in session and your Congressman is probably home, you can address him at his home office. It is important to note, however, that part or all of congressional office forces usually remain on hand in Washington, whether or not Congress is in session, and whether or not the Congressman is in the Capital. These office forces will be ready to assist you at all times.

When you want Government information only, write to the United States Information Office, 1400 Pennsylvania Avenue NW., Washington 24, D. C.

(2) Legibility: Most letters are quite readable. They are typed, or the penmanship is fair, words are not crowded, and there is plenty of paragraphing. Now and then, however, a letter comes in which can't be answered because the writer's handwriting is illegible; his address is scrawled, and his sentences look like a spiderweb of crisscrossing.

Congressmen don't ask you to write a penmanship masterpiece, but since they do have to read so many letters, legibility becomes an important factor in helping them to help you.

(3) Brevity: There are very few farmers who have to be told to keep their letters brief because, obviously, they have enough to do on the farm without writing long-winded communications to Washington. Most of them condense their thoughts in letters very well, often putting a two-three word digest in the upper right-hand corner of the letter, such as "Subject: Defeat S. 400, Kennedy bill."

Still, some folks do become involved in telling irrelevant stories of their Aunt Emma and of Uncle Pete, which are a long way from the subjects they have to discuss with their Congressmen.

(4) Completeness. Be sure, however, to include all pertinent facts, such as the history of your effort to get satisfaction from some Government agency, dates on which you wrote the agency, to whom you wrote, replies you received. Don't send original copies of important documents or other correspondence unless it is absolutely necessary. Copies should be sent instead. Congressmen can't be expected to return material.

LEGISLATIVE LETTERS

There are certain rules which especially apply to writing legislative letters. Here are a few:

(1) Keep them friendly. "Of all the stupid, blankety-blank actions I have ever heard a Congressman take, yours wins the rotten cake." That might be the way you feel about your Congressman, but it would be best to restrain your feelings, and write him in as respectful and calm a manner as possible.

This does not mean that you should not be frank; on the contrary, Congressmen appreciate blunt, straight-shooting talk. But they don't appreciate the nasty letters which a handful of folks write to them. Actually, when a writer gets excited, he limits the effectiveness in presenting his case to his Congressman.

(2) Keep them personal. Instead of using "canned" thoughts supplied by various organizations, the farmer should write about his own experiences in a personal way, straight from the heart.

"Here is the picture of how the farm-labor shortage and the machinery shortage is hurting production on my 600-acre farm. I have one hired man where I used to have four. My wife and three children help me out all they can, but we are way behind in our work, and our health suffers because of the burden."

A legislator can understand these facts, and they mean more to him than all the high-falutin', impersonal talk that some organizations mistakenly advise.

(3) Be reasonable. The farmer should present the facts behind his suggestions, rather than simply stating, "Do this" or "Vote this way" or "Protest this action." The legislator will listen if there is a good basis for your suggestion.

(4) Be timely. Many folks unfortunately send their letters in too late. When an important bill is coming up, farmers should make certain that their letters will arrive in time.

This does not mean sending a telegram or air-mail special delivery long before a bill comes up. An ordinary letter, well timed, is better than these expensive rush forms. So follow newspaper, magazine, and radio reports to learn when things will break in Washington, and then act accordingly.

(5) Follow up on your letter. Analyze the answer that your Congressman makes to your letter. Sometimes if many other farmers (and possibly city folks) have written in to him on the same subject, he may have to use a mimeographed-form response. You shouldn't mind this because, on the whole, Congressmen like to use form letters as little as farmers like to receive them, but often they are necessary.

When you receive a reply, ask yourself if the Congressman answered the questions you raised, or if he listened to your point of view with understanding.

In his reply, the Congressman may not be able to indicate a final commitment on the bill you asked him to support. This does not mean that he is hedging. In fact, a noncommittal answer may be the best for all concerned.

It is foolhardy for the legislator to give a blanket endorsement to any subject which is still in committee, and which may be amended there beyond recognition, or which may be vastly revised on the floor of the Senate or House.

Many farmers, in writing their legislator, say, "You needn't acknowledge nor answer this letter because I know you're busy. It is your action that counts, and I'll be following it."

This is a wise point of view because it is the action that the legislator takes and the reasons for it that really count more than an answer in words alone. So follow up on the results of your correspondence by watching for the roll-call votes on measures, and the reasons your Congressman gave for voting the way he did. If you like his vote, tell him so; if not, don't hesitate to advise him accordingly.

When the farmer writes his Congressman, he helps himself, the Congress, and American agriculture.

The Public Share in Indian Assimilation

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by William E. Warne, Assistant Secretary, Department of the Interior, before the annual meeting of the Home Missions Council of North America, Inc., Buckhill Falls, Pa., January 6, 1948:

The avowed objective of the Indian Service of the Department of the Interior through the years has been to work itself out of a job. Within the last year the committees of the Congress which are concerned with Indian Affairs have expressed some doubts whether the controls were being released rapidly enough. To reaffirm this policy of releasing Indians from Government supervision, the Congress made substantial reductions in funds appropriated for this fiscal year for Indian administration at all levels of the service.

My direct connection with Indian problems dates from last July 1, when I became Assistant Secretary of the Department of the Interior, in general charge of the Office of Indian Affairs, among others. As it happened, the drive to reemphasize the withdrawal of the Indian Office coincided with my entry on new duty, though there was no other relationship between the two events. Nevertheless, the United States has before it, posed anew, the question of its treatment and relationships with the Indians.

Government management and leasing of Indian property were based on the assumption that Indians lacked the experience to compete with whites in handling their own affairs in our economy. Money from these operations have remained in restricted status. I am sure that this is one of the greatest causes of Indian resentment at Federal supervision, and rightly so. It has been increasingly clear that the Indian field service has been reluctant, perhaps because of imposed regulations, to relinquish control over funds of individual Indians, as rapidly as the increasing competence of Indians should have dictated. One result of the current cut in administrative funds has been that we have had to withdraw much of the supervision of individual funds and individual leasing of land that was formerly exercised by agency officials. The suddenness of this transition will work to the disadvantage of some Indians, but the change as a whole is a move in the right direction.

Wholesale and indiscriminate relinquishment of Federal responsibilities for the protection of Indian property rights is not justifiable, however, and would be dangerous to the Indians. Many critics fail to discriminate adequately between those Indians who have progressed a long way toward assimilation, and those like the Navaho, Apache, and Eskimos who have as yet had little opportunity for association with non-Indians. As a matter of fact, it is easy, when discussing Indians in Oklahoma, to be so impressed with the economic and political competence of many representatives of the Five Civilized Tribes as to forget that there are several thousand members of these same tribes isolated in 100 percent Indian communities in the eroded Cookson Hills, and in eastern McCurtain County who speak very little English, and who a few years ago had an average net annual cash income of $54 a year.

Haste would make waste of many an Indian patrimony. The Indian Office should promptly and finally wean the competent Indians, but the Nation must not wean the starvelings among this Indian brood. They must first have an adequate economic foothold in modern society, or they will be lost.

An increasing number of Indians each year are drifting from the reservations into urban life and industrial employment. I am sure that this movement could be greatly accelerated if the public played its part in welcoming these graduates into economic and social equality. These phases of Indian assimilation are at present largely outside the scope of the Federal Government's efforts. But here in this movement lies the final answer for most of the Indians themselves to the age-old problem that we and our ancestors have created by occupancy of this great and beautiful land.

At the close of the Indian wars, treaties were drawn providing for the ceding of Indian lands and the education and civilization of the Indians. Many of the eastern tribes gave up all of their lands and accepted land set aside in a vague Indian territory west of the Mississippi.

Most of these tribes were partially adjusted to non-Indian ways of earning a living, and had long since given up any active opposition to the Government, or to their white neighbors. This was not so of many of the Plains Tribes, however. The peace treaties with the Sioux, the Blackfeet, the Shoshone and their plains neighbors provided that the leaders of these tribes would keep their members within the borders of the reserved lands. The Government also agreed that the Army would keep non-Indians out of these areas. The letter and spirit of these treaties were often broken by the whites, but until about a dozen years ago the regulations of the Indian Office still provided that Indians might not leave their reservations without permission from the superintendent. Actually, these regulations were seldom enforced, but they remained in the book.

Today, any Indian in the United States is as free to come and go as is any other citizen. Many of the rights of citizenship that are only spottily accorded to Indians, such as the right to vote in the States of Arizona and New Mexico, and throughout the South, and the right to receive social-security benefits are outside the jurisdiction of the Indian Office and the Department of the Interior. These are matters which rest on State laws and public attitudes.

The vast field of law and order presents another problem. In early days, Indian tribes were classified as dependent nations. Each had its own recognized customs and regulations governing personal and tribal conduct.

Onto this structure of local law and order was placed the Federal definition of offenses which must be punished by the white man's code, murder, rape, etc. A limited corps of Federal enforcement officers was created. The enforcement of the Indian liquor law came in time to occupy much of the attention of these agents.

The Indian Reorganization Act gave a well-defined place in Indian self-government to the enforcement of law and order. Tribal councils were recognized as competent to enact regulatory ordinances and fix penalties; tribal courts were reinforced; and the tribes were encouraged to employ law-enforcement officers. Many tribes have established effective local systems of law and order on their reservations. In areas where there is still operating an effective body of tribal lore and custom, this is probably as it should be. There is just as much reason to permit the passage and enforcement of local regulations in an Indian community as in any other American town or community. The Indians because of their peculiar legal status in the national life derive much of their authority for local self-government by inherent right, as distinguished from cities which are chartered by the States, but the powers exercised by the tribes and by cities are similar.

There are many reservations, however, on which Indian customs are no longer strong. The Indians live side by side with non-Indians, and to all intents and purposes are fitting into the general culture pattern. In many of these areas there is no interest on the part of the Indians in setting up and operating a tribal code or tribal courts. Their right to do so is sometimes used as an excuse to interfere with the enforcement of local law upon restricted Indian property. The Indian Office recognizes this situation and has for a decade prepared legislative proposals that would permit State law enforcement agencies to assume the responsibility in many parts of the country. Legislation transferring the responsibility has already been enacted for Kansas and for one reservation in North Dakota. It is our belief that similar legislation should be passed at an early date for the Indians residing in California, Minnesota, Wisconsin, Iowa, and some other States.

Indians, when they leave the reservation, are subject to the laws of the State and the community in which they live. They are entitled to no special consideration. They cannot legally be deported back to their reservations. Sometimes reservation officials or others, in an endeavor to work out a solution more favorable to the Indian in view of his tribal attitudes, may urge him to return to the reservation and avoid contact with a community with which he is not equipped to deal.

Some advocates of emancipation of the Indians presume that the Federal Government is somehow or other exercising restraint. As a matter of fact, the instances which are quoted in support of the assumption are usually outside the province of the Federal Government. Indians do face discrimination and Indians are in many States deprived of full and functioning citizenship, but these are matters largely beyond Federal control. In these areas emancipation will be gained chiefly through public opinion. As active participants in the formulation of public opinion within your home communities, I bring these matters to your attention.

It is true that reservation Indians may not vote in Arizona and New Mexico. While the Department of the Interior believes that this is a matter of racial discrimination, the restrictions are not expressed in racial terms. The determination of voting qualifications is vested in the State legislatures by the Federal Constitution, so this is largely a matter which must be settled by the citizenry of those States. The courts of Arizona some 20 years ago interpreted the State constitution as barring ward Indians from voting. The Constitution of New Mexico debars from vot-

ing Indians not taxed. The qualifying tax has been determined to be an ad valorem land tax. In recent months test suits have been started in both States in an endeavor to have the constitutional questions decided by the United States Supreme Court. In the long run, the question of Indian voting in these States will be greatly influenced by the local public opinion. If this is favorable, barriers may be broken down. That job is logically in your sphere.

It is true that Indian citizens in Arizona and New Mexico do not receive social-security benefits. In view of the large Indian populations of these States in proportion to the number of non-Indians and the further presence of large units of nontaxable Federal land within the States, the reluctance of these States to assume the burden is understandable. Indians, however, are subject to the payment of certain State taxes, proceeds of which are used to raise the State's share in these benefits. This matter is now before the Social Security Board for a ruling, and some change may be made in favor of Indians.

When an issue is made of the nontaxpaying status of Indians, one should remember that in general the only taxes which Indians do not pay are those on real and personal trust property. Indians with few exceptions are subject to State and Federal income taxes, State and Federal inheritance taxes, sales taxes, automobile use taxes, and the various excise levies. What an individual Indian pays under any of these levies is small, usually. But there are millions of non-Indian citizens who pay no property taxes because they own no property and whose contribution to excise levies are infinitesimal. The basic resistance to including Indians in State and local services requiring outlay of funds grows out of a belief that the Indian makes no economic contribution to the community, and unfairly escapes his share of taxation. These assumptions are erroneous, in my belief, but no Federal regulation can change public thinking based on them. Enlightened public opinion would help.

The Navajos, poor as they are, contribute much to the economic life of the cities bordering the reservation, for example. As the Navajos profit, so do the traders and other citizens of Gallup, Farmington, Holbrook, and Winslow profit. As the Navajos starve, so are these communities less well-to-do. When public opinion makes this connection between the welfare of Indians and their non-Indian neighbors, there will be less discrimination against Indians. I have tied these remarks to the Navajo. They apply with equal force to every area where there are large groups of Indians.

It is true that Indians sometimes cannot get a square deal with the police and the courts of the cities bordering the reservations. Corrupt police ignore the preying by bootleggers on Indians but arrest the drunken Indians, and occasionally, at least, strip them of their money and jewelry. There is hardly a person in this room who can't fit that description to the towns bordering many of our reservations. The Indian Office can attempt to discover the bootleggers, but it can't influence the courts which dismiss such cases without even a reprimand. And whether a town will put up with corruption in its police force can only be determined by the citizens, including the substantial businessmen, the teachers, and others of the community. People like yourselves can bring such matters to public attention in such a way as to change the climate of opinion, and it needs improvement.

It is true that there are many towns and cities in the United States where an Indian cannot be served in most restaurants and stores, cannot register at the leading hotels, cannot rent a home in some sections of town. The discrimination is racial, and bears little relationship to the cultural status of the individuals. Until such barriers are removed and well-behaved Indians are accepted as other well-behaved citizens are accepted, Indians will choose to remain in their reservation homes, where they at least enjoy the respect of their associates. This discrimination depends on public opinion, which you can influence much better than can a government agency.

It is true that in many parts of the country Indians are included in the races barred by restrictive covenants on land. The legality of such covenants is now being tested in the Supreme Court, and the Government has entered the cases to ask that these covenants be declared illegal. Regardless of the Court decision, the spirit of a people who have entered into such covenants must be changed if Indians are to receive a square deal in the cities. In these same areas, Indians are usually not welcome in the churches, their children are not wanted in the public schools. They also suffer discrimination in the kinds of jobs that are open to them, and are the first to be laid off in times of slack employment. No Government can control such public opinion. You can offer leadership to a better type of thinking.

It is true that in many States, intermarriage between Indians and Caucasians is prohibited by law. Many of you, in discussing the ultimate solution of the Indian problem point to the successful amalgamation of races which has taken place in Oklahoma, and say that is the American way. That is the ultimate solution. So long as intermarriage is prohibited, such amalgamation must wait on the outcome of illicit unions, which is hardly what we would recommend. The revision of the marriage statutes rests upon public opinion. You rather than I can develop that public opinion.

It is still true in many States that Indians are not called to serve on juries, though the courts have begun to throw out cases on appeal in which it can be proved that the peers of a man of a minority group were systematically excluded from the jury panels drawn in his case. Also there are still a few States where the competence of Indian witnesses to testify in court may be challenged. In practice, I know of no recent case in which this latter has happened, but it is clear in the court records that in several States Indian testimony is discounted. No group enjoys full citizenship under these circumstances. Emancipation here also is dependent upon enlightened public opinion, not a change in Federal law.

The products of Indian handicraft, though widely sought, are still thought of by many people as something to be obtained for a song. Traders and public alike resent paying a price for something made by an Indian commensurate with the work involved in making it. This is merely a reflection of a belief that Indian competence is less and is therefore not worthy of the same reward. These are beliefs, not facts. Something must be done to change them, to alter public opinion.

People are not willfully inconsiderate in dealing with Indians, I think. They are simply reflecting a stereotype which has come down from the past when Indians were facing the destruction of their way of life, and groping for new values. There are still old and middle-aged Indians in every Indian group who in some degree justify these critical attitudes. It is unreasonable, however, to penalize the younger, educated group, who are making a tremendous effort to find a place in the society and economy of the majority group of Americans, because of these exceptions among their people. The change does not rest on Government action. It is you who must initiate it.

It is true that when Indians do succeed in an individual or a tribal enterprise there is likely to be political pressure exerted to interfere with their activities, on the ground that they enjoy an unfair competitive status because of Government subsidy. It seldom is so, but that doesn't stop the agitation. Aside from the nontaxable status of Indian property, which is guaranteed in the constitutions of most of the Western States, Indians usually experience a handicap instead of an advantage in starting or carrying on any business. It is because the normal sources of credit which are open to you and to me are not open to Indians, that the Federal Government inaugurated Federal loans. But Indians are not alone in receiving this aid. Small home owners, even large railroads, have not hesitated to accept loans from the Government when the banks which would normally be expected to supply such credit, failed to do so.

I believe too much emphasis is being placed on the nontaxable status of Indian land. It is always cited as though Indians were alone in enjoying this status. Again, the Indian is not alone. In many of the Western States, homestead or veterans' exemption acts have been passed in the last two decades, which have taken a great deal of real and personal property off the tax roll. While I have not compiled all of the figures, it is a fair guess that the amount of non-Indian land taken off the tax rolls in Oklahoma, for example, by the homestead exemption act greatly exceeds in value all of the nontaxable Indian land in the State. Similar comparisons could be made in most of the other States where such laws exist.

Having made reference to these several ways in which all of us as private individuals might help our Indian citizens to take their rightful places in our communities, it is only proper that I should refer briefly to some of the things the Federal Government is now doing to remove sources of irritation and bring better conditions for the Indians.

First, I will remind you that until a year ago, it was legally impossible for the Secretary to delegate to the Commissioner or any lesser official of the Indian Office any of his multitudinous authorities placed in 100 years of Indian law-making. The Secretary personally until then had to approve a staggering number of transactions involving expenditures of less than $10, for example. Now we expect to and are actually moving control over essential administrative details closer to the communities in which the Indians live. I have already mentioned that supervision over individual Indian moneys and leasing of individual Indian lands has been relaxed.

Instructions recently were issued urging Indian tribal groups to deposit their corporate funds in local commercial banks rather than with the agency headquarters for the reservation. This again will reduce some of the clerical burden on the agency, but more important is the effect it should have in giving the Indians experience in handling their own money.

The Johnson-O'Malley Act of 1936 empowered the Commissioner to enter into contracts to provide for education, health services, and welfare by other agencies than the Indian Office. Under this authority, contracts were made with the States of Minnesota, Washington, and California, by which the entire educational service for Indians in those States was assumed by the State. More than 1,000 contracts were made with separate school districts for the operation of individual schools within the States, where the State was not prepared to assume the entire responsibility. However, we have steadily moved in the direction of State-wide contracts and have just completed negotiations resulting in the signing of two more contracts of this nature—with the State of Wisconsin on December 12 and with the State of Montana only a few days ago.

The Indian Office has long had an arrangement with the United States Public Health Service by which it obtains medical personnel and professional assistance of various kinds from that agency.

Finally, I might refer to the testimony given by Acting Commissioner Zimmerman before a committee of the United States Senate last winter in which it was proposed that certain tribes, possessed of resources and already well assimilated, were at the point where Federal supervision could be withdrawn almost immediately. Other tribes should come to this point in another 10 years, and all tribes should be moving in this direction. All of us in the Department of the Interior are hopeful that the day is not too far off when we may see the end of our guardianship responsibility with respect to the Indian people. That day will come at different times for different tribes, but everyone will welcome the advent of each such day.

Let us part with two conclusions. First: The Federal Government is not giving things to Indians. Reservation lands always belonged to Indians or were acquired in trade for other lands considered more desirable by the white man. School and health services are either explicit or implicit in most of the early treaties, sometimes in part payment for ceded land, often as a matter of self-protection. Second: That achievement of full assimilation for Indians involves attitudes of mind on the part of the non-Indian group which are beyond the reach of law and regulation. The Department of the Interior is working on these attitudes, and on other requirements of complete assimilation. You, my friends, can spearhead a drive for the needed change in public attitudes.

Clarence Hancock

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mrs. ST. GEORGE. Mr. Speaker, it is a source of very real sorrow to me that I did not have the honor and pleasure of being in the House of Representatives at the same time as the Honorable Clarence Hancock.

I knew Clarence Hancock personally, and his wife very well, indeed.

I have been greatly impressed since coming to Washington to see in what great and lasting esteem he is held on both sides of the aisle and especially the deep regard and affection that the entire New York delegation, his own delegation, have for him.

It is a great tribute to this man's personality and character that his memory is so greatly cherished. It must, indeed, be a source of solemn pride and joy to his widow and family.

It can in very truth be said that this man was a true and patriotic American, devoted always to the service of his country. That he is and will remain an example to those who come after him as well as to those who served with him. And that all will rise up and call his memory blessed.

Housing for Veterans

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. KEATING. Mr. Speaker, aside from the actual shortage of housing units, another obstacle, high rents, faces the returned veteran of modest income as he searches for a home.

I have today introduced a bill which, if enacted into law, will cause a material reduction in rent for those veterans who either now or in the future may occupy dwelling units in low-rent housing projects.

This measure seeks to amend section 22 (b) of the Internal Revenue Code so as to exempt from income tax the interest on bonds, notes, or other obligations issued in connection with such projects by corporations or associations engaged solely in providing or constructing such homes for veterans.

Under the law of New York, and I understand a number of other States, authority is given for the formation of limited dividend corporations to make available additional veterans' housing. A number of communities, including the city of Rochester, N. Y., have undertaken to try to alleviate the housing shortage in part by proceeding under the provisions of such laws to raise the necessary capital to commence construction of housing developments.

In the case, which has been brought to my attention by a group of my constituents, certain public-spirited citizens have indicated their willingness to purchase some $30,000 of authorized capital stock to create a corporation known as the Rochester Civil Redevelopment Co., Inc. This corporation is to receive land from the city of Rochester which it has acquired under tax foreclosure in exchange for $27,000 of the capital stock. Under the contract of sale it is provided that no dividend will be paid on this stock. The agreement between the corporation and the city of Rochester further provides that the corporation will pay taxes only on the value of the unimproved land for a period of 25 years. The corporation proposes to obtain the cost of constructing a low-rent housing project for veterans on the land acquired from the city by borrowing money from local banks on its unsecured notes. It is contemplated that after the project has been completed the corporation will take up the notes by means of a mortgage. The corporation has already applied to the Federal Housing Administration for insurance on its mortgage under the provisions of the National Housing Act of 1934.

The certificate of incorporation of the corporation provides that its purpose is to acquire areas and to construct, operate, sell, and convey projects pursuant to the terms and provisions of the redevelopment companies law of the State of New York. Provision is made for limited income with respect to those holding obligations of the corporation. It is stated that the corporation is organized to serve a public purpose and that all surplus income upon dissolution will be paid to the city of Rochester. The bylaws provide that no dividends will be paid on the stock of the corporation. There is, therefore, no possibility of any profit or gain for the stockholders of the company.

The redevelopment companies law of the State of New York states that public interest requires the rehabilitation of unsanitary and substandard areas and the provision of adequate, safe, and sanitary housing accommodations.

The United States Housing Act of 1937 expressly exempts from all taxation obligations, including interest thereon, issued by public-housing agencies in connection with low-rent housing projects. A ruling has been made, however, by the Commissioner of Internal Revenue that, since this limited dividend corporation, although not a source of profit to anyone, is not truly a public-housing agency, interest on its obligations cannot be exempted from Federal income tax.

Those interested in furthering this worth-while project have arranged for a substantially lower interest rate on the notes and subsequent mortgage issued by the corporation, provided the income from such obligations is tax-exempt. Such a result will, of course, make it possible for the project to be self-sustaining upon a correspondingly lower rental to be charged to tenants.

Every argument which applies to the merit of existing legislation granting tax exemption to public housing projects applies with equal force to the obligations of such nonprofit corporations. Obviously, such a tax advantage should be limited strictly to those situations where the project can truly be said to be entirely free from any profit incentive.

The state of facts which I have outlined no doubt finds its parallel in many similar cases throughout the country. In the case I have related, and no doubt in many others, earnest and public-spirited citizens have devoted long hours and tireless energy to an attempt to assist in the alleviation of the distressing plight of so many of those who have served our country well and who can now find no adequate living accommodations within their pocketbooks. They have now turned to the Congress for help but have only said that they want the same consideration given to the nonprofit projects which they are promoting, which is now accorded to those sponsored by the Federal Government.

It may very well be that private enterprise and initiative may not be able to solve all of the problems connected with providing homes for those of modest incomes. Perhaps, too, it will not be possible in all communities to find financial institutions which are willing to cooperate to the extent of lending money to a

corporation whose only asset is an unimproved plot of ground.

But certainly every legitimate encouragement should be extended to those who seek to secure moderate-cost housing accommodations for our veterans, through the medium of private enterprise and local management and control.

It is appropriate that this bill should be introduced at a time when so many veterans are gathered here in the Nation's capital to discuss the acute housing situation which they face throughout the Nation. The measure is by no means intended as a cure-all. It must be supplemented by other housing legislation. In that connection, also, we must not forget the obligation which we owe to the millions who served so faithfully and patriotically on the home front and who also are faced with the problem, often heart-rending and acute, of finding a place for them and their families to live.

I am confident, however, Mr. Speaker, that this legislation will result in substantial rent reductions for those occupying the privately financed nonprofit low-cost housing units and will thus go a long way toward fulfilling the obligation which is ours, to assist those who, when their country turned to them in its hour of emergency, responded without hesitation and without condition.

Lithuanian Resolution

EXTENSION OF REMARKS

OF

HON. ELLSWORTH B. FOOTE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. FOOTE. Mr. Speaker, 30 years ago we joined with the people of Lithuania in celebrating her independence after more than 100 years of servitude under foreign rule. Today we find Lithuania without her independence. The aspirations of her people were brutally betrayed in the secret dealings at Tehran, Yalta, and Potsdam at the behest of the Soviet Union. Under the tyranny of her conquerors, Lithuania suffers, but yet lives. In due time, however, Lithuania will rise again as a free and independent nation and take her seat at the conference table of the family of nations.

Under permission to extend my remarks in the RECORD, I wish to include the following resolution adopted by the Lithuanian-American Council of New Haven, Conn., on February 22, 1948:

The following resolution was voted by citizens of the city of New Haven and State of Connecticut at the observance of the thirtieth anniversary of the Declaration of Independence by the people of Lithuania, held under the auspices of the Lithuanian American Council of New Haven, at the St. Casimir's Hall on the 22d day of February 1948:

"Whereas the American people continue to believe in certain inalienable principles of the American Declaration of Independence and wartime policy declarations; and

"Whereas the people of Lithuania and countries adjacent to it, firmly espousing the selfsame principles in their declarations of independence promulgated in 1918, have won their liberty by valiant fight against their oppressors, and made substantial contribution to the United Nations victory over the Nazi-Fascist enemies by their unified, vigorous, and heroic underground resistance movements during the late war; and

"Whereas the aspirations of the peoples of Lithuania, Latvia, Estonia, Poland, Ukraine, and other similarly situated countries were brutally betrayed in the secret deals at Tehran, Yalta, and Potsdam at the behest of the conniving and imperialistic masters of the Soviet Union; and

"Whereas the peoples of Lithuania and other countries lying between the Baltic, Black, and Adriatic Seas continue to wage relentless war for liberation from enslavement by the Soviet Union, cosignatory of the Atlantic Charter and United Nations Charter; and

"Whereas the people of the United States are directly benefiting from the said liberation fight, in that the ultimate Soviet aggression against the United States is in this manner deterred; and

"Whereas the present precarious armed truce imposes heavy burdens on the American taxpayers whose public and voluntary contributions for the relief of the countries remaining beyond the immediate reach of the Soviet aggressor, fall short of the intended effect by reason of the disruptive actions manipulated by Communist fifth columns; and

"Whereas the Soviet Union consistently and unilaterally violated all of the pacts and declarations solemnly underwritten by it, viz, peace and nonaggression pacts with the Baltic States and Poland, the Atlantic Charter, Four Freedoms, the United Nations Charter, Yalta Declaration to liberated European peoples, and the Potsdam Agreement; Now, therefore, be it

"*Resolved*, That we petition the Government of the United States—

"(a) to terminate all of the secret pacts concluded, without the consent or knowledge of the Congress of the United States, at Tehran, Yalta, and Potsdam, and

"(b) to demand that the Soviet Union conform to the letter and spirit of the Atlantic Charter, to wit:

"That Soviet armed forces, puppet regimes, and terrorist personnel be immediately withdrawn from all of the countries invaded by the Soviet Union since September 1939 in connivance with Hitler; further

"*Resolved*, That we petition the Government of the United States to initiate firm measures and render effective aid for the restoration of the violated sovereignty of the peoples of Lithuania, Latvia, and Estonia and for the reopening of freedom of navigation of the Baltic Sea; and be it further

"*Resolved*, That we petition Members of Congress of the United States to expedite enactment of the legislation necessary for translating the European recovery program into an effective policy, and for admission of a fair share of displaced persons from Europe under an equitable pro rata distribution to visas among the respective racial groups presently living in and out of camps in Germany and Austria; and be it finally

"*Resolved*, That copies of these resolutions be forwarded to the President, Secretary of State, and Members of Congress of the United States, and to the local press."

Yours respectfully,

MATHEW J. VOKETAITIS,
Chairman, Lithuanian American Council of New Haven.

MAE JAKUBAITIS, *Secretary.*

Mikolajczyk Tells How the Big Three at Tehran Carved Up Poland Without Any Regard for the Principles of the Atlantic Charter

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. KERSTEN of Wisconsin. Mr. Speaker, under leave to extend my remarks, I wish to include two additional installments on Mikolajczyk's story as contained in the Milwaukee Sentinel. These articles disclose the haplessness of the true Polish Government, the London Poles, after the Big Three had carved up Poland at Tehran without consulting the representatives of the Polish people. The American people were led to believe that World War II was fought on the principles of the Atlantic Charter but our representative at Tehran was not much troubled with the rights of conquered peoples when he sold out to Stalin on the question of Poland.

The following are two additional articles:

STALIN SPURNS NEW POLAND PLAN

(By Stanislaw Mikolajczyk, former Prime Minister of Poland and president of the Polish Peasant Party)

(Installment XVIII)

Back in London, after my fruitless visit to Moscow in August, 1944, I reported my failure to come to terms with Stalin about the future of Poland, and set to work on a compromise that I hoped would make possible a resumption of Soviet-Polish relations.

With the aid of my government in London, and after many communications with our underground leaders in embattled Warsaw, we drew up a postwar plan for Poland in which our five major political parties would have recognition.

As Prime Minister I would form a temporary government made up of equal numbers of the five parties. We would draft a new constitution. We would hold a free election. The elected parliament would settle our growing frontier dispute with Russia and see to it that the Red Army was asked to leave the country when hostilities ceased.

We pledged also to continue the Allied fight against Germany.

I submitted the plan to Russian Ambassador Lebiedov on August 22. A month later I asked him how the plan had been received in Moscow.

"It was turned over to the Lublin committee," he said.

The British were friendlier. "The British government indorses the Polish plan," Anthony Eden told me at the Foreign Office.

Early in October, Churchill sent me a letter from Moscow:

"I hope that you and whatever colleagues you think necessary to bring with you will be able to fly at once to join us in Moscow.

"I am sure that this is the only way in which we can break the present deadlock."

AGREES TO GO

I answered that I was prepared to fly to Moscow, but could not agree to go there if Churchill planned to confer also with the Lublin Poles.

Eden replied, "I am now expecting you. Discussion will, of course, be with the Soviet

government and ourselves as well as with the Polish (Lublin) committee."

I talked the matter over with our Government in London, and was urged—against my better feeling—to go.

We met on October 13 with Stalin, Churchill, Eden, and Averell Harriman at the Soviet Foreign Office.

POLISH GUESTS

Molotov, the chairman, seated us around an oval table and welcomed the American and British. He referred to us as "our Polish guests," then called on me to speak.

I restated the postwar plan which Stalin had previously ignored, and concluded, "Our aim is to bring about an agreement between Poland and Russia, not between Russia and a handful of Poles."

Stalin spoke up:

"You say this plan has the backing of the Polish underground. I doubt that it's possible for them to have engaged in such work lately."

"Marshall Stalin, perhaps you forget that as a younger man you, too, were in an underground and remained active making plans and programs which affected your country," I said.

"Ah, yes," he said, "we held six big congresses and about 25 meetings of the central committee of the Communist Party while I was underground."

"What about the Lublin committee?" Churchill asked. "Was its advice sought?"

"I went much deeper than the Lublin Poles," I said, "I went to the Polish people."

"Your plan has two big defects," Stalin said. "It ignores the Lublin committee, which has done such a good job in that part of Poland which the Soviet Army has liberated; and, secondly, if any Polish Government wants relations with the Soviet Union, it must recognize the Curzon line as an actuality."

CHURCHILL PLEASED

Churchill expressed a great and sudden happiness.

"I see now a new hope for agreement," he said enthusiastically. "Regarding the new frontier along the Curzon line, I must announce in the name of the British Government that, taking into account the huge losses suffered by the U. S. S. R., and how the Red Army has helped liberate Poland, the line must be your eastern frontier.

"We will see to it that for the land you have lost there will be compensations in eastern Germany, in East Prussia, and Silesia. You'll get a nice outlet to the sea, a good port at Danzig, and the priceless minerals of Silesia."

I looked at Stalin.

"You accuse me of ignoring the Lublin committee," I said. "You're ignoring the Polish Government which has fought the Germans for 5 years, which created strong armies, a navy, and air force, and which now fights on all fronts."

"I recognize this," he answered. "I have given proper credit."

CONTRADICTS STALIN

"But you haven't," I insisted.

"I want no argument," Stalin said.

"I can't accept the Curzon line," I said.

Stalin then went into a lengthy argument in which he insisted that the Polish lands then liberated were really White Russia and the Ukraine, which, of course, was not true.

Molotov told me—officially—that the Big Three had agreed on the Curzon line as a Polish-Russian frontier at their Tehran Conference—a fact which had never been revealed.

I looked from Churchill to Harriman, silently begging them to call this damnable deal a lie.

Harriman was silent. Churchill looked straight back at me. "I confirm this," he said quietly.

It made Churchill angry and, turning on me, he demanded that I agree then and there.

"You don't have to make a public announcement," Churchill said. "I don't want to put you in a difficult position with the Polish people."

I could make no private deal either, I told him. He went on:

"But you can at least agree that the Curzon line is the de facto frontier, and you may appeal for adjustment at the peace conference."

But before I could answer, Stalin rose indignantly.

"I want this very clear," he said gruffly. "Mr. Churchill's thought of any future change in the frontier is not acceptable to the Soviet Government. We will not change our frontiers from time to time. That's all."

Churchill held out his hands, looked up to the ceiling, and wheezed with a despairing impatience.

MIKOLAJCZYK RECALLS NEAR BREAK WITH CHURCHILL

(By Stanislaw Mikolajczyk, former Prime Minister of Poland and president of the Polish Peasant Party)

(Installment XIX)

In view of what has subsequently happened in Poland, my efforts in Moscow in 1944 to save our land and sovereignty, which had been imperiled by the secret agreements of Tehran, take on considerable significance.

Churchill and Roosevelt had yielded completely to the demands of Stalin in regard to Poland at their Tehran Conference. They had agreed to split Poland, an ally, through the middle with the Curzon Line. Each had made a number of notable statements about refusing to recognize territories gained by aggression, and continued to do so even after Tehran. But Stalin's will prevailed.

HINT OF POLISH SPLIT

When I refused to become a party to this deal, at Moscow in October 1944, Churchill became very angry at me. In a series of conferences, aimed at solving the issue, he demanded that I agree to the new eastern frontier between Russia and Poland, accept a verbal promise of future gains of land from Germany and a similar promise about the future political independence of what would be left of Poland.

He blamed me for not appeasing the Russians early in 1944, when there was a hint that the Big Three had decided to split our country, and he said that because of my stubborn refusal at that time I had provoked Stalin into setting up the Lublin Committee of Polish Communists.

"How near we got the beginning of the year," Churchill stormed. "If you had come to an agreement with the Russians at that time, you would not have today those Lublin people. They are going to be a frightful nuisance. They will build up a rival government and gradually take over authority in Poland."

I reminded him of the Atlantic Charter and the other pacts and promises made to such states as Poland.

"I shall tell Parliament that I have agreed with Stalin," Churchill flatly declared. "Our relations with Russia are much better than they have ever been. I talked to your General Anders the other day and he seems to entertain the hope that after the defeat of the Germans the Russians then will be beaten.

"This is crazy. You cannot defeat the Russians. I beg of you to settle upon the frontier question. Suppose you lose the support of some of the Poles? Think what you will gain in return. The British Ambassador will be with you. The Americans will send an Ambassador—the greatest military power in the world."

INFURIATES CHURCHILL

I shook my head and it infuriated him.

"Then I wash my hands of this," he said. "We are not going to wreck the peace of Europe. In your obstinacy you do not see what is at stake. It is not in friendship that we shall part. We shall tell the world how unreasonable you are. You will start a war in which 25,000,000 lives will be lost."

"You settled our fate at Tehran," I said.

"Poland was saved at Tehran," he shouted.

"I am not a person whose patriotism is diluted enough to force me to give away half of my country," I replied.

'Unless you accept the frontier you are out of business forever," Churchill cried. "The Russians will sweep through your country and your people will be liquidated. You are on the verge of annihilation. * * * We will become sick and tired of you if you go on arguing."

Anthony Eden smoothed matters for a moment, but Churchill came back strongly.

"If you accept the frontier the United States of America will take a great interest in the rehabilitation of Poland and may grant you a big loan, possibly without interest. As for ourselves, we shall be poor after this war. * * * You are bound to accept the decision of the great powers."

It seemed the proper time to remind him again of Poland's shocking losses in the fight against the Germans, and the better treatment being accorded such enemies as Italy and Rumania. But he dismissed this argument.

"You are no government," Churchill said, adding:

"I will have to call on the other Poles. This Lublin Government may function very well. It will be the government. This is a criminal attempt on your part to wreck, by your liberum veto, agreement between the allies. It is cowardice on your part."

I resented everything he said and told him so.

"I am not going to worry Mr. Stalin," he replied. "If you want to conquer Russia, we shall let you go your own way. You ought to be in a lunatic asylum. I don't know whether the British Government will continue to recognize you. You hate the Russians. I know you hate them."

Eden again attempted to smooth matters, but Churchill interrupted. In a calmer voice he promised me that if I acquiesced in this bold sell-out of a nation that had lost nearly 6,000,000 people in the war, and if I accepted Russia's claim to the half of Poland which the Red Army seized in 1939 while an ally of Hitler, he, Churchill, would personally guarantee that what was left of Poland would be free of Russian interference.

I was furious at the man, and could not conceal it.

"Mr. Prime Minister," I said, "I once asked you for permission to parachute into Warsaw and rejoin the underground that is at this very hour fighting the Germans, while the Red Army sits in the suburbs and refuses to help. You refused to give me that permission. Now I ask it again."

"Why?" Churchill asked.

"Because I prefer to die, fighting for the independence of my country, rather than be hanged later by the Russians in full view of the British Ambassador."

It hurt the old man * * * hurt him more than I had wanted to, for he had been and remains, my friend. He turned on his heel and walked out of the room. But after a few minutes he returned and put an arm around my shoulders * * * and we were both on the point of tears.

I asked to see Stalin alone before I left Moscow. I still hoped I might appeal to him to relent in his outrageous demands.

"Poles will bless your name if you make a generous gesture here and now," I appealed to him. "Even if we retain only the area around Lwow and Vilna we will be grateful."

"I cannot and will not do this," he said.

I pleaded for Poland's future political independence and envisioned a day when a sovereign Poland would have enduring pacts with "Russia, the United States, Great Britain, France, and Czechoslovakia."

He nodded, then said, "You must include Hungary in that group." His statement was a surprise, for Hungary was at that time an ally of Germany and was busily engaged fighting the Red army.

"Hungary?" I asked, incredulously.

"Hungary," he said, steadily "will change completely when we get there." He had obviously completed his plan for the future political domination of that country.

I asked him if he intended to make Poland a Communist state after the war.

"No," he said. "Absolutely no. Communism does not fit the Poles. They are too individualistic, too nationalistic. Poland's future economy should be based on private enterprise and Poland will be a capitalistic state."

He saw my surprise.

"There is no middle system," he explained, after a bit. "Capitalism can assume many forms, have many different controls. But what is not communism is capitalism."

"Will you order the Communist Party in Poland not to seek a revolution after the war? I asked him.

"I will order that," he said. "Poland will not be disturbed by ideological strife. But there are certain people—both left and right—we cannot allow in Polish politics."

"But Marshal," I protested, "one cannot dictate who shall not be in public life—if the person's party is behind him."

Stalin looked at me as if I were indeed a lunatic and abruptly ended the conference, and so again I went back empty handed to what was left of the Polish Government in London.

Czech Liberties Vanish

EXTENSION OF REMARKS
OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of February 29, 1948:

EUROPE FEARFUL AS CZECH LIBERTIES VANISH

(By Ferdinand Kuhn, Jr.)

What happened in Prague last week was murder most foul—the murder of the civil liberties and free institutions of 12,000,000 people.

A week ago the people of Czechoslovakia could read what they liked, say what they liked, vote as they liked. Their country was in the Soviet sphere of influence, tied to Russia by a military and political alliance, but in its internal affairs it was still free.

The Czechs could read attacks on their Government in newspapers of the opposition parties. They could go to see American or Soviet films, as they chose. They could buy foreign publications. They could move and travel where they wished.

Today the non-Communist newspapers have been taken over by a disciplined Communist minority. Politicians of the non-Communist parties have been arrested and jailed. Soon there will be the purges, the concentration camps, and perhaps the firing squad or gallows.

From now on, into an indefinite future, the Czechoslovak people can look forward only to the dread sound and symbol of the police state—what Dean Acheson, former Under Secretary of State, once called "the knock on the door at night that strikes terror into men and women."

THE CLOCK SPINS BACK

The Czechs have heard it all before. Nine years ago next month Hitler's mechanized armies rumbled into Prague, bringing with them the black-shirted secret police, the concentration camps, and the living death of Nazi rule. Then, as now, the Czechs lost their liberty, and it took years of occupation and war to set them free.

In the eyes of the remaining free nations of Europe, this second extinction of Czech freedom is not only tragic but deadly serious. For western Europe looked upon the Czech people as Slavic in language but western in culture, tradition, and achievement.

The sight of these people being swallowed into the Soviet system has given western Europe a greater shock than anything since the end of the war. In Paris and London, still half prostrate from the wounds of one war, it looks as if Russia is on the march once more; as if the Kremlin has regained the initiative which Secretary Marshall took from it last summer. Each country again looks at its neighbor, as it did in Hitler's day, and asks, "Who's next?"

And there is a haunting sense in western Europe that only the United States, acting with more swiftness and strength than ever before, can prevent the Czechoslovak pattern from being followed in Italy before summer.

If the sense of shock has not yet hit official Washington—and there is little sign that it has—it is because the United States long ago wrote off Czechoslovakia as a genuinely independent country. Officials here have felt that the death warrant of Czechoslovak liberties was signed almost 2 years ago, on the fateful day when President Eduard Benes accepted Klement Gottwald, a Moscow-trained Communist, as Premier.

COOPERATED INTERNALLY

Gottwald was accepted because his Communist Party had won 38 percent of the votes in the April 1946 election, and had become the biggest single party in the state. He promised to cooperate with the non-Communist parties in the cabinet; he let the country have genuine democracy and free institutions within its borders, as long as it suited his purposes.

But from the day he became Premier, Czechoslovakia ceased to follow an independent foreign policy. Her delegates at foreign conferences voted obediently and monotonously with the Soviet Union and its satellites. Only in trade and cultural relations with the outer world did the Czechs differ from their Soviet masters, and then they did it by permission.

The final proof of their lost independence, in American eyes, came last summer in the aftermath of Secretary Marshall's famous speech at Harvard. The British and French invited the Czechs, together with all other European countries except Spain, to come to Paris and discuss European economic cooperation. The Czechs accepted promptly.

But it was not long before their Premier and their Foreign Minister, Jan Masaryk, were summoned to Moscow. The Czechs were compelled to withdraw their acceptance of the Paris invitation. They declined to take part in the Marshall plan, and their spokesmen at home and abroad began attacking it as an attempt to dominate the peoples of Europe.

From that moment official Washington no longer regarded Czechoslovakia as an independent country able to carry out its own policies in its own interests. Its civil liberties and parliamentary institutions were admirable, but they could be wiped out by the flick of a finger in the Kremlin.

TOUGH BUT PASSIVE

When the crisis finally came last week, the Czechs submitted more tamely than their less-cultured and less-democratic Balkan neighbors. They are tough people, so tough that the old Austrian Empire could not crush their national spirit in hundreds of years. But their traditional role under Austria and Hitler Germany was that of passive resisters, noncooperators, and saboteurs, rather than active rebels. It remains to be seen how they will withstand the Soviet version of totalitarian rule.

The overturn in Prague differed in three respects from the Communist coups in Hungary, Rumania, and Poland. They are differences in detail, but they are worth examining and remembering, for the Czech overturn contains clues to what may be expected from the Communists elsewhere.

In the first place, there was no Red Army actually in Czechoslovak soil, and not even any Soviet troops ostensibly guarding communication lines as they did in Hungary. The actual tramp of Red Army boots was not needed. Soviet territory adjoins Czechoslavakia at its narrow eastern border, and Soviet armed power spoke as loudly in its absence as if it had been on the spot.

In the second place, the Czechoslovak overturn was the first in eastern Europe in which the trade-unions played a prominent and perhaps decisive part. In Poland, and still more in the Balkan countries, trade-unions are comparatively weak. In Czechoslovakia, an industrial country, they are strong, disciplined, and well organized. The seizure of Communist power last week could not have taken place so smoothly without their connivance and cooperation.

Finally, Czechoslovakia was one of the few European countries where an important wing of the Socialist Party had continued to cooperate with the Communists. Although European socialism and communism are deadly enemies, the left wing of Czech socialism had a leader, former Premier Zdenek Fierlinger, who was ready to do the Communists' bidding. It may yet be that Socialist leader Pietro Nenni in Italy will play the Fierlinger role when communism is ready to try for power in the Mediterranean.

BYRNES EXPLAINS "SHOVE"

At moments like these an American may wonder whether the United States could not have saved the Czechs from their present purgatory. Leading Czechs, friendly to the western world, have often complained that Secretary Byrnes helped to throw them into Russian arms in 1946 by cutting off American economic help.

The reasons were told in the Byrnes book, Speaking Frankly. At the Paris Peace Conference of 1946, Andrei Vishinsky, of Russia, had just finished a denunciation of the United States for trying to dominate the world by hand-outs. Byrnes noticed two of the Czechoslovak delegates applauding heartily.

At that very time, he remembered, the Czechs had been allotted a $50,000,000 surplus-property credit from the United States. He also discovered that a Communist minister, without the knowledge of Foreign Minister Masaryk, had contracted to relend $10,000,000 of this to Rumania at a higher rate of interest.

Byrnes promptly cut off the credit with the bitter remark that he did not want to offend the Czechs further by giving them American hand-outs.

Partly from this episode came Byrnes' determination to give strictly American help to countries who would not denounce us for giving them the relief they asked for, in place of internationally administered relief on the UNRRA model.

The record shows, however, that the United States continued giving some help to the Czechs long after their foreign policy passed into virtual Soviet control.

Czechoslovakia had received a total of $268,250,000 from UNRRA up to the end of 1946, 70 percent of it contributed by the United States. It had used $9,304,694 of the surplus property credit before Byrnes cut it off. It had received $3,042,000 in direct and indirect lend-lease help following the liberation. Yet in February of last year it got $20,000,000 from the Export-Import Bank to buy American cotton, and two million for tobacco.

Apart from these sums, the Czechs asked, but did not get, a further cotton credit of twenty million and a surplus property credit of the same amount. They also sent the World Bank a letter of intent for a $350,000,000-reconstruction loan, but no formal application has ever been received.

SMALL BUSINESS' TURN

The seizure of power by the Communists probably extinguishes any hopes the Czechs may have had of getting economic help from the west, except for the indirect effects to be expected from a revival of east-west trade under the Marshall plan.

The economic consequences will be serious in other ways. Czechoslovakia until now has been a nation of small-business men and some big industries. Until now the small businesses have been allowed to follow paths of free enterprise even though the big industries have been nationalized. The advent of a straight Communist regime is expected to lead to the gradual nationalizing of all businesses, and the small-business man may be driven to the wall.

Politically, the new regime is also expected to move gradually after its lightning seizure of power. The scheduled elections will be held with the opposition leaders in jail or powerless to speak; therefore a rigged result is almost certain. The parliamentary forms may be preserved until a new Soviet-type constitution can be written, but they will be a hollow mockery.

Whether or not President Benes remains, his power to control events appears gone. He had his value to the Communists as a symbol of the Czechoslovak Nation. He had compromised with them in a wholly sincere belief that east and west could live together in peace and that Czechoslovakia, as bridge between them, could belong to neither side.

If he stayed, the Communists, being what they are, would have used him until it suited their purposes to discard him, just as they discarded King Michael, likewise a symbol of the state in Rumania.

THE ROAD TO ROME

What can the outer world do about it now? Probably it is too late to do anything for Czechoslovakia except to keep open every possible channel of communication to the Czech people, the majority of whom are democratic to the marrow of their bones.

It is not too late, however, to take to heart the lessons of this latest Soviet triumph. The pattern of bloodless conquest has now taken the Soviet system farther west than it has ever penetrated before.

The finger of future trouble now points squarely at Italy, where the government is shaky, the Communists strong and ably led, the Socialists divided. A general election in Italy is due April 18. It is wholly likely that the Communist machine will begin a drumbeat to discredit the election results in advance, as it did in Greece, and then attempt a coup d'etat of the kind it engineered with such deadly skill and precision in Prague.

So far American policy makers have not faced up to this situation. Their thoughts and energies have been devoted to getting the European recovery program passed promptly by Congress and followed up by the western Europeans.

Secretary Marshall has said already that Europe's immediate future depends on ERP, and that there can be no true peace until American economic help can repair the weaknesses of the western European countries.

But the past week's events have made it clear that economic help is not enough. Unless western Europe is tightened as swiftly as possible, by political as well as economic measures, there may yet be a repetition of the tragic events in Prague.

Los Angeles Needs a Foreign-Trade Zone

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. McDONOUGH. Mr. Speaker, Los Angeles, Calif., is now one of the leading industrial centers in the United States, and is tied in sixth place with Pittsburgh, Pa., as an industrial city.

Los Angeles has excellent harbor facilities which today provide a gateway for the constant flow of raw and processed materials from South and Central America, and this harbor is situated more than 300 miles closer to the source of these materials than any other major shipping port.

I have advocated the establishment of a foreign-trade zone at Los Angeles Harbor since 1945 because such a zone will contribute materially to the expanding industry of Los Angeles and southern California, and through increased production in that area will benefit the entire Nation.

I am glad to find that Mayor Bowron, of Los Angeles, agrees with me in a recent radio address delivered over radio station KMPC on February 1. Mayor Bowron's speech follows:

Citizens of Los Angeles, all too few people realize the importance of our harbor, what it has meant in the development of this metropolitan area and the great Southwest, and what world trade will mean to Los Angeles and southern California in the future. There was a time when harbor affairs were of the most important subjects of local consideration. But for nearly a quarter of a century it has been one of those things, vital to our economy, which has been taken for granted.

With the great increase in population in this area, there are hundreds of thousands of people who are not familiar with the fact that most of the water-front land and improvements and shipping facilities at the harbor, including wharves, slips, docks, and warehouses, are city-owned, and that the management and operation of the harbor is a municipal enterprise. More people should know about their harbor. It is true that we should have better access. It is hoped that before long we will have a harbor freeway. But I should like to urge those people who are not familiar with one of the city's great assets to go to San Pedro and Wilmington and Terminal Island and look around. Many of you will be surprised at what you will see.

Although shipping, both domestic and foreign, has not anywhere near reached the volume and importance of the prewar years, nevertheless there is much activity. You will see ships bearing the flags of many foreign nations and you will get a much better idea of the important place Los Angeles holds in commerce and how this city is in direct contact with many foreign lands over the sea routes.

Prior to the commencement of World War II, much of the commerce through the port of Los Angeles, both domestic (that is, coastwise and intercoastal movements) and of foreign commerce, inbound and outbound, was the result of local production and consumption. Based upon this prewar experience, it is reasonable to presume that, with our great increase in population and industrial growth, upon the stabilization of conditions affecting maritime service, our port will handle greatly increased commerce movements. At the present time ships entering our local harbor are handling about 60 percent of prewar day domestic commerce, and we are looking forward to very substantial increases in foreign trade.

Anticipating a big shipping increase, the city harbor department has adopted an all-time record budget of more than $17,000,000 for the current fiscal year's operation, and of this amount about $9,250,000 has been earmarked for new construction, including freight terminals, berths, wharves, and facilities for passengers and the United States Customs Service. Some new warehouses will be constructed. A new wharf for the commercial fishing industry is under way. The building of a combination passenger-marine terminal facility in the west basin, at an estimated cost of $3,900,000, is proposed as soon as conditions permit, which means the removing of the existing drawbridge, which has impeded the development of this portion of the inner harbor. The city is actively pressing its application with the United States War Department to order the removal of this drawbridge, and it is hoped that such order may be made in the near future.

The board of harbor commissioners has before it for consideration reports dealing with promotion activities and is considering the creation of a traffic and public relations department for the purpose of stimulating more commerce through our port. The publication of a brochure has just been completed setting forth pertinent information about the port of Los Angeles, and copies will be widely distributed to traffic managers of large industries throughout the country as well as in foreign countries. Our harbor department is constantly in touch with larger shippers, both domestic and foreign, with steamship operators, and with railroad and truck carriers who serve our port, for the purpose of ascertaining how their needs can be better served.

The Los Angeles Chamber of Commerce has a well-staffed department under the very capable direction of Stanley T. Olafsson, the entire activities of which are directed to increasing world trade, and the city harbor administration works closely with this organization, and also with the Foreign Trade Association, and all other similar organizations interested in promoting commerce.

Recently the harbor department had made an industrial and administrative survey of the business and property of the city at the harbor. This was done by a nationally known firm of engineers, and the report and recommendations are now being carefully studied by the board of harbor commissioners and the general manager of the department.

A matter of far-reaching importance is the establishment of a foreign-trade zone at the Los Angeles Harbor. While I cannot anticipate the final action of the board of harbor commissioners, which is still studying this matter, it is my belief that within a very short time formal application will be

made to the Federal Government for the necessary authority. A foreign-trade zone is sometimes improperly referred to as a free port. It is a customs-guarded area operated as a public utility, into which goods, whether foreign or domestic, dutiable or free, may be brought and stored. Within the zone such goods may be cleaned, graded, reconditioned, and then reshipped or sold. If reshipped to a foreign destination, no customs duties need be paid.

In December 1946, the board of harbor commissioners appropriated funds to make a reinvestigation and economic survey leading to the determination as to what should be done in connection with the establishment of a foreign-trade zone. Two competent consulting engineers and port authorities, Col. Charles T. Leeds and Gerald C. Fitzgerald, were employed for this purpose. Their study and preparation of a report required nearly a year's work, and was finally submitted to the board of harbor commissioners on October 15, last. The report submitted was very informative and included much detail, and pointed out an economical method of financing. The establishment of a foreign-trade zone in our port has been the subject of continuous interest for the past 10 years, but heretofore there was considerable objection to the estimated cost, and the necessary information has been lacking as to economic feasibility, and full data has never before been collected in such form as would meet the exacting United States Government foreign-trade requirement. Now we have it.

Heretofore it has been estimated that construction costs would amount to $1,000,000 or more. The Leeds-Fitzgerald report shows a way by which a foreign-trade zone may be established at very small capital outlay and with low operating cost, by using a portion of an existing facility, warehouse No. 1 and berth 60 in the outer harbor of the San Pedro area. The large warehouse that stands at the entrance of the harbor has, during the past years, been something of a white elephant, and since it has not returned substantial revenue heretofore, except during a period when it was used for storage of cotton, there will be no great loss by using a portion of this facility for a foreign zone. At the beginning of the operation of a foreign-trade zone there will be a considerable expense to the city. In addition to the original construction costs, which will include necessary fences and gates to make it impossible for goods either to be taken inside or outside of the zone without checking and official permission, the operation of a foreign trade zone will require adequate lighting by night, the continuous employment of guards, and additional personnel.

The question to be decided is whether the indirect and potential benefits will or will not be commensurate with the deficit incurred during the development period. In other words, will the increased convenience and savings afforded to foreign traders, the stimulation of foreign trade, the advertising of the port, the diversion to the port of Los Angeles of trade that might go to other harbors, and the indirect benefit through increased commercial activity in southern California, will more than offset the expense involved.

The Leeds-Fitzgerald report reviews all of the factors, and undertakes to make an estimate of the potential tonnage that will pass through the foreign trade zone, if one should be established. On the basis of estimates, it is indicated that a foreign-trade zone will be a losing venture financially for at least 3 years; that it should break even about the fourth year; and return a profit to the city from its operations by the eighth year. It is further calculated that all capital expenditures and accumulated deficits would be liquidated within 10 years. It should be understood that the objective of a foreign-trade zone is not to produce revenue but to stimulate commerce. Its benefits will be found in increased activity at the harbor, greater revenue from docking fees and other charges collected by the harbor department, and stimulation of business activity in this general area. We are particularly interested in increasing world trade, as it is now more appropriately termed, because such trade and commerce will be the means of expanding local industrial production, giving more employment, increasing business in this area.

Foreign trade zone experience in this country is limited. The first zone was established in New York in 1937, and during the war the location of the zone had to be moved twice, but the experience there has justified its establishment. A foreign-trade zone was established in Mobile, Ala., in 1938, but was closed after only 6 months' operation. Authority to open a foreign-trade zone in New Orleans was given more than a year ago, and operations started May 1, 1947. San Francisco made application for a zone in 1935 but the application was denied because the site was unsuitable. More recently a new site was selected which complied with the Federal requirements, and San Francisco will soon be operating a foreign-trade zone. The matter has been under study at Seattle for some years but no action has been taken.

The world trade committee and the harbor affairs committee of the Los Angeles Chamber of Commerce have recommended the establishment of a foreign-trade zone at our port in the following language:

"In our world trade the emphasis today is on the necessity of importing more goods from other lands in order to supply our industries with raw materials and to assist in creating new sources of dollars to pay for our exports. Our opinion is that the Los Angeles Harbor Department should install and maintain every available modern facility and service that will advertise, publicize, and assist in sustaining our world trade at the highest possible levels. The establishment of a foreign trade zone facility would be an important contributing factor in developing and expanding our international trade."

As I said before, I cannot anticipate the action of the board of harbor commissioners. The decision must be made by that body. There may be factors concerning which I am not fully informed, that may be advanced as negative reasoning, but I feel that the application should be made and that the port of Los Angeles should not permit New York, New Orleans, and San Francisco to forge ahead in bidding for foreign commerce. In this area we have a veritable empire, representing in population and business the equivalent of many States in the Union. Our production should find foreign markets and our industries need foreign goods. Los Angeles is a city of world-wide importance and we must recognize our position in world trade and world-wide affairs.

What Is Necessary To Provide the Largest Number of Housing Units in the Shortest Possible Time in Metropolitan Detroit?

OF

HON. HAROLD F. YOUNGBLOOD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. YOUNGBLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Hiram Perry Holmes, president, Detroit Real Estate Board, as presented before the Detroit and State Affairs Section of the Economic Club of Detroit, January 28, 1948:

The purpose of this discussion is to attempt to bring forth practical and possible ideas that will help to make available as quickly as possible more family living units. As I see the problem, there are two general ways in which this can be done. One is to construct more new units. The other is to make the best possible use of existing structures. Because of the urgency of the problem, I believe we should first explore the condition of what we have already. If we find that anything can be done to improve their use, with proper cooperation, it can be done in less time than it would take to build new ones.

May I say here that by no means do I wish to discount the importance of exercising immediately all of our abilities and facilities in developing new construction. In fact, may I urge that every citizen in this country capable of constructive thinking do his or her best in helping to bring out into the open the causes of existing bottlenecks in the construction field today. More important still than telling us what is wrong with the situation, I hope that they will follow through with some useful ideas on how to eliminate the troubles of the contractor, as well as how to convince private investors that they can safely invest more capital in rental housing. Too many good citizens, in my opinion, are too modest in their own estimate of their ability to think. There are others, of course, even though they are able, who are too lazy to think. They are the parasites of our society who, perhaps unconsciously, are not only contributing nothing but are rapidly helping to destroy what we have.

During my life, and particularly in the past 25 years, it has been my lot to be closely associated with the two fundamentals of life—food and shelter. In this time I have had actual and practical experience as a farmer, a carpenter, a builder, and a property owner. Most of my working experience has been that of a property manager whose true role is to act as a sort of a trustee between four related groups of people. They are the property owners, the tenants, the workmen, and the public. Management is now my business, my means of livelihood. As a property manager I am a servant of all of these people, and here may I inject the fact that in this country, not until lately, has there ever been any thought of classes or one class versus another. This is a foreign idea and unnecessary and undesirable under our Constitution. The workman (the employee) can be and often is both a tenant and a property owner. The tenant must be a workman or a property owner. He can be both. The property owner is a workman of the past. All make up the public and are important members of our society of high specialization and intense cooperation. That is as it should be for time has already proved it.

Reference of personal experience is made here only with the hope that it may help to qualify me in the minds of others from all walks of life as a qualified witness for the rental-housing business. It is my sincere hope that the thoughts which I shall present will be received in the spirit in which they are given. I have tried to base my conclusions on actual experience, facts, and findings, without passion, prejudice, personal selfishness, or political philosophy.

The value of housing space or time of occupancy is purchased, as in the case of any other commodity, on its worth to the tenant and the tenant's ability to pay. Any other standard of value disrupts the entire housing field and creates artificial shortages

or vacancies just as in the manufacturing, retail, or labor markets. But the relationship between the property owner and the tenant differs in some respects from the merchant and his customer. It is a constant relationship of 24 hours a day, 365 days of the year. This relationship shares the good with the bad, sickness, good health, financial reverses, and good fortune. The renting of living accommodations owned by another is a privilege and not an inherent right. With this relationship goes certain privileges, responsibilities, and obligations on the part of both parties. If they are respected the relationship is pleasant and satisfactory to everyone. But, to be harmonious, that relationship between the property owner and the tenant must be fair and equitable to both parties.

In my opinion, at least 95 percent of the tenants I know do respect these privileges and responsibilities. They are desirable and we hope that we can keep them. The other 5 percent are undesirable for one reason or another and they are generally considered so by their neighbor tenants. They may be destructive, disturbers of peaceful living, or creators of fire or other hazards. They may be causes of crime and delinquency. Almost always they add more to the cost of maintenance than do the good tenants. In a free society it is the duty of management to dispossess these tenants but, bear in mind, these vacancies are immediately filled for property owners must have tenants to remain in business.

I offer this thought because I believe the eviction scare has been vastly overplayed and stressed completely out of proportion to its actual importance. There would be no wave of evictions without rent control. Nothing of this kind happened before rent control. Property owners want tenants just as badly as the tenants want living space.

Advocates of rent control frequently say that elimination of controls would cause rental housing to be available only to the well-to-do. I believe that they are generally well provided with housing now and those others are not enough in numbers to make any dent in the supply. We used to have a rule that it was unwise to sell rental space to a tenant to any lesser quality than the best he could afford to pay for. If we did, he would not stay settled long. His pride compelled him to look for and find the best he could afford to pay for.

One point generally overlooked is that rents cannot be arbitrarily raised to any point desired by the property owner. There must always be a tenant able and willing to pay the price. Removal of rent control would permit the asking of higher rentals but in most cases the new rates would truly reflect comparative values as tenants view them today, not as they were several years ago under completely different conditions.

Proponents of rent control claim that it must be retained to prevent or retard inflation. Simple proof that their contention is wrong is the fact that during the years we have had rent control we have had our greatest inflation. Rent control has served only to conceal some of the effects of inflation by distorting relative values of housing and other commodities. Holding down the rent of a family has made it possible to bid up the prices of food, clothing, and other essential and nonessential commodities. Thus rent controls have removed some price pressures—only at the expense of others. Rent control has had the effect of increasing the incomes of some tenant familes (those in possession) but at the expense of other families—those who own rental property, those seeking rental housing, and those who have been forced to buy houses before they were really able to do so. In other words, the owners of rental housing, together with those seeking housing, have been required to subsidize not only the tenants in possession but other kinds of business enterprises patronized by these tenants.

Rent control has not kept the cost of housing or the cost of living down for the Nation as a whole. It has kept the cost down for some of the tenants, but only at the expense of other of our citizens.

The points brought out so far are, in my opinion, necessary as a foundation for understanding of why, under rent control, we have not made the best use of our existing structures or why rent control has served to reduce the number of rental family units which are available to those families seeking rental housing. At the same time rent control has contributed to the prevention of greater production of new rental housing.

It is time to cease thinking in terms of an emergency. As long as emergency treatment continues, the emergency will stay with us, at least in our minds. With reference to position, there is a certain segment of our population in a real state of emergency, but I shall discuss that later. I believe that it is necessary and advisable now to think in terms of a rental housing market based on this new, postwar, peacetime pattern and adjust ourselves to it. The wartime emergency is over. The original justification for rent control now ceases to exist. Army and navy training centers, mobilization bases, or ports of embarkation where wives and children congregated to be with husbands and fathers no longer exist. There are no mass movements of war workers to centers for production of war weapons. The war-displaced population has either settled permanently in its new communities or returned to its former home communities. We have begun to assume our true postwar pattern as a nation. We are no longer in an extreme state of flux.

Census figures show that by our own prewar standards there is more housing today, and more housing space per person, than ever before in the history of this or any other nation. In other words, there is no actual shortage of housing.

When any necessary commodity—and rental housing space is a commodity—is priced below its free market value, people will rush to buy it. With rents less than 7 percent over the 1942 market value and with average wages and incomes of our rental population more than 100 percent over the 1942 level, rental housing space has become a cheap commodity in relation to earnings. In 1942 approximately 22 percent to 25 percent of the average income was devoted to rent. Today rent absorbs only about 9 percent to 14 percent of this average individual income. Under this situation people have followed their natural desire and sought larger and better living space. This situation continues today. In actual practice the owners and tenants have been partners in contributing to this overconsumption of space per person. The fewer the tenants in a given space the less wear and tear and maintenance expense there is on that space. Even the OPA and the Housing Expediter have encouraged this wasteful use of rental housing. With very few exceptions, they have made higher rents for increased occupancy impossible. That is why, from 1940 to 1946, the number of houses and apartments occupied by one person increased by approximately 800,000. In other words, 800,000 living units, formerly occupied by two or more persons, became occupied by only one person. This was an increase of about 30 percent. The number of living units occupied by only two persons during this period increased by approximately 1,900,000, an increase of 22 percent. Again, in other words, approximately 2,700,000 living units became occupied by only one or two people instead of larger families. This under-occupancy trend was noted in all sizes and classes of living units. This wasteful use of housing space still continues. The housing is still there but it is not being used as it was originally intended. Existing buildings now contain fewer persons. I know it is hard to grasp the true import of this situation but it is true that our present-day widely accepted shortages are not shortages of housing space, but shortages of available rental space—particularly rental vacancies.

A special study of 34 metropolitan districts in 1947 showed that in every one of them the percentage of dwelling units that were rented, instead of owner-occupied, declined from the 1940 figures. In many of these districts the decline was tremendous. Time will not permit the quoting of percentages but they clearly show what is happening to the rental business under rent controls. They clearly show why the the plight of the renter is becoming increasingly desperate. There is a shortage of rental housing because rent controls are forcing it off the market.

Today's tenants live in buildings which were constructed from yesterday's profits. If there are no profits today, who will provide the buildings of tomorrow? Some say that public housing is the answer. I believe that public housing is not an incident or a trading point in our politics today. It is a touchstone by which we can judge a man's entire political philosophy. The person who sincerely believes in public housing and thinks that we must have a little of it to pacify certain segments of our population has to accept the implications. That man does not any longer believe in the American private-enterprise system. He is a Socialist at heart. Destruction of private enterprise and the ultimate victory of socialism always starts with public housing. We have but to refer to the history of France, England, Austria, and Russia to realize this.

The philosophy of rent control has been based upon the assumption that the amount of rent a tenant pays is his most important consideration in renting a home. It is my considered opinion that this is not so. From my own experience, I have learned that the tenant looks for four things: (1) His first consideration is a home for his family wherein there is security and safety. If he were allowed to occupy a castle free and he felt that his life or the lives of his family were in danger, he would not want to live there. (2) He looks for all of the comforts, conveniences, physical appearances, and atmosphere that he can find. (3) He seeks to establish his home wherever he can enjoy peace and freedom from annoyance, wherein he can live peaceably with the owner, other tenants and others in the same neighborhood. (4) He wants all of these things to the fullest extent that he can pay for them in order to satisfy his pride of living. Under rent control item 4 has been placed first, and it has in many cases made it impossible for him to satisfy the first three desires.

Rent control as it has been maintained has prevented the attainment of the tenant's goal. The longer controls are so maintained, the further the tenant will be from complete satisfaction. Aside from the fact that there were no rental units available the rent-control act has forced millions of families to purchase homes at too high a price in order to satisfy these fundamental living desires. These families, unfortunately many of them veterans, are experiencing a higher cost of living which offsets the apparent savings of the tenants in possession. Even those tenants in possession of the rent-controlled living units are beginning to realize through missing services and standards of living that their rental payments are not buying as much as they did before rent control. More and more tenants are finding out that the rental housing of 1941 and 1942 cannot be bought with 1948 dollars.

Earlier I made reference to one segment of our population who are in a state of emergency. These are the elderly people who have worked hard all of their lives at modest salaries, who have saved and deprived themselves of many wants and who have looked forward to being property owners. They were confident that by becoming a property owner they would escape the humiliation of becoming public charges when they were no longer able to work. The majority of these people have only the net income from one,

two, or three tenants to depend upon. These poor people are really in a state of emergency. Removal of rent control would restore their confidence in this country and permit them to pass on the same incentive to be industrious and thrifty to their children. These people have always been the backbone of any country; perhaps too few realize how many of these people there are in this country. According to statistics taken from the Federal income-tax returns 74.7 percent of all of the property owners of this country have net incomes of $5,000 or less. Approximately 80 percent of our rental units are in small buildings such as single dwellings, duplexes, or four-family structures.

It is only on a free market that we can learn how many rental units are actually needed to house our rental population in the manner in which it wishes to be housed. Today these desires and demands are all out of balance. The picture has become so distorted that it is impossible for the investor or builder of housing to know just how much housing is actually required and at what rental levels. If we based our construction of housing on the artificial demand of today, we would run the risk of creating the greatest property depression the country has ever known. The longer the elimination of rent controls is postponed, the greater will be the unbalance and confusion. For the history of what has happened in France by renewing rent control for just one more year for 33 consecutive times, I refer you to an article that appeared in the December 29 issue of the Wall Street Journal. People in that country just cannot understand why we cannot learn from their experiences. They know now that the longer removal of controls is put off, the harder it is to do it. One so-called emergency seems always to follow another while available rental housing keeps getting worse and worse.

In conclusion, may I briefly summarize the important reasons why I believe removal of rent controls as of February 28, 1948, will quickly result in the balancing of supply with demand and thereby provide sufficient rental housing family units for all of those who desire them. Property owners need tenants and desire all good tenants to remain. Fears of wholesale evictions are completely groundless. Structures in use today are not housing the number of tenants for which they were originally designed. The tenants, the property owners, OPA, and the Housing Expediter have all contributed to a less efficient use than could be made of the existing structures. The emergency for which the Rent Control Act was created no longer exists. Under the act as it now stands, one segment of our economy is paralyzed, thereby throwing our whole system further out of balance. It is time to establish ourselves on a new, normal peacetime pattern. Strictly speaking, there is not a housing shortage but rather a shortage of dwelling units which are available for rental. The returning veteran, instead of being aided by rent control, has been its principal victim. The housing picture is so distorted under rent control that an accurate picture of the real needs is impossible to obtain. Rehabilitation and modernization of present structures will materially reduce pressure for new housing. We are using up faster than many realize the housing that is now in use and confidence must be restored to the investor in order to stimulate building for the future.

If this is not the time to permit Federal rent controls to expire, then the time will never come. There is no single argument for continuing rent control that cannot be repeated next year and the next year, as France has done for 33 years. Give the property owners the right and the confidence to build a new America in the only way it can be built.

Water for Long Beach, Calif.

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. BRADLEY. Mr. Speaker, I place herewith a resolution adopted by the Board of Water Commissioners of the City of Long Beach, Calif., before the House for the consideration of its Members. It is to be noted that this resolution expresses the unqualified opposition of the Board of Water Commissioners of Long Beach, Calif., to Senate bill 1175—the central Arizona project—and its wholehearted support to Senate Joint Resolution 145.

Whereas the city of Long Beach has reached what is believed to be the safe maximum yield of its wells in the Coastal Plain and is now taking 40 percent of its water requirements from the Metropolitan Water District of Southern California, of which district said city is a member; and

Whereas the city of Long Beach has increased in population from 164,271 in 1940 to approximately 285,000 at the present time and is still expanding rapidly, requiring steadily increasing quantities of water from said water district; and

Whereas said Metropolitan water district holds filings upon 1,655 cubic feet per second of the flow of the Colorado River and has expended some $200,000,000 in the construction of an aqueduct to deliver said water into the metroplitan area of southern California; and

Whereas said water district has made these expenditures in reliance upon definite contracts with the Government of the United States; and

Whereas the Metropolitan water district and other southern California organizations have in effect underwritten the construction costs of Hoover Dam through firm contracts to purchase the power developed at said dam and to store water behind said dam; and

Whereas the central Arizona project (Senate bill 1175) is unsound, economically infeasible, and indefensible in that it cannot be constructed and supplied with water without serious encroachment upon the water rights of the Metropolitan water district and in that it proposes to saddle the power users with the major part of its costs, which means, inasmuch as the market for such power is in southern California, that if this pernicious bill is enacted into law, southern California will be required to finance Arizona's taking of water rightfully belonging to southern California; and

Whereas Senate Joint Resolution 145 provides for settling the controversy between California and Arizona before the Supreme Court of the United States: Now, therefore, be it

Resolved by the Board of Water Commissioners of the City of Long Beach, acting for and in behalf of said city, That said board hereby expresses its unqualified opposition to Senate bill 1175 (the central Arizona project) and its wholehearted support of Senate Joint Resolution 145, and urges the defeat of the former and the passage of the latter; be it further

Resolved, That the board of water commissioners hereby authorizes distribution of copies of this resolution whenever and wherever necessary in order to make known the board's position on this proposed legislation.

I hereby certify that the foregoing resolution was adopted by the Board of Water Commissioners of the city of Long Beach at its meeting of the 5th day of February 1948, by the following vote:

Ayes: Commissioners Johnson, Wall, Hilbert, Martin, and Wilson.

Noes: Commissioners, none.

Absent: Commissioners, none.

[SEAL] HELEN L. PENLAND,
Secretary of the Board of Water Commissioners.

Steel Export Situation

EXTENSION OF REMARKS
OF
HON. ALBERT J. ENGEL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. ENGEL of Michigan. Mr. Speaker, we hear a great deal about the steel situation these days, and rightly so.

I want to discuss briefly the steel export situation, with specific remarks on how these exports affect industries, small and large, in my district. I want to include the suggested solution of one small manufacturer in my district, since this suggestion makes complete sense to me.

This suggestion is that steel export controls be clamped on so rigidly that no permit be issued on any steel export item until the manufacturer can show that his steel firm is not more than 6 months behind in domestic shipments and no domestic orders be refused, providing the purchaser was a customer in good standing during the years 1938 to June 1942, when all production went on a wartime basis.

We hear a lot about steel export controls as they exist today. There has been some degree of improvement in recent months, it is true. But it also is evident large amounts of steel, badly needed by American industry, are still being shipped to foreign markets, perhaps because prices are higher in these markets. Whatever the reasons, these exports should be far more tightly and sensibly controlled, right now, in the interests of all the people of this country.

I was amazed to pick up a copy of Report No. 825 of the Senate Special Committee to Study Problems of American Small Business a few days ago and read the following from page 11 of that report, dated January 16, 1948:

In securing figures from the Bureau of the Census on steel exports for the year 1946 and the first three-quarters of 1947, the subcommittee found that total exports are on the rise in 1947 over 1946, at a rate which will be an increase of 2,000,000 tons of steel products this year. This also represents about a million and a half more tons of steel than exported in the prewar year of 1938, when there was no shortage of steel and exports were unrestricted.

Exports of steel-mill products are leaving the United States this year (1947) at the rate of 7,000,000 tons, or 11.1 percent of current production. At the half-year mark the figure was 6,500,000 tons, or 10.5 percent of what it was then estimated production would be. At the three-quarter mark production

of steel products is running at the yearly rate of 62,300,000 tons.

Exports of such critical products as sheet steel and steel pipe and tubing have doubled and trebled in 1946 and 1947 over shipments of those items in normal prewar years.

During its preliminary investigation, the steel subcommittee was especially interested in shipments of sheet steel and steel pipe and the countries to which these shipments were being made. Census figures indicate that our prime country of export on most steel products, and especially of sheet steel, is Canada. Next in volume are such countries as Argentina, Brazil, Mexico, and Sweden and other nations not involved in war-rehabilitation projects. Only one country in the devastated areas of Europe—France—has been a major participant in current export trade.

In the case of steel pipe, Brazil, Argentina, Mexico, Venezuela, Colombia, and Russia have been the chief recipients. In the case of Venezuela and Colombia, investigation has shown that American oil firms are developing new oil resources in those countries, which accounts for large shipments of pipe. In the case of Russia, however, it is difficult to determine any reason for the shipment of 65,000 tons of critically short steel pipe and tubing to that country in 1946, shipments which continued at the rate of 20,926 tons in the first quarter of 1947. This situation was brought to the attention of the Bureau of Export Controls, Office of International Trade, Department of Commerce, by the subcommittee in May 1947. Since that time it is noted that all shipments of steel products to Russia have been curtailed; steel-pipe shipments in particular were reduced to 1,056 tons by the third quarter of 1947. The subcommittee is heartily in accord with this move.

It so happens that the manufacturer whose suggestion is cited in the opening paragraph of these remarks is in the business of making irrigation systems, and thus pipe is the principal ingredient in his business.

Believe it or not, his firm is now making a sizable shipment, of special fittings only, to Barbados in the lower West Indies just off the coast of Venezuela, where they can get all the pipe they want. But the same firm cannot get pipe enough to ship 300 feet to a plant grower in Georgia to grow small plants for northern markets. The same old story: Plenty of United States pipe in South America but still an extremely critical shortage in the United States.

If the American steel companies want to capture a new market, let them first supply the market that lies at their door, which in turn will supply labor, taxes and productive materials for our own needs. A shipment of $1,000 worth of pipe to South America will add possibly $100 or less to the taxable income of the steel company. That same pipe in the business of the man who makes irrigation systems, for example, will add the same profit and in addition will add taxable income from the men who work for him, will add taxable income from his factory and will add taxable income from the growers who use his product.

A policy of rigid controls based on domestic shipments would not work any undue hardship on the steel industry. It would not curtail sales. An export permit would merely assure the little fellow that he was being taken care of to the best of the ability of the steel industry. It would not require that one company be compelled to fill the gap for the entire demand. It would only compel the various companies to take care of their old customers before exploiting brand new markets.

There will be no expansion of steel production as long as any sizable segment of that industry can force American users, even the smallest of them, to play second fiddle. If the South American market, or any other, is to be developed, let it be by new investment in new production capacity, and not out of the hides of America's small-business men.

This pipe situation is already bad—

Reports the irrigation manufacturer in my own district—

not alone for me but for everybody else, of course. It is, for example, one of the big factors in the housing crisis. I wish I knew the months of occupation of new homes that have been lost by lack of plumbing. In my own community, Muskegon, Mich., I have seen new homes plumbed with electric conduit, which will rust in a few years and have to be replaced. I have seen sinks and toilets and bathtubs hooked up with discarded boiler tubes and water connections made with rubber hose. I have been offered a dollar a foot for pipe that should sell for 12 cents. It is this shortage that makes the shortage for me.

Here is the point: As everybody knows, steel will be scarce for quite a while. The mills and other suppliers know full well that customer good will is something they will not have to reckon with too seriously for some time. In too many instances their present attitude reflects this, as any steel buyer will verify.

I am told there is ample legislative authority now for far more rigid control of steel exports. I hope the congressional committees concerned with this question, and all other Members of Congress as well, will press for licensing of steel exports on a basis where no permit will be granted until the producer in question can show that it is no more than 6 months behind in domestic shipments. A 6-month leeway on delivery of domestic orders would allow for planning by the mills. It would also allow for a more definite delivery schedule to small domestic consumers. If the mills cannot do that, they should not be allowed to export a pound of steel.

Luxemburg, Wis.: The Village of Friendly Folk

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. BYRNES of Wisconsin. Mr. Speaker, the backbone of America is the people in our small towns and villages. It is from this source that our finest leaders, our great ideals, and our cherished traditions have sprung. Typical of these small towns and villages is the thriving village of Luxemburg, Wis., located in my district in the heart of dairyland. As an example of the progressive and alert spirit that has made America great, I include as part of my remarks an open letter from the village of Luxemburg to the people of America:

WHY DO THEY STILL RING CHURCH BELLS ON SUNDAY?

An advance man for a circus once suggested to a small-town storekeeper that he take space on the circus posters to advertise his business.

"Why should I advertise?" countered the storekeeper. "Been here 20 years, everybody knows me." The circus man pointed to a church across the street. "How long has that been there?" he asked. "About a hundred years, I'd say." "And yet," exclaimed the circus man, "they still ring the church bell every Sunday."

Today we must be reminded more often than taught. You may have heard about Luxemburg but you would fail to appreciate the many advantages of this little community if we did not tell you more about it. The write-up on the edge of the enclosed letterhead and the reproductions on the reverse side should give you some idea of this fine little burg. However, a number of changes have taken place since this was printed. The recent installation of a modern waterworks plant and disposal system has created a great deal of added building activity, the laying out of several new plats of land into lots, opening of a number of new streets, etc., and it is evident that the entire village as well as the fine adjoining surrounding community has been stepped up just a bit as regards enthusiasm, and the desire to promote the growth of Luxemburg. However, no community can keep up that enthusiasm, or can attain any degree of such growth unless there is provided sufficient employment for its people and those in the outlying territory. With this thought in mind, that we may thereby interest some individual, or group of individuals to come to our town, we are sending out this brief publicity matter. Our thought is that we would be more interested in a number of small plants rather than too large a factory. While we do not have many vacant buildings, there are available some fine factory sites, especially suitable for small or medium-sized businesses. It would be useless to make any attempt here to go into details about this. To you who may be at all interested, we hope that through this publicity we can induce you to make a personal call, look over our town, contact some of the businessmen and meet some of those listed here at the bottom of this letter. Investigations through other sources would, of course, be most welcome to us.

Naturally, we might be prejudiced, but we feel that we have a mighty swell little community and that we can offer a number of advantages to anyone looking for a small factory location or a place to build a home. While we are a prosperous community, we could hardly be classed as a wealthy community. Our most treasured asset lies in the fact that there exists here a spirit of community cooperation that is seldom evidenced anywhere—the envy of many communities much larger than ours. It is in that spirit that we solicit a visit from you who may be interested in what we state here, with the hope that you may decide to locate here and share this with us.

In conclusion, we believe that the hospitality of Luxemburg village and the surrounding community can best be demonstrated by quoting in whole a welcome invitation contained in a booklet that was mailed out to publicize a local Legion Fourth of July celebration some years ago over the signature of its long-term chief executive:

"WELCOME

"On behalf of the citizens of the village of Luxemburg, it is my pleasure to extend to

you a most cordial welcome to be our guests during the Fourth of July festivities.

"Luxemburg is an inland village of happy homes and contented people, where the latchstring is always out and where friendship is deep and true. You will like us as we shall like you. Come then, laugh with us and play with us while we forget our troubles and pack them up in the kit bag of understanding and good will.

"And we are a patriotic people, too, for while we represent many nationalities and religious and political beliefs, we believe in the American way of life. Each for all and all for each. Not all of us may speak the same language with our lips, but we do with hearts—the language of American democracy, where the poor are as good as the rich and one race as good as another.

"Welcome then to Luxemburg, the village of friendly folk, whose hearts beat true to the red, white, and blue. God bless America."

As stated, while we should very much solicit a personal visit, however should you desire additional information we ask that you write to any of the undersigned, or any member of the village board, who we are sure will be pleased to answer your inquiry.

Cordially yours,

Charles L. Peters, Village President; Richard Seidl, Cashier, Bank of Luxemburg; Rev. J. Huhn, Pastor, St. Marys Congregation; George Gregor, Principal, High School; Dolores Sands, President, American Legion Auxiliary; Elroy Hoppe, Fair Secretary; Lawrence Rueckl, President, Luxemburg Milling Co.; Dr. E. J. DeWane, Dentist; Gordon Zemlika, High School Director; Clem Rass, Village Clerk; John Schwab, Jr., Town and Country Club; Rev. J. H. Nau, Lutheran Minister; Earl Peot, Commander, American Legion; John L. Miller, CRCOF; Austin Allard, Postmaster; Peter Colle, Zoning Committee; Dr. R. R. Jandrain, Physician; Ed Dalebroux, Manager, Farmers Trading Co.

LUXEMBURG, WIS.

Situated in Kewaunee County, population 500, on the Kewaunee, Green Bay & Western Railway. It is located in Wisconsin's richest dairy belt, 14 miles from Lake Michigan, ideal shipping facilities to the East.

Luxemburg is honored as having one of the finest bank buildings in the State, housing the Bank of Luxemburg, which is a community institution.

Luxemburg's population consists of a Belgian, Czech, and German mixture, which makes it a consistent and energetic populace.

Luxemburg has a modern street-lighting system, Kewaunee County fair grounds, a community newspaper, firemen's band, a 50-piece high-school band, two parochial schools, an excellent high school with a new and modern $40,000 gymnasium and auditorium, two churches, paved streets, and 5 miles of cement sidewalks. It also boasts of three large general stores, a grocery store, several variety stores, radio shop, two electric shops, two appliance stores, furniture store and undertaking establishment, drugstore, two hotels, two grain elevators, several hay dealers, four garages, a telephone exchange, three implement dealers, opera house, lumberyard, two barber shops, two beauty parlors, a modern art studio, two meat markets, a shoe store, real-estate dealers, jewelry store, harness store, two welding shops, a tool and lawn mower service station, a freezer plant, two fur farms, large cheese factory with a capacity or 45,000 pounds of milk daily, a planing mill and cheese-box factory, flour mill, a plumbing shop, bowling alleys, a number of well-regulated taverns and lunchrooms, beet-lbading station, large apple and cherry orchards, three bulk oil stations, six gasoline service stations, several livestock shippers, and in the near vicinity are the largest gravel pits in the State, a pulverized limestone plant. Two doctors, two dentists, and a veterinarian take care of human and animal ailments.

Luxemburg has an active service organization, the Town and Country Club, who are alert to the commercial and industrial needs of the community and take the lead in promoting clean and wholesome social activities for both young and old.

The village has a supervised municipal playground, public park, excellent police protection, a modern up-to-date post office, and an efficient volunteer fire department equipped with the latest fire-fighting apparatus, and serving both the local and surrounding territory.

The village has just completed the installation of a complete municipal waterworks and sewage-disposal plant, designed to add much to the convenience and comfort of home owners and others. Building lots are available at very reasonable prices and prospects are invited to establish themselves in this fine village.

The businessmen are wide awake, and will lend their cooperation to those wishing to invest capital or locate in this prosperous community. Dairying is the chief farming industry and is largely practiced, although the land is fertile and crops of all kinds grow in abundance.

Italy Next?

EXTENSION OF REMARKS

OF

HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. LeFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an article by Joseph and Stewart Alsop taken from today's New York Herald Tribune.

It seems to me that the world picture is beginning to take definite form. Heretofore, ever since VJ-day, our Government has been doing everything possible to appease the Soviet Government. Everyone has been confused. What has recently happened in Czechoslovakia and what is threatened in Finland begins to clear the pattern that Russia is following.

The following article informs us about what can take place in Italy. There are those who believe that the Scandinavian countries can likewise be taken over by the strategy directed from Moscow. By this strategy Stalin is accomplishing even more than Hitler did by force. Soon the powers that be will have to decide whether the United Nations is capable of satisfactorily adjusting our international disputes. Most certainly the United States will have to take a leading position in this decision.

Many of my constituents have expressed their opposition to universal military training. Again I repeat that few of us like a military program. We all have hoped and prayed that the United Nations would be effective. Another world war will be ruinous—but what is the answer? We may have a selective service draft program forced on us in the near future. Are we going to sit by and let communism spread or are we going to carry through our desire to free the downtrodden peoples of the world through democratic forms of government?

MATTER OF FACT

(By Joseph and Stewart Alsop)

ITALY NEXT?

What has just occurred in Czechoslovakia, and what is clearly in the process of occurring in Finland, may happen within the next few months in Italy. That is the stark fact of which the American policy makers are fully and agonizingly, aware. Serious as the Czech and Finnish events are, they do not greatly alter the balance of power between the Soviet sphere and the West. Yet if Italy enters the Soviet sphere, the United States and the whole western world will have suffered a disastrous defeat.

An Italian election is scheduled for April 19. Italian politics are volatile and unpredictable. Yet, as of now, it appears probable that the Communist-run Italian people's bloc, which has been gaining rapidly in recent weeks, may poll well over 40 percent of the total vote. If that happens, it will almost certainly be politically impossible for Premier Alcide de Gasperi or any other non-Communist leader to form a non-Communist government. That is why Italian Communist leader Palmiro Togliatti is now reported to be exuding a supreme confidence.

Field reversed by Reds

Togliatti's leadership of the Italian Communists and their stooges has recently thoroughly justified his reputation as the shrewdest Communist outside Moscow. All observers agreed last autumn that the Moscow-ordered campaign of violence had frightened and alienated a large proportion of the Italian electorate. But since then the Communists have neatly reversed their field. They have assumed again the disguise of true democrats and patriots. Moreover, Togliatti has finally persuaded his old friends in the Kremlin to join him in wooing the Italian voters.

Thus an Italian mission was sent to Albania shortly after the war, and was promptly jailed on orders from Moscow. Its members have now been released through the intervention of the Italian Communists, and relations with Albania resumed. Yugoslavia's Marshal Tito has been equally cooperative. Seventy-odd Italian fishing boats have been quite illegally seized in the Adriatic by the Yugoslavs (one Yugoslav gunboat even pursued an Italian fisherman with machine-gun fire, right into an Italian port). Recently a direct appeal from the Communist trade-union leader De Vittorio has elicited from the Yugoslav dictator the gracious promise that the Italian boats will be returned.

Such triumphs of Communist diplomacy have been widely advertised in the pro-Communist Italian press. There have been broad hints that they are no more than preliminary tidbits. If the Communists come to power, the grand prize, the return of the city of Trieste to Italy, will be forthcoming.

Moreover, the Soviets, after treating the Italians with open contempt since the end of the war, have suddenly begun to bid for Italian favor. Within the last few days they have announced that they are "still" in favor of Italian trusteeship for the former Italian colonies. And last Friday they stated that they were very much in favor of the return of Italy to the international Tangiers regime.

Such announcements have been published with much fanfare in the powerful pro-Communist Italian press (which is lavishly and

somewhat mysteriously supplied with paper). The fact that all the other Tangiers signatories, including Britain and France, had 3 months before signified their willingness to invite Italy back to Tangiers was studiously disregarded. So was the fact that the Soviets had previously tried to grab the Italian colonies for themselves. Instead, a riot in British-held Italian Somaliland, in which 52 Italians lost their lives, was held up as further proof of western imperialism, duplicity, and hatred of the Italian people.

Few cards to play

In this rather squalid game of bidding for the favor of Italian nationalists, the United States and the western nations have few cards to play. If the red tape in which the Maritime Commission is as usually firmly bound can be unraveled, some 15 Liberty ships will shortly be dispatched to Italy, as authorized by Congress. But against such minor gestures, the Soviets can still play their ace. They can renounce a portion of their Italian reparations.

Meanwhile, Togliatti's grip on Pietro Nenni, Italian Socialist leader, is as tight as Gottwald's grip on the traitorous Fierlinger; indeed, the Italian Communist Party is known to pay more than nine-tenths of the expenses of Nenni's Socialists. The other parties in the people's bloc, the Action Party, and the Republican Alliance, are in like case. With such tight organization, with apparently unlimited funds and with the miseries of postwar Italy working in their favor, it is now believed seriously possible that the Communists and their stooges will poll a vote sufficiently large to prevent the formation of any non-Communist government. Then the venal Nenni will be propelled into the premiership, and the reins of power will stretch back through the hands of Togliatti into the Kremlin.

If that happens—and it must be emphasized that it is regarded by those who should know as a wholly serious possibility—the whole western position in the Near and Middle East will be outflanked, and the power balance in Europe itself will be disastrously altered. The world will then be close to war.

Czechoslovakia

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 1, 1948

Mr. STEFAN. Mr. Speaker, this past Friday, over radio station WOL in Washington, at 8 o'clock in the morning, Mr. George E. Reedy, the popular commentator, discussed the fall of Czechoslovakia to the Communists. I quote:

The fall of Czechslovakia to the Communists has brought the United States to its greatest diplomatic crisis since the beginning of the late war. American officials are making no attempt to disguise their deep concern.

Of course, Czechoslovakia is only one of a long series of nations to fall to the Communists. It has been preceded by practically all of eastern Europe. Soviet domination of border countries has become the pattern of the postwar world.

But the fall of Czechoslovakia presents a different picture. The other nations had been under Russian domination in one form or another for several centuries.

Their nation, which grew out of the First World War, was patterned after our own. Its government was modeled on the lines of our Government, and its people had a passionate devotion to liberty. They have proved it over and over.

From a strategic standpoint, the capture of Czechoslovakia was important to the Communists. It advances the Russian sphere of influence to western Europe itself, and it brings to the Soviets an important industrial prize.

The Soviet Union has always lacked a pool of skilled workers. Czechoslovakia as an industrial nation has plenty. Before the war it was one of the most important manufacturing centers on the Continent.

There is little doubt that Russia will be able to make good use of this pool of workmen. The Germans proved that it could be done, and the Communists are fully as efficient as the Nazis. The Czechs will work—whether they want to or not.

All of these things considered, it is not surprising that the United States, Great Britain, and France have joined to denounce the Communist stroke. Their language is bitter and undiplomatic, but it is justified.

The three-power note calls the coup a "disguised dictatorship of a single party." It calls the crisis which was used to bring it about "artificially and deliberately instigated." No words are minced—or softened.

Such language, of course, does nothing but give the three nations a chance to blow off some steam. They are still faced with the problem of doing something to halt a further Soviet advance. Czechoslovakia must be written off the books.

Secretary of State Marshall has already asked Congress for more aid to Greece—the only non-Communist country adjoining the Soviet sphere. He wants $275,000,000 to strengthen the Greek Government.

But the real fear is that the Communists have designs on France and Italy. Those are the two vulnerable points in western Europe. The Communists know they cannot take them except by force from the outside.

A strike at either by Soviet forces would put this country directly on the spot. We would either have to fight or get out of Europe altogether. Neither alternative would be a happy one. Either alternative could be disastrous.

The true significance of the fall of Czechoslovakia is this: There are now no more buffers in the world. From here on out international diplomacy is played for keeps. Any further Soviet expansion means we must put up—or shut up.

Mr. Speaker, and so ends the commentary last Friday morning of Mr. George E. Reedy.

Much of what Mr. Reedy said about Czechoslovakia and her current situation I am sure most of us will agree with.

However, I wish to most earnestly correct Mr. Reedy's remark that "Czechoslovakia must be written off the books."

Mr. Reedy and the world must never forget that Czechoslovakia is a young republic, younger even than our own United States. And youth has vitality, strength, and courage. Nor must the world forget that the people of Czechoslovakia cherish in their hearts a deep love of liberty as passionate and sincere as is our own.

It is true that a Russian rider sits in the Czech saddle. But if I know those people, and I think I do, the spirit of democracy will not die as long as one Czech lives.

It is also my belief that the Russian rider will find that he sits astride a strong-willed and bucking mount.

Radio Address to My Constituents

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 1, 1948

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over Station WNBF on February 28, 1948.

Dear friends of the Triple Cities and my congressional district, first I want to acknowledge the telegrams representing hundreds of post-office employees, clerks, railway-mail men, letter carriers, and custodians, which were sent me this week.

You boys are asking for a raise from $800 to $1,000, and I think you ought to have it. You're the only ones on the Federal pay roll who have been left out in the cold. Whatever the committee decides to do for the rest, the postal workers ought to be given the limit.

I want you to know that I complied with your request to plead your case before the Rees committee. The chairman very courteously received me and gave to me the opportunity of stating your wishes in the matter.

A message from Mr. Howard J. McNamara, chairman of the Broome County Red Cross Chapter, reminds us that the National Red Cross campaign begins March 1. He says that the quota for Broome this year is $147,000, more than 45 percent higher than for 1947.

It is scarcely necessary to point out the necessity of public support for the Red Cross. The record of this great organization is written on the hearts of Americans the country over. Let us hope the response will more than take care of the increased requisition.

George Washington had a lot to contend with fighting the enemies of the people of that day, just as your own Congressman struggles against the intolerance and sham thrown up to barricade his efforts. The House recently observed another Washington's Birthday and, impressed with the significance of such an occasion, I made the following speech before Congress:

"Mr. Speaker, whenever, on these annual occasions, Washington's Farewell Address is read, I never fail to get a new angle. I am always impressed by some different phase of this immortal message.

"I suppose the Nation would be better off today if our leaders and statesmen down through the years had taken Washington's advice more to heart. A lot of decisions made since might have been changed for the wiser, if his parting, fatherly words had been contemplated oftener.

"The public knows George Washington as the Father of His County. He is looked upon as the foremost military man of his generation. He won the War of American Independence and, as our greatest Revolutionary hero, was the logical man to become our first President.

"Washington's record as head of the new America was unimpeachable. Under his administration the country emerged as a strong Nation, young as she was.

"While all of us know Washington for his amazing public accomplishments, few realize that he was as hard working in private affairs. No matter how great the cares of his military or executive office, he always seemed to find the time to develop his farm lands in Virginia.

"History tells us he was an authority on agriculture. He burned the midnight oil studying about ways to improve the soil and develop new programs of fertility and farm development.

"George Washington knew more about farming than some of the so-called experts down in the Department of Agriculture. If he came back today, he could probably teach a lot of the specialists things they never heard of about the soil.

"Each Member of Congress has in his office a set of volumes containing Washington's letters. If you peruse them you will find how versatile this great man was and what a wealth of knowledge he possessed.

"So, in addition, Washington can be looked upon as first in war, first in peace, and first in the hearts of American farmers."

Sale of American Merchant Ships

EXTENSION OF REMARKS
OF

HON. WILLIS W. BRADLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. BRADLEY. Mr. Speaker, it is gratifying, indeed, to note that the Congress has seen fit to stop all sales of American war-built merchant ships to foreign nations or to foreign individuals as of February 29, 1948. This, of course, is only the first step in the struggle to prevent the sale or transfer of a large number of such American merchant ships in connection with the forthcoming European-recovery plan legislation.

As an indication of the widespread support which the complete stoppage of foreign ship sales has behind it, I take pleasure in publishing herewith a letter from the secretary of the California State Federation of Labor of February 6, 1948. I invite attention to this clear presentation of the reasons why additional ships should not be sold foreign:

CALIFORNIA STATE
FEDERATION OF LABOR,
San Francisco, February 6, 1948.

Hon. WILLIS W. BRADLEY,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN BRADLEY: This will acknowledge and thank you for the copy of your letter to Mr. Bassett regarding our opposition to that portion of the Marshall plan which proposes to sell and/or charter 500 American merchant ships to European nations.

The basis for our action rests on the following conclusions:

First of all, it is important that our country maintain a strong merchant marine for foreign and domestic commerce and to support our national economy. On at least two occasions in our Nation's history, we have passed through critical situations due to the lack of the necessary ships and trained personnel to support our national defense. The reduction in our merchant marine is an obvious danger to the adequate defense of this country.

Moreover, it is recognized that competition exists between the various fleets of the world for the transportation of international cargoes, and that to the extent that one fleet is successful, another one is deprived. To overtonnage the fleets of our foreign competitors from our surplus war-built fleet, at a low price with the resulting low capital costs, would deprive American ships of a proper competitive position in international trade. With the low wages and living standards aboard foreign ships, and further aided by low capital costs, our foreign competitors would have an advantage sufficient to more than offset the low speed and relative inefficiencies of certain of our surplus war-built vessels.

Investigation discloses that on an over-all basis the 1939 fleets of foreign nations, other than those of our enemies, have been restored up to or more than their prewar strength on a tonnage basis alone. That does not take into account the increased lifting capacity of the higher speed and more modern vessels which have been built or acquired. Certainly there can be no obligation to build up our foreign competitors beyond their 1939 status, and it is not in the interest of our merchant marine or in the public interest to do so.

There are many other arguments that can be advanced proving the need of opposing this proposed transfer of American ships to foreign registry.

We are very appreciative of the effective presentation of this position which you made on the floor of the House, and we wish to congratulate you for taking this position.

You are free to insert in the RECORD any of the opinions expressed above.

Sincerely yours,

C. J. HAGGERTY,
Secretary.

Germany and Christianity

EXTENSION OF REMARKS
OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. SADOWSKI. Mr. Speaker, now when so many Members of Congress are being driven by fear and fear propagandists and are about to make decisions on foreign policy which may have an adverse effect upon our Nation and our relations with the nations of the world, it is good to see once in awhile a ray of sunshine break through these dark and disturbing clouds.

Yesterday I received a letter from E. M. Poe, GI student at the University of Michigan. He tells of a lecture delivered by Dr. Ferenac Kiss at the church auditorium. Dr. Kiss is head of the Free Church—Protestant—movement in Hungary, and was teaching anatomy at the University of Budapest. He was released by the Russians and is the only member of his faculty that was not shot by the Germans, or is not in jail. He has been in the United States for 3 months and is making a tour of this country and Canada under the auspices of the Inter-Varsity Christian Fellowship. He has so far given 100 lectures.

Dr. Kiss is not only a scientist, but he is also a great Christian leader. He is not one that believes that science or new knowledge should supersede Christianity or the teachings of Christ. Although he has written an anatomy text, atlases, and 40 or 50 scientific papers, he has not forsaken the greater teachings of religion.

Dr. Kiss stated:

The problem of Russia is only secondary. It is the European organism that is primary. We used to teach that germs cause diseases Now we teach that if the organism is weak, it will be subject to attacks of various kinds. The real cause of Europe's present plight is the lack of positive Christianity and social reform, which alone could have prevented World War II.

Russia broke from Christianity, but we must remember that the aristocracy of Europe and their close imitators, the middle classes, also decided that—

Religion was only an opiate for the masses. The top class must set an example for the masses. They have the power, the government, and the lives of the people are in their hands. Along with this power there is a great responsibility. A moral one. If the rulers become corrupt they are like a sore on an arm. Some day the whole skin underneath will slough off that dead, corrupt, and useless old tissue. While still alive and performing its function as skin and protecting flesh beneath, it will continue to be fed by the body. When it forgets its duties it dies and will be pushed off.

Germany became the leading scientific country and decided that science was greater than God. They pushed God out and substituted lectures on science for sermons on morality. They taught nothing but science in school and put all faith in armies and the military.

After World War I some tried to urge Germany back to God but the learned professors only laughed and said, "The real trouble was not lack of God, but that they had started the war too soon before science was sufficiently well developed."

So they redoubled their scientific efforts and they knew far more than the United States about a lot of things. So they tried again. Again it was the Christian countries than won the war. Then these non-Christian German scientists were called before the courts at Nuremberg. At the trials they said, "We are not responsible. We had to obey Hitler's orders. It was all his fault."

We said, "You are of the intelligent class. You are the men of learning, of science. You are the leaders." Yes; they were men of pure science who had forgotten God, and they could not succeed.

We need science and we should learn all we can, but we must remember that we are responsible for our inventions and machines, to see that they work for the good of the people and that science does not desert the teachings of God.

In England the Government leaders admit that it was not their armies that held the Empire intact. It was their preachers, hymns, and Christian literature that gave courage to the people and held them together. Likewise in Poland, when all hope was gone, it was the faith and belief in God that held them together. Today the churches are filled and Christianity is stronger than ever in Poland. Without bulldozers, mammoth tractors and trucks, thousands of people are picking up rubble, brick by brick, stone by stone, with their bare hands and loading them on wheelbarrows and horse carts. Every visitor and correspondent who visits Warsaw and other Polish cities is amazed at the Polish people when they witness their desire to live and excavate themselves from the ruins. Poland is a great Christian nation. It is not a nation of science and

scientists. But the people possess a far greater asset. It is hope and faith in God. Yes, Germany had great scientists. But no man must set himself on a plane higher than God.

A true Christian is not a fearful man. Today in Congress I believe we are being driven by fear and told to believe in the protection of science and the military. This road will not lead us to peace, friendship, and security. We must not allow German scientists or atheistic leadership to sway us.

We have recently appropriated substantial sums for the Voice of America. How much time is being devoted to bring a Christian message from us to the people of Europe? Dr. Kiss, as a scientist and a Christian leader, has a real message to deliver to the people of Europe—yes; the people that he knows so well and the conditions under which they have lived for centuries. Why not invite Dr. Kiss and other religious leaders like Monsignor Sheen to deliver a Christian message to the people of Europe? Of course, this would mean that our foreign policy would have to be changed in accordance with the Christian message that these men would send. It would mean giving help, aid, and assistance on a Christian basis.

We must send a spiritual message to Europe before we send our dollars. Otherwise, our dollars will do no good. In the Middle Ages the body of Europe died and remained dead until the Renaissance came and picked up the people's spirit. This we did not get after World War I, nor have we so far developed anything after World War II. The people are in a vacuum. They are lost in the jungle. Go to the left or go to the right. No other choice. They want to take a Christian Democratic road that goes down the middle. Perhaps our great Christian teachers will provide the leadership. I have hope, I have faith, that neither the right nor left shall prevail, because both roads lead to destruction. The world does not want leadership from militarists, monopolists, royalists, or dictators.

Real Christian leadership has a golden opportunity, and it must be kind, charitable, understanding, and not permit itself to be used by any powerful group or interests.

European-recovery money should not be wasted on arms and armaments. It should go for reconstruction, education, food, medicines, to restore farms and factories and—yes—even a few dollars to restore churches and religious institutions.

MacArthur: The Man of the Hour

EXTENSION OF REMARKS
OF
HON. MAX SCHWABE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. SCHWABE of Missouri. Mr. Speaker, the recent statesmanlike utterance by Gen. Douglas MacArthur is refreshing in that it offers new hope to millions of our people who are weary of being exploited by politicians.

MacArthur asserted:

The Republican Party is peculiarly well fitted * * * to further arouse in the youthful mind the all-important concept of public responsibility, for the Republican Party has never deviated from the proposition that all political power resides in the people.

It has never failed in its staunch advocacy for the maximum of personal freedom and individual responsibility, and has tenaciously held as a principle inviolate equality of opportunity.

Undoubtedly the above words quoted from a statement by General MacArthur to the Republican National Committee endorsing a drive to establish Young Republican Clubs on the Nation's 1,730 college campuses has prompted today's double-column front-page editorial in the New York Journal American entitled "The Man of the Hour," as follows:

THE MAN OF THE HOUR

More than at any time since Abraham Lincoln was summoned to the White House to save the Republic, these United States need a statesman and not a politician at the head of the National Government.

None of the avowed candidates for the Presidency meets the public need.

And the responsibilities that lie upon us are too grave and too consequential to be committed into feeble or uncertain hands.

Misled by vainglorious ambitions and false alien ideologies, we have departed dangerously from the sound traditions and the equally sound practices of our successful past.

We have become a debt-ridden commonwealth, with a debased currency, drifting like a rudderless bark in the shoals of inflation toward shipwreck on the rocks of depression.

The seeds of class hatred and class conflict have been sown in our soil and are bearing poisonous fruit.

The tribunals of justice have been debaunched; arbitrary administrative edicts are taking the place of just laws justly enforced; and a vast bureaucracy is being erected over us to devour our substance.

Taxation has been made an instrument of pillage and persecution, so that the accumulation of generative and productive wealth is diminishing; the fountains of philanthropy are vanishing; the creative energies of our people are faltering; and the dependencies of the dole are being substituted for the virtues of self-reliance and self-respect.

Beyond our shores, our so-called diplomacy has been carried on in a disgraceful medley of secrecy and deception and usurped authority, until no man knows what our foreign policies are—or what they portend.

And meanwhile, in a world where the embers of unextinguished war still smolder and there is no peace anywhere, our defenses are permitted to decline and decay.

A free republic that is so beset with manifold errors and evils cannot—in Lincoln's historic phrase—"long endure."

The times are indeed critical, calling for saving leadership—and America would be indeed bankrupt if the leadership were lacking.

But fortunately for us and for posterity, the leadership awaits—the kind of virile leadership that democracy requires.

Above any man of his generation, Gen. Douglas MacArthur has demonstrated in many capacities his superlative qualities.

He has the statesman's touch along with the patriot's consecration, and he has the inspired and selfless "gift of command" which extreme exigencies always require.

In every call to duty that has been made upon him he has always responded—and he has never failed.

No difficulty, however great, has ever daunted him.

Knowing that we cannot believe that General MacArthur would fail his beloved country now.

We need him.

We need his experience and his judgment and his superb executive ability at Washington.

If we are to save ourselves from our own follies, we must draft General MacArthur for the Presidency.

For beyond any rivalry and any partisanship and any questioning, Douglas MacArthur is America's man of the hour.

Federal Council of Churches' Advocacy of Marshall Plan Questioned

EXTENSION OF REMARKS
OF
HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. BUFFETT. Mr. Speaker, several weeks ago I received a letter from Charles Taft, president of the Federal Council of Churches. Mr. Taft's letter set out that the executive committee of the Federal Council of Churches of Christ in America was whole-heartedly supporting the Marshall plan.

Mr. Taft's message to Members of Congress was inserted in the CONGRESSIONAL RECORD and so it appears some reply might likewise be made public.

Mr. Speaker, years ago I was saddened as I studied the record of how Hitler slyly prostituted church institutions in Germany for his evil purposes—although ultimately the strongest opposition to Hitler from within came from courageous churchmen.

Probably no greater tragedy could ever befall American Christianity than that its power and influence be, in any part, unwittingly used to promote the goals of militarism and power politics. I hope that in advocating the Marshall plan the federal council is not making that kind of error, but, as my letter to Mr. Taft indicates, I have real anxiety on this score.

The letter follows:

FEBRUARY 28, 1948.

Mr. CHARLES P. TAFT,
President, the Federal Council of the Churches of Christ in America,
New York, N. Y.

DEAR MR. TAFT: This will acknowledge your letter of January 28, advising me that the executive committee of the Federal Council of Churches of Christ in America is wholeheartedly supporting the European recovery program.

Because of my deep respect for the religious leaders of this country of all faiths, I am interested in learning the procedure whereby the council's executive committee arrived at this conclusion.

Accordingly, I will appreciate being advised as to what expert testimony from witnesses favoring this program was received by the committee, and also the witnesses the council heard giving the arguments against this scheme.

Also, I note the federal council believes that this Government "must be zealously on guard against imposing, or appearing to impose, conditions in the granting of foreign aid which would seem to threaten the political independence of the nations of Europe or their right to choose their own way of life."

1. Is it the belief of the federal council that this plan is devoid of provisions designed to influence the political, economic, and military behavior of the governments receiving the subsidies involved in this scheme?

2. The Senate Armed Services Committee has recently been told by the Joint Chiefs of Staff that the extended American position in Europe required by the European recovery program makes necessary a doubled annual military budget. Did the federal council have knowledge of this military expansion aspect of this scheme, and am I to understand that the federal council favors the growing military dominance of American life promoted by this plan?

3. What evidence does the federal council have that the European relief program will be more successful than the Bretton Woods agreements, which were supposed to accomplish the same objective?

4. The House committee report on Bretton Woods, advocating that legislation, carried this paragraph:

"On the other hand, if some countries should find it difficult to secure through private investment the minimum capital needed from abroad, they will be tempted to seek this capital in other ways. Foreign loans may be arranged on a political rather than an economic basis. Such a policy would be most unfortunate, for it could only means a resumption of the use of power politics in international economic relations."

From the foregoing it would seem that the European recovery program initiates the power politics which the Bretton Woods agreements were designed to prevent.

Did the executive committee of the federal council consider this aspect of the European recovery program? If so, is the federal council now an advocate of "power politics"?

5. Does the Federal Council of Churches believe that the Anglo-American decision to build a western European military alliance is an action for which the churches of America should be the advocate?

6. Does the executive committee of the federal council know of any country in which the peacetime economic regimentation (rationing and price control) demanded by the advocates of the Marshall plan has existed side by side with religious freedom?

7. Has your executive committee analyzed to what extent this program will accelerate the deterioration of the American dollar? If so, what conclusions were reached by the committee?

8. Does the federal council believe that the motives and objectives behind this program have been forthrightly and fairly laid before the people? Or that the American people have had a fair presentation of both sides of this controversial issue in the press and on the radio?

If so, how would the committee account for the fact recently established by Congressman MAX SCHWABE that the radio networks have given about 10 hours of radio time to the promoters of this program to every single hour granted to the opponents of the program?

I am not writing this letter simply because I believe the European recovery program will be as futile and disastrous as the British loan was for both the recipients and for ourselves. Instead, I write it because I have the conviction that only by brilliant spiritual leadership will we be able to save our country from the materialism and imperialism that have ruined former civilizations.

I am concerned lest the federal council make the same mistake that many top intellectuals made in Germany when totalitarian government was on the march in that land.

In November 1933, the following Associated Press dispatch came from Leipzig, Germany:

"In picturesque Leipzig University German professors, in an Armistice Day meeting, appealed to the intelligentsia of the world today for a better understanding of Germany.

"It was their way of urging popular support for the Nazi government in tomorrow's elections. The appeal followed along broad lines one released during the war when professors and scientists appealed for a better understanding of the German Nation.

"German professors, today's appeal said, placed themselves in the front ranks of field leaders and fighters in behalf of 'German's honor, justice, and for world peace'."

It is plain now that these men of great intellect were being used as pawns by adventurers in ruthless power politics. It would be an irreparable disaster to Christianity if the federal council, possessing the power to speak for millions of Christians, now makes a series of similar blunders in this country, wouldn't it?

Sincerely yours.

What Is Our Policy?

EXTENSION OF REMARKS
OF
HON. PRESTON E. PEDEN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 1, 1948

Mr. PEDEN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herein an editorial from the Sunday Star, Washington, D. C., February 29, 1948:

WHAT IS OUR POLICY?

On Tuesday of last week our representative in the United Nations said that this Government was prepared to enter into consultations looking toward the sending to Palestine of a UN force, presumably including both American and Russian troops, to maintain peace. Two days later Secretary of State Marshall asked Congress to appropriate $275,000,000—this in addition to the $400,000,000 already provided—for Greece and Turkey. The additional money is to be used to provide military assistance to the Governments of Greece and Turkey in an effort to keep those countries from being overrun by the Russians and their Communist stooges in the satellite nations.

If this can be called a national policy, what kind of policy is it?

The Star has supported the policy of assisting Greece and Turkey. And it continues to support that policy in the belief that our vital national interests and our national security would be gravely threatened if those strategically placed countries should be taken over by the aggressive Communist fifth columns, aided by outside forces.

When one looks at a map, however, the logic, if any, of spending $675,000,000 to keep the Communists out of Greece and Turkey, while pursuing at the same time a policy which would bring the Russian Army into Palestine, is utterly incomprehensible to the lay mind. For once the Russians are in Palestine, they have outflanked Greece and Turkey. And once those countries are outflanked by the Red Army they are done for.

Surely, this seemingly contradictory policy ought to be explained, if any explanation is possible. But no one in an official position has offered a word of explanation. On the face of the matter, the American people, at considerable expense, are being asked to march up the hill in Greece and Turkey and to march down again in Palestine. It is doubtful that they will be willing to accede for long to any such request. To the layman it does not make sense, and a policy which, on its face, does not make sense is going to be hard to sell to the people of this country.

In the letter accompanying the request for additional funds, General Marshall said that the Communists, in their ambition to dominate Greece and Turkey, are convinced that time will play into their hands. To this might be added the thought that the Communists may be convinced that not only time but also American policy will play into their hands.

The Racial Issue

EXTENSION OF REMARKS
OF
HON. JAMES DOMENGEAUX
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 1, 1948

Mr. DOMENGEAUX. Mr. Speaker, the March 1948 issue of U. S. Public Opinion, published here in Washington, contains an interesting and instructive article on the racial issue entitled "Race Issue Looms Bigger Than Ever in Politics." I believe this article is worthy of careful study and consideration, particularly by those who would seek to make politics out of a problem which the South best understands.

U. S. Public Opinion, a new publication, treats national and world issues in a very entertaining and original manner. It has attracted considerable interest, and I believe its success is assured. The editor and publisher is Mr. John T. Parkerson, a native of the Third Louisiana District I represent in Congress. Mr. Parkerson has had wide experience in reporting, analyzing, and interpreting public opinion. He served as war correspondent for the Associated Press in both World War I and II, and represented the Hearst newspapers at the Paris Peace Conference at the close of the first world conflict. He remained in Paris to become business manager of the Paris edition of the New York Herald, and upon his return to the United States was one of the founders of Trans-Radio Press Service. For the past several years he has served as commercial manager of Press Wireless, in which a number of the Nation's largest newspapers are interested.

Mr. Parkerson understands the South and the fight the Southern States are making to preserve long-established ideals and principles. He knows that the South has often been misunderstood and has also often been the victim of prejudice and of attempts by outside influence to destroy barriers that are necessary for the mutual welfare of the white and colored races. He understands the motives and purposes back of these attempts. For these reasons the following article under his editorship is of special interest, particularly to all southerners:

RACE ISSUE LOOMS BIGGER THAN EVER IN POLITICS—IS SOCIAL BAIT HELD OUT FOR NEGRO VOTE?

With a national election only a few months away, and all parties vying for the votes of the huge Negro population, particularly in

cities of pivotal States, the race question has suddenly sprung into a prominence never before equaled in the history of the country.

"End of racial bars demanded by President's Committee on Civil Rights," says one glaring headline.

The Nation's Capital is held up as "a graphic illustration of a failure of democracy," and the manner in which the Negro population of Washington is treated is denounced by the committee as intolerable and shameful.

The United States Army tells our troops throughout the world that three-fourths of the people of the earth are what we call "colored" and warns that racial and religious prejudice endanger democracy and peace.

HENRY WALLACE'S PARTY

Out in Chicago, where Henry Wallace was acclaimed by his Gideon's army of extreme left-wingers, someone called for Paul Robeson, the Negro singer, "for Vice President," and the crowd roared, "We want Robeson."

The Supreme Court ruling that "equal educational facilities" must be made available for Negroes in all State institutions of learning creates a problem in the South. At the same time, when the question of restrictive covenants aimed at Negroes and other minorities comes before them, three of the Justices of the Supreme Court disqualify themselves from acting in the case.

"Antisouthern legislation," sponsored by President Truman and his Committee on Civil Rights, constitutes "a greater menace to the Nation than the international clash between democracy and communism," declares Gov. Fielding L. Wright, of Mississippi, who urges southern Democrats to secede from the national party unless this situation is corrected. "Such legislation," adds the Governor, "violates the very experience of man, namely, that the problems of human relationships are so varied and diverse that we can never begin to solve all of them by laws."

An ultimatum of the southern Governors, castigating President Truman for his civil rights message and calling on the National Democratic Party to reverse its stand with the President, or face a threat of secession by the traditionally solid South, is the big political story of the day.

DEMOCRATS ON SPOT

It is no secret that a revolt within the Democratic Party has been brewing for some time, and the suggestion has even been made that the Southern States unite upon a candidate like Senator HARRY F. BYRD, of Virginia, and vote for their Presidential electors to support him in the electoral college. Such action would, of course, insure the election this year of a Republican President, which many Southern Democrats openly admit they would prefer to continuation of the Truman policy and his support of what they term "the infamous proposals" of his civil liberties committee.

Southern whites, who claim to know something about the subject, because they say they have had to live with most of the Negroes, contend that the sudden interest in the Negro's social status stems chiefly from political considerations. Perhaps the answer was given in an article which appeared in Liberty magazine in December, 1945, by Sam H. Jones and James Aswell, of Louisiana, who estimated that 5,000,000 Negroes had quit the South and headed north between 1940 and 1945. More have left since.

WHY THEY'VE MOVED AWAY

The reason for this vast exodus—mechanical cotton pickers, flame cultivators, etc. One farmer who formerly employed 1,000 workers now has 250. Under primitive methods, two Negroes and two mules per 20 acres of sugarcane. Today, with tractors, mechanical cane cutters, and loaders, one man can handle 100 acres.

"The war which ended in '65 did not free the Negro," said Messrs. Jones and Aswell. "Instead, it enslaved both the white people and the Negroes of the South. But now, ahead, both races see the first crack in their chains."

WILL NEGROES BENEFIT?

With the steadily increasing population of Negroes in New York, Chicago, and other large cities, "politics has taken direction of the race question." Where will it lead? Will the Negro be better off?

Nearly half a century ago a magazine entitled "White America" appeared on the news stand in Los Angeles, Calif.—a magazine, which it proclaimed, was "devoted to the race question." What it said at that time on the question of social equality between the races is interesting to quote now. Here is an excerpt:

SAYS IT'S FALSE HOPE

"Even though this euphemistic dream could be realized, it would be done at a sacrifice of all moral compunctions and * * * at such a cost * * * that society would be wrecked and stung to its death. There can be no peace as long as simpering idiots who pose as philanthropists advocate a social harmony which they do not practice. * * * No white-skinned declaimer of amalgamation seeks marital alliance with the Negro hero whose cause he champions. It is criminal to inspire a hope or an ambition in the Negro in which disappointment gives birth to ranking bitterness. * * * The inequalities of birth, and blood, and tastes, and instincts, and the natural antipathies and incompatibilities had their origin in divine economy, and the man who does not see it is a fool; and the man who sees it and then lures the Negro to his certain doom by such an ignis fatuus is a knave of the deepest dye."

What do you think?

Weak Electoral System

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix to the RECORD, I wish to submit the following newspaper article from the Washington Post, Washington, D. C., of date February 29, 1948, as follows:

WEAK ELECTORAL SYSTEM

We suspect that Mr. Average Citizen is likely to regard Governor Tuck's request that the Virginia Legislature vote President Truman's name off the ballot as an unconstitutional device for defeating the will of the people. The pathetic fact is that it is not only constitutional but also seems to be fully in accord with what the founding fathers intended. The people have so long exercised the right of electing the President and Vice President that they forget the Constitution accords them no such privilege.

Any skepticism on the subject can be readily dissipated by turning to article II, section 1, of the Constitution. "Each State," it reads, "shall appoint, in such manner as the legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress."

Those electors choose the President and Vice President. The practice of pledging the electors to individual party candidates, so that the electors become mere recorders of the will of the people, has grown up by usage. Virginia is thus free to elect uninstructed electors, or even to have them appointed by the legislature or the Governor, without the slightest deference to the national conventions where Republican and Democratic candidates for President will be chosen.

There seems to be little question as to enactment of the Tuck proposal at Richmond, and similar bills are likely to emerge in other State capitals. Indeed, a number of States do not now permit the names of Presidential and Vice Presidential candidates to be printed on the ballots. The voters in those States vote for electors only, and if those electors are not committed to candidates named in advance, the will of the majority may be defeated. The critical weakness of our electoral system is thus strikingly illustrated.

For years the Washington Post has been urging Congress to throw safeguards around this Achilles' heel in our representative government by constitutional amendment. We are confident that the people would vote overwhelmingly for confirmation in the basic law of the right they have been exercising to elect their own President. What is needed, in our opinion, is a new constitutional provision that would divide the electoral votes of each State among the candidates in the same proportion as the ballots actually cast are divided. That would preserve the present relative influence of each State in the choice of the President while at the same time eliminating opportunities for finagling. Incidentally, it would recover for the South much of the influence and prestige it now loses by having its electoral votes automatically counted in the Democratic column. For minority protest votes would then count against the most favored candidate to the extent of their actual number.

Of course, nothing can be done in time to affect the 1948 election. But Congress can and should set up a commission of experts to work out a foolproof electoral system. If the revolt in the South inspires action in this direction, it will have at least one constructive result.

What Is Our Foreign Policy—Why Are We Rebuilding Germany?

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following speech that I will make over radio station WWJ in Detroit, Mich., on Monday, March 1, as follows:

What is our foreign policy? Why are we rebuilding Germany? Why does everyone talk of war instead of peace? These are questions that are being asked most frequently by my constituents. People are deeply disturbed and rightly so, and I believe that every Congressman should speak up frankly and honestly. I do not like our foreign policy and I believe that it leads to war.

I voted against the Greek-Turkish loan and I shall vote against the Marshall plan.

I have repeatedly expressed my opposition to the rebuilding of a strong and militaristic Germany. I believe that money for European recovery should go first to those countries that suffered the most in this war at the hands of the Nazis. The present policy divides Europe into east and west blocs, giving the western bloc forty billions of our dollars, as against one and one-half billions for the countries of eastern and central Eu-

rope, which countries lost over 35,000,000 people killed, and suffered twice as much destruction to their cities and villages and to their factories and farms. Most people are amazed to hear this and ask, Who is responsible?

I blame it on the present bipartisan government, which is the result of the 1946 elections, wherein the people gave a Republican Congress to a Democratic President.

The Republicans brought in Herbert Hoover and John Foster Dulles as their leaders and spokesmen. Hoover and Dulles brought in Dillon, Read & Co., international bankers, and all of their cartellists and monopolist friends, and poor old General Marshall, who is a good and sincere man, is being shunted aside and the program is becoming a part of a plan to revive Germany as the great industrial center of a European military bloc, that will restore back into power the European monopolists, cartellists, royalists, and landed aristocracy. That's why the Republican Herter plan calls for the removal of the program from General Marshall and the State Department. It is to be administered by someone approved by this Republican Congress. General Marshall will be used until Congress appropriates the money so that the big boys can get their hands on it.

Never have the American people been so high-pressured by such a tremendous propaganda campaign as they are at this time to pour out their billions in tax dollars.

A scare psychology. This is "aid to stop communism." Anything to bribe us into this deal.

To make factories run, you must have energy. Europe's source of energy is coal. The two greatest suppliers of coal for Europe are the United States of America and Poland. The Ruhr should be No. 1 source of supply. But Ruhr coal is being hoarded for Germany, only about 5,000,000 tons of this coal was made available for other nations. Poland exported about 30,000,000 tons. Seventy-five percent of Polish export coal went to western European nations, such as Austria, eastern Germany, Italy, France, Sweden, Norway, Denmark, Belgium, Holland, England, Czechoslovakia. Poland's request for $60,000,000 to modernize her coal-mining equipment has not been acted upon. Why? Are the proponents sincere in their desire to rebuild Europe, or are they just interested in rebuilding Germany?

Is it not their purpose to withhold recovery in Europe until Germany has complete industrial domination again and the big boys can make their billions?

Recently, Senator TAFT made a pitiful plea for the poor Nazis' standing trial at Nuremberg. On February 24, before the Economic Club at Detroit, he was sorry that Germany had to surrender unconditionally. He deplored reparations and any plan that might adversely affect German economy. He deplored the UNRRA aid that was given to our battered allies, and he was opposed to granting a Polish loan for coal-mining machinery. And Senator TAFT is not the only Republican weeping tears for poor Germany and the monopolists.

Not one kind word for the victims of German Nazi brutality! Not one kind thought to aid them in their struggle for reconstruction! Not even a thought for Europe's orphaned and destitute children!

After a hard struggle last year, we managed to squeeze out a bare $40,000,000 for the United Nation's Children's Relief Fund. Only $15,000,000 of this money has actually gone to the children's fund. Many private and charitable organizations are now seeking private donations to the extent of $60,000,000 to implement this meager and inadequate fund.

Yes, billions for Germany, billions for European politics, billions for militarism! For the poor, for the unfortunate, for the victims of Nazi aggression, not a kind word, not a dollar, just a stone-deaf ear!

In Palestine we see a continuation of this policy. Human beings, they mean nothing. Profits from oil—that's what counts. There we have a policy laid down by American and British oil monopolists. That 10,000,000 Jews were killed, tortured, placed in slave labor camps, and now that the remaining few would like to go to their homeland in Palestine, that all means nothing. Money, profits, bigger and better monopolies, and bigger and better cartel agreements, even if made with the devil, yes, that's what counts.

Well, isn't President Truman responsible for this foreign policy? No, my friends. It's the voters, who in 1946 gave to the Nation a bipartisan government. They gave to the international bankers, monopolists, cartellists and militarists a fertile field to work in.

Today, paid newspaper columnists and radio commentators are reeking with pro-German propaganda. In 1945 they would not have dared to do it, because the stench from the cremated bodies at Oswiecim, Treblinka, Buchenwald, Dachau, and Belsen, was still fresh in the nostrils of the people. Then many an American mother was weeping for her boy killed in Italy, France, Germany, and in the Pacific.

At that time these Germany-firsters had to lie low, but now they are all out in the open, white-washing the terrible crimes of the Germans, and are creating a political climate that is ripe for the betrayal of our loyal friends and allies.

We must remember that Germany remains a spawning ground for lust, for conquest. They are not sorry for their sins, they are only sorry that they lost the war, and they hate Hitler not because he waged this brutal war, but because he was not victorious.

These Germany-firsters are trying to keep Germany's war potential intact. They are trying to keep Ruhr coal in Germany so that her neighbors cannot restore their destroyed industry. They are trying to protect Nazi war criminals. Yes; they are planning on partnership and business arrangements and to participate in German industry and German profits.

Our policy toward Germany is important because what we do in Germany will ultimately determine whether Europe and the United States can go forward in peace, prosperity, and security. For centuries, Germany's neighbors have been slaughtered and butchered by German militarists. Now, even many Germans are demanding that the German warmongers, those wealthy German families like Krupp-Von Bohlen und Halbach, Mannesman, Stinnes, Klockner, all ,those who owned the heavy war industries, the Vereingte, Stahlwerke and the coal mines, be dispossessed of their holdings, and that these properties be nationalized. Why shouldn't they be permitted to do so? Perhaps there would be no money in it for the monopolists and cartellists, is the right answer.

As to our policy in the Pacific, we hear Senator KNOWLAND, the wealthy California Republican, shouting that the United States is promoting socialism in Japan, by breaking up the industrial and financial combines owned by a few rich "Zaibatsu" families in that country. Senator KNOWLAND and American big business interests would keep on top the Jap warmonger families who misruled and enslaved their people and who together with the militarists attacked China, Pearl Harbor, and the Philippines.

We must see to it that big business does not resume its prewar "international cartel" ties with the industrial and financial combines of Germany, Italy, Japan, and other nations. It was these foreign industrialists and financiers who, with the help of American international bankers and American corporations, put Hitler and Mussolini in power, used the Japanese Emperor as their puppet, militarized their nations, destroyed tradeunions and democracy, and plunged the world into a bloody war.

The desires and hopes of the people of Europe, Asia, and the United States are all the same. Liberty, freedom, democracy—better living conditions. They want neither to go left nor right. But they are squeezed and shoved from the middle of the road that they desire to follow.

Just recently we heard the Minister of Bulgaria propose an alliance of the 100,000,000 people that live in the Balkans and the eastern and central European states. Moscow squelched the idea immediately. Why? Because she was afraid that such an alliance might turn against her. Yet to these same nations and these same people we refuse to loan a dollar, and tell them to go to Russia for help. Why? Because Churchill and Hoover told us that they were behind an iron curtain and that they are satellites. Now just recently Churchill and Hoover have played their trump card. They propose to militarize and arm the western bloc. Will they succeed? I don't think so.

European economy requires cooperation between eastern and western European countries. Trade agreements have already been completed between most of the European countries. Nationalization or socialization of heavy industries, utilities, transportation, shall continue. The era of kings, queens, dukes, and princes has come to an end—even in Greece the German King will have to abdicate. The days of the landed aristocracy of Europe are over.

Must we have wars with countries because they go socialistic? I say "No." Can we do business with socialistic countries? I say "Yes."

Should we release the gold that we are holding that belongs to socialistic countries? I say "Yes."

Secretary of Commerce Harriman, banker and railroad magnate, says that no credits will be granted to Socialist countries. Well, I say that he is wrong. We cannot turn the clock back. After the First World War many crowns toppled, the Hohenzollerns, the Czars, the Hapsburgs, the Ottoman Empire. After this war more and greater changes have taken place.

We should insist that assistance be given first to our allies—those nations in eastern or western Europe who suffered the most and were devastated the most by the Fascists and the Nazis;

That relief be handled through established charitable organizations with no political strings attached;

That all credits and loans be used for economic reconstruction and peaceful purposes, and not for military armaments;

That we work to restore the UN to greater power, not to by-pass it; in fact, the whole recovery program should be worked out through the UN.

The hour is late, but the fight for peace and security can still be won. It remains for all of us to join hands as we did during the war years and demand that our Government get back on the right track.

Lift Arms Embargo—Support of Partition of Palestine

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. CELLER. Mr. Speaker, support of the United Nations' partition of the Holy Land by lifting the United States embargo against the shipment of arms to Jews in Palestine is essential to world peace. Paul E. Fitzpatrick, chairman of

the Democratic State committee, declared today in a four-point program submitted to the New York State congressional delegation.

Such positive action, Mr. Fitzpatrick pointed out, would go far toward backing up President Truman's declaration February 12 that the United States is supporting the UN settlement, and would reenforce Secretary George C. Marshall's statement the day before that no change in our policy of support is contemplated.

Emphasizing that American troops are neither necessary nor desired, the New York State chairman strongly urged that the United States also support UN proposals for a voluntary police force, and clearly warn Great Britain against any scuttling of the partition.

His recommendations supplemented a proposed joint resolution introduced in the New York State Legislature Tuesday by the Democratic Party, calling on Congress to lift the arms embargo.

Mr. Fitzpatrick's complete statement follows:

The New York State Democratic Committee is heartily in accord with President Truman's statement that the United States support the United Nations' settlement of the Palestine issue. We welcome the assurance from Secretary of State George C. Marshall that this Government contemplates no change in support of that decision.

We are convinced that such support is essential to the future if not the very life of the United Nations as an instrument for the peaceful settlement of disputes. We also believe, however, that such support must be positive and real for those defending the United Nations' decision against aggressors who would ignore that decision and nullify it.

We therefore respectfully but strongly recommend that the members of the New York State delegation in Congress actively support a program that would:

1. Bolster the United Nations in this, its first important decision, lest its effectiveness for peace be destroyed.

2. Lift the United States arms embargo so that Jews can defend the decision of the United Nations within Palestine against Arab aggression.

3. Inform the British Government clearly that this Government will not tolerate scuttling of the partition.

4. Support proposals by the UN Palestine Commission made to the Security Council that a voluntary police force be sent into Palestine. It is not necessary to send United States forces for Palestine does not want American troops.

The New York State Democratic Committee sincerely believes that the above program is the only real way to back up President Truman and reinforce Secretary Marshall, in their aim to safeguard the United Nations and world peace.

Racine, Wis., Memorial to Veterans of World War II First in the Nation

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, on this coming Memorial Day the first memorial to veterans of World War II will be dedicated at Racine, Wis. This memorial has been erected in Mound Cemetery. It is the gift of Mr. William R. Wadewitz, himself a veteran of World War I, as a member of that famous Thirty-second Division, and with which he served with honor and distinction.

Mr. Speaker, this memorial is to perpetuate the memory of 375 Racine County veterans who gave their last full measure of devotion in the hope that a just and lasting peace might be achieved. The people of Racine County will always honor and revere their memory. Likewise, they appreciate the gift by Mr. Wadewitz of this fine memorial, for it will be a living witness to his patriotism and civic-mindedness.

Mr. Speaker, I include as part of my remarks the following article, which appeared in the Racine Journal-Times of February 20, 1948, pertinent to this subject:

GIFT OF WAR DEAD MEMORIAL TO BE DEDICATED ON MAY 30

To perpetuate the memory of 375 Racine County veterans who lost their lives in World War II, a Court of Honor will be dedicated in Graceland Cemetery on Memorial Day, May 30.

The Court of Honor includes a plot, large enough at present for 450 graves, and a Veterans' Memorial Shelter. The shelter was constructed as the gift of William R. Wadewitz, vice president of Western Printing & Lithographing Co., who is starting his sixth term on the Racine Board of Cemetery Commissioners. The plot is so constructed that 1,500 graves can be added.

PLOT HAS GARDEN EFFECT

The shelter was designed by Hoffman & Schneider, Racine architects, and was constructed by Johnson & Henrickson. It is 122 by 13 feet in size with two galleries or wings, each 25 feet long, and it is entered by circular steps which can be used as a stage. It is constructed of Lannon stone with Bedford facings and trimmings, slate roof and flooring, and oak panelled ceilings.

On an elevation facing the south, the stone shelter can be seen from all parts of the cemetery. Block 15, set aside by the city in 1945 for the dead of World War II, has been landscaped on designs of Hare & Hare, Kansas City, who originally designed the cemetery.

Six 20-year-old maple trees are being moved to the site which is bisected by red granite walks. Shrubbery and grass will add to the beauty of the plot when it is completed and the artificial lake adds to the picture. A large flag staff has been erected there. Graves will not be in rotation but on a garden design.

HONOR ROLL A FEATURE

Central feature in the main shelter will be the honor roll on which will be listed the name of each of the Racine county veterans who died in action or because of illness between the years 1941-'45. These will be carved in four plaques, 7 feet 6 inches by 2 feet 10 inches, of Tennessee marble. Cut over the north wall, which will carry the roll, is the inscription, "1941—They Gave the Last Full Measure of Their Devotion—1945" and over the four plaques will be the wording, "Racine County's World War II Honored Dead."

A further inscription, "Time shall not dim the glory of their dead," tops the entrance. On the east and west friezes are listed the battle areas in which these men saw service, so arranged that Pearl Harbor is the first and Japan the last.

VETERANS OF WORLD WAR I

Back of the building is the wording, "Memorial Court of Honor Dedicated to All Racine Veterans of World War II." A panel on the northeast bears the inscription, "God's Everlasting Peace to All Nations of the World," while that on the northwest panel bears lettering, "Presented to Racine by W. R. Wadewitz, Memorial Day, May 30, 1948."

Wadewitz, a veteran of World War I and one of the founders of the Racine Legion Drum and Bugle Corps, has been active in veterans' work for years. When the cemetery commission, on which he has served for 25 years, began considering a plot in Graceland Cemetery for dead of the recent war, he suggested that Superintendent Leroy Jerstad write to the original landscape architects, Hare & Hare, Kansas City, for suggestions.

These architects drafted designs for laying out the large plot which they featured with outlines of a shelter. The city council had given the commission authority to proceed with the landscaping which was done under the direction of Superintendent Jerstad.

WORK ON HONOR ROLL

When the place began to assume form, Jerstad asked the commissioners what to do about the shelter. It was then that Wadewitz announced that he and the Western Printing & Lithographing Co. would assume the costs.

The foundations were started last fall. The building was completed during the winter. It is expected that cutting of the honor roll of Racine's war dead on the plaques will be finished by Memorial Day.

FIRST IN NATION

Jerstad in commenting on the gift said, "Through the generosity of Mr. Wadewitz, Racine is the first city in the United States to be in a position to dedicate a memorial to its World War II dead by Memorial Day. This I know as a member of the National Cemetery Association which is devoting a special article to our memorial in its spring edition."

Washington Cooperative Farmers Association Resents Unfair Attacks on Cooperatives

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. JACKSON of Washington. Mr. Speaker, one of the largest farm cooperatives in the Northwest is the Washington Cooperative Farmers Association of the State of Washington. Thirty thousand Washington State farm families own and patronize this great organization. They recently held their thirty-first annual meeting and passed two resolutions which I feel should be called to the attention of the House. This cooperative and other cooperatives in my State deeply resent the unfair attacks which are being made against our farmers. I heartily subscribe to the position taken by our Northwest farmer cooperatives.

Mr. Speaker, under unanimous consent, I include the following resolutions to be printed in the RECORD:

Resolution on financial contributions to NTEA

Whereas our association and other farmer cooperatives have made their records of receipts and disbursements for the last 12 years available to the House Small Business Committee; and

Whereas that committee has officially requested the National Tax Equality Association to furnish to it the names of the contributors to the National Tax Equality Association and records of its receipts and disbursements for the past 2 years; and

Whereas the public in general and farmers in particular are entitled to know who seek to destroy farmer cooperatives and to divide and alienate segments of private industry of this country: Now, therefore, be it

Resolved, That the members of Washington Cooperative Farmers Association, assembled at their thirty-first annual meeting, vigorously urge that the Congress of the United States take action to require the National Tax Equality Association to furnish to the Congress the names and addresses of each and every contributor and the amount contributed by each to the National Tax Equality Association during the past 2 years, together with a complete record of all receipts and disbursements for the like period.

Resolution on planks in party platform

Whereas farmer cooperative associations have been recognized and encouraged by the American people in the public interest under the administrations of the Federal Government by both the great political parties of the United States; and

Whereas for many years the Democratic and Republican Parties have recognized by their actions the fundamental right of farmers to cooperatively market their own farm products and cooperatively purchase their own farm supplies: Now, therefore, be it

Resolved, That the members of Washington Cooperative Farmers Association, assembled in their thirty-first annual meeting, hereby call upon the leadership of both great political parties to reaffirm, by platform pledge and prompt affirmative performance, their belief and faith in farmer cooperative associations; and be it further

Resolved, That the members of Washington Cooperative Farmers Association denounce the activities of those individuals who have violated the pledges of their parties by attempting to cripple agricultural credit and seeking to destroy the right of farmers to cooperatively market their own products and to cooperatively purchase their own farm supplies.

Amos Richard Webber

EXTENSION OF REMARKS

OF

HON. WALTER B. HUBER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lorain (Ohio) Journal of February 26, 1948:

AMOS RICHARD WEBBER

Some years ago the editors of Who's Who in America wrote Judge A. R. Webber for information concerning himself.

He complied only on condition that the biographical sketch include the statement that, as a Congressman, he introduced the first prohibition bill to make the District of Columbia dry.

It was not so much that he was proud of the furor his bill caused in Washington more than 40 years ago. He was concerned with the importance of the issue, rather than the part he played in making it a vital force in the Nation for so many years. Judge Webber was a sincere as well as a vigorous advocate of prohibition. And it was for that that he was known and respected throughout Ohio, even among those not in accord with his views on prohibition.

He insisted that alcohol had no place in either good being or good living, and during his more than a decade on the common pleas bench of Lorain County he frequently posed for photographers in his court with a glass of water in his hand.

Now he is dead. The marvelously durable heart and body that outlasted his family and his associates ran down at 96.

Until the day of his final illness, he practiced what he preached, which was to live simply, maintain good habits and keep busy. He was a total abstainer from the use of tobacco and intoxicating liquor and believed the way to start the day right was to arise early.

For most of his 96 years he was a power and an influence in and out of public office. As county prosecutor, Congressman, and judge he gave a great part of his life to public service. Even after his retirement at 83, he refused to be idle and persisted in his writing. He wrote four books, all of them after reaching 70. His purpose was not profit, but, as he himself expressed it, "to keep alive the names and good deeds of our forefathers to whom we owe so much."

It is not strange that he should have written of the hardy pioneers who carved the Western Reserve from the Ohio wilderness. His grandfather came from Massachusetts, purchased 125 acres of solid woods in Medina County, put up a log house, and felled and burned trees in order to make room to plant corn.

Many honors came to Judge Webber. None of these did he prize more than the tribute paid him by members of the county bar association on the occasion of his eightieth birthday, when he was called from his bench in court and presented with a metal card, rolled out of gold coins, as a testimonial to his "integrity, wisdom, and leadership."

Baldwin-Wallace College, from which he graduated in 1876, honored him twice in recent years, conferring on him the honorary degree of doctor of laws in 1935 and presenting him a special centennial merit award in 1946 when the institution celebrated its hundredth anniversary.

On this occasion, Judge Webber expressed the philosophy of almost a century of living. "I became convinced many years ago," he said, "that true success is never attained in accumulating dollars or holding official positions, from the President down, unless the recipient of such earthly honors uses them in accordance with the divine teachings."

Power and Water Shortage in California

EXTENSION OF REMARKS

OF

HON. JOHN J. ALLEN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. ALLEN of California. Mr. Speaker, under leave to extend my remarks, I include an article which gives further indication of the water shortage in California and of the power shortage which follows from it. Every resident of the district which I represent is feeling the effects of this shortage.

The article which is taken from the Oakland Post Enquirer of February 25, 1948, follows:

BEGIN OAKLAND DIM-OUT TONIGHT

At midnight tonight Oakland and the rest of California from the Oregon border to the Tehachapis will be darkened by an emergency brown-out on orders issued by the State public utilities commission to save electricity.

The drastic action—reminiscent of wartime power restrictions—was forced by one of the worst winter droughts in California's history which has brought on an electric-power crisis.

The commission called for a 10-percent reduction in consumption of electrical energy by all classes of power users, including householders.

All outdoor lighting, except theater marquees, was banned. Floodlighting of outdoor sports events was cut in half. Street lighting will be curtailed.

The commission, after an emergency hearing in San Francisco yesterday, ordered seven utility companies to shut off the electricity of any violator after 3 days' notice. This measure will be invoked only against commercial users.

Persuasion will be used against household violators.

Specifically, the program—which is expected to continue at least until autumn rains next fall—provides:

1. The seven power companies will furnish up to 90 percent of their present delivery for commercial, residential, and agricultural uses, and up to 60 percent for outdoor displays and advertising.

2. The companies will cut their frequencies from 60 cycles to 59½ cycles for the entire 24-hour period instead of 8 hours as has been the case recently. Voltage will be reduced by 5 percent.

3. New businesses and new customers will receive only minimum service essential for public health and safety. New lighting for outdoor sports, signboards, and exterior lighting will be prohibited.

4. Residential customers must use 10 percent less electricity. The commission may demand greater cuts if conditions warrant.

5. All agricultural pumping plant operation shall be prohibited during peak power use hours. Kilowatt-hour consumption shall be reduced by about 10 percent.

6. Special establishments other than theaters may be permitted one formal indentification sign from sunset until closing. Theaters may use marquee signs indicating current and coming attractions only. Under-marquee lighting must be reduced 50 percent.

7. Sports floodlighting must not be turned on until 8 p. m. and must be limited to half the amount used the same month a year ago.

8. Street lighting, except for all-night safety lights, shall be prohibited.

Southern California was excepted from the order because it gets electric power from the Hoover Dam.

No termination date was set for the order affecting the drought area, but commission officials predicted the shortage will last until fall. Only abnormal spring rains and adoption of daylight saving time may ease the crisis, the commission said, but not enough to end the dimout.

The commission urged the State legislature to adopt daylight saving time as another measure to save electricity. State Senator Gerald J. O'Gara, of San Francisco, announced he would ask the legislature convening March 1 to enact a daylight saving law.

The Pattern of Conquest

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 1, 1948

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial from the New York Times of February 27, 1948, entitled "The Pattern of Conquest":

THE PATTERN OF CONQUEST

Shocked by the Communist coup d'état in Czechoslovakia into their first joint action on Russo-Communist expansion, the Governments of the United States, Britain, and France have condemned what they characterize bluntly as the establishment of a one-party dictatorship disguised under the cloak of a government of national union. They are conferring on the advisability of refusing to recognize this new regime. But neither of these steps, reminiscent of similar protests against Hitler's methods, will stop the course of events. Nor will they dispel the fear that is stalking through Europe, where other nations feel themselves to be the next potential victims. But they do reveal that the last stubborn illusions are falling, that world opinion is at last beginning to crystallize, and that out of this process is emerging the realization that appeasement still carries its own penalty, and that doing business with Stalin is just as dangerous and as profitless as it was with Hitler.

Like Hitler, Stalin has been taking over one country after another, sometimes by direct conquest, as in the cases of Lithuania, Latvia, and Estonia; sometimes by traitorous fifth columns backed by Russian troops or commissars, as in the cases of Poland, Yugoslavia, Albania, Bulgaria, Rumania, Hungary, and now Czechoslovakia. Today, Stalin's acquisitions already amount to more than four times those of Hitler prior to the war, and, like Hitler, he is reaching out for more.

Equally striking is the virtual identity of the methods by which both the Nazis and the Communists attained power, as exemplified especially in Czechoslovakia, whose directed democracy was comparable with that of the German Republic. Both began as small parties able to flourish under ultra-democratic proportional representation, but determined to use democratic methods only for the destruction of democracy, and making no secret of the fact. Hitler served early notice that once he was in power heads will roll, and Gottwald, his Czech counterpart, told Benes and his followers long ago that he would break their necks. Despite this, both Hitler and Gottwald were made heads of government with the cooperation of the parties they had vowed to destroy. And once in office they undertook to capture the state from within.

First they took over the police and made it a party instrument for the extension of their power and the terrorization of the opposition. Then they neutralized the army by putting in command officers loyal to themselves and, in the case of Czechoslovakia, pledging the army to loyalty to the Soviet Union. With these two instruments of power in hand, they began to regiment the population. They took over the Ministry of Propaganda, or Information, and with it control of the radio and the film industry. They restricted freedom of the press by taking control of the supply of paper and by compelling all journalists to join a union under Communist control. They took over control of industry—Hitler by organizing it into associations under Nazi domination, Gottwald by nationalizing it and organizing an armed workers militia to guard it. They conscripted labor, put all labor unions into one labor front under their control, and thereby obtained control of every worker's job and livelihood, with power to penalize any worker who dared to oppose them. Finally, national socialism in Germany and communism in Czechoslovakia resembled each other even in the matter of a racial policy; Hitler turned against the Jews in the name of pan-Germanism and the Slav Communists against the Germans and Hungarians in the name of pan-Slavism.

It seems amazing that, having seen these things happen in Germany under Hitler, the Czech leaders and parties still dedicated to democracy should have permitted them to happen in Czechoslovakia—going along step by step, making one concession after another, until they were powerless to resist.

That in itself is a warning to all countries still under the delusion that they can cooperate with Communists without signing their own death warrant.

What Is Our Policy?

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 1, 1948

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix to the RECORD, I wish to submit the following newspaper article from the Sunday Star, Washington, D. C., of date February 29, 1948, as follows:

WHAT IS OUR POLICY?

On Tuesday of last week our representative in the United Nations said that this Government was prepared to enter into consultations looking toward the sending to Palestine of a UN force, presumably including both American and Russian troops, to maintain peace. Two days later, Secretary of State Marshall asked Congress to appropriate $275,000,000—this in addition to the $400,000,000 already provided—for Greece and Turkey. The additional money is to be used to provide military assistance to the Governments of Greece and Turkey in an effort to keep those countries from being overrun by the Russians and their Communist stooges in the satellite nations.

If this can be called a national policy, what kind of policy is it?

The Star has supported the policy of assisting Greece and Turkey. And it continues to support that policy in the belief that our vital national interests and our national security would be gravely threatened if those strategically placed countries should be taken over by the aggressive Communist fifth columns, aided by outside forces.

When one looks at a map, however, the logic, if any, of spending $675,000,000 to keep the Communists out of Greece and Turkey, while pursuing at the same time a policy which would bring the Russian Army into Palestine, is utterly incomprehensible to the lay mind. For once the Russians are in Palestine, they have outflanked Greece and Turkey. And once those countries are outflanked by the Red Army they are done for.

Surely, this seemingly contradictory policy ought to be explained, if any explanation is possible. But no one in an official position has offered a word of explanation. On the face of the matter, the American people, at considerable expense, are being asked to march up the hill in Greece and Turkey, and to march down again in Palestine. It is doubtful that they will be willing to accede for long to any such request. To the layman it does not make sense, and a policy which, on its face, does not make sense, is going to be hard to sell to the people of this country.

In the letter accompanying the request for additional funds, General Marshall said that the Communists, in their ambition to dominate Greece and Turkey, are convinced that time will play into their hands. To this might be added the thought that the Communists may be convinced that not only time, but also American policy, will play into their hands.

ERP Should Not Subsidize European Socialism

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 1, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, one of the problems in the European recovery program, as the bill is now written, is that it would impose further socialization of the 16 European countries who are to be the beneficiaries under the act. I have informed my constituents that I will not support any program which will further the cause of socialism in Europe. Mr. Speaker, on February 23 Mr. Merwin K. Hart, president of the National Economic Council, delivered a radio address on the subject Let's Not Subsidize European Socialism.

Under leave to extend my remarks, I am including his address at this point:

You and I want to see the United States help European countries, but not at the cost of our own economic stability, our own liberties, our own Republican form of government. To give help to other countries is nothing new for Americans. We have long shared with other peoples the benefits of our private enterprise.

But unless the Marshall plan is drastically revised, then, instead of helping to establish freedom in western Europe, we will merely promote socialism, and socialism is unsound and will end in economic and political bondage.

The February 14 issue of the London Economist, Great Britain's leading financial weekly, says, Britain faces bankruptcy. That is part of an editorial entitled "On the Rocks."

Kenneth de Courcy, of London, in the February issue of his Review of World Affairs, speaking of Britain, said:

"The immediate economic prospects could scarcely be graver. Whether they are going to be felt to the extreme point depends almost entirely upon the degree of further American aid."

If you or I had a friend in financial straits, we'd do two things—first relieve his pressing needs and then look into his business methods; and if we found his methods impractical, before we came around with more solid support, we'd demand he adopt a sounder plan.

Well, our friend Britain is in just this predicament—as are also certain other European countries. Britain asked help 2 years ago, and we gave her nearly $4,000,000,000. That was to last 5 years and put her on her feet. But it was nearly gone in a year.

Britain is in worse shape today because her methods are unsound.

It's as simple as that. Just before we gave her the four billions Britain had decided to

discard the private-enterprise system and to substitute socialism. Under socialism, the responsibility of individuals is scrapped, except for a few intellectuals who tell everybody what to do, and the people are invited to stop worrying and lean on the government.

Socialism has never succeeded in supporting a people. Ambition languishes. Nobody gets ahead, no matter how hard he works. And so nobody tries.

And today's misguided British leaders, while they and other European countries are asking you American taxpayers to give them $17,000,000,000, defiantly insist they will go ahead with their socialism. They will continue to nationalize their industries. They will proceed with such schemes as putting all British doctors on the public pay roll, and furnishing free medical treatment to everybody, even though a few days ago 89 percent of all British doctors said they were against it.

Now the giving of seventeen billions to Europe is the object of the Marshall plan. The Senate is beginning to debate it. The House Committee on Foreign Affairs has not yet acted. There is still time for you, Mr. and Mrs. Citizen, to do something about this.

If you don't act, then the Congress under the pressure of propaganda, will pass this Marshall plan as is. And President Truman has asked Congress for practically unlimited power to impose wartime controls. Perhaps you like rationing and standing in line and black markets.

In short, the Marshall plan is a scheme to finance socialism in Europe, to put socialism thoroughly on its feet. And to do it we will probably go Socialist ourselves. For once we go back to wartime controls, in peacetime, we may never see the end of them.

If we could teach Europe what free enterprise has done for us, what it can do for them, we would be doing far more than the mere giving of goods and dollars. We ought to cease our silly attitude that to make conditions for giving or lending money is indelicate. Your banker and mine do not hesitate to make conditions when we ask for a loan. We should get down to realities and tell these countries, as a condition, to reopen the door to free enterprise.

So keen are the British Socialists over the Marshall plan that they have called a Marshall plan conference of European Socialists to meet in London in March.

Some defenders of the Marshall plan say the Socialists are on our side in the struggle against communism. But socialism and communism are much alike. Both are Marxist. Both are opposed to capitalism and free enterprise. Both want to abolish private property—both discourage initiative—destroy incentive. They want to take the steam out of the steam engine.

Mr. Marshall has said that our policy is not directed against any country or doctrine.

But we ought to be against a doctrine that means the destruction of free institutions. But not being against socialism, we are inviting disaster upon Europe and eventually upon the whole world.

Perhaps no American industry has rendered greater service to the people than the oil industry. Yet a bill has been introduced in Congress to put the oil industry under Government control.

Excessive steel and other exports to Europe for their own use and benefit have handicapped the oil industry. Due to these exports there haven't been enough tankers to take the oil north. Already, without any Marshall plan, many of our people have been threatened with cold and hunger. Through industry cooperation and through assisting the fuel coordinators, this unregulated industry has ably met the crisis.

But how able to serve the American people do you think the oil industry would be under Government control? Yet this and more socialistic threats to American industry will come if the Marshall plan goes through.

And how much more financial strain can the United States stand? Are we to give Europe a book of blank checks on what is left of American savings?

It is unsafe to believe Soviet Russia is really against the Marshall plan despite appearances and despite the propaganda. The Communists are for anything that weakens us as a free enterprise nation. The United States is "the number one target of Soviet Russia"—George Dimitrov, exiled Bulgarian peasant leader, told a congressional committee that only last week. Since the Soviets could today seize all Europe up to the Pyrenees, why would they not wait until America had spent its seventeen billions building up Europe's plant and equipment?

In addition to the financial burden, the Marshall plan would give one more grant of unlimited power to the President. The bill authorizes the Administrator to employ personnel for duty outside the United States without regard to the law limiting the number of persons who may be employed in the Government.

As though we do not have enough bureaucrats today.

Since both experience and prudence prompt us to make sure what we do will be of value, the Marshall plan should be amended in these ways:

First. Every country, in order to receive its benefits, must fully abandon all further schemes to nationalize industry or to promote socialistic activities, and must stop all present socialistic plans that can be stopped.

Second. The aid given should be limited to food and supplies vitally necessary to help bring western European plant and equipment back to prewar status only. We can't afford to make the proposed grand gesture of building European industry up to 30 percent above prewar level.

Third. The whole project of aiding Europe should be placed in the hands of a commission, the chairman and a substantial majority of whom shall be business men with a record of high achievement in private enterprise. They should be men who believe in private enterprise and in the incentive system, and are convinced that recovery can come only through production. The chairman should be given Cabinet rank and serve directly under the President. Our purpose should be frankly to convert Europe back to private enterprise.

Fourth. Spain should be included among the countries to be offered aid in any plan adopted. Spain with moderate commercial loans can soon help in the rehabilitation of Europe. Spain is a good credit risk; never in her history has she defaulted on a foreign loan. And in event of war, Spain would be our most powerful ally on the Continent of Europe.

Some years ago Betrand de Jouvenel, a Frenchman, lived in Washington as a newspaperman. He came up the hard way, but he got to know America well. Recently, after another visit to this country, he wrote a friend:

"My main impression, after visiting America, is that production can do for the worker what socialism can only promise. While Europe has been losing its time and strength with paper reforms, commerce has provided America with the means of decent living for everyone."

Why can't Europpe learn the secret of how the United States has been able to achieve so much? Here come 16 nations of Europe, all Socialist in varying degrees, asking us to help them. If we had not had our private-enterprise system all these years, we couldn't do it.

Mr. and Mrs. Citizen, if you don't care enough about private enterprise to defend it against Marxism, then there is nothing for you to do. But if you do care, and I know you do, you better tell your Congressman what you think about this Marshall plan.

Let's get down to fundamental realities in our next grant of aid to Europe.

Let's be a sympathetic and generous banker, on businesslike terms, to the rest of a world that is willing to work and to open its doors to the ways of freedom.

Let's not accept the Marshall plan, as is. Let's amend it to conform with what we have learned from our own experience. Let's not invest private-enterprise earnings in Socialist schemes. We'll only throw money away.

In his Farewell Address to the American people, George Washington, whose birthday we have just celebrated, said to his fellow citizens:

"The independence and liberty you possess are the work of joint councils and joint efforts, of common dangers, sufferings, and success."

Let's not permit steps to be taken that will destroy our American heritage.

America's Postwar Merchant Marine

EXTENSION OF REMARKS
OF

HON. WILLIS W. BRADLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. BRADLEY. Mr. Speaker, for the information of Members regarding the current situation and future prospects of the American merchant marine, I include herein extracts from a number of articles published in the February 1948 issue of the Marine News, one of the leading publications of the American shipping world, edited by Commander Wendell Phillips Dodge, a well-known authority on shipping affairs.

Mr. Andrew W. Robertson, chairman of the board of the Westinghouse Electric Corp.—also a member of the President's Advisory Committee on the Merchant Marine—writes under the heading entitled "The Need of American Passenger Ships," as follows:

If we lived in a storybook "one world" of brotherly love, it might be safe for the United States to be without passenger ships; but in the world as we know it today, with its international problems aggravated by the aftermath of the war and the lack of friendliness between people, it is foolhardy for the United States to be without the necessary ships to carry its citizens wherever they wish to go. If it were not so serious, it would be comic to picture the all-important role the United States is playing in world economy at the present time in contrast to its pitifully weak position in the maritime passenger-carrying field.

Every day the newspapers print statements to the effect that America must spend vast sums to relieve the distress of Europe to the end that the people of Europe may thereby be saved from communism. There is a broad insinuation in the discussion that it might be necessary to use force. This cold war of supplying aid and comfort to our openly avowed friends and denying it to our less openly avowed enemies may well burst into a shooting war. If that happens we would find ourselves without adequate passenger vessels to aid in troop transportation. In other words, if we had to fight another war, we would be handicapped because of a lack of passenger ships, notwithstanding the hundreds of naval vessels and cargo ships we have built. And the next time, perhaps we could not rely on the *Queen Mary* and the

Queen Elizabeth to carry thousands of troops quickly from port to port.

This is a brief picture of our need for passenger ships for national security.

The complete lack of appreciation of the need of passenger ships by a great majority of our people is paradoxical in the light of the well-known American urge to excel in the mechanical arts. During the war we demonstrated that we not only have everything available to build ships so far as materials are concerned, but we also have the required skill and know-how to build ships better and faster than the master builders of other lands. We discuss in academic terms the need of selling surplus goods abroad, but pay no heed to the matter of the ships necessary to carry American citizens engaged in world trade. When we think of the matter at all, we seem to have a childlike faith that somehow, someway, the necessary ships to carry our people will be provided. * * *

Our neglect of the sea amounts almost to an aversion. Like some animals, we do not like water. As a common practice our sons do not go down to the sea in ships. Our daughters, unlike Helen of Greece, could no doubt start a million automobiles, but the best of them could not launch a dozen American ships, not because our women are not beautiful and exert a powerful influence but because, as a people, we prefer the land and are woefully ignorant of maritime affairs.

To make matters worse, we supplement our lack of interest in ocean travel by creating all sorts of difficulties for the few who make a living by operating ships. For instance, our standards of safety are higher than those required by other nations. Our standards of comfort and space for the crews of our ships are also higher than those of any other nation. Our laws limiting hours of labor add greatly to the expense of operating American ships. At the present time these cumulative costs make the operation of an American ship twice as expensive as the most expensively operated foreign ship. These are difficult conditions to overcome, but they must be overcome if we are to have American passenger ships. These extra expenses are largely due to the attitude of our people, either as expressed in their laws or interpretation of public opinion. And since the public is responsible for the expense, it is inevitable that the public must pay the cost. This means, of course, a subsidy of some kind. This has been a common practice for years, so that the present question is not so much one of a subsidy or not a subsidy but rather the amount of the subsidy.

Following Mr. Robertson's article is one by myself, headed "Ocean shipping and the European recovery program," which says in part:

The funeral of an adequate American merchant marine has been arranged by the State Department. The pallbearers may well be some 16 foreign nations. The dirge is misleading propaganda. The mourners will all be Americans. The outline of a European recovery program prepared under the direction of the State Department and submitted to Congress, aims a near mortal blow at our present merchant marine. It may be that Congress can save the patient's life and disappoint those who hopefully anticipate the reading of the last will and testament.

I favor reasonable help to western European nations, and to their citizens to enable them to regain their economic footing even though such help is an additional burden upon our taxpayers. But I do not comprehend, as a part of that help, a program which will strip us apart of our principal defense assets and will relegate our entire shipping industry to a very inferior standing among the fleets of the world.

Under the proposals of the State Department we shall sell to European nations some 200 oceangoing steamships and, in addition, transfer to them on a temporary basis up to 300 more bulk-cargo ships under bare-boat charter. In substance, this is a proposal to transfer 5,000,000 tons of American ships—about 25 percent of our reserve dry-cargo fleet to foreign nations under the Marshall plan. It is a proposal to transfer foreign about half as many ships as now constitute our entire privately owned ocean-going merchant marine.

This astonishing proposal has come forth even though the merchant fleets of the 16 Marshall plan nations will exceed the level of their prewar capacity when their present construction programs are completed. This proposal is made notwithstanding the fact that in 1951 these same nations expect to have 10,000,000 tons (over 20 percent) more shipping than they had prewar. It is made notwithstanding the fact that even after allowing excessively heavy withdrawals for obsolescence by 1951 they will still exceed their 1938 capacity by the equivalent of 750 ships of an average of 10,000 deadweight tons each. This proposal is made notwithstanding the fact that the United States has already made a material contribution toward increasing the postwar tonnage of these nations by selling them over 750 of our war-built ships.

Then follows a forthright article by Mr. George Killion, president of the American President Lines, under the title "United States Has Sunk to Seventh Place Among Nations of World in Ship Construction," stating in part:

I have been invited by the editor of Marine News to contribute a "forthright article pointing up the vital necessity for a strong American merchant marine."

To those of us in the shipping business and on the shipping-trade publications such an article seems as unnecessary as one on why food, sunshine, and fresh air are necessary to maintain life. Yet there are hundreds of thousands of good, sound, loyal American citizens living within the interior of our great country who have not the faintest idea why a large fleet of merchant ships should be maintained as a matter of national policy after a war is won.

While the conflict rages, yes. Everybody knows we need ships. We need them to transport troops, munitions, and supplies to battle areas; to fuel and service combat ships of the Navy, and to bring the boys home when the firing ceases. It has been said that most of our merchant seamen during the war hailed from the Middle West and other inland States, and because of this it was felt that the value of the merchant marine would be so impressed on everyone's mind that we simply could not let this important industry deteriorate again as we did after World War I.

But here we are in the same old doldrums. Shipyards are idle and rusting away, and the skilled hands that fitted ships for victory a few years back have of necessity gone into other occupations. Not a single passenger liner keel has been laid in an American yard since the war ended. The new luxury liner *President Cleveland*, recently turned out at Bethlehem-Alameda, and her sister ship, the *President Wilson*, still under construction, rose from keels laid during the war and were intended for troop transports.

Meanwhile Great Britain has no less than 125 ships presently under construction, and even the hard-pressed nations of France and Italy have 11 and 9 ships respectively on the ways. The United States, the wealthiest and most influential nation on earth, with 10,000 miles of coastline to protect, has sunk to seventh place among the nations of the world in new ship construction.

Why is it that we do not learn the lesson so clearly pointed by two world wars?

I believe that a large part of the fault lies within the industry itself. By industry I mean both shipbuilding and ship operation, not to mention all the allied concerns that have a collateral interest in one or more of the many phases of the maritime scene.

I believe that the maritime industry, in collaboration with the United States Maritime Commission and other interested Government bodies and officials must give unified, intelligent leadership to a campaign of public education concerning the merits and necessity of a strong American merchant marine as a continuing institution, in peacetime as in war.

I am convinced that unless the majority of our citizens can be persuaded, through common-sense logic and reasoning, that a strong American merchant marine is in the public interest; and these same citizens become articulate through their duly elected representatives in Washington, we shall just continue to muddle along as a third-rate power on the high seas.

We can trust the American people. They have never failed to respond favorably to an appeal which they believe to be in the public interest. A minority group of Americans know that we must have an adequate merchant marine both for reasons of national security and national economy. But the majority of our citizens do not understand this necessity. If they did, their will would be reflected in the Congress and we would have the necessary appropriations and legislation.

Mr. M. G. Gamble, general manager of marine department of the Standard Oil Co. of New Jersey, writing on the topic of "Tanker Transportation," has this to say, in part:

The foremost question within the industry today on the subject of tankers is, "Are there enough tankers?" If there are, why are we experiencing such a transportation shortage as now exists? The correct answer to the first question, I believe, is that there are ample tankers in the world today. As of October 1, 1947, there were 96 United States Government-owned T-2-type vessels in tie-up, over and above nearly 200 in operation. In regard to the second question, the prolonged shipyard strike kept a substantial number of tankers out of service from July to November. Several months have been required in most cases to process the purchase by private industry of T-2's from the United States Maritime Commission. Also, both military and commercial requirements have proved to be far in excess of previously estimated needs. All these factors, I think, explain why, in spite of there being enough tankers over the longer term, we are at present handicapped by an artificial shortage of water transportation.

We understand that progress is now being made in returning all modern tankers formerly in tie-up to active operation and are pleased that steps are being taken to sell all United States Maritime Commission tankers promptly to private interests. However, it is difficult to foresee when all of these steps will be effective in remedying the situation because of the extent of the accumulated shortage. As vessels taken out of tie-up for sale or operation require repairs, the shipyard situation will largely govern the speed with which the shortage can be alleviated and finally overcome.

From a long-range standpoint, it is felt that building in Europe, which apparently is being greatly retarded by material and labor shortages, will not in itself provide all tonnage needed to keep pace with world requirements, and construction in United States yards will, therefore, be necessary.

For national defense purposes tankers should be fast, modern, and efficient in order to minimize the risk from enemy action and to insure prompt delivery of cargo. No less is this true for economical commercial operation. It is fortunate, therefore, that the Government has promoted sales to legitimate

buyers for foreign registry, as this will provide an opportunity in the future for modernization of the United States-flag tanker fleet.

WAR CONSTRUCTION

The war resulted in the loss of about 40 percent of the prewar world-wide tanker fleet. However, it also had the effect of hastening the general utilization of larger and faster ships. For example, the average prewar American-flag tanker had a deadweight tonnage of about 11,500 tons and a speed of about 10 knots, whereas today the average American tanker has a deadweight of about 15,000 tons and a speed of 14 knots. In general, we might safely say that the size and speed of a tanker, within certain limits, are all-important in reducing operating costs. This is particularly true with today's high and rising costs.

Our Government constructed during the war about 9,000,000 tons of T-2 type tankers. These vessels have a deadweight of about 16,600 tons, a speed of 15 knots, and a capacity of 138,000 barrels of gasoline. In most trades oil can be transported in them about 25 percent cheaper than in a prewar 13,000-ton 12-knot tanker, and for about 30 to 40 percent less than on the old 11,000-ton vessels. Looking at this question in another way, it is estimated that out-of-pocket operating costs have about doubled since 1939. However, the increased size and speed of the modern fleet, with consequent increased haulage capacity, has fortunately reduced the cost per ton-mile, so that the effective rise on that basis has only been about 65 percent.

NEW TANKER TYPES

Inasmuch as it is obvious from the foregoing that large fast tankers are an answer to the high cost which owners—and, I might say, particularly American owners—are experiencing today, the question naturally arises as to how far one should go in this matter of size and speed.

"What's Ahead for the American Merchant Marine?" is the title of an article appearing in this issue of Marine News, by Mr. Howard P. Bish, manager of the aircraft, Federal and marine divisions of the General Electric Co., setting forth in part:

What is ahead for the American Merchant Marine? Last November 1, the President's Advisory Committee on the Merchant Marine made its official report to President Truman. This committee, composed of four nationally known and successful business leaders and a high-ranking naval officer, has performed a patriotic service by making a most careful and comprehensive study of this highly complicated and important problem. Its members have concluded "that a modern, efficient merchant fleet, and an effective and progressive shipbuilding industry are necessary economic adjuncts to the peacetime economy of the United States, despite the unavoidable present necessity of Government financial aid to maintain them." What makes this conclusion more potent is that it has been arrived at impartially by leaders who are not directly connected with either shipbuilding or the shipping industry.

Events of the past eight years have pushed us to the forefront of world leaders. Whether we, as placid, self-sufficient, self-satisfied citizens of the United States like it or not, we have arrived at a position of world leadership which places upon us responsibilities that we cannot avoid nor shirk. Our merchant fleet constitutes the life lines of our world commerce, and to place it largely in the hands of foreign nations, as we have in the past, is fraught with real danger.

Prior to World War I, and between the two World Wars, there were discriminations against our ships in many foreign ports which proved to be detrimental both to our economy and to our national safety. Certain nations practically closed their ports of call to our ships by discriminatory laws which helped them to build strong merchant fleets and tended to weaken our national defenses.

We came out of the war with well over 5,000 merchant ships, but the vast majority of these cannot compete economically with ships built since the war by other nations. Also, there are certain types of ships, such as passenger liners and combination cargo and passenger ships, which are vitally needed, but virtually none of which were constructed during the war.

Even before the war, the number of passenger liners and cargo-passenger vessels was pitifully inadequate from a security standpoint. At that time, there were only 118 vessels of these types in service. All were requisitioned for war duty. Thirty-one were lost during the war. Ten were sold to foreign operators, and 10 were retained by the Army or Navy. There are another 30 of these vessels now laid up because it is uneconomical to recondition them for further service. There remain, then, from the already inadequate 118-ship prewar fleet of passenger and cargo-passenger ships, only 37 vessels which will be in service when all reconditioning work on them has been accomplished. These 37 vessels have an average age of more than 18½ years.

Since the end of the war, 18 vessels of these types originally intended for war service have been converted during construction and completed for commercial use. One more, the steamship *President Wilson*, is under construction. These, added to the 37 which remain from the prewar fleet of such vessels, bring our total postwar fleet of these types to less than half of the dangerously low number of passenger and cargo-passenger ships which we had in 1941. And yet, with the exception of the one vessel already mentioned, there are no ships of these types now under construction.

At present, only 32 ocean-going merchant vessels and four large dredges aggregating 200,000 gross tons are under construction in private yards. All of these vessels, half of which are for foreign owners, will be completed by the middle of 1948. By contrast, Great Britain currently is building more than 2,000,000 tons of merchant shipping and 125 of the vessels presently on the ways are passenger or cargo-passenger types.

"Don't Dump the Ships," is the title of another article by Mr. H. Myron Bull, president of A. H. Bull Steamship Co., in which he states:

The Government war-built fleet presented two contrasting possibilities for the American merchant marine—one good, one bad. The better ships furnished a substantially adequate supply for the rehabilitation of our pre-war fleets which were, for the most part, obsolete at the outbreak of the war and lost or largely worn out by war use. However, the large number of slow Liberty-type vessels constituted a threat of disaster, for if thrown upon the market there would result such a surplus of tonnage as to destroy all values. * * *

We should, therefore, further build up and modernize our merchant marine, not by drawing upon the surplus Liberty ships, but by encouraging new construction.

Shipyards in going condition are no less essential to national defense than the fleet in being. A subsidy to them, so that they may turn out ships for domestic as well as foreign trade, is no less justified in terms of national defense.

The principles of the Ship Sales Act are now being cast aside.

The State Department has recommended, and this recommendation has been adopted by President Truman, that 200 additional vessels be sold to foreigners and an additional 300 be chartered to foreigners.

When the Ship Sales Act was under consideration, the industry opposed sales to foreigners, but unsuccessfully. It then proposed that sales foreign be limited to the rehabilitation, but not expansion, of the Allied foreign fleets. This would seem to have been a reasonable place to hold the line. Prewar American vessels carried about 30 percent of our own foreign commerce. Foreigners had 70 percent. It appears reasonable that American vessels should carry at least 50 percent, but this objective cannot be reached merely by stating it. Fifty percent or any other percent can be obtained only by competing for it, and if we largely expand the foreign fleets, we make the competition infinitely more severe while we subsidize the American vessels to meet that competition. The State Department proposal envisages that by 1951 we will carry only 20 percent of our foreign commerce. Even without adoption of the proposal for further sales and charters foreign, it is anticipated that by 1951 the foreign fleets will be 20 to 25 percent above their prewar tonnages.

Another manifestation of the dumping theory is the recommendation of the President's Advisory Committee on the Merchant Marine that 250 Liberty and Victory vessels be sold for domestic operation, for what they will bring.

The shipping industry, either domestic or foreign, like any other industry, cannot be healthy when the quantity of service it has to offer substantially exceeds the demand therefor. If trades are greatly overtonnaged, the American operator will suffer devastating losses. The effect of overtonnaging on the shipping industry is so well known that it should not need restatement and further emphasis, and yet, today, it appears completely to have been lost sight of.

The stock argument that the Liberty ship is not a competitive ship and that the purchasers of the better ships need not be concerned with the sale of the Liberty ships simply does not make sense. There has been much controversy about the merits of the Liberty ship. It cannot be classified categorically as a good ship or a bad ship. It is a very useful ship for certain purposes, but by and large it is not a competitive ship for berth services, nor is it competitive, generally speaking, with specially designed bulk carriers. A limited number for services to which they are fitted would be a proper component of an American merchant marine and useful for national defense, but the number is definitely limited.

The conclusion must not be drawn from the foregoing that a Liberty ship cannot be competitive. Any ship that can carry cargo is potentially competitive, and if it is available cheap enough and in sufficient quantity, it can wholly disorganize the industry, because it involves no capital costs and invites irresponsible and speculative operations. The prudent and essentially long-range planning which is involved in large investments of private capital in modern vessels, and with which goes dependability and permanency of service, is impossible against the competition of cut-rate, cheap ship operation.

Mr. John F. Gehan, vice president of American Export Lines, Inc., has contributed an article with a punch entitled "Positive Thinking and Action Called for To Accomplish the Merchant Marine Destiny," in which he states, in part:

At a recent merchant marine conference, an inland delegate not associated with the industry said: "If we support subsidies for the maritime industry, then why not subsidies for other major American industries?"

The answer is that some domestic industries do receive subsidies in one form or another.

National thinking on the subject of subsidy wavers from time to time. In the long

run, a substantial body of public opinion has upheld the principle where necessary to protect and to encourage essential industries, particularly those which vitally affect our national defense and economic security.

We do not find consistency with respect to the merchant marine. At government level and among the public at large, there are frequent changes in attitude, which in turn have serious effect upon the course of the maritime industry.

The shipping industry is international in scope. While dedicated to the transportation of a substantial part of our Nation's commerce—generally interpreted at 50 percent of our imports and exports—it is in constant competition with vessels flying all manner of foreign flags. The crux of the matter is that foreign-flag vessels inherently are built at lower cost and are cheaper to operate than American-built and manned vessels. Thus the purpose of American differentials and operating differentials is to provide a means of equalizing cost for American operators under varying foreign competitive situations.

The public frequently loses sight of the fact that the prime purpose of the American merchant marine is to carry American commerce in good times and bad, in peacetime as in war. No foreign flag competitor is dedicated to a similar purpose. Lack of this service concept at a time when America lacked a merchant marine cost American business tremendous sums and likewise handicapped our military preparedness. * * *

There is urgent need for straight thinking and honest understanding of the nature and purposes of the construction differentials and operating differentials (subsidies) as provided under the 1936 act. The act provides for construction differential up to 50 percent, and for operating differential, where required, to provide equalization of costs for Americans who compete with vessels constructed and operated by foreign-flag owners.

American Export Lines and certain other lines have applied for 50-percent construction differential in connection with their proposals to acquire new passenger vessels.

In determining the need for 50-percent differentials in the 1936 and 1948 acts, recognition was given to the inherent spread in constructing costs here and abroad.

The Ship Sales Act of 1946 authorizes the Government to dispose of war-built vessels at 50 percent of their estimated prewar domestic cost.

Current reports indicate that foreign shipyards are operating close to capacity and that many are favored with extensive backlogs of orders for additional new vessels. Foreign costs are currently reported above their long-term averages. Because of this current condition, there is a feeling in some Government quarters that 50-percent construction differential is not necessary here at this time. Proponents of this view must not overlook the situation at home, where American yards are completely lacking new construction contracts and their costs have advanced 60 percent since the start of the war.

The public does not seem to understand that operating differential (subsidy) is subject to recapture by the Government if earned. Perhaps not enough publicity has been given to the fact that for the 5-year period, 1937–42, the Government dispersed about $50,000,000 in operating-differential payments, and that of this sum approximately $30,000,000 was earned, hence subject to recapture. Thus, the net cost to the taxpayer for this vital service averages $4,000,000 a year.

Mr. Speaker, one interested in American ocean shipping will find other pertinent articles in this same issue of the Marine News. I recommend it for general reading—by those particularly interested in the merchant marine, to bolster their knowledge and enthusiasm; by those who lack interest, to make them understand better the problems of shipping and, perhaps, to develop a more sympathetic feeling for those who go down to the sea in ships.

Now Czechoslovakia

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial from the New Hampshire Morning Union of February 26, 1948, entitled "Now Czechoslovakia":

NOW CZECHOSLOVAKIA

One sees in the Communist coup in Czechoslovakia the operation of the same program followed by the Soviets in the absorption of other countries behind the iron curtain.

This program consists of four distinct steps, cleverly designed to disguise the process of Soviet domination. The first step is to form a coalition government in which the Communists must be included, no matter how small their initial strength may be. This is followed by the inflexible demand that the Communists must control the ministry of the interior, under which the domestic police in European countries operate.

Then in due time when the Communist grip on the police is considered adequate, the charge of plotting against the state is trumped up against other parties in the government that resist Communist dictates, as a pretext for an assault upon them and their ejection from the government. This gives the Communist minority in the government an excuse for seizing control, backed by the overshadowing presence of a Russian Army somewhere in the offing.

What has happened in Czechoslovakia is not new. It runs perfectly true to form. It is the same thing that has happened in Hungary, Bulgaria, and Rumania, and that we may expect to happen again and again as the program of Soviet expansion works itself out.

True, the Western World has been more deeply shocked by the death of democracy in Czechoslovakia than it was by the submission of Hungary, Bulgaria, and Rumania to Soviet dictation. The Czechs are traditionally a democratic people. They set up a republic after World War I with western help and they made democracy work even beyond the most sanguine expectations. Democratic peoples elsewhere cannot but be saddened at seeing this brave, freedom-loving people hamstrung and hoodwinked into bondage.

Moreover, Czechoslovakia has a strategic importance in the fight for freedom in Europe far beyond Hungary and the two Balkan States. It lies at the center of the political framework of Europe, a fact that the Soviets have certainly not overlooked.

The question is: What is the Western World going to do about it? Will it stand by and see one free nation after another fall like pins in a bowling alley before Soviet machinations? The world is faced today with a new method of conquest, bloodless usually, but nonetheless effective in its operation. What nation will be next in the march of communism? One may believe that others are listed for Communist absorption in due time following Czechoslovakia.

Will the next in the list be Greece, Italy, Austria, or France? Time will tell unless the Western World awakes and decides to meet the challenge to freedom with something more than words. Let there be an end of chatter about an understanding with Russia. A sharp line of division has been drawn across the world by Moscow, and only firmness and force can stop the slow Communist attrition that blots out a free nation in a day as in Czechoslovakia.

Air Power

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 2 (legislative day of Monday, February 2), 1948

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Air Power delivered by me at the opening of the Air Forces University, Maxwell Field, Ala., on September 2, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

General Vandenberg, General Fairchild, distinguished guests, gentlemen of the faculty and student body, ladies, and gentlemen, I wish to thank General Vandenberg for his kind introduction and for extending to me the privilege and opportunity of addressing this opening class of the Air University. As we realize the dreams which we have so long cherished for an autonomous air arm within a single military establishment of Air, Ground, and Sea Forces, I am conscious of the honor of being bidden to speak on this significant and historic occasion.

This Air University—with its member schools at Maxwell Field, Craig Field, and Gunter Field in Alabama, Tyndall Field in Florida, and Randolph Field in Texas—epitomizes all that we have fought for in our efforts to build for the United States a strong defense structure that will always meet the requirements of the hour.

You gentlemen—perhaps more than any other single group in the country—are the guardians of the future of America.

It has been well said that "Air power is peace power."

This school is the cradle of the principles upon which this declaration is based. It is the laboratory in which those principles are studied and nurtured and developed. The United Nations, the Atomic Energy Commission, and our security forces hold among them the key to the survival of our civilization and perhaps even of the human race. If the United Nations and the Atomic Energy Commission cannot control the forces of totalitarian aggression and atomic destruction, our hope for the preservation of our freedom and our democratic institutions lies in the success of this Air University and the task which our country now places in your hands.

As student officers chosen from among many, you fully appreciate the responsibility which is yours. In your daily work you will

keep constantly before you the trust imposed in you.

Here at Maxwell Field the air university brings together those elements of the Military Establishment which many of us have long deemed vital to our national security—unification of the armed forces, development of air power, and military education. May I express the pride of Alabama that Maxwell Field is the home of this significant, unique, and profoundly important institution.

Maxwell Field had its beginning 37 years ago when the Wright brothers came here to carry forward the experiments begun at Kitty Hawk and to pass on their knowledge to a pitifully small handful of aviation enthusiasts. The field's first use was in the nature of a laboratory and a school when American aviation was still largely a dream.

I have watched Maxwell Field, aviation, the Air Forces, the Army educational system, and Alabama grow and develop together. We in Alabama have watched this growth as the fond parent watches the growth of his child.

In the First World War, Maxwell Field served as an aircraft-engine and repair depot. Since 1922 it has borne the name of that gallant pioneer airman, Lt. William C. Maxwell, of Atmore, Ala., who gave his life in the Philippines.

In 1931, the Air Corps Tactical School was moved to the field, and here were developed the tactics, stratagems, and techniques which made possible General Eisenhower's immortal words to the Army Ground Forces on D-day, 1944:

"If you see any airplanes, they are ours."

Maxwell Field, as an advanced flying school in World War II, turned out a long line of fighting airmen whose courage and valor will never be surpassed.

Historic Austin Hall is the birthplace of that air-ground cooperation which, joining with our naval power, finished off Japan in the far Pacific and made the race across France and Germany the most brilliant and complete victory in all military history.

After the war, the Air University of the Army Air Forces was founded here and graduated its first and only class. You gentlemen are the first class of the Air University of the United States Air Force. I know you feel pride in your selection and I congratulate each of you.

This school inherits the fine traditions of the old Army Air Service, the Army Air Corps, and the Army Air Forces, but it must ever go forward, looking ahead, thinking ahead, and planning ahead.

We must remember that there is no more reason for believing that there will always be a long-range bomber than there was for the belief that there will always be a horse cavalry. We must remember that a victorious nation tends to prepare to fight the last war while a defeated nation always plans to fight the next one. You will question yourselves frequently and search yourselves deeply to insure that your planning does not take the pattern of fighting the air war of 1940–45 all over again. You will not permit your wise concentration upon building a long-range attacking air force to obscure the need for air defense of the United States or the need perchance of an air umbrella for your comrades of the Ground Forces.

In keeping with your spirit of self-analysis, the Air Educational Advisory Board, headed by Dr. Kenneth Williams, formerly dean of the College of Education at the University of Georgia, has been established here and General Fairchild has invited civilian leaders to come here and cross-examine your dream boys from the layman's practical point of view.

We must remember that America's military strength is built upon the bedrock of America's economic strength. Our Air Force can be foremost only if we maintain supplies of strategic materials, air research of every type, and vast productive capacity.

The great problem that confronts our military establishment today is to keep the Nation aware of the need for air training and education for American youth, for maintaining and continually advancing technical research, and for preserving our aircraft industry, our factories, mills, mines, and workshops, to insure us the air power we must have if we are to remain strong and preserve the peace.

Only last week, General Spaatz, Commanding General of the Air Force, expressed deep concern over the severe reductions in Air Force personnel and the ability of the Air Force to get the replacement planes they will need this year. Two thousand replacement planes are needed, General Spaatz pointed out, but only 800 are being secured this year. He told how worried he was over the enormous decline in aircraft production and yet the aircraft industry is a fundamental element of the national security.

Your designers and your engineers and your production experts are the sinews of your air power. We must remember that tactical and strategic proficiency can be taught and acquired much more readily than aircraft technical knowledge and productive capacity can be developed.

To recover the lost ground, to rebuild and maintain the Nation's air force at security levels is a difficult task. But when things look darkest, that is the time to work the hardest. If we think that things look dark today, we have only to recall the discouraging and heart-breaking picture back in the days of Billy Mitchell, when for so long he knocked in vain at the closed door of official minds. If he and Andrews, Hickam, Knerr, Kenney, Arnold, Spaatz, Eaker, and Walter Weaver, beloved of Alabamians—if they had throttled down when the going got rough, instead of being a victorious Nation today we might be fighting with our backs to the wall. And surely we would not have unification of our armed forces with a separate autonomous air force.

Since 1921, there has been a continuous struggle for unification. Alongside the old invincibles of the early Air Corps, I joined that struggle. In 1931, we lost a bill for unification in the House of Representatives by 153 to 135. We were that close to victory. Though we lost year after year we never gave up. Like old England, we lost every battle but the last one—the pay off.

Now we have the single military establishment and a separate autonomous air arm under the National Security Act of 1947, which gives us a sound military structure.

It creates the National Security Council, the National Security Resources Board, the Central Intelligence Agency, the Munitions Board, and the Research and Development Board, that we may make certain that our foreign and military policies are coordinated and mutually supporting; that a central intelligence agency may collect and analyze that mass of information which is so essential for the Government to maintain peace and without which the Government cannot wage war successfully; that scientific research and development may be coordinated, not only within the military services, but between the military services and other Government agencies, and with industrial and educational activities; that intelligent planning may guarantee coordination of our military program with the Nation's resources in manpower, materials, and production facilities; and that all of these objectives may be accomplished with the greatest possible economy consistent with a strong and effective national security.

In the last war time was bought for us by the blood of those peoples who were attacked first; time to prepare; time to mobilize; time to plan; time to forge our winning war machine. Time saved us. But it was given to us by others. We will not have this gift again.

Our other indispensable ally was space. There was a barrier of thousands of miles of ocean between us and our enemies. The weapons of 1941 could not cross this barrier. But—like our ally of time—space will not save us again. The weapons of today can cross that barrier. The weapons of tomorrow will laugh at it. By VJ-day we had entered a new age of science, of warfare, and of world relations.

The United States has attained an unprecedented ascendancy among nations. Willing or not, we have acquired new and awful obligations. So much of the responsibility for the future peace of the world rests with us. The world looks to us for our cooperation, but even more the world depends upon our willingness and our ability to back cooperation with the military power to preserve the peace. The peaceful nations of the world know that they can cooperate to preserve the peace only if they are backed by a strong United States, strong not only in moral values and material resources, but strong in military potential.

In the United Nations we have set up the machinery for building the peace. While a strong America stands guard over the peace, we must work to make the United Nations an effective instrumentality to prevent war among nations—that through the United Nations we may substitute the rule of law and reason for force and violence.

Until this day comes, bear always in your minds and carry in your hearts the trust and the faith that America has placed in you. You are the guardians of the peace, the guardians of America.

Address by Hon. Olin D. Johnston, of South Carolina, Before South Carolina Regional Conference on United Jewish Appeal

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 2 (legislative day of Monday, February 2), 1948

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent that there be inserted in the Appendix of the RECORD a copy of the brief talk which I made before the South Carolina Regional Conference of the United Jewish Appeal, which met in Columbia, S. C., on Sunday last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a known fact that since 1918, from the administration of Woodrow Wilson through the Presidencies of Harding, Coolidge, Hoover, and the late Franklin D. Roosevelt, and even including the present administration, our national policy has been publicly stated and restated as supporting the establishment in Palestine of a national homeland for the Jewish people.

I state at the outset that this is no longer an issue. Since the pronouncement of the Balfour Declaration in November 1918 and the establishment of Great Britain as the mandatory power over that country with the consent of all of the sovereign powers of the

civilized world, there may have still been an issue, but that has been resolved for all time by the determination of what we all hope will become the most sovereign power on earth—the United Nations Assembly.

The world has long recognized that in the short period since 1918 a small but hardy band of Jews has made of Palestine a virtual oasis—a garden spot out of a desert.

Despite the Arab failure to assist the Allied cause in World War I, the Arabs received recognition for sovereign states covering over 1,000,000 square miles, with all of present-day Palestine but 10,000 square miles. Despite the aid given to Hitler by the Grand Mufti of the Arabs, who fled to Berlin to give such assistance to our common enemy, the United Nations Assembly partitioned Palestine and left for the remnant of a butchered people but 500 square miles, and yet the Arab feudal lords are not satisfied and are carrying on a holy war. What is so holy about that war? It is born of a fear that the feudal barons from all Arab kingdoms will, with the development and evolution of higher living standards in Jewish Palestine and among the masses of Arabs—most of whom are and would—continue to be friendly but for the fear of reprisal from the hired thugs of the overlords.

Our country has, happily, attained the position as the first power on earth. As such, we wield an influence in proportion to that power. Do we, however, measure up to the responsibilities which the power and influence require? I fear not, but sure hope we will. We cannot and must not stand idly by. We must take such steps which will, at the very threshold of the existence of the United Nations, implement and make effective the decisions of that body. We cannot—we must not—fail to exercise that same power and influence which brought the United Nations Assembly decision resolving the Palestine issue by partition between Arab and Jew to implement that determination.

I have called to the attention of the administration in Washington in language as forceful and, yet, as friendly as is within my command, that its silence under conditions where a people harassed, maimed, and destroyed during many centuries, but more recently in the heart of central Hitler Europe, is itself un-Christian and inhuman.

We have failed in our responsibility actively to give life to and enforce the decision of the United Nations Assembly. We have, on the contrary, actively taken a position hostile to and destructive of the international conclusion arrived at. We permit an embargo upon arms and equipment which the Jews so sorely need to defend themselves, while Great Britain disarms the Jews—gives aid and comfort to the Arabs, who, from the first, have defied the United Nations decision.

Our Nation should immediately announce that it stands foursquare behind the United Nations decision; permit United States citizens or residents to volunteer as members of an international military force representing the United Nations in such numbers and at such times as will enforce with other members in the United Nations the international decree. We will thereby give breath, vigor, and life to the international body so recently created and make its decisions the law of the civilized world.

We have heard much and read more about our interests in oil in the Middle East, particularly in Saudi Arabia. Are we to permit human blood, be it Arab or Jew, to be spilled for that reason? It is hoped that the President of the United States will restate that which is historically true—that the traditions of this country make it impossible for us now, or at any time, to permit blood to be traded for property—even oil.

It is only fair and in the commands of Christian teaching that the steps I have suggested be taken by the President, who will have not alone the support of the vast numbers of our country's citizens but also the approval and approbation of the civilized world, save for those with special interest—and you know who those are. To paraphrase Holy Writ, the Prophet Isaiah said, "Let us not be among those who justify the wicked for a reward, and deprive the righteous of justice."

The Wallace Campaign

EXTENSION OF REMARKS
OF
HON. CLYDE R. HOEY
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Tuesday, March 2 (legislative day of Monday, February 2), 1948

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article by Jim Chaney, from the Raleigh News and Observer, which discusses a very unusual meeting held at Chapel Hill. It was called a Wallace seminar. The meeting was held last Saturday and Sunday. A number of students from other colleges in North Carolina were invited to attend, and they were given instructions as to how to proceed with the Wallace campaign. There are one or two items I should like to call to the attention of the Senate, as they relate to the methods of proceeding. The students were told:

Write simple and plain letters to the editors of newspapers in which you say: "If you want to save the country from war, Wallace seems to be the only man to make President."

They were also told to write:

Why is your newspaper playing down Wallace news?

Again, these students were admonished to get into the churches, the effect being to utilize the facilities of these religious institutions to circulate and disseminate Wallace propaganda.

They were told:

But don't make your purposes too obvious. People will see your letters and get in touch with you.

Another suggestion which was made to these organizers for Wallace was:

Get on the radio stations. There are many which give free time, especially to college groups, if you sell them on the idea that it is a public-service feature. Ask for time to hold a forum with candidates of other parties taking part. A good trick is to offer four persons to debate the third-party issue or other issues. You don't bother to explain that all four are pro-Wallace.

Mr. President, I think it might be quite revealing to study the methods which will be adopted in pushing forward this "idealistic" campaign on behalf of Henry Wallace.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLANS FOR WALLACE DRIVE OUTLINED AT CHAPEL HILL

(By Jim Chaney)

CHAPEL HILL, February 28.—A heterogeneous collection of 126 progressives—similar only in their conviction that Russia and the minorities are the victims of a capitalistic greed—laid the groundwork here today for the Wallace movement in North Carolina.

To 99 percent of the population of this university village, it was Saturday and no more. To the 43 UNC students and instructors who sponsored the war council and their 83 visitors, it was M-day for the common man.

Assembled for a Tar Heel-students-for Wallace rally, they received from experts in liberal-front promotion the basic lessons in salesmanship for the common cause—how to get free time on the radio, how to push petitions, how to work through letters to the editor departments of newspapers, and how to sell the cause with words.

"There are many times," their teachers told them, "when you must not reveal your real objective."

"As students you will have many opportunities," they were told, "to campaign by talking to the right people."

The progressive method, laid down at the seminars by CIO Organizer Mike Ross and Veteran Progressive Mary Price, follows easy steps:

1. Write simple and plain letters to the editors of newspapers in which you say: "If you want to save the country from war, Wallace seems to be the only man to make President," or "Why is your newspaper playing down Wallace news?" But don't make your purposes too obvious. People will see your letters and get in touch with you. Soon you will have little groups from which to work.

2. Get on the radio stations. There are many which give free time, especially to college groups, if you sell them on the idea that it is a public-service feature. Ask for time to hold a forum with candidates of other parties taking part. A good trick is to offer four persons to debate a third-party issue or other issues. You don't bother to explain that all four are pro-Wallace.

3. Get into the churches. There are many chances to talk among church groups, especially among young peoples' groups, and if you are a church member you aren't as subject to as much criticism.

4. Get into organizations and try to get pro-Wallace speakers on the program. Newspapers and radios generally will carry speeches made at civic clubs when they might otherwise refuse them.

5. Organize entertainments and social events, chiefly as social events. They provide good opportunities to talk to people about the "progressive" program.

6. If people call you a Red, brush it off as a smear. If they go too far, remind them that they can be sued for libel.

7. Work with race groups and groups which have something definite to gain by the "progressive" movement.

8. Find out who is registered in your community. Take the people who aren't registered to the voting places and see that they register. If you carry them there, they will be more likely to vote for your candidate.

Go push the New Republic liberal magazine. It carries Wallace's speeches.

More than a third of the 126 were Negroes, chiefly from Johnson C. Smith University in Charlotte and North Carolina College in Durham. Approximately half originally were from out of State. A majority were members or past members of other liberal-front groups, particularly the Southern Conference for Human Welfare.

At least 20 listed New York as their home State; 6 New Jersey; 5, Alabama; 4, the District of Columbia; 3, Florida; and 3, South Carolina.

Ohio, Pennsylvania, Massachusetts, Virginia, California, Maryland, and Mississippi were represented by two delegates each. Others claimed Missouri, Georgia, Arkansas, Illinois, and Connecticut.

The break-down for North Carolina residents showed seven were from Greensboro, four from Charlotte, four from Stanly County, five from Alamance County, four from Durham, two from Lumberton, two from High Point, two from Wake County, and two from Columbus.

Single delegates were registered from Gastonia, Wilmington, Cabarus, Elm City, Fayetteville, Elkin, Winston-Salem, Craven, Goldsboro, Robeson, Asheville, Greenville, Davidson, Randolph, Cleveland and Brunswick.

A few names picked from the registration cards are typical:

Carl S. Leonard of Washington, D. C., State College; Thomas McPhasher of Lexington, Johnson C. Smith University; Floyd Spaulding of Clarkton, Johnson C. Smith; Sigrid Lehribereger of New York, Duke; Wallaer F. Daley of Hartford, Conn., Johnson C. Smith.

Helen Mercer, of Westfield, N. J., Duke; Nancy Bone, of Toledo, Ohio, Duke; M. J. Simpson, of Hagerstown, Md., Duke; Sidney Fletcher, of Elkin, UNC; Stanley A. Simpson, of Orange County, UNC; Richard B. Null, of Gettysburg, Pa., Duke; Charles D. Lucas, of Matthews, Duke.

Mary Upshur Elliott, of Norfolk, Va., woman's college; Arlene Batchelor, of Brooklyn, N. Y., woman's college; Miri W. Whitaker, of Batesville, Miss., Duke; Elias Freedland, UNC instructor.

W. A. McGirt, Jr., of Wilmington, former Duke student.

Marge Frantz, of Orange County, UNC; Albert H. Haney, of Birmingham, Ala., Elon; Dick Koral, of Brooklyn, N. Y., UNC; Grover C. Adams, of Charlotte, Johnson C. Smith, Walter Robinson, of New York, UNC; Don G. Harris, of Shelby, UNC: Bill Cannon, of Durham, Duke; Dot Arnett, of Greensboro, UNC; E. D. Miller, of High Point, Elon.

Sylvan Routh, of Franklinville, Elon; Hale Chamberlain, UNC instructor; J. F. Blake, of Charlotte, UNC; L. Dixon Lyon, of New Jersey, woman's college; Dorothy Blake, of Orange County, UNC; S. J. Klein, of New York, UNC; M. Lucille Davidson, of Fayetteville, N. C. college.

Daniel B. Jackson, of Orange County, UNC; Roy Watson Coble, Richard E. Deane, Doyle Edison Cowder, and Gerald Reid Chandler, all students of Pfieffer College, from Stanly County.

James Charles Johnson, of Washington, D. C., Shaw University; Ralph L. Fleming, Jr., of Greenville, Duke; James W. Stanford, of Asheville, UNC; Betsy Bush, of Florida, Duke; Isabel Elmore, of Alabama, Duke; Elizabeth Rhoads, of California, UNC.

Mildred L. Haney, of Burlington, Elon; Nancy Keen, of Burlington, Elon; William E. Gibson, Jr., of Marion, S. C., Johnson C. Smith; John H. Kier, of Mississippi, Duke; and Louise F. Schneider, of the Bronx, N. Y., Duke.

Their candidate, Henry A. Wallace, featured speakers of the two-day program reported tonight, is certain of victory.

James Waterman Wise, director of the council against intolerance and co-chairman of the citizens committee which supported Progressive candidate Leo Isacson in his successful Bronx race for Congress, told the group "the very formation of a third party today is an act of faith in democracy."

FOREMAN SPEAKS

Clark Foreman of Atlanta, Ga., president of the Southern Conference for Human Welfare and member of the national Wallace campaign committee, declared the Democratic Party is crumbling.

The word from Henry A. Wallace—received in a speech read by Sam Hirsch, Trenton, N. J., member of the Carolina Playmakers—backed up the prediction. Through a "progressive" party, Wallace's statement promised, Americans can work for peace with Russia, the adoption of Fair Employment Practices legislation and elimination of "Jim Crow" discriminations.

In sessions Sunday, the group will hear reports on operating plans; attend services at the Presbyterian Church; adopt an organization plan; elect officers, and conclude their rally with a folk-song recital by Ballad-Singing Pete Seeger.

Hardly the spontaneous demonstration some notices had described as the rally was organized by a youth who reports he plans to make the "progressive" party his career, Leonard Nelson of Miami, Fla.

A 24-year-old veteran and graduate of Columbia University, Nelson now holds the title of secretary of the National Students for Wallace, but he plans to go higher.

If Wallace wins, he told The News and Observer during a telephone conversation, he expects to find a permanent job.

If Wallace doesn't win—

"That," says Nelson, "is a chance everybody has to take in politics."

At Chapel Hill, among the members of the University of North Carolina Wallace Club, Nelson found ready and experienced workers—among them Junius Scales, son of a prominent Greensboro industrialist and reportedly a former leader of Chapel Hill Communists.

The president of the club, Bill Richardson, is a former resident of Belhaven. The active members are part-time and junior instructors, their wives and older students.

Kingston, Once Capital of Tennessee

EXTENSION OF REMARKS
OF
HON. TOM STEWART
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Tuesday, March 2 (legislative day of Monday, February 2), 1948

Mr. STEWART. Mr. President, I ask unanimous consent to place in the Appendix of the CONGRESSIONAL RECORD a very historically interesting story written by Mr. E. E. Patton, of Knoxville, Tenn., one time mayor of that city, and published in the Knoxville Journal of February 29, 1948.

The story concerns the interesting fact that Kingston was at one time actually the capital city of Tennessee by reason of a promise made to the Cherokee Indians in the area at that time.

I recommend the article as interesting reading.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"PROMISE" TO INDIANS MADE KINGSTON CAPITAL OF TENNESSEE FOR 2 HOURS

(By E. E. Patton)

Four cities have had the honor of being the capital of Tennessee: Knoxville, Kingston, Murfreesboro, and Nashville. The dates are as follows: Knoxville, 1796 to 1802; 1807 to 1811; 1817 to 1819. Kingston, 1807—1 day, 2 hours. Nashville, 1812 to 1815; 1826 to 1843, when it became the permanent capital. Murfreesboro from 1819 to 1825. In this article I shall deal only with Kingston. I quote:

"On October 27, 1805, the State made the Treaty of Tellico with the Cherokee Indians, in which is the following clause:

"Whereas it has been represented by the one party or the other, that the section of land on which the garrison at South West Point, and which extends to Kingston, is likely to be a desirable place for the Assembly of Tennessee to convene at—now, the Cherokee, being possesed of a spirit of conciliation, and seeing that this tract is desirable for public purposes and not for individual advantages—cede to the United States the said section of land, understanding at the same time, that the buildings erected by the public are to belong to the public, as well as the occupation of the same, during the pleasure of the government."

"In order to give color of claim made in the Treaty of Tellico, the General Assembly on September 13, 1806, directed that Knoxville should be the seat of government after the second Monday in September 1807. On September 21, 1807, the legislature convened at Kingston but adjourned the same day to meet 2 days later in Knoxville."

The above is a quotation which gives the history of the capital at Kingston; it is recited in a very few words, and those words are very hazy. They must have been written by a career diplomat. The statement has been made that the State authorities felt honor bound to have the capital at Kingston on account of a promise made to the Cherokees. If the above quotation contains a promise, I fail to find it. It merely states that Kingston is a "desirable place for the assembly of Tennessee to convene at"—bad grammar.

At any rate, the legislature—house and senate—and the Governor made a pious pilgrimage to Kingston; both houses were called to order; and in 2 hours or less time, they had adjourned to meet 2 days later in Knoxville. They then climbed into their wagons, buggies, or carry-alls, or straddled their horses and came back to Knoxville by easy stages.

Roane County was named for Archibald Roane, second Governor of Tennessee. He was highly educated; was an eminent lawyer and outstanding judge. Under the Tennessee constitution, a governor may not serve more than three consecutive terms. John Sevier was Governor from 1796 to 1802: Roane succeeded him and was a candidate for reelection in 1804, but was defeated by Sevier, who served three more terms, going out of office in 1810. Roane is buried in a cemetery about halfway between Concord and the Farragut High School; his grave is marked by a handsome monument erected by the State, the bill having been sponsored by the late Hon. John C. Houk.

Roane County is famous in many ways; it has rich soil and as capable farmers as may be found anywhere. It has fine coal mines and is rich in high-grade iron ore. Harriman and Rockwood are as important manufacturing cities, of their size, as you will find anywhere. The public-school system is one of the best in the State, Mr. J. F. Brittain has been superintendent of schools for many years, and his heart is in the work. The principals and teachers of the grammar and high schools are most capable and efficient.

Roane County has been a veritable breeding ground for eminent lawyers and judges. Martin W. Littleton, one of the great New York lawyers, was a native of Roane. Then there were Judge Thomas A. R. Nelson, Judge W. B. Staley, Judge Robert M. Jones, for many years chancellor of Knox County, the late Hon. W. L. Welcker, and Judge James Sevier, one of the most eminent lawyers the State has produced. Sam Rayburn, for several years Speaker of the United States House of Representatives, was born in Roane County. Hon. James G. Crumbliss, son of Maj. Henry Crumbliss, judge of the county court, clerk, and master and for 4 years United States marshal of east Tennessee, is a native of Roane.

Miss Rachel Littleton of Kingston married Cornelius Vanderbilt, Jr., in one of the most notable weddings in New York.

I have mentioned the schools of Roane County, and I want to state further that no

county in the State has a better class of citizenship that Roane. Most of them own their own homes; they are law abiding; there is very little crime in that county. The business and professional men are among the leaders of the State.

There is little race or religious prejudice in the county, and the county has the distinction of having within its borders the first Christian Church organized in Tennessee; it is Post Oak Springs Church, on the highway between Kingston and Rockwood. Judge John R. Neal's father, a Confederate officer, lawyer, and Congressman, is buried just east of the church mentioned above.

I want to speak of the movement that has been discussed for many years: the erection of a suitable and appropriate tablet or marker on the site of the first capitol in Knoxville and also a similar action in regard to the site of the capitol in Kingston. The State historical commission is granted funds every year by the legislature for purposes just like this, and it would seem that no more appropriate action could be taken by this commission than to mark the sites of the capitols in Knoxville and Kingston.

The Knoxville Journal has been very interested in matters of this kind; in fact, it has marked a number of historic spots in and around Knoxville, and I believe the people of Roane County will appreciate a program for marking this historic spot. There are 95 counties, but only 4 of them have had the honor of having the capital within their borders.

An appropriation by the State historical commission, the county court of Roane County could be matched by subscriptions from the progressive and loyal people of the county. This marker should be worthy of the place that it memorializes; and we would expect it to stand as long as America is kept free. If you are favorable toward a movement of this kind, write the editor of the Knoxville Journal and express your views.

A Salutary Reform

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Tuesday, March 2 (legislative day of Monday, February 2), 1948

Mr. LUCAS. Mr. President, recently I submitted a concurrent resolution seeking to reform senatorial committee procedure. On March 1 of this year the New York Herald Tribune published a very important editorial under the caption, "A salutary reform," which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A SALUTARY REFORM

The congressional investigation is a most useful, indeed an essential, tool of Government in the United States. It is the best official means of keeping the public informed of the operations of Federal administration, of examining into errors and frauds, of functioning in the twilight zone where the law itself cannot—or for some reason does not—take effective action, and where the press is unable to obtain access to all the facts. The investigating committee is particularly important now when the threat to the American system may take forms which are not comprehended in the constitutional system of safeguards for the State and the individual. Unfortunately, the congressional investigation can be and has been abused for party or private advantage.

Senator LUCAS has therefore introduced a concurrent resolution which would bind the committees of both Senate and House to certain rules protecting witnesses and accused persons. Hitherto, the committees have been able to establish their own rules of procedure which depended upon the good taste, judgment, and fairness of the committee majority, and which often resulted in the browbeating of witnesses, the utterance of unsubstantiated charges to which the accused was not permitted to make formal reply, and a number of other infringements upon individual rights and the public interest.

Senator LUCAS's proposals include many rules, not all of which may be found necessary or advisable. But the principles upon which he bases his code are certainly in accord with the American tradition. They would not hamper a congressional committee in getting to the roots of any matter. They would cause no change in the procedure of committees which normally conduct their investigations decently. They would, however, put a bridle on fanatics.

It is difficult to see how this would interfere with the necessary flexibility of a congressional investigation. Instead, it would give such investigations enhanced prestige and authority. Therefore, Congress in its own interest and the public for its own security, should get behind the Lucas resolution and see that its spirit is written into congressional practice. There is plenty of work for congressional investigating committees, and they should be made to perform their tasks in an atmosphere which will give the best possible results.

Address of Hon. L. B. Schwellenbach, Secretary of Labor

EXTENSION OF REMARKS
OF
HON. ANTONIO M. FERNANDEZ
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. FERNANDEZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. L. B. Schwellenbach, Secretary of Labor, before the Jefferson-Jackson centennial dinner, February 19, 1948, in Albuquerque, N. Mex.:

I appreciate this opportunity to come back to the West and to join with you in commemorating the birthdays of Andrew Jackson and Thomas Jefferson. Thomas Jefferson founded our party. It was through his vision that it was conceived. It took Jackson, however, with all of his strength of character and virility and toughness against opposition so to strengthen it that it might be preserved as an instrument for the protection of American democracy through the many decades since Jackson's death.

To the Americans of Jackson's day he was looked upon as coming out of, and speaking for, the West. To most Americans on the Atlantic seaboard President Truman is looked upon as coming from the West. Andrew Jackson was being critized for being plain, common. It was said that he was not sufficiently erudite to occupy the high office of the Presidency. Many of the things that were said about Jackson then are being said about President Truman today. Jackson had the courage and the faith to carry on his fight against most bitter opposition. He knew he could, and he did succeed in protecting the institution of American democracy. All I know about Andrew Jackson is what I have read in many volumes printed about him. I have known President Truman well over the past 11 years. I know that he, too, has that same courage and that same faith in the American people, and that under his leadership we will carry through with a solution of the almost overwhelming problems with which we are today confronted.

I was particularly delighted to accept this invitation to come to Albuquerque. This was because of the fact that during the last 13 years I have come to have a very intimate acquaintanceship with, and a very affectionate regard for, three of the public servants that you have sent to Washington. The first of these whom I met was Senator HATCH. When first I met him I did not realize fully the deepness of his strength of character. He was soft of voice, kind, and considerate. It took only a short time for me to realize, as I watched him debate on the Senate floor, that he could present as tough a debate as any Member of that body. No man has gained a position of respect for intelligence and integrity higher than that of Senator HATCH. A few months later Senator CHAVEZ was sworn in as a Member of the Senate. He, too, has gained the respect of the Members of that body. He has the remarkable attribute which is possessed by too few people—to know that a straight line is the shortest distance between two points. He plunges into a debate armed with the facts, and it makes it rather difficult for anyone to withstand the force of his argument because he has so carefully conceived the point which he intends to make. I did not know Secretary Anderson until I returned to Washington in July 1945. I have known several Secretaries of Agriculture. I served on a Committee of Agriculture when I was in the Senate. During that 6-year period not only the Secretaries, but the Assistants and many experts from the Department testified. I can say without qualification that Secretary Anderson has a better grasp of the broad problems of the farm than anyone who appeared before our committee during the 6 years I was in the Senate.

My home, as you know, is in Spokane, Wash. To a great extent the eastern part of the State of Washington is similar to New Mexico. We have some of the same problems. We have the problem of reclamation and irrigation. We have the problem of the development of power through the dams, which not only are an aid to navigation, but which also are used for the purpose of flood control. So I think I know a little about the problems of New Mexico which went through years and decades of Republican neglect, and which have at least partially been solved by the interest which the Democratic administrations have shown since 1933.

Probably no State in the Union is more vitally concerned with problems of irrigation and reclamation than is your State of New Mexico. My State of Washington, with its vast supplies of water and power generated from projects made possible under Democratic administration, has difficulty in conceiving of water shortages which exist in the more arid regions of the Southwest, but at the same time present serious problems of flood control.

Yet, I understand from my more or less intimate association with your representatives in the Congress and from other sources, that you here in New Mexico, even in this fair city of Albuquerque, do have both problems to consider and sometimes they exist almost simultaneously, however impossible that may seem to be to those who have no genuine conception of the great Southwest.

When I say those who do not understand the problems of the Southwest, I might just as well include all of the West, which embraces my own State in the northwestern

part of the Nation. After all, the West is the West, whether it is the Southwest or the Northwest.

While we on the one hand have an abundance of water supply, and you on the other may have a scarcity, nevertheless the unalterable fact remains that the development of our great regions depends upon a continuation of the philosophies and theories advocated and carried out by Democratic administration of the Federal Government. Without Federal assistance, we in the Northwest never would have been able to construct our vast projects which contributed so much to the war effort and without which a different production story might have been written.

As more or less a stranger within your State, I shall not attempt to discuss specific projects. I do know that here at Albuquerque you are vitally concerned in adequate flood control and protection against the waters of the Rio Grande. Also, I am told that there are some differences existing between those of you interested in the Middle Rio Grande Conservancy District and others of your citizens in the southern part of your State—including, but never overlooking, your neighboring State of Texas. Whatever these differences may be—and I am sure they are real—they can be reconciled. Under a Democratic Congress, with a Democratic President, whatever flood protection is needed in the middle Rio Grande can and will be given; and, at the same time, ample protection for the users of water under the Elephant Butte project will be afforded. In the end the development and protection of this area can go forward without injury to any, and real benefit to all.

The same is true of your greatly needed developments at Tucumcari, Fort Sumner, and Carlsbad. Your problems on the Gila and the San Juan are not insignificant. All in all, these different streams and systems add up to a general situation which prevails throughout the entire West. This general condition, prevalent all over the West, requires an administration which is cognizant of and sympathetic with our natural resources and their proper development. This has never occurred under Republican administration, and the actions of the present Congress speak more loudly than any words of mine the absolute impossibility of any future development by any Republican administration.

I want to talk to you for awhile about an old friend of mine. I met him on January 3, 1935. There were 14 of us in the group, including my good friend, Senator Guffey, of Pennsylvania. We knocked upon the doors of the United States Senate, presented our credentials, and were accepted into membership in that body. One of the most unassuming and humble of that group was Harry S. Truman, now the President of the United States. I am sure that no one of us on that cold January day had the slightest thought of, or aspiration to, the office of the Presidency. There was within the group a feeling of friendliness and mutual respect that I have not seen in any group entering the Senate since. We had no bloc of votes. We held no caucuses. Yet because of the fact that we were the first group of new Senators elected after President Roosevelt assumed office, and because we had all pledged ourselves to our constituencies to uphold the hand of the President in his efforts, there was a certain solidarity about the group which made it distinctive.

Senator Truman did not speak on very many subjects. He wasn't one who thought he knew the answer to all of the questions that might arise. Yet, when he did speak, it was found that he knew the facts and knew the problem, and spoke only because he sincerely believed that the particular piece of legislation would meet the situation as it then existed. For example, we found out, when the question came up of railroad reorganizations because of improper financing of such reorganizations in the past, that Senator Truman knew more about it than any other Member of that body. The same was true when the civil aeronautics bill came on for consideration. Slowly, gradually, but nevertheless deeply ingrained in the minds of the Members of the Senate, there developed a feeling of confidence in, and respect for, the ability, the integrity, and the sincerity of this unassuming man.

After 6 years I left the Senate and moved back to my home to go on the Federal bench. During that 6 years of effort to advance the welfare and well-being of the American people Senator Truman made a record which in itself is proof of the intensity of his belief that, insofar as it can, the Federal Government must be ever-watchful to guard the interests and the welfare of the great mass of the people. Let us glance briefly at that record. During our first year he voted for the Wagner Labor Act, social security, the Agricultural Adjustment Administration, and the ratification of the Treaty of Adherence to the World Court. In 1936 he voted for the Soil Conservation Act and against sustaining the bonus payment veto, and against returning relief to the States. In 1937 he voted for the low-cost housing bill, the Fair Labor Standards Act, the continuation of the Civilian Conservation Corps, and the continuance of reciprocal trade agreements. In 1938 he favored the antilynching bill cloture, the naval expansion bill, and WPA appropriations. In 1939 he voted for the civil liberties bill, the Hatch Act, the lifting of the arms embargo, and for adequate appropriations for aeroplanes, ships, and military stock piles. In 1940 he voted for the conscription bill and farm parity payments.

Those are but a few of the votes which he cast while I was a Member of the Senate. I have selected them as typical. Surely, that record alone must be proof to anyone that he has sympathy and understanding of the problems of those people who have no special lobbies and who have no one to speak upon their behalf before the committees which prepare such bills for consideration.

Then the war came on and Senator Truman saw the difficulties which would arise. We were going into a war program—the largest in the history of any nation in the world. We were undertaking to supply, not only our own armies, but the armies of most of our allies. He introduced a resolution which the Senate approved by which there was authorized the setting up of a War Investigating Committee. He became chairman of that committee. I might go on for an hour discussing the success that committee had in almost every field involving the war effort. Let me give you three illustrations. It ended the army camp scandals and saved the taxpayers $250,000,000. It broke the bottleneck on aluminum and made possible the subsequent record in airplane production that contributed so largely to winning the war. It came to the aid of small business which was being pushed out of the war picture by large corporations. You may inquire how this committee, functioning during the strenuous wartime period and having to combat the very natural pressures by which the patriotism of the country made it difficult for any committee of this nature effectively to function because of the criticisms that it was impeding the war effort, did function, and did succeed. This inquiry might very well result from what you have read and heard about the same committee a few months ago when, in its first major postwar investigation, it turned the committee hearing into a hippodrome and caused those in charge to look like clowns because of their ineptness and their lack of knowledge of the facts which they set out to investigate. The answer is very simple. During the war the committee was chaired by Senator Truman. He adopted certain rules for the conduct of the committee. The first was that the committee should not prejudge any case until first it had mastered the facts of that case. It was a committee of inquiry, and not of persecution. Its hearings, for the most part, were held quietly and without demonstration or display. Mr. Truman does not have a flair for dramatics. He sought no personal publicity, although the success of his efforts in itself resulted in Nation-wide publicity. It was not a partisan committee which had as its purpose the smearing of individuals. Whether they dealt with industry, labor, or the Government, the committee called its shots as they saw them even if, as a result, those in charge of the war might be hit by them. By and large throughout the country confidence in the committee and Mr. Truman was so great that the people were willing to make many more sacrifices which they would not have made had they lacked that confidence. Here was a simple man who honestly and courageously investigated and told them the truth no matter what might result therefrom.

It was but natural in 1944 when the Democratic Convention in Chicago selecting a candidate for Vice President it turned to the same man who had such a reputation for honesty, integrity, and fearlessness as did the Senator from Missouri. He was elected to that office and was happy in it because it gave him the opportunity to deal and work with the group of men in the Senate whom he had come to know and to admire regardless of their political party affiliations. He was permitted to occupy that office but a few months. Suddenly, and with no warning as to its imminence, the hand of death stopped the beating of the heart and stifled the voice of the man who for 12 years had carried the burdens of the American people.

Late one afternoon Harry Truman was called to the White House and informed that, then and there, he must assume the responsibilities and obligations and the duties of the Presidency of the United States. Events since have proved that on that afternoon he took over the most stupendous task which any man has ever undertaken in any country in the world. Undaunted and unafraid, he assumed the obligations. Even he did not then realize how rough and rocky was the road ahead. A few weeks after he became President the shooting war in Europe collapsed. To many, that meant a partial end of war activities. The problems of reconversion and reconstruction presented themselves immediately. The President was faced with the task of balancing the two. On the one side, he must provide leadership to a successful termination of the campaign in the Far East; on the other side, he must attempt to make the delicate adjustments from war to peace in a portion of our economy without disturbing the necessary activities behind the campaign against Japan.

In a few short months that campaign ended with the collapse of Japan's Empire and its unconditional surrender. That surrender was greeted with heart-felt thanks by every man, woman, and child in the United States, even including those who knew that their own brothers or husbands or sons would never return from the battlefields in which they were buried.

It has taken a considerable length of time for the American people to realize that reconversion to peace is even more difficult than conversion for war. After the almost 4 years duration of the war people were tired; they had worked long hours; many hours of the day when they did not work the time was spent in extra duties performed for the benefit of the war. The end of the shooting was

in no sense the end of the war. The lives and portions of the bodies of our men were given that the democratic process and the free enterprise system would be permitted to exist wherever in the world the people wanted it to exist. Until we reach that point, the war is not yet over.

During all of that time, and up to and including this very minute, the policy of President Truman has not changed. He has worked consistently and energetically to bring about such a condition. Yet, even today, there are those who look wishfully back at 1939 and would seek to a return to it. We will not return to the days of 1939—this, for the simple reason that we cannot return to those days. We cannot do it and maintain our economic system or the democratic privileges which our forefathers gave us. If that wishful thinking were not so tragic, I would get amusement out of it. I was in the Senate then. I not only read, but I analyzed my mail. I know that those same people who today wish to return to the conditions of that time were extremely unhappy in those days because they wanted to turn back the clock 10 years to the predepression days of 1928 and the first 6 months of 1929.

The problems which confront us now are immediate, important, and emergent. The President discussed them with the American people from time to time. He described them as "high prices at home and hunger and cold abroad." As he said, "We could choose the course of inaction, we could wait until depression caught up with us, until our living standards sank and our people tramped the streets looking for jobs. Other democratic nations would lose hope and become easy victims of totalitarian aggression. That would be the course of defeatism and cowardice." This call to the American people was made modestly and unassumingly, yet it was made courageously and even daringly. The time has come for the American people to respond to this call. The goal which the Administration seeks is easy of understanding, but difficult of attainment. This is no time for timidity. This is no time for delay or quibbling. The President seeks, as he rightfully should, the cooperation of the people of America. We must have faith in our system of Government, faith in our economic system of free enterprise, and faith in the God who guides our footsteps. If each of us imbued with that spirit of faith is moved onward by determination and courage and daring, there can be no doubt that we will attain that goal for which the war was fought, and for which so many lives were given, and so much of our resources expended. We cannot do less.

Are Treaties Meaningless?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. REED of New York. Mr. Speaker, what nations in western Europe will be our allies if and when hostilities break out between the United States and Russia?

I invite attention to two treaties of fairly recent date, one entered into in 1942 between the Union of Soviet Socialist Republics and Great Britain, and the other between the Socialist Republic and France, the latter executed in 1944.

I am inserting these treaties in the RECORD under unanimous consent:

LONDON, *May 26, 1942.*

[Ratifications exchanged at Moscow, July 4, 1942.]

TREATY OF ALLIANCE IN THE WAR AGAINST HITLERITE GERMANY AND HER ASSOCIATES IN EUROPE AND OF COLLABORATION AND MUTUAL ASSISTANCE THEREAFTER CONCLUDED BETWEEN THE UNION OF SOVIET SOCIALIST REPUBLICS AND THE UNITED KINGDOM OF GREAT BRITAIN AND NORTHERN IRELAND

His Majesty The King of Great Britain, Ireland, and the British Dominions beyond the Seas, Emperor of India, and the Presidium of the Supreme Council of the Union of Soviet Socialist Republics;

Desiring to confirm the stipulations of the Agreement between His Majesty's Government in the United Kingdom and the Government of the Union of Soviet Socialist Republics for joint action in the war against Germany, signed at Moscow on the 12th July, 1941,[1] and to replace them by a formal treaty;

Desiring to contribute after the war to the maintenance of peace and to the prevention of further aggression by Germany or the States associated with her in acts of aggression in Europe;

Desiring, moreover, to give expression to their intention to collaborate closely with one another as well as with the other United Nations at the peace settlement and during the ensuing period of reconstruction on the basis of the principles enunciated in the declaration made on the 14th August, 1941,[2] by the President of the United States of America and the Prime Minister of Great Britain to which the Government of the Union of Soviet Socialist Republics has adhered;

Desiring, finally, to provide for mutual assistance in the event of an attack upon either High Contracting Party by Germany or any of the States associated with her in acts of aggression in Europe.

Have decided to conclude a treaty for that purpose and have appointed as their Plenipotentiaries:

His Majesty The King of Great Britain, Ireland, and the British Dominions beyond the Seas, Emperor of India,

For the United Kingdom of Great Britain and Northern Ireland: The Right Honourable Anthony Eden, M. P., His Majesty's Principal Secretary of State for Foreign Affairs;

The Presidium of the Supreme Council of the Union of Soviet Socialist Republics: M. Vyacheslav Mikhailovich Molotov, People's Commissar for Foreign Affairs,

Who, having communicated their Full Powers, found in good and due form, have agreed as follows:

PART I

Article I

In virtue of the alliance established between the United Kingdom and the Union of Soviet Socialist Republics the High Contracting Parties mutually undertake to afford one another military and other assistance and support of all kinds in the war against Germany and all those States which are associated with her in acts of aggression in Europe.

Article II

The High Contracting Parties undertake not to enter into any negotiations with the Hitlerite Government or any other Government in Germany that does not clearly renounce all aggressive intentions, and not to negotiate or conclude except by mutual consent any armistice or peace treaty with Germany or any other State associated with her in acts of aggression in Europe.

PART II

Article III

(1) The High Contracting Parties declare their desire to unite with other like-minded States in adopting proposals for common action to preserve peace and resist aggression in the post-war period.

(2) Pending the adoption of such proposals, they will after the termination of hostilities take all the measures in their power to render impossible a repetition of aggression and violation of the peace by Germany or any of the States associated with her in acts of aggression in Europe.

Article IV

Should one of the High Contracting Parties during the post-war period become involved in hostilities with Germany or any of the States mentioned in Article III (2) in consequence of an attack by that State against that Party, the other High Contracting Party will at once give to the Contracting Party so involved in hostilities all the military and other support and assistance in his power.

This Article shall remain in force until the High Contracting Parties by mutual agreement, shall recognise that it is superseded by the adoption of the proposals contemplated in Article III (1). In default of the adoption of such proposals, it shall remain in force for a period of twenty years, and thereafter until terminated by either High Contracting Party, as provided in Article VIII.

Article V

The High Contracting Parties, having regard to the interests of the security of each of them, agree to work together in close and friendly collaboration after the re-establishment of peace for the organisation of security and economic prosperity in Europe. They will take into account the interests of the United Nations in these objects, and they will act in accordance with the two principles of not seeking territorial aggrandisement for themselves and of non-interference in the internal affairs of other States.

Article VI

The High Contracting Parties agree to render one another all possible economic assistance after the war.

Article VII

Each High Contracting Party undertakes not to conclude any alliance and not to take part in any coalition directed against the other High Contracting Party.

Article VIII

The Present Treaty is subject to ratification in the shortest possible time and the instruments of ratification shall be exchanged in Moscow as soon as possible.

It comes into force immediately on the exchange of the instruments of ratification and shall thereupon replace the Agreement between the Government of the Union of Soviet Socialist Republics and His Majesty's Government in the United Kingdom, signed at Moscow on the 12th July, 1941.

Part I of the present treaty shall remain in force until the reestablishment of peace between the High Contracting Parties and Germany and the Powers associated with her in acts of aggression in Europe.

Part II of the present Treaty shall remain in force for a period of twenty years. Thereafter, unless twelve months' notice has been given by either Party to terminate the Treaty at the end of the said period of twenty years, it shall continue in force until twelve months after either High Contracting Party shall

[2] "United States No. 3 (1941)." Cmd. 6321. (The declaration was drawn up by the Prime Minister and the President of the United States of America on August 12, 1941, and made public on August 14.)

have given notice to the other in writing of his intention to terminate it.

In witness whereof the above-named Plenipotentiaries have signed the present Treaty and have affixed thereto their seals.

Done in duplicate in London on the 26th day of May, 1942, in the English and Russian languages, both texts being equally authentic.

TEXT OF THE RUSSIAN-FRENCH ALLIANCE

(The following is the text of the treaty of alliance and mutual assistance between the Provisional Government of the French Republic and the Union of Socialist Soviet Republics, as transmitted today by the French Telegraph Service and reported by the Federal Communications Commission:)

The Provisional Government of the French Republic and the Praesidium of the Supreme Council of the Union of Socialist Soviet Republics.

Resolve to pursue together, and until the end, the war against Germany;

Convinced that, once victory has been achieved, the reestablishment of peace on a stable basis and its maintenance for a lasting future require the existence of close collaboration between them and with all the United Nations;

Resolved to collaborate with a view to creating an international system of security, making possible an effective maintenance of general peace and guaranteeing the harmonious development of relations between nations;

Desirous of confirming reciprocal commitments resulting from an exchange of letters on Sept. 20, 1941, relating to joint action in the war against Germany;

Certain of meeting, through the conclusion of an alliance between France and the U. S. S. R., the feelings as well as the interests of the two nations, the demands of war as well as the requirements of peace and of economic reconstruction in full conformity with the aims adopted by the United Nations,

Have resolved to conclude a treaty and to this effect have appointed as their plenipotentiaries:

The Provisional Government of the French Republic, M. Georges Bidault, Minister of Foreign Affairs; the Praesidium of the Supreme Council of the Union of Socialist Soviet Republics, M. Vyacheslaff Mikhailovitch Molotoff, People's Commissar for Foreign Affairs. Their appointments having been recognized as being fully valid, they have agreed on the following provisions:

ARTICLE I

Each of the high contracting parties will continue to fight by the side of the other and of the United Nations until final victory over Germany. Each of the high contracting parties undertakes to afford to the other help and assistance in this struggle by all the means at its disposal.

ARTICLE II

The high contracting parties undertake not to enter into separate negotiations with Germany or to conclude, without mutual consent, an armistice or a treaty of peace with either the Hitlerite Government or any government or authority set up in Germany with the aim of prolonging or maintaining the German policy of aggression.

ARTICLE III

The high contracting parties undertake to adopt in complete agreement, at the end of the present conflict with Germany, all measures necessary to eliminate any new threat on the part of Germany and to oppose any initiative of a nature capable of making possible a new attempt at aggression on her part.

ARTICLE IV

If one of the high contracting parties should find itself involved in hostilities with Germany either as the result of an aggression committed by Germany or as the result of the provisions of the above Article III, the other high contracting power will immediately give the contracting power so involved all the help and assistance in its power.

ARTICLE V

The high contracting parties undertake not to conclude alliances and not to participate in any coalition directed against one of them.

ARTICLE VI

The high contracting parties agree to give each other all possible economic assistance after the war in order to facilitate and hasten the reconstruction of the two countries and in order to contribute to the prosperity of the world.

ARTICLE VII

The present treaty in no way affects the commitments previously undertaken by the high contracting parties toward third parties by virtue of published treaties.

ARTICLE VIII

The present treaty, of which the French and Russian texts are equally valid, will be ratified and instruments of ratification thereof will be exchanged in Paris as soon as possible. It will take effect immediately on the exchange of instruments of ratification and will remain in force for twenty years. If this treaty is not denounced by one of the high contracting parties at least one year before the expiration of this period, it will remain in force without limitation as to its duration, each one of the high contracting parties being then able to terminate it by means of declaration to this effect subject to one year's notice.

The plenipotentiaries above named have hereunto set their hands and seals.

Made in Moscow in duplicate on Dec. 10, 1944.

BIDAULT,
Minister of Foreign Affairs.
MOLOTOFF,
Commissar for Foreign Affairs.

Devious Ways of Communism

EXTENSION OF REMARKS
OF
HON. TOM STEWART
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Tuesday, March 2 (legislative day of Monday, February 2), 1948

Mr. STEWART. Mr. President, I ask unanimous consent to insert in the Appendix of the CONGRESSIONAL RECORD a very able and thought-provoking editorial from the Nashville Banner, published in Nashville, Tenn.

This editorial appeared on Saturday, February 28, 1948, and I commend its reading to all interested in the defeat of communism. It points out that while we spend billions to stem the tide of communism in Europe, we are tolerating things in our own country which are utterly inconsistent with our anti-communistic flames.

I commend this editorial and congratulate the editor and the newspaper.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COMMUNISM, A SNEAK ENEMY, BETRAYS ITS HAND

In communism, the civilized world faces an enemy which is at once a sneak and a pervert, a lying, murderous foe, spawned in hell and doing its master's bidding. It breeds on treachery, and fastens by that method on the weak and sleeping. It penetrates, where permitted, to seduce the unvigilant. It exploits at the same time every advantage occasioned by the reluctance of contemporaries to initiate a breach in present "peace" machinery.

We mention the latter point thus early in the discussion because it is obvious that Russia—bound body and soul by this design of world revolution—will block every effort of the United Nations to achieve any working formula of peace. The Kremlin is using UN, and its power of obstruction therein, to stultify joint action against this conspiracy of infamy, expansionism, and aggression, while its own agents knock over government after government in nation after nation. It will continue to do that so long as by choice on its part and sufferance on the part of the rest, it remains ostensibly a "member" of this organization of the "peace-loving."

While deploring Communist conquest of such nations as Czechoslovakia, the likely conquest of Finland, the possible spring putsches against France and Italy, contemporaries like the Big Three and Four still shake the hands of Communist-Kremlin delegates, debate with them, and go through all the ceremonious motions of sweet and trusting fraternity. Yes, we even contemplate termination of diplomatic recognition where Czechoslovakia is concerned, because it now is captive, yet preserve full recognition of its captor, lest we offend as outspoken and back-stabbing an enemy as we ever have had.

We spend billions, and contemplate spending other multiplied billions of dollars to stem the tide of surrender to communism in Europe, but break bread with it at the peace table and tolerate its conspiracy within our very doors. We wax indignant (and properly so) when liberty falls within the area which communism has designated as its own immediate orbit, and purges ensue to seal with blood a covenant with the devil over there, but ignore territorial plans drawn at Moscow, picked up and advertised and propagandized here, to carve the southland into a Soviet colony populated and ruled on a racial basis.

Yes, the Kremlin has all its maps ready—including the United States map. It has filled in part of those maps, by expansion and aggression. Its plans are worldwide. What has happened in Czechoslovakia, and is in store for Finland; what the Kremlin contemplates in its renewed drive on France and Italy, are all part of its plan. It is divide and conquer, penetrate and conquer, attack where necessary and conquer, purging as it goes.

But it is also: Maintain the subterfuge of peace-loving participation in joint efforts as long as possible; play on the sympathy, the gullibility, the patience of these nations as long as possible; be misunderstood as long as possible Arm meanwhile. Sabotage meanwhile. Steal atom secrets meanwhile. Do missionary work, meanwhile, and count on the stupidity of sympathetic jackasses to get in a kind word for continuing appeasement.

Communism is a sneak, the most depraved and dangerous in history. Yet we are playing with it—and that is its danger.

It can be defeated. It can be contained in a small area where it will die of its own rottenness and eventually be buried as were nazism and fascism of another hue. But we're certainly not going to kill it with kindness, or discourage its caress of death all over the earth by submitting to its embrace for just the seduction that is on its perverted mind. When the United Nations wake up to this, a sufficient number remaining will be United Nations to take care of the Kremlin threat.

The International Communist Movement

EXTENSION OF REMARKS
OF

HON. W. KINGSLAND MACY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. MACY. Mr. Speaker, I would like to insert into the RECORD at this point excerpts from the official organ of the new international Communist alliance, the Communist information bureau or cominform.

In view of the current congressional study of plans to finance foreign countries in their fight against Communist domination and also in view of forthcoming legislative proposals dealing with the Communist problem within the United States, I believe that Members of Congress will find helpful these expressions by the ringleaders of the international Communist conspiracy.

Through the wide distribution of the CONGRESSIONAL RECORD in the schools and libraries of the country, I feel that the general public will also benefit from this timely and significant material.

The Cominform was established during a secret meeting of leaders from nine European Communist parties in Poland last September. This organization, which has its headquarters in the Soviet puppet state of Yugoslavia, is recognized as nothing more than a resumption of open activities by the old Communist International, that Moscow-directed alliance for world revolution which Stalin pretended to dissolve in 1943 when he needed our help to defeat Hitler.

I am submitting excerpts from the first issue of the Cominform's publication, dated November 10, 1947, as well as excerpts from the issue of December 1, 1947. The articles leave no doubt that the international Communist movement considers the United States to be the chief stumbling block to world-wide Communist control, and as such is to be made the chief target of attack by Communists throughout the world, including the United States Communists.

The publication bluntly tells us that the Communists are now on the offensive. A. Zhdanov, a secretary of the Soviet Communist Party and member of the powerful Politburo of the Soviet Union, who was one of the leaders in the formation of the Cominform, confesses that the U. S. S. R. plans to bend every effort to see that the Marshall plan is doomed to failure. This lieutenant of Stalin also reveals that Russia is hoping that a defeat of the Marshall plan will hasten what to Russia is an inevitable economic crisis in the United States. How the Communists profit from economic crises within a country is already known to us from the difficulties in France and Italy.

The Cominform organ promises to present articles showing how the theories of Marxism and Leninism can be applied by the Communist parties of various countries. As you know, the theories of Marx and Lenin are founded on the violent overthrow of non-Communist systems of government.

I would like to call particular attention to the admission by Soviet Leader Malenkov that the Soviet Union maintains social and political contacts with organizations in other countries through which it strengthens the international influence of the Soviet Union.

The predominance of writings by Soviet Communist leaders in the Cominform publication is evidence of the predominant role that the Soviet Union is playing in this international Communist alliance. In addition to articles by Zhdanov, there are discussions by G. Malenkov, another one of Stalin's lieutenants, who also serves on the Politburo of the Soviet Union and the Secretariat of the Soviet Communist Party.

Although the Cominform membership is allegedly limited to the Communist Parties of the Soviet Union, Yugoslavia, Bulgaria, Rumania, Hungary, Poland, Czechoslovakia, France, and Italy, there is little doubt after reading the official organ that the information serves as instructions to Communist Parties in all the other countries of the world.

For example, an editorial in the first issue of the organ lays down the rule that "Communist Parties everywhere must become a leader or organizer of the popular masses in the struggle for peace and a people's democracy."

Communists, of course, have their own definitions for terms such as peace and democracy. As the Cominform organ itself discloses, peace is that which the Soviet Union is seeking and which America is trying to destroy; while democracy is the form of government in the totalitarian Soviet Union and its puppet states. Thus only can one understand the significance of the title of the Cominform publication, which is "For a Lasting Peace, for a People's Democracy."

The matter referred to follows:

[From For a Lasting Peace, For a People's Democracy, of November 10, 1947]

THE INTERNATIONAL SITUATION [1]

(By A. Zhdanov)

I. THE POSTWAR WORLD SITUATION

The end of the Second World War brought with it big changes in the world situation. The military defeat of the bloc of Fascist states, the character of the war as a war of liberation from fascism and the decisive role played by the Soviet Union in the vanquishing of the Fascist aggressors sharply altered the alinement of forces between the two systems—the socialist and the capitalist—in favor of socialism.

What is the essential nature of these changes?

The principal outcome of World War II was the military defeat of Germany and Japan, the two most militaristic and aggressive of the capitalist countries. The reactionary imperialist elements all over the world, notably in Britain, America, and France, had reposed great hopes in Germany and Japan, and chiefly in Hitler Germany; firstly, as in a force most capable of inflicting a blow on the Soviet Union in order to, if not having it destroyed altogether, weaken it at least and undermine its influence; secondly, as in a force capable of smashing the revolutionary labor and democratic movement in Germany herself and in all countries singled out for Nazi aggression, and thereby strengthening capitalism generally. This was the chief reason for the prewar policy of appeasement and encouragement of Fascist aggression, the so-called Munich policy consistently pursued by the imperialist ruling circles of Britain, France, and the United States.

But the hopes reposed by the British, French, and American imperialists in the Hitlerites were not realized. The Hitlerites proved to be weaker, and the Soviet Union and the freedom-loving nations stronger than the Munichists had anticipated. As the result of World War II the major forces of bellicose international Fascist reaction had been smashed and put out of commission for a long time to come.

This was accompanied by another serious loss to the world capitalist system generally. Whereas the principal result of World War I had been that the united imperialist front was breached and that Russia dropped out of the world capitalist system, and whereas, as a consequence of the triumph of the Socialist system in the U. S. S. R., capitalism ceased to be an integral, world-wide economic system, World War II and the defeat of fascism, the weakening of the world position of capitalism, and the enhanced strength of the anti-Fascist movement resulted in a number of countries in central and southeastern Europe dropping out of the imperialist system. In these countries new, popular, democratic regimes arose. The impressive lesson given by the patriotic war of the Soviet Union and the liberating role of the Soviet Army were accompanied by a mass struggle of the freedom-loving peoples for national liberation from the Fascist invaders and their accomplices. In the course of this struggle the pro-Fascist elements, the collaborators with Hitler—the most influential of the big capitalists, large landowners, high officials, and monarchist officers—were exposed as betrayers of the national interests. In the Danubian countries, liberation from German Fascist slavery was accompanied by the removal from power of the top bourgeoisie and landlords, compromised by collaborating with German fascism, and by the rise to power of new forces from among the people who had proved their worth in the struggle against the Hitlerite conquerors. In these countries, representatives of the workers, the peasants, and the progressive intellectuals took over power. Since the working class had everywhere displayed the greatest heroism, the greatest consistency and implacability in the struggle against fascism, its prestige and influence among the people have increased immensely.

The new democratic power in Yugoslavia, Bulgaria, Rumania, Poland, Czechoslovakia, Hungary, and Albania, backed by the mass of the people, was able within a minimum period to carry through such progressive democratic reforms as bourgeois democracy is no longer capable of effecting. Agrarian reform turned over the land to the peasants and led to the elimination of the landlord class. Nationalization of large-scale industry and banks, and the confiscation of the property of traitors who had collaborated with the Germans radically undermined the position of monopoly capital in these countries and redeemed the masses from imperialist bondage. Together with this, the foundation was laid of state, national ownership, and a new type of state was created—the people's republic, where the power belongs to the people, where large-scale industry, transport, and banks are owned by the state, and where a bloc of the laboring classes of the population, headed by the working class, constitute a leading force. As a result, the

[1] A speech delivered at the Informative Conference of representatives of a number of the Communist Parties held in Poland at the end of September 1947.

peoples of these countries have not only torn themselves from the clutches of imperialism, but are paving the way for entry onto the path of Socialist development.

The war immensely enhanced the international significance and prestige of the U. S. S. R. The U. S. S. R. was the leading force and the guiding spirit in the military defeat of Germany and Japan. The progressive democratic forces of the whole world rallied around the Soviet Union. The Socialist state successfully stood the strenuous test of the war and emerged victorious from the mortal struggle with a most powerful enemy. Instead of being enfeebled, the U. S. S. R. became stronger.

The capitalist world has also undergone a substantial change. Of the six so-called great imperialist powers—Germany, Japan, Great Britain, the United States of America, France, and Italy—three have been eliminated by military defeat—Germany, Italy, and Japan. France has also been weakened and has lost its significance as a great power. As a result, only two great imperialist world powers remain—the United States and Great Britain. But the position of one of them, Great Britain, has been undermined. The war revealed that militarily and politically British imperialism was not so strong as it had been. In Europe, Britain was helpless against German aggression. In Asia, Britain, one of the biggest of the imperialist powers, was unable to retain hold of her colonial possessions without outside aid. Temporarily cut off from colonies that supplied her with food and raw materials and absorbed a large part of her industrial products, Britain found herself dependent, militarily and economically, upon American supplies of food and manufactured goods. After the war, Britain became increasingly dependent, financially and economically, on the United States. Although she succeeded in recovering her colonies after the war, Britain found herself faced there with the enhanced influence of American imperialism, which during the war had invaded all the regions that before the war had been regarded as exclusive spheres of influence of British capital (the Arab east, southeast Asia). America has also increased her influence in the British dominions and in South America, where the former role of Britain is very largely and to an ever-increasing extent, passed to the United States.

World War II aggravated the crisis of the colonial system, as expressed in the rise of a powerful movement for national liberation in the colonies and dependencies. This has placed the rear of the capitalist system in jeopardy. The peoples of the colonies no longer wish to live in the old way. The ruling classes of the metropolitan countries can no longer govern the colonies on the old lines. Attempts to crush the national liberation movement by military force now increasingly encounter armed resistance on the part of the colonial peoples and lead to protracted colonial wars (Holland-Indonesia, France—Viet Nam).

The war—itself a product of the unevenness of capitalist development in the different countries—still further intensified this unevenness. Of all the capitalist powers, only one—the United States—emerged from the war not only unweakened but even considerably stronger economically and militarily. The war greatly enriched the American capitalists. The American people, on the other hand, did not experience the privations that accompany war, the hardship of occupation, or aerial bombardment; and since America entered the war practically in its concluding stage, when the issue was already decided, her human casualties were relatively small. For the United States of America, the war was primarily and chiefly a spur to extensive industrial development and to a substantial increase of exports, principally to Europe.

But the end of the war confronted the United States with a number of new problems. The capitalist monopolies were anxious to maintain their profits at the former high level, and accordingly pressed hard to prevent a reduction of the wartime volume of deliveries. But this meant that the United States must retain the foreign markets which had absorbed American products during the war, and, moreover, acquire new markets, inasmuch as the war had substantially lowered the purchasing power of most of the countries. The financial and economic dependence of these countries on the United States of America had likewise increased. The United States extended credits abroad to a sum of $19,000,000,000, not counting investments in the International Bank and the International Currency Fund. America's principal competitors, Germany and Japan, have disappeared from the world market, and this has opened up new and very considerable opportunities for the United States. Whereas before World War II the more influential reactionary circles of American imperialism had adhered to an isolationist policy and had refrained from active interference in the affairs of Europe and Asia, in the new, postwar conditions the Wall Street bosses adopted a new policy. They advanced a program of utilizing America's military and economic might, not only to retain and consolidate the positions won abroad during the war but to expand them to the maximum and to replace Germany, Japan, and Italy in the world market. The sharp decline of the economic power of the other capitalist states makes it possible to speculate on their postwar economic difficulties, and, in particular, on the postwar economic difficulties of Great Britain, which makes it easier to bring these countries under American control. The United States proclaimed a new frankly predatory and expansionist course.

The purpose of this new, frankly expansionist course is to establish the world supremacy of American imperialism. With a view to consolidating America's monopoly position in the markets gained as a result of the disappearance of her two biggest competitors, Germany and Japan, and the weakening of her capitalist partners, Great Britain and France, the new course of United States policy envisages a broad program of military, economic, and political measures, designed to establish United States political and economic domination in all countries marked out for American expansion, to reduce these countries to the status of satellites of the United States, and to set up regimes within them which would eliminate all obstacles on the part of the labor and democratic movement to the exploitation of these countries by American capital. The United States is now endeavoring to extend this new line of policy not only to its enemies in the war and to neutral countries, but in an increasing degree to its wartime allies.

Special attention is being paid to the exploitation of the economic difficulties of Great Britain, which is not only America's ally but also a long-standing capitalist rival and competitor. It is the design of America's expansionist policy not only to prevent Britain from escaping from the vise of economic dependence on the United States in which she was gripped during the war, but, on the contrary, to increase the pressure, with a view of gradually depriving her of control over her colonies, ousting her from her spheres of influence, and reducing her to the status of a vassal state.

Thus the new policy of the United States is designed to consolidate its monopoly position and to reduce its capitalist partners to a state of subordination and dependence on America.

But America's aspiration to world supremacy encounter an obstacle in the U. S. S. R., the stronghold of anti-imperialist and anti-Fascist policy, and its growing international influence, in the new democracies, which have escaped from the control of British and American imperialism, and in the workers of all countries, including America itself, who do not want a new war for the supremacy of their oppressors. Accordingly, the new expansionist and reactionary policy of the United States envisages a struggle against the U. S. S. R., against the labor movement in all countries, including the United States and against the emancipationist, anti-imperialist forces in all countries.

Alarmed by the achievements of socialism in the U. S. S. R., by the achievements of the new democracies, and by the postwar growth of the labor and democratic movement in all countries, the American reactionaries are disposed to take upon themselves the mission of saviors of the capitalist system from communism.

The frank expansionist program of the United States is therefore highly reminiscent of the reckless program, which failed so ignominiously, of the Fascist aggressors, who, as we know, also made a bid for world supremacy.

Just as the Hitlerites, when they were making their preparations for piratical aggression, adopted the camouflage of anticommunism in order to make it possible to oppress and enslave all peoples and primarily and chiefly their own people, America's present-day ruling circles mask their expansionist policy, and even their offensive against the vital interests of their weaker imperialist rival, Great Britain, by fictitious considerations of defense against communism. The feverish piling up of armaments, the construction of new military bases and the creation of bridgeheads for the American armed forces in all parts of the world is justified on the false and pharisaical grounds of defense against an imaginary threat of war on the part of the U. S. S. R. With the help of intimidation, bribery, and chicanery, American diplomacy finds it easy to extort from other capitalist countries, and primarily from Great Britain, consent to the legitimization of America's superior position in Europe and Asia—in the western zones of Germany, in Austria, Italy, Greece, Turkey, Egypt, Iran, Afghanistan, China, Japan and so forth.

The American imperialists regard themselves as the principal force opposed to the U. S. S. R., the new democracies and the labor and democratic movement in all countries of the world, as the bulwark of the reactionary, antidemocratic forces in all parts of the globe. Accordingly, literally on the day following the conclusion of World War II, they set to work to build up a front hostile to the U. S. S. R. and world democracy, and to encourage the antipopular reactionary forces—collaborationists and former capitalist stooges—in the European countries which had been liberated from the Nazi yoke and which were beginning to arrange their affairs according to their own choice.

The more malignant and unbalanced imperialist politicians followed the lead of Churchill in hatching plans for the speedy launching of a preventive war against the U. S. S. R. and openly called for the employment of America's temporary monopoly of the atomic weapon against the Soviet people. The new war mongers are trying to intimidate and browbeat not only the U. S. S. R. but other countries as well, notably China and India, by libelously depicting the U. S. S. R. as a potential aggressor, while they themselves pose as friends of China and India, as saviors from the Communist peril, their mission being to help the weak. By these means they are seeking to keep India and China under the sway of imperialism

and in continued political and economic bondage.

II. THE NEW POSTWAR ALINEMENT OF POLITICAL FORCES AND THE FORMATION OF TWO CAMPS: THE IMPERIALIST AND ANTIDEMOCRATIC CAMP, AND THE ANTI-IMPERIALIST AND DEMOCRATIC ONE

The fundamental changes caused by the war on the international scene and in the position of individual countries has entirely changed the political landscape of the world. A new alinement of political forces has arisen. The more the war recedes into the past the more distinct become two major trends in postwar international policy, corresponding to the division of the political forces operating on the international arena into two major camps: the imperialist and antidemocratic camp, on the one hand, and the anti-imperialist and democratic camp, on the other. The principal driving force of the imperialist camp is the United States of America. Allied with it are Great Britain and France. The existence of the Attlee-Bevin labor government in Britain and the Ramadier Socialist Government in France does not hinder these countries from playing the part of satellites of the United States and following the lead of its imperialist policy on all major questions. The imperialist camp is also supported by colony-owning countries, such as Belgium and Holland, by countries with reactionary antidemocratic regimes, such as Turkey and Greece, and by countries politically and economically dependent on the United States, such as the near eastern and South American countries and China.

The cardinal purpose of the imperialist camp is to strengthen imperialism, to hatch a new imperialist war, to combat socialism and democracy, and to support reactionary and antidemocratic pro-Fascist regimes and movements everywhere.

In the pursuit of these ends the imperialist camp is prepared to rely on reactionary and anitdemocratic forces in all countries, and to support its former adversaries in the war against its wartime allies.

The anti-Fascist forces comprise the second camp. This camp is based on the U. S. S. R. and the new democracies. It also includes countries that have broken with imperialism and have firmly set foot on the path of democratic development, such as Rumania, Hungary, and Finland. Indonesia and Viet Nam are associated with it; it has the sympathy of India, Egypt, and Syria. The anti-imperialist camp is backed by the labor and democratic movement and by the fraternal Communist Parties in all countries, by the fighters for national liberation in the colonies and dependencies, by all progressive and democratic forces in every country. The purpose of this camp is to resist the threat of new wars and imperialist expansion, to strengthen democracy and to extirpate the vestiges of fascism.

The end of the Second World War confronted all the freedom-loving nations with the cardinal task of securing a lasting democratic peace sealing victory over fascism. In the accomplishment of this fundamental task of the postwar period the Soviet Union and its foreign policy are playing a leading role. This follows from the very nature of the Soviet Socialist state, to which motives of aggression and exploitation are utterly alien, and which is interested in creating the most favorable conditions for the building of a Communist society. One of these conditions is external peace. As embodiment of a new and superior social system, the Soviet Union reflects in its foreign policy the aspirations of progressive mankind, which desires lasting peace and has nothing to gain from a new war hatched by capitalism. The Soviet Union is a staunch supporter of the liberty and independence of all nations, and a foe of national and racial oppression and colonial exploitation in any shape or form. The change in the general alinement of forces between the capitalist world and the Socialist world brought about by the war has still further enhanced the significance of the foreign policy of the Soviet state and enlarged the scope of its activity on the international arena.

All the forces of the anti-imperialist and anti-Fascist camp are united in the effort to secure a just and democratic peace. It is this united effort that has brought about and strengthened friendly cooperation between the U. S. S. R. and democratic countries on all questions of foreign policy. These countries, and in the first place the new democracies—Yugoslavia, Poland, Czechoslovakia, and Albania which played a big part in the war of liberation from fascism, as well as Bulgaria, Rumania, Hungary, and to some extent Finland, which have joined the anti-Fascist front—have proved themselves in the postwar period staunch defenders of peace, democracy and their own liberty and independence against all attempts on the part of the United States and Great Britain to turn them back in their course and to bring them again under the imperialist yoke.

The successes and the growing international prestige of the democratic camp were not to the liking of the imperialists. Even while World War II was still on, reactionary forces in Great Britain and the United States became increasingly active, striving to prevent concerted action by the Allied Powers, to protract the war, to bleed the U. S. S. R., and to save the Fascist aggressors from utter defeat. The sabotage of the Second Front by the Anglo-Saxon imperialists, headed by Churchill, was a clear reflection of this tendency, which was in point of fact a continuation of the Munich policy in the new and changed conditions. But while the war was still in progress British and American reactionary circles did not venture to come out openly against the Soviet Union and the democratic countries, realizing that they had the undivided sympathy of the masses all over the world. But in the concluding months of the war the situation began to change. The British and American imperialists already manifested their unwillingness to respect the legitimate interests of the Soviet Union and the democratic countries at the Potsdam tripartite conference, in July 1945.

The foreign policy of the Soviet Union and the democratic countries in these two past years has been a policy of consistently working for the observance of the democratic principles in the postwar settlement. The countries of the anti-imperialist camp have loyally and consistently striven for the implementation of these principles, without deviating from them one iota. Consequently, the major objective of the postwar foreign policy of the democratic states has been a democratic peace, the eradication of the vestiges of facism and the prevention of a resurgence of Fascist imperialist aggression, the recognition of the principle of the equality of nations and respect for their sovereignty, and general reduction of all armaments and the outlawing of the most destructive weapons, those designed for the mass slaughter of the civilian population. In their effort to secure these objectives Soviet diplomacy and the diplomacy of the democratic countries met with the resistance of Anglo-American diplomacy, which since the war has persistently and unswervingly striven for the rejection of the general principles of the postwar settlement proclaimed by the Allies during the war, and to replace the policy of peace and consolidation of democracy by a new policy, a policy aiming at violating general peace, protecting Fascist elements, and persecuting democracy in all countries.

Of immense importance are the joint efforts of the diplomacy of the U. S. S. R. and that of the other democratic countries to secure a reduction of armaments and the outlawing of the most destructive of them—the atomic bomb.

On the initiative of the Soviet Union, a resolution was moved in the United Nations calling for a general reduction of armaments and the recognition, as a primary task, of the necessity to prohibit the production and use of atomic energy for warlike purposes. This motion of the Soviet Government was fiercely resisted by the United States and Great Britain. All the efforts of the imperialist elements were concentrated on sabotaging this decision by erecting endless and fruitless obstacles and barriers, with the object of preventing the adoption of any effective practical measures. The activities of the delegates of the U. S. S. R. and the other democratic countries in the agencies of the United Nations bear the character of a systematic, stubborn day-to-day struggle for democratic principles of international cooperation, for the exposure of the intrigues of the imperialist plotters against the peace and security of the nations.

This was openly demonstrated, for example, in the discussion of the situation on Greece's northern frontiers. The Soviet Union and Poland vigorously objected to the Security Council being used as a means of discrediting Yugoslavia, Bulgaria, and Albania, who are falsely accused by the imperialists of aggressive acts against Greece.

Soviet foreign policy proceeds from the fact of the coexistence for a long period of the two systems—capitalism and socialism. From this it follows that cooperation between the U. S. S. R. and countries with other systems is possible, provided that the principle of reciprocity is observed and that obligations once assumed are honored. Everyone knows that the U. S. S. R. has always honored the obligations it has assumed. The Soviet Union has demonstrated its will and desire for cooperation.

Britain and America are pursuing the very opposite policy in the United Nations. They are doing everything they can to renounce their commitments and to secure a free hand for the prosecution of a new policy, a policy which envisages not cooperation among the nations, but the hounding of one against the other, violation of the rights and interests of democratic nations, and the isolation of the U. S. S. R.

Soviet policy follows the line of maintaining loyal, good-neighbor relations with all states that display the desire for cooperation. As to the countries that are its genuine friends and allies, the Soviet Union has always behaved, and will always behave, as their true friend and ally. Soviet foreign policy envisages a further extension of friendly aid by the Soviet Union to these countries.

Soviet foreign policy, defending the cause of peace, discountenances a policy of vengeance toward the vanquished countries.

It is known that the U. S. S. R. is in favor of a united, peace-loving, demilitarized, and democratic Germany. Comrade Stalin formulated the Soviet policy toward Germany when he said: "In short, the policy of the Soviet Union on the German question reduces itself to the demilitarization and democratization of Germany. The demilitarization and democratization of Germany is one of the most important guaranties for the establishment of a solid and lasting peace." However, this policy of the Soviet Union toward Germany is being encountered by frantic opposition from the imperialist circles in the United States and Great Britain.

The meeting of the Council of Foreign Ministers in Moscow in March and April 1947 demonstrated that the United States, Great Britain, and France are prepared not only to

prevent the democratic reconstruction and demilitarization of Germany, but even to liquidate her as an integral state, to dismember her, and to settle the question of peace separately.

Today this policy is being conducted under new conditions, now that America has abandoned the old course of Roosevelt and is passing to a new policy, a policy of preparing for new military adventures.

III. THE AMERICAN PLAN FOR THE ENTHRALLMENT OF EUROPE

The aggressive and frankly expansionist course to which American imperialism has committed itself since the end of World War II finds expression in both the foreign and home policy of the United States. The active support rendered to the reactionary, antidemocratic forces all over the world, the sabotage of the Potsdam decisions which call for the democratic reconstruction and demilitarization of Germany, the protection given to Japanese reactionaries, the extensive war preparations, and the accumulation of atomic bombs—all this goes hand in hand with an offensive against the elementary democratic rights of the working people in the United States itself.

Although the United States of America suffered comparatively little from the war, the vast majority of the Americans do not want another war, with its accompanying sacrifices and limitations. This has induced monopoly capital and its servitors among the ruling circles in the United States to resort to extraordinary means in order to crush the opposition at home to the aggressive expansionist course and to secure a free hand for the further prosecutions of this dangerous policy.

But the crusade against communism proclaimed by America's ruling circles with the backing of the capitalist monopolies leads as a logical consequence to attacks on the fundamental rights and interests of the American working people, to the fascistization of America's political life, and to the dissemination of the most savage and misanthropic theories and views. Dreaming about preparing for a new, a third world war, American expansionist circles are vitally interested in stifling all possible resistance within the country to adventures abroad, in poisoning the minds of the politically backward and unenlightened American masses with the virus of chauvinism and militarism, and in stultifying the average American with the help of all the diverse means of anti-Soviet and anti-Communist propaganda—the cinema, the radio, the church, and the press. The expansionist foreign policy inspired and conducted by the American reactionaries envisages simultaneous action along all lines:

(1) Strategical military measures;
(2) Economic expansion; and
(3) Ideological struggle.

Realization of the strategical plans for future aggression is connected with the desire to utilize to the utmost the war-production facilities of the United States, which had grown to enormous proportions by the end of World War II. American imperialism is persistently pursuing a policy of militarizing the country. Expenditures on the United States Army and Navy exceeds $11,000,000,000 per annum. In 1947–48 35 percent of America's budget was appropriated for the armed forces, or 11 times more than in 1937–38.

On the outbreak of World War II the American Army was the seventeenth largest in the capitalist world; today it is the largest one. The United States is not only accumulating stocks of atomic bombs; American strategy says quite openly that it is preparing bacteriological weapons.

The strategical plans of the United States envisage the creation in peacetime of numerous bases and vantage grounds situated at great distances from the American continent and designed to be used for aggressive purposes against the U. S. S. R. and the countries of the new democracy. America has built, or is building, air and naval bases in Alaska, Japan, Italy, South Korea, China, Egypt, Iran, Turkey, Greece, Austria, and western Germany. There are American military missions in Afghanistan, and even in Nepal. Feverish preparations are being made to use the Arctic for purposes of military aggression.

Although the war has long since ended, the military alliance between Britain and the United States and even a combined Anglo-American military staff continue to exist. Under the guise of agreement for the standardization of weapons the United States has established its control over the armed forces and military plans of other countries, notably of Great Britain and Canada. Under the guise of joint defense of the Western Hemisphere, the countries of Latin America are being brought into the orbit of America's plans of military expansion. The United States Government has officially declared that it has committed itself to assist in the modernization of the Turkish Army. the army of the reactionary Kuomintang is being trained by American instructors and armed with American material. The military circles are becoming an active political force in the United States, supplying large numbers of Government officials and diplomats who are directing the whole policy of the country into an aggressive military course.

Economic expansion is an important supplement to the realization of America's strategical plan. American imperialism is endeavoring, like a usurer, to take advantage of the postwar difficulties of the European countries, in particular of the shortage of raw materials, fuel, and food in the Allied countries that suffered most from the war, to dictate to them extortionate terms for any assistance rendered. With an eye to the impending economic crisis, the United States is in a hurry to find new monopoly spheres of capital investment and markets for its goods. American economic assistance pursues the broad aim of bringing Europe into bondage to American capital. The more drastic the economic situation of a country is, the harsher are the terms which the American monopolies endeavor to dictate to it.

But economic control logically leads to political subjugation to American imperialism. Thus the United States combines the extension of monopoly markets for its goods with the acquisition of new bridgeheads for its fight against the new democratic forces of Europe. In saving a country from starvation and collapse, the American monopolies at the same time seek to rob it of all vestige of independence. American assistance automatically involves a change in the policy of the country to which it is rendered; parties and individuals come to power that are prepared, on directions from Washington, to carry out a program of home and foreign policy suitable to the United States (France, Italy, and so on).

Lastly, the aspiration to world supremacy and the antidemocratic policy of the United States involve an ideological struggle. The principal purpose of the ideological part of the American strategical plan is to deceive public opinion by slanderously accusing the Soviet Union and the new democracies of aggressive intentions, and thus representing the Anglo-Saxon bloc in a defensive role and absolving it of responsibility for preparing a new war. During the Second World War the popularity of the Soviet Union in foreign countries was enormously enhanced. Its devoted and heroic struggle against imperialism earned it the affection and respect of working people in all countries. The military and economic might of the Socialist state, the invincible strength of the moral and political unity of Soviet society were graphically demonstrated to the whole world. The reactionary circles in the United States and Great Britain are anxious to erase the deep impression made by the Socialist system on the working people of the world. The warmongers fully realize that long ideological preparation is necessary before they can get their soldiers to fight the Soviet Union.

In their ideological struggle against the U. S. S. R., the American imperialists, who have no great insight into political questions, demonstrate their ignorance by laying primary stress on the allegation that the Soviet Union is undemocratic and totalitarian, while the United States and Great Britain and the whole capitalist world are democratic. On this platform of ideological struggle—on this defense of bourgeois pseudo-democracy and condemnation of communism as totalitarian—are united all the enemies of the working class without exception, from the capitalist magnates to the Right Socialist leaders, who seize with the greatest eagerness on any slanderous imputations against the U. S. S. R. suggested to them by their imperialist masters. The pith and substance of this fraudulent propaganda is the claim that the earmark of true democracy is the existence of a plurality of parties and of an organized opposition minority. On these grounds the British Laborites, who spare no effort in their fight against communism, would like to discover antagonistic classes and a corresponding struggle of parties in the U. S. S. R. Political ignoramuses that they are, they cannot understand that capitalists and landlords, antagonistic classes, and hence a plurality of parties, have long ceased to exist in the U. S. S. R. They would like to have in the U. S. S. R. the bourgeois parties which are so dear to their hearts, including pseudo-socialistic parties, as an agency of imperialism. But to their bitter regret, these parties of the exploiting bourgeoisie have been doomed by history to disappear from the scene.

Th laborites and other advocates of bourgeois democracy will go to any length to slander the Soviet regime, but at the same time they regard the bloody dictatorship of the Fascist minority over the people in Greece and Turkey as perfectly normal, they close their eyes to many crying violations even of formal democracy in the bourgeois countries, and say nothing about the national and racial oppression, the corruption and the unceremonious abrogation of democratic rights in the United States of America.

One of the lines taken by the ideological campaign that goes hand in hand with the plans for the enslavement of Europe is an attack on the principle of national sovereignty, an appeal for the renouncement of the sovereign rights of nations to which is opposed the idea of a world government. The purpose of this campaign is to mask the unbridled expansion of American imperialism, which is ruthlessly violating the sovereign rights of nations, to represent the United States as a champion of universal laws, and those who resist American penetration as believers in an obsolete and selfish nationalism. The idea of a world government has been taken up by bourgeois intellectual cranks and pacifists, and is being exploited not only as a means of pressure, with the purpose of ideologically disarming the nations that defend their independence against the encroachments of American imperialism, but also as a slogan specially directed against the Soviet Union, which indefatigably and consistently upholds the principle of real equality and protection of the sovereign rights of all nations, big and small. Under present conditions imperialist countries like the United States of America, Great Britain, and the states closely associated with them become dangerous enemies of national independence and the self-determination of nations, while the Soviet Union and the new democracies are a reliable bulwark against encroachments on the equality and self-determination of nations.

It is a noteworthy fact that American military-political intelligence agents of the Bullitt breed, yellow trade-union leaders of the Green brand, the French Socialists headed by that inveterate apologian of capitalism, Blum, the German social democrat, Schumacher, and labor leaders of the Bevin type, are all united in close fellowship in carrying out the ideological plan of American imperialism.

At this present juncture the expansionist ambitions of the United States find concrete expression in the Truman doctrine and the Marshall plan. Although they differ in form of presentation, both are an expression of a single policy, they are both an embodiment of the American design to enslave Europe.

We thus see that America is endeavoring to build a western bloc not on the pattern of Churchill's plan for a United States of Europe, which was conceived as an instrument of British policy, but as an American protectorate, in which sovereign European states, not excluding Britain itself, are to be assigned a role not very far removed from that of a forty-ninth State of America.

The Marshall plan strikes at the industrialization of the democratic countries of Europe and hence at the foundations of their integrity and independence. And if the plan for the Dawes-ization of Europe was doomed to failure, at a time when the forces of resistance to the Dawes plan were much weaker than they are now, today, in postwar Europe, there are quite sufficient forces, even leaving aside the Soviet Union, and if they display the will and determination, they can foil this plan of enslavement. All that is needed is the determination and readiness of the peoples of Europe to resist. As to the U. S. S. R., it will bend every effort in order that this plan be doomed to failure.

The assessment given by the countries of the anti-imperialist camp of the Marshall plan has been completely confirmed by the whole course of developments. In relation to the Marshall plan, the camp of democratic countries have proved that they are a mighty force standing guard over the independence and sovereignty of all European nations, that they refuse to yield to browbeating and intimidation, just as they refuse to be deceived by the hypocritical maneuvers of dollar diplomacy.

The Soviet Government has never objected to using foreign, and in particular American, credits as a means capable of expediting the process of economic rehabilitation. However, the Soviet Union has always taken the stand that the terms of credits must not be extortionate, and must not result in the economic and political subjugation of the debtor country to the creditor country. From this political stand, the Soviet Union has always held that foreign credits must not be the principal means of restoring a country's economy. The chief and paramount condition of a country's economic rehabilitation must be the utilization of its own internal forces and resources and the creation of its own industry. Only in this way can its independence be guaranteed against encroachments on the part of foreign capital, which constantly displays a tendency to utilize credits as an instrument of political and economic enthrallment. Such precisely is the Marshall plan, which would strike at the industrialization of the European countries and is consequently designed to undermine their independence.

The Soviet Union unswervingly holds the position that political and economic relations between states must be built exclusively on the basis of equality of the parties and mutual respect for their sovereign rights. Soviet foreign policy and, in particular, Soviet economic relations with foreign countries, are based on the principle of equality, on the principle that agreements must be of advantage to both parties. Treaties with the U. S. S. R. are agreements that are of mutual advantage to both parties and never contain anything that encroaches on the national independence and sovereignty of the contracting parties. This fundamental feature of the agreements of the U. S. S. R. with other states stands out particularly vividly just now, in the light of the unfair and unequal treaties being concluded or planned by the United States. Unequal agreements are alien to Soviet foreign trade policy. More, the development of the Soviet Union's economic relations with all countries interested in such relations demonstrates on what principles normal relations between states should be built. Suffice it to recall the treaties recently concluded by the U. S. S. R. with Poland, Yugoslavia, Czechoslovakia, Hungary, Bulgaria, and Finland. In this way the U. S. S. R. has clearly shown along what lines Europe may find the way out of its present economic plight. Britain might have had a similar treaty, if the Labor Government had not, under outside pressure, frustrated the agreement with the U. S. S. R., the agreement which was already on its way to conclusion.

The exposure of the American plan for the economic enslavement of the European countries is an indisputable service rendered by the foreign policy of the U. S. S. R. and the new democracies.

It should be borne in mind that America herself is threatened with an economic crisis. There are weighty reasons for Marshall's official generosity. If the European countries do not receive American credits, their demand for American goods will diminish, and this will tend to accelerate and intensify the approaching economic crisis in the United States. Accordingly, if the European countries display the necessary stamina and readiness to resist the enthralling terms of the American credit, America may find herself compelled to beat a retreat.

[From speech by G. Malenkov printed in December 1, 1947, issue, page 1, of For a Lasting Peace, For a People's Democracy]

The great historic victories won by the Soviet Union during the war were possible only due to the preliminary preparations for defense made by our country under Comrade Stalin's leadership in the prewar years. It would be a mistake to imagine that a victory of such historic importance could have been achieved without preliminary preparations for active defense by the entire country, or that such preparations could have been effected in a short space of time, say in 3 or 4 years.

To withstand the blows of such an enemy as Hitler Germany, to repel this enemy, and then inflict utter defeat on him, required, apart from the unexampled bravery of our troops, the possession of armaments that were quite up to date and, moreover, in sufficient quantities, and of a well-organized system of supplies, also available in sufficient quantities. To make that possible one had to possess metals, fuel, a developed engineering industry, grain, and cotton. But in order to have all of this our country had to be transformed from a backward agrarian country into a historic and up-to-date industrial state. This historic transformation was effected in the course of the three 5-year plan periods, beginning with 1928.

Even prior to its participation in the Second World War, the U. S. S. R. possessed the minimum of material resources necessary to meet the basic requirements of the battle fronts. These material resources were created as a result of the fulfillment of three 5-year plans of national economic development by our country and our party under the leadership of Comrade Stalin. Thereby was established the economic base of the U. S. S. R. that could be used for the conduct of a victorious war.

[From speech by G. Malenkov, printed in December 1, 1947 issue, p. 3, of For A Lasting Peace for a People's Democracy]

One is the policy pursued by the Soviet Union and the new democracies. The foreign policy of the Soviet Union and of the democratic countries is designed to undermine imperialism, secure a stable democratic peace among the nations and generally strengthen amicable cooperation among the peace-loving nations.

In following this line, our foreign policy is supported by the increased international significance of the Soviet state and the new democracies.

The other trend in international politics is headed by the ruling clique of American imperialists. In their efforts to consolidate the position which American monopoly capital gained in Europe and Asia during the war, this clique has taken the path of outright expansion, of enthralling the weakened capitalist states of Europe and the colonial and dependent countries. It has chosen the path of hatching new war plans against the U. S. S. R. and the new democracies under the banner of combating the Communist menace. The clearest and most specific expression of this policy pursued by American capital is provided by the Truman-Marshall plans.

Such are the two trends in present-day international politics.

The wise Stalin foreign policy of the Soviet Union, both prior to the war and in the course of its conduct, enabled us correctly to utilize the contradictions existing within the imperialist camp, and this was one of the important factors making for our victory in the war.

We proceed from the fact that the coexistence of two systems—capitalism and socialism—is inevitable for a long period of time, and we follow the line of maintaining loyal good-neighborly relations with all states manifesting a desire for friendly cooperation on the condition that the principle of reciprocity is observed and that obligations undertaken are fulfilled. The U. S. S. R., true to its international treaties and obligations, pursues this policy with the utmost consistency and firmness.

But at the same time we are prepared to repel any policy hostile to the Soviet Union, no matter from what quarter it comes.

The CPSU (B) devotes much attention to problems of foreign policy and shows special concern for the selection and proper training of cadres capable of putting into effect the party's line in the sphere of foreign policy.

With regard to countries that have proven true friends and loyal allies of the Soviet state—the new democracies—the U. S. S. R. is always prepared to come to their assistance, and actually does so by rendering them extensive aid and firmly defending their interests.

The U. S. S. R. and the new democracies pursue a policy of unswerving support with regard to colonial and dependent countries fighting for their national liberation from the yoke of imperialism.

One of the major results of the Second World War is the strengthening of the U. S. S. R. and the establishment in a number of countries of new democracy systems under the leadership of the working class.

The defeat of Germany and Japan signify the weakening of the imperialist camp and the further aggravation of the general crisis of the capitalist system. Of the capitalist countries the United States of America emerged from the war considerably strengthened, while her partners, Great Britain and France, were weakened by the war.

In a situation in which America's chief competitors, Germany and Japan, have been removed and Great Britain and France weakened, the United States of America adopted a new openly expansionist policy aimed at establishing American world supremacy.

After the war, Soviet public organizations received extensive possibilities actively to participate in international trade-union and other democratic organizations, and to develop friendly contact with national democratic organizations in the vast majority of countries.

The active participation of the Soviet trade-unions and other public bodies in international democratic organizations is of assistance to our fraternal Communist parties in their struggle for the unity of the labor and democratic movement abroad. Our participation counteracts the splitting activities of the right-wing Socialists and other enemies of unity, facilitates the growth and consolidation of progressive organizations, and, at the same time, strengthens the international influence of the U. S. S. R.

Our cultural and political contact with democratic organizations in various countries, exercised in different forms, helps to spread the truth about the Socialist state, strengthens the influence of the Soviet Union, and facilitates the activities of democratic organizations.

[From editorial printed in December 1, 1947, p. 1, issue of For a Lasting Peace, For a People's Democracy]

In the past few weeks all the political and diplomatic activity of the United States Government has been aimed at facilitating the preparations for a new war to win world domination for American imperialism. The United States delegation at the UNO General Assembly frenziedly resisted the efforts of the representatives of the Soviet Union and the countries of the people's democracy to curb the warmongers. With the vigorous support of their English, South American, French, and other vassals, the Americans are steadily digging under the foundations of UNO, in an effort to turn it into an executive organ of the United States State Department.

On orders from the American reactionaries the Fascist provocateurs in Brazil and Chile have broken off diplomatic relations with the Soviet Union and other countries of the people's democracy, thus preparing the ground for an unbridled anti-Soviet and anti-Communist campaign, which in its turn would facilitate the preparation for war.

The American imperialists are hurriedly building up a military arsenal in Europe in preparation for their military adventure. That is why they have split up Germany. They are restoring the industrial might of western Germany, by transforming the Anglo-American zone—Bizonia—into their protectorate which is entirely in the hands of the American militarists and their assistants—the German imperialists who are dreaming of revenge.

A new government has been formed in France on instructions from Washington, a government which aims through Draconic measures to destroy the French democratic and labor organizations. In Italy the de Gasperi government is forming a bloc with the Fascists to start a crusade against the labor organizations.

At the same time the American imperialists, supported by the British laborites, are making feverish military preparations. They are establishing strategic bases in Greece, in the Near and Middle East; are opening new military bases in Greenland, on Alaska; are extending the existing bases in Iceland, in Japan, in Korea; are sending troops and munition to China.

In an effort to mislead the politically backward sections of the population the warmongers have started a new campaign of lies and slander against the vanguard of the defenders of peace, against the Soviet Union, the countries of the people's democracy, the Communist parties, and against all active champions of peace.

The imperialists and their lackeys are frightened at the development and power of the world democratic movement, which is headed by the working class and its vanguard—the Communist parties. The forces fighting for peace and democracy are growing daily, and their resistance to the onslaught of the Anglo-Saxon imperialists is increasing. The more insistent the American imperialists are in their efforts to enslave the European countries economically, and to deprive them of their national sovereignty, the more consistent and resolute the resistance of the popular masses to the attempts to transform Europe into an American colony.

The valiant troops of the Greek Democratic Army, who are setting heroic examples in the struggle for freedom and independence, are frustrating the intentions of the Anglo-American warmongers to enslave the Greek people and to convert Greece into a springboard for a new war.

The French workers, united in the General Confederation of Labor, have exposed and branded the Marshall plan as an odious plot of a handful of United States industrial and finance magnates to enslave France. The mass strikes in Marseilles, Paris, and other French cities demonstrate that the anti-French and antilabor plot of the French bourgeoisie, who are acting on orders from Washington, is meeting with powerful resistance of the working class and other sections of the French people.

The workers of northern Italy who have unanimously opposed the Fascist provocations, have proved to the whole world that they are able to resist the treacherous plots of the American flunkey, De Gasperi.

The popular movement for peace is spreading to all countries. The people want peace. The peoples of Europe are ready to fight for peace, for freedom, and their national independence, which is now threatened by American-British imperialism, with the same determination displayed by them in the struggle for their liberation from Hitler Fascist slavery.

Communists who showed examples of heroism, courage, and selflessness in the struggle against the Hitler invaders, rallied and led the masses and won victory in a number of countries. There is no doubt whatsoever that today, when the ranks of the Communist Parties have increased, when the Communist Parties have developed politically, and grown stronger organizationally, when their influence among the popular masses has spread and taken deeper root, the Communists will be able to expose the instigators of war and to defend the freedom and independence of their countries.

[From the declaration released by the conference of Communist Parties at Belgrade, p. 1 of November 10, 1947, issue of For a Lasting Peace for a People's Democracy]

Under these circumstances it is necessary that the anti-imperialist, democratic camp should close its ranks, draw up an agreed program of actions and work out its own tactics against the main forces of the imperialist camp, against American imperialism and its British and French allies, against the right-wing Socialists, primarily in Britain and France.

[From editorial in November 10, 1947, issue, page 1, of For a Lasting Peace, For a People's Democracy]

The imperialist and antidemocratic camp has intensified its propaganda and preparations for a new war. The Anglo-American imperialists continue to impose and reinforce the monarcho-fascist regimes in the countries dependent on them; continue to wreck the democratic organizations of the working class, to use corrupt politicians, known for their criminal ties with the Fascist Hitlerite regimes.

The policy of enslaving Europe economically, the preparations for a new war, the destruction of the democratic forces are veiled with hypocritical phrases about saving western democracy.

The Anglo-American imperialists boast about their democracy; their press, cinema, literature depict the domination of the handful of industrial magnates as a model example of democracy. However, genuine democracy is possible only where the people possess real political power, where the people can use this power against the landlords and capitalists. What democracy can there be in the United States of America today when the imperialist bourgeoisie, holding the reigns of political power, is the supreme master of all the tools and means of production? There is not very much of a difference in England and France, where parties, which call themselves Socialist parties, are in power.

The right-wing Socialists, slavishly devoted to the imperialist bourgeoisie, resort to pseudo-socialist demagogy, cover up and justify the bandit actions of the American imperialists.

The imperialist and antidemocratic camp is counterbalanced by the anti-imperialist and democratic camp, headed by the U. S. S. R. and the countries of the new people's democracy: Yugoslavia, Bulgaria, Poland, Czechoslovakia, Rumania, Hungary, Albania.

The countries of the new democracy, which have recently thrown off the yoke of their oppressors together with their Anglo-American imperialist masters, have introduced socio-economic and political reforms such as go to show that the people themselves in these countries are governing the country's life and promoting its development along the path to socialism.

These countries have become genuine democratic, independent, and sovereign states.

In contrast to the policy of the imperialist camp, the U. S. S. R. and the countries of the new democracy stand for peace and international cooperation on democratic principles.

The experience of the war and that of the postwar period has shown that henceforth the bourgeoisie of Europe have definitely taken the path of betrayal of the national interests and rejection of the sovereignty of their countries. This same experience has shown that the working class, headed by the Communist parties, is the most consistent leader of all the patriotic and democratic forces who defend the sovereignty and independence of their country.

[From editorial, November 10, 1947, issue of For a Lasting Peace, for a People's Democracy]

The Communist Parties everywhere can, and must, take upon themselves the role of leader and organizer of the popular masses in the struggle for a lasting peace, for a people's democracy.

The journal For a Lasting Peace, For a People's Democracy will exert every effort to help the Communist Parties rally their peoples into a powerful united camp, closely brought together by their vital interests in the struggle against the imperialist and antidemocratic camp.

Our journal will help the Communist Parties exchange experience, will help strengthen the mutual contacts and fraternal solidarity of the working peoples of the different countries in their great struggle for a lasting peace and a people's democracy.

The journal also sets itself the task to further elaborate questions of the great and invincible theory of Marxism-Leninism, the concrete application of this theory and its theses by the Communist Parties in conditions of the given country.

Among the important tasks of the journal is that of reporting on the activities of the Communist Parties to consolidate the democratic and patriotic forces of the people for struggle against the danger of a new war, on the achievements of the democratic forces in each country.

We shall conduct a struggle against bourgeois ideology, against opportunist and revisionist theories propagated by the enemies of the working class.

The journal will carry material showing the experience of socialist construction in the U. S. S. R., the experience of state and economic construction in the countries of the new democracies, material reflecting the activity of the democratic forces in all countries.

From the pages of our journal will resound the voice of the peoples against the warmongers.

We warmly salute all democratic and patriotic forces of the peoples who are fighting for the honor, freedom, and national independence of their countries.

We salute the fraternal Communist Parties, which are heading the struggle of all the anti-Fascist, freedom-loving elements against the Anglo-American plans of expansion to enslave Europe.

For a lasting peace, for a people's democracy.

Tragic Lesson of the Czechs

EXTENSION OF REMARKS
OF
HON. TOM STEWART
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, March 2 (legislative day of Monday, February 2), 1948

Mr. STEWART. Mr. President, I desire to place in the Appendix of the CONGRESSIONAL RECORD an outstanding editorial which appeared in the Wednesday, February 25 issue of the Chattanooga News-Free Press, published at Chattanooga, Tenn. This editorial is entitled "Tragic Lesson of the Czechs."

It points out that Russia has now taken care of the liberties of the people of this one-time democracy, the little state that was set up by Woodrow Wilson and others following World War I, and the editorial observes that probably the Czechs are worse off than they were during the German occupation which occurred a few years ago when the late Neville Chamberlain appeased Hitler at Munich.

This is communism on the march. It is time for America to wake up. As the editorial observes, one cannot play with communism any more than a child can play with fire.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRAGIC LESSON OF THE CZECHS

Nine years ago when Hitler ranted at the helpless Neville Chamberlain at Munich and took the Sudenteniand of Czechoslovakia as the price of a short-lived "peace in our time," the world trembled on the brink of war and "liberals" everywhere screamed for other folks to start fighting.

Germany's gobbling up of the Sudeten was one of the initial steps in Hitler's program of ruthless aggression, but, inexcusable as it was, the Nazis could at least argue that this area was inhabited by Germans. The fighting in World War II started a few months later when the Nazis extended their aggressions to Poland, but the outrage of Munich still rankled in the mind of the democratic world and was at least an important contributory casus belli.

Now, in a couple of days of terrorism, Communist agents of the Soviet Empire have taken over all of Czechoslovakia and converted it into a police state, and not an effort has been made by the rest of the world to stop them. What would be the use? Everyone seems to recognize the futility of opposition.

Yet poor old Chamberlain was denounced and ridiculed for appeasement.

Few of the alleged liberals who cried so loudly for Hitler's blood will be heard in condemnation of the Communist rape of Czechoslovakia. Many of them condemn those who do protest against the Red annexations of first one country and then another as warmongers.

To be frank about it, nothing but war could save Czechoslovakia now, just as nothing but war could have saved Poland, or Yugoslavia, or Hungary, or Bulgaria, or Romania—all victims of the brutal aggressions of the mobsters of Moscow; and the world has no stomach right now for such a war. Not even those who most wholeheartedly hate the Communist reign of banditry are ready to go to war to stop it—not many, anyway.

This absence of warlike fervor is not hard to understand.

In the first place, except for the United States, the western nations that fought Germany are too weak to fight today. In addition, these nations are strongly infected with leftism, including communism and the milder forms of this ideological disease. Non-Communist leftists talk a lot about liberty, but they don't look with abhorrence on loss of liberty as real believers in the free way of life do.

Our own Government's appeasement of the Soviets, in which the victims of these conquests were practically handed to the aggressors, has dulled American preception of the Russians' guilt. Until comparatively recently Americans who showed concern over Russian aggressions were brushed off as Roosevelt haters.

Then, too, we have just fought a great and disastrous war to rid the world of aggression, and we now find the world in worse shape than it was in when that war started. So what would be the use of fighting for the same thing again?

There is also much fear that another war would be the end of what we know as civilization—as well it might.

Even so, there will be war if the Reds push their aggressions too far. Just how far too far is, however, is very uncertain.

There is one significant lesson in the fall of Czech freedom: A few months ago there was a rash of apologists for Czechoslovakia in this country. Writers and speakers of alleged liberal leanings were busy explaining that the Czechs had found a way to cooperate with the Russians and still retain their liberty. Czech cooperation with the Commies was "voluntary" and the Commies respected and would continue to respect the freedom of the Czechs, these pundits said.

Of course, the Czechs had nationalized industries and adopted other measures that were Communist in nature. But these were presented by the apologists as really necessary and progressive steps. The Czechs were great lovers of liberty, we were assured. In fact, it was strongly hinted that they were such great lovers of liberty that the Commies knew they'd better not try to get tough in that country.

Well, the Commies have now taken care of Czech liberties and the Czechs are as bad off as they were during the German occupation. Maybe worse.

The lesson is the one that children have to learn about fire—you can't play with communism.

Czechoslovakia's warning to the world is that the people who are determined to stay free had better find some way of stamping out their own Communist fifth columns. They have the same objective everywhere that they had in Czechoslovakia.

The Case for Stassen

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 27, 1948

Mr. DEVITT. Mr. Speaker, Life magazine this week carries a splendid article about Presidential candidate Harold E. Stassen which I am sure the membership of the House will be interested in reading. I include the article as part of my remarks:

THE CASE FOR STASSEN—HE COULD SWING THE INDEPENDENT LIBERAL VOTE THAT THE REPUBLICANS WILL NEED TO WIN THE PRESIDENCY

(By Roscoe Drummond)

The frankest way to make the case for Harold Stassen as the next United States President is to begin by making four admissions; Govs. Thomas E. Dewey, of New York, and Earl Warren, of California, have each had greater administrative experience; Senator ROBERT A. TAFT, of Ohio, has had greater legislative experience; Gen. Douglas MacArthur has had greater military experience; Senator ARTHUR VANDENBERG, of Michigan, has had greater experience in foreign affairs.

To make these honest admissions is in keeping with the candor of Stassen's approach to politics. It will not surprise Mr. Stassen to see the case for his candidacy opened with these unpolitic admissions. His attitude is unique. Few Presidential candidates have admitted during campaigns that they did not know everything about everything. Honest humility is a very rare quality in politics.

But these admissions, fair and factual as they are, do not damage the Stassen candidacy. Stassen's record easily stands scrutiny; he need not campaign by minimizing his competitors. The plain fact is that Stassen's total experience excels that of any one of his opponents. Certainly he has had far more foreign-policy and military experience than Governor Dewey. Three times governor of Minnesota, he has had far more administrative experience than Senator Taft. In the military field his 2 years of combat service under Admiral Halsey have given him a fuller military background than any other civilian presidential aspirant. Stassen may not have the intimate foreign-policy experience of Senator Vandenberg, but he was one of the strongest members of the American delegation to the UN San Francisco Conference. And he is the only candidate for the Republican nomination who has dealt with Stalin at first-hand, as well as the only one who has made the grand tour of postwar Europe.

Thus Harold Stassen exceeds all his competitors in sum-total experience. He is not a specialist candidate for the nomination. To his supporters it seems an objective fact that he is the best-equipped candidate available to the party and the country.

Harold Stassen has practiced the art of government nearly all his life. In 1928 his burly, overalled father, Farmer William Stassen, accepted the post of Dakota County Republican chairman with the understanding that Harold, then 21, "would do all the work." Stassen, now 40, has been doing political work—and succeeding at it—ever since.

Physically, in hulk and agility—he is 6 foot 3 and weighs 210 pounds—Stassen is molded along the lines of Gene Tunney, and he plans his campaigns far ahead, as did Tunney, with a plan for the 11th round as well as the first. A big man, he has only

a faint trace of paunch. He has light, thinning blond hair; large, steady blue eyes, and a quickness of manner and movement that belie his size-17 collar and size-12 shoes.

His suits, always double-breasted, always blues and browns, are usually store-bought, picked from a rack. He always keeps his coat on, however small or informal the group, and always keeps it buttoned, however hot the day. He does not diet to keep down his weight, but he has not gained or lost more than a pound since the end of the war. He is a light breakfaster, with one egg when he has a heavy schedule; his big meal is in the evening. He drinks coffee heavily all day long, but he doesn't smoke and he rigidly limits his social drinking.

Stassen's intimates and his audiences—he usually attracts large crowds—find him disarmingly candid, direct, and likable. He is rarely witty, but this is not fatal in a politician or a President. George Washington was pretty humorless, and Franklin Roosevelt's satiric cracks were offensive to many. Stassen is not a great orator or a gifted phrasemaker, but he does have the knack of clarity, presenting complex matters simply. On the platform he does not act: he stands erect and still, using a short, upward gesture with pointed finger. His vigor, his clarity, and his obvious supreme confidence in the American future are the qualities that hold his audiences.

The most discerning tribute to his character comes from Washington correspondents, those skeptics who are alert to detect artificialities in public men, but who have noticeably avoided ironic criticism of Stassen. The reporters never ridicule Stassen, and this is a rare tribute in itself.

During Stassen's recent 6,000-mile tour by plane through 12 Southern and Western States, this item appeared on the detailed itinerary furnished by his staff to the accompanying correspondents, "Quiet day in Denver. Morning church, afternoon hike." To the press, that had all the earmarks of a bid for the religious vote and an invitation to the photographers. But it developed that that was just the way it was, with no publicity. And in last summer's American Legion parade up Fifth Avenue in New York City, when most State governors, politicians, and celebrities rode in huge Cadillacs, Stassen footed it all the way—in the Minnesota ranks, without ballyhoo.

FROM FARM TO STATE CAPITOL

Besides his physical well-being, Stassen enjoys remarkable mental and spiritual balance. This gives him a simplicity that is never forced and a detachment that helps him appraise himself objectively. A radio correspondent recently confronted Stassen with Arthur M. Schlesinger, Jr.'s searchingly critical review of his new book, Where I Stand. He wanted to know what Stassen thought of the review. "What do you think?" Stassen asked. The radio commentator said he thought a lot of it was valid. "I think so, too," Stassen replied.

Stassen's balanced view of himself, his reserve of good health and his understanding of plain people are inevitable products of his breeding and upbringing. His parents, through whose blood run strains from Norway, Czechoslovakia, and Germany, were hard-working, successful truck farmers in West St. Paul when Harold, the third of four sons, was born on April 13, 1907, and they still operate their farm today. His brother, William, is a sheet-metal worker, brother Elmer a grocer, and brother Arthur a State employee; his tall, attractive sister, Mrs. Rollin Crawford, manages his St. Paul office.

The Stassen family had to work to live. In 1921 his father fell ill. Harold delayed going to college and took over the family farm for a year. Then, to support himself for 6 years at the University of Minnesota and its law school, Stassen worked at every kind of odd job—grocery clerk, pan greaser in a bakery, conductor on the Chicago, Milwaukee, St. Paul & Pacific Railroad. Working people are not just statistics to him; they are people he has worked with.

When Stassen became attorney of Dakota County in 1930, he heard that distressed dairy farmers were talking of using violent methods to get fair prices for their milk. He attended a farmers' meeting to see what could be done. "Block the highways, spill the milk," one speaker urged the gathering. "If the county attorney gets in the way, run him out."

But Stassen would not be run out. He pushed his way to the platform and announced, "I'll prosecute any act of violence which is committed." But he also said, "If you will appoint me your attorney, I'll represent you without fee and do everything I can to help you get justice." He did. There was no violence. He got milk prices upped 30 cents per 100 pounds—with no increase to the consumer.

The sensible humanity of his approach gave the voters of Minnesota confidence in Stassen. As a result he was able to carry the GOP to victory three times in his State, winning in spite of the national trend that kept reelecting Roosevelt and coattail riders of the New Deal. As governor he replaced a socialistic, class-conscious Farmer-Labor administration with a progressive, solvent, and humane Republican administration which ultimately won even the support of labor leaders. The top command of the A. F. of L. supported him in 1940, and both the A. F. of L. and CIO leaders supported him in 1942—although he had never amended by one particle his Minnesota labor-peace law (in its provisions a forerunner of the Taft-Hartley Act), which they had earlier called the Stassen slave law.

HE GAVE MINNESOTA INDUSTRIAL PEACE

In Minnesota Stassen showed that he could create a political climate favorable to both labor and capital. He earned the respect of the greatest number on both sides in the old labor-management controversy. As an advocate of free enterprise, he worked to guarantee the citizen protection against abuses by both capital and labor, with further guaranties of security against unemployment and old age.

Stassen put an end to four terms of Farmer-Labor government in Minnesota at a time when the State was experiencing the most serious industrial unrest in the whole United States and faced the prospect of class strife of ominous intensity. He dealt with the trouble-making Communist leaders by appealing directly and persuasively to the unemployed they were trying to mislead and by correcting the conditions which were breeding radicalism. Shortly after his inauguration an organized mob marched on the capitol to protest against relief methods. Stassen did not call on the police. He invited their spokesmen to state their case in his office. After listening, he went with them to address the mob from the statehouse steps. The crowd booed. After the booing died, he said, "That's one nice thing about this country. You can boo your officials without getting pushed up against a wall and shot." Then he discussed the relief problem frankly, admitting some faults and pledging to do his best to correct them. He was cheered when he finished—and he carried through his promised reforms, to the dismay of the Communist leaders.

Harold Stassen created a new atmosphere and was rewarded with the greatest popular pluralities ever given a Minnesota Governor. But his major achievement was that he operated without rancor and without turning the clock back to reaction. He founded an honestly progressive administration with manifest good will toward all groups.

The argument of the people who now back Stassen is that he could do the same job on a national scale; that he would be the most effective instrument with which the Republican Party would terminate in 1948 four terms of New Dealish government in the Nation.

It is easy enough to show that Harold Stassen is, in the old nominating phrase, "a true man of the pee-pul." He is unpretentious, a man of plain and homely tastes, a good family man, well educated but not overeducated, well dressed but not overdressed—all characteristics that the American voters traditionally are supposed to like. And it is easy to show that he has the qualities of moderation that the voters respect—the plain piety of an honestly religious man who does not need to end every address with an invocation; an honest liberalism without any of the radicalism that Americans have learned to suspect; and honest conservatism in the best sense, of preserving the fundamentals of the American system.

These are all sound qualities. But are they enough?

One great political lesson of our times is that the voters will sacrifice every other consideration in a candidate for a single condition: the capacity for imaginative leadership. In Stassen's judgment the three great tasks for American leadership are:

1. To keep the American system of modern capitalism strong and stable, to avoid any serious economic crash, to make sure that free enterprise includes humanitarianism.

2. To provide a firm, calm, and consistent conduct of foreign policy calculated to defeat totalitarian concepts in the world—without war.

3. To face frankly the reality that if the spread of totalitarian concepts cannot be stopped without war, then the Nation must maintain its victorious leadership through war.

Stassen has said to Americans and Europeans, and he told Stalin himself during their conversation in the Kremlin, that America's "free capitalistic system, wisely regulated but not unduly burdened," is capable of avoiding crises and crashes, recessions and depressions. Stassen knows that the United States can do most to build a secure peace by remaining strong at home.

He would bring to the great tasks of the Government the humanity of approach that has given him his international reputation as a liberal. In the winter of 1945 he gave his name and assistance to the Committee To Aid the Families of General Motors Strikers. He knew this action would bring criticism; he knew it would cost him political support. But he would do it again.

He argues: "Anyone who investigated the facts would agree on the impelling humanitarian importance of granting this aid.

"Veterans of World War II who had just returned from service, particularly if they had served as privates or seamen, had no accumulation of war bonds or wartime savings. If they were ambitious and went to work for General Motors soon after their discharge and were caught in the strike, they had no resources to fall back on. Because they were unemployed due to a strike, even though it was no fault of their own, they were ineligible for unemployment compensation.

"Thus the veteran across the street who was taking it easy and did not try to go back to work was drawing his unemployment compensation of $20 a week steadily, but the veteran who had gone back to work and was thrown out of his job by the strike could not draw unemployment compensation."

"We must," he says, "never permit the left wing to claim a monopoly on humanitarianism."

The Republican Party must nominate an electable as well as a capable Presidential candidate. Stassen supporters believe that his prospects of winning are better than

those of the other candidates. The preeminent reason is that Stassen has shown that he has a compelling appeal to the nonparty or independent voter. The independent vote, which the Republican Party lost in every Presidential election since 1928, is obviously indispensable to a Republican victory. Only a few die-hard old guardsmen now fail to see this.

INDEPENDENTS WOULD VOTE FOR HIM

One such unconvinced Republican in Iowa recently cross-examined Stassen during the course of a small private dinner. After hurling all kinds of critical questions at him, the conservative began his next question with this statement: "There is a man in my neighborhood who I am certain is a Democrat. I know he has been a Democrat for 25 years. He told me the other day that if you were nominated he would vote for you." He paused and then concluded in accusatory tones, "Mr. Stassen, how do you account for that?" No doubt it does appall such Republicans to think that their candidate could appeal to other than traditional Republican voters, but if their candidate doesn't do so, it is obvious that he is not going to be elected.

That is the central problem of the Republicans; their appeal must reach beyond traditional Republican ranks to win. And the Roper public opinion polls in Fortune magazine have shown that of all the possible candidates of both parties, Stassen stands highest with the independent voters.

His supporters believe that President Trumans' weaknesses would stand out most vividly in contrast to Stassen's strength. In the campaign, Mr. Truman would be tied to his mimeographed hand-outs and the speeches prepared for him, while Stassen could exhibit, as he does in his public appearances and his packed Washington press conferences, his full mind and quick grasp of matters.

Stassen 's young in body and mature in mind. He possesses the mental and physical vitality needed to deal calmly but tirelessly with the press of problems at home and abroad. It has been argued that he is too young for the Presidency, but if he goes to the White House in January 1949, he would be only 14 months younger than Teddy Roosevelt who took office at 42. His election would almost certainly assure the country and his party of 8 years of sustained leadership over a most critical period. The evidence of Mr. Roosevelt's impaired physical strength at Yalta, disclosed in James E. Byrnes' and Edward Flynn's recent books, underlines how needful it is that the Nation have an administration likely to continue strong and virile.

Is Stassen too "radical"? His "radicalism" is actually fictitious, based only on charges circulated mostly by old guardsmen who want to head him off. He knows and frankly says that neither the Nation nor the Republican Party can turn the clock back; at the same time he sees socialism a monumental failure in Europe. That is the extent of his "radicalism."

He advocates a taxation ceiling of 50 percent. On this point he says, "Let me make it clear that when I say that not more than 50 percent of a person's income should be taken from him, I mean not more than 50 percent of his total income, including that portion which comes from tax-exempt bonds or capital gains. But I strongly believe that a government which demands more than half of the total fruit of a citizen's labors, or ingenuity, or inventiveness or other income is a government killing the future of its average citizen and weakening the long-range strength of its economic system."

A FEET-ON-THE-GROUND INTERNATIONALIST

Is he a disloyal Republican? Stassen has always worked with and through the Republican Party, not around it or outside it. On one occasion, it is true, he has opposed particular party leaders, as when he first sought the governorship of Minnesota in 1938. What Stassen said then he would say today: "I look about this hall," he used to tell his audiences, "and I see men and women whom I know to be Democrats. I see others whom I know to be Farmer-Laborites. I see others who have never taken an active part in politics. I know that you have all gathered here in full realization that my candidacy shall be Republican. The men and women in every walk of life have everything in common with each other and nothing in common either with the radical racketeers on one extreme or the selfish reactionaries on the other. The time has come when the voters of this State must take a temporary vacation from their party and unite in a crusade to bring about a wholesome and necessary change in our government."

He has consistently supported major Republican policies despite particular differences. The tax-reduction bill and the Taft-Hartley Act of the last session of Congress are good examples. He disagreed with some provisions of the tax bill; the Taft-Hartley law contained some restrictions he opposed. After both were passed, he opposed the President's tax veto and defended the Taft-Hartley bill almost as strongly as Senator TAFT himself.

Is Stassen too advanced an internationalist, too much of a global stargazer? The record reveals him as a pretty careful, feet-on-the-ground internationalist. He unqualifiedly accepts the premise that the United States cannot secede from the world, that America cannot maintain its own prosperity and security if there is insecurity and chaos abroad.

He is completely aware that Russia and Russia's totalitarian concepts are acting to suffocate human freedom. He told Stalin that the Kremlin might as well realize now that Russia would lose out on its two major hopes—that the American economic system would fall into depression and that the Communist Party could successfully infiltrate the American people or the American Government.

One of Stassen's outstanding qualities is his foresight. In 1942 he called for the early creation of a UN organization before President Roosevelt had lifted a finger to prepare the way. Furthermore at the San Francisco Conference, which drafted the UN Charter, he led a fight within the American delegation to keep the veto out of the Charter. He yielded only in face of the State Department's contention that the American Government was bound by the Yalta agreement. It was on his initiative that a provision was approved by which members of the UN are free to defend themselves collectively against aggression, a provision which is an essential balance against the use of the veto by an aggressor.

In his Jefferson, Iowa, speech of last May he urged that for the next 10 years "10 percent of our total production of goods and food" be used to aid the stricken economies of the world. This was a month before the administration unfolded the then vague Marshall plan. He urged that it "not be a sharpster lending program, not * * * a lightheaded give-away program, but a practical, sound, long-visioned businesslike approach."

Stassen is devoting himself to learning all he can about all of America—its problems, its needs, its hopes, its possibilities—from the vantage points of every State of the Union, instead of from the single vantage point of Washington. Stassen knows America and all its people as few in public or private life do today. He knows the qualified leaders whom he could later call to public service.

Since his release from the Navy, he has devoted about 16 hours a day to doing two things: earning his living and introducing himself to the country. He gets about 50 speaking invitations a week, 75 to 100 letters a day. He often speaks for nothing; he lectures professionally to some extent, his fees ranging from $500 to $1,000 a lecture. Through these activities, plus selling some dozen mass-circulation magazine articles a year, he nets an average annual income of about $42,000. He doesn't need to be in politics to make a livelihood.

Stassen finances his political expenses from his own earned income. The additional costs of his wide-ranging preconvention campaign have been defrayed largely by the Minnesota Finance Committee whose major funds come from small contributions ranging from $1 to $100. Another committee in Minnesota takes contributions up to $1,000; and now preliminary finance committees have been set up in New York, Chicago, Philadelphia, Boston, San Francisco, St. Louis, Los Angeles, and Portland. The average contribution to his campaign is about $14.60 per contributor.

Stassen will bring to the Republican 1948 convention a minimum of 100 to 130 pledged delegates. He may pick up another 50 delegates from the South and West. But delegate speculation is obviously premature this early, particularly when the Presidential nominating primaries are only a few weeks away. The primaries will be stern tests this year, weeding the men from the boys, and there is good reason to predict that Stassen will show some extraordinary strength. The primaries will not be cut and dried, because Stassen has refused to negotiate any of those private little agreements under which the leading candidates usually stay out of each other's back yards.

His invasion of Ohio is a typical exhibit of his cool political audacity and his hard common sense. He is certain to break through the Taft forces in Ohio to pick up at least a few delegates, and perhaps as many as a dozen. He cannot lose anything; he may win new prestige. But this is not his only motivation—he firmly believes in the American direct-primary system. He thinks the people should have a chance to nominate their Presidents as well as to elect them. And he believes that the American people should have a direct opportunity to pass on his candidacy. He is content to abide by the result. For Harold Stassen does not want to master and manage the people of his country but to serve them.

The Late Hon. Clarence E. Hancock

EXTENSION OF REMARKS

OF

HON. HADWEN C. FULLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. FULLER. Mr. Speaker, the recent death of our former colleague, Clarence E. Hancock, is mourned by all the Members of the Congress, as well as by his family and a host of friends.

He was outstanding in this body, exceedingly able and withal kindly and generous of heart. When I first entered the Congress a few years ago, on more than one occasion I leaned on his advice and counsel, and benefited greatly from his wisdom.

His congressional district adjoins mine on the south, and many of his problems were my problems. No man could have been more kind in his assistance.

Clarence Hancock was a Member of the House for nearly 20 years, and was

ranking minority member on the great Judiciary Committee. Not only was he at all times soundly American as he influenced the destiny of our great Nation, but no problem of any constituent was too small for his time and effort. He endeared himself to untold thousands of the people of his district by his devotion and interest in what concerned them individually and collectively.

His decision to retire from active service in the Congress on January 3, 1947, came as a blow to all of us. His health at that time was very poor, and he had more than justification in reaching his decision, but there are few men with the courage and character of Clarence Hancock and he could ill be spared.

The affection with which his memory is held, the long record of achievement in public life, are enduring monuments to his name.

What builds the Nation's pillars high
And its foundations strong
What makes it mighty to defy
The foes that round it throng?
No gold, but only men can make
A people great and strong;
Men who, for truth and honor's sake,
Stand fast and suffer long.
Brave men who work while others sleep
Who dare while others fly—
They build a nation's pillars deep
And lift them to the sky.

Accountancy Profession Attacked

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. HOLIFIELD. Mr. Speaker, under law to extend my own remarks in the Appendix of the RECORD, I include the following article by the National Society of Public Accountants entitled "Accountancy Profession Attacked":

ACCOUNTANCY PROFESSION ATTACKED—H. R. 2657 SEEKS TO RESTRICT THE PRACTICE OF ALL PUBLIC ACCOUNTANTS BEFORE AGENCIES OF THE FEDERAL GOVERNMENT

H. R. 2657 was introduced by the Honorable JOHN W. GWYNNE, Member of Congress from the Third District of Iowa, on March 20, 1947. The bill was referred to the Judiciary Committee by the Speaker of the House. The chairman of the Judiciary Committee appointed a subcommittee to conduct hearings, and appointed as chairman of the subcommittee, Mr. GWYNNE, the author of the bill. Hearings by the subcommittee began July 9, 1947, and were discontinued; however, hearings were resumed on January 26, 1948. The provisions of H. R. 2657 may be summarized as follows:

This bill is entitled, "Administrative Practitioners Act," however, it seems to have two separate and distinct purposes.

First, it provides for the creation and appointment of a credentials committee, whose duty shall be to register lawyers to practice before the various governmental agencies and bureaus. This is of some great advantage to the legal profession, especially to those lawyers who desire to practice before a number or all of the various governmental agencies or bureaus, and if such is the intent, of course, it will cause no particular injury to the members of the accountancy profession. However, there seems to be no justification for the creation of another bureau to regulate practice before governmental agencies and incur additional expenses to the already overburdened taxpayer. The necessity for the creation of an additional bureau has not been explained.

Secondly, and this is the provision to which the accountants take exception, the resolution requires all persons, lawyers or nonlawyers who practice before governmental agencies, first to obtain credentials from the so-called Credentials Committee. This section of the bill certainly abridges the right of accountants to practice before the Treasury Department, as well as other agencies. It has, for its purpose, the creation of a monopoly for lawyers in certain forms of practice dealing with fact and not legal matters and it certainly deprives the existing bureaus and agencies of the right to determine the qualification of the individual practicing before such agency or bureau. Therefore, it discriminates between members of the legal profession and the accounting profession in such a manner as to be of no discernible benefit to the public.

Section 3 of the bill further provides that there shall be created a Credentials Committee of five members, three of whom shall constitute a quorum, four to be designated by the Attorney General of the United States with the approval of the President, from among officers otherwise serving in the executive branch of the Government, and it further provides that they must be confirmed by the Senate; one other member shall be appointed, but the bill specifically states that he must be a representative of the legal profession, and it further provides that four must hold or be eligible to hold credentials as provided under section 5. This provision in itself, could deny to the accounting profession the right of having a representative on the Credentials Committee, as most of the individuals today, holding executive positions are members of the legal profession.

Under the provisions of the bill as now written, it would place the members of the accounting profession in the position of having to serve as employees of the legal profession in tax matters. In other words, it could be, by regulation or otherwise provide that the preparation of income-tax returns could be construed as practicing law, and an accountant, unless he was permitted by the Credentials Committee, could not prepare income-tax returns. However, in the preparation of income-tax returns, accountants are dealing with facts and not legal matters. In the examination of returns by the Treasury Department, the accountant deals with facts and not legal questions. In cases wherein a controversy exists between the Internal Revenue Bureau and the taxpayer, these matters are settled in conference by the accountant and the internal revenue agent, or the conferee in the office of the internal revenue agent in charge, and if no settlement is arrived at as a result of a conference, then the accountant attempts to settle the matter with the technical staff. Up o this point, the accountants are dealing with facts. If no settlement is made with the technical staff, a 90-day letter is issued, and, of course, it becomes a legal matter, as the controversy must be tried before The Tax Court of the United States. Where can a lawyer be of any assistance to the taxpayer during these proceedings? The accountant is dealing with accounting and tax matters of which he is especially skilled, while the majority of the legal profession have little or no knowledge of accounting or tax matters.

Under our code of ethics, accountants are not allowed to split fees, therefore they must charge the taxpayer direct and if the taxpayer be required, which H. R. 2657 would make mandatory, to hire a member of the legal profession, the taxpayer would be required to pay double or triple the amount for the service that he receives, which will still have to be handled by the accountant, and for which the member of the legal profession could render little or no service. This will be admitted by the majority of the members of the legal profession.

This is not the first attempt to regulate practice before the agencies of the Government. The Congress of the United States, on June 11, 1946, enacted the Administrative Procedure Act, which allowed the agencies to determine for themselves to what extent taxpayers and others might be represented by nonlawyers. As far back as 1884 the Secretary of the Treasury prescribed by rules and regulations for those who would be recognized as agents or attorneys practicing before that department, and at the present time enrollment of individuals to practice before the Treasury Department is governed by Circular No. 230, and we submit that there has been no complaint, either on the part of the practitioner or the taxpayer up to this date, and the Government seems to be getting on very well with its present program. It has been admitted by many of the courts that tax practice as far as the taxpayer has been concerned has, to a large extent, been turned over to the accounting profession, for the reason that a finding or a determination in a tax controversy is largely a matter of accounting facts which are distinguishable from legal interpretation. However, this bill goes even further than the Treasury Department. It would prohibit traffic representatives of the various chambers of commerce from practicing before the Interstate Commerce Commission; it would prohibit farm agents and others from appearing before the Department of Agriculture and also prohibit members of labor organizations from appearing before the National Labor Relations Board. In other words, it would prohibit any one not licensed by the credentials committee from appearing before any of the agencies of the Government because H. R. 2657 provides in section 2 that "practice means any form of appearance or participation in any agency proceeding other than that of a witness."

We have no objections to that part of the bill which provides for a Credentials Committee to register lawyers and make it unnecessary for any particular lawyer to be admitted to practice before a multitude of agencies, but the bill does not stop there; it goes further, and would bring all practitioners within its purview. It would appear that the purpose of this bill would be to convert all agencies of the Government into "quasi courts" in which lawyers would have a superior right to practice. We can only judge the future by the past, and when we look back to the time when Congress changed the name of the Board of Tax Appeals to the Tax Court of the United States, and provided that that court, by rule and regulations, could determine who could practice before them, we now have a condition where only lawyers are eligible to practice before the Tax Court of the United States, unless the individual passes a legal examination prepared by members of that court and hence nonlawyers are finding it difficult to practice before that court while a member of the bar does not have to pass any examination.

This bill certainly discriminates unduly between lawyers and accountants, in that a lawyer may be enrolled on a showing that he is a member in good standing of the bar and that he is engaged in the active practice of law, irrespective of his qualification, and upon making that showing, which any attorney can do, credentials must be immediately issued to him. On the other hand, an accountant or nonlawyer must first obtain a certificate from the agency in question, after undergoing an examination and investigation, and thereafter must be governed by the whims of the Credentials Committee, which has discretionary power as to admission. All rights and privileges of lawyers

are carefully safeguarded. Disbarment proceedings must be instituted and a court proceeding "de novo" must try and determine the facts; an accountant or nonlawyer, may be disbarred by the agency and his credentials are immediately revoked by the committee, as the present bill does not provide for a hearing or trial of a nonlawyer or an accountant.

The purposes of this bill are clear: It creates a monopoly for certain lawyers residing in Washington and New York to practice befor the agencies of the Government. The public certainly is not protected by reason of that fact. Members of the accountancy profession should immediately obtain a copy H. R. 2657 by writing to your Congressman, and certainly the members of our profession should inform your Member of Congress that you are viciously opposed to the passage of this bill, for if this bill is enacted into law, the accountancy profession, insofar as practice before governmental agencies is concerned, is done for. On the other hand, if the legal profession is attempting to do something to regulate their own profession in providing qualified lawyers to appear before the various governmental agencies, then they certainly should provide in this bill that lawyers be required to take the same examination as accountants before they are permitted to practice before agencies of the Government. This is fair and is the American way of doing things. The bill has, for its purpose, the creation of a monopoly for certain members of the legal profession, and certainly places a heavy additional burden upon the American taxpayer, in that taxpayers will be required to pay double fees for the same service they are now receiving. It has been stated that there are more lawyers per capita in this country today than there are medical doctors by two to one, and the bar association has been very active in the past few years creating additional courts and agencies of Government, all of which have for their purpose providing employment for the members of the legal profession, and yet this overcrowded profession is continuing to turn out from the various schools of our country, more and more lawyers, until it has reached the point where the public can no longer absorb them. What we need today, are fewer and better trained lawyers, and if the Congress will spend as much time in investigating the public pay rolls as to needless and useless members of the legal profession, and eliminating that expense, as they are putting into this bill, the taxpayers will receive a substantial reduction in the cost of Government.

This bill can be of no benefit to the public. It only adds to their already hard financial burden, and when it's all said and done, Congress should consider the public before the enactment of any legislation. Accountants cannot stand idly by and see themselves legislated out of business, we must stand together and fight this bill or any similar class legislation that will restrict or discriminate against our profession or any group of our citizens.

Whereas there has been introduced in the Eightieth Congress of the United States a bill entitled "This action may be cited as the Administrative Practioner's Act," said bill being designated as H. R. 2657; and

Whereas it is the purpose and purport of H. R. 2657 to set up or cause to be established a committee, which by the terms and provisions of H. R. 2657, would have arbitrary and dictatorial authority and power to legally prevent, restrict, and discriminate against taxpayers and citizens of these United States, in the lawful pursuit of their business or profession in such a manner and to such an extent as to prevent and prohibit qualified persons from appearing before agencies or bureaus of the Government, as agents or representatives for citizens or taxpayers; unless such person possess the qualification or professional standing as may be determined by the committee in their absolute discretion; and

Whereas the enactment into law of H. R. 2657 will cause undue hardship and irreparable damage to the public accountants of the United States and its territories, and to all other citizens similarly situated, and to the public generally, in that it will deny and deprive all, except certain members of the legal profession of their constitutional right to engage upon their business or professional duties in appearing on behalf of those citizens and taxpayers who have business with the agencies or bureaus of the Government, the character of which is exactly or similar to the duties and responsibilities which they now perform and assume on behalf of citizens and taxpayers who desire and do employ their services in the several States and Territories of these United States, all of which they are entitled to and privileged to do under the Constitution of the United States; and

Whereas H. R. 2657 discriminates against the accounting profession and all other professions in favor of and creates a monopoly for certain members of the legal profession: Now, therefore, be it

Resolved by the National Society of Public Accountants in annual convention assembled in St. Louis, Mo., this 15th day of August 1947, That we condemn and oppose the passage of H. R. 2657 or any similar resolution or measure as class legislation and discriminatory against the accounting and other professions, in that it has for its purpose the creation of a monopoly for certain members of the legal profession and a denial to the public accountants and others similarly situated of their constitutional rights and guaranties to engage in business or pursue their profession; be it further

Resolved, That a copy of this resolution be sent to each and every Member of the Congress of the United States and to all public accountants of the United States and its territories.

H. E. ALFORD, *President.*

Attested:

GEO. L. LA COSTE,
Executive Secretary.

Germany's Share in the Marshall Plan

EXTENSION OF REMARKS
OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article that appeared in the Central European Observer, London, England, on February 6, 1948, by Jean Pajus:

GERMANY'S SHARE IN THE MARSHALL PLAN

(By Jean Pajus)

Two of America's foremost experts on foreign affairs, Secretary Marshall and Sumner Welles, have stated their views on European recovery. They have also told us about some of the inherent dangers involved in the revival of the German economy. These views are most pertinent to the Nationwide discussions now going on and they must serve as guides for our program of helping Europe.

Secretary Marshall, speaking to the Nation from Chicago on the eve of his departure for the London Conference of Foreign Ministers, November 18, 1947, told us why we must restore Germany. "The restoration of Europe involved the restoration of Germany," he said. "Without a revival of German production there can be no revival of Europe's economy. But we must be very careful to see that a revived Germany could not again threaten the European community."

Secretary Marshall stressed the importance of controlling the German economy by reminding us that the implementation of that policy raises a most difficult and complicated problem, because "there is an imperative necessity for 'safeguards' to insure that the economic power of Germany shall not be used by a future German Government as a weapon for the furtherance of exclusively German policies." However, Secretary Marshall has not told us yet how to solve this complicated problem.

Former Under Secretary Sumner Welles was more critical as he grappled with the problem. He says: "The Germans are still dangerous. The Marshall plan is not worth the paper it is written on so long as the western democracies do not obtain a guarantee against renewed aggression from Germany; so long as the Ruhr coal and steel are not integrated in the whole western economy and so long as they benefit Germany only."

No doubt the American people will applaud Secretary Marshall when he tells them to be careful, because certainly no one wants to make the same mistakes all the time.

Perhaps the American people will listen more carefuly to former Under Secretary Welles for the simple reason that he is a little more explicit on the score of safeguards because he singles out coal, steel, and Ruhr as the most important factors in the Marshall plan. It is interesting to note that Secretary Marshall speaks of guaranties against German aggression. What do these words mean in practical terms? Since neither the Secretary nor the former Under Secretary have spelled out the details of the safeguards—or the guaranties—we believe the following comments and questions will be pertinent to the discussion:

1. WHY SELECT 1936?

When we say that the restoration of Europe involves the restoration of Germany—what kind of a German economy do we want to restore? The Germany of the thirties or the Germany of the twenties? What year are we going to use as a yardstick?

More than a year ago the British and American economists agreed that 1936 will be the year upon which to base the revival of German industry. The arguments used by these economists were:

a. That 1936 was the last year before Germany began intensive rearmament.

b. That 1936 was a normal year, marked neither by a depression nor by a boom.

In the spring of 1947, former President Herbert Hoover, after a hurried trip to Germany, also selected 1936 as a basis for German production.

On August 29, 1947, the experts of the United States and the United Kingdom Governments agreed to raise the level of German industry to that obtained either in 1938 or in 1936. For instance, in the case of chemical industry, the year 1936 was selected, to which was added 42 percent.

While Secretary Marshall did not specifically single out 1936, it is expected that 1936 will be used as a basis for the revival of German industry. The facts are: in 1936, Germany was working hard towards preparing for war; her iron and steel industries made a better showing than the record year of 1929. The output of pig iron rose to 15,303,000 tons and ingot production advanced to 19,158,000 tons, compared with a production of only 5,751,000 tons in 1932.

That year, too, under the impetus of large armament orders, the production of machinery established a new record and reached the prewar high of 1938 in tonnage. Industrial production of 1936, as a whole, was 80 percent over 1932. The truth is that 1936

was merely a continuation of 1935 which set the whole rearmament program in motion.

Nineteen hundred and thirty-six was the fourth year of Hitler's regime, a year in which Germany made it amply clear to the world at large that it intended to attain the political mastery of Europe. Considering, therefore, that Germany's foreign economic policy was aimed primarily at weakening the economic strength of the countries which the Third Reich regarded as potential obstacles to the carrying out of its aggressive policies, the fundamental question is why 1936, or for that matter, any Hitler year was selected as the year upon which to base the revival of the German industry?

What makes this question more crucial is the statement made by another former Under Secretary, Dean Acheson, on June 25, 1947, the man who had much to do with the elaboration of the Marshall plan. Speaking about Europe's recovery, Acheson said: "Putting in working order the German production is considered by the American Government as the cornerstone of the plan which the European countries will be able to elaborate within the framework of the Marshall plan." The American people are entitled to know how the German economy of 1936 can offer them the proper guaranties or safeguards against renewed aggression, and whether such an economy can serve as the cornerstone of the Marshall plan.

2. SHOULD THE GERMAN ECONOMY BE RESTORED?

Perhaps some will say that the Germany of the twenties was a peaceful Germany because, after all, it was the Germany of the Weimar Republic and of the Social Democrats. Before we decide to restore the economy of the twenties, it is pertinent to state plainly the economic realities of those times.

In 1926 the German Republic appointed an inquiry commission to make a thorough analysis of the German economy. The inquiry lasted 5 years. The commission was composed of members of the German Parliament, industry, agriculture, trade-union leaders, and economists. The most important work, from our point of view, was done by a subcommittee charged with the task of making a most exhaustive inquiry into the workings of the German iron and steel industries. The findings of the committee were signed unanimously by all its members and subsequently published by the German Government.

No effort was spared by the subcommittee on iron and steel to ascertain the true facts of the German economy. All official data of the German Government were available to it; the leading directors and top managers of the German iron and steel trusts appeared before that committee to give testimony. Top union leaders presented their point of view and, indeed, no effort was spared to arrive at a correct conclusion regarding the functioning of the German heavy industry.

The unanimous opinion expressed in that report was that the German iron and steel industries could not subsist unless they received tremendous subsidies in the form of protective tariffs, freight rebates, and direct Government subsidies. Even these costly measures did not suffice to sustain the heavy industries for, in the course of the hearings, the steel makers and industrialists flatly asserted that the major German trusts could not even survive without support derived from the activities of the international cartels.

With reference to the domestic prices for German steel, the leaders of the German cartels frankly admitted that the German consumer was forced to pay double the world market price for German products in order to sustain Germany's export of steel. The report also brought out the startling fact that the German iron and steel industries were financed by a dangerous overstructure of largely short-term indebtedness.

Nor did the report overlook the political aspects of the relations between the heavy industries and the German Government. In its analysis of the German heavy industry of the twenties, the Commission revealed that the industry, in order to obtain the subsidies from the government, had to maintain a strong influence over the German Government. Because the heavy industry was constantly afraid of losing the government subsidies, it was forced to exert all its pressure upon the German Government to embark upon policies which would make the existence of a large German steel industry necessary, regardless of economic justification. This constant pressure of the German industry finally resulted in a policy of aggression, since of necessity military consideration forced the German Government to override all sound economic judgments. In other words, the Weimar Republic became the ally of Pan-German industrialists. What happened after the advent of Hitler is too well known to both Germany and the world at large. Thus the Weimar Republic served the interests of the industrialists well.

As soon as they realized the possibilities of nazism, the industrialists made use of Hitler's chauvinism to further their aims. If history, therefore, is any guide, it is clear that a restoration of the iron and steel industries of the twenties, as now contemplated, will inevitably restore the conditions which have, time and again, forced the German iron and steel industries to play the role of the strongest promoter of the forces of aggression. The question again therefore is: Can we take the German economy of the twenties as a guidepost or as the cornerstone of the Marshall plan?

3. HOW DID GERMANY BUILD UP HER HEAVY INDUSTRIES?

The answer is, she did it with coal. Coal was the heart of the German economy of both the twenties and the thirties. It was the source of nearly all the country's energy, including that expressed in electric power and liquid fuels. In addition, it was of primary importance as a commodity, particularly with respect to coke, chemicals, and other products—the basis of her industrial economy of the twenties which enabled her to overcome her enemies in World War I and without which she would not have been able to build her war machine of the thirties.

A quick glance at Germany's consumption of coal during the years of preparation for war will suffice to explain Germany's power. It is estimated that the consumption of coal within Germany, in hard coal units, increased from 116,000,000 tons in 1933, to 197,000,000 tons in 1943. During the same period, coke consumption increased from 16,000,000 tons to 41,000,000 tons. Most of these increases were related to war preparation.

Taking the Ruhr as a separate unit, the following picture is obtained. In 1937, the Ruhr produced 128,000,000 tons of hard coal, of which 88,000,000 tons was bituminous coke and coal. This is striking evidence of the tremendous importance of the Ruhr as the backbone of the German industrial structure.

In 1937 Germany produced 106,000,000 tons of coking coal, yet her requirements were only 63,000,000 tons, or approximately 60 percent of the total. Most of the remainder was exported. The same year the reported coke production was about 41,000,000 tons, of which about thirty-two millions were produced in the Ruhr region. In other words, about 77 percent of the entire coke production originated in the Ruhr region.

To indicate the importance of the Ruhr as the center of Germany's war-machinery structure, it will suffice to mention that in 1937 the Ruhr contained 80 out of 113 metallurgical coke plants and 11,050 out of 14,471 coke ovens in Germany.

In the field of heavy chemicals, as a result of this tremendous concentration of coke capacity in the Ruhr, Germany was in a position to produce by 1943, 70 percent of crude benzol, crude tar, ammonia, and sulphur produced in German-occupied Europe.

Should Germany be allowed to retain such a share of the European production of by-products of the coke industry?

4. COAL FOR GERMANY'S NEIGHBORS

An analysis of Germany's exports in 1937 reveals that she exported 2,564,000 tons of steel and imported 545,000 tons of steel. Had this exported steel been made in other countries; that is, Belgium, France, or Holland, and had Germany only supplied the coal or coke to these countries for the production of the same steel, it would have been necessary to export about the same quantity of coal as steel, or, in terms of coke, Germany would have had to export about 2,000,000 tons of coke more than she exported. How much Germany's neighbors depended on her for coal products is revealed in a study of Germany's 1937 export of coal and coke to France, Belgium, and Luxemburg, Italy, and Sweden—all recipients of the benefits of the Marshall plan:

German exports of coal and coke

To—	Hard coal	Coke	Production of steel ingots and castings
France	8,045,000	2,338,000	7,893,000
Belgium	5,325,000	96,000	3,863,000
Luxemburg	56,000	2,567,000	2,510,000
Italy	7,930,000	169,000	2,099,000
Sweden	632,000	873,000	1,106,000
Total	21,988,000	6,043,000	17,473,000

Source: Statistical Yearbook, League of Nations—1942-43—Geneva.

The steel capacity of these countries has not changed much since 1937; they are willing and able to produce the same steel products. Nor has the coal situation changed for the better; if anything, it is worse because no other supplies of coal are available. Consequently, if these countries are to produce their 1937 quota—which is not asking them too much—they will have to import about 18,000,000 tons of coking coal for steel ingots and castings, and probably additional tonnages for related products.

Will these countries obtain the necessary coal to produce their steel products or will Germany be allowed to retain the coke and prevent the neighboring countries from producing what they are able to produce?

5. VICIOUS CIRCLE OF GERMAN EXPORTS

It is claimed in most responsible quarters that the restoration of German industry will benefit the European economy. The advocates of this theory maintain that the revival of the Ruhr will substantially alleviate our financial burden.

If this theory is to be proved correct on all points, the Ruhr should be developed to its maximum capacity and should logically absorb all of its coal production. In this case, very little would be available for its neighbors. Eventually, but not immediately, the Ruhr will succeed in producing tremendous quantities of steel products, machinery, and chemical products for Europe. These products could, theoretically, be purchased by Germany's neighbors provided they had the dollars to pay for them. But Germany's neighbors have no dollars to pay, nor can they expect to have them in the near future, because they can obtain dollars only if they can produce goods for export. In order to produce for export, Germany's neighbors need coal to manufacture goods which they could sell for dollars with which to pay for German products. In other words, it is a vicious circle. The sad truth of the matter is that Germany's neighbors have neither the markets nor the dollars, because for the past few years the United States has replaced the German market in Europe. The

former buyers of German goods have no money to pay for either American or German goods, so that the deficit in German production for exports is largely theoretical. So long, therefore, as Europe has only a very restricted market, and so long as Europe is short of raw materials, very few new markets can be created for German goods.

Europe's postwar economic situation is such that the shortage of raw materials, particularly food and above all, coal, is greater than the shortage of machinery. As between manufactured goods and coal, the latter could bring dollars much faster, provided it were available.

The advocates of the restoration of the German economy for the benefit of European recovery overlook another very important tendency of our times, namely, autarchy. All the western countries are now anxious to make ends meet by concentrating their credits in order to buy food. Each nation is desperately trying to become as self-sufficient as possible in order to export as much as possible and to derive enough dollars to buy essentials. Today, the competition for the sale of manufactured goods is very great. This means that all western nations are competing for the same raw materials and all are trying to increase the production of their own industries. In other words, all European nations are anxious to export manufactured goods, rather than to import.

As there is no lessening of that trend, it is inevitable that:

(a) Germany—assuming that she is able to produce the goods—will encounter greater competition than before the war.

(b) Assuming that Germany is in a position to export the manufactured goods—which is very unlikely—it is hard to see that the western European nations will stand by and allow Germany to dominate the European export market again. This will create a tremendous political problem as well as an economic one, unless it is deliberately so willed by the United States.

But the most important question has yet to be answered, namely: How will the western nations pay for the German goods? One hates to think that the only alternative will be credits from the United States to enable the western nations to buy from Germany. If this is true, then it follows that Germany:

(a) will recover first, and

(b) the American taxpayer will foot the bill.

A further corollary will be that Europe will have to plan its economic life with a view to providing the market for German goods and with a view to becoming an exporter of raw materials for Germany. This does not make sense; this is not what Europe fought for, and such an economy cannot provide the western nations with a livelihood.

6. WHY SUBSIDIZE GERMAN STEEL?

This leads us to another important problem involved in the European recovery—priorities. Which economy should be rebuilt first? The German or the western European? If the Ruhr is to be rebuilt first, where will it get the ore which it does not have in abundance? Before the war, Germany, because of her control of the international steel and coal cartels, was in a position to import French and Swedish iron ore for the Ruhr blast furnaces. This enabled Germany to become the blacksmith of Europe in the interwar period. If the Ruhr is to be rebuilt first, it follows that France, for instance, will have to send to the Ruhr her iron ore, bauxite, phosphates, etc. If she is forced to do so, she will retard her own economy, which is exactly what happened in the thirties, and with disastrous results.

Between 1935–38 the French iron and steel industries imported from Britain and Germany approximately 1,300,000 tons of coal per month.

Britain is no longer in a position to ship any coal to France. Germany, plus the Saar, have been shipping in recent months an average of 208,000 tons a month, or one-sixth of the prewar shipments of coal to France. The lack of supplies of coke and coal has affected the French steel industry very badly, with the results that her steel production is only working about 50 percent capacity. The French experts have produced all the data to prove that if France could receive 1,000,000 tons of coal per month from Germany her output of consumer goods would so rise as to completely change her economic life. They claim that France would be in a position to produce her own machinery and her own tractors and farming equipment, thus eliminating the extremely costly import of these goods from the United States—imports for which France must find dollars, and which she has not. These experts have also produced all the evidence to show that France will need at least an additional 7,400,000 tons of coke to achieve the stated goal of her 1951 steel production.

Nor did the French overlook the most important problem—the cost of producing a ton of steel. A legend has grown that Germany can produce steel products cheaper than her neighbors. As discussed earlier in point 1, if the western nations had studied the report of the German Inquiry Commission (1926–31), they could easily have discovered that Germany's cost of production was not cheaper. They would have realized that so long as the domestic consumer in Germany was willing to pay for Germany's exports of steel goods, the German industry could boast of alleged cheaper production. But those times are gone. So is the German republic which made it possible. Times have changed now, and it is the American taxpayer who will be called upon to finance the reconstruction of the Ruhr steel. It is only fair therefore that the cost of production in Germany and western Europe be compared. This was done by the French experts at the Paris conference and the figures they adduced are most startling.

They show that the cost of production of one ton of Thomas steel in the Ruhr area is 86.3 prewar marks, whereas the same ton of steel can be produced in the Lorraine mills for 53.3 prewar marks. Moreover, the experts claim that the Lorraine mills require less coke than German mills. If this claim is true—and it can be checked easily—the problem of priorities assumes a totally different character and it is quite in order to ask: Should the American taxpayer be taxed heavily in order to subsidize the more expensive German steel mills?

The most elementary common sense—let alone economic sense—would suggest that the goods essential to the European recovery be produced at the lowest possible cost. By the same token, it is elementary economics to send one ton of coke from Germany to France and let the French produce a ton of steel rather than force France to send three tons of ore to the Ruhr in order to produce one ton of steel there. Moreover, contrary to allegations that French are short of labor, it takes little manpower to produce steel and the French have that manpower.

An attempt to answer the all-important question of priority was made by the Harriman committee. On page 16 of the report released November 12, 1947, the following recommendation is made: As between steel production in Germany and an equivalent steel production in France, the priority should go to the latter. This recommendation is in line with one of the fundamental principles of the Marshall program which calls for the full utilization of the available production facilities of the 16 nations.

7. WHY FAVOR GERMANY?

It would appear thus far that the demands of Germany's neighbors will, in theory, be taken care of. According to the Paris economic recovery program, steel production of the 16 nations and western Germany will, in 1951, have increased by 20 percent compared with 1938. The total production of these countries will rise from 45,500,000 tons in 1938 to 55,400,000 tons in 1951. The major question, however, is how this program will be met. No doubt, the steel-producing nations are able and willing to increase their 1938 output. They can do it provided they receive an adequate supply of coal and coke from Germany. Every effort is being made to provide machinery, raw materials, food, and other supplies which are required to increase the Ruhr coal production. Indeed, the coal production has received the highest priority at the Paris Conference. A quick glance at the requirements of coal-mining equipment of all categories will reveal that the Paris Conference has allocated for this purpose a total of $3,563,000,000, covering a period of 4 years, to the following countries: Western Germany, $1,414,000,000; United Kingdom, $1,042,000,000; and France, $656,000,000; the rest going to other countries.

Taking into account that the Ruhr mines were newly equipped in the period 1922–26, and that in the thirties and during World War II the process of mechanization proceeded further, an investment of so large an amount—40 percent of the total—is bound to favor Germany more than any other country. Meanwhile, the iron and steel industries of France, Belgium, Luxemburg, and Sweden are still in a quandary as to whether they are going to get the coal and coke. Their coal deficit is estimated at 12,500,000 tons, and at this juncture the prospects of obtaining it are not bright.

Since the Paris report does not tell us how these countries will make good their coal deficit, it is clear that only a greater rate of carbonization in western Germany and a higher proportion of hard coke exports from the Ruhr can meet the legitimate demands of the industrial nations of the Paris Conference.

8. WESTERN EUROPE MUST GET PRIORITY

A preview of things to come is provided in the report on German exports for the next 4 years, submitted to the Paris Conference by the American and British bizonal authorities. It is reported that in 1951, western Germany will export 5,500,000 tons of coke. Her total production in 1951 is given at 29,000,000 tons. In this connection, it is pertinent to point out that in 1938 western Germany produced 36,700,000 tons of coke, which is nearly 8,000,000 tons more than the slated production for 1951. If the proposed export of 5,500,000 tons of coke in 1951 remains the final target, it will constitute the greatest blow to Germany's neighbors. Since Germany in 1929 exported 10,000,000 tons of coke, and in 1938—a time of intense war preparations—she was still able to supply her neighbors with 6,000,000 tons of coke, one is completely at a loss to explain the low production and the low export of coke for 1951. Only one interpretation is possible—the military authorities in western Germany do not agree with the recommendations of the Harriman committee which give to France priorities in production of steel.

Nor is this all the bad news the reports of the Paris Conference reveal. The same reports have it that the military authorities plan to extract 16,000,000 tons of ore in western Germany in 1951. Since the total production in Germany in 1936 was 6,900,000 tons of ore, and the highest under the Hitler regime was 11,000,000 tons, the net effect of the 16,000,000 tons program will be that Germany will embark on a new autarchy program.

If this became a reality, then we will witness a repetition of the German economy of the thirties when Goering tried to make Germany economically self-sufficient. The Nazis called the system "autarchy." The system was economically unsound because it was costly to Germany but not to Goering,

for money was no obstacle to him, so long as he was in a position to develop certain German industries essential to preparing for war. The tremendous cost involved in setting up the Hermann Goering Works is a typical example. The cost of extracting iron ore was, by our standards, prohibitive. However, from the point of view of the German war lords, it was sound since it enabled the German war machine to obtain more steel. In any case, if Germany is allowed to produce 16,000,000 tons of iron ore, this can mean only one thing—Germany will need all the coal and the coke she can produce in order to fabricate the steel products from her own iron ore. This in turn means that Belgium, France, Sweden and the other countries will not get the coke to enable them to exploit their own steel capacity.

In other words, while Germany today is consuming 6 out of every 7 tons of coal produced there, under the proposed program she will become the greatest competitor in western Europe for coal and other vital raw materials, instead of resuming her role as the chief supplier of coal to western Europe.

Meanwhile, what are the western European heavy industries going to do without the needed coal? Surely, this cannot be the intent of the Marshall plan.

Coal and the Railroads

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. KELLEY. Mr. Speaker, with permission to extend my remarks, I am including an editorial appearing in the current issue of the United Mine Workers Journal. This editorial deals with the use of oil and coal for power purposes by our American railroads. We have heard so much recently about the shortage of oil for heating purposes, and this editorial throws some light upon what is in store in the future for the consumers of oil. It is not an encouraging picture by any means.

For anyone familiar with the coal industry it is difficult to understand why large carriers of coal should discontinue the use of coal for locomotives. The question arises as to why these coal-carrying roads substituted oil for coal when it was within the realm of possibility that they could have designed locomotives driven by electric current produced by powdered coal. I believe a recent news item indicated that the Chesapeake & Ohio Railroad was experimenting with such a locomotive, and it sounds like good common sense. Users of oil for heating purposes would be smart to convert their plants to coal, for instance, by using the stoker-fed furnace. This would eliminate a lot of discomfort and worry next winter and in the winters beyond. I hope my friends in the East will read this editorial and give some thought to it.

COAL CONSTITUTES 22 PERCENT OF ALL RAILROAD FREIGHT BUT CARRIERS ARE GIVING COAL THE BOOT

The coal industry is the best customer of American railroads. In 1947 railroads hauled 9,088,216 cars of coal, 520,000,000 tons of the total of 677,000,000 tons. Coke freight totaled 732,019 cars, making a grand total of 9,820,235 cars or 22 percent of the total of 44,503,349 of all railroad car loadings.

Coal loadings in 1947 established a new record, topping all other commodities, 13.5 percent over 1946 and coke 24.7 percent over 1946.

The average layman and the professional advocates of reciprocity would naturally think that the railroads in turn would do something for the coal industry. But the facts reveal that the railroads are converting from coal to oil as rapidly as delivery of Diesel engines will permit.

In this change-over the railroads are not only contributing to decreased coal consumption when normal conditions return but are also the largest single contributing factor to the present day oil shortage.

Spokesmen for the petroleum industry assert that the increased use of Diesel oil by the railroads since 1940 has been sevenfold—from 1,000,000 barrels to 7,000,000 barrels. The petroleum industry estimates that if the present ratio of purchases of Diesel engines by the railroads continues, supplanting coal-burning locomotives, Diesel oil consumption by the railroads will increase to 90,000,000 barrels in 1952.

Six hundred and six new Diesel locomotives were put in service in 1947. At present there are 1,192 Diesels on order, as against only 30 steam locomotives and 4 electrics. As compared with last year, Diesel orders have more than doubled while steam locomotive orders have decreased one-half. Diesel locomotives are being turned out on a mass-production basis—around 120 a month.

On the southwestern railroads Diesels are first choice by reason of the absence of coal production. But certainly this is not true of the railroads serving our geography north of Alabama and Tennessee and east of the Mississippi and the western intermountain States.

When the railroads embarked upon the transition from steam to Diesel locomotives oil was plentiful. Diesel oil like the small sizes of coal—stoker coal for example—was offered below cost of production. But, again like stoker coal with the widespread sale of stokers, Diesel oil now accounts for such a large portion of the petroleum industry's production that the industry must receive a price that will not only pay production costs but return a profit. Consequently, both small sizes of coal and Diesel oil now command a price comparable with other oils and sizes of coal.

The economy advantage that was the first consideration in the railroads' use of Diesels has now been largely dissipated and coal is available f. o. b. the mines cheaper than Diesel oil on a comparable haulage cost, B. t. u. ton-mile basis.

The railroads are constantly importuning the coal operators and the UMWA to fight waterpower development and pipe-line construction for gas and oil that would eliminate coal and oil traffic. In other words, the railroads are anxious and vigorous in their endeavors to hold down the consumption of pipe-line oil and gas and electricity generated from water power for domestic and industrial consumers in order to maintain their freight haulage, but railroads are unwilling to continue to use coal to generate motive power.

It is a paradox that puts the railroads on the spot and a commercial indictment that they cannot answer.

Locomotive-manufacturing companies that have heretofore engaged in the production of steam locomotives are wondering what to do with their equipment. Representatives of these companies have placed before the Joint Army-Navy Munitions Board a program for the purchase of military steam-powered locomotives in order to save the manufacturing facilities of these plants for wartime production. The steam-locomotive producers assert that when and if war should come, the demand for oil would be so great from our fighting forces that it would be necessary for the railroads to replace Diesel engines with steam-powered locomotives. These companies have $35,000,000 of equipment and no orders. So they want to know whether national defense requirements are such as to make it feasible for the Government to keep their stand-by capacity in productive condition.

The leadership of the coal industry have ever humbled themselves to the railroads. Prior to passage of the Bituminous Coal Act in 1937, the railroads practically dictated the purchase price of railroad coal. The operators intrigued, scraped, and bowed, used political influence, and every other conceivable contact to get railroad orders on a production-cost basis.

Coal-industry leaders have been unable to convince the railroads of the practicality and necessity of reciprocal trade. On the other hand, such large companies as General Motors, Fairbanks-Morse, and others engaged in the manufacture of automobiles and varied products have been able to sell the railroads Diesel engines on the strength of the freight these companies furnish the railroads.

Here again is a demonstration of the evils of monopoly control. As an example, General Motors could not swing railroad purchases of Diesels on the shipment of automobiles alone. But since GM makes Frigidaires and a varied line of other products which railroads compete for the shipment of, GM is consequently able to turn the trick.

Freight rate hearings before the Interstate Commerce Commission have proven time and time again that coal is the most profitable freight hauled by the railroads. Coal carriers like the Chesapeake & Ohio and the Norfolk & Western earn money when other railroads are going in the red.

Since 1940 coal freight rates have increased 45 cents a ton, or $24.75 per 55-ton car. We do not believe that railroad costs have increased this much.

But regardless of increased expenses incurred by the railroads and recognizing the fact that greatly increased coal production is a leverage for an increased earnings ratio for railroads, we do not believe that the latter is totally responsible for the large earnings of such coal-carrying railroads as the Norfolk & Western, whose earnings increased from $22,733,409 in 1946 or $3.88 a share to $32,292,608 or $5.58 a share in 1947, and the Chesapeake & Ohio, whose earnings increased from $28,372,066 or $3.54 a share in 1946 to $35,387,327 or $4.44 a share in 1947. Certainly the earnings of these railroads demonstrate the profitability of coal freight. And we think unduly high rate increases are to be credited as a big factor.

So the next time you read a railroad advertisement in the newspapers telling all about how the railroads cooperate with industries on their lines, just remember to reflect on the kind of treatment the railroads are handing the coal industry plus the fact that coal production in any period of great demand is always hampered by an inadequate railroad car supply, which in the past has contributed to increased conversion from coal to oil and gas.

Vandenberg's Lead

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. DEVITT. Mr. Speaker, herewith is an editorial from this morning's

Washington Post entitled "VANDENBERG's Lead" which I ask be included in the Appendix to the RECORD as an extension of my remarks. It is a good, sound editorial and well written.

VANDENBERG'S LEAD

ERP has now been transformed into a bill which on enactment will be called ECA—the Economic Cooperation Act. The story of the transformation is familiar enough. Last June 5 Secretary Marshall electrified the world by suggesting that the Europeans get together and submit to the United States a program for the revival of Europe as "a working economy." In due course the program arrived in Washington. It was screened by the country's best brains. To the Senate Foreign Relations Committee fell the role of hammering out a bill. Under Senator VANDENBERG's chairmanship the committee spent 5 weeks in public hearings and 10 days in continuous executive sessions. The bill that grew out of all this work and which was introduced yesterday by Senator VANDENBERG is submitted to the Senate with the unanimous recommendation of the seven Republicans and six Democrats making up the committee.

The occasion is appropriate to say (and the applauding Senate recognized it) that Senator VANDENBERG has proved himself the model of the vision and courage that he bespoke after Secretary Marshall's declaration. If Marshall was the prophet, VANDENBERG has been the engineer of the heroic adventure, and now he is undertaking the pilot's job. He got the barque off yesterday with an allocution in part narrative and in part advocacy, and the whole was shot through with an apocalyptic sense of history in the making.

There will be a disposition in Congress to quibble over the details of ECA. Particularly, as the Herter committee makes clear, an effort is brewing to whittle down the amount. Originally this was $6,800,000,000 for 15 months after April 1. The figure was the result of rigorous pruning by the executive agencies of Europe's proposals for $8,400,000,000 as well as a realistic appraisal of domestic availabilities. The committee decided to launch the plan on a timetable which would permit early review. Thus the first authorization would be for five billion three hundred million instead of $6,800,000,000, and for a year of operation instead of 15 months. Senator VANDENBERG pleads that this figure should be left untouched. The figures, he admits, are not sacred. We ourselves would say they are an exercise in faith. But in the light of the powerful credentials they possess, unless the Appropriations Committee can strongly prove them wrong, let's give them the benefit of any doubts for the time being. Next January is not long to wait for the accounting with so much at stake.

The plea was advanced with compelling power. The debate is taking place while the enemies of the plan in what Senator VANDENBERG calls the •Soviet police empire are moving heaven and earth to frustrate it. They are bent upon breaking up the embryonic chain of ERP Europe. Italy is the most exposed, if not the weakest, link, and the drive to communize Italy is now on. Nothing would hearten the Italians more than the early and triumphant passage of the Economic Cooperation Act. The aid afforded by this bill is needed desperately to prop them up, not by way of what Senator VANDENBERG calls a sterile dole, but for the purpose of fitting them and their neighbors into an integrated continental system. Italy has been in the van in the preparatory work to unite Europe.

Unity—that is the concept of ECA. To put the nations of Europe on their individual feet while the Colossus is on the march would be to increase their value without mitigating their defenselessness. Unity is the only strength in today's momentous contest. It is the thing that Soviet Russia most fears. Senator VANDENBERG sees this requirement with a clarity that has been nourished by actual experience of diplomacy with Soviet Russia. He reminded Congress that the continuity of our assistance is made dependent on the deepening of intra-European cooperation. The central body in Europe with which the ECA will work can be made into the nucleus of a new Europa if we insist that it shall be equipped with an international staff operating a sort of peace production board. Only such an entity will give Europe and us any safeguard against the advancing hordes of the Slav aggressor. The Vandenberg speech was a mobilization call expressed with deep seriousness and minus heroics. If it is not heeded, there is no doubt that another kind of mobilization will be forthcoming.

Reserve Corps' Importance in Nation's Defense

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks in the RECORD I would like to include the following address which was delivered by me to a group of Reserve Corps men at Chattanooga, Tenn.:

Upon the 28,000 Army and Air Force Reserves in Tennessee and upon the hundreds of thousands of other Reserves throughout the Nation rests a great responsibility—perhaps we should call it an opportunity—in connection with the formulation and disposition of vital national-defense questions.

RELATIONSHIP OF RESERVE CORPS TO NATIONAL DEFENSE

We are all concerned today with the question of national security and of vital importance are these matters which are before Congress, or which may come before it affecting national security.

To begin with let me first give you a picture of your relationship, collectively and individually, to the national-defense program. Perhaps you know this already. No doubt most of you do. But it is so basic, so very important a point, that it cannot be repeated too often. The Organized Reserves now number well over a million people, with slightly more enlisted men than officers. Just what are all of you supposed to do? Just where do you fit in in the national-defense scheme? Well, let's look back a bit.

RESERVE CORPS PAPER UNITS AFTER WORLD WAR I

After World War I we had an Officers' Reserve Corps organized into units of officers only, and these were essentially paper units. There were about 3,000 enlisted Reservists who enlisted primarily as a means to secure commissions. No enlisted men were assigned to units nor was any equipment provided for training. As late as 1940 the Officers' Reserve Corps had a strength of about 100,000. Only about 6,000 of these were from among the 200,000 officers who served in the First World War. So you can see that in a period of about 21 years the Officers' Reserve Corps decreased insofar as war-trained officers are concerned from 200,000 to 6,000.

The rest of the 100,000 Reserve officers we had when Pearl Harbor was bombed were principally ROTC graduates, as no doubt many of you are. By Pearl Harbor day over 80,000 of these 100,000 had been called to active duty to augment the officer personnel of the Regular Army and National Guard.

Now, here is the problem that developed. By December 7, 1941, even the paper officer units of the Reserve had been entirely dissipated. The fact is, not one of the Reserve units as such was ever called to duty during the entire war. Actually, because many of the officers on duty had been promoted, no appropriate vacancies existed in the units to absorb them even if they had been returned to their former Reserve-unit assignments.

WAR DEPARTMENT ESTIMATES TOO CONSERVATIVE

What had happened was that War Department planning for officer strength had been too conservative. The Department had provided in all components a strength of about 135,000 officers. But some 800,000 were needed. Here, then, was a lesson from the last war affecting the reserves vitally, that required corrective legislation in this Congress. Such legislation is now in the mill, and I will tell you about it a little later.

What I have just been over very generally is the backdrop for what we have today. I am intentionally skipping over how the Reserves contributed to the winning of the war. All of you know about that, much better than anyone else. I will just remind you of General Marshall's remark that—and I quote—"Just what we would have done in the first phases of our mobilization and training without the Reserves I do not know. I do know that our plans would have had to be greatly curtailed, and the cessation of hostilities on the European front would have been delayed accordingly." Certainly there's no need to expand on that.

SITUATION IN EIGHTIETH CONGRESS

Now, what situation faces the Reserves in the present Congress? Some very important legislation is now pending before the Committee on Armed Services and the House of Representatives that will affect each one of you here this evening. Incidentally, I think it is a safe statement that this Congress has already initiated more basic Reserve legislation, with more far-reaching effects on the Reserves, than any previous Congress.

INACTIVE-DUTY TRAINING BILL

We have, for example, one bill that I know many of you are curious about. It is the so-called inactive-duty training-pay bill. We call it H. R. 3227, the number meaning, by the way, that 3,226 other bills had been introduced in the House of Representatives before it came along. I mention this so you can understand that there are a relatively large number of legislative items confronting a Congressman.

This inactive duty training pay bill, as you may know, contemplates giving inactive duty training pay, for the first time, to the Army Reserves, thereby giving them the same status in this respect as Marine Corps and Navy Reservists and the National Guard.

This measure will cost the American taxpayer, if it is enacted into law, somewhere around $117,000,000 a year. That is a lot of money. However, the Reserves must be kept active if we are to have an adequate national defense program and equity requires the compensation of Army Reserves on the same basis as Navy Reservists, Marine Corps Reservists, and the National Guard.

This bill was voted out of the Armed Services Committee favorably and I made a vigorous effort to have it passed by the House of Representatives before it adjourned on July 26. A companion bill had already been passed by the Senate.

PRESENT STATUS OF MEASURE

The Rules Committee has not granted a rule on the bill and it will be brought up on the floor of the House shortly. Even though considerable debate may develop in the House because of the cost this legislation will incur, I think we can get it through and that, reasonably soon, you fellows and the thousands of other Army Reserves will be receiving inactive duty pay.

You can easily compute how much pay you will get from this bill if and when it becomes law. The bill specifies that inactive duty pay will be at the rate of one-thirtieth of 1 month's base and longevity pay for each training period of two or more hours. Neither you nor I want to see these funds wasted. I am glad to say that the program is to be very closely administered, and the law was written with that in view.

HOW THE BILL WILL OPERATE

To be paid, you will have to belong to a class A, class B, or class C unit—or else be a certain type of specialist, such as a pilot, a radar technician, a doctor, and so on, who can be paid even though assigned outside such units. If you belong to a class A unit—four of them have been activated in the country so far—you can have 48 training periods a year, or about one a week, for which you can be paid. If you are in a class B or class C unit you will get half as much as the fellows in class A units or 24 training periods for which you can be paid annually.

The Army expects this legislation to cost about $35,000,000 in 1948. Twenty million of it will go to the Ground Forces, and about fifteen and a half million to the Air Forces. Eventually, as reserve units are activated and advanced into class B and class A status, the cost is expected to reach about $117,000,000 a year.

RESERVISTS RETIREMENT BILL

Another bill came out of the Armed Services Committee this session which also will affect every reserve here tonight. The so-called retirement bill known to us in Congress as H. R. 2744, reported late in the first session of the Eightieth Congress by the Armed Services Committee, is to be considered this week by the House. It is likely to be passed, although it is somewhat more controversial than the inactive duty training bill.

Tied in with this bill is the Regular Army retirement plan and also a program by which inefficient and substandard Regular officers will be eliminated. But what concerns you particularly is that part of the bill which sets up for the first time a retirement program for Army, Navy, Marine Corps, and Air Force reservists. Of course, the bill also applies to the National Guard. The end result of the legislation is that if you stay with your reserve training until you are 60 years old and qualify under detailed standards specified in the bill, you will receive a retirement income from the Federal Government. It will be computed similarly to that received by Regular officers of the Services. The formula by which your retirement income will be computed is not exactly simple.

HOW IT WILL AFFECT YOU

Take the base pay, plus the longevity pay, of the highest grade you anticipate attaining in the reserve, then take 2½ percent of that. Multiply the result by the number of years you will have served on active duty. Then add to that total one-half of 1 percent multiplied by the number of years of inactive duty you will have had. What comes out is your retirement pay. It will be relatively substantial for an officer in the grade of colonel who has had some 25 or 30 years of service. For an officer, the average annual benefit will be about $1,300 a year, beginning at age 60. For an enlisted man it will average about $500.

For your officers to buy such a 60-year retirement income from an insurance company beginning at age 20 and maintained on a 30-year payment basis, you would be out about $300 a year. So you can see that this legislation will be worth, on the average, about $300 a year to each Reserve who stays active and qualifies for retirement under the terms of this bill.

This program will cost the taxpayers about $50,000 in 1949. By 1957 the War Department estimates the cost to be about one and one-half millions a year. Some estimates are much higher. The President's Budget Bureau, for example, thinks the cost will be very much higher than the War Department estimate.

However, the program is, in my opinion, still warranted, even though it may become expensive. It dovetails closely into the concept of the inactive duty pay bill. By providing inactive duty pay, we hope the Reserves will stay active while they are young—that is, when the weekly or bimonthly inactive duty pay checks from Uncle Sam mean a good deal. Retirement programs seem rather distant and unrealistic to most young men; they are likely to worry more about the present than the future.

By the time a fellow gets around 30 or 35 years old, he begins to think about his future, his insurance, his retirement, his established personal estate. Around this time, too, he begins to lose interest, if he has been successful, in the comparatively small income he can derive from the inactive duty pay. In here steps in the retirement program. It offers the Reservist the equivalent of a $300 a year retirement policy if he will remain active as a Reserve officer.

I think these two programs are excellent. The fact is, they are absolutely necessary in my judgment, if we are to avoid severe attrition in the Reserves and an expensive turn-over of officers during the peacetime years.

UNIVERSAL MILITARY TRAINING

Another bill you may have heard something about is the universal military training bill which was reported to the House on the last day of the session. At this point it is sufficient to say only that the bill would require all qualified young men between the ages of 18 and 20 to undergo military training to fit them to contribute to the protection of the country in time of emergency. I do not know whether the Congress will enact universal military training into law or not. But I can certainly assure you that I am going to make a strong effort to get it passed. For I think that universal military training is a vastly important and absolutely imperative element in the national security program. And you realize, of course, that it is also exceedingly important for the healthful development of the Organized Reserves and the National Guard.

OTHER MEASURES

There are a great number of legislative matters in the mill and for that matter enacted into law during the last session but I do not want to extend this summary too long. It suffices to say that we passed 59 laws affecting the armed forces which is one out of six of all laws passed by the Congress last session.

Now, in conclusion, I want to emphasize that you men here this evening are, whether you will it or not, representative of one of the most important elements of the Nation's defense. I mean this sincerely. A lot has been said about it and written about it lately. And it is definitely true. We in Congress have initiated legislation which we believe will help you keep active in the reserve components. If you do not, then the Nation is certain to be hard put to maintain an effective defense establishment. I agree completely and unreservedly with the remark of the President's Advisory Commission on universal military training when it said that military weakness "is a passport to aggression."

RESERVE CORPS, BACKBONE OF REGULAR SERVICES

The Regular Army, the Regular Navy, the Regular Air Forces, and the Regular Marine Corps are but one element, and the smallest element, I may say, in our defense structure. Upon you Army reservists and other civilian components hinge the efficacy of the Regular services in repelling aggression. I know you can perform, if given the materials and incentives necessary for your peacetime training. We are working vigorously in the Congress to give you just that. If you have any suggestions to improve what we have done or have not done, I trust you will let me and others in our Tennessee delegation in Congress have them. We are as determined as you are to insure that our armed forces and their civilian components are properly and sufficiently equipped to meet any crisis in the world that may arise.

Thank you very much for giving me the opportunity to make these remarks to you.

The Human Side of Politics

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley at Colgate University, Hamilton, N. Y., on February 17, 1948, at the opening of the university's 1948 series of lectures in human relations:

THE HUMAN SIDE OF POLITICS

For more than a quarter of a century I have carried in my pockets a definition of politics which has been an inspiration and a comfort in hours of striving and stress. I am not certain of the identity of the author beyond the fact that his name is Oliver. I believe that the sentences are the product of Andrew Oliver, the younger, scholar and founder of the Political Journal, rather than of his father, Andrew Oliver, the Colonial political leader, who was hanged in effigy on his appointment as stamp officer for the crown and at whose grave in Boston in 1774 patriots cheered when his coffin was lowered into the ground. Both father and son had postgraduate courses in the hard school of practical experience, which would have given either of them the background for the lines I quote:

"Politics is the most hazardous of all professions. There is not another in which a man can hope to do so much good to his fellow creatures—neither is there any in which by a mere loss of nerve he may do widespread harm—nor is there another in which he may so easily lose his own soul—nor is there another in which a positive and strict veracity is so difficult. But danger is the inseparable companion of honor. With all the temptations and degradations that beset it, politics is still the noblest career that any man can choose."

As they say in the precise language of academic halls, Mr. Oliver said a mouthful. I can attest to that out of instructive, if at times trying, experience gathered in 35 years of active political life. For the past 4 years I have been an interested observer on the sidelines where I have learned much that escaped me when I was in the rough and tumble of town, county, State, and national arenas. In these later years I have been urged, now and then, to expound my political philosophy. While I am not a philosopher, except as the passage of years promotes contemplation and reflection on one's way of life, I do have some knowledge of politics.

If you would know politics, look about you. I do not entirely subscribe to the dictum that the proper study of mankind is man; I would raise our eyes higher to the contemplation of a divine and beneficent Providence, but for the politician there is no study more rewarding than the cultivation of his fellow men

in each and every walk of life. Only through knowledge of his fellows can a man hope to lead or influence them. A love of his fellow men helps, but, it is to be regretted, is not essential since it can be so readily simulated.

The hazards of politics, I have often thought, are not campaigns and elections, as might be commonly supposed, but rather the human element, the very nature of the animal that engages in politics. Ambition, love, jealousy, hate, and the many emotions and reactions man is heir to frequently affect the course of the nation and of the world more than principles or circumstances or events. This was so from the dawn of time, is true today, and will ever be in the history of man's search for perfection.

Moses, first of the great leaders, had the wisdom of a statesman and was perhaps the only political leader who kept all his campaign promises, as Pharaoh learned to his sorrow. Yet, he was not without opposition even from within his own family. Miriam and Aaron, his sister and his brother, spoke against him. He saw other tribes bitter with jealousy against his tribe and his own tribe envious of his preeminence. He knew the worldly considerations by which some of his followers were moved as told in the story of the children of Reuben and Gad, who sought permission to remain in the land of Gilead because the country was well suited for the raising of cattle, instead of passing over the Jordan into the promised land with the other children of Israel. He was disturbed over the lack of faith in the people and their readiness to lapse into idolatrous ways. Frequently he meditated on these weaknesses and pondered on ways of combating these threats to national existence. One of his ways was the preparation of a farewell address, which precedent undoubtedly influenced that great Moses of the west, George Washington, when he closed his career by offering a political valedictory for the instruction of his countrymen.

Moses was not without weaknesses of his own, not the least of which was vanity. It will be remembered that at the encampment at Kadesh, where Moses and Aaron were bidden by God to speak to the rock, Moses said to the murmuring people, "Hear now, ye rebels: shall we bring forth water out of this rock?" and he smote the rock twice with his staff so that it gushed forth water. Like many a politician who has followed them, the brothers failed to recognize their subordinate position. At that moment they felt they were the leaders of the people, forgetful that it was God who led the tribes out of Egyptian bondage and fed them in the wilderness for 40 years. Moses and Aaron paid dearly for this sin, being denied the honor and privilege of leading the children of Israel into the promised land.

Vanity, the insatiable sixth sense common to man but most highly developed in politicians, has ruined many a political career, as has vaulting ambition. Reluctance to relinquish power, particularly where the hand is feeble and the mind is tired, is fraught with danger to parties and to the Nation. This weakness is often the salvation of courtiers and coat-tail riders. In the vital relay of politics, every lap of which measures the progress of man, the torch of leadership must be passed on to trained younger men. If younger men are not trained to take over leadership, the party and the Nation are weakened, with the danger that the race may be lost.

Politics is no place for the timid man; he who hesitates will lose the election. Frequently the man in public life is called upon to make split-second decisions, usually in the heat of campaigns or in times of crises in office. While it is true, delay solves some problems, the man who puts off decisions too long finds his career crushed by the weight of the accumulated heap. And politics is no place for the corrupt or dishonest. Sooner or later, evil deeds rise to confound the guilty. In my time I have been criticized for helping men who have betrayed their trust. Somehow I could never feel anything but pity for them. I have no capacity for hate and but little for censure. I feel that a man found wanting in political honesty suffers enough in standing revealed as a weakling, unworthy of the reliance placed in him by his friends and the electorate. I have sympathy for him as one has a sympathy for the afflicted, but without any trace of the admiration that goes for the latter.

In the final analysis, the politician has nothing to offer but his word. If he tells the truth and keeps his word, he gains the devotion of his friends and the respect of his enemies. Men may and do have honest differences. More often than not there is something to be said on both sides of a question. Compromise is the usual measure of political progress. This does not mean that principles or ideals are to be raised or lowered in any skirmish; they can and should be nailed to the mast.

The man who does not tell the truth is distrusted and shunned, and rightfully so. There are those whose first instinct is not to tell the truth even when it best serves their own purposes just as there are those in whom the dog of ambition is pursued by a rabbit of conscience. Truth is by far the easier as well as the most respected course. I had an early lesson in this from Charles E. Murphy, leader of Tammany Hall, whom many of you might regard as a strange preceptor. I approached him after Alfred E. Smith was first elected Governor of New York, after a campaign in which I played a small part. I felt entitled to the post of secretary to the State Industrial Commission. My sights were not, I modestly felt, fixed too high. Mr. Murphy told me that while he was impressed by my earnestness and ability, he felt I lacked experience for the place, and that it should go to someone else. I was a bit bitter for a time, but as disappointment died, the more reasonable Mr. Murphy's attitude seemed to me. As a result I have never concealed the truth from an applicant for a position. In the end I always found him grateful as I was.

In the rare instances where one cannot tell the truth, because he is bound by his word not to reveal confidences or advance information, it is not necessary to become involved in complicated evasions or falsehoods. Again the easier method is to acknowledge that you are sorry but just can't answer the questions. The passing of one's word is the execution of a sacred bond. It is so with most men in political life as it is with the great majority of men everywhere.

In politics, it is well to start at the very bottom rung of the ladder, because each rung gained has its delights, and the loftier the climb, the more gratifying the view from above. The usual first step is bringing voters to the polls. There is no better way to meet people in the district than by offering them a favor. This develops courtesy and ability to meet people. The second step is ringing doorbells to solicit votes for a candidate or party. Here salesmanship and personality are developed. If the young man attracts the notice of his superiors he is given greater responsibilities either within the party organization or in public service or both. He may rise in responsible but appointive administrative posts; he may work into the ranks of the king makers, or he may travel by the elective rung to the highest office in his city, county, State, or Nation. In mention of the highest office within the gift of our fellow countrymen, I am glad that each passing year brings us nearer to the ideal where any American mother, regardless of race or creed, can look into the crib holding her child and say to herself, "Some day he may be President of the United States."

Where the opportunities are limitless so are the capacities for service. Nothing has given me greater pleasure in my years in politics than the services I was able to do for the people as a whole or as individuals. To this day I find, wherever I go, someone is always taking my hand to thank me for a service I have usually forgotten. The services I have given will ever be a source of joy to me. Those in academic life among you know too well that money is not the highest reward; that the metal of service outshines gold.

Heretofore, for the most part, I have confined myself to approaching politics from the viewpoint of the individual. I now propose to consider politics from the viewpoint of groups of individuals or parties. It is fitting and proper that we should be governed by political parties. From the dawn of self-government in Greece it was natural that political parties should vie for the management of the government.

It is not surprising that parties should take color and appeal from their leadership. However, it should not be forgotten that parties have basic principles, which differ sharply. These basic principles are constantly being renovated by the play of social and economic forces and by the interplay of conditions and events within the party and within the country.

In our own country we have two parties with more or less fixed ranks of the party faithful and a large number of independent voters who swing from party to party under the attraction of personalities or party platforms, or the pressure of forces or events, but often out of disappointment with the performances of the party in power. This is, I am convinced, as it should be. As a lifelong Democrat, I am a firm believer in the two-party system and feel it would be a tragedy if either the Democratic or the Republican Party were to pass from the national scene.

I believe that men and women should seek to correct what they dislike in the party from within the party. In my own case I strongly opposed the majority of my party on the issue of a third term. I am still opposed to a third term. But I am not opposed to the Democratic Party. I participated in the national convention that voted for a third term and by that participation bound myself to accept the will of the majority. While I resigned from the Cabinet, not wishing to embarrass the administration by remaining in a high position, I voted the Democratic ticket. Again in 1944, when my opposition had increased rather than lessened, I voted the Democratic ticket because I had once more participated in the national convention where I and others like me were overwhelmingly voted down.

I was not then happy in the Democratic Party, but I could not bring myself to enter the Republican Party for the sole purpose of defeating the party to which I owed so much and which I had helped to put in power. Nor could I form a third party merely to have a yard of my own to play in because the big boys wouldn't play my way. We have a third party today, formed by one who wouldn't play according to the rules in the Republican or the Democratic Parties. I, for one, don't want a third party in this country. The two great political parties help our Nation by promoting unity. A third party can only promote minority rule and tend to leave the country the prey of demagogs and malcontents.

Disappointment and discontent should not promote cynicism, for the bitter cynic loses his friends and damages his soul. Not all aspirants can win nomination and only one candidate can win the election. While defeat is not pleasant, it is seldom fatal and there is always another election on the horizon. Those disappointed over failure to

gain an appointment should remember office-holders are mortal.

I am reminded of the story of the persistent office seeker who rushed to a former State senator, the late Pat McCarran, on learning of the death of an official: "Can I take Flanagan's place?" he pleaded. The senator, wearied by previous entreaties, snapped, "It's all right with me if you can square it with the undertaker."

Discontent is a more virulent disease. Its invasion of the pride is far more serious. Often it is the harder to bear because it entails ostracism of a sort. Once a man strips himself, or is divested of the powers of his office, he frequently finds those he regarded as friends pass him by and those for whom he did most know him not. It is not a pleasant experience, although there are some who hold it to be a great developer of character. In my own case I was saved from cynicism by the firm knowledge I was right and by the kind words of the many who sought me out in my travels to commend my action or to give thanks for services I had rendered. I shall ever be grateful to them.

As I favor the two-party system, so am I opposed to the one-party system in vogue in some nations where it is proclaimed as true democracy. I do not want to confine my participation in government to voting "ja," "yes," "aye," or "da" to the whim of any totalitarian overlord. The party should be the servant of its members, not their master. It should be open to all who wish to join it, not an exclusive society of assassins. And it should be competing for national good will, not dictating the way of life.

In concluding, I should like to dwell on Oliver's statement that politics, with all its faults, is still the noblest of careers. It may appear, as Robert Louis Stevenson said, "Politics is perhaps the only profession for which no preparation is thought necessary." Yet no other is so essential for the distribution of temporal happiness and the preservation of the freedoms and liberties that make our way of life.

Plato and after him Aristotle held the good politician in high esteem. In fact the latter placed him at the topmost step of a graduated sort of heaven he evolved in the vast cathedral of his mind. It may be that the highest step is not crowded or even empty as has been suggested to me. If so, then let it be said of us we are reaching for the ideal state and coming ever nearer. I am supremely confident man will solve his problems; that the future is bright though the day be dark.

He who chooses politics as a career will have the experience of ages to guide him in reaching for higher if unattainable goals. In extending his grasp he may give his name to an age when it may shine brightly for all time. For those to whom such fame is denied, there is comfort in knowing that we are providing experience to be drawn upon by those to come. We are the progenitors of the perfect rulers of the future, men in whom thought and action are delicately balanced and from whose rule political blessings will flow.

Bipartisan Foreign Policy Stifles Opposition

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. SHAFER. Mr. Speaker, the victory of Henry Wallace's personal candidate in the Bronx, N. Y., election last week was interpreted in many ways by Congressmen and commentators, but most of them agreed on one point: The so-called bipartisan foreign policy is wilting away.

I have little confidence in Henry Wallace. His domestic policies proved to be fallacious and ill-timed, and he has been noted more as a coat-tail rider in the field of foreign policy than for any contributions of his own.

However, by attacking the so-called bipartisan foreign policy, he has hit on a basic issue that has increasingly threatened to split both major parties asunder in recent years.

The truth is, the people are frustrated by any so-called bipartisan foreign policy such as we have had in recent years. A spokesman for the minority party—the Republicans until a little more than a year ago—presumed to speak for millions of Americans who were of the same minority party, but it was doubtful if these millions of Americans went along with the spokesman. Yet, to keep from splitting the party wide open, they had to acquiesce.

As a result, the so-called bipartisan foreign policy has become more and more an instrument for repressing the people and a device to prevent both sides of any issue in the field of foreign affairs to be discussed.

A bipartisan foreign policy does more than stop politics at the water's edge. It stifles discussion in Congress, by the two national committees and by political leaders and people throughout the country. It gives to most thoughtful Americans a feeling of futility. You can fight one machine, as long as you have a machine, however small it may be, but when you find yourself up against two machines you are apt to retreat.

In a nation as big as this one, with as many varying interests, there must be opportunities for discussion and for voting on every part of every issue, whether in the field of domestic or foreign policy. Any other course, by means of which two or three men become the self-proclaimed spokesmen for millions of Americans and commit them to a course they do not like, is suicidal to representative government. It is frustrating, anomalous, and, in fact, as deadening in the affairs of government as any blight that ever attacked a farm crop.

Let the people know and let the people debate and let the people decide. That, or some similar slogan, should be the watchword of the American people. If the people are fully informed as to what is happening all over the world—and they never have been currently informed in the past 15 years as to what is cooking—they can make sound decisions. Lacking full information, they naturally are confused and bewildered—and can be handled by demagogues.

Franklin D. Roosevelt was the architect of the so-called bipartisan foreign policy and full responsibility for it must be laid at his door. He carved it out as insurance against being attacked for his foreign-policy blunders in the fourth-term campaign. He did it so subtly that some Republicans now even claim that they started the bipartisan foreign policy.

As an instrument to help keep the hush-hush on foreign-policy debates and to assure his reelection, the ailing Roosevelt and the little group around him found the bipartisan foreign-policy strategy good. It stifled potential opposition from the only effective place from which it could come—the Republican Party.

Later, of course, international bankers and other predatory groups saw that it would help them, too, in their designs on the American people and the American Government. The Communists, you will remember, were all for the bipartisan foreign policy—as long as its adherents were for shipping billions of dollars worth of goods and materials to Russia, long after war was over.

The people in those days who opposed the bipartisan foreign policy were accused of being Fascists. Now, the ones who oppose the bipartisan foreign policy sometimes are accused of being Communists. The groups that want to rule America, whether meaningly or not, have adopted the Communist technique of smear.

Relationship Between Cities and Federal Government

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include an address which I made at the National Conference on Government of the National Municipal League at Nashville, Tenn. The address is as follows:

Mr. Chairman, the relationship between the Congress or the Federal Government and the cities of the Nation is considerably more complex than the average citizen appreciates. It is only natural that with the development of technology that cities and the Federal Government should become more interrelated in their governmental functions. In these days, the Federal Government and the cities have a joint and common interest in air-line transportation, streets, housing, schools, and commerce. The problem that vexes both Congress and city officials is arriving at a proper line of demarcation between the activities which should be wholly in the hands of the cities and those which should also be the concern of Congress and the Federal Government. It is axiomatic that democracy works best when it is close to the people. The town-meeting plan can be the nearest approach to pure democracy that we have in this country.

On this premise, I think we will all be in agreement that those matters which can be handled by either the local municipality or by the Federal Government should be left with the local group. This will preserve and develop the maximum of initiative and responsibility at local levels which is the healthiest possible attitude for a democracy.

But before going into the implications of Federal participation in city affairs, let us first examine the instances in which the Federal Government is taking a part in municipal matters and also look at some of

the further proposals for Federal participation that have been made recently.

GROWTH OF FEDERAL SERVICES TO CITIES

According to a survey made by the National Resources Committee, only 14 services were performed by the National Government for urban communities in 1875. By 1900 the number had risen to 30; 47 more had been added by 1920. During the depression years, 42 new activities were begun. This great growth of direct Federal-municipal contacts during the depression resulted from the cities' need for aid and the States' inability to furnish it. The National Government then moved in to supply the necessary help. During the Second World War, with its resulting emergency conditions, many departures were made from the traditional way of doing things, and this was true in the field of Federal-city relations, where many new relations were established. During the past 50 years the new activities which the National Government has undertaken for cities have in few instances been replacements for old functions, because in the great majority of cases the old functions have been retained by the Federal Government. There are now more than 100 agencies of the Federal Government, including bureaus, boards, and independent establishments, which are concerned in one way or another with municipal activities.

INDIRECT FEDERAL SERVICES

Many of the activities undertaken by the Federal Government involve no formal agreements or even informal understandings with the cities—they are, in other words, relatively indirect. In this category are included those agencies which collect information concerning municipal affairs. For instance, the Bureau of the Census publishes an annual volume on city finances. Studies and surveys made by the United States Office of Education have proved of great value to local school officials. The Public Roads Administration conducts research on the best methods of street construction; the studies of the United States Public Health Service are of great significance to local health departments. There are many other instances of such indirect Federal aid to cities. During the 1930's, Federal-municipal relations were, for the most part, of this casual or incidental nature, arising from the necessity for close contact between governmental levels of administration. This aid took the form of statistics, research, information, and advisory services. During the period the number of direct contacts and services with cities was also increased.

At this point may be mentioned the way in which the Federal Government during the Nation-wide depression of the 1930's assumed responsibilities which would otherwise have fallen on the State and municipal governments. An extensive relief program was set up which saved the States and cities from having to provide for hundreds of thousands of unemployed workers. In addition, the States and cities were given direct grants from the Federal Government for public works projects involving relief labor.

DIRECT FEDERAL SERVICES

There are a number of ways in which the Federal Government is in direct contact with the cities. Perhaps the best known example of this is in the field of law enforcement. The Federal Bureau of Investigation of the United States Department of Justice maintains an elaborate fingerprint file of millions of known criminals. The facilities of this system are available to local law enforcement officials upon request. FBI agents also cooperate in several other aspects of crime detection. The local police departments of course give assistance to the Federal agency in turn, and a semiannual publication of the FBI, Uniform Crime Reports, is based on information furnished by local police departments.

Another area of close contact between the two levels of government is that of public personnel. The United States Civil Service Commission has prepared standard tests for the use of municipal officials. Many of the Federal grants to the States are conditioned upon administration by trained State and local personnel. For instance, the United States Public Health Service requires that every city receiving public health funds directly must have a properly trained full-time health officer and an adequate number of trained assistants. The qualifications for these officers were determined by the Public Health Service and the Conference of State and Provincial Health Officers. In addition, there are a number of in-service training programs conducted by agencies to provide advanced training for local as well as Federal employees.

There are many other agencies whose work is concerned with local conditions. For instance the State and municipal employment agencies work with the United States Employment Service to reduce unemployment.

An important change in Federal-municipal relations has taken place as regards street construction. Federal funds have been made available to the States for highway construction for the last 30 years, but until 1932 it was specifically stated that none of the Federal funds and none of the matching funds supplied by the State could be used for the construction of city streets. In 1934 the reversal of Federal policy was made complete by an Executive order decreeing that one-fourth of the emergency highway grants must be used for municipal street construction. The latest Federal highway program has an allowance for city street construction.

WAR PERIOD DEVELOPMENTS

The Office of Civilian Defense established many local defense councils and eventually was provided with the means of enforcing its regulations. Loans of Federal equipment to localities were conditioned upon the acceptance of Federal rules. The Office of Defense Transportation received cooperation from many cities on its list of suggested revisions of traffic regulations in order to save tires, gasoline, and time.

The major problems occurred, however, in the cities in which war industries were concentrated. Housing was at a premium, schools were overcrowded, medical and recreational facilities were inadequate. The Federal Government assisted in this crisis by authorizing an extensive war housing program, and by providing grants to permit cities to expand certain of their regular services to take care of their increased populations. A National Committee for Congested Production Areas was created and charged with the task of coordinating Federal, State, and local activities in the crowded urban centers.

LEGISLATION OF EIGHTIETH CONGRESS AFFECTING CITIES

Housing and rent control: A matter which is necessarily of great importance to any community is the manner in which its citizens are housed. Of recent years there has been an attempt all over the country to improve the living conditions of our people, especially of low-income families living in slum districts of our cities. There have, of course, been programs designed to improve the lot of rural residents, but the demand for new housing has been concentrated largely in the cities. Low-rent housing and slum-clearance projects have been initiated or seriously considered in many municipalities. But, as you members of the National Municipal League are well aware, more than the mere recognition of a housing problem is required in a community if concrete attempts at solution are decided upon. The biggest hurdle is probably that of financing the project.

Today we are facing the fact that the United States, the richest nation on this earth, does not have decent homes to offer its veterans. It must have been a bitter pill for these men to swallow when they returned from the battlefields and found that while we had made all sorts of advances in means of carrying on war our housing production methods showed little advancement over the methods of the horse-and-buggy era. The housing facilities of our cities were strained to the utmost during the war by the influx of defense workers. Now the war is over, but the crisis in housing is still with us. Our millions of veterans have returned to civilian life and are now trying to establish themselves or to pick up where they left off when they were called into service. Many of these veterans are married and have children. No one questions that they are entitled to a decent place to live. But, nevertheless, the Bureau of the Census has reported that between 30 and 40 percent of the married veterans of this country are living in single rooms or have been forced to share living accommodations with in-laws or other relatives, a most unsatisfactory arrangement for all concerned. It was also found that many of these veterans were making salaries or wages which would not justify the expenditure of more than $6,000 for a house. You and I know that with prices as they are right now you can't get much of a house for $6,000. This does not alter the recognized fact that the veteran is entitled to the best that we can give him—at a price that he can afford to pay. The veteran does not want to be given special privileges by any government, either Federal or local, but he does want a fair deal. Unfortunately, it is not only veterans who are being forced to live in cramped, miserable quarters; there are thousands of nonveterans in the low-income group who should be provided with more adequate housing facilities.

Who is to take care of all this? Whose responsibility is it? The municipality is, of course, the unit most immediately concerned. But this is not a condition which prevails in only a few scattered cities—it is a state of affairs which can be found in nearly every city in the country. For this reason and because of its serious nature, it is a problem which must be of concern to the Federal Government—at least to the extent of giving assistance to the local governments in attempting to resolve it. Let us now take a look at what the Eightieth Congress has done or failed to do in the field of housing.

One of the most significant pieces of legislation proposed to the Eightieth Congress for its consideration was the Taft-Ellender-Wagner bill. This bill contained provision for public aid to localities for low-rent housing for low-income families; encouragement of private investment in rental housing by setting up a system of Federal insurance; establishment of a more adequate program of farm housing; aid to cities for the clearance of slum areas; additions to the existing aids to home financing; and a program of housing research aimed at reducing the cost of housing. The bill was supported and endorsed by many organizations. It was felt that this would be one great step forward in giving the veteran and the low-income families the sort of housing which they should have.

But what happened? The Senate Banking and Currency Committee reported the bill out on April 24, but the leadership in the Senate did not see fit to bring the measure to a vote before the end of the session. A companion measure in the House was not reported by the committee to which it was referred.

The net result of certain other activities of the Eightieth Congress has been to toss the problem of rent control back into the laps of the various State and local governments. Several bills were introduced dealing with the subject. Senator HAWKES, Republican of New Jersey, introduced a measure calling for periodic increases in rents; Senator BUCK, Republican, of Delaware, in-

troduced S. 590, which provided for a 10-percent rent increase with all controls to be dropped at the end of a year; Senator WHERRY, Republican, of Nebraska, introduced a bill asking outright repeal of rent controls. The bill introduced by Representative WOLCOTT, Republican, of Michigan, which was eventually passed and became law, extended rent control to March 1, 1948, except that "voluntary" increases of 15 percent were allowed if the tenants signed leases extending beyond 1948.

Thus, unless the Congress takes some action before the first of next March, the rent-control problem will be squarely up to the State and local governments. They will have to decide whether the landlords are entitled to increased rents, or whether the landlords are already receiving an adequate return on their investments.

There were a few bits of legislation—of rather minor importance in view of the pressing need for major action in this field—which did become law. On February 28, President Truman sent a message to the Congress asking for an appropriation of $50,000,000 so that the Federal Government might be able to fulfill its commitment to supply a certain number of Army barracks or civilian wartime structures for conversion into temporary-housing units to rent at an average price of $30 monthly. A sum of $35,000,000 was appropriated for this purpose. An amendment to the National Housing Act of 1937 was approved which allows local governments to receive Federal funds to the amount of $5,000 and the actual cost of construction. Perhaps the most important contribution of the Eightieth Congress was the approval of the President's reorganization plan which placed all Federal housing activities under one responsible head. Even this was opposed by the House.

In addition to the bills which were passed or passed over, as the case might be, four separate committees were set up to investigate various aspects of the housing situation.

Federal aid to education: During the first session of the Eightieth Congress, 21 bills proposing Federal aid to the States for education were introduced. One bill (S. 472), introduced by Senators TAFT, THOMAS of Utah, ELLENDER, HILL, SMITH, COOPER, TOBEY, and CHAVEZ, is on the Senate calendar after having been reported out of committee. It would authorize $150,000,000 for 1948, $200,000,000 for 1949, and $250,000,000 for 1950, and each year thereafter to aid the States, Territories, and the possessions of the United States in financing their public, elementary, and secondary school systems, and to more nearly equalize school opportunities throughout the States. In order to be eligible for Federal aid the State itself must spend 2.5 percent of its average annual income for a 5-year period, an amount equal to the annual national average. No Federal control over schools receiving aid under this act is permitted.

In the House the McCowen subcommittee of the House Committee on Education and Labor reported favorably on one educational aid bill (H. R. 2953), but no report came from the full committee. This measure would provide somewhat larger sums than the Senate bill and would provide a minimum of $3 per child to all States, whereas the Senate bill would apportion the funds on the basis of need. In other respects the two measures are quite similar.

Disposal of surplus airports: The provisions for the disposal of surplus airports, airport facilities, and their equipment were contained in a bill which was introduced by Senators MCMAHON and BALDWIN, and which eventually became Public Law 289. By its terms disposition may be made to States, political subdivisions, municipalities, or tax-supported institutions without monetary consideration to the Federal Government. Certain conditions, such as restrictions on use of United States property and reservations during an emergency, are imposed.

Water pollution control: Passed by the Senate late in the session, this bill (S. 418) provides that the Surgeon General of the Public Health Service and the Federal Works Administrator in cooperation with other Federal agencies, State water-pollution agencies, and interstate agencies, and municipalities involved, shall prepare comprehensive programs for water-pollution control projects. The bill carries an authorization of $100,000,000 annually for: (1) grants-in-aid to local governments and other public bodies for engineering reports, plans, and for construction of treatment works; and (2) loans to industrial enterprises for engineering reports, etc. Five million dollars would be available annually to State and interstate agencies for studies and investigations; and $12,000,000 annually for advances to States or municipalities to aid in financing the costs of activities preliminary to construction of water-pollution control projects. Four bills introduced in the House on this subject failed to come to a vote.

Technical information and services: A bill introduced by Senators FULBRIGHT and AIKEN, reported in the Senate on June 27, authorizes the establishment in the Department of Commerce of a clearinghouse for the collection, dissemination, and exchange of scientific, technical, and engineering information. Such information would be available to Federal, State, and local agencies as well as to business, industry, and the general public.

IMPLICATIONS OF DIRECT FEDERAL AID TO CITIES

The original method by which the Federal Government made contact with the cities was through the medium of the State. We have already seen an example of this method in the appropriation of Federal funds to the States for highway construction, with the provision that a certain portion be spent for construction of city streets. But increasingly in periods of emergency the Federal Government has made grants directly to the cities, thus bypassing the State governments and potentially modifying the traditional Federal-State-municipal relationship. As a rule, Federal grants have carried no unreasonable restrictions but there is the possibility that this new policy might be the beginning of greater and greater Federal control of municipal affairs by means of conditional grants from the Federal Treasury. That this is desirable is highly debatable and the development of the new pattern has aroused considerable comment among students of government about "the new federalism." Furthermore, the authority and power of the State governments are impaired by this procedure. There are also important political considerations in the situation, frequently found, in which the same major political party does not control Federal, State, and city government.

Due to the development of present-day science, especially in fields of transportation and communications, we will never again see the day when the cities and the Federal Government operate in watertight compartments. I think there must be joint interest and participation in many governmental functions. Nevertheless, the lack of initiative on the part of some local officials that has resulted from Federal participation is most disturbing. "Let's wait until we can get a Federal grant" or "The project is too big for us—let's get Uncle Sam to help," are expressions frequently voiced by some local officials. This tendency to pass the buck has had very damaging results. I am glad that statesmanship and self-restraint on the part of both Federal and local officials are checking this unhealthy trend.

Local self-government is a cherished part of our democratic process. It must be preserved. Wise and strong local governments go far toward assuring a sound national government. People of a democracy are made more capable of carrying on their cities if they participate actively at the local levels. They can if they will handle most problems better than some bureau of the central government, and they will be the stronger by having found their own solutions. Therefore, let us hope that when the job can be done at home or at Washington, that it will be done at home.

The people are going to have good service. Let us not mistake this fact. They demand this whether it comes from the city council or from the Congress. The challenge is, therefore, to give them the best service locally. This is part of the program of the National Municipal League, and I am delighted to see that you are on the road to success. I see on all hands a renewed interest and faith in local government. The extent to which people are interesting themselves in State and local affairs is most encouraging. They are doing this not by crying out against the invasion of States rights, but by getting down to the business of intelligent government themselves. This means improving the caliber of local officials, bringing charters and constitutions up to date, public discussion, and an active-citizen interest. Local governments can be restored to their place in the sun. If local officials and the citizens are willing to shoulder the heavy burden of local self-government, it will be done.

European Recovery Program

EXTENSION OF REMARKS

OF

HON. PETE JARMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of March 1, 1948:

THE TIME TO ACT IS NOW

The Senate debate beginning today on the European-recovery program—the Marshall plan—is of vast importance to the future of America and the world. At stake in it is the security of free men and free nations everywhere. If they are to be safe, if they are to perpetuate their way of life, if they are to deal effectively with the creeping menace of Soviet totalitarianism, then the final vote in Congress must be a resoundingly affirmative one.

The proposition involved is an either-or proposition. Either the United States and like-minded lands will work together in doing the job that needs to be done, or they will be taking the risk of being picked off, one by one, by a tyranny quite as black and aggressive as any mankind has seen in modern times. Politically, economically, militarily, the situation thus offers only one choice to democracies in their right minds. It is to act in unison, on time and on the grand scale required, to insure their common survival against the common peril now confronting them.

As far as the United States is concerned, this means that there must be at this stage the promptest possible favorable action on the Marshall plan. Without such action, the participating European countries cannot hope to achieve the stability they must have to save themselves from eventual Soviet dominance—a stability vital not merely to them, but to our own long-term American future and to the happiness and peace of the entire world as well. Chairman VANDENBERG of the

Foreign Relations Committee, together with the unanimous voice of the committee itself, has left no room for doubt on that score. Nor has he exaggerated the urgency of the situation in solemnly warning that "time is of the essence" and in indirectly appealing for an end to the Senate debate and an affirmative vote by March 15.

Senator VANDENBERG'S profoundly well-informed counsel ought certainly to be heeded. The Marshall plan has been so thoroughly studied and discussed for months past that neither the Senate nor House can have justification for getting bogged down in a protracted debate. As the latest events in Czechoslovakia and Finland make clear, the Kremlin, like time, is waiting for no man, least of all for any Senator or Representative who may be addicted to the dangerous luxury of dilly-dallying. The hour is here for action. History is moving too fast and too portentously to permit America and the rest of the free world to conduct themselves on a too-little-too-late basis.

What To Do About Water

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. POULSON. Mr. Speaker, at the present time there is an unknown quantity of water flowing down the Colorado River into the Gulf of Mexico—water which means so much to the Southwest, principally California and Arizona. It is true, there is a dispute as to who has the prior rights to this water. While we are making our various charges, both States are suffering for lack of water and there are untold numbers of kilowatts of hydroelectrical power going to waste because the issue remains unsettled. Because we in California realize this, we earnestly ask the Congress to request the Attorney General to start suit immediately to determine these water rights. Many of us have introduced legislation to that effect.

The editorial which I am enclosing is one of several such editorials written by Mr. Lester E. Claypool, of the editorial staff of the Los Angeles Daily News. Mr. Claypool has recently spent several weeks in Arizona talking with the various leaders, getting their opinions, and this editorial is evidently the result of that expedition and is a good argument for the passage of this legislation which is now before the Judiciary Committee.

WHAT TO DO ABOUT WATER

Public officials and many leading residents of Arizona are considerably perturbed about what they have been led to believe California proposes to do with Colorado River water.

Such phrases as "California is at it again," "California wants to hog the water," "California refuses to negotiate," are heard on all sides in the State to the east.

Actually the people of Arizona have been misled in some instances and in others they lack an unbiased understanding of the situation. They have been encouraged in their position by certain Colorado newspapers, especially in Denver. It is so easy to take the position that a great, sinister city (meaning Los Angeles, of course) is about to rob, if it hasn't already robbed, a poor struggling community (meaning Arizona).

Arizona has some rightful claim to Colorado River water. There is no doubt that the central Arizona project may require some of it. There may be other projects there that are entitled to water on the basis of economic and population needs. These needs should not be met on the basis of who can yell the loudest or who can distribute the most convincing propaganda. Water is something more than votes or semantics.

Arizona lays great store by the fact that more of the Colorado River lies in that State than runs through California and claims ipso facto that Arizona contributes much and California little to the stream. If the stream's route and locale were the determining factors, most of the water could rightfully be claimed before the river gets to Arizona. Fortunately they are not.

The law on riparian rights is too complicated for an editorial, either here or in Denver, or, for that matter, in Phoenix. But this much is known to any intelligent layman who has ever studied water problems at all. The right to water, in every civilized nation that has legislated about it, stems from beneficial use and potential beneficial use.

Courts have held time and again that a stream coursing through a farm, but which has its source and mouth elsewhere, is only partially and incidentally the property of the owner of that farm. He is entitled to a just portion, provided he puts it to an admitted beneficial use, but no more.

Use by people to drink, to bathe, to wash, to cook and to operate business and industry is the most beneficial use to which water can conceivably be put. Next to that is the use of water for livestock. And of course use by people includes putting out fires, irrigating land, sprinkling lawns, when there is plenty, and a dozen other things that could be named.

To determine the extent of beneficial use it is necessary only to estimate the number of people, the kind of society they live in and what would happen if they ceased to get water. Los Angeles County alone probably has a larger population than that of the other six States in the Colorado River basin. Person for person the people here are no better and no more deserving than those elsewhere. But 5,000,000 people (in southern California) add up to a greater need than 3,500,000, which is more or less the population of all the other States concerned.

Gov. Earl Warren has repeatedly offered to negotiate, personally or via his agents, with officials of Arizona. He has even proposed arbitration after efforts at negotiation failed. Neither proposal has been accepted and if Arizona persists in maintaining its present attitude, litigation is all that is left and that we all deplore. But it must be settled.—L. E. C.

Kind Words for Congress Prove Popular

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. ENGEL of Michigan. Mr. Speaker, late in December of last year Wally Boren, who writes Wally's Wagon column in the This Week magazine, which appears as a supplement in so many of the Nation's Sunday newspapers, saw fit to turn one of his columns into a comment on Congress. In his usual humorous, easy-going manner he made the point that maybe all Congressmen were not thieves and nitwits; that maybe Congress was not solely to blame for all the many problems that face our country.

With Wally Boren's permission, early in January I inserted that column in the Appendix of the CONGRESSIONAL RECORD. The results, Wally says, were quite startling, so much so that he decided to write another column as a kind of follow-up on the same subject. It appeared in This Week Sunday, February 29. It is equally good and for the benefit of those who may not have seen it Sunday I am, again with Wally's permission, including it here:

I guess I have joined the immortals an' gone an' got my name in the history books.

Do you remember that piece I wrote back in December—to the effect that maybe Congress wasn't entirely to blame for the country bein' busted, blasted, an' hardly worth savin'? An' how I thought somebody better say a kind word for the Senators an' Representatives?

Well, let me tell you what happened. I started in gettin' letters from lots of them—an' both Democratic an' Republican too.

Herman, the mailman, got worried.

"Wally, you must be a grain speculator," Herman said to me. "Nobody honest gets 30 to 40 letters a day from Congressmen."

So I showed Herman some of the mail. "They're just so grateful for a little appreciation it makes your heart ache," I told him. "Here—Congressman PRIEST, f'r instance, writes me: 'Here in the House of Representatives right now you could have all 435 votes for anything you wanted!' "

"Jee-pers!" Herman's eyes bulged, "A word of praise must hit a Congressman like a quart o' benzedrine!"

"Yep," I tell him. "An' look here, Senator KILGORE wants to treat me to a meal in the Senate Restaurant. An' Congressman CASE wants to send what I said out to a guy in his district in South Dakota. An' Congressman CHIPERFIELD writes me two pages. So does Senator PAT MCCARRAN, of Nevada.

"Congressman ENGEL of Michgan an' Senator MCMAHON, of Connecticut, an' the Atom Commission, both want to put what I said in the CONGRESSIONAL RECORD——"

"Oh, oh—that does it!" Herman throws up his hands. "You know what's goin' to happen to you, don't you? About 25 or a hundred years from now, some history professor will get around to readin' what you done. An' he will go put it in the history books. After that, there will be one more date to bedevil kids with.

"Yessir, them kids off in the dim future will be recitin': '1492 Columbus discovered America; 1620 the Pilgrims landed; 1865 Lincoln was shot; 1947 some dope defended Congress.' "

"Hey," I say to Herman, "That'll make me unpopular with millions of kids!"

"You shoulda thought of that," says Herman. "My advice for a man who is speakin' to posterity is to keep his mouth shut."

WALLY BOREN.

Investigation of Dr. Edward U. Condon

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. RANKIN. Mr. Speaker, I am submitting this partial report on the Condon case. The Members would be shocked

beyond measure if they could read the full report in this case.

The partial report reads as follows:

REPORT TO THE FULL COMMITTEE OF THE SPECIAL SUBCOMMITTEE ON NATIONAL SECURITY OF THE COMMITTEE ON UN-AMERICAN ACTIVITIES

When the Committee on Un-American Activities was reorganized in January 1947, it adopted an eight-point program of investigation. The fourth point of that program stated: "Those groups and movements who are trying to dissipate our atomic bomb know-how for the benefit of a foreign power will have the undivided attention of our committee agents, as well as those who are seeking to weaken other aspects of our national security." While your subcommittee is fully aware that it is not our responsibility to detect and counter the espionage activities of foreign countries in the United States, nevertheless in our continuing investigation of the extent and character of communism here, we necessarily have to check on the activities of Soviet agents, because of the integration and tie-up between so-called domestic Communist activities and that of the official Soviet Government.

That the Soviet Union and her satellite nations have been desperately attempting to not only secure our complete atomic know-how, but also to weaken or destroy our hold of this important knowledge, is plainly evident to this subcommittee. As the full committee is aware, for over a year now agents of the committee have been assigned to special investigations in this field, and, while their investigation is not yet completed, the subcommittee feels that it should submit a preliminary report, particularly on one aspect of this matter which is of such importance that it demands immediate attention. It has to do with Dr. Edward U. Condon, Director of the National Bureau of Standards. From the evidence at hand, it appears that Dr. Condon is one of the weakest links in our atomic security. In substantiation of this statement, the subcommittee respectfully submits the following information:

PERSONAL HISTORY AND EDUCATION OF DR. EDWARD U. CONDON

Dr. Edward U. Condon, Director of the National Bureau of Standards, was born at Alamogordo, N. Mex., on March 2, 1902. On November 9, 1922, he married Emilie Honzek, an American-born woman of Czechoslovakian descent. Dr. Condon is a graduate of the University of California, having received an A. B. degree from that institution in 1924 and a Ph. D. in 1926. During the years 1926 and 1927, Condon studied at the Universities of Munich and Gottingen, in Germany. In 1928 Dr. Condon was a lecturer on physics at Columbia University, in New York City. In 1929 Condon was a professor of physics at Princeton University, and during the years 1930 to 1937 he was associate director of the physics department at the institution. From September 1937 through November 4, 1945, Dr. Condon was employed by the Westinghouse Laboratories at Pittsburgh, Pa. While with the Westinghouse Laboratories, where he was employed as director, Condon was a consultant on war research projects being performed at the radiation laboratories of the Massachusetts Institute of Technology, Cambridge, Mass., and the University of California, at Berkeley, Calif. Condon is principally regarded as a theoretical physicist, which involves radar, nuclear physics, radioactive tracers, mass spectroscopy, and the elastic properties of metals. On November 5, 1945, Dr. Edward U. Condon was appointed Director of the National Bureau of Standards. Dr. Condon was recommended by Henry A. Wallace, who was then Secretary of Commerce. The Bureau of Standards is a bureau in the Department of Commerce.

In addition to the employment mentioned above, it should be noted that during the year 1940, Condon was a member of the National Defense Research Committee and that during the year 1941, he was a member of the Roosevelt Committee on Uranium Research. During the Seventy-ninth Congress, Dr. Condon was Scientific Adviser to the Special Committee on Atomic Energy. In July 1946, Dr. Condon was a member of the President's Evaluation Committee which was formed for the purpose of observing the effects of the atom bomb test made at Bikini Atoll. Condon has also served as an adviser to the National Advisory Committee for Aeronautics.

INFORMATION REGARDING THE NATIONAL BUREAU OF STANDARDS

The National Bureau of Standards is the principal agency of the Federal Government for research in physics, mathematics, chemicals, and engineering. It acts as custodian of the Nation's basic scientific standards and serves Government and industry in an advisory capacity on any scientific and technical matters in the physical sciences. The Bureau's direct appropriations for the fiscal year totaled approximately $6,800,000 which was supplemented by approximately $10,800,000 in funds transferred by the Army, Navy, the National Advisory Committee for Aeronautics, the office of the Secretary of Commerce, the Bureau of the Census, and other Federal agencies.

The bulk of the Bureau's work is conducted at its laboratories in Washington, D. C. However, it has several field testing stations located at various points within the United States and its territorial possessions. Included in the research work presently being conducted by the Bureau of Standards is the field of radio propagation, which relates to guided missiles. In conducting its radio-propagation activities, the Bureau of Standards maintains field stations in Sterling, Va.; Adak, Alaska; Punnene, Maui, T. H.; Palmyra Island; Guam Island; Trinidad, British West Indies; and Las Cruces, White Sands proving ground, N. Mex. Research projects engaged in by the Bureau of Standards at the present time concern atomic energy, radar proximity fuses, instrument-landing systems, and radiosonde. During the year 1947, the Bureau of Standards conducted research work on classified projects for the War Department, the Navy Department, and the Atomic Energy Commission.

With reference to the work performed under the auspices of the Atomic Energy Commission, it should be noted that the background for this activity extends to the early years of the twentieth century, for in the atomic energy field, the National Bureau of Standards has had the responsibility for conducting basic research, associated with the scientific standards, the physical constances and properties of substances, and methods of measurement and instrumentation. The atomic-bomb project itself originated in the Bureau in 1939.

Other national defense work carried on by the Bureau of Standards during the year 1947, particularly for the Army and Navy, consisted of basic studies of the properties of electro-magnetic radiation in connection with communication and radar activities, the development of related instrumentation, and radio-propagation research. The Bureau also conducted special research regarding jet fuels, the design and construction of new types of optical-range finders, and methods of retarding gun erosion.

The Bureau of Standards is one of the most important national-defense research organizations in the United States. Because of this, it has become the target of espionage agents of numerous foreign powers.

The subcommittee has in its possession a list of employees of the National Bureau of Standards who have been cleared by the Atomic Energy Commission to perform work on atomic projects. Because of the fact that this list contains restricted data, it is not being included in this report. However, it is to be noted that when this list was issued at the end of November 1947, the name of Dr. Edward U. Condon was carried in a pending status. This list contains the names of all of those persons who are qualified to work on atomic energy projects from a loyalty standpoint. The fact that the name of the Director of the Bureau of Standards was carried in a pending status by the Atomic Energy Commission as late as November 1947, becomes a matter of serious concern to us when it is recalled that he had, as early as 1941, held several important positions in the United States Government which related to the development of atomic energy. For instance, in 1941, he was a member of the Roosevelt Committee on Uranium Research, and in July 1946 he was a member of the President's Evaluation Committee which, as stated previously in this report, was formed for the purpose of observing the effects of the atom bomb test made at Bikini Atoll.

It is of interest to note that in May 1947 Dr. Condon reorganized the Bureau of Standards and set up 14 separate divisions. Despite the fact that he had not been cleared to perform work on atomic energy projects for the Atomic Energy Commission, he appointed himself head of the Atomic Physics Division, one of the divisions involved in the reorganization.

That the Atomic Energy Commission had reason to doubt the loyalty of Dr. Condon is evidenced by a letter, the original of which the subcommittee has in its possession, which letter was dated July 11, 1946, and is addressed to a Member of Congress, who at that time was a member of the Joint Committee on Atomic Energy of the Congress. This letter was written by a person who held a high post in the security division of the Manhattan project, and who is now a ranking official of the Atomic Energy Commission. The first paragraph of this letted is quoted in part as follows:

"Attached is a very hurried attempt which may be of some help. Unfortunately, the ——— group has loaded me down in preparation for Friday's meeting. May I suggest that you demand Dr. Condon's record of the FBI. It would be enlightening."

The associations of Dr. Condon and his wife have been cause for great concern to the agencies charged with the security of the United States. Dr. Condon, knowingly or unknowingly, entertained and associated with persons who are alleged Soviet espionage agents, and persons now reported to be under investigation by a Federal grand jury. So serious have Dr. Condon's associations been, that on May 15, 1947, J. Edgar Hoover, Director of the Federal Bureau of Investigation, sent a confidential letter to W. Averell Harriman, Secretary of Commerce. The letter is quoted in part as follows:

"The files of the Bureau reflect that Dr. Edward U. Condon has been in contact as late s 1947 with an individual alleged, by a self-confessed Soviet espionage agent, to have engaged in espionage activities with the Russians in Washington, D. C., from 1941 to 1944.

"Mr. and Mrs. Condon associated with several individuals connected with the Polish Embassy in Washington, D. C. Among these are Mrs. Joseph Winiewize, wife of the Polish Ambassador; Virginia Woark, a clerk employee of the Polish Embassy; Helen M. Harris, secretary of the Polish Embassy; and Ignace Zlotowski, former counselor of the Polish Embassy and presently a Polish delegate to the United Nations.

"Helen Harris is identified as a former secretary to the American Soviet Science Society during the time it was known as Science Committee of the National American Soviet Friendship Society. She went to work for the Polish Embassy in the fall of 1946.

"Zlotowski is identified as a nuclear scientist who studied under Joliet Curie, known member of the Communist Party. He was

ex-secretary of the American Soviet Society. It is known that in February 1947, Zlotowski purchased 270 books on atomic energy which had been published by the Department of Commerce.

"It is also known that Mr. and Mrs. Condon were in contact with several other persons closely associated with this alleged Soviet espionage agent. It is also reliably reported that in March 1947, Zlotowski offered the use of the Polish diplomatic pouch to scientific groups as a means of transmitting scientific material outside the United States, dissemination of which had to be restricted because of security reasons by military authorities.

"Zlotowski was in contact with Anatole Gromov, First Secretary of the Soviet Embassy who has since returned to Russia. Mrs. Emily Condon applied for passports for European travel in 1926, and passport for travel to Russia in 1945. Passports were withdrawn. Condon issued passport 276319 on October 11, 1946, to travel and study in Germany, France, Holland, Italy, Czechoslovakia, Great Britain, Denmark, and Switzerland. He applied for passport June 4, 1946, to Russia which was issued but was later canceled by the Army."

There are other instances in which Dr. Condon and his wife have been guests at the home of persons who are attached to the Embassies of Soviet satellite nations. Also present were the representatives of official Soviet agencies.

We have previously stated herein that the Bureau of Standards, because of its importance to the national defense, has become a focal point for espionage agents attached to foreign governments. For a great many years, the Bureau of Standards has been visited by representatives of many foreign governments.

In order to accommodate foreign visitors, shortly after his own appointment as Director of the Bureau of Standards, Dr. Condon appointed Demetry I. Vinogradoff, a Russian-born scientist, as the liaison representative of the Bureau. Vinogradoff, prior to his affiliation with the Bureau of Standards, was employed by the Westinghouse Laboratories at Pittsburgh, Pa. During the wartime years, he was in charge of liaison between the Westinghouse Electric Co. and the representatives of the Soviet Purchasing Commission.

During the period July 1936 through March 31, 1947, a total of 238 visitors and 64 delegates from foreign nations, including Russia and Poland, visited the National Bureau of Standards. During this period, a total of 39 Russians and 3 Polish nationals visited the Bureau. Among these visitors were the naval attaché and the assistant naval attaché of the Russian Embassy, and 3 representatives of the United Nations Relief and Rehabilitation Administration. Since March 1947, a total of 666 persons representing foreign governments have visited the Bureau. Very few Russian or Russian satellite-nation representatives are included in this number. The reason for the decline in the number of Russian visitors to the Bureau of Standards is unknown to the subcommittee. However, it should be noted that during the month of December 1946, Demetry I. Vinogradoff, liaison officer of the Bureau of Standards, made arrangements with F. T. Orekahov, the first secretary of the Russian Embassy in Washington, D. C., to discuss the problem of exchanging books, pamphlets, and other written material. The arrangements for the discussion were made by Vinogradoff at the request of Dr. Condon, and it was agreed that the discussion between Orekahov and Vinogradoff would be informal because, otherwise, it would be necessary to obtain a clearance from the State Department.

It is also known that Vinogradoff has been in close touch with Capt. A. F. Belikov, assistant naval attaché of the Russian Embassy.

Your subcommittee would like to point out to the full committee that the exchange of scientific material with the Soviet Union is a one-way street, and that our Government is pursuing a dangerous and foolish policy of making scientific data available to the Soviet Union, since they will not permit us to inspect any of their bureaus, nor will they exchange any information with us. Early last year, the chairman of the committee, Mr. THOMAS, disclosed that the Soviet Union, acting through its fronts, had secured hundreds of thousands of patents from our patent office and our present investigation along these lines reveals that even today they are continuing to order thousands of patents. We are convinced from the information we have that what the Soviet Union is actually doing is setting up her own patent bureau by obtaining all of ours, at the rate of 10 and 25 cents each We should like to point out that the Russian Government has refused to give the United States a single patent since 1928.

Your subcommittee, by a very diligent investigation, has determined that Dr. Condon has in the past 5 years been in personal contact and communication with a number of individuals who are American citizens, but who are members of the Communist Party. There is no evidence in our possession that Dr. Condon is a member of the Communist Party, however, but as a member of the Executive Committee of the American-Soviet Science Society, which is affiliated with the National Council of American-Soviet Friendship, Inc., and which was recently cited as a subversive organization by Attorney General Clark, he has lent his name and influence to one of the principal Communist endeavors in the United States.

The extent to which he has aided and abetted this Communist front is illustrated by the following letter, dated March 7, 1946, addressed to certain employees of the National Bureau of Standards by Samuel Gelfan, for the membership committee of the American-Soviet Science Society:

("American-Soviet Science Society, affiliated with National Council of American-Soviet Friendship, Inc., 114 East Thirty-second Street, New York 16, N. Y., Murray Hill 3-2082, March 7, 1946)

"———— ————,

"National Bureau of Standards, United States Department of Commerce, "Washington, D. C.

"DEAR ————:

"It has been suggested by Dr. Condon, who is a member of our executive committee, that you might be interested in the activities of our society and membership in same.

"We are, therefore, enclosing a brief statement concerning the objectives and activity of our organization, and under separate cover are also mailing you a copy of our latest bulletin.

"Sincerely yours,

"SAMUEL GELFAN,
"For the Membership Committee."

In response to this letter 10 scientists of the Bureau of Standards joined this subversive organization. The subcommittee is cognizant, however, of the implied pressure which Dr. Condon, as Director of the Bureau, applied to his subordinates, and therefore it should not necessarily reflect upon these 10 employees. It does, however, indicate the dangerous extremes to which Dr. Condon has gone in an effort to cooperate with Communist forces in the United States.

Speaking before the Fifth Annual Scientific Institute March 5, 1946, Dr. Condon stated, in speaking of Russia:

"We must welcome their scientists to our laboratories, as they have welcomed ours to theirs, and extend the base of scientific cooperation with this great people. Of course, we must behave this way toward the scientists of all nations. I only mention Russia because it is right now the target of attack by those irresponsibles who think she would be a suitable adversary in the next world war."

This subcommittee is in possession of no evidence or information which indicates that the Soviet Government has in the past, or will in the future permit the scientists of the United States in their laboratories or to make available to them any information of any scientific importance. Any Government official who is not aware that the Soviet Union is bent upon the Stalinization of the world, is not qualified to hold a strategic position which affects the security of the United States.

CONCLUSIONS AND RECOMMENDATIONS

In considering the case of Dr. Condon, we wish to emphasize that what is involved is not a question of freedom of speech or research. The ruthless rush of Stalin through Europe, in the opinion of this subcommittee necessitates a revision of the policy and thinking of this Government and the people of the United States, regarding communism. We should bear in mind that the Government is charged not only with the administration of public affairs, but it is also charged with the security of the people and the institutions of the United States. Whether we like it or not, we are now engaged in a great epochal struggle; not a struggle with guns, because the Communists don't fight that way. They didn't take over Czechoslovakia with guns, they merely employed the strategy of getting a few men in the government and then a few more, and then they took over the entire government without firing a single shot or calling out a single regiment of soldiers.

They are conducting exactly the same kind of campaign in other countries. In this country they haven't gotten as far as they have in Czechoslovakia, but they got pretty far, because they got a man as Vice President of the United States, and he is now their candidate for President, and he is the same man who recommended Dr. Condon as Director of the Bureau of Standards.

It is the unanimous opinion of this subcommittee that Dr. Condon should either be removed or a statement should be forthcoming from the Secretary of Commerce setting forth the reasons why he has retained Dr. Condon, in view of the derogatory information which he has had before him.

We further recommend that the full committee address a communication to the President of the United States, calling to his attention the fact that the situation as regards Dr. Condon is not an isolated one, but that there are other Government officials in strategic positions who are playing Stalin's game to the detriment of the United States. It should also be pointed out to the President that the evidence before our subcommittee and the evidence which we are sure should be available to him, indicates very strongly that there is in operation at the present time in the United States an extensive Soviet espionage ring, and to permit this ring to continue, in view of the high atomic prizes which they are seeking, is folly, and can only lead to ultimate disaster.

We recommend that all of the evidence in the committee's possession be forwarded to the President for his consideration.

Water

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. POULSON. Mr. Speaker, I am asking permission to insert in the REC-

ORD this advertisement which was placed in all of the metropolitan papers in Los Angeles, to show the serious fight we are facing in southern California. Water is the only obstacle in the path which will threaten in any way the future growth of southern California. This advertisement was inserted and paid for by the Los Angeles city-owned department of water and power. It gives the story in a very concise fashion. It also shows the need of passing certain legislation which is now before the Judiciary Committee of the House.

WATER?

The serious drought prevailing throughout all of California and the Southwest, resulting in rationing of water in some communities and agricultural areas, has aroused concern in the minds of many people as to the local supply.

There is no prospect of curtailment of water use in the city of Los Angeles in 1948.

LOS ANGELES HAS WATER TODAY

Because of the foresight and courage of the people of Los Angeles throughout the past 45 years, the city has an adequate water supply for the needs of today.

Originally, the Los Angeles River basin was the sole source of water—a source sufficient for a population of not more than 300,000 persons.

Envisioning the future growth of the community, the citizens of Los Angeles, in 1905, began to plan importation of additional water supplies. In 1913 the aqueduct bringing in the waters of the Owens River was completed. In 1940, the Mono extension to this system was finished, assuring supplies for almost 2,000,000 population from these sources.

Again, because of evidence of continuing and accelerated population growth and industrial expansion, the citizens of Los Angeles led the movement to bring in water from the Colorado—a movement leading to formation of the Metropolitan Water District of Southern California, serving more than 3,000,000 persons in areas from San Diego to Santa Monica on the coast, and extending inland to the Sierra Madres.

BUT WHAT ABOUT TOMORROW

Adequate water supplies for the future, in the city of Los Angeles, and throughout southern California, depend upon the vision, and the courage, and the acts of the citizens of today.

The 1947 rainfall in the Los Angeles area was the lowest on record. Below-normal precipitation in the Owens Valley-Mono Basin area caused the storage reservoirs of the department of water and power to be filled to only 56 percent of total capacity. After 35 years of operation, the population has just about caught up with the local and aqueduct supplies. In case of prolonged drouth, and for the future, the Colorado River is the city's only available source of additional water.

Upon the basis of allocation of water provided in the Colorado River compact, and succeeding agreements, Los Angeles and her sister communities have invested or committed $550,000,000 in water and power developments depending on Colorado River water. The city's rights and the rights of all southern California are now in jeopardy, because the State of Arizona is seeking authority to divert water from the river—water for which our developments have been designed and built.

Arizona is demanding a greater share of water, which would be taken from California's share of lower-basin supply. All efforts to settle interstate disputes over the river waters by arbitration and negotiation have failed. Since the basic difference between the States is in interpretation of the agreements apportioning water in the Lower Basin States of Arizona, California, and Nevada, the city of Los Angeles has joined other California agencies with water rights in the Colorado, in asking Congress to make it possible to secure an interpretation by the Supreme Court of the United States.

Protection of our existing water rights is essential to the future domestic, industrial, and agricultural development of Los Angeles and southern California. That future rests in the Colorado—our last waterhole.

CHEAPER THAN DIRT

Despite its being brought into the city from high-mountain areas hundreds of miles distant, water supplied to the people of Los Angeles through their municipal water system is literally "cheaper than dirt." It costs, delivered to the city's homes and industries, less than 5 cents a ton—slightly more than 240 gallons. And you use it by the cupful—or tubful—in any quantity desired—at any hour of the day or night. Los Angeles municipal water rates are among the lowest in the Nation among cities dependent upon imported supplies.

DEPARTMENT OF WATER AND POWER.

Universal Military Training Should Be Enacted Immediately

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include the column of Alfred Mynders, Next to the News, in the Chattanooga Times of February 28, 1948, which includes a letter on the urgency of Congress adopting universal military training, written by Col. Louis D. Hutson, United States Army, retired. The column is as follows:

NEXT TO THE NEWS
(By Alfred Mynders)

Col. Louis D. Hutson, United States Army, retired, was with MacArthur in the Philippines when war broke over the western world, was wounded on Bataan, and was for 3 years a prisoner of the Japanese. Now a resident of Chattanooga, Colonel Hutson has been impressed during the last 2 years with the record of Mr. ESTES KEFAUVER in Congress and especially with Mr. KEFAUVER'S advocacy of universal military training. One who has known the bitterest of war experiences gets a respectful hearing when he warns his country of what may come again.

Colonel Hutson's article makes vivid and interesting reading, and is as follows:

CHATTANOOGA.

To the EDITOR OF THE CHATTANOOGA TIMES:

During the recent war years while I was absent overseas in the Army, and since my return to the States in 1945, Chattanooga has been the official residence for myself and family. As a war veteran of two wars and a Chattanoogan by adoption, I feel qualified to express my opinion concerning the candidacy of ESTES KEFAUVER for Senator from Tennessee.

During the period I have resided in this State I have followed with interest the activities of Congressman KEFAUVER. I believe him to be a sound man in matters of business interest, veterans' affairs, and national policy. His attitude towards labor appears to be fair and impartial. As a representative of his district, it is his duty to protect the interest of all the citizens and not just one class. I believe he has done this to the best of his ability and conscience.

Recently, certain opposing interests have attempted to aline Congressman KEFAUVER with the communistic elements in the United States. This smear campaign has not detracted from the greatness of Congressman KEFAUVER'S stature, nor damaged his fine reputation. To the contrary, I believe it has benefited him to the extent of arousing the people's resentment and sympathy.

Congressman KEFAUVER has declared himself in favor of universal military training and has pressed for passage of this in Congress. I feel that he is justified in his actions on this matter.

This is a most controversial issue and is being violently opposed by certain groups and elements in the United States. Some of this opposition comes from people who are definitely aligned with the subversive communistic elements or are out-and-out Communists. Nothing would please those people more than to defeat the proposed training bill.

The fact that Congressman KEFAUVER is working hard for the passage of this bill speaks for itself. Lack of preparedness in our country will do more to foster, to bring on that ghastly debacle, that cataclysm of war, than any other single factor in the causes of war. With the histories of the last two wars before us, each brought about by lack of preparedness, and short-sightedness of our people, we still hesitate to take steps to prevent another—another war more horrible and vastly more devastating.

Our lack of preparedness is but an open invitation to an aggressor nation to attack—an invitation that will strike with lightning speed when he is assured that our defenses have dwindled, and victory is his for the taking. Our only check on his ambition is strength, strength in military preparedness. The cost is heavy, but will amount to only a small trickle of dollars, as compared to the tidal expenditures, to the sea of dollars that will flow in the event of war.

"I do not believe that universal training will prevent another war. I do not believe that the exponents of this training think so, either. It is but one of the many steps necessary in being prepared.

There are other steps more important.

Those of us who face realities are convinced that World War III will be won or lost in the air. The nation that has superiority in the air, in both offense and defense, will win that war. We must not only have weapons in defense to check the sudden undeclared attack of an aggressor, but we must have superior offensive air weapons to inflict reprisals and defeat upon the attacker. Our research, development and production of these instruments and weapons must be more advanced than any other nation—if we are going to survive.

The state of the world today is such that the realities and facts should not be ignored by our people and their representatives in Congress.

The four main veterans' organizations have endorsed universal military training. Military training is a builder of character, a builder of healthy bodies. Aside from the necessity of this training as a preparedness measure, the youths of our country will be much better citizens for a brief period of training of both their bodies and minds. Military training inspires obedience to law and order, something our youth can stand a lot of.

I have stated that the next war will be won or lost in the air. What need, then, for universal military training? The answer is quite simple.

While it is possible for modern air attacks to demolish, destroy, and demoralize the

enemy, yet it holds no power to take and occupy enemy territory. Large bodies of organized, trained troops are going to be needed for this purpose. There will be no time to train these forces after the shooting starts. It will be at least a year before they could be organized and trained. Action in the next war will be fast. Troops must move immediately into the areas demolished by the air force, to seize, to consolidate, to mop up, if necessary, and to hold and occupy the ground.

Millions of trained men will be needed for this purpose.

In addition to Congressman KEFAUVER'S backing of universal military training, he has shown that he is a firm friend of the veteran. He has consistently voted in favor of bills beneficial to the veterans. It is to be noted and highly commended, that he is one of the authors of a bill recently passed in Congress authorizing increases to veterans and their dependents who are taking educational training under the GI bill. * * *

Congressman KEFAUVER is a very likeable and personable man and when elected to the Senate will uphold the dignity and integrity of his great State. The voters of Tennessee will be well represented in the Senate when they elect ESTES KEFAUVER.

LOUIS D. HUTSON,
Colonel, United States Army (retired).

Soil Conservation Cannot Be Postponed

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I include therein a speech by myself delivered at the National Convention of Soil Conservation District Commissioners, at Des Moines, Iowa, February 27:

SOIL CONSERVATION CANNOT BE POSTPONED

Mr. Chairman and fellow Americans, I am pleased to talk to so many "doctors of the soil." Welcome to Iowa.

Modern soil conservation is probably the most significant agricultural development of the times. It is proving itself the only practical way by which any real permanency can be assured for our cultivated land.

From time immemorial, regardless of race or creed, humans have known that their existence and welfare are derived from the natural resources with which they have been surrounded. And yet only recently have we Americans seen fit to use these treasures which the Maker has so generously bestowed on us. And, gentlemen—you, the directors, commissioners, and supervisors of soil conservation districts are the first to fully accept the responsibility of conserving the soil and water resources of a nation, and to cure our sick soil. That is why I address you as "doctors of the soil."

Compare, for example, Greece as a world power before the coming of Christ with that of her present plight. Greece has squandered her resources and now lies weak and exhausted. Man has left a terrible pattern of ruin across the pages of history in Asia Minor, Africa, Europe, China, and India.

United States is the youngest of the major nations in the world today. In less than 200 years of its existence it has become the most progressive, prosperous, and powerful country on the globe. Its rise to the pinnacle of supremacy can be attibuted to two major factors: 1. The abundance and diversity of its resources; and 2, its principles of constitutional government. How long can America continue to maintain its enviable position of world superiority? The answer hinges on how effectively the United States utilizes its natural resources from now on, together with how tenaciously it clings to the principles of government which has served it so well. I believe we can have a free and democratic government as long as we maintain resources to properly feed, clothe, and house our people, and give them a reasonable opportunity to succeed on their own initiative. Soil and water conservation is indeed America's most basic problem. The major responsibility for conserving the soil and water resources of our Nation rests on your shoulders.

THE LAND SITUATION TODAY

There once was a time when there was so much productive land that people saw no need for concern over the possibility of its decline. But that time is past. General lack of information about the erosion problem, until recent years, was reflected in an almost total absence of concern anywhere for the condition or welfare of our productive land—the most indispensable resource we have. But we do have, at long last, a highly effective soil-conservation program under way in the United States. What is needed is increased speed—more technicians in the Soil Conservation Service to help farmers in soil conservation districts.

Looking at the world situation, wherever there is productive land, hunger is an unnecessary, costly outgrowth of inadequate farm methods, ignorance, and lack of decision on the part of nations to take up vigorously the job of erosion control and soil betterment—that is to say, soil conservation to save their source of food and raiment. Soil conservation in the modern sense is not just controlling erosion; it's that and whatever else needs to be done to keep the land permanently productive while in use. It is not just terracing, contouring, strip cropping, and crop rotations; it is that and draining land where it's too wet, applying water where it's too dry, and so on.

That is why I want to point out with all the emphasis at my command the extraordinary need now for improving and maintaining the productivity of our limited and shrinking area of productive land. If soil conservation does not soon become a major factor in our national and international deliberations, decisions, and actions, the alternative can scarcely be less than widespread world food shortages in the not too distant future. No one really believes, I am sure, that the United States can feed the world from its limited supply of cropland. We can help, but we can't do the whole job indefinitely. If we let much more of our good productive land run down the rivers to the sea, the time could come when there would no longer be quantities of food to export.

UNITED STATES NEARS DANGER LINE

The United States is somewhat better off, of course, than most nations from the standpoint of area of productive land, chiefly because of its rich heritage of good soil. But there is no cause for complacency; for we, too, have come all too close to the danger line as the result of careless land use. We now have left in the United States only about 460,000,000 acres of high-grade cropland, as well as can be determined from erosion surveys. That is slightly more, on the basis of present population, than the 3 acres per person it is estimated are required to meet the food and other requirements per person, including soil-sustaining crops, plus some land to take care of industrial, clothing, and other needs. Unfortunately, all but about 100,000,000 acres of this 460,000,000 acres is subject to erosion, poor drainage, and other forms of soil impoverishment.

About a fourth of our good cropland (some 115,000,000 acres (is being damaged at a critically rapid rate by erosion. It ought to be protected—and must be—during the next 10 to 15 years, or not later than by 1960. Still another large area of cropland, estimated at some 115 to 120 million acres in extent, should, for the same reason, receive adequate protection not later than 1970. And we cannot afford to neglect the additional millions of acres on which erosion is beginning or is likely to begin at any time. We should never again allow ourselves to overlook the recent findings of our over-delayed erosion research which, among numerous discoveries, has shown that accelerated erosion sometimes proceeds a thousand times faster than natural erosion under the protection of trees and grass.

PRODUCTIVE SOIL AND HEALTH

We have made great strides in medical science, health, sanitation, lowering mortality rates, and prolonging life. In the final analysis, however, it is the good soil of our fields and pastures on which we must rely for survival and good health. Land stripped of its productive topsoil down to raw, unprocessed subsoil, not only produces less but what is produced is generally of lower nutritional value, and may be lacking in some of the essential food elements. Although the subsoil may contain as much of the major elements of plant nutrition (except nitrogen and organic matter) as the topsoil, as revealed by chemical analysis, they are frequently unavailable to the plant. If the major elements of nutrition are unavailable, probably the minor nutritional elements, as copper, cobalt, etc., also are unavailable in the raw material.

So soil conservation of the kind that fights to hold the topsoil, as well as to improve lands depleted of plant nutrients, is a national must. Delay in getting ahead with this job—even 1 year's delay—is probably the most unwise act that a nation can be guilty of, for this crime leads surely and rapidly to the gravest kind of national danger. I have a word which, to my way of thinking, fits the crime against our precious soil. That word is "soilicide." We of this generation can and must stop it.

SOIL-CONSERVATION DISTRICTS

Modern soil and water conservation, practically applied with the full cooperation of farmers and ranchers, is beginning to catch up with the land-depletion problem. This is being done through farmer-organized and farmer-directed soil-conservation districts, with the Soil Conservation Service furnishing technical assistance. The program is supported by other aids, such as educational help from State extension services, by research carried on by the Service in cooperation with State agricultural experiment stations, wildlife conservation organizations, and by credit and conservation materials supplied by numerous public and private agencies.

It has been shown that there is no shortcut method for getting the job done, no quick and easy way to do it. The damage that has been done to our land over more than 150 years cannot be cured overnight. In order to assure the continued productivity of our agricultural land, every acre must be adequately treated—which means treatment according to the need of the land and its use according to capability for producing the various crops, whether it is corn, wheat, grass, or timber. This has been proved to be the first basic principle of sound soil conservation.

Highly effective conservation of soil and water is being done through sound land planning and treatment by the farmer and the soil conservationist working cooperatively out on the land, field by field, in every pasture and woodlot, in every gully, and over every piece of idle land. Moreover, this means a diversified type of production that

fits the needs of the land, and gives people more of the nutritious food they need. This program is flexible enough to be responsible to changing market or other demands, such as the present food-producing emergency, and it gives us the basis for the permanent maintenance of the soil to support a permanent agriculture and a permanent nation, and this is exactly what the present national program of soil conservation is doing, and can continue to do with increasing speed.

Farmers and ranchers of the 48 States, Puerto Rico, and the Virgin Islands have formed about 2,000 soil-conservation districts already. Additional districts continue to be voted in by the farmers. They now cover more than a billion acres and 4,500,000 farms and ranches, or three-fourths of all the farms and ranches in the country. Alaska and Hawaii also now have district laws.

These districts, as you know, are managed by local farmers, locally selected. There are now between 9,000 and 10,000 district governing officials who thus are giving unselfishly of their time and energies in the furtherance of soil conservation throughout the country. They are on nobody's pay roll and are obligated to no group, no individual, and to no State, Federal, or other outside authority. They draw on the support and facilities of everybody who can contribute something to district progress, including business establishments and civic organizations, schools, banks, churches, railroads, newspapers, and so on. These districts, in my judgment, come nearest to representing farmer control of their own agricultural affairs of any plan ever developed anywhere down across the whole history of mankind here on earth. Nothing has ever even approached this district movement for getting a common need like soil conservation attended to promptly—effectively.

Also, it is the best possible way of getting permanency into our conservation efforts. So, when any of the authority which the 48 States have legally granted the districts is taken away from them and given to some other agency or group, I don't care what agency or group it may be, you thereby undermine and emasculate the districts and disloyally, whether consciously or unconsciously, sabotage and hurt the people of the United States of America.

I have been interested in soil conservation a long time—since I watched the gullies form in our Iowa corn fields after every rain. I've talked with a great many district supervisors—read their letters—I have had personal contact with many employees of the Soil Conservation Service. I've never heard a hint on any of their part to bring soil conservation into politics. What they are doing is this—they are fighting to retain the best means yet found to get permanent soil and water conservation applied to the lands of our country promptly and efficiently. For that I compliment you—don't give up ever—it is a fight to save America. Politics is not involved—everyone is for soil conservation. No one should play politics with our precious soil. That would be "soilicide" in the nth degree.

As you know, I introduced H. R. 4417—the national land policy bill—so that through soil conservation districts soil and water conservation could be applied to the lands of our country faster. My bill recognizes that more technical on-the-farm help is needed in addition to more education and research in soil conservation. It provides for more funds for the Extension Service to get the needed educational job done. It provides for a conservation timetable to guide districts, the agencies cooperating with them, and the Congress in making appropriations to get the soil conservation job done on time.

In addition to providing for necessary surveys, research, education, and technical on-the-farm assistance, grants-in-aid are to be made on the basis of the need to get the job done. By grants-in-aid I mean machinery, seeds, trees, and other conservation materials, but no payments in cash to farmers. There are a great many farmers who don't need grants-in-aid. They have, either on their own farms or can readily obtain, all the conservation materials they need. But, in every State, many more in some than others, there are farmers who don't have and can't get what they need to finish the job of conserving their land. We have millions of acres of poor land on which farmers are trying to make a living. I can't describe it better than to call it sick land. When one is sick he needs help—just as does this poor badly eroded land.

Furthermore, the excess run-off water and silt from these badly eroding lands contributes to damage on neighboring downstream lands. It is the responsibility of the Government to assist these farmers in preventing run-off and stopping erosion. When the damage has been repaired by the farmer with needed Governmental assistance no further grants need be made.

H. R. 4417 makes grants-in-aid for soil conservation a responsibility of the Soil Conservation Service. I have been asked frequently, "What about the Agricultural Conservation Program or the Production and Marketing Administration, popularly known as the AAA?" They aren't mentioned in the bill and there was never any attempt to harm them in the least. We need to retain county and community committemen to handle crop loans and numerous other services necessary to maintain a prosperous agriculture which is basic to national prosperity just as productive soil is basic to farm prosperity. Hence, high-productive soil is basic to permanent national prosperity. So, as Don Berry, of Indianola, Iowa, says, "This is a program that counts everybody in."

SOIL CONSERVATION WORK IS MOVING FASTER

According to the annual report of the Chief of the Soil Conservation Service for the fiscal year ending June 30, 1947:

The conservation of our remaining productive land is still our most urgent farm problem. Proper land management and treatment of land is the base on which other phases of our agricultural program must rest. Improved breeds and varieties; hybrid seed; insect and disease control; better machinery and more efficient cultural methods; scientific feeding, grazing, and management of livestock; and improved marketing practices are of the utmost value, of course, but they are of only temporary value to the farmer who is losing his soil and wasting his water. The price of agricultural commodities means little to the farmer who does not and cannot produce efficiently because of excessive erosion and run-off of the rainfall. The land—productive land—is basic.

We now have much of the information needed to put American agriculture on a permanent, self-sustaining basis. And we have made enough progress toward getting the right kind of conservation farming measures in use on farm and range land to point the way. The major part of our soil-conservation job, however, is still ahead of us—and it is an urgent job, demanding immediate attention. Postponement means a more difficult and expensive job, and for some land it means oblivion insofar as further cultivation is concerned.

"Progress in getting soil conservation on the land was greater during the fiscal year 1947 than in any previous year," the report says.

Continuing, the Service report says:

"During the year 1947 we put more than twice as much conservation work on the land as during 1945 and increased the 1946 record by more than 25 percent. In 1947 some 127,000 farm plans were made that covered about 36,000,000 acres, and conservation treatment was completed on more than 20,000,000 acres. In addition, soil-conservation practices were spread to thousands of neighboring farms and ranches. * * * The supervisors of most districts are taking a more active interest in administration of the districts and in other ways of helping to speed up the work. Farmers in districts are working together far better than ever before."

A NEW AGRICULTURAL TECHNIQUE

Soil conservation, as practiced by trained and experienced soil conservationists today, is a technique in land use and protection that was never previously employed in any general way anywhere. It is not only the cheapest and most effective way of protecting farm land from impoverishing erosion; it is the only practical way to keep cultivated and grazing land permanently productive. Such other methods as the old single-practice method of terracing have failed to the extent of permitting millions of acres to be ruined for any further cultivation.

We have learned this modern way of conserving our soil and water resources since 1934. It is just 12 years since the first soil-conservation district was organized. Complete conservation plans have been made covering more than 200,000,000 acres of farm and ranch land in districts throughout the United States to date. The land treated under these plans now totals more than 100,000,000 acres. The cost to the Federal Government for assistance in getting this much done has been about $185,000,000. That is proof that the job is being done cheaply and efficiently.

Being on the Appropriations Committee of the House of Representatives has made it necessary for me to closely scrutinize Federal appropriations. The time may come, and soon, that our national income will shrink to the point where it will not yield the revenue from taxes to support such a tremendously large Federal budget as we now have. When that happens we will be looking for reductions that can be made and those programs that get the most good for the money spent will be least affected. The figures show that the national income is always approximately seven times the farm income. That is why we must of necessity maintain a high farm income. Farm income comes from production and production springs from the land.

There is no Federal, State, or local agency that duplicates the work of the Soil Conservation Service. This is the only agency that works with individual farmers, out in their fields, pastures, woodlots, gullies, and idle lands to develop and carry out soil and water conservation farm plans. It is the only agency that makes scientific soil conservation surveys and land capability maps for use to guide, scientifically, the development of detailed farm plans for soil and water conservation and for application of the needed practices to the proper kinds of land appropriately used for adaptable crops and cropping systems. In most communities the Service technicians are the only experienced and trained personnel available to help farmers properly apply soil-conservation practices.

The technical aid that this Service furnishes to farmers and ranchers in soil-conservation districts—accurate conservation surveys to determine land capability, detailed conservation farm plans, and technical assistance in applying conservation practices on the land according to its needs—is the vital key to an adequate and permanent soil- and water-conservation program. And there is no other group of technicians trained to do these jobs.

We must stop erosion on this land. We must stop the mining of the soil. We must stop bad land use and bad water management now.

We must prevent dust bowls and gullying and give to every acre of farm land in the United States the treatment it needs to protect it and make it productive and keep it

productive, and we must use it for the crop it is best fitted to produce.

These are more of the reasons that I introduced H. R. 4417, known as the national land-policy bill, on July 26 last year. H. R. 4417, you will recall, was designed to provide for a national land policy based on the conservation of our soil and water resources, the orderly development and protection of the Nation's agricultural lands, and for other purposes. Here are some of the important things that H. R. 4417 would do if enacted into law:

First, it would establish a new national land policy, recognizing the conservation of soil and water resources and the orderly development and protection of the Nation's agricultural lands as a basic consideration of American agriculture. Just as a prosperous agriculture is the basic essential to national welfare and prosperity, so productive land is essential to a prosperous agriculture. However, not since pioneer days has the United States Government had a definitely stated and publicly accepted land policy.

In the second place, H. R. 4417 would safeguard the interests of the Nation and of the people of the United States in the conservation of America's land and water resources upon which the Nation and the people depend for their wealth and—in the end—for their very existence.

Third, H. R. 4417 would get the basic conservation job done in time to prevent further large-scale irreparable damage and loss to America's agricultural land, and this is a vital consideration.

Fourth, H. R. 4417 recognizes the urgency and the size of the conservation job. Land damage in the United States still is proceeding at a faster rate than conservation. In other words, our progress is still too slow, although we have a program that is unmistakably proving its worth, and is making progressively faster progress.

The fifth point is this: This bill recognizes the interrelationship of soil conservation, drainage, irrigation, land use, soil fertility maintenance and improvement, control of sedimentation, conservation, and proper management of water, and flood prevention on agricultural lands. We must keep in mind that any work to maintain and improve soil fertility is ineffective without corresponding work of soil and water conservation.

No one has yet been able to induce the flow of water in rivers to stop at State lines. Yet it has been proposed that we adopt a program, administered by States, to retard silt and prevent excess run-off. How can 48 States effectively administer a program of flood prevention on the lands of this country in cooperation with the Army's flood control work on the streams. I believe it essential that flood control and flood prevention programs be planned and carried out on a watershed or river valley basis. We are beginning to make progress in the Missouri Valley under the Pick-Sloan plan. Soil conservation districts are involved and they have already shown in the Little Sioux River watershed in northwestern Iowa that they can cooperate in getting permanent flood prevention in the valley.

For the sixth point, H. R. 4417 would recognize the technical nature of the job ahead. There is no more uniformity in land and water problems than there is in the landscape. Conditions, as we all know, vary with almost every field we cross.

My seventh point is the provision of this technical assistance to farmers and ranchers in handling their soil and water conservation work.

My eighth point is that increased educational work in conservation is necessary and would be provided for under this bill. This would be provided largely through the Federal and State Extension Services.

My ninth point is that this bill would provide grants-in-aid, but no cash payments, wherever such grants-in-aid are necessary to supplement the contributions of the farmers themselves in dealing effectively with their physical land and water problems.

When I say "no cash payment," I mean the Soil Conservation Service will not give benefit in cash payment which has nothing whatever to do with the triple A compliance payments. In short, my bill H. R. 4417 provides a plan to speed up the conservation of our soil and water resources and for flood prevention in the most economical way that can be devised in the opinion of a great majority of our people.

Tenth, by making this work available through soil conservation districts and other authorized districts, H. R. 4417 would stimulate self-government, strengthen the soil conservation districts of the United States, and give more local farmer control of soil-conservation work.

My eleventh point is that this bill would assure a conservation program of technical excellence based on fact-finding surveys and research carried on in cooperation with the State Agricultural Experiment Stations, thus bringing to the solution of soil and water conservation problems the methods and materials found to be best adapted to the areas in which the work is to be done.

The twelfth point is that H. R. 4417 would provide for rapid completion of a conservation survey of the Nation's farm and ranch lands. This type of analysis provides the factual basis on which present-day soil and water conservation operations are carried out.

My next point is—and this is extremely important—that this bill provides for the development and protection of new agricultural land. You will recall that of the more than 420,000,000 acres now in crop production, many millions of acres should be retired to grassland or woodland use.

Finally H. R. 4417 recognizes the desirability of having all technical action programs and grants in aid programs involving conservation, drainage, water development, and flood prevention on farm and ranch lands technically directed by one agency. This would include the technical aspects of irrigation work on the land as well as the development of new agricultural lands. This bill would assign that responsibility to the Soil Conservation Service. In assigning these basic responsibilities to the Soil Conservation Service the bill recognizes the agency of Government that has pioneered in the development of effective soil-conservation measures, as well as in the procedures for getting them applied with full farmer understanding and without any semblance of regulation.

Soil conservation cannot be postponed. It is everyone's wish that there be no more wars. We had plenty of good, nutritious food produced from highly fertile land in winning World Wars I and II. Let us always be ready and have a storehouse of productive land or in event of another war we will not be so fortunate.

Yours is a great responsibility. Yes; even more, you have a grave responsibility, my friends of the Soil Conservation Service, for America is looking to you to keep our soil healthy and productive so that we and our children may be happy, healthy, and prosperous, and that our Nation under God may be preserved.

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD the following editorial which appeared in the New York Times of Tuesday, March 2, 1948, entitled "Five Tests—What Now?":

FIVE TESTS—WHAT NOW?

For 14 years the Hull Reciprocal Trade Agreements Act has been the economic keystone of this country's foreign policy. The act will expire a few weeks hence. Yesterday President Truman urged its extension for an additional 3 years. He could do so on the sound ground that foreign trade is necessarily a two-way process and that it is more essential today than ever before to strengthen the economic ties between those nations—the democratic nations—which are the chief beneficiaries of this legislation.

Including its original enactment, the Hull trade program has come before Congress on five occasions: In 1934, and again, for a renewal of its powers, in 1937, 1940, 1943, and 1945. The Senate votes on these five tests have shown:

1934: Democrats for, 51; against, 5; Republicans for, 5; against, 28.

1937: Democrats for, 56; against 9; Republicans for, 0; against, 14.

1940: Democrats for, 41; against 15; Republicans for, 0; against, 20.

1943: Democrats for, 41; against, 8; Republicans for, 18; against, 14.

1945: Democrats for, 38; against, 5; Republicans for, 15; against, 16.

Meantime, in the same years, the votes in the House of Representatives have shown:

1934: Democrats for, 269; against, 11; Republicans for, 2; against, 99.

1937: Democrats for, 278; against, 11; Republicans for, 3; against, 81.

1940: Democrats for, 212; against, 20; Republicans for, 5; against, 146.

1943: Democrats for, 193; against, 3; Republicans for, 163; against, 26.

1945: Domecrats for, 205; against, 12; Republicans for, 33; against, 140.

What do these figures show? They show that with the single exception of the war year 1943—when there was a general disposition in Congress to follow the President's leadership in foreign affairs—the Republican Party in Congress has consistently opposed the Reciprocal Trade Agreements Act; that on no occasion in any peacetime year has the Republican Party in either branch of Congress cast a majority of its votes in favor of this legislation; and that its majorities against have usually been almost unanimous.

The forthcoming test will provide an interesting and particularly timely answer to the question of how far the Republican Party has emerged from prewar isolationism—in its thinking on international economic issues—in this election year.

John L. Lewis and 1948

EXTENSION OF REMARKS

OF

HON. WILBUR D. MILLS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. MILLS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast by George E. Reedy:

For weeks the country has been watching the "cold" war in Europe. It has been so engrossed that it has failed to note the war of nerves in our own back yard. But it is there and ready to burst out any day now.

The kingpin of our domestic war of nerves is stormy John L. Lewis, boss of the United

Mine Workers. Lewis has never let a year go by without creating at least one crisis. Nineteen hundred and forty-eight promises to be no exception.

Most of the operators have resigned themselves to a major strike, complete with Shakespearean quotations. They are ready for the eyebrow waggling and table thumping that always goes with a Lewis campaign.

Their only difficulty is that they don't know where and when he will strike. He has already passed up one excellent opportunity. But that isn't any sign he intends to pass it up permanently. There are other days coming.

The issue of the coming strike is already known. It is Lewis' demand for a $100-a-month pension to miners over 60 years of age. He asks that it be paid out of the health and welfare fund, which is financed by a royalty on coal.

The operators have refused. They claim that such a demand would require an increase in the 10-cent-a-ton royalty. Therefore, they have begun a Nation-wide survey to form a counter offer that will be presented in the near future.

Under the Taft-Hartley Act, Lewis must notify the Federal Mediation Service 30 days before he takes his men out on strike. Yesterday was his first chance to do so, as he does not have the right to terminate his present contracts until March 30.

Of course, everyone is looking for John to defy the law. He has branded it a "slave labor act" and charged that it is unconstitutional. At the very least, he will put it to a stiff test and try to get it knocked out in the courts.

Government officials are watching the situation very closely. In the first place, a soft coal strike would damage the Nation's economy considerably. In the second place, it would call into effect a major section of the Taft-Hartley law.

This is the provision designed to give the country some protection against paralyzing strikes in basic industries. It permits court injunctions to stall off strikes for 80 days. So far this section has not been given a real test.

Lewis, of course, will give it that real test. No other section of the act affects him so vitally. He has to find out where he stands and this is as good a time as any other. He will have an excellent chance to prove his power.

Government authorities have already made it clear that they will put up a fight. They want no part of a break-down in the country's coal supply in the midst of a diplomatic crisis. That would be a drastic blow to American foreign policy.

However, officials cannot forever prevent the miners from striking. The Taft-Hartley Act puts a limitation on the number of days the union can be enjoined. But they do hope they can put a strike off to late spring.

At that time the need for coal will be less desperate. Lewis then can use his power only against the operators. He cannot make the public suffer. Perhaps this time the strike can be confined to an economic struggle between the miners and their bosses.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herein an editorial from the Watertown Times, Watertown, N. Y., February 28, 1948. It, of course, is a great disappointment that this bill was recommitted but since that action was taken, I think the enclosed editorial reflects pretty well the feeling of those of us who have been so strong in advocating the St. Lawrence seaway and power project.

The editorial follows:

SEAWAY POSTPONEMENT

On motion of Senator H. ALEXANDER SMITH, of New Jersey, the St. Lawrence seaway resolution has been recommitted to the Foreign Affairs Committee for further study. Strong advocates of the seaway, notably Senator WILEY, of Wisconsin, and Senator AIKEN, of Vermont, opposed the motion strongly but without avail. The vote was 57 to 30.

This vote probably does not represent the relative strength of seaway advocates and opponents in the Senate. There is good reason to believe that some of those who voted for recommittal would have voted in favor of the seaway resolution had there been a show-down vote. But they thought it better strategy to keep the resolution alive rather than to invite almost certain defeat in a show-down vote at this time.

It is not correct to say, as some Washington correspondents write, that the seaway proposal has been "scuttled" as a result of this Senate vote. It has not yet been defeated As a matter of fact, it has not been voted upon. The effect of the recommittal vote is simply to postpone a decision to some later time.

This means, evidently, that no attempt will be made to revive the proposal during the present session of Congress. Proponents realize that chances of passages will be better after the Presidential election. But both Senators AIKEN and WILEY promise that the fight will go on. The seaway is not dead by any means.

When the seaway proposal was first advanced to the floor of the Senate, chances for passage appeared bright. But proponents underestimated the strength of the powerful railroad and utility lobbies. The most intense kind of a campaign was put on to switch the votes of those who might otherwise have been favorable and the campaign was successful.

The opposition of Senator IRVING M. IVES of this State was also most damaging. When a representative of the State destined to benefit the most from the seaway and the resulting power development did everything he could to defeat it, the effect was bound to be bad.

By the same token, Governor Dewey's silence was unfortunate. True, Dewey is on record for the seaway but his failure to speak out when it would do the most good together with the position taken by his protégé, IVES, gave the impression to some western Senators that Dewey was not too much concerned one way or another.

These were the handicaps the advocates of the seaway faced, the strong opposition of the Republican Senator from New York, the silence of Governor Dewey, the activity of the railroad and power lobbies, the heavy appropriations needed to implement the Marshall plan and the fact that the seaway got involved in Presidential year politics.

There will be disappointment among those who had hoped that at last the seaway might be authorized but it may be a different story next year. Not only will a President be elected this fall but also a new Congress. The new Congress may be much more favorable to public projects of this nature than the present one and the selfish lobbies may not exercise the influence then that they do now.

We must carry on the fight and we must go to the grass roots as Senator AIKEN suggests. The people are for the seaway. Even the people of Buffalo, a public opinion poll showed, are for it. We must find a way to bring public sentiment to bear on our legislative representatives, both in Congress and the State legislature.

We have found it necessary to stage a strategic retreat but the issue is still far from decided.

Mikolajczyk Tells of the Beginnings of the Polish Satellite State Amid a Scene of Soviet Bullets

EXTENSION OF REMARKS
OF
HON. CHARLES J. KERSTEN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. KERSTEN of Wisconsin. Mr. Speaker, I wish to include in my remarks two additional articles of the former Prime Minister of Poland, Mikolajczyk, as printed in the Milwaukee Sentinel. They continue to tell the story of the tremendous pressure used by Russia to set up its satellite state in Poland under the leadership of the Soviet agent, Bierut, as the new President of the Polish satellite state.

Following are the two articles:

(By Stanislaw Mikolajczyk, former Prime Minister of Poland and president of the Polish Peasant Party)

(Installment XX)

Back in London after a discouraging trip to Moscow in the fall of 1944, I reported my failures to the Polish Cabinet and the Polish underground.

There remained one ray of hope, President Roosevelt. After Winston Churchill told Commons "important progress was made toward a solution of the Polish question"—which was not the truth—and then blamed my government's difficulties on the fact that we would not accept the Big Three's callous division of Poland, I wired Roosevelt:

"Mr. President," I wrote, "you probably have heard of the recent transactions at Moscow from Ambassador Harriman, and you know of the great pressure put on us to recognize the Curzon line as the future frontier between Poland and Russia.

"I think you appreciate, too, how terrible would be the injury to the Polish nation if, after all the losses it has suffered in this war, it would be then forced to suffer the loss of one-half of its territory.

EFFORTS IN VAIN

"I tried to persuade Marshal Stalin and Prime Minister Churchill to permit us to retain at least the Lwow area, with its oil and potash, for it is a region that never belonged to Russia. But my efforts were in vain.

"Before I make my final decision, I would like to know your attitude. I remember your own feelings about our retention of the Lwow area, as expressed at our last meeting."

LETTER FROM F. D. R.

Ambassador Harriman brought me a letter from President Roosevelt, after the latter's election, incorporating answers to both notes I sent to him.

"I have constantly in mind the problems you are facing in your endeavors to bring about an equitable and permanent solution of the Polish-Soviet difficulties and particularly the questions which you raised in your message of October 26," Roosevelt wrote.

"I am giving below in broad outline the general position of this Government in the

hope that it may be of some assistance to you in your difficult task.

"1. The United States Government stands unequivocally for a strong, free and independent Polish state with the untrammeled right of the Polish people to order their internal existence as they see fit.

"2. In regard to the future frontiers of Poland, if a mutual agreement on this subject including the proposed compensation for Poland from Germany is reached between the Polish, Soviet and British Governments, this Government would offer no objection. Insofar as the United States guaranty of any specific frontiers is concerned I am sure you will understand that this Government in accordance with its traditional policy, cannot give a guaranty for any specific frontiers.

"3. If the Polish Government and people desire in connection with the new frontiers of the Polish state to bring about the transfer to and from the territory of Poland of national minorities, the United States Government will raise no objection and as far as practicable will facilitate such transfer.

"4. The United States Government is prepared, subject to legislative authority, to assist insofar as practicable in the postwar economic reconstruction of the Polish state.

"Very sincerely yours,

"FRANKLIN D. ROOSEVELT."

I submitted the British and American notes to the Polish Government in London and, by radio, to the desperate men who were fighting the Germans in Warsaw.

PROTESTS IGNORED

The NKVD was continuing to arrest and, in some cases, execute Polish underground fighters immediately after the Red Army and the Poles liberated the cities of Poland. My protests to Moscow were being ignored.

We knew, too, that Britain and the United States were in no mood to back our demands. The London government would soon become completely isolated. And taking all these things into consideration, I resigned as Prime Minister on November 24, 1944.

I was succeeded as Prime Minister of the Polish Government in exile by Tomas Arciszewski, veteran Socialist, who had spent most of the war in the Warsaw underground. Arciszewski took office November 29, 1944, in an atmosphere of deepening despair for Poles at home and abroad.

LUBLIN RECOGNIZED

On December 15 of that year, Prime Minister Churchill's changed outlook on Poland was endorsed by Commons. The Kremlin on January 5, 1945, recognized the Lublin Poles as the official government of Poland.

Stalin now received Churchill and Roosevelt at Yalta for what turned out to be the final meeting of these three, who were among the most powerful individuals in history.

In the case of Poland, Churchill and Roosevelt either yielded again to Stalin or strengthened decisions they had secretly reached at Tehran.

The Polish government in London promptly rejected the Yalta decisions on Poland on the ground that the Polish government, which was recognized by every other country except Russia, had not been consulted in the matter of its postwar fate.

At the beginning of March 1945 leaders of the Polish underground, consisting of all recognized parties except the Communist Party, were asked by representatives of the Lublin government to go to Moscow for political conversations concerning the future of Poland. They were promised on the word of honor of a Russian general that they would have safe conduct in Russia and permission to go thereafter to London and then return home.

On March 27, Vice Premier Jan Jankowski, speaker of the underground parliament, Puzak, and Col. M. Okulicki, former commander of the home army, met Colonel General Invanov in the suburbs of Warsaw. They did not return from the meeting.

On the following day 13 more Polish leaders, including the chairmen of the parties represented in the underground, journeyed to the same meeting place. They, too, did not return.

From London we announced to the world on April 6 that Soviet promises of safe conduct had been broken, that the 16 leaders had been arrested and disappeared.

Molotov finally admitted to Eden and Secretary of State Stettinius, at the San Francisco Conference, that Russia was holding the men.

The charge against them was announced the next day, May 5, by Tass, which stated officially they had been guilty of "diversionary tactics in the rear of the Red Army" and were awaiting trial.

CHURCHILL PESSIMISTIC

On June 11, I received an invitation from the Big Three to go to Moscow for consultations. I accepted on the 12th and Moscow immediately announced that the trial of the 16 Polish leaders would begin on the 18th.

I saw Churchill before I left for Moscow and found him deeply pessimistic about the future of Europe.

This is why I agreed to return:

1. Inside Poland, the Russians were arresting, shooting, and deporting thousands of members of the Home Army and the underground—with the servile agreement of the Communist Lublin Government.

2. Russia was dismantling and shipping to the U. S. S. R. a great number of Polish factories;

ONE HUNDRED AND FIFTY THOUSAND FACE SLAVERY

3. There were 150,000 members of my Peasant Party battalion in extreme danger of being annihilated or sent into Siberia and slavery, as was the fate of 40,000 other Home Army men.

4. The 5,000,000 Poles living in that section of Poland which had been given to Russia by Yalta, had to be rescued and removed to safety.

5. I knew of the impending Potsdam Conference and, knowing that the Lublin Poles would agree to anything Russia proposed, I wanted to make my independent voice heard there.

(Installment XXI)

My return to Warsaw on June 26, 1945, to take my place as second deputy prime minister and minister of agriculture in the Communist-dominated Polish provisional government filled me with mingled emotions.

Fresh in my mind were our last hours in Moscow, hours of countless frustrations and the ever increasing clarity of the fact that Russia had no intention of living up to promises it signed jointly with the United States and Great Britain.

FEARS PLAIN TO SEE

Subtly, terribly, the Poland which had been guaranteed its independence was becoming an isolated ally dominated by Russia. Soviet influence pervaded us. Indeed, in one of the final meetings during the formation of the government, Boleslaw Bierut, who was to be president of Poland, spoke in Russian during a statement to the representatives of the Big Three.

"Please translate what this Pole is saying," I asked.

Ambassador Harriman's own fears, and those of British Ambassador Clark-Kerr, were plain to see. Harriman especially kept mentioning to Bierut and the Russians that the Yalta agreement provided that there must be a free and unfettered election in Poland as soon as possible.

PROMISE IN POCKET

At last the new government took off for Warsaw in Russian planes. In my pocket I held a signed agreement calling for freedom of the vote and the press, a promise by the new government to remove the Red army from Poland, an amnesty for those brave Polish underground army men who, having seen so many of their colleagues arrested by the Russians, were still in hiding, and six seats for independents in the 19-seat provisional administration.

We landed at Okecie airport, outside Warsaw, and my heart swelled at the sight of countless thousands of Polish people.

They called for a speech and as I moved to the microphone, filled with emotion, Bierut—and the three NKVD men who always stood at his side—stopped me for a moment.

"When you speak," Bierut hissed to me, "you must address these people, at first, by saying 'Obywetele.'" It is a salutation that is older even than "comrades." I turned my back on him, took the microphone, and began, "My sisters and brothers."

The ceremonies at the airport ended, we drove into the city. It was a sight that shocked me beyond expression. Warsaw was an eternity of rubble, and the sweet, sick smell of the dead that lay under the debris filled the world.

In the Ghetto alone, the Germans had killed more than 100,000 Jews. Nearly a quarter of a million other Poles had perished in the uprising.

DRIVES TO SEE WITOS

On the second day at home, I drove to Krakow and to the village of the old and ailing president of the Peasant Party, Mr. Witos. The village lay only 40 miles outside of Krakow but the trip took 12 hours. The roads were jammed with Red Army troops returning from Germany and western Poland, carrying with them loot of such quantity and variety as to defy description.

Many were drunk. Some who had captured German or Polish automobiles drove them crazily and often crashed. Some of the victors dragged along German and Polish girls.

I found Witos sick and pessimistic. Three times Premier of Poland and one of democracy's greatest voices in the history of our country, he lived in poverty and continuing peril.

I reported the results of the Moscow meeting to him, the mock trial and stern sentences which had been handed down to 14 of the 16 leading Polish patriots, and my fruitless appeals to Molotov for their release.

On the same day I was to learn that instead of our possessing nearly a third of the seats in the provisional government, we now had less. Two Communist members had been added to the government without the consent of the United States and Britain.

Our increasingly pathetic efforts to avert the growing catastrophe that was overtaking "liberated" Poland began the following day in Krakow when I met with Peasant Party leaders of that area.

The street in front of the meeting place had been filled with tens of thousands of Poles as we entered the conference. But when I stepped out of the place that night the street was empty and ghostly. Not a living person stirred.

I thought it odd, but I stepped into my open car and started away. And then I realized there was indeed life in that street. A flaming burst of machine-gun fire swept over my head, and in the light from the gun I could see that Red Army troops and Polish security police were standing with their backs against the walls of the buildings * * * as far as the eye could see.

I drove down that 600-yard street with the shots streaking just over my head. They could have killed me easily, of course. But they had their instructions. This canopy of fire they placed over my head as I drove along was to be simply a warning.

READY FOR ANYTHING

On the following day, at the first meeting of the new government on Polish soil, I let President Bierut and the others know that I was aware of the significance of the gun play.

"I see you have warned me," I said, "but if you think you can frighten me, you're mistaken. I was warned long before I got back to Poland. I'm prepared for anything."

I had contacted my mother as soon as I returned to Poland, and I soon flew to Poznan to see her. It was our first meeting since the day I left in August 1939, to join the Polish Army that was about to be attacked by both Hitler and Stalin.

On the same day that I saw my mother, I spoke in Poznan's Place of Freedom before 60,000.

POSITION DIFFICULT

I thought the Potsdam Conference might enable the independent members of the provisional government to state their case to American and British leaders. But whatever we were able to tell them was overshadowed by concessions which the Russians later forced upon us.

My position was extremely difficult there. Bierut and the others, acting on instructions from the Kremlin, set out to antagonize President Truman and Prime Minister Churchill and, after Churchill's defeat in the British general elections, Prime Minister Attlee.

At Potsdam it was agreed "the U. S. S. R. undertakes to settle the reparation claims of Poland from its own share of reparations."

Here is but one result of that decision:

In mid-August 1945, after the Americans and British had left Potsdam, the Polish Government was abruptly ordered by Stalin to come to Moscow for consultation.

There, Molotov told us that our share of the reparations which Russia planned to extract from Germany (15 percent) would total $500,000,000.

"Poland is luckier than the Soviet Union," Molotov told us. "You get this amount in addition to the $6,000,000,000 you've already received."

"What $6,000,000,000?"I asked, startled.

"Don't you understand?" he asked coldly. "Poland has given eastern Poland to Russia. The Polish property left there totaled $3,500,000,000. You receive from Germany an area whose property is worth $9,500,000,000. So it is clear that you have gained $6,000,000,000.

"Just a moment," I said. "You say the property in the new western part of Poland is worth $9,500,000,000. But don't you remember that you've stripped it of its factories, railroads, plants, homes, livestock, and everything else you could transport?"

Molotov scoffed. "Oh, that has only amounted to about $500,000,000," and abruptly adjourned the meeting.

The Late Clarence Hancock

EXTENSION OF REMARKS
OF
HON. WILLIAM T. BYRNE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. BYRNE of New York. Mr. Speaker, I knew Clarence Hancock when he was a student at Wesleyan in 1905, and our friendship continued down through the years until it was very greatly strengthened when I came to Congress in 1937 and became a Member of the House Committee on the Judiciary.

Clarence was always very popular with his school and college mates, and was the center of all reunions. I had considerable contact with him when he was the corporation counsel of the city of Syracuse, and his fine application to his duty marked him as an outstanding lawyer and public servant. He became the ranking member of our committee and we looked forward to his chairmanship in the event his party came into the majority.

His character was of the loftiest, and with a high sense of love of home, country, and friends, I know of no man who was held in higher respect than he.

In my humble judgment our country never had a more loyal and conscientious public servant than our dear, departed Clarence Hancock, and I extend my deepest sympathy to his devoted widow and son.

The Effect of Inflation on Endowed Educational Institutions, Charitable Organizations, and Hospitals

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. REED of New York. Mr. Speaker, a cry is going up from our endowed institutions, especially from our universities and colleges, that inflation is reducing the purchasing power of the income from their endowments. I fear that the economic principles which some of the complaining institutions have been teaching during the past 14 years are coming home to roost.

I recall, vividly, an article entitled "Endowments in Jeopardy" which appeared in the Atlantic Monthly, December 1937, page 737, which reminds me that the March 1948 issue of the same outstanding magazine carries an article relating to the same subject by the distinguished president of Williams College, James Phinney Baxter.

When Germany started the printing presses to flood the nation with fiat money, the purchasing price of the income from endowments went down until even the endowments of the educational institutions almost vanished.

The deficit financing of the Government by the New Deal has had much the same effect in the United States. The proposed Marshall plan, if carried out as planned, will inflate prices and rapidly whittle away the endowments of our universities and colleges. Yet, my mail indicates that many educational leaders condemn those of us who resist waste, extravagance, and reckless spending, believing as some of us do that a solvent government is of more worth to the world than a weak, insolvent one.

Under unanimous consent I am inserting a survey made by eminent men showing the effects of inflation in Germany after World War I:

THE EFFECT OF INFLATION ON ENDOWED EDUCATIONAL INSTITUTIONS, CHARITABLE ORGANIZATIONS, AND HOSPITALS

THE VULNERABILITY OF ENDOWED INSTITUTIONS UNDER INFLATION

Endowed institutions of all kinds stand in a particularly vulnerable position with respect to inflation. Endowments given to institutions are granted by their donors either in the form of investments from which the institutions in question draw the income, or are turned over in the form of outright payments which the institutions themselves invest. (Sometimes it may be a combination of the two.) In the former case, business precaution has been responsible for the fact that such investments usually are in high-grade bonds of Government or corporations of a category termed "gilt edged," the yields from which may be expected to be steady over the years. If institutions are called upon to invest or reinvest money or securities given to them outright not only business precaution but law restricts their investments to securities having as small an element of speculation as possible, which again means in effect high-class securities bearing a fixed rate of interest. It should be further added that a large proportion of endowments are inviolable, meaning that the principal must be kept intact, leaving only the income for use by the recipient of the endowment.

Now, it is just this type of investment that is affected most disastrously by inflation. It pays by contract a fixed percent which remains unchanged even though the purchasing power of the sum so paid has fallen practically to nothing. And for this very reason the face value of the securities themselves falls precipitously and little if anything can be realized from their sale. This is in contradistinction to common stocks, which pay on earnings and hence whose yields and face value go up during an inflationary period though not nearly so much as the purchasing power of the currency unit declines.

DEPRECIATION OF THE ENDOWMENTS OF THE UNIVERSITY OF FRANKFURT

A striking effect of the German inflation on endowments of educational institutions may be noted in a table which lists the face value of the 38 inviolable endowments which constituted the main support of the University of Frankfurt, first in 1922 just before inflation became uncontrollable and then after revalorization. It should be noted that under the German revalorization law (February 14, 1924) the currency was stabilized on the approximate basis of 1,000,000,000,000 paper marks to 1 gold mark, and furthermore in this general revalorization law certain types of securities were decreed to be worth more than that at which they were currently quoted. Thus, Government and other high-grade bonds were revalorized at 2½ to 12½ percent of their face value (according to qualification), savings bank deposits at 10 percent, and mortgages at 25 percent. Under this dispensation it will be noted in the table (which on account of its length is appended hereto) that less than 15 percent of the face value of these endowments was recovered and that the one endowment (Jakob Schiff) which returned better than 50 percent was due to the fact that 57 percent was invested in American railroad bonds. It should be further noted that 11 of the endowments were revalorized at less than 10 percent and 3 of them at 2½ percent or less.

THE STROOF ENDOWMENT

Another example is worth citing at considerable length because it is not extreme but is typical of what happened to endowed institutions—educational, charitable, and medical—as a result of Germany's experiment with inflation. Its parallel will also be found in other European countries, the extent of the ensuing disaster being contingent on the degree and severity of the course of inflation in the individual countries concerned.

In 1921 there died in Germany one Dr. Stroof, who being a public-spirited man, in his will endowed the University of Frankfurt with the sum of nearly 8,000,000 marks for the purpose of fostering research. The only condition imposed was that certain employees of Dr. Stroof should be paid pensions out of this fund amounting to approximately 666 marks a year. The first installment to the university consisting of 1,000,000 marks

in inconvertible Reich Treasury notes was paid in January 1922. By that time the German inflation characterized by ever larger issues of currency irredeemable in gold was under way, and so the 1,000,000 marks in question was worth only 25,000 gold marks—or about $5,950 at the prewar rate of exchange. One month later, a second installment of 1,000,000 marks in treasury notes was paid, but by that time it was worth only 22,000 gold marks ($5,236). Again in March 1922, a third installment—this time of 1,250,000 marks—was transferred to the university, yet this larger sum was worth only 18,000 gold marks ($4,284). No payments were made for the next 13 months, but in April 1923 Prussian State bonds with a face value of 450,000 marks were turned over to the fund. By that time the uncontrollable phase of the German inflation had been reached and the entire sum was equivalent in value only to 86 gold marks ($20.46). In May 1923, the fund received 700,000 marks in treasury notes, but this amount—nearly twice as large as the sum paid 1 month earlier—was worth only 90 gold marks ($21.42), and in July an installment of 171,000 marks in treasury notes had a value of only 2.6 gold marks (about 62 cents). The final chapter was written when in December 1923, the last installment of 3,250,000 marks in treasury notes was paid. This installment, it will be noted, was about three times as large as any previously made and yet it was worth only thirty-eight one hundred millionths of a single gold mark, or such an infinitesimal fraction of 1 cent in American money as almost to defy computation.

Put into the following tabular form the figures become even more startling:

	Face value of installments	Gold value of installments	Approximate value in American money (prewar rate of exchange)
	Marks	*Marks*	
January 1922	1,000,000	25,000	$5,950
February 1922	1,000,000	22,000	5,236
March 1922	1,250,000	18,000	4,284
April 1923	450,000	86	20.46
May 1923	700,000	90	21.42
July 1923	171,000	2.6	0.618
December 1923	3,250,000	0.000000038	(?)
Total	7,821,000	65,178.6+	15,512.498+

It should, of course, be understood that whatever the value with relation to gold marks, the various installments had at the time they were paid into the fund, these steadily depreciated, and, in fact, they all reached the level of the value of the final installment of December 1923. In short, by December 1923 the gold value of the entire Stroof endowment shrank to such an infinitesimal fraction of a single gold mark that for all practical purposes it was completely wiped out.

An ironical aftermath may be found in the fact that the university was still bound to pay the small pensions of the Stroof employees and, in fact, after the revalorization of the mark, had to do so out of the small remnant of funds still left to the institution even though the Stroof endowment itself had been inflated out of existence.

THE CASE OF THE THERESIAN ACADEMY OF VIENNA

This institution, equivalent in standards to an American high school, was founded in 1778 by the Empress Maria Theresa and by 1914, and through funds added to its original endowment, had approximately 8,000,000 crowns (about $1,600,000). At the beginning of 1925 when the Austrian crown was finally stabilized after the inflation period on the basis of about 14,400 paper crowns to 1 gold crown, this endowment was discovered to have a value of just over $112 as compared with $1,600,000 in 1914. Under this severe loss the school was no longer able to care for needy but deserving students. It had to take with little discrimination only students who could pay their own way, and besides it had to curtail its plant and equipment in every possible manner even to the extent of renting unused rooms and turning the school stables into garages which were rented to outsiders.

THE THIERS FOUNDATION

While the course of inflation in France was not nearly as severe as in Germany or Austria, the franc being stabilized in 1925 at about one-fifth its prewar value, nevertheless it was sufficiently severe to cause tremendous losses particularly to those whose living was derived from fixed incomes. The case of the Thiers Foundation was a typical case in point. This institution was founded by Adolph Thiers, the first President of the French Republic, as an aid to students in obtaining the highest instruction in law and medicine and also to qualify them for doctors' degrees in literature and science. It received the income from a fixed capital fund invested in government bonds and in coal mine securities. The institution had already had its income severely curtailed during the war through the occupation of the French coal mine area by the German armies. But after the war the rising tide of inflation so depleted the purchasing power of its income that it became necessary to secure permission from the State to sell the jewels of Mme. Thiers which were conserved for the foundation in the Louvre museum. Even though this sale nearly doubled the foundation's capital, the purchasing power of the increased income was little more than one-seventh of the purchasing power of its original prewar income and left the institution close to the brink of insolvency.

CHARITABLE AND WELFARE INSTITUTIONS AND FOUNDATIONS

So far we have cited only examples relating to educational institutions. The consequences of inflation are equally disastrous upon charitable and welfare institutions of all kinds. For instance, the city of Frankfurt like nearly all German cities possesses numerous institutions of this character supported largely by trust funds (contributed by philanthropic citizens) which under the law have to be invested in mundelsicher securities, i. e., highest grade state, municipal and corporation bonds, paying fixed rates of interest. In 1914, foundations for the care of children and young people possessed assets of about 922,000 marks, and foundations for the poor possessed assets of approximately 5,372,000 marks. But when these assets were revalorized at the beginning of 1925, the assets of the former had shrunk to about 112,000 marks and the latter to 655,000 marks, these sums being in each case about 12 percent of the 1914 assets. The highest amount recovered in any of the individual foundations was 37 percent and in many cases the rate of recovery was 5 percent or less of the original amounts. Tables showing the details relating to these foundations are appended. Obviously the drastic curtailment of the income and assets of these foundations under inflation meant that the poor, the aged, and the destitute had to be denied the help they needed.

HOME FOR THE AGED AND INFIRM (FRANKFURT)

Nowhere are the disasters of inflation upon the poor and aged more strikingly brought out than in the case of the Home for Aged and Infirm in Frankfurt. Again it should be reiterated that this is only one typical case selected at random out of many.

This institution was founded in 1816 and was originally a workhouse, but later developed into a home into which aged men and women (to the number of 300) purchased a life residence out of their meager savings and, in addition any additional savings which they possessed were entrusted to the institution which paid them interest on it. These entrance fees and savings funds constituted the main portion of the working capital of the home, and consequently under inflation it found itself utterly unable to provide for its inmates or to pay the small amounts of interest due them from the savings which had been entrusted to it. Furthermore, as inflation progressively advanced, great pressure was brought upon the home to aid more and more people who themselves were rendered poverty stricken by the disastrous economic conditions which inflation was producing. Obviously the home had to refuse further aid, no matter how necessitous the circumstances.

An idea of the astronomical character of Germany's inflation may be visualized in the fact that the food bill for the home in the fiscal year 1923–24 reached a total of 23,293,366,276,337,266 paper marks (the item for black bread alone was 2,986,973,878,061,080 paper marks), while it cost 10,246,434,361,231,396 paper marks to supply heat for the establishment. The income from all investments during this year, reckoned in paper marks, covered less than 3 percent of the food bill alone. And whereas in 1914 the income of the home from its investments amounted to more than two-thirds of its total receipts, in 1923–24 it was less than one-seventieth of the total. In short, the home itself became dependent upon the city of Frankfurt for aid, and hence lost its character as a self-supporting institution, whose large and growing endowments had enabled it to meet an expanding need in the community.

WELFARE INSTITUTIONS IN AUSTRIA

Endowments of charitable and welfare institutions in Austria fared worse than those in Germany, because, even though in the former currency depreciation did not go so far as in the latter, Austria did not revalorize as did Germany. Without going into detail, a survey made in 1927 shows that only about 6 percent of the charitable institutions in Vienna in 1914 still remained, that their capital and revenues were only 1 percent of the 1914 total and that they were rendering assistance to only 2 percent of the people cared for in 1914.

THE SITUATION IN THE UNITED STATES

With the above examples in mind can it be doubted as to what would happen under inflation to endowed institutions in the United States? Whether they are educational, welfare, or charitable institutions the result would be utter disaster.

Consider first that over one-half of our higher education is being carried on by privately supported colleges. Consider also that the endowments of such institutions total over $1,500,000,000. Consider, finally, that endowments of this character are considered to be of such great social importance that in the words of E. W. Kemmerer: "We protect many of them by special laws which restrict the investment of trust funds to a limited and supposedly safe field of investments. In these restrictions, high-grade bonds and mortgages are favored, and common stocks are usually disfavored. This policy is enforced both by law and by traditional public opinion." (Endowments in Jeopardy, the Atlantic Monthly, December 1937—p. 737.)

For example, six of our best-known endowed educational institutions are Harvard, Yale, Princeton, Cornell, the University of Chicago, and the University of Pennsylvania. As of 1936 the total endowments of these

universities reached a total of $355,000,000. Of this total about $311,000,000 was invested in securities, and of this sum approximately $213,000,000, or nearly 69 percent, was invested in fixed income securities such as bonds and mortgages as against only $98,000,000 invested in equities consisting mostly of common stocks. This 69 percent is an average, be it said, for Princeton University has nearly 83 percent of its invested endowment in fixed securities and Harvard has over 72 percent of its endowment so invested.

While this example covers only educational institutions, the type of investment made by charitable institutions is of an exactly similar character and would be subject to the same disastrous consequences under inflation.

And once these endowments were impaired or destroyed, how would they ever be restored. To quote Professor Kemmerer again:

"In the face of our large and growing governmental control of business, in the face of increasing resort to highly progressive income, inheritance, and gift taxes on the part of both our National Government and the States, taxes whose combined rates in the higher brackets are already the highest of any advanced country in the world, and in the face of the commonly neglected fact that inflation continually pushes all taxable incomes into higher and higher brackets, although the real or purchasing power value of these incomes may be actually declining—in the face of such facts, who will restore the endowments of these educational institutions if they are greatly depreciated or destroyed by inflation?"

To sum up, then, the ultimate threat of inflation to endowed institutions is as expressed in the words of Professor Kemmerer:

"Excessively burdensome government debts are usually not paid by taxation. The political resistance to taxes adequate for the purpose becomes too strong. Such debt burdens are usually reduced to politically workable proportions by inflation. The burden is thereby shifted largely from vigorously protesting taxpayers who have votes by the millions to bondholders and other 'economic royalist' creditors whose numerical protest at the ballot box is weak. In this class belong our privately endowed colleges, universities, scientific research institutions, and hospitals. In America the greatest and most irreparable damage that unsound monetary policies and Government financing by inflation threaten is the undermining of these great public-welfare institutions."

The New Plan for European Recovery

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. GWINN of New York. Mr. Speaker, I am proposing a new plan for European recovery. The Marshall plan originated in Socialist Europe. It is admitted that the Europeans devised it so that the Socialist elements in our own State Department would continue to finance their Socialist cabinets abroad.

Without exception, American political dollars have helped to entrench the Socialist elements, and defeated our friends who fought for freedom against socialism.

Ever since VE-day they have deceived Americans into a kind of pathetic trust that our political dollars delivered to Marxist state Socialist planners would reestablish freedom, politically, socially, and economically. They also played upon our fear and sentimentalism, even our hatred of communism, as a means to peace, reconstruction, and freedom to the nations. We have acted up to now in ignorance of the facts and against all reason and logic. Our failure is as revealing as it is tragic.

Look at Soviet Poland where we handed Mr. Bierut and his camarilla $448,000,000 since VE-day, while he and his fellow Socialists delivered Poland to the Soviets. Look at Soviet Czechoslovakia, where Mr. Klement Gottwald received $257,000,000 before he crushed, only yesterday, the Czech nation under the hammer and the sickle. Today her Communists and Socialists have united to work for the same boss. Look at the Soviet Hungary of Mr. Rakosi and Soviet Albania. Above all, remember how we strengthened Tito, until he made his tyranny complete in Yugoslavia with the help of $303,000,000 in American goods and services.

This total of $1,053,000,000 speaks with a mighty voice of what mere dollars will do, to Europe and to us, if we permit this self-defeating and treacherous policy to continue. No billions of dollars can change the basic truth that a Socialist planned economy can only operate in an absolute police state. So far, without

exception, it has merged into communism without a fight.

Since that is the underlying drift in this twentieth century, we must tell both our own people and Europe that unless the creative and productive genius of free men and women is again released, there can be no economic recovery. A plan, therefore, that finances Socialist governments instead of free individuals in commerce and trade is no plan at all for Americans.

When I felt compelled to vote against the so-called interim aid to Europe in the special session, December 1947, I had earlier voted both for the British gift of $3,750,000,000 and for the gifts of $400,000,000 to Greece and Turkey. Our party voted for these immense gifts because it was sincerely hoped that these billions, together with all the other billions of dollars previously given, would provide the freedom-loving people of these nations with still another breathing spell. They needed it in order to recover their own freedom from the groups of political and economic tyranny found in power when they returned to their own homes after fighting tyranny abroad.

No such resurgence of freedom has taken place. On the contrary, Socialist cabinets are actually in control of every western European country except Holland, Belgium, Portugal, and Switzerland. The whole European economy is fast becoming that of a controlled statism, operated according to the false and pernicious bible of Karl Marx. What sense is there in making fine distinctions between their socialism and outright communism?

Take Great Britain, the land of Adam Smith, where a Marxist cabinet has led the nation ever further down the treacherous and liberty-killing road of not less but more nationalization. Winston Churchill has stated that the Socialist cabinet squandered $700,000,000 of the American loan in Egypt and India alone. Sir William Darling, of the British Parliament, has repeatedly pointed out that the money from America helped the British Socialist Government to inaugurate a 5-day week, higher wages, shorter hours, and a British brand of slow-down, feather-bedding, underproduction, price fixing, currency control, and inflation with general compulsory management of trade and commerce, including the land itself. In brief, free England is abjectly subject to a handful of planners in London.

The lamentable end result is an economic situation which the London Economist just recently called bankruptcy. Its editors explained that the Socialist planners had used the previous gifts of $4,750,000,000 from America to live and to spend on a scale out of accord with Britain's real economic position.

And what guaranty is there—

The Economist asked—

that the Marshall plan may not be used in the same way?

Mr. Speaker, the guaranty on the basis of experience is that it will be used the same way.

Instead of loaning, trading or giving as free American men and women to the free men and women of England to strengthen their individual freedom we weakened it and abandoned our own ideals in all our dealings with them.

Because our whole postwar policy for world recovery was built on the utterly false and self-defeating principle of supporting temporary socialist cabinets with billions of dollars, our assistance has failed miserably in arousing the freedom instinct in the peoples of Europe. Where are the free democracies of the west? Not England, not France, not Italy?

Witness the failure in France, a nation which did not, by comparison, suffer any extensive material destruction from World War II. One would think that the $2,260,000,000 which we Americans recklessly but hopefully sent to France, would have resulted in a great productive and economic renaissance in the French people. Instead, France is just gasping for another billion dollar transfusion from America. And then another, and yet another.

For more than three post-liberation years, the French cabinets fixed an artificial value on currency. Farmers could not produce food at the Government ceiling prices, nor would they accept the inflated francs in exchange because they could not get what they wanted and needed for their farms and families. So they simply quit shipping food to Paris and other cities. During 1946–47, the French farmers took more than a million acres out of wheat production. The cities starved because the socialist government deceived them into thinking they could work 5 days a week and slow down and yet be rich with Government price fixing and issuance of currency to pay higher wages. This man-made French starvation American taxpayers have been deceived into financing. This despite the fact that half of our own American people are already struggling with a family economy which has reached the breaking point and should not be forced to pay taxes for such outlandish purposes.

Yet M. Leon Blum and other notorious foes of economic freedom flew into Washington, D. C., to tell their dishonest sob stories of a bleeding France. France was not bleeding. She was simply mismanaged and corrupted by promises that the city people would not have to work hard any more and that purchasing power could be created by printing more money.

Look at Scandinavia, which we Americans some years back were told to regard as "the middle way." The idea was that the Scandinavian countries had proved, alone among all the nations, how it was possible to reap all the blessings of socialization without paying the price of economic tyranny. The heroic resistance in Denmark and Norway against nazism seemed to prove that these Scandinavians would never yield an inch of their freedom.

Now let us read a paragraph of the almost incredible law which the Norwegian labor cabinet pressed through the Norwegian Parliament with the help of the Communists.

The law reads:

The King or whomsoever he shall authorize shall make such regulations as are found to be necessary to regulate and control: (a) Prices, profits, and gains of all kinds; (b) production, distribution, and all other economic enterprise, for the purpose of counteracting harmful competitive activity, or other economic conditions which shall be held to be unreasonable or harmful to the public interest, or to advance a rational organization of the (national) economic life.

To the extent to which it is found necessary to further said aims, the King or whomsoever he shall authorize may inter alia also make regulations of the following kind:

(1) Forbid producers to curtail or stop production, distribution, or other economic activity.

(2) Decree that new plants must not be erected nor existing plants expanded without his approval, or that production, distribution, or other economic activity must be parceled out among the producers according to the directives hereunder, or that the production in any plant must be curtailed or stopped.

(3) Decree that producers produce certain articles or perform certain services at the prices stipulated and fulfill other conditions which are decreed. No order made hereunder shall vary the purposes for which any plant shall be organized.

This law in one of the stoutest and most highly regarded of the 16 nations is now typical of all of them with few exceptions. Their laws are as totalitarian in economics as any human logic can conceive and write.

Individual freedom is gone. Inventiveness, creativeness, imagination is dead. The State is all and over all. And certainly it would be foolish to expect that human nature would care to exert itself under such an economic slave system. The truth is that as long as the Marshall plan is going to operate on the basis of government-to-government control, you can write off European recovery as impossible and a bad dream. No man or woman will for long endure hard work and austere living just for the sake of keeping Marxist bureaucrats satisfied.

The new plan for recovery encourages and supports the elements in rebellion against statism, and not the elements of oppression inherent in the socialism most of the 16 countries now have.

Let me quote the recent words of Mr. Sigurd Hoel, until recently a leading Socialist intellectual of Scandinavia:

They are clamoring for the state. The state must take over. The state must take over everything. In the end, the state takes us over. And then I must say that I prefer to be exploited and suppressed by a person rather than by the state.

Such people who fight for freedom are our only friends. We should finance them because we can trust them.

Instead of that we have financed our actual and potential enemies throughout eastern Europe and now all our friends there are silenced.

If we continue to finance the same forces, our enemies of freedom in western Europe, we shall have not one friend left on the Continent. And we shall deserve it.

However, since the anti-Marxist freedom forces of Europe—farmers, business-trade and shipping people, builders, teachers, clergy, and professional people—today are close to or in some nations exceed 50 percent of the population, they will soon take the lead, if we do not defeat them. It is perfectly

superfluous to point out that it is the men and women of these creative groups that built European civilization into its former greatness. They can do it again. They are worth financing.

So if it is freedom and recovery we are after in western Europe, it is now clear that the Marshall plan of government-to-socialist-government controlled funds contradicts the very purpose we seek to accomplish. This House therefore must write a completely new bill, embodying the principle of individual economic responsibility, free individual self-assertion in things economic without the deadly encroachments of state planning. To do otherwise is to deny our own faith and abandon those in Europe capable of making a recovery.

The new plan invites the free movement of men and materials from us to the people of Europe as distinct from their temporary socialist overlords. We ask them to join with the free peoples of North and South America in a crusade for the rebirth of free economy on both sides of the Atlantic.

I emphasize the point about getting the South American nations to take an active part in this recovery crusade as full and equal partners with Europe and the United States.

It is imperative that such nations in South America which have essential contributions to make to the exports of food, fuel, and fertilizer to Europe, at long last, be invited to the expanded circle of the cooperating ERP countries. Political considerations demand such an arrangement. The economic reasons are equally obvious. Otherwise, we may soon see the Secretary of State appear on this Hill with a Marshall plan for the Western Hemisphere. And what insolence it would be to expect the other nations of this hemisphere to advance credit and adjust their prices for the benefit of a program in which they have no voice whatever.

Now turning to the new plan itself. It follows quite closely the suggestions of the 16 nations in their Paris meeting in the fall of 1947. A careful examination of the Paris report by the CEEC—State Department Document 2930, European Series No. 28—leads to the astonishing discovery that the 16 European nations did not come to us, asking us to foot the whole bill.

They offered to carry much of the financial burden themselves. They did not expect any American lend-lease.

On page 51 of the above-mentioned Paris report we read that the European nations proposed to meet part of the expenses by "the expenditures of other financial resources by the participating countries." Inasmuch as these countries have a total amount of gold and dollar assets of $13,312,000,000 as reported by the International Monetary Fund the 16 nations will be able to reduce requirements by $1,000,000,000 from the $6,800,000,000 total, originally proposed.

When the public was finally told that Switzerland has $2,620,000,000 in assets, Netherlands $1,481,000,000, Belgium $1-016,000,000, it seems apparent that $5,-800,000,000 of new financing is an ample over-all figure for the first 15 months.

Next, we find that the Europeans expect to finance certain of their ERP purchases "by the repatriation of capital after the restoration of internal financial stability"—ibid., page 54. Now, inasmuch as our own Treasury has informed us that it has found $750,000,000 of hoarded assets held by Europeans here, such assets are available to meet the different and respective countries' purchases within the ERP. To the $750,000,000, we can add a further $750,000,000 of hoarded assets, which can be found in Europe itself, once the vast amount of billions of hidden assets again come out of hiding.

Although the Paris report states that it does not propose to give solutions for the payment problem—ibid, page 50—it does makes the observation about the International Bank that "the bank's recent report shows the important part which it should be able to play"—page 54. The Paris meeting expected that $918,000,000 for equipment, other than agricultural and mining machinery, for 1948 might be financed by "loans from the International Bank or other credit operations." So the new plan looks to the World Bank to lend $800,000,000 for capital goods, the "private investment" which the Paris report hopes for—ibid, page 54—would certainly be forthcoming.

The European proposals for financing some of the recovery expenses by their own financial resources, by hoarded assets, by loans from the World Bank and other credit operations, including private investments, should all be written into the new bill. We simply take the 16 nations' own proposals.

When steps have been taken to invite the South and Central American export nations to partnership in ERP and assurance given them that their own needs of heavy equipment and plants will become an integral part of an over-all export program carried on by this country price adjustments and credits in Central and South America might well rise to a $500,000,000 total on the purchases by European nations of food, fertilizer and fuel.

A similar amount of $500,000,000 may be deductible for sinking prices in our own country in 1948–49 as compared with the prices of July 1, 1947, upon which the ERP figures were built. World conditions, market and production conditions, and the needs of our own people demand that our prices go down within the next half a year. If they go up, our own domestic economy will burst at the seams and the whole ERP may have to be called off.

The new plan provides that $1,500,-000,000 for American purchases of strategic materials required for our stockpile of which we are dangerously short, such as tin, chrome, manganese, nickel, copper, lead, zinc, bauxite, and so forth, be purchased so as to contribute to the recovery program. This sum can be made available by a readjustment in the armed forces budget and if passed, as it no doubt will be, requires no new appropriation.

Another $1,000,000,000 credit should be provided by the United States through the Export-Import Bank, so that the European nations could feel that the whole cooperative effort is on a mutually responsible basis. Above all, the ERP must on every turn and in every chapter, be written so as to make maximum use of direct trader-to-trader contact. Regular prewar trade channels must be given a maximum chance to operate. We do not want another UNRRA hierarchy with thousands and thousands of highly paid bureaucrats and experts, who excel in self-importance because they lack any true motivation of real service in the cause of free trade among free peoples.

Finally, $500,000,000 shall be set aside as a gift of the American people to relieve suffering and hunger wherever it may appear. This contribution shall be distributed through the regular established channels for the distribution and administration of charity. If required we propose the organization of World Relief, Inc., a private organization comparable to the Red Cross to which private gifts would be made and supplemented by Congress when required. The unadvertised, unheralded good that has come from person to person giving and that will continue to come from such giving where the spirit of the giver may go with the gift will do the good for the morale required above all else for this suffering world. A bill to carry out this plan will be offered presently.

It will be designed to furnish a living, tangible example of American faith in the workings of free men through the regular channels of trade, commerce and giving between the citizens of two hemispheres.

To summarize:

Total demand for European recovery for 15 months	$6,800,000,000
Deduct resources mentioned by the European countries in Paris report	1,000,000,000
Leaving	$5,800,000,000
Repatriation of capital hoarded by Europeans found by U. S. Treasury in United States of America	$750,000,000
Leaving	5,050,000,000
A further sum hoarded in Switzerland and other countries of Europe available when confidence is restored	750,000,000
Leaving	4,300,000,000
International Bank loan as expected by Paris report	800,000,000
Leaving	3,500,000,000
Western Hemisphere loans outside the United States of America	500,000,000
Leaving	3,000,000,000
United States of America purchase of strategic materials for defense (no new appropriation required)	1,500,000,000
Leaving	1,500,000,000

United States of America subscription to capital of Export-Import Bank	1,000,000,000
Leaving	500,000,000
Gift for relief of hunger through private channels	500,000,000
Leaving	0

Hon. Frank B. Keefe

EXTENSION OF REMARKS
OF
HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. JENNINGS. Mr. Speaker, our colleague, the Honorable FRANK B. KEEFE, from Wisconsin, during his almost 10 years as a Member of the House has achieved a national reputation.

His thorough knowledge of the fiscal affairs of the country, and his power in debate have made him widely sought as a speaker. He has championed Republicanism and Americanism in all parts of the country. The following editorial which I include as a part of these remarks is a fitting tribute to FRANK KEEFE:

[From the Daily Northwestern, Oshkosh, Wis., February 16, 1948]

TALK OF KEEFE FOR VICE PRESIDENT

At an overflow gathering of Republicans of the Sixth Congressional District, held Saturday evening at Fond du Lac, with a banquet at the Retlaw Hotel, the major speaker of the occasion, Senator HENRY C. DWORSHAK, of Idaho, paid high tribute to the record of FRANK B. KEEFE, of Oshkosh, Representative of the Sixth Congressional District, and sincerely and vigorously suggested that Mr. KEEFE would make an excellent Vice President of the United States.

In fact, he told interviewers that the Idaho delegation to the Republican National Convention, to be held next June at Philadelphia, intends to propose the name of the Oshkosh Member of Congress for that position. Mr. KEEFE recently delivered a speech in Idaho and made such a deep impression that the decision to place his name among the candidates for Vice President was the result.

The Idaho Senator said that, of course, Mr. KEEFE would be out of the running if a midwestener should be nominated for President by the GOP convention.

The Sixth District Congressman, who introduced Senator DWORSHAK in terms of high praise for his courageous record of opposition to the huge appropriations sought by the New Deal administrations, indicated surprise at the mention of his name for Vice Presidential place, but added that he had heard of talk in various parts of the country linking him with the Vice Presidential candidacy and expressed appreciation for that consideration, remarking that stranger things than that have happened.

Senator DWORSHAK and Congressman KEEFE became Members of the Seventy-sixth Congress in the same year, 1939, and the Oshkosh man long has been a hard-working Member of the House Appropriations Committee, endeavoring to hold down administration appropriations to essentials and force the practice of economy in Government.

In advancing the idea of Mr. KEEFE for Vice President on the GOP national ticket, the Idaho Senator declared he knew of no one better qualified for the Vice Presidency, or even the Presidency, and that the Oshkosh Representative has been a fearless crusader for honest government and the American way of life.

He said further that it has been hard to accomplish anything against New Deal opposition in the hectic New Deal days, that most of the difficult work of reducing appropriations and bringing about economy in the Federal Government is done in committee rooms and it is there that Mr. KEEFE has been a tower of strength.

In introducing the Idaho Senator, Representative KEEFE stated his conviction that the Republican Party is the only one that can solve the problems ahead. He said he liked his job in Congress because of the work there is to do.

The suggestion of Mr. KEEFE as a Vice Presidential candidate brought expressions of approval on the part of many of the Republicans at the Lincoln Day dinner and produced a greater realization than ever that the Oshkosh man occupies a prominent place at Washington as a veteran national legislator and is widely esteemed for the services he has performed both on a district and on a national basis.

In his address Senator DWORSHAK charged the New Deal administration of national affairs with being inconsistent and illogical as to foreign policies, and the result has been a serious delay in the establishment of peace. It was his assertion that the claim that American foreign policy is bipartisan is an error.

"In some instances," he said "Congress has been permitted to give its approval to prearranged plans, but the lack of information as to details of the secret agreements negotiated at Tehran, Yalta, and Potsdam has placed full responsibility for failure of foreign policy squarely upon the New Dealers."

One of the features of the dinner meeting, in which over 600 were served and the overflow had to be accommodated in dining rooms other than the main one, was the opportunity given supporters of several rival candidates for the GOP nomination for President to be heard in boosting their favorites.

William J. Campbell, of Oshkosh, who is a candidate for delegate at large at the State Presidential preference primary to be held April 6, spoke for Gen. Douglas MacArthur for President and urged a delegation pledged to him as Wisconsin's favorite son. He said MacArthur would not get this country into war and that no military man chosen President has ever done that.

Lester Bradshaw, of Milwaukee, put in some good words for Gov. Thomas E. Dewey, of New York, emphasizing the New York Governor's opposition to Communists.

William G. Van Pelt, of Fond du Lac, paid compliments to Harold Stassen, former Governor of Minnesota. He said Stassen makes his own decisions and that these decisions have proved right. The people, he declared, know exactly where he stands on the issues and as Governor he made a record for cutting the Minnesota State debt and the property taxes. He is also for fewer Federal employees.

Brooklyn's Congressional Delegation and Palestine

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. MULTER. Mr. Speaker, the Brooklyn congressional delegation has long been aware of the desperate situation in Palestine and, while doing everything possible to improve conditions there, they very regretfully have watched them get worse.

We were pleased to have our efforts supported by Borough President John Cashmore, who, among other things, took the time to make a special trip to Washington to visit the President and to urge upon him the implementation of the United Nations decision, and the modification of the embargo on arms to the Jewish militia in Palestine. Mayor William O'Dwyer also has vigorously urged the same action.

Last week our efforts were fortified by the issuance of a statement by Paul E. Fitzpatrick, chairman of the Democratic State Committee, in which he urged the New York State congressional delegation to actively support a program to sustain and make effective the United Nations decision to set up a Jewish state in Palestine, and to modify the arms embargo. He also urged that the British Government be informed that our Government intended to vigorously urge and support partition, and the sending by the United Nations of a voluntary police force to save the peace.

Yesterday I was very happy to be able to accompany the Brooklyn congressional delegation to the State Department with a delegation led by Mr. Nathan Dinkes, president of the Brooklyn division of the American Jewish Congress, and Mrs. Henry A. Baron, president of the Women's Division of the same organization.

Our arguments were bolstered by a petition which was submitted to the State Department for transmission to the President, which contained upwards of 165,000 signatures of American citizens residing in Brooklyn. Christians and Jews signed the petition because they realize that this is no longer a Jewish question but rather one of worldwide peace.

A Time for Brave and Honorable Men

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Syracuse Herald-Journal of Friday, February 20, 1948:

A TIME FOR BRAVE AND HONORABLE MEN

Delivering the first of the Colgate University 1948 series of lectures on human relations, former Postmaster General James A. Farley staunchly defended the American two-party system.

With obvious reference to current political fireworks set off by Henry Wallace, he argued that a third party "can only promote minority rule and tend to leave the country the prey of demagogues and malcontents."

He has even less use for the one-party system as exemplified in Soviet Russia. A political party, he said, "should be the servant of its members, not the master * * * it should be open to all who wish to join it, not an exclusive society of assassins."

All this is sound common sense, in the best American tradition. Jim Farley has always been a very clean, plain spoken person and he was in good form at Hamilton.

It will be recalled that he broke with the late President Roosevelt and left Washington because he did not believe in violating the American two-term tradition and hence could not go along with the third-term movement. But he didn't organize a third party.

In his Colgate address, he remarked that politics is no place for a timid man or for the corrupt or dishonest. Every thoughtful American will say amen to that. In these parlous times, democratic America must have bold, brave, and honorable men, and many of them, if our free way of life is to survive.

Minnesota Towns Hit by Oil Shortage

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the St. Paul Dispatch:

MINNESOTA TOWNS HIT BY OIL SHORTAGE

All Minnesota communities with fuel-oil shortages have now been sent supplies except one, and that will have oil by tonight.

That report came from the office of James W. Clark, State fuel oil conservator, today when it was announced that continued warm weather had further relieved the shortage.

Clark said 231 towns in the State have now called for and received oil, all except Maple Plain, which will get supplies late today. The 231 towns in this State were compared with 108 in Wisconsin which had fuel-oil shortages. Clark said the figures prove that it was imperative for the State government to step in and try to organize relief.

Present supplies of oil-shortage towns do not mean that the critical situation is over, according to Clark. He said the towns now have oil but only the weather will decide how long they will last.

Joseph N. McIntyre, city conservator, said calls for fuel oil at his office have now fallen to 40 or 50 per day.

McIntyre said he plans to attend a meeting scheduled by the Northwest Petroleum Association at noon Friday in the Radisson Hotel, Minneapolis, at which plans will be made to inaugurate the new reconversion plan there.

Minneapolis residents who can't get fuel oil will be allotted 50 gallons. In return they must sign an affidavit that they will reconvert to other fuels. This plan has not been adopted in St. Paul. The city conservator said he plans to attend the meeting to learn what the oil companies will do for St. Paul.

International Falls closed down its emergency fuel oil office today and advised consumers to get fuel through their dealer.

At 10 a. m. the Minnesota Highway Department received the following reports from district stations:

Willmar: 1 below; winds 58 miles an hour; visibility, zero.

Crookston: 4 below; winds 45 miles an hour; 1 inch of new snow; no visibility.

Brainerd: 4 below; winds 45 miles an hour; 1 inch of new snow; visibility poor.

Morris: 8 below; winds 48 miles an hour; no visibility.

Duluth: 4 below; winds 35 miles an hour; sleet; highways icy.

Thief River Falls: 9 below; visibility zero; all schools closed.

In North Dakota the State highway department warned motorists not to attempt to travel in the eastern half of the State where many highways were reported blocked.

The weather bureau said the cold wave is headed eastward across the country and probably will extend to the Atlantic Coast by Saturday. It is expected to cover States as far south as Oklahoma and Arkansas.

The observers said the cold air mass is moving so rapidly that it may last only a few days, although present indications are that it will hang over the North Central States through Saturday, with a slight rise in temperature Sunday and Monday.

Louisiana Investigation, House Resolution 462

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 1, 1948

Mr. BROOKS. Mr. Speaker, this Congess appropriated the sum of $188,000,000 last year for the purpose of investigating income-tax cases. It appropriated an unusually large amount in order that the Treasury Department might have sufficient money, without stinting, for this purpose. The representation was made that if ample money was given additional men would be trained and put to work on this type of investigation. I am informed that men have been trained and are now at work in all parts of this country. They have this job to do and I think generally they are active and doing a creditable work.

This resolution would change this. It would bring to an investigating committee of the House this type of problem. It would create the precedent of passing separate resolutions to investigate individual cases. It would substitute untrained investigators for trained ones. It would place upon the already burdened shoulders of this Congress additional problems with the consequent additional harassment and irritations. It would, in my opinion, substitute politics for equity and justice. It is therefore a bad policy—and unfortunate precedent.

Someone may say that perhaps the Justice Department should be investigated, or it may be the Treasury Department is falling down on the job. Should it be felt that this is the case, I submit that H. Res. 462 is not the way to handle the job. A general investigation by the committee of the Department would not begin with the investigation of one tax return. On the contrary, it should begin with an investigation of the over-all procedure used by the Department, its efficiency, and its methods. It should, if this be the intent, check the qualifications of the personnel together with its background and its training. Nothing of this character is intended by the instant resolution.

This resolution came into being as a result of a great political campaign in Louisiana. Out of the heat of the campaign charges developed and they were brought to the floor of this House. They were picked up by the Appropriations Committee Treasury Department Subcommittee, and made the subject I am told of an hour-and-a-half hearing. The gentleman from Illinois [Mr. DIRKSEN] interrogated Commissioner Schoeneman, chief of the Internal Revenue Bureau, for a long period of time. This testimony was taken in secret session; and although many requests have been made to inspect it, no one save the committee to this hour have been permitted to read those remarks taken down within the sanctum of the Subcommittee on Treasury. Upon the basis apparently of this secret record, the gentleman from Illinois [Mr. DIRKSEN] makes speeches on this floor and statements referring to the secret testimony. This shows the unfairness of this type of procedure.

The normal way for handling income-tax violations is through the Treasury Department. In my judgment, we should not try to substitute for the work of the Treasury an investigating committee of the House of Representatives.

Endorsement by Episcopal Church of Civil Rights Report

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. MULTER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following letter which I have received from Mr. Allen M. Taylor, chairman, legislative committee, Department of Christian Social Relations, Diocese of Long Island, Brooklyn, N. Y.:

DEPARTMENT OF CHRISTIAN
SOCIAL RELATIONS,
DIOCESE OF LONG ISLAND,
Brooklyn, N. Y.

The Honorable ABRAHAM J. MULTER,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: At a recent meeting of this department, which represents the Episcopal Church of Long Island in these matters, it was decided to inform you of our endorsement of certain legislation currently pending before Congress and urge you to give it your support.

Full endorsement was given to the Report of the President's Committee on Civil Rights, particularly the sections on antilynching, antipoll tax, a permanent Federal employment practices act; especially it is recommended that serious consideration be given to implementing section I, subsection 3, the Right to Freedom of Conscience and Expression.

Approval of the President's 10 points on inflation was given, especially the controls of consumer credit, commodity exchanges, rents, rationing, price and wage ceilings; a stand also was taken against reduction of income taxes.

It was recommended that the European recovery program be implemented promptly, in sufficient quantity, and regardless of the political set-up of the recipients.

Your support, also, is urged for the bill H. R. 2910, "to authorize the United States during an emergency period to undertake its fair share in the resettlement."

Also the bill H. R. 4418, "to provide for the naturalization of persons legally in the United States."

Our endorsement of the above is based, we believe, on the Christian principles of the worth of the individual, the security and welfare of all the people, and the peace of the world. As Christians, therefore, as well as Americans, we urge you, as our elected representative, to work for the passage of this legislation.

Respectfully,

ALLEN M. TAYLOR,
Chairman, Legislative Committee.

Palestine

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement issued by Hon. Paul E. Fitzpatrick, chairman of the Democratic State Committee, in connection with a four-point program submitted to the New York State congressional delegation with reference to the lifting of the United States embargo against the shipment of arms to Jews in Palestine:

Support of the United Nations' partition of the Holy Land by lifting the United States embargo against the shipment of arms to Jews in Palestine is essential to world peace, Paul E. Fitzpatrick, chairman of the Democratic State Committee, declared today in a four-point program submitted to the New York State congressional delegation.

Such positive action, Mr. Fitzpatrick pointed out, would go far toward backing up President Truman's declaration February 12 that the United States is supporting the UN settlement, and would reinforce Secretary George C. Marshall's statement the day before that no change in our policy of support is contemplated.

Emphasizing that American troops are neither necessary nor desired, the New York State chairman strongly urged that the United States also support UN proposals for a voluntary police force, and clearly warn Great Britain against any "scuttling" of the partition.

His recommendations supplemented a proposed joint resolution introduced in the New York State Legislature Tuesday by the Democratic Party, calling on Congress to lift the arms embargo.

Mr. Fitzpatrick's complete statement follows:

"The New York State Democratic Committee is heartily in accord with President Truman's statement that the United States support the United Nations' settlement of the Palestine issue. We welcome the assurance from Secretary of State George C. Marshall that this Government contemplates no change in support of that decision.

"We are convinced that such support is essential to the future if not the very life of the United Nations as an instrument for the peaceful settlement of disputes. We also believe, however, that such support must be positive and real for those defending the United Nations' decision against aggressors who would ignore that decision and nullify it.

"We therefore respectfully but strongly recommend that the members of the New York State delegation in Congress actively support a program that would—

"1. Bolster the United Nations in this, its first important decision, lest its effectiveness for peace be destroyed.

"2. Lift the United States arms embargo so that Jews can defend the decisions of the United Nations within Palestine against Arab aggression.

"3. Inform the British Government clearly that this Government will not tolerate scuttling of the partition.

"4. Support proposals by the UN Palestine Commission made to the Security Council that a voluntary police force be sent into Palestine. It is not necessary to send United States forces, for Palestine does not want American troops.

"The New York State Democratic Committee sincerely believes that the above program is the only real way to back up President Truman and reinforce Secretary Marshall, in their aim to safeguard the United Nations and world peace."

Was Adam Irish?

EXTENSION OF REMARKS
OF
HON. THOMAS E. MORGAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. MORGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include one of a series of statements prepared for American Brotherhood Week by Richard Ginder. The statements were released under the sponsorship of the National Conference of Christians and Jews.

It is my belief that the spirit of brotherhood can only become a reality through the cooperation of all mankind.

WAS ADAM IRISH?

(By Richard Ginder)

You remember Adam, don't you? Eve's husband. The first of all men to walk the earth.

Was he Irish or Polish?—English or German?—black or white?

It's an interesting question, isn't it?

To tell the truth, the Bible doesn't say anything about his race or his nationality. Adam was a man. It makes that point very clear. He had a body and a soul especially created by the good God. And it was his soul that gave him his immense dignity. It made him a human being. It was the seat of his power to think and control his actions, to recall the past and imagine the future.

He gave the animals their names and ruled over them. Because of his human powers, he would always be able to throw a saddle over a horse, confident that the roles would never be reversed—that no horse would be able to get a saddle across his back.

Was he Protestant, Catholic, or Jewish? Adam wasn't any of these. The Jews didn't come into existence as a religious people until many thousands of years after Adam; and Christianity didn't develop until thousands of years after the days of Abraham. Not that Adam didn't worship God. No, indeed. He was a deeply religious man. He accepted God's revelation with simplicity, and although he sinned mightily against his Lord, there is a solid opinion that he repented that sin and that he is happy with God in heaven right now.

But why the talk about Adam? Because it is through him that we are literally made cousins. We are all kin one to another. We all have the same grandparents—maybe a great, great, great to the nth degree, but still, we're all members of the same human family.

Some of our cousins are Irish and some are Swedes; some are Syrian; some are Japanese. What of it? We'll never know, in this life, the color of Adam's complexion. The Bible is wisely silent on this point.

As for our religion, over here in America, at least, we're all divided up among Catholics, Protestants, and Jews. Whatever our creed, each of us is sincerely convinced that ours is the belief God wants us to follow. And we know that conscience, if we follow it, is going to lead us straight to God our Heavenly Father.

These considerations are presented in view of American Brotherhood Week extending from February 22 to 29. It's a time for renewing our convictions on the very real brotherhood of man through the blood of Adam and Eve, under the spiritual parenthood of the Almighty God in heaven.

Truth of National Service Life Insurance Surplus Should Be Told

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. SHAFER. Mr. Speaker, the National Underwriters, in its issue of February 20, carries an editorial which in substance states that President Harry S. Truman estimates the surplus of national service life insurance will reach $7,300,000,000 by June 30, 1949. I figured you and the public might be interested to know how this is being accomplished.

Bear in mind that the NSLI was organized to pay death claims resulting from war service. It was only these claims that the private insurance companies could not afford to pay. NSLI was given a "blank check" on the Federal Treasury for the purpose of keeping the company solvent. As far as life insurance agents and the public were concerned, that was all.

Now, it is revealed that the total claims attributable to war were not paid from this fund, but from the Federal Treasury in whole. Only deaths coverable by the private life insurance companies were charged to NSLI. This resulted in about $3,000,000,000 expense, so I am informed, charged to the Federal Treasury, which should have been charged to the NSLI fund.

In fairness to the taxpaying public and to the insurance fraternity, I would like to see that the Federal Treasury is reimbursed for the fake robbery that has occurred before NSLI is permitted to declare a surplus of any kind and distribute a dividend.

The life insurance men of the United States were the main supporters and backers of NSLI on the principles of its organization. The present accumulation of dividends and the tremendous amount

of publicity on this subject make unrealistic and unfair results as compared to the present accomplishments of life insurance companies. The public has been led to believe that insurance sold by private companies could be much cheaper than it really is, if the companies were willing to forego profits. And this publicity comes from Government sources at the very time the private companies still do most of the contact work in connection with NSLI.

Mr. Speaker, the insurance men of this country—the companies, the agents, and the men who work on debits and earn their living by selling insurance—deserve better than they have been getting from Uncle Sam on the NSLI deal. The people ought to know the truth about how certain agencies have used double bookkeeping to make the public think that something is true that is not true at all. Congress ought to get to the bottom of this insurance mix-up and see to it that the people get the whole truth and nothing but the truth.

European Recovery Plan

EXTENSION OF REMARKS
OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. HOLIFIELD. Mr. Speaker, the European recovery plan, commonly known as the Marshall plan, will be considered soon by Congress. Senate bill 2202 has been reported from the Committee on Foreign Affairs of the Senate. Under unanimous consent, I include in the RECORD an informal summary analysis of this bill. It was prepared by the Committee for the Marshall Plan to Aid European Recovery. This committee is composed of a broad, representative cross section of prominent Americans. The Honorable Henry L. Stimson, former Secretary of War, is the national chairman.

SUMMARY ANALYSIS OF S. 2202, THE VANDENBERG-CONNALLY BILL

FEBRUARY 25, 1948.

1. ADMINISTRATION

The bill establishes an Economic Cooperation Administration headed by an Administrator of Cabinet rank who is in charge of the program. In Europe there is to be a special ECA mission in each country, reporting to the Administrator. The head of each such mission will rank immediately after our Ambassador or Minister, and will assure performance of ECA operations.

The Administrator and the Secretary of State are required to keep each other informed of current and prospective actions of mutual interest, both in the United States and abroad. Any disagreements that cannot be settled between them will be referred to the President for decision.

The bill also establishes a special representative with the rank of Ambassador to act as our representative at the continuing organization to be established by the participating countries. He may also be designated United States representative on the Economic Commission for Europe. He is to work in cooperation with the chiefs of the ECA missions.

The Administrator is responsible for determining whether aid shall be made available on a cash, credit, or grant basis, or in return for materials for stockpiling. In making these determinations, he is to act in consultation with the National Advisory Council, of which he is to be a member. The determinations are to be based on the character and purpose of the assistance, and on ability to pay. The administration of credits decided on by the Administrator is to be handled by the Export-Import Bank with funds allocated for the purpose by the Administrator.

The Secretary of State, after consultation with the Administrator, is responsible for negotiating the agreements provided for in the bill.

The bill provides for a bipartisan Public Advisory Board to advise the Administrator and also for a Joint Congressional Committee to make a continuous review of programs of United States economic assistance to foreign countries.

2. SCOPE, PERIOD, FINANCING

Countries eligible to participate include the 16 nations (with their dependent areas) which signed the Paris report plus any other European country (including the occupation zones and Trieste) that adheres to the joint recovery program.

The bill authorizes the continuance of the program to June 30, 1952. It authorizes an appropriation of $5,300,000,000 for the first year after enactment. It likewise authorizes an advance of $1,000,000,000 from the RFC to be repaid from appropriations.

Three billion dollars of the first appropriation are to be charged against the expenditures of the fiscal year 1948 even though expended during the fiscal year 1949.

3. COMMODITIES AND PROCUREMENT

The bill authorizes the Administrator to make available any commodity or service (except merchant vessels: see below) that is needed for the program.

The Administrator may furnish commodities procured by the United States Government or may make funds available to the participating countries or their agents to be used in making purchases from private suppliers, under approved supply programs.

Commodities or services may be procured either in the United States or elsewhere.

4. LOCAL CURRENCY

Under the bill the participating country will put into a special account the local currency equivalent of goods and services made available as a grant. Each agreement with a participating country must provide that the country will use these funds only in ways agreed to by the country and the Administrator. The disposition of the balance remaining on June 30, 1952, must be approved by Congress.

5. COOPERATION WITH UN AND OTHER INTERNATIONAL AGENCIES

In addition to the duties of the special representative (see above), the bill authorizes the Administrator, in the President's discretion, to perform his functions or any part of them "by acting in cooperation with the United Nations or with other international agencies." The President is also authorized to use the services and facilities of UN or its affiliated agencies, and to pay for such services from ECA funds. The President is to transmit copies of his reports to Congress to the Secretary General of UN and agreements are to be registered with UN as required by the charter.

6. BILATERAL AND MULTILATERAL AGREEMENTS

Each participating country must agree to promote industrial and agricultural production, to establish sound currency and a valid rate of exchange, to cooperate in stimulating international trade, to make efficient use of all available resources, including assets of its nationals in the United States, to facilitate transfer of materials for stock-piling, to set up special local currency accounts, to publish reports on operations, and to furnish information.

7. PROTECTION OF THE DOMESTIC ECONOMY

In providing for procurement of commodities in the United States, the Administrator is to minimize the drain on United States resources and the impact on the domestic economy, and must avoid impairing the fulfillment of the vital needs of the people of the United States.

To the maximum practicable extent, petroleum is to be procured outside the United States, and the installation of petroleum-consuming equipment is to be discouraged, where alternative practices are feasible.

When long-supply United States agricultural commodities are being procured for transfer by grant, proportionate quantities of the various types of such commodities are to be procured, where practicable.

8. MISCELLANEOUS PROVISIONS

A. Strategic materials

The bill provides that the agreements with recipient countries should include the supplying of raw materials for stock piling by the United States, under reasonable agreed conditions. It also provides for the use of funds to enlarge productive facilities for such raw materials in the recipient countries for such purpose. It also provides that such materials may be applied in payment for aid.

B. Joint continuing organization

The Administrator is to encourage the joint continuing organization of the participating countries to establish a follow-up system to insure that each country is making efficient use of its resources.

C. Guaranty of private investments

The bill provides that up to 5 percent of the total funds appropriated may be used to guarantee the exchange convertibility of funds realized from investments made by United States investors in projects approved by the participating country and by the Administrator. The guaranty is limited to the amount of the investment and applies only to currency conversion, not to business losses.

D. Ships

The bill permits the Administrator, with the approval of the President, to put into operating condition not more than 300 surplus dry-cargo vessels, and to charter these ships to participating countries.

E. Termination of assistance

Assistance will be terminated if a country does not abide by its agreement (and if no other remedial action is feasible) or if, because of changed conditions, assistance is no longer consistent with the national interest of the United States.

NOTE

The Export-Import Bank is a United States Government corporation established "to aid in the financing and to facilitate exports and imports and the exchange of commodities between the United States * * * and any foreign country or the agencies or nationals thereof."

Its loans are supposed to offer reasonable assurance of repayment, and are repayable in dollars, with interest.

The National Advisory Council on International Monetary and Financial Problems was established by the Bretton Woods law. Its members include the Secretary of the Treasury (Chairman), Secretary of State, Secretary of Commerce, Chairman of the Board of the Export-Import Bank, Chairman of the Board of Governors of the Federal Reserve System. The function of the NAC is to coordinate all our foreign fiscal policies. The United States executive directors of the International Bank and the International Monetary Fund attend all meetings of the NAC.

The Housing Problem

EXTENSION OF REMARKS
OF

HON. MARGARET CHASE SMITH

OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mrs. SMITH of Maine. Mr. Speaker, housing for veterans, housing for war workers who are returning to their homes, housing for couples who have been living with their in-laws continue to be problems unsolved.

As a member of the Naval Affairs Congested Area Committee, I saw many war-housing projects developed and knew considerable about housing problems, so while there is a serious shortage of housing, I have been watching the disposal of some of these war-housing projects.

I visited Redbank Village when in Portland and talked with several members of the Redbank tenants' council so that I could get first-hand their reasons for wanting the sale of these houses postponed.

The Lanham Act was a wartime measure. It authorized housing and other projects that would help municipalities carry the burden arising from war production. This act calls for the disposal of temporary housing, but Redbank Village is of permanent construction and the houses are in excellent condition, so I asked the Federal Works Agency under what authority these are to be sold, and request that the reply of the Administrator of the Housing and Home Finance Agency be inserted herewith.

Following Mr. Foley's letter is one received from Rev. Charles W. Crooker, chairman of the disposition committee, which is confirmation of my discussion with him. I believe this will be helpful to others interested in the proposed disposition of public war housing.

HOUSING AND HOME FINANCE AGENCY,
Washington, D. C., January 29, 1948.

Hon. MARGARET CHASE SMITH,
House of Representatives,
Washington, D. C.

DEAR MRS. SMITH: I have your letter of January 20 requesting information as to the jurisdiction of the Redbank Village housing project in South Portland, Maine, in consideration of prospective disposition of the project.

Redbank Village was built as a permanent war housing project under the provisions of the Lanham Act, which covers both temporary and permanent war housing, and it is under the jurisdiction of this agency. I believe from your inquiry that you are particularly interested in the policy and procedure in effect in disposing of the permanent war housing projects, and I would like to take this opportunity to outline for you the circumstances upon which our policy for moving ahead with the sale of these projects is based.

Considerable attention was given, during the first session of the Congress last year, to the disposition of war housing. Hearings were held before both the House and Senate Banking and Currency Committees. The House of Representatives passed H. R. 3492, a bill which would have made it mandatory to sell all the projects within a very short period of time, to give an absolute first preference to veterans in the disposition of the housing, to subdivide large projects into the smallest feasible units of sale, and to require that all sales be for cash. As a result of these hearings and of the passage by the House of H. R. 3492, it was our conclusion that our policies should conform with the wishes of Congress as expressed in these hearings and by the passage of the bill referred to.

While the Lanham Act, which is the basic legislation under which this housing was built, does not require disposition of the permanent housing within a given time limit, it does state in section 4 that it is the policy of the act that housing provided under it may be disposed of as expeditiously as possible. Subsequent amendments to this basic legislation as well as discussions with the congressional committees seem to indicate clearly that we should dispose of this housing just as rapidly as the resources and staff at our disposal will permit. Our revised policies are set forth in Public Regulations No. 1, copy of which is enclosed for your information.

We are attempting to proceed with the present policy of sales in as orderly a manner as possible and with the least disruption to present occupants. Because of wartime restrictions that were in effect at the time this housing was built, problems will arise in connection with its sale for private residential purposes which will delay disposition of many projects for varying periods of time. It is important, however, that we move ahead with sale of projects which do reach the stage where offerings can be made if we are to succeed in meeting a schedule of final disposition within a reasonable period of time.

The Redbank Village project is expected to reach the stage where sales offer may be made by late spring or early summer of this year. Before such offer is made, however, full opportunity will be afforded the community for discussions locally with public housing administration officials regarding the plans or problems affecting the sale, as required by Public Regulation No. 1. We have already been in touch with the South Portland Housing Authority in connection with the problems involved in the disposition of the Redbank Village project. Enclosed is a copy of our letter of January 2 to Mr. Frank Preti, chairman of the South Portland Housing Authority, on this matter. You will note that we have taken steps to assure full and proper consultation with the city government and the South Portland Housing Authority toward working out a plan of disposition for the Redbank Village project which will be in the best interests of all concerned.

Sincerely yours,

RAYMOND M. FOLEY,
Administrator.

SOUTH PORTLAND, MAINE,
January 27, 1948.

Hon. MARGARET CHASE SMITH,
House Office Building, Washington, D. C.

DEAR MRS. SMITH: At your request, the disposition committee of the Redbank Tenants' Council has asked me to send you the following facts which we hope will be useful to you.

1. Over-all housing picture in Portland area:

Among the 4 Government housing projects in the Portland area, 420 families moved out during the year 1947. Out of that number, only 67 moved because they had purchased homes of their own. I happen to know personally of several families who have bought well outside the city limits. One hundred and ninety-five of the 420 moved out because they were unable to pay their rent, were evicted, or had a change in employment which caused them to move.

Among the 759 applicants for admission to these projects during 1947, 390 gave as their reason for applying that they had been living with another family, were in overcrowded quarters, or were living in substandard housing; 129 of the 759 applicants had been evicted from their former residence because it had been sold to someone else. Since no one but veterans can be admitted to these projects, it is safe to assume that most of these applicants had first choice in buying the homes from which they were evicted, but were unable to make the purchase.

In Redbank, of the 500 resident families, 64 have no children at all, 188 have 1 child, 130 have 2 children, 56 families have 3 children, 41 families have 4 children. The other 21 families have 5, 6, or 7 children. To take this out of the realm of statistics, it is certain that by next year the number of families with 2 or less children will be substantially increased. In short, the overwhelming proportion of residents in Redbank are young veterans who are just starting their families. If they should be forced to move during the present shortage of housing, they would have extreme difficulty in finding a decent place in which to bring up their families.

Finally, a reasonable estimate of the average income of Redbank families is $2,000. I hope these figures give a fairly clear idea that the average veteran is not in a position to buy a home at the present time. I have little doubt but what most of the houses in Redbank could be purchased within a short time after being put up for sale. What disturbs me is that only the more fortunate financially would be able to purchase, while the average as represented by most of the present population would be left to scramble for what was left over. As a Christian minister, I am violently opposed to the attitude, "Let the common people take what's left."

2. The financial risk involved:

Although we have no figures to prove it, I think it is obvious that a large proportion of these young families are not settled or secure enough to be asked to take the risk of purchasing a home. If Redbank is offered for sale while the total housing picture is still chaotic, many of these families will buy in desperation and thereby jeopardize their financial future. In addition, several leading bankers have announced privately that the banks in this area have almost reached their limit in the amount of money they are able to loan veterans for the purchase of homes.

3. Constructive alternatives to immediate sales:

Redbank was designed to be and ought to be a pioneer type of community. It is laid out as a unit, with the streets running in more or less concentric circles around the community building, playground, and school as the focus. It has had since the early shipyard days an active and vigorous Tenants' Council, which supervises the use of the community building, sponsors recreational and cultural activities, and acts as representative for the tenants in all affairs which concern them. It is democracy at its best. In a community which has had to face the problem of a gigantic turnover of population, the tenants' council has kept Redbank from becoming just a place where you hang your hat and has helped maintain a real unity of spirit. Redbank is also a place where, by necessity, the neighbors must live in very close contact with one another. Every house contains two families, with the exception of the barracks, which contain four. If this village were sold piecemeal, the residents, instead of focussing their attention on those things which are for the welfare of the whole community, would be preoccupied in their own private interests. Finally, these houses are best adapted to those families in the relatively low income group. Yet it is just these people who will be least able to buy.

For a long time I have been interested in the idea of the residents of Redbank organizing into a mutual ownership corporation. As you perhaps know, this is a nonprofit or-

ganization in which the residents buy the whole community on a cooperative basis. By pooling their resources, they are able to have a far more satisfactory home than for the same amount of money elsewhere. The advantage of mutual housing is two-fold. First, it enables families in a low-income group to own their homes who otherwise could not. Second, it would perpetuate the unity and democracy that already exists. We are entering an age where we must learn to pool our resources for the common welfare or else end in chaos. What better way to pioneer that new age than by a group of average people pooling their resources so they can have more adequate housing?

Another constructive possibility for Redbank which would not break its unity is that of low-rent housing. If the time ever comes when Maine passes the necessary enabling legislation, the existence of Redbank would be a wonderful opportunity to destroy one substandard dwelling in this area for every housing unit in this village. People in the very lowest income group would have an opportunity to bring up their children in a wholesome environment.

4. Summary:

We are opposed to the sale of Redbank this spring (1) because it would create too great a hardship; (2) there are far better methods of disposal than merely a quick cash sale.

Finally, let me point out that since Redbank is a paying proposition from the Government point of view, the only loss caused by a delay would be a loss of the theoretical principle that the Government ought to get out of the housing business.

Sincerely yours,

Rev. CHARLES W. CROOKER,
Chairman, Disposition Committee.

Request for a Statement of Expenditures for Germany

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. SADOWSKI. Mr. Speaker, on Saturday I sent the enclosed request to the President of the United States, the Secretary of State, to the House and Senate members of the Foreign Affairs Committee on Appropriations.

Now that we are embarking on a continuing program of spending billions of dollars in Europe and Asia, we should at least know where this money is going and where we have spent our previous billions. I have read the report prepared by the Case committee on Germany, and I must frankly state that this report is poorly prepared, misleading as to facts, and in no way supplies the information that all of us are entitled to have. I hope that this information that I requested will be made available to the Members of Congress quickly. My request follows:

In order to give full and thorough consideration to the Marshall plan and to the program of European recovery, I believe that the following information should be made available to every Member of Congress:

1. Total American expenditures for occupying Germany since VE-day to comprise:

(a) The disease and unrest program;

(b) The purchases of food and raw materials bought in the United States and foreign countries;

(c) Expenditures incurred by the import-export program of the United States zone;

(d) Expenses incurred by the United States authorities in transporting and importing from foreign countries, of food and raw materials to Germany.

2. Total value of surplus materials turned over to the Germans by the United States since VE-day (original value and for how much it was sold).

3. Total value of credits granted by the various United States Government agencies to Germany since VE-day.

4. Total value of German exports, the proceeds of which are to be charged to our expenditures and credits in Germany since VE-day.

5. If American private loans and/or investments have been granted to Germany since VE-day, what is their approximate value?

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. CHAUNCEY W. REED
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. REED of Illinois. Mr. Speaker, I have before me an editorial that I have taken from the Harvard (Ill.) Herald of Thursday, January 22, 1948, which I am inserting in the RECORD.

You will note, sir, that the editor of the Harvard Herald fears that Members of Congress do not or may not read editorials such as this which appear in country weeklies. Indeed, but for the fact that my attention was especially directed to this editorial I, too, may have missed it. Mr. Speaker, now that I have read it, however, I commend it to you and to our colleagues for we shall soon be confronted with this problem in legislative form.

I think it is of more than passing interest to note that Harvard, Ill., is a thriving community of about 3,500 inhabitants and is known as the dairy capital of the United States.

VIEW OF MARSHALL PLAN

One of our newspaper magazines published in New York says that only 54 percent of this Nation's farmers know what the Marshall plan is. We'd say that's a pretty good percentage. If more than half the farmers in our Harvard area have taken the time to read and find out how the Government proposes to spend $17,000,000,000 in 4 years to try and put Europe on its feet, then we can express an opinion on a subject in which a good share of our readers are interested.

This is one of those country weekly editorials which we hope the Congressmen and other politicians will read. But they probably won't. Nevertheless, if we don't air our views, and this terrifically important plan becomes law, who can we blame first but ourselves? Timidity, after all, is democracy's most insidious evil. So we shall speak up, clearly, we hope, and to the point.

Thinking of our own country first, the outpouring of these billions will naturally make our present inflation worse. How can it possibly do otherwise? We have inflation now, and we don't like it. It is taking all our earnings, leaving little or no room for savings. And currently we are sending some $2,000,000,000 worth of aid to Europe and Asia annually. This deliberate act of charity is partly responsible for today's dollar-a-pound butter.

If we had any assurance that the Marshall plan would really be the answer, we might be inclined to risk further inflation. But we haven't. The $400,000,000 loan to Greece and Turkey is not restoring those tiny countries very fast. Greece still has its civil war. Turkey, if she appreciates the funds, hasn't bothered to inform us of her progress. And our three and one-half billion loan to Great Britain, what of that?

The Marshall plan means 4 years of charity; 4 years of delay in the restoration of Europe's character. There is surely a better, more direct way of getting food to the starving Germans and Hungarians than this grandiose scheme. We say, let's beat down this proposal and ask for a saner one.

Civil Rights Program

EXTENSION OF REMARKS
OF
HON. TOM MURRAY
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. MURRAY of Tennessee. Mr. Speaker, I wish to call to the attention of the Membership of the House a timely editorial entitled "South No Longer in Bag for Truman," which appeared in the Jackson Sun on February 26, 1948, a fine newspaper published in my home city of Jackson, Tenn.

This splendid paper has always loyally and actively supported all democratic nominees and is intensely interested in the principles, traditions, and success of the Democratic Party. The editorial in question ends with the paragraph:

If Truman persists in clinging to his civil-rights program, it will be useless, we think, for him to campaign for the electoral votes in the South.

I believe that the Democratic national leaders must now realize that the revolt or the resentment in the South over President Truman's civil-rights program is quite serious. At first some of our leaders were saying that the revolt would soon die down in the South since only a few "hot-headed southerners were getting off a little steam," and that the opposition in the South would soon cease.

In the interest of party harmony and success I hope that President Truman will not be a candidate for the Democratic nomination for President at the National Democratic Convention to be held in Philadelphia next July, and that the convention will nominate for President either Senator Harry Byrd, Secretary of State George Marshall, Chief Justice Fred Vinson of the United States Supreme Court, or Senator Millard Tydings.

The editorial in the Jackson Sun is as follows:

SOUTH NO LONGER IN BAG FOR TRUMAN

A delegation of southern governors, incensed over President Truman's civil-rights declaration, his intention to try to get the 10 points enacted into law, and his avowed purpose of seeing them written into the Democratic platform at the national convention this year, called upon Senator MCGRATH, of Rhode Island, chairman of the National Democratic Executive Committee, with a view

of getting retraction, but met with dismal failure.

Whereupon these Democratic governors from the South gave expression to the following sentiments:

"We feel we are expressing the firm conviction of our people when we say that the present leadership of the Democratic Party has deserted the principles of government upon which the Democratic Party was founded."

This statement represents the studied sentiments of accredited representatives of the Southern Governors Conference recently held at Tallahassee, Fla. It represents an open split on the part of a representative group from the South speaking with real authority. It is a declaration that the solid South is no longer in the bag for Truman.

When the governors of these Democratic States describe the party leadership as unfit and as a violation of the traditional party principles, the declarations cannot be dismissed as mere twaddle.

If Truman persists in clinging to his civil-rights program, it will be useless, we think, for him to campaign for the electoral votes in the South.

Presentation of Air Force Association Medal to Irving W. C. Hamlin

EXTENSION OF REMARKS
OF
HON. WALTER E. BREHM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. BREHM. Mr. Speaker, on Saturday, February 14, 1948, an incident occurred which to my way of thinking brought signal honor to Lancaster, Ohio, which is the county seat of Fairfield County, which is one of the five counties comprising the Eleventh Congressional District, which I have the honor to represent. On that day Mr. Eugene M. Zuckert, Assistant Secretary of the United States Air Force, visited Ohio University at Athens, Ohio, where he addressed the advanced air corps and other ROTC students as well as faculty members and the general public.

The high light of Mr. Zuckert's visit was the presenting of the Air Force Association Medal to the most outstanding Air ROTC student at the university. This is where Lancaster, Ohio, figures into the proceedings. It so happens that living in Lancaster and attending Ohio University is a young man 23 years of age by the name of Irving W. C. Hamlin, who was the recipient of that valued medal. Mr. Hamlin is a graduate of the Lancaster High School and was attending Dennison University at the time of his entry into the armed services in July 1943. He served as a rifleman in the Seventy-first and Twenty-ninth Infantry Divisions, and was a private first class on his discharge in December of 1945. He will graduate in June from the university and plans to remain in the Air Force after graduation and make it his life's work.

The point I am trying to make, Mr. Speaker, is that so long as men like Mr. Hamlin, who have come up through the ranks and without any pull or special favor, arrive at the heights to which this young man has arrived by sheer ability, that those of us who are so dependent upon our American youth can relax with assurance that the future of America will be in good hands.

I offer my congratulations to Irving as well as to his parents, Mr. and Mrs. Horace J. Hamlin, on their good fortune in having such a distinguished son.

Universal Training as Nation's Great Necessity

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. MULTER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following article I wrote which appeared in the Brooklyn (N. Y.) Eagle on February 29, 1948:

UNIVERSAL TRAINING AS NATION'S GREAT NECESSITY

After the report and the recommendations of the President's Advisory Commission on universal training many bills were introduced in Congress. The one receiving most discussion is that on the Union Calendar in the House, known as H. R. 4278, entitled "The National Security Training Act."

At the present time it seems unlikely that the bill will be brought before the House for action at this session. That being so, some people may say that we can postpone discussion of this proposed law. It is my thought that the discussion, at least about the principle involved in the law, should be encouraged now in order that public opinion may be carefully formulated. In this article I do not intend to discuss the various details by which the principle is to be effectuated. There will always be a difference of opinion as to what is the best method of effectuating a particular plan, even by the supporters thereof. The details can be worked out later. The important thing to do first is to determine upon the principle. In order to arrive at a proper conclusion it is important that we first understand the subject.

On December 19, 1946, President Truman appointed the Advisory Commission on Universal Training, and on December 20, 1946, said to the members of the Commission:

"I want our young people to be informed on what this Government is—what it stands for—its responsibilities. And I think the best way to do this is through a universal training program. I don't like to think of it as a universal military training program. I want it to be a universal training program, giving our young people a background in the disciplinary approach of getting along with one another, informing them of their physical make-up, and what it means to take care of this temple which God gave us. If we get that instilled into them, and then instill into them a responsibility which begins in the township, in the city ward, the first thing you know we will have sold our Republic to the coming generations as Madison and Hamilton and Jefferson sold it in the first place.

"Then go outside the executive branch and talk to leaders in the House and Senate. I want you to be known as the President's Advisory Commission on Universal Training.. I want that word 'military' left out. The military phase is incidental to what I have in mind."

CONCERN FOR SECURITY

When the Commission unanimously reported to the President under date of May 29, 1947, it said, in part, as follows:

"In your original charge to us, and in subsequent discussion with you, it was clear that your concern for the security of our country penetrates beyond the aspects of military organization into those deeper attributes of character and physical and mental fitness which must be the basis of effective service by the citizen to his country.

"Universal training cannot be evaluated except in its relation to, and its effect upon many other activities. Hence, with your approval, we have considered international, economic, educational, medical, and religious implications. We have envisaged possible types and risks of future war; and have studied the various requirements of military strategy to avoid these risks if possible and to overcome them if necessary. We have sought and secured information, ideas, advice, and criticism from individuals and organizations of many types and interests, and have given most serious consideration to all the problems involved.

"Out of these studies we have come to a clear, unanimous, and strong conviction about the course which our country should follow in respect to universal training in the foreseeable future. We recommend this course as a wise and prudent investment in American security, liberty, and prosperity."

Universal military training has been urged upon our country many times in the past, and by leaders whose sincerity of purpose was beyond dispute. Among them, history tells us, were George Washington, Thomas Jefferson, Alexander Hamilton, and James Monroe. Present-day leaders in political life, regardless of party affiliation, have also taken a firm stand in favor of a universal training program. It is not a political issue. I trust it will never become one.

Not the least of those who have taken a position in favor of universal military training are former Secretary of State James F. Byrnes, present Secretary of State George C. Marshall, former General of the Army Dwight D. Eisenhower, and John Foster Dulles.

SETS FORTH PURPOSES

The Committee on Armed Services, in reporting the bill referred to above, sets forth its purposes as follows:

"The purpose of this bill is to provide for the common defense by requiring all young men between the ages of 18 and 20 to undergo a period of training which will fit them to contribute to the protection of the country in time of emergency.

"The young men liable for training under the terms of this bill, although they shall be legally deemed to have military status, shall not be members of the armed forces, shall be subject to no duty other than training, and shall be liable to bear arms for the United States only in the event of a national emergency so declared by Congress and the President, and by the enactment of a new conscription act. They shall not be subject to the Articles of War, nor to the Articles for the Government of the Navy, but to a special disciplinary code as outlined below in this report."

It is my feeling that most persons who are opposed to universal training as presently proposed would soon become earnest supporters of the program if they took the time

to read and analyze the report of the President's Advisory Commission, which, incidentally, is on sale by the Superintendent of Documents, at the United States Government Printing Office, Washington 25, D. C., for 75 cents. The Commission heard witnesses for and against the program. It gave as careful and as full consideration to the opponents as to the proponents. No phase of the problem has been overlooked.

My own position in favor of the early enactment of the program is based not upon emotion reactions but upon fact and upon reason.

ANTICIPATES MUCH MAIL

I have no doubt that immediately after the publication of this article I will receive much mail, urging me to change my position. I hope that those who take the time to write me on the subject will at least first acquaint themselves with the full contents of the report and of the proposed legislation, and then, after having done that, I hope they will not simply say to me that they are against the program, but that they will set forth their reasons.

The subject is one about which either side can easily get emotional and oratorical and end up with flag waving. People who approach the problem that way do not do justice to either side.

I am just as anxious as every other good American that world-wide peace be made the order of the day, that war be banished from the earth.

I am certain that the United States will never be an aggressor nation. I am just as firmly convinced, however, that the same cannot be said of Soviet Russia. It matters not whether you refer to Soviet Russia's policy as defensive aggression or just plain aggression. The fact is that she is gobbling up Europe as fast as possible, peacefully when the people succumb without fighting back, and at the point of a bayonet when they attempt to resist.

Despite that, our country alone and through the United Nations is ready and willing at any time to sit down around the conference table with Russia in an effort to bring about world disarmament. Only one who utterly ignores the facts, however, will think for 1 minute that Russia would ever agree to such a plan. She is armed to the teeth today and will continue to be so armed, not because she is afraid of attack from the outside, but because her leaders are imbued with the insatiable desire to conquer the world. In Soviet Russia every man, woman, and child from 16 to 50 is subject to the most rigorous military training program, every person being fitted into a niche, whether they like it or not, where their every daily effort is utilized to support the totalitarian dictatorship and its world-wide aims. That is the danger that we face. That is the danger that we must prepare against.

HAS NO SUBSTITUTE

Of those who oppose universal military training I ask the question: "What will you substitute in its place so that these United States may remain so strong that no country will dare attack us?"

To those who say the next war will be an atomic war, against which that is no defense, I say we must leave that to the scientists and military experts. We must at least give those working with the civilian authorities, placed in charge of the proposed universal training program, the opportunity to train our youth in that defense. There is nothing in the proposed program which intends to teach our youth that by learning to march they will be able to defend our country. It will be a modern program, teaching modern methods.

To those who say it will regiment our youth and take them away from religious beliefs and concepts, I say that the program encompasses the moral and religious aspects of training and may bring forth a more religious youth, rather than a less religious youth. It is well to note here that more than 50 percent of our American population are not affiliated with any church or synagogue. More youths in the armed services of our country attended religious services than civilian youths. Under the proposed program even those with no religious affiliation will at least be submitted to good moral training.

WOULD NOT DEPRIVE OTHERS

To those who argue that a universal training program will be expensive and that, instead of spending the money for that purpose we should spend it for education, health, housing, unemployment insurance, social security, and any or all of the other social services and welfare projects that a great democracy should foster, the obvious answer is: Not one penny must be taken from any of those programs for universal training. At the same time we must assume the additional burden of universal training. The universal-training program is not intended as a substitute for any other program, or for part of any other program. It is a supplement to all of them. It is not urged as a cure-all, but as a necessary incident and as but a part of an over-all national security program.

To those who say, Let us rely on the United Nations for world peace, I say, when the United Nations is so constituted that no country can exercise a veto power and that all countries will submit in a democratic way to decisions of the United Nations, arrived at in a democratic way, and when the United Nations is implemented with a police force sufficient to prevent aggression by any and all nations, then we can disband our program for universal training.

Let me conclude with the following quotation from the last paragraph of the report of the President's Commission:

"We recommend the adoption of universal training because we are convinced that weakness on our part not only involves our country in grave risks but also weakens the United Nations, on which rest our hopes for lasting peace. A weak and irresolute America is an invitation to failure. A strong and resolute America is the best guaranty for our safety and for the success of the United Nations."

Poem by Former Lt. Sidney B. Gault

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. BRYSON. Mr. Speaker, my attention has been called to the following beautiful and inspiring poem which appeared in the 1948 January issue of the United States Air Services magazine. This poem was written by a young man, former Lt. Sidney B. Gault, of the Air Forces, whose home is in Spartanburg, S. C. I take pleasure in submitting these inspiring words for inclusion in the CONGRESSIONAL RECORD:

FROM HIGH ATOP THE SPIRES OF SPACE

From high atop the spires of space I've seen
The murky dawn give way to morning's birth.
I've watched the fingers of the sun stretch out
To rouse from lethargy the sleeping earth.
I've sailed my ship on silvery wings above
The vast expanse where men and beast belong,
And, hovering there in calm serenity,
I've heard angelic choirs burst forth in song.

At night, in shimmering moonlight, I have soared
Above the overcast that hides earth's face;
And frolicked o'er its fluffy blanket top
To dance and skip across its downy lace.

I've scaled, with ease, the breathless slopes of air
To poise, in peace, above the burnished sod;
And wondered why the foolish rushing throng
Paused not to heed the handiwork of God.

—*Sidney B. Gault.*

Mr. Marshall, How About Those Planes for China?—Congress Is Entitled To Have the Facts

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, last week the press of the country carried a startling story to the effect that the United States had been sending bombers and fighters to China under a secret agreement. This morning, before the House Committee on Foreign Affairs, the Honorable William C. Bullitt, formerly Ambassador to Moscow, testified that such was not the fact. The Times-Herald, in a feature article by Mr. Frank C. Waldrop, likewise questions the statement by Mr. Marshall and indicates just what has transpired so far as planes to China are concerned. Under permission to extend my remarks I include the article by Mr. Waldrop which appeared in this morning's Times-Herald:

CHINA'S PLANES

(By Frank C. Waldrop)

Either Air Force Secretary Symington or State Secretary Marshall is trying to kid the public. Maybe they're in it together.

In any case it is a dirty, defenseless trick and here's hoping somebody in Congress has the courage to call the pair of them to the witness stand for an explanation.

Perhaps you saw a United Press story headlined in last Saturday's Times-Herald, thus: "United States bombers, fighters sent to China."

That headline and the story following were utterly misleading, utterly unjustified, utterly false in emphasis, though neither the United Press nor this newspaper had any way of knowing that to be the case at the time.

Frankly, the reading public is entitled to know that the UP and not only this but the newspapers of the country, generally, were by that story made the victims of a shabby piece of misdirection. The true emphasis would have had to say aid to China has been stopped, not begun. Here is a chronological history of the actual case:

1. Back in December 1945, Mr. Truman and T. V. Soong, for China, came to a general agreement that the United States would furnish air aid to Chiang Kai-shek.

2. On the basis of that agreement, our air experts worked out a deal to equip Chinese with eight and one-third air groups, consisting of 1,071 combat planes, plus spare and replacement parts, ammunition, and so forth. Marshall himself approved the final form of the agreement jointly with Chiang, while Marshall was in Nanking on the President's mission of supposed aid to China.

3. In August 1946, Secretary Marshall ordered the sending of further equipment under that agreement to be stopped.

It was stopped. It has never been resumed. Thus, the commitment by the President of the United States of December 1945 was broken.

Congress ought to find out why.

As to the details of execution of the agreement up to the time Marshall ordered it broken, here are further facts:

We promised the Chinese 1,071 planes, plus parts and ammunitions. We delivered them 158 planes which would not fly. We delivered them 304 planes that would fly but for which we furnished no spare parts or replacements. We earmarked 135 more planes but did not actually deliver them. We counted in still more planes that had been given to China in the course of the war with Japan and were no longer serviceable.

And there the contract stopped. No further allocations of planes. No deliveries of spare parts or ammunition at all.

To keep aloft those few planes which could be flown, the Chinese have had to cannibalize their meager air force, that is, take parts off one plane to equip another.

The over-all deal, as such, has never been executed.

General Marshall's attitude toward China is undoubtedly the most peculiar feature of his record in public office, to date.

The recognized government of China is that of Chiang Kai-shek. We recognized it years and years ago. This recognized government, with which we have long since exchanged ambassadors, has been at war with the Communists from the day it started, something more than a generation ago.

In between, it fought a war with Japan into which we were finally drawn and in which we delivered the victory. But the war with communism has kept right on going.

To help the Communists, Russia gave Chiang's enemies vast stores of Japanese weapons and equipment captured during Russia's brief and phony war with the already defeated Japs.

Obviously, if we cared at all about keeping China out of Russian hands, our cue was then and there to give Chiang the kind of help he needed, namely, weapons and not kicks in the teeth.

But General Marshall, as head of a special mission to China, let himself be influenced to give Chiang a kick in the teeth because Chiang would not surrender any part of his country's sovereignty to Russia.

It would be interesting to know who influenced Marshall to make that fatal boner, as now all the world knows it to have been.

No man on earth can square Marshall's attitude on China with common sense, in view of his attitude on Europe.

In Europe, he asks the American taxpayers to spend seventeen thousand million dollars, plus, to keep the Reds from conquering any more territory.

In China, he asks the only government we recognize, to surrender to the Reds and let them help govern, which is merely opening the gates wide to Stalin and everybody knows it.

Who led Marshall into that trap? How did the great military man come to make that boner? Why has he let this fake story of air-power aid to Chiang go unexplained?

Congress should find out.

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 3 (legislative day of Monday, February 2), 1948

Mr. WILEY. Mr. President, I ask that the text of a radio address I broadcast over Wisconsin stations be printed in the Appendix of the RECORD. The St. Lawrence seaway battle continues, in spite of the recommittal of the bill to the Senate Committee on Foreign Relations on February 27, last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ST. LAWRENCE SEAWAY BATTLE GOES ON

Fellow citizens of Wisconsin, the battle for the St. Lawrence seaway will go on.

The seaway suffered only a temporary setback in the Senate on February 27, when, by a vote of 57 to 30, it was decided to recommit the resolution to the Foreign Relations Committee for further study.

This vote followed many days of intensive debate which explored all the phases of this bill. It was my pleasure and privilege to manage this nonpartisan resolution on the floor of the Senate. It had previously been my responsibility to serve as chairman of the Foreign Relations Subcommittee which held hearings on the resolution and which reported it favorably to the full committee.

WISCONSIN'S ENDORSEMENT OF SEAWAY

I wish that each of my listeners might have been with us during the hearings, during the discussion in the Foreign Relations Committee and on the floor of the Senate as this great project—so vital in the national interest—was discussed. I know, however, from the many fine communications from all over our State, that the people of Wisconsin followed this issue with the closest and keenest attention.

I am grateful for all the magnificent letters and wires which poured into my office before, during, and after the debate. Wisconsin rallied virtually unanimously behind this important objective. Farm groups, labor unions, businessmen's clubs, associations of commerce, mayors, county supervisors, the Great Lakes Harbors Association, the Deep Waterways Commission, and countless other individuals and leading organizations wrote and telegraphed me. They expressed the almost unanimous conviction of our State that this great project is necessary for the national welfare.

OUR PURPOSE TODAY

It is not my purpose at this time to review in detail the record of the seaway battle, because you are familiar wtih it. "What is past is but the prologue" anyway. I do want to discuss some of the brief high lights of our effort and then to submit a suggested answer to the big question, "Where do we go from here?"

OUR ACCEPTANCE OF RECOMMITTAL MOTION

First, it should be said that we accept the recommittal vote without rancor and without bitterness. We fought as hard as we could for this objective, but now that the decision has been reached, we accept it, although only as a temporary set-back. "Truth crushed to earth will rise again." The forces of progress, though temporarily halted, are irresistible, and move ever forward.

SEAWAY REQUIRED FOR NATIONAL INTEREST

Throughout the seaway debate, it was my purpose to point out that this great project is necessary in the national interest, for national defense, for national economic benefits to agriculture, business and labor, for the development of 2,200,000 horsepower of needed electrical energy. I stated that what the Senate needed and what all America needs was the vision, without which we are told, "a people perish," the vision to see that this project is needed now and for the future. It is needed today to handle the expanding needs of our Nation of 145,000,000 people, and will be needed even more in the future when America will have 160,000,000 and then 200,000,000 people.

History will render the final verdict on the decision of the Senate to recommit the resolution. I hope that history will not be too harsh in its judgment of the men who unfortunately voted to defer this project.

You and I know that the St. Lawrence seaway is the largest single untapped natural resource left on the North American Continent. We know that no man ever progressed who did not use the talents the good Lord gave him. No nation ever prospered which did not use its natural resources, its coal, its iron, its minerals, its oil, and its great rivers. Now that the Mesabi iron range is nearing depletion, because of the tremendous amounts of ore we have extracted from it, we felt that it was urgent that the seaway resolution pass, so that through this great natural artery, we could import Labrador ores to maintain our midwestern steel industry at its present location.

MIDWEST DESPERATELY NEEDS SEAWAY

It was pointed out in the debate that the 50,000,000 people of the land-locked inland empire of America desperately need this seaway. The economic health of the Middle West, the bread basket of America, requires this seaway. We of the Middle West have given unselfishly of our resources to the Nation. We of the Middle West have voted for projects which we felt were vital to the economic health of other regions. But, unfortunately, when it came to voting as a loan the sum of $720,000,000—the combined United States and Canadian cost for both the seaway and the power project—other sections of our Nation were less willing than we had been, to build a vital project, a self-liquidating project.

EXCUSES AND PHONY THINKING AGAINST SEAWAY

Throughout the debate, I am frank to say, every sort of excuse and smoke screen was devised to postpone the resolution. We heard fear expressed on the floor of the Senate, the fear of the eastern ports, the fear expressed by representatives of other means of transportation that the seaway would hurt them. To answer this fear, we tried to implant faith—faith in our country, faith in our future to prove that not only would this seaway not hurt present economic interests, but that it would contribute to their economic health.

We heard synthetic thinking, questioning the mass of documents supporting the seaway—questioning the costs, the channel depths, the constitutionality and countless other features which had been proved and proved again in the past.

We have no regrets for what we did. We fought for hour after hour, day after day on the floor of the Senate, contesting the claims of the opposition. My colleague, Senator AIKEN, of Vermont, and I spoke over the radio on behalf of the seaway. We prepared statements for the press to spread truth and light on this long-debate issue. We were in continuous contact with Federal agencies and private organizations and individuals to mobilize the facts.

WHERE DO WE GO FROM HERE?

Now that the seaway resolution has been recommitted, the question remains—"where do we go from here?" What does the future hold for the St. Lawrence seaway?

You and I have no crystal ball, but we can foresee something of the future.

It is a fact that the St. Lawrence seaway resolution cannot be revived in the Eightieth Congress. However, we are not going to lose any time in crying over spilt milk meanwhile. Looking toward the future, we are going to mobilize still more facts from the finest authorities in the land, from the United States Corps of Engineers, from the Department of Commerce, from the United States Maritime Commission, the State Department, from business, labor, and farm groups. We are considering the possibility of asking for the establishment of a special Presidential commission impartially and objectively to study this project in the light of our current and future needs.

SEVERE OPPOSITION STILL EXPECTED

But we know the battle will not be an easy one. The opposition is not going to be easily convinced. I respect the sincerity and the integrity of my colleagues, but as I have candidly stated to them on the floor of the Senate, there are unfortunately some who have "eyes to see but do not see, and ears to hear but do not hear."

In 1949, the grounds for their opposition will undoubtedly have changed somewhat, as they have in the past. The opponents will have new arguments against the seaway. Just because we have accumulated more facts, they are not going to be won over automatically. You and I know that if we mobilize all the literature that has already been developed on the seaway, it would fill a warehouse. But even if we have five warehouses full of facts, it probably could not convince an opponent whose judgment had been foreclosed.

FAITH IN CONGRESS' ULTIMATE VOTE FOR SEAWAY

But we have sufficient faith in the intelligence, in the reason, in the understanding of the Members of the United States Congress and of the American public that when they are presented with the true facts of the situation, they will accept this project as being necessary in the national interest.

WHAT MIDWEST WANTS

Just what do we of the Midwest want?

1. We want to continue to grow in population and in economic health.

2. We of the Middle West do not want to see idle factories, lines of jobless men developing, because the Middle West is placed at an economic disadvantage in this highly competitive age as compared with the advantages enjoyed by the eastern and Pacific seaboards.

3. We of the Middle West do not want to see America finding herself, in the event of some future national emergency, unprepared, lacking adequate shipbuilding and ship-repair facilities, such as could be enjoyed through the seaway. We do not want to see our beloved America critically short of sufficient electrical energy to produce modern implements of defense and to support every industry.

All of the signs, however, point to these unfortunate results—idle factories, unpreparedness—unless we of this generation demonstrate the vision to prevent them by building the seaway.

WHAT CAN WE DO FOR SEAWAY?

Now, what can you and I do to help bring the seaway into completion?

The first and most important thing, I feel, is not to become discouraged over this setback and the previous reverses which we have suffered. Throughout the history of human progress, pioneers have always temporarily suffered the taunts and the set-backs by men who lacked vision.

But the pioneers who built this great country had faith in themselves and in the future—the faith that, we are told, moves mountains. The men who built the Suez Canal, the Panama Canal, who pioneered with the automobile, the steam engine, the railroads, the airplane—these men and women would not admit defeat. They would not give power to defeat by accepting it, and therefore they triumphed. So, too, we shall triumph because progress, although stayed, can never be defeated.

OUR MISSIONARY JOB TO PROMOTE SEAWAY

But you and I each have a missionary job also. It is up to us to think, talk, and act for the St. Lawrence seaway, not only in our own State, among those who may still be unconvinced on the facts, but in all sections of the Union. Each of us has colleagues, friends, business and other acquaintances, relatives in other States of the Union. Each of us should take it upon himself or herself to conduct a constant educational campaign to present the facts in this matter, to point out the fact that it is to the economic self-interest, not only of Wisconsin, Michigan, Minnesota, the Dakotas, but of the people of all the 48 States, to enact this resolution.

We believe in our cause and we are reminded of a familiar verse:

"Then conquer we must,
When our cause it is just.
And this be our motto,
In God is our trust."

CONCLUSIONS

Wisconsin this year celebrates the centennial of its admission into the Union. We had hoped that the St. Lawrence seaway might have been begun in this, the opening year, of Wisconsin's second century of statehood. The seaway will have a wonderful impact on every last community and hamlet of our State, on every citizen, every group—accelerating progress, increasing prosperity.

Our hopes, our dreams, our faith will yet be fulfilled. The battle for the St. Lawrence seaway goes on. We are not discouraged, we are not defeated. We are in this fight until victory is finally achieved.

Stand united, stand with faith, my fellow citizens and this magnificent 2,300-mile artery will yet be constructed.

Justice and truth shall prevail. Forward, Wisconsin. Forward, America.

The Partition of Palestine

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, March 3 (legislative day of Monday, February 2), 1948

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD excerpts from an address which I delivered before a rally of the American Emergency Zionist Council, at the Manhattan Center, New York City, N. Y., on March 1, 1948, concerning America's obligation to support United Nations' decision to partition Palestine.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

The problem before the United Nations is crystal clear. Shall its decisions be honored and carried out—particularly by member nations—or shall they be ignored as "scraps of paper," again by member nations?

Similarly, the problem before the United States is equally clear. Shall it use its great influence to strengthen the United Nations, particularly in reference to such decisions as it took the initiative to make, or shall it use its influence in undermining the authority of the United Nations and thus hasten its complete disintegration?

Any action suggested or any suggestion made which can cause a deviation from this clear policy which has been ours in relation to the United Nations and which policy has been in the minds and hearts of the American people for years should be considered contrary to America's well-being.

It is all right to have committees to investigate, committees to follow up, and committees to report, but never should any committee be considered as a medium for deciding a reversal of policy once that policy has been decided and has become accepted by the vote of other nations. For America to recommend anything contrary to decisions made when other nations have agreed is a step toward a reversal of an international agreement. That step should not be a one-sided action.

America has both officially and sentimentally stood so long for the restoration of Jerusalem and the return of the Jews to Palestine that that policy cannot be given up without shocking the conscience of all of our people. America's ideological fight, running over 150 years, has been a fight which has said that democracy has a right to be in the world and that democratic ideals must be respected. We have built our whole theory around the Monroe Doctrine which has now evolved into the notion of unity in our hemisphere for defense purposes, based on the idea and with the ideal that imperialism is a thing of the past, that colonialism is bad, that people have a right to be independent and a right to work out their own destinies without hindrance from the outside. Therefore, America has stood for the policy of protection for small states and she has accepted the theory that is basic in international law, that states, no matter what their size, have equality in the sisterhood of nations. We assumed that when the ideal of a mandate was set up that the first duty of the state which held the mandatory power was to administer affairs within the mandate so that it could become capable of an independent existence. Logically and ideologically, therefore, America should stand for the decisions which have been made throughout the years in regard to Palestine. The big question is not whether the Jewish national state shall be set up now. It is, Shall we go back upon our pledged word and a decision made in accordance with the machinery which we have pledged ourselves to support?

The American people know that if we are to sustain international law, deliberation before action, and respect for promises made and covenants entered into, they must sustain the action of any institution set up to operate in accordance with the theories of a peaceful process.

The final analysis of a peaceful process always results in a compromise on the theory that compromise is better than the alternative. This still leaves room for future struggle for right and change. But to let opportunity after opportunity go by to make strong the deliberative action is a mistake.

The United Nations has acted in regard to the Palestinian question. Their action

was, of course, a compromise. Neither side had its absolute way. But it did afford a new start for peaceful institutional building and the age-old striving for a national home for the Jews saw the light. All forces the United States has should now be used to unite with all of the nations that supported it in the United Nations decision to maintain that decision for the sake of a future world organization.

A Jewish national state is an insignificant thing, indeed, compared to the proper functioning of a world organization. To go back on the Jewish national state merely retards for the time being the inevitable. But to turn our backs on world-wide action and the pledged word of the nations of the earth in formal deliberation may destroy all the progress we have made toward world organization and the peaceful settlement of disputes for generations. If man loses faith, now, in nations' ability to cooperate with each other to make decisions and to stand by those decisions, when will we have a chance again to move forward toward what has been the desire not only of nations but the prayer of the people of the world since the concept of progress dawned on man?

America must marshal those nations which voted to support the United Nations decisions. There is no retreating from that stand. We cannot afford in this generation a Corfu affair which destroyed the hopes of the last generation.

We hear echoed on all sides that if we do not give aid to Europe democracy is at stake. I say, if America and the nations of the world do not stand by their pledged word, world organization is at stake. And without world organization democracy ultimately may fail because democracy rests upon the peaceful process and so does world organization.

Palestine, United States, and Security Council: What Now?

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Wednesday, March 3 (legislative day of Monday, February 2), 1948

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent that there be inserted in the Appendix of the RECORD a copy of an address delivered last evening by Dr. Israel Goldstein, chairman, World Confederation of General Zionists, and chairman, United Palestine Appeal, speaking before the Palaver Club, of Washington, D. C., and also remarks I made in presenting Dr. Goldstein to this group.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

Senator JOHNSTON of South Carolina. It is my rare privilege this evening to present as our speaker one of the outstanding Jewish leaders in the entire world and a truly great world citizen. Dr. Goldstein graduated from the Jewish Theological Seminary in 1918 and received the degree of doctor of Hebrew literature from the Jewish Theological Seminary of America in 1927. In 1945 he was awarded a doctor of divinity degree. He is at the present time an able leader of numerous organizations. He serves as chairman of the United Palestine Appeal, cochairman of the United Jewish Appeal, chairman of the World Confederation of General Zionists, and president of the Jewish Conciliation Board of America. He is the former co-chairman of the Commission on Religious Organizations of the National Conference of Christians and Jews, and a former president of the Zionist Organization of America. He is the public representative on the Committee of the United States Department of Labor, Wage and Hour Division, on Meat, Poultry, and Dairy Industry.

He is the former president of the Synagogue Council of America, a former chairman of the Jewish section of the Interfaith Committee for Aid to the Democracies.

In his honor the British War Relief Society has established the Dr. Israel Goldstein Children's Nursing Home in England. On the occasion of his fiftieth birthday in 1945, the Jewish Theological Seminary of America established in his honor the Dr. Israel Goldstein lectureship.

The Dr. Israel Goldstein Children's Home in Lyons, France, has been dedicated in his honor. In Palestine a large tract of land has been named for him by the Jewish National Fund of America. He is the author of two books, a Century of Judaism in New York, a very scholarly work published in 1930; and Towards a Solution, published in 1940. He is a contributor to Encyclopaedia Britannica and to the Universal Jewish Encyclopedia.

Today, Palestine is the most serious trouble spot in the entire world. I believe that our speaker this evening is better equipped to discuss the interest of the Jewish people and the interest of the United States in the peaceful solution of the Palestine problem than any other American. I therefore take pride and pleasure in presenting Dr. Goldstein.

Dr. GOLDSTEIN. Was November 29 a fool's paradise? I do not think so.

No Jew felt then that the Jewish people got all it was entitled to get from the UN. The area allotted to the Jewish state was whittled down to one-eighth of what had been contemplated by the Balfour Declaration. But it was a sacrifice which the Jewish people felt was worth making because it was the final compromise and it was worth making, because it was final, because it was a settlement at last, because it meant that in that area, small as it is, there would be at last a Jewish state so that in the future no alien hand could bar any Jew from his homeland, and so that the Jewish people, after 19 centuries of abnormality, would have at last a place, a voice, a name in the councils of the nations.

No one expected that the Arabs would meekly submit to the November 29 vote. It was anticipated that the Arab League would try to make trouble, but it was also anticipated that the Arab states would be slapped down at the first attempt to sabotage the decision of the UN, slapped down by stern warnings from the great powers, especially from the United States, and sobered by serious international planning for an international force. And it was also expected that if the Arabs in Palestine itself would make trouble, the Haganah could handle them, since it would have no difficulty in securing arms from those states who voted for partition, and especially from the United States, which was the leader of the propartition forces.

No one expected that the British mandatory government would take an active part in helping to bring about the partition plan, but the British spokesman was taken at his word when he said that his Government would be loyal to the UN, would not obstruct its decision.

No one delved into the legal technicalities of whether the UN Assembly vote was a recommendation or a decision. It was taken for granted that it had the force of a decision. Otherwise it would have made no sense to appoint a commission on implementation and it certainly would have made no sense to bring the Security Council, the acting body of the UN, into the picture, a step which was taken after considerable debate in which the opponents of the resolution who resisted the tie-up with the Security Council, were defeated.

No one assumed that the active interest of the United States delegation in the closing days of the debate was a hastily improvised benevolence. It was no secret that in the State Department there was considerable opposition, that in the President's mind there had been some doubts, opposition and doubts which had to do with Middle East oil, with uneasiness over the possibility of a war with Russia, and with reluctance to contemplate the possibility of America's participation in an international force. But the doubts and the misgivings were overruled by President Truman and Secretary Marshall—overruled with open eyes—and the United States not only cast its vote in favor of the partition plan but by casting its vote firmly and with strong advocacy influenced other states who were looking to American leadership.

This brief orientation helps us to evaluate what is happening now.

Is our Government backing down from its firm position of November 29, and why? This is the main question.

We could, if we had the time, spend some of it in arraigning the Arab states, members of the UN, for blatantly defying international policy, but it would serve no useful purpose since our castigations would fall on deaf ears. We should, if we had enough time, draw up an indictment against the British Government for shamelessly conniving with the Arab saboteurs of the UN. The facts have been presented by the Jewish Agency in an official memorandum. This British alliance with erstwhile Hitlerites will be exposed again and again until the civilized world fully understands that we are witnessing the moral decline and fall of a once great empire, an ignominious descent, from Balfour to Bevin. But we should not be diverted too long by that theme, for we have a more profitable theme to consider, more profitable because more amenable to correction.

Our main purpose is to evaluate the attitude of our own Government. It is our duty to do so as American citizens and because our Government's attitude is the key to the attitude of the Security Council. The supermodesty and self-effacement of those American officials who say "The United States is only one member of the UN; we shall do whatever the UN decides" will not fool anyone. The United States cannot, out of one side of its mouth, declare that it is ready with its billions of dollars to put western Europe on its feet, and declare out of the other side of its mouth that it is insignificant and helpless. When the United States wants something strongly enough, it knows how to get it, or at least how to try to get it. If it cares enough about the Palestine question, our Government can speak quite effectively to Great Britain and to the Arab States, who need us more than we need them.

I am sorry to have to point the accusing finger at my own Government, but I believe with all my conscience that I am rendering a patriotic service in doing it because what is involved is not only the fate of the Jewish people but the honor of the United States and the future of the United Nations.

American Jews yield to no one in their concern for American national interests. We don't have to proclaim our patriotism. It is an open book, our record in peace and in war. A propaganda campaign has been sedulously promoted, in part no doubt by the oil companies, and has apparently persuaded

high quarters in Government that the implementation of the partition plan for Palestine will jeopardize America's access to the Middle East oil supply and that therefore our national interest is at stake. Mr. Harold Ickes is a greater expert on oil problems than Mr. Forrestal and as much of a patriot. He and many others do not consider that our national interests are being jeopardized. The Arab States need American dollars so desperately that in the final test they will all do what Ibn Saud, the strongest of them, is doing, not permitting ideology to interfere with business. American oil companies, making huge profits out of Middle East oil on which they are probably not paying taxes to our Government, are naturally eager to keep the Arabs as sweet as possible, but their private interest is not to be confused with our national interest.

Our highest national interest at the present juncture in world affairs is to keep the UN, the one remaining hope of world peace, from becoming bankrupt, discredited, and defunct, as it would become if its first great moral decision becomes a scrap of paper. That is why I believe we are performing a patriotic duty when we criticize our Government in the hope of correcting a hurtful trend.

I accuse my Government of having contributed to the deterioration of the Palestine situation. By failing to utter a single word of rebuke to the Arabs in Palestine and to the Arab states around Palestine who were openly defying the UN, our Government seemingly condoned their misdeeds. By failing to criticize Great Britain's obstructionism, our Government encouraged British tactics of pettiness, spitefulness, and connivance with the aggressor. Why should the United States have hesitated to talk up to Great Britain, a recipient of billions of dollars of American aid, and a suppliant for billions more? By imposing an embargo on arms to Palestine which, obviously, helped the Arabs and hurt the Jews, our Government, doing this thing which it was not called upon by the UN to do, emboldened the Arabs, heartened the British, and handicapped the Haganah. Though it was not the intention, this was the effect.

Had our Government acted as it should have acted, things in Palestine would never have come to this pass.

And now, having been partly to blame for the deteriorated situation, our Government, speaking through its delegate to the Security Council, gives the impression of being intimidated by the very difficulties it has had a part in bringing about. Or is that impression of Mr. Austin's speech unfounded? Nothing would please us more than to be told that it is an unfounded impression and that the speech and the resolution presented by the United States delegate to the Security Council does not mark any change in the Government's November 29 position. Perhaps we shall be told that our Government, having discovered that the UN Assembly has only the legal right to recommend partition, but not to enforce it, is trying to find a legal way to bring about partition and the way is to have the Security Council deal with the threat to peace and security, which it has the legal right to do, summon an international force of some kind to safeguard peace and security in and around Palestine, so that while it is holding the Arabs in check, a Jewish state can be brought into being by the Jews themselves in cooperation with the UN Commission on Implementation. Thus, the legal limitations of the UN Assembly would be observed and yet the purpose of its November 29 vote would be served. How gratifying it would be to hear that this, indeed, is the President's interpretation of Mr. Austin's resolution before the Security Council. But in the absence of such an interpretation one can only wonder why the legal technicalities were raised by the United States when, as a matter of fact, the mandatory power itself treats the UN vote of the 29th as a decision, when it states it will give up the mandate on May 15 and turn over the Palestine administration to the UN Commission. Why does Mr. Austin propose that the Palestine question be studied again and consulted about again after it has been so painstakingly studied, consulted about, and settled by the UN. Why, after the compromise solution of November 29, does the American delegate now suggest an attempt be made to compromise even this compromise, which can only mean at the expense of the Jewish part of Palestine?

On the face of it, one cannot escape the conclusion that our Government seems to be backing down from its position of November 29, seems to be suggesting delay in implementation, and seems to be hoping that the irreducible Jewish minimum may be reduced with a view to appeasing the Arabs. If that is so, then the American people have got to speak up to our Government and say both clearly and firmly "The final compromise was made on November 29. Further delay in implementation will bring further deterioration. Our Government dare not back down, for if it does back down in the face of Arab force, it will be driving the first nail into the coffin of the UN."

If the charitable view of Mr. Austin's resolution is the correct one, it should become evident soon enough. The first evidence should be a decision by the State Department to permit the shipping of arms to Palestine. At the same time our Government should take the leadership and initiative among the Big Five in the Security Council to the following end: (1) To establish that there is a threat to peace and security in the Palestine situation; (2) to authorize the Haganah as the Jewish militia in the part assigned to the Jewish state; (3) to place the port of Telaviv immediately under Jewish control; (4) to proceed with the organization of an international force of some kind, even if it be composed of regular troops or volunteers, is necessary for safeguarding the borders and preventing external aggression, to organize and equip such a force, and thus to create the conditions which will permit the Jewish state to come into being.

Munich, 1948

EXTENSION OF REMARKS
OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, March 3 (legislative day of Monday, February 2), 1948

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the Manchester (N. H.) Evening Leader, March 2, entitled "Munich, 1948." This editorial is particularly significant in view of the current critical world situation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MUNICH, 1948

The history of our times is being decided now. With sledge-hammer blows, today's policies are shaping the kind of world we are going to live in.

We are faced with the immediate necessity for deciding whether we want a world of international law and order, or of anarchy and violence. Once we make our decision, we must take whatever steps are necessary to give it fulfillment.

A decision not supported is no decision at all. It is only a confession of indecision and weakness. In making our choice we must realize that more than a statement of preference is required. There must also be adequate physical evidence that we mean exactly what we say.

This is no simple selection. Neither is this a simple world. Appeasement and moral retreat might save us inconvenience temporarily. Side-stepping issues will enable us for the moment to avoid drastic measures imposing fresh burdens.

But that is not the way to peace. Today's indifference can mean tomorrow's destruction. Momentary gain is at the risk of permanent loss.

Our policy can be determined as much by uncertain inaction as by decisiveness. History will not wait, while we waver, tormented by doubts and fears.

Absence of a firm stand will have sad effect upon our natural allies. We can suffer isolation that will be the result of the loss, one by one, of those countries whose interests are akin to our own—until at last we remain in terrifying solitude.

By now, we should have learned that appeasement is not the road to security. Feeding the demands of dictators only whets their appetites for more.

The philosophy of Munich will not be any more successful or realistic in 1948 than in 1938.

The Nazi timetable in the thirties was the Rhineland, the Saar, Austria, Sudetenland, Czechoslovakia, Danzig, Poland. The Communist timetable in the forties is Estonia, Latvia, Lithuania, Yugoslavia, Bulgaria, Poland, Czechoslovakia—with Finland, Austria, Greece, Italy, and France marked as the next stops on its fire-breathing express.

Part of our problem is a direct inheritance from the Munich of 1938. Czechs, remembering how they were betrayed at a conference with Hitler—to which neither they nor the Russians were invited—have little confidence in the word of the western powers.

Once again we are sowing seeds which will sprout the poisonous weeds of distrust. The crisis abroad, from Prague to Palestine, is part of the same world picture. Our friends can well be dismayed at the sight of our moral retreat while Russia marches ahead.

Integrity is indivisible. Honor is not a cloak worn in some instances and discarded in others. Other countries can feel that if we repudiate a decision of the United Nations when it suits our interests, we might desert them similarly at some future date.

The validity of international judgments must be upheld, or else it will be the end of the United Nations. We will have made the change from united action and peace to anarchy and war. Reassurance must be given that our policies are built upon concrete determination and not upon fleeting words.

In today's crisis, neither fulsome speeches before the Security Council nor polite letters of protest will avail. Diplomatic regrets after the deed is done will have no more potency now than when Hitler set the pattern.

We must evidence, so that the world will know beyond any question, that our hearts are as brave and our strength as alert as our words are full of promise. The Government and people of the United States should join in some clear program, such as:

1. Joining with the other free nations in an agressive stand in the Security Council for the maintenance of democratic ideals. Life and significance must be given to the judgments of the United Nations—whether it be in connection with Greece, Korea, or Palestine—lest otherwise speeding history run the UN down and destroy this instrument for international cooperation.

2. Providing all necessary aid, in military supplies, food, and finances, to the remaining independent countries of Europe and Asia. The Marshall plan must be carried forward.

3. Bringing our military strength up to the state of preparedness dictated by current conditions. Our air power particularly should be enlarged with both heavy, long-range bombers and speedy fighters. Universal military training should be initiated for a 5-year period, to be continued or ended then as circumstances at that time should recommend.

4. Coupling these moves with a steadfast will for peace. Defense preparations should not be confused as a desire for war. To this end, having made our resoluteness known, we should initiate proposals within the United Nations which will lead to eventual general reduction of armaments. While we should arm as long as other nations undermine peace, we should evidence our readiness to join in universal disarmament.

5. Added to this, the American people should elect an administration next November, regardless of party, which will have the character to project some comprehensive policy along the lines summarized here.

This program is not offered as a complete and final thing. All that we seek and urge is a wedding of faith and courage into a single policy of action which will bring hope for peace to liberty-loving people throughout the world.

The Hour of Crisis in Palestine

EXTENSION OF REMARKS
OF
HON. GUY CORDON
OF OREGON
IN THE SENATE OF THE UNITED STATES

Wednesday, March 3 (legislative day of Monday, February 2), 1948

Mr. CORDON. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "The Hour of Crisis in Palestine," published in the Washington Evening Star of February 25, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE HOUR OF CRISIS IN PALESTINE

The conflicting interpretations which have been placed upon Ambassador Austin's address to the Security Council on the Palestine issue are the best evidence of the lack of clarity, if not the lack of candor in the statement itself.

Yet this is not a matter in which there should be any ambiguity, or in which words should be used to say one thing when something else is intended. There is good reason to believe the problem of Palestine and the method of its solution will directly affect the welfare and the security of the United States. If that is so, then it seems obvious that the American people should not be led into any course of action unless they fully understand what it is that they are doing and what the consequences are apt to be.

It is not easy to get this full understand- from Mr. Austin's statement. When his remarks are read carefully, however, their meaning and significance seem clear.

Mr. Austin begins by saying that the Security Council can and should act on the first request made by the General Assembly in connection with its recommendation for partition of Palestine. This request was that the Council "take the necessary measures as provided for in the partition plan for its implementation."

The most important of these necessary measures calls upon the Council "to take such action as the Security Council may deem proper with respect to either the Jewish or the Arab state if by April 1, 1948, a provisional council of government cannot be selected for that state, or, if selected, cannot carry out its functions." If this language means anything it means that the Security Council is asked to implement the partition plan. Mr. Austin, speaking for this Government, says, "We believe it is clear that the Security Council can undertake the above-mentioned measures," and he plainly indicates his belief that this should be done.

Mr. Austin next takes up the question whether the disorders within Palestine and the threats of armed resistance to partition by other Arab states constitute an actual or threatened breach of the peace. It is not necessary to review his arguments in this respect, for it is perfectly evident that both an actual and a threatened breach of the peace are present in Palestine.

If the Security Council finds this to be the fact, Mr. Austin declares, then it is required by the UN Charter to act, and the action which he clearly contemplates is the use of force to maintain peace in Palestine. Furthermore, Mr. Austin adds, if the Security Council decides that armed force is necessary, the United States "would be ready to consult under the Charter with a view to such action as may be necessary to maintain international peace."

In the next phase of the address Mr. Austin attempts to make a distinction between the use of armed force to maintain peace and the use of armed force to enforce partition. The Council, he says, has the power and the duty to do the first; it has no authority to undertake the latter.

This is equivocation, for the distinction is meaningless. Under whatever guise force is employed the intended result would be the same—the implementation of partition. There should be no misunderstanding about this, and it is regrettable that Mr. Austin was not more candid in his discussion of the point. For if the Arabs resist partition, as they say they intend to do, and if the United Nations sends an armed force to Palestine to maintain peace, the result is going to be a war between that armed force and the Arabs. It might prove to be a minor war or a serious one, but in either event the American people should not be led into it unless they know what is being undertaken and are prepared to go through with it.

In the Star's view, the most disturbing aspect of this long step toward a commitment to use American troops in Palestine is the failure of the administration to bring out into the open all of the factors and risks involved. Mr. Austin rests his case squarely and wholly on the proposition that we must support the United Nations in any decision made. This is a very important consideration, for it can hardly be doubted that a refusal by the United States to support a Security Council decision in this matter would be a very heavy blow to the United Nations. But there are other important considerations involved, and there ought to be some opportunity to bring them forward for public consideration.

One of these has to do with the oil of the Middle East. A war with the Arabs might close that source of supply. If so, how vital is this oil to the recovery of western Europe under the Marshall plan? And how vital would it be to us in the event of war with Russia?

Any mention of oil in this connection is apt to be condemned as a placing of sordid economic considerations ahead of considerations of justice and humaneness. But that is not the case. If this oil really is vital to our security or to the security of the western world, that is a consideration which has a significant bearing on what our course of action in Palestine should be. And it is a consideration which ought to be fully explored.

A second and even more important consideration involves the wisdom of opening Palestine and the Middle East to penetration by Russian troops. We propose to spend billions of dollars to keep Russia and her satellites out of western Europe. We are already spending hundreds of millions of dollars and incurring a risk of war to keep them out of Greece and Turkey. Yet under the apparent intent of Mr. Austin's proposal a United Nations force consisting primarily of Russian and American troops would be sent into Palestine. Once there they would outflank Greece and Turkey, and if they came in through Iran and Iraq or Syria the Russians could be expected to insist on maintaining troops in those countries to insure their lines of supply.

This might not be such a serious consideration if the good faith of the Russians could be relied upon; if it were reasonable to assume that their aim really is to uphold the United Nations and not to secure a foothold in the Middle East pursuant to the historic Russian ambition to expand in that direction. But can it be assumed that the Russians would act in good faith? We can see what has just happened in Czechoslovakia. We have a measure of their good faith in what has happened to joint undertakings in Germany and in Korea. Clearly, it would be folly raised to the nth degree to go into this undertaking with the Russians in any expectation that they will not act in furtherance of their own interests. If we invite the Red army into Palestine we had better consider carefully how we are going to get it out after the fight with the Arabs is over.

There may be other considerations of national interest at stake in this matter. But these are the principal ones. And if they are not given the consideration they deserve before we commit ourselves to any course of action in Palestine, we can expect the people of this country, when they learn the facts from bitter experience, to react in a manner which can do great injury to the best interests of all concerned.

Appellate Tribunal in Income-Tax Cases

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 3, 1948

Mr. DEVITT. Mr. Speaker, today I have introduced a bill which will have the effect of giving residents of the District of Columbia the right to use the Circuit Court of Appeals for the District of Columbia as an appellate tribunal in income-tax cases. An anomalous situation is presented by the present wording of the Internal Revenue Code as it pertains to appeals from the United States Tax Court. The statute provides that such appeals are reviewable by the circuit court of appeals for the circuit in which the internal revenue collector's office is located. Residents of the District of Columbia file their tax returns with the collector at Baltimore. Residents of Washington must, therefore, appeal their tax cases from the Tax Court in Washington to the Circuit Court of the Fourth Circuit. This requires the taxpayer to go to Richmond, Va., or Asheville, N. C.,

in order to argue his appeal. Why should he be obliged to do this when the United States Circuit Court of Appeals for the District of Columbia is located in his home town?

The bill which I have filed today gives the taxpayer the choice of filing his appeal in the circuit in which the internal revenue collector's office is located or in the circuit court of appeals for the circuit in which his principal place of business or principal office is located. In addition to making such appeals more convenient for the residents of the District of Columbia, it also makes the appellate courts more convenient for taxpayers in other sections of the country whose business organizations are creatures of the law of Delaware or some other State, but who maintain their principal place of business at a point far removed from the place of incorporation where, under the present statute, it is necessary to file such an appeal.

Economic Sanctions

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include a leading editorial which appeared in the Boston Post March 1, 1948, entitled "Economic Sanctions":

There are numerous reliable evaluations of the economy of the Soviet Union. These evaluations differ in many details but they are agreed upon one thing—the Soviet Union is striving to rebuild its heavy industry to produce war materials in quantity as a primary objective and to produce consumer goods as a secondary objective.

Today the three great powers at present opposing Soviet entry into the political vacuum of central Europe are agreed upon a protest against the seizure of Czechoslovakia and the inexorable pressure upon Finland. The protest is in the form of a polite diplomatic memorandum telling the dictators of the Politburo what they already know—that the western powers disapprove of Soviet tactics and Soviet unilateral action in central Europe.

More positive action must be taken if the Russians are to be stopped here and now before these tensions manufactured in the Kremlin result in war, a war no one wants and for which no one but the Russians are prepared.

Soviet ships are frequently seen in west coast harbors loading machinery and raw materials, exports from the United States to a nation which is a sworn and implacable enemy of the democratic way of life. Great Britain has a trade pact with the Soviet Union and is similarly engaged in exporting machinery and other primary industrial equipment to the Soviet Union.

In the so-called cold war of ideologies, the power of economic sanctions brought to bear upon the Soviet Union has been underestimated. The seizure of the entire Czechoslovak state, with its highly developed industrial complexes, is ample proof that the Russians are desperate for an efficient productive political entity within the sphere of Soviet domination. It is the use of economic sanctions that the Russians fear most.

Without the help of instruments, heavy equipment, and electrical generating equipment from outside of the Soviet Union it is not possible for the Russians to build an atomic fission plant like those at Oak Ridge and Hanford. Only the superb technical, industrial, and engineering might of the United States made it possible here. Industrially the Soviet Union is more than 50 years behind the United States.

It would seem, on the basis of these facts, that our foreign policy as it affects the Soviet Union should encompass an embargo against shipment of electrical generating equipment, instruments, heavy machinery, raw materials, railroad equipment, and rails to Russia.

It is possible to appraise the effect of economic sanctions applied against the Soviet Union. There is the case of Japan. The United States armed Japan for the eventual attack upon Pearl Harbor. If economic sanctions had been applied against Japan at the time of the Manchurian incident, even at the time of the attack upon Shanghai, the Japanese could not have gone to war. The claim by Japanese statesmen that the embargo finally applied against shipments to Japan precipitated the war has been disproved over and over again. The embargo was seized upon as justification for the attack.

Notes of protest to the Soviet Union are without merit, without force, and lack effect. Economic isolation of the Soviet Union, even breaking off diplomatic relations, would be far more effective in the present state of affairs.

When the people of the Soviet Union feel the pinch of world disapproval in their already depressed standard of living, there is hope for the counterrevolution, and not until then.

Let's Face It

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mrs. DOUGLAS. Mr. Speaker, we cannot let matters in Palestine drift.

If we are to maintain our moral leadership within the United Nations, we cannot continue our present course of vacillation. We must act at once to support partition.

Under permission to revise and extend my remarks, I wish to include a speech which I made on September 25, 1947, at the Hollywood Bowl in Los Angeles, Calif.:

LET'S FACE IT

History will record that World War II began in 1939. (For the Jews in Europe, World War II began 6 years earlier.) For the Jews in Europe, World War II began in 1933.

They were the first victims of Germanic sadism. It was their shame, grief, and despair that sounded the first alarm.

In the German plan for world domination, the first battle was fought against this helpless minority. The remnants of that minority have found no peace. It is 2 years after the defeat of the German armies and yet, they have found no peace. Two years after the war's end, and 250,000 of these miserable human beings find themselves still behind a barbed wire fence. For them freedom is still a word that has no meaning. Freedom means more than the dubious privilege of existing from day to day.

After 14 years, fundamental human rights are still denied them. Daily they watch their skills and talents and hopes rot away, while we ease our conscience with investigations and recommendations. We now have charts and graphs showing just how much the dignity of man can endure. Oh, yes—we keep a close watch on the patient. Periodically we take his pulse to reassure ourselves that the individual is still worth saving. And then we smugly consign our findings to the first convenient pigeonhole and put aside the ugly thought that we are perpetuating Hitler's crime until the hue and cry for the next report.

For those Jews who are fortunate, or unfortunate enough, as you please to view it, to be outside these reconstructed 1947 concentration camps, they are condemned to live in countries with proven anti-Semitic records; where the suspicion is ever present that one's neighbor may have been the informer or the murderer of one's loved ones.

Even in those countries where there was very little or no antisemitism before the war, the Jewis are met with sullen hostility and stubborn resistance when they seek to reestablish themselves.

The bloodstream of Europe is still poisoned with Hitler's propaganda.

Poverty and misery create new hate when the survivors returning to their homes, rightfully ask that their property be returned to them.

And for those who are rash enough to try and escape, they are beset on the high seas by their legal protector—beaten, gassed, murdered—and as a final indignity, returned to the land that for them is filled with graveyards, gas chambers, and human furnaces.

At the war's end, the Jews asked only that they be allowed to survive as free men in the land pledged to the Jewish people; that they might regain dignity; once more learn to hold up their heads.

If the statesmen of the world agreed that the Jews had a need of Palestine after World War I, how much greater is the need after World War II.

Palestine is the natural refuge.

But that refuge was closed to the Jews in 1939 by the British white paper. That refuge remains closed today.

In 1939, in the white paper, Great Britain broke the terms of the mandate.

Because of the impending war and the open collaboration between certain Arab leaders and the Germans, Great Britain sought to buy Arab loyalty from the Axis powers. The price was Jewish lives. The Jews were caught in 1939 power politics.

At the war's end it was to be expected that the mandatory power would hasten to repair the mortal injury to the people and the land entrusted to its care—that the doors of Palestine would be opened.

No one should forget that in 1939, had the doors of Palestine not been closed in the face of thousands of fleeting Jews, they would be alive today.

It should not be forgotten that thousands of Palestinian Jewish volunteers served in the Army, Navy, and Air Force on our side. It shouldn't be forgotten that when Montgomery's army was cut off from supplies, it was the Palestinians who manufactured the guns, the clothes, and spare parts that were needed.

It should not be forgotten that the Palestinians were not afraid to stand by the Allies even though they were but a small community surrounded by a hostile Arab world where neutrality thinly veiled pro-Axis sympathy and collaboration.

The white paper of 1939 did not buy Arab friendship. The Mufti fled to Berlin from where he directed the Arab fifth column.

Now that the war is over, it was to be expected that the doors of Palestine would be opened.

But the doors remain closed while the mandatory power proceeds, in the face of international agreements, to turn the Jewish homeland into another German ghetto.

Why? Why is this? Why has it happened? Why has a great nation so debased herself?

That is for Great Britain to answer.

But this I do know, and we must face it. The United States has as yet made no concrete contribution to the solution of the Palestinian problem.

We have talked. We have protested. We have sat on commissions. We have made reports and recommendations. We have shed tears. But we have done nothing concrete. It is easy enough to blame Great Britain, but it is high time we took an active hand ourselves in the solution.

If we had done something besides talk and advise, it might have been a different picture today.

Palestine cannot be isolated from the rest of the world. The world's problems must be settled in terms of people as the United Nations Charter affirms.

The United States is committed to uphold the Charter.

If the welfare of people is our high goal, and I believe it is, Palestine is as good a place to begin as Greece.

The United States has a legal and a moral responsibility in seeing that the terms of the Paletinian mandate are carried out. The United States endorsed the Balfour declaration of 1917. Great Britain was granted the mandate by the League of Nations in 1922.

The United States entered into a treaty with Great Britain establishing the British mandate over Palestine in 1924.

These international agreements are still valid. The charter of the United Nations guarantees their validity.

Great Britain hasn't sovereign power over Palestine. She can't do just as she pleases in Palestine.

Great Britain was granted the mandate over Palestine by 52 nations for the specific purpose of "establishing in Palestine a national homeland for the Jewish people."

In the Palestine mandate, approved by the Council of the League of Nations on the 24th of July 1922, it stated that, "recognition has thereby been given to the historical connection of the Jewish people with Palestine and to the grounds for reconstituting their national home in that country."

The British Government was made responsible "for placing the country under such political, administrative, and economic conditions as will secure the establishment of the Jewish National Home," and, with this end in view, was enjoined to "facilitate Jewish immigration" and "encourage * * * close settlement by Jews on the land."

The Arabs agreed to this mandate. They sat at the peace table.

An agreement was reached in 1919 at the Peace Conference between Emir Feisal and Dr. Chaim Weizmann. The terms of the agreement provided for the close cooperation between the Arabs and Jews in the building of a Jewish homeland.

And why shouldn't they have agreed. Palestine was to be carved from what had been the Turkish Empire before World War I. The Arabs were to receive over 1,000,000 square miles of that empire and the Jews 40,000 square miles. That contract with the Arabs has been kept.

The contract with the Jews has been broken.

The ink was hardly dry on the mandate when the Trans-Jordan was cut away from the land promised the Jews and closed to Jewish immigration.

In 1939 Palestine itself was virtually closed to Jewish immigration.

Yet the rights guaranteed the Jews under the mandate were very specific.

On the strength of international agreements and faith in these international agreements, the Jews of the world gave money to build the Jewish homeland in Palestine.

The men and women who have gone there have made the desert bloom. They have built cities, and universities, libraries, and scientific laboratories. They have brought health and new life to a feudal land, raised the standard of living of the native population.

The Jewish return to Palestine is unique in the history of colonization. They did not steal the land from the natives for a few dollars and then exploit them as cheap labor. They paid dearly for desert and marsh land from Arab chiefs and then they allowed the peasants who primitively tilled the soil for these Arab chiefs to remain on the land until they had time to find a new home. The Jews did not drive the Arabs from Palestine.

In the years between 1920–40, the Arab population doubled in Palestine, while in neighboring Trans-Jordan, over three times the size of Palestine, the Arab population remained static and impoverished, even though it too was under British mandate.

The Arabs in Palestine today enjoy a higher standard of living than in any part of the Arab world.

How then can the doors any longer remain closed in face of the Jewish record in Palestine and the needs of the Jews in Europe.

That is the question the United Nations must now answer for it has been put to them. The tragedy of Palestine and European Jewry is in their hands. They will speak for the conscience of the world.

The Jewish Agency for Palestine does not come before the bar of world opinion, hat in hand, as a new supplicant. They ask only that promises made be fulfilled; that commitments undertaken be completed; that international law be upheld; that a solemn international treaty not be treated as a scrap of paper.

The United Nations this spring called a special session to consider Palestine. A special committee on Palestine was set up. That committee has now made its report.

On 11 points there was unanimous agreement by the 11 members of the committee.

What was the first of those 11 points? I quote:

"The mandate for Palestine shall be terminated at the earliest practicable date."

The committee also unanimously reported:

1. The question of Palestine is of extreme urgency.

2. Immediate action must be taken to alleviate the plight of the survivors of European Jewry.

There was also a majority and a minority report. The majority report was signed by seven members, the minority signed by three members. Australia, abstained from voting but agreed to abide by any United Nations decision.

The majority recognized the legality and justice of an independent Jewish state.

It recommended (1) partition and (2) that the doors of Palestine be opened.

The majority report of the United Nations Special Committee on Palestine reflects the justice we can and must expect tomorrow.

Even though the Jewish homeland now outlined in it is but a small part of the territory guaranteed to the Jews by the world.

Even though for a second time Palestine is to be partitioned, the action committee of the Jewish agency has accepted the United Nations majority report as a basis of discussion. It has accepted the report with heavy heart to show it good faith. It did so to show its willingness to work toward world peace.

Secretary Marshall, speaking for the United States, in his opening address to the United Nations, endorsed the majority report and pledged United States support for the solution of the Palestine problem at this session of the General Assembly.

The United Nations Charter demands that the nations "establish conditions under which justice and respect for obligations arising from treaties and other sources of international law can be maintained."

Recommendations, resolutions, and advice to Great Britain are not enough.

The United Nations must take whatever action is necessary to make the majority report a reality.

Action must be based on legality and justice—not on Arab favor and oil. The Jews must not be caught again in power politics, 1947 power politics.

The United States must be willing and prepared to shoulder her share of the responsibility.

If Palestine must be policed until such time as independent Arab and Jewish states are established, the United States must be willing and prepared to lend a helping hand.

If Great Britain is unwilling or unable to share this responsibility, then it is up to the United States and the United Nations to see that the United Nations recommendations are put into effect.

We do not raise our voice tonight so much against the British or so much for the Jews as we do in support of justice that we may get on with the building of peace.

A Tribute to the Jewish War Veterans of the United States

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 3, 1948

Mr. JAVITS. Mr. Speaker, I consider it a privilege to insert in the CONGRESSIONAL RECORD the glowing tribute to the Jewish War Veterans of the United States which follows, on the occasion of their fifty-third anniversary; and I consider it an honor to be a member of that organization:

A TRIBUTE TO THE JEWISH WAR VETERANS OF THE UNITED STATES

(By Harry H. Schlacht)

The Jewish War Veterans of the United States represents the patriotic voice of American Jewry.

Our Nation salutes the Jewish War Veterans of the United States on their fifty-third anniversary.

The JWV has a glorious tradition.

It has rendered service with honor and distinction.

It has ever been on guard to preserve our priceless heritage.

The JWV is dedicated to God and country.

The Jewish War Veterans of the United States was founded on April 20, 1896, by men who fought with the Union Army during the Civil War.

It is today the second oldest veterans' organization in the United States.

It is headed by Brig. Gen. Julius Klein, a fearless fighter for freedom.

How proud the heritage of these noble men.

How inspiring the task which confronts them.

The Jewish War Veterans are pledged—

To maintain true allegiance to the United States of America.

To foster and perpetuate true Americanism.

To combat whatever tends to impair the efficiency and permanency of our blessed institutions.

To uphold the fair name of the Jew.

To fight his battles whenever unjustly assailed.

To combat the powers of bigotry and darkness.

To instill the love of God, country, and flag in all.

To preserve the doctrine of justice for all men.

To preserve the doctrine of universal liberty.

To preserve the spirit of comradeship.

To preserve the honored memories of Jewish war dead.

The Jewish War Veterans have always fought with head, with hand, and with heart for the country they love, for the institutions they cherish, and for the principles that gave it birth.

Let us unfold the scroll of the fighting Jews.

The Jews have played a glorious role in the development of American history since the birth of our Nation.

They have been identified with our colonial growth and helped finance the revolution.

They have served with gallantry under the leadership of Gen. George Washington.

They have fought in all the wars of the Republic.

They have won the highest commendation from every President of our Nation.

Let us call the roll of these gallant Jews in freedom's holy cause.

We see them at Valley Forge when the spirit of the American people hung low, and only the stout of heart stood fast and constant by Washington.

Of the 3,000 Jews in all the Colonies, 4 of them were lieutenants, 3 majors, 6 captains, and many in the ranks.

Lt. Col. Isaac Frank was aide-de-camp to General Washington.

Haym Salomon dedicated his entire fortune of $640,000 to the young Republic and later died impoverished.

We see them in the War of 1812.

We see Uriah P. Levy, commander of the brig-o-war *Argus*, run the British blockade and destroy 21 British merchantmen.

With tongue and pen Commander Levy succeeded in effecting the abolition of bodily punishment in the United States Navy.

He died a commodore, then the Navy's highest rank.

We see them in the Mexican War, the fight for Texas, and in the Seminole wars. Again the fighting Jew in action.

Again the healing Jew—in the person of Surg. Gen. David Deleon.

We see them in the Civil War rallying under the inspiration of Abraham Lincoln.

Of the 200,000 Jews then in the United States—10,000 saw active service, 7 received the Congressional Medal of Merit.

Frederick Knefler of Indiana rose to the rank of major general.

Edward S. Solomon was brigadier general. President Lincoln named Leopold Newman of New York a brigadier general while he lay dying of battle wounds received at Chancellorsville.

We see them in the Spanish-American War with William McKinley striking the shackles of bondage from a neighboring people and bringing forth an island republic.

America accepted the challenge of Spanish tyranny.

"Remember the *Maine*."

Fifteen Jews were on the ill-fated battleship. Sgt. Maurice Joost, of California, was the first to fall in the attack of Manila.

Five thousand intrepid Jewish volunteers gladly answered the call of their President.

We see them in World War I with Woodrow Wilson fighting to make the world safe for democracy.

Two hundred and fifty thousand Jews were in uniform, constituting 5 percent of the fighting forces.

Ten thousand Jews held commission ranks, and 1,000 Jews were cited for valor in action.

The greatest epic of courage ever to come out of that war—the exploits of the "Lost Battalion"—was a demonstration of conspicuous bravery.

We see them in World War II with Franklin D. Roosevelt fighting to make democracy safe for the world.

First American penetration of German soil was made by the Third Armored Division, commanded by Maj. Gen. Maurice Rose, who gave his life for his country.

First Japanese battleship hit in the war was the *Haruna*, bombed by a plane piloted by Capt. Colin Kelly, whose bombardier was Sgt. Meyer Levin.

First American assault boat to hit the shore of France on D-day was commanded by Lt. Abe Condiotti.

First four-medal winner in the American Army in World War II was Lt. Morris Berenson.

There are scores of Americans of Jewish faith whose names will live forever in the archives of our Government.

Travel where you may through American cemeteries on a thousand battlefields, travel where the delicate poppies carpet the earth with their rich red blossoms or in the glistening white stones rising from the flower-strewn mounds—

One beneath the cross of Christianity, and one beneath the star of David. Jew and Christian—pillowed in eternal glory.

They have fought, they have bled, they have worshipped, they have died together.

So hail, JWV—lovers of liberty—on this your glorious fifty-third anniversary.

Play your martial music, unfurl your battle-scarred colors, for you have demonstrated the truth that the American Jew is a patriot.

May your deeds fill your hearts with renewed patriotism.

May your deeds fill your minds with renewed resolves—that America shall ever be free.

May you continue to spread your ideals and may you help bring nearer to humanity the realization of Isaiah's dream of universal peace.

Guard blessed America.

God bless America.

Postal Employees Deserve Salary Increase

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. KEFAUVER. Mr. Speaker, a large amount of mail has been received in my office in recent months concerning the measures which are pending before your committee to increase the salaries of postal employees. I have also talked with a number of representatives of postal organizations about the matter and after close study it has become apparent to me that some wage adjustment is necessary.

The need and importance of such an increase was vividly demonstrated when I found that during this Eightieth Congress more than 40 bills have been introduced in the Senate and House of Representatives proposing increases ranging from a minimum of $480 a year to a maximum of $1,000 a year in postal salaries. This fact alone indicates that postal employees are not being adequately compensated.

As of February 1, 1948, the Bureau of Labor Statistics reported the cost of living to be 69 percent above the August 1939 level. To raise the salaries of postal employees to meet this increased cost would mean that we would have to increase their salaries 35 percent above the 1939 average, or slightly more than $850.

A recently released report from the same source shows that food costs on December 15, 1945, stood at 141.4 points, or 41.4 points above the 1935–39 level, as compared with 202.7 points on November 15, 1947. Thus, it was revealed that food costs have risen 43.4 percent in that period. These experts further estimated the continuing rise in the over-all cost of living to be 2 points each month at the present time. This would mean the increase in the cost of living from December 15, 1945, to January 1948 is 27.3 percent. Therefore, the wages of the postal employee have been cut by that amount for this period. Their take-home pay has been seriously reduced and corrective action is imperative.

Workers in industry have, through strikes, secured necessary wage adjustments. But postal employees and all Government workers, since their salaries are fixed by law, must appeal to Congress for relief.

Some facts that shed an interesting light on the subject are as follows:

Wages in retail trade have increased nearly 70 percent since 1939.

In manufacturing, the wages have increased 100 percent.

In coal mining they have gone up 175 percent.

In the postal service, 20 percent.

As against these incomes, the price of all items have climbed 65 percent above the 1935–39 level.

It is important that we secure and retain the high caliber of personnel which has brought the United States postal service to the unique position it now holds. It has become increasingly clear to postal officials that they cannot hope to recruit new personnel on the entirely inadequate entrance salary of $2,100 per annum. Actually, in terms of the purchasing power of the 1939 dollars, these people are receiving a wage of about $23.38 per week. This, if you please, before withholding tax and retirement deductions. Twenty-three dollars and thirty-eight cents was far from a sufficient wage in 1939, and the 1948 equivalent is even more grossly inadequate. New postal employees are required to serve a period of 11 years before reaching the maximum salary of $3,100. Under these conditions the job of carrying the mail has ceased to hold the promise of security it once offered to those potential applicants who pass the civil-service examination and otherwise meet the necessary requirements. I am convinced that if we are to maintain a high standard of efficiency and morale in the postal service, salaries must be made more attractive.

It is true that many new entrants in the postal service are attempting to augment their postal wages with income from outside employment. This action on their part results in many instances in a diminishing interest in the postal service.

Not only is there the danger of our mail service being impaired by the possibility of inadequate performance by overtired men who are trying to hold down two jobs, but we must also realize that in too many instances these men are leaving the postal service for other jobs that offer higher salaries. This sort of situation is one that inflicts considerable expense on the Government. A good deal of money is spent to train a postal recruit and before there is time to collect on the investment the new man becomes disillusioned. He gives up any idea he might have had about a postal career and sells his services elsewhere.

In addition to this, in a good many other cases we find the wives of workers invading the labor market so that through their efforts the strain on the family budget may be lessened to some extent.

This sort of existence is not good for the family. There can be no normal home life when the father and mother must combine their energies to support the family. We constantly are being reminded that special attention should be given to the prevention and control of juvenile delinquency—the Nation's No. 1 social enemy.

Gentlemen, the elimination of this grave problem must begin in the home. If we are to have healthy, normal youngsters we must provide them with the proper environment. Parents who must constantly spend their time worrying about the family's financial condition cannot give their children the guidance they so vitally need.

The last increase granted to postal employees effective January 1, 1946, was designed to at least partially assist them in meeting the then prevailing living costs. Actually this did not accomplish its purpose for as I have pointed out earlier, increases in prices continued, and according to these statistics the need for a salary adjustment for this group is greater now than ever before.

The postal service forms a large group of our most reliable public servants. The service they render is essential to the well-being of our Nation. This Congress has the opportunity to recognize and reward this faithful and untiring service in a highly justified manner. I sincerely hope this committee will favorably consider a permanent salary increase of not less than $800 per annum for postal employees.

What Shall We Do About the Marshall Plan?

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1948

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include the following address given on February 2, 1948, before the Economic Club of Detroit.

The plainest fact we face today is that we don't have one world, as we had hoped we would have. We have two worlds. Men and nations are split straight down the middle. Politically, economically, ideologically, and spiritually.

We don't believe in the same things and, therefore, are not pursuing the same objectives.

People can reach agreement no matter how far apart they are in the beginning if both sides want good relations. But if, for whatever reason, either side does not want agreement, then there is no way you can get them together just by negotiation.

The second plainest fact is that we cannot go on indefinitely as two worlds. We must become one world. This planet is too shrunken. Modern means of communication and transportation are so efficient, we are so dependent on each other for all sorts of raw materials and manufactured commodities, for economic as well as security reasons, that it is inconceivable we can go on indefinitely as we are.

And that brings us to a third plain fact, that there are only 2 ways by which the two worlds can become one. One is by conquest; the other is by agreement.

It seems to me there have been in all history but two basic forms or philosophies of government; one is the philosophy perhaps best described as dictatorship. It may be dictatorship by a man or by a party. We have seen recent examples of that abroad, some nearer home. It may be dictatorship by a class, ranging from the aristocracy to the proletariat. It may be dictatorship by a race, the Nordic race, the Yamato race, etc. Or it may be dictatorship by a bloc, economic or otherwise. This is the form democracies have tended to develop.

The key characteristic of a dictatorship is that it tolerates no opposition. One group imposes its will, and the opposition has no rights.

Over against that is the other basic philosophy of government which I would describe by the word "federation"—federation of all the classes, all the races, all the blocs, working for the good of all as the way to promote the good of each. It provides a mechanism by which one group can come to power and govern—you have got to have some way by which one group or another gets power to govern. But there are certain rights reserved for the opposition which the man or group in power cannot override, cannot suppress. Perhaps the most important right reserved for the opposition is the right to try to become the governing power.

Today's two worlds must move either toward dictatorship by one over the other or toward some sort of voluntary federation.

Mr. Stalin understands perfectly that they must come together. He wrote 20 years ago:

"It is inconceivable that the Soviet Republic can exist for an indefinite period side by side with western imperialist states." (By imperialist he means, of course, non-Communist states.)

He recognizes the split frankly. Why should we imagine it isn't there? He added: "Ultimately one or the other must conquer." He apparently thinks the only way we can get together is by conquest. You and I don't believe in or want that method. We don't want conquest of us by them, but we are not in the least interested in conquest of them by us.

Our task then in the year 1948, at this great crossroads in history, is to try to get the two worlds together by agreement; try to get a set of circumstances where there is more to gain for both sides by coming together in common acceptance of certain mutually agreed upon rules of behavior than there is by continuing disagreement or by conquest.

On the street corner we have red and green lights. No matter how unlike the cars and the drivers, we have agreed we are all going to follow a certain pattern of behavior—we will all stop when the light is red and we will all go when it is green. That doesn't mean we cease being capitalists and Communists, Republicans and Democrats, Catholics and Protestants and Jews, rich and poor. We maintain our different ideas and goals, but we have agreed that it is mutually beneficial, it is to everybody's advantage for everybody to stop when it is red and go when it is green.

Can we get these two worlds together on some such basis—mutual agreement as to the traffic rules by which life and intercourse, exchange of goods, personalities, and ideas are to be carried on on this planet? If we cannot, then we are doomed to another war, with little hope our system can survive even if we win that war.

To achieve that agreement is the job of our foreign policy.

Well, how have we tried to do it heretofore? Our policy for 2 years prior to VJ-day and for a year and a half thereafter was to try to do it by appeasement. Our leaders assumed that the only way we could get along with Russia was by yielding to her. They feared that not to appease her might lead to war; and we didn't want war. So we appeased. It was a policy that led to unmitigated disaster. Appeasement of aggression by an expanding military dictatorship always leads to disaster. Show me one exception.

We tried to appease the Japanese militarists. We thought we could buy them off by shipping scrap iron and oil for them to use against China. Did it lead to peace with Japan? No; it led straight to war.

England and France didn't want war with Hitler. So they appeased him—with other people's territory. They tried to buy him off by giving him part of Czechoslovakia. Did it lead to peace with Hitler? No; it led straight to war.

Russia tried to get peace with Hitler, as you have all read in the documents recently released, by giving him other people's territory—in this case, Poland's. Did it lead to peace? No; it led straight to war.

Appeasement of aggression always leads either to abject surrender or to resistance, by war, if necessary, and we will not abjectly surrender.

Despite tragic lessons, our leaders at Yalta and elsewhere committed the incredible folly of risking everything on one gamble—namely, that by yielding to Russia, we could get the confidence and good will of the politburo. They thought the way to get security for our Nation and peace for the world was to insist on believing that the tough realists in the Kremlin aren't really Communists—they are just Jeffersonian Democrats. The results of such naive folly are apparent.

When at last the sound instincts of the people rebelled against further attempts to get peace by sacrificing our principles and other people's territory, Henry Wallace accused America of getting tough with Russia, of provoking her to aggressive action against other countries. That is plain distortion of the truth. Our change of attitude was the too-long-delayed consequence, not the cause of Russia's aggression.

What are the facts? On VJ-day the United States had the greatest military strength any country in history ever had—in the air, on the land, on the sea, and under the sea. If we had had a single grain of imperialism in our national soul, if we had had a single design on Russia or on anyone else we could have imposed our will. If we had had a grain of imperialism in our national soul, we would have. They were all scraping the bottom of the bar-

rel and our strength was at an all-time high. But what did we do with our military superiority? We tore it all to pieces and threw it away in 6 months. Does that look like imperialism? And yet we are the one accused of getting tough.

Somebody will say, "We could afford to do that because we had the super ace, the atomic bomb." Well, what did we do with that? We said, "Russia, we will give that to you, too, subject only to the condition that any use you make of atomic energy be under the full inspection and supervision of an international commission, without any vetoes—just the same as any use we make of atomic energy, our own invention, our own Oak Ridge, will be under the full inspection and supervision of that same international commission, without any vetoes by us either."

Actually that was the most radical, the most far-reaching proposal any strong, sovereign, victorious nation ever made in history. And it was made by so-called reactionary, capitalistic Uncle Sam.

How can anybody be taken in by charges that we are the ones getting tough? Look at the deed.

We went further. We turned our faces in the other direction while Russia destroyed the independence of half a dozen countries in Eastern Europe, whose independence had been proclaimed to the world as the reason for the war in the first place.

We accepted her thesis that in order to be secure she had to impose her will on almost a hundred million people in Eastern Europe who are not Russians.

We went even further. In order to assure her that we would not interfere with what she was doing in Eastern Europe, in flagrant violation of her pledges under the Atlantic Charter, we threw the Charter out of the window. One of its two authors, our President, publicly repudiated it, said it wasn't an official document, just some notes.

Did such appeasement lead to better relations? No. They got steadily worse. Surely it is clear that appeasement is not the way to get agreement.

What next? We finally woke up with a start in March 1947, when the British Government belatedly realized that it could not carry all its obligations, and it dropped the Greece mess in our laps almost on 24 hours' notice. We had to move on from the appeasement stage. If we yielded there to Soviet pressure, the Mediterranean would soon be a Russian lake. Because if Greece were to go down, Turkey would be outflanked and would go down within a year and all the Middle East would go with it.

Then Italy and France would go. Actually Greece would have been taken over by the Communist minority in March, Italy in April, and France in May or June, if we had not acted. The timetable was all set up. Without vigorous help from us nothing could have stopped Russia from gaining effective control of the whole Mediterranean area last year.

Then England would have been neutralized, as she almost was at the end of the last war by the rocket bomb alone. She couldn't move under her own power, and she couldn't again be a base for us as she was in the last two wars.

Then Germany would have been effectively encircled and the battle for Europe would have been over.

For the crux of the struggle in Europe is which way Germany is to go. We know who defeated the Germans. But we won't know who won World War II until it is clear who wins the Germans—wins their minds and hearts. They occupy a strategically advantageous central position, they have great mineral resources, and they are 68,000,000 people with a real genius for organization. They have unusual abilities along scientific and mechanical and inventive lines. They have proved twice in our lifetime they have the capacity to commit themselves to an idea, and, no matter whether it is good or bad, pursue that idea with singleness of purpose and with extraordinary efficiency and devotion. Which way are the Germans to go? That will largely determine the fate of Europe.

Stalin couldn't get western Germany by direct action short of war. So he set out to get it by a flanking movement beginning in Greece. If it hadn't been for our taking the strong stand we did in Greece—inexcusable as it was that we should have made the Tehran and Yalta deals which gave Russia the Balkans and the chance to put such pressure on Greece—the fact remains that in a few months all of Europe would have been under the control of Russian satellites. That, of course, was one reason Marshall couldn't get anywhere with Molotov and Stalin at Moscow last spring. Why should they enter into any agreement that would limit their freedom of action with respect to Germany, if within a few months, as they expected, they were going to have Germany in the bag—by our default?

So when almost a year ago we moved on from the appeasement stage to the resistance stage, the so-called Truman doctrine—it wasn't just the fate of a few little Greek peninsulas at stake. The fate of Turkey, the fate of Italy, the fate of France, England, and Germany, the fate of Europe were at stake. That meant the fate of north Africa was at stake. And that meant the security of South America was involved. Dakar is only half as far from the bulge of Brazil as is the United States. Our own security, even in the Western Hemisphere, was involved.

But the Truman doctrine could give only a temporary respite. It was a sort of hold-that-line policy. It bought us a little time.

When I was a boy out in Nebraska we had a couple of bad prairie fires. The first thing we did was get out a team of horses and dig a furrow across its path. Can one furrow of moist, black soil stop a prairie fire? No. The heat of a blazing prairie fire is so fierce it will jump over a narrow furrow. But you can use that furrow as a base from which to start a backfire against the main fire—that way you can stop it.

The Truman doctrine was merely such a furrow. From it we had to start a backfire, which is the principle involved in what has been called the Marshall plan: help resist further expansion of the area of tyranny and dictatorship; at the same time, assist expansion of the area of freedom and federation.

We must stop, if possible, the alarming spread of slavery and the contraction of liberty which have been going on during the last 20 or 25 years. We must reverse those trends and resume the trends in the other direction that prevailed from 1776 to 1931.

That is the idea behind the European recovery plan. We are now in the midst of a great national debate on the course we should adopt, a course which will determine our future for years and decades to come.

It seems to me we can reduce the problem to two sets of calculated risks.

First, if we don't promptly carry out some program of helping these European nations get on their feet, so that they can become sound economically and strong in the sense of presenting a united military barrier to Russian aggression either from without their borders or from within, then they will go down one by one; and most of Europe will be under the effective control of the Soviet Union, and so will much of Asia by the end of this year.

If we do carry out such a program, there is a chance the 16 western European nations can be saved, and an area of freedom preserved from which it can perhaps penetrate back into eastern Europe, until ultimately the Soviets will crack. Their whole system is so immoral, so cruel, that it must crack eventually. But we can't sit down and wait for that to happen. That would be like saying, "Don't worry about the flood. A flood always goes down." Certainly, but I don't want it to take my house with it. A fire, too, always burns out. But that gives me no consolation if it first destroys my city.

If we don't give assistance to these nations, there is no hope. If we do, there is hope. Therefore, we should give it.

That is the way you would reason if you consider only the first set of alternatives.

But there is a second set of calculated risks which cannot be ignored. They rise from the plain fact that we can't carry out this huge program without weakening the United States—at least temporarily—draining its limited resources, putting a severe strain on our own economy.

It isn't the money that is so important. If we should be left without friends and allies, the cost in taxes for our own armaments each year would be greater than the whole contemplated cost of the European recovery plan for 4 years. We originally thought our budget for defense this year would be about six or seven billions. Before we were through, it was eleven. If Europe goes down, it will be eighteen billion by next year. And still more the next year; don't make any mistake about that.

It is the drain on our resources that is most dangerous—the necessity to export materials and commodities already in short supply, the increase in inflationary pressures that raises prices and lowers standards of living here, causing unrest and upsetting our whole economy. These are far more serious than just the dollars involved.

If, by doing this, we can succeed in producing a compensating increase in the strength of those countries—which will add to our own security, reduce the burdens for our own armaments, and preserve and expand the area of freedom with which we can trade in the future—then it is a justifiable risk, even a sound investment.

On the other hand, if we don't succeed, and at the end of 1952 when American aid ends, those nations still go down, or are still economically unsound and insolvent, then all we will have done is endangered, perhaps destroyed our own soundness—and not have done them any long-term good in the process.

In this kind of a world, somebody somewhere has got to stay free, somebody has got to stay strong, somebody has got to be able to hold aloft the torch of freedom to which people can at least look with hope until the day comes when they themselves can once more rally to it. The United States is their only hope and we dare not allow it to falter.

I was in Europe last fall. Our committee visited 22 countries, and in each we talked with the cabinet or some of its members. One of the most instructive visits was in Sweden. They adopted a sort of Marshall plan right after the war. They had come through the war years unscathed, in fact had prospered. They had a praiseworthy humanitarian urge to help their neighbors, and a sense of special obligation, as have we, because they had been spared the horrors and the destruction of war and invasion. Besides it would be good business to get the economies of their customers functioning again. So they embarked upon a plan to help Norway, Denmark, Finland, and others recover. They made loans and grants which represented more in proportion to their national wealth than seventeen billions is in proportion to ours. But they now find they got in too deep, and they have to come to us to bail them out.

Well, if the United States miscalculates and gets in too deep, who will or can bail us out? That is the hard risk we cannot ignore.

How can we resolve this second set of calculated risks? It seems to me that if we

can be reasonably sure of a better than 50–50 chance of success, then we ought to make the effort because the risks in allowing Europe to go by default are plain and inescapable and exceedingly grave.

If there isn't a better than 50–50 chance of success, then we have no right to take such a gamble. Instead we should do everything possible to keep our country strong, sound, and solvent—and hope the Soviet-dominated part of the world cracks up before we do.

How can we estimate the chances of success?

There are about five criteria which seem to me the most important, probably the minimum that must be met if there is to be a better than 50–50 chance of success.

The first is this:

No matter how much we put in, the European recovery plan cannot succeed unless these 16 nations in Europe are willing to make a far more vigorous and aggressive attack upon their own economic problems, both individually and collectively, than most of them have been willing to make up to the present.

Just to restore France as she was, to restore England as she was, to restore Norway and Italy, and so on, as they were, won't be good enough, because most of them were unsound before. The war merely revealed how badly they were running downhill, and accelerated the rate. Western Europe was not self-sustaining even when it was able to trade with eastern Europe, which is the surplus area of Europe.

If Europe, when it was all together, was not basically sound economically, what is it now with eastern Europe cut off? And how can the western European nations recover, if each of the 16 insists on remaining a separate individual economic unit?

We talked about this to almost every cabinet group we met in Europe. Frequently I said something like this: "Many people seem to think that the main reason America is strong today is just because we have a large population, great resources, and were spared the destruction of war. Those are important, but the single biggest reason is because of the system our forefathers had the sense to establish, a system under which we have 48 separate political units, but only one economic unit.

"My State is Minnesota. We have high-grade iron ore, but we can't get prosperous on iron ore unless we can get it with good coal. We don't have coal in Minnesota. Where is the coal? In West Virginia, a thousand miles away.

"Why were we able to grow so strong? Because the iron ore from Minnesota and the coal from West Virginia can get together in Pittsburgh and Cleveland and Detroit and Gary, Ind., without going through three or four sets of currencies and customs barriers, with delays, confusion, and loss of time and money at each."

If the basic system which has prevailed in Europe is continued it will be impossible for any amount of money or goods poured into Europe to cure the situation. It is like giving a sick patient palliative transfusions and no real remedies. He looks a little better after each transfusion but when they end he collapses.

Will the countries take the steps necessary to remedy their underlying maladies?

Last fall when I was there I had serious doubts about it. For example, I was more discouraged in England than almost anywhere else. We talked with Mr. Bevin and other members of the British Cabinet. Mr. Attlee was away that week end for a vacation. We talked, among other things, about coal production, because that is the crux of the situation today, just as coal was the major factor that enabled the enterprising Britishers of yesterday to build the greatest empire of all time. Someone has rightly said that England could become great because it is an island lying on a bed of coal.

It was their coal that enabled them to make steel from their iron ore, to build ships, and power the ships, and send their products, manufactured more cheaply by coal than others could make them by hand, to the ends of the earth, exchange them for raw materials, bring them back, process them with coal and send them out again. Besides they had surpluses of coal which they could export to Sweden in exchange for iron ore, to Norway for wood pulp and sardines, to France for textiles and silks and wines, to Italy for fruits, vegetables, olive oil, to Denmark for butter, eggs, bacon, and so on.

Then England failed to mine enough coal. The production rate has been steadily falling for many years. To be sure most of the best beds have been worked, the seams are narrow and crooked and the mines are deeper, but there is still plenty of coal in England for two or three hundred years.

One reason for the acute crisis is that during the six war years, thousands and thousands of British boys, instead of following their fathers into the mines, went off to war. They encountered the hazards of battle but at least they could be in the fresh air. Many of them are not willing to go back into the coal mines.

But more important and basic has been the long-standing opposition of British labor leaders and miners to mechanization of the mines. That was understandable, though shortsighted. They remembered the long years of unemployment when they were on the dole. So they fought against any machinery that would increase production, because a machine might put a man out of work. As a result coal production went down and down and the price went up. They didn't realize they were pricing their coal out of the world market as against coal produced by machines, until they would have, not a few miners, but most of the industry out of work.

Our American miners by and large also opposed mechanization, but they had a tough leader who went into their conventions year after year, slugged it out with them and won by sheer force of vision and courage. He cooperated with management to mechanize the mines until today the American miner produces four to five tons a day, while the British miner can seldom produce one ton. The American miner has become one of the best paid workers in the world as a result. John L. Lewis gets enough brickbats so that he ought to have a bouquet when he deserves one.

There is another reason for England's troubles. The Labor Party for decades advocated nationalization of the mines. That was supposed to cure all the problems. But could anyone expect the owners to put their money into improving the mines if they might then be taken over at a confiscatory rate?

The different policies, economic and political, in our two countries has produced this illuminating set of figures; more than 70 percent of the net profits of American coal mines in the last 20 years has been plowed back into improvement of the mines; in England less than 20 percent. That tells the whole story.

Why did capital not act in the normal way in England as it did in America? Because there was no incentive. Neither men nor money will work without incentive. The state then resorts to compulsion, and it always ultimately fails.

The labor groups in England focused their attention so completely on getting a more equitable distribution of goods and money that they forgot that first you have to produce or there isn't anything to distribute—except cold, hunger, and want. Like many reformers, in their emphasis on the weaknesses of the capitalistic system they forgot its very great strength, its capacity to get production.

The first requirement in England and in Europe is greater production. Lack of that is the cause of most of their troubles which it is proposed to remedy by the Marshall plan. Now can they get the productive mechanism going? We asked Mr. Bevin what they were doing about this. He said they had just reduced the hours of work from 47 to 40 a week. They had promised it, and they had to do it. That is a strange way to begin increasing production.

When he said, "We must have your help," we made bold to ask, "Mr. Secretary, do you really think we can go back to the people of the United States and persuade them they must work harder to save England than the English are willing to work to save England?"

He was asking for the gold buried in Kentucky. But far more essential for their recovery is the coal buried in England.

On the basis of the state of affairs in England in September, I could see little hope. You can't save a patient no matter how much medicine you pour into him if he hasn't the will to do the things necessary for his recovery.

The British have a magnificent negative courage. One always comes away with the highest respect and admiration for their unbelievable ability to endure. But what they need is more than negative courage to endure. They have got to regain a positive imaginative courage to correct.

Contrast their leadership with that in Holland. One night we talked to the Dutch cabinet, and a leading minister said to us, "Imagine the difficulty of my position. I am a Labor Party leader. I am a Socialist. I have worked all my life to get my party into power so that we could reduce hours, increase wages, improve working conditions, and carry out the reforms for which we have campaigned. And then we come to power at a time when Holland is on her back, and I have to go down to my own party's convention and tell them we can't shorten the hours of work per week. We have got to lengthen them. We simply can't carry out our promises. We have to put them aside until Holland is restored."

He had political courage. He had the realism to subordinate dogma to facts. Holland's difficulties were about as great as England's but her leaders had the will and the courage to attack those difficulties positively and Holland has bounced back surprisingly.

Look at the cabinet of Belgium. Of all the cabinets we visited, this one was to me the most impressive. The average age of its members is 42. Most are veterans of the war. The Deputy Prime Minister is about 38. The Minister of Labor is 32. They weren't sitting down resigning themselves to their difficulties—just pulling their belts tighter. They were grabbing hold of the difficulties with imagination and vigor. As a result Belgium has recovered more rapidly than any other country, even though she too was occupied 5 years.

Fortunately, for whatever reason, some of the leaders in England woke up about September to the fact that the United States couldn't save them unless they were willing to work harder and more realistically. They modified their dogmas somewhat, set aside some of their program, instituted some incentives, and as a result every week since, with the exception of thet Christmas holiday, there has been an increase in coal production. There is real hope in the situation today as there wasn't last fall.

Look at France for a moment. We talked to members of the French cabinet about closer economic cooperation in Europe. Mr. Ramadier was Prime Minister—a fine, genial old gentleman and scholar. He said, "Of course, these things ought to be done, we know that, but it is very difficult to do them. France is an old country and we have great traditions." Everywhere we found that the greater a nation's past, the more it is ham-

pered by its traditions. That, too, is understandable. We know they can't accomplish all the changes overnight or in a year or in a decade, but they never can change at all, or even survive, unless they are willing to start, and start now.

I ventured to say, "Mr. Prime Minister, we in the United States have some traditions, too. We are not a young republic. We are the oldest of the republics. What is our No. 1 tradition—our most deep-rooted and firmly held tradition? It is this: Don't have anything to do with Europe. You expect us to reverse our strongest tradition, but you aren't willing to attempt to modify your own traditions."

We talked about the problem of getting Germany back into production. It is admittedly a tough question. If we had been through what they have at the hands of the Germans, we doubtless would feel as they do. I don't blame them for the way they feel, but the fact remains they cannot solve the problems with their emotions and fears.

The Belgians and the Dutch fear the German military just as much as France does, but they are facing the problem with their heads, rather than with their hearts. They know if the Germans aren't permitted to go back to work at industrial production, turning out steel and machinery and chemicals and fertilizer, France, too, cannot recover, Belgium and Holland cannot recover—Europe cannot recover. To wreck German industry isn't just destroying Germany; it is destroying themselves, too.

For the Ruhr is more than a German asset. The Ruhr is a European asset. Western Europe simply cannot become a sound economic organism until the Ruhr is put to work, producing manufactured goods to ship abroad to get foreign exchange to buy the foods and raw materials Europe must have to live. Western Europeans must find other ways than destruction of Germany to get the security they properly want and need.

They are at last beginning, I believe, to wake up to the hard fact that their choice is not between allowing the Germans to produce or not allowing them to produce. Their choice is between having the Germans produce with and for western Europe, or having them produce for Russia. If western Europe and ourselves do not permit, even assist the Germans to get on their feet to produce the goods of peace, do not succeed in tying their economy in with western Europe's so it is more profitable for them to go along with the peaceful democratic nations of the world than with the totalitarians, then the unrest in Germany will grow until it becomes uncontrollable by us, communism will win, and the Germans will be put to work with their production used by and for the Soviet Union.

The Germans will either be working with the free nations, or they will be working for the Soviet. That is the only choice France has.

In summary, the question in western Europe is not whether they are to get together or not get together. The question is whether they will get together voluntarily on some basis of federation, or be eventually gotten together involuntarily on the basis of dictatorship.

The 16 free nations and western Germany are now like our 13 colonies were. Either they will hang together, or they will hang separately.

Eastern Europe too was made up of nations that were very nationalistic. Bulgaria was very jealous of her complete independence, economically as well as politically. So was Poland, and so were the rest of them. Believe me, they are not independent now. The wheat from Bulgaria, the oil from Rumania, the coal from Poland, all go where the Soviet Union decides. They are already one economic unit and are moving rapidly toward, in effect, political union, whether they like it or not. With Russia's own great manpower and resources and those of the eastern European nations working as one economic unit they have an enormous advantage over divided Western Europe. The western nations will either get together voluntarily and stay free, or they will be gotten together involuntary and be slaves.

We can't succeed in producing economic recovery, no matter how much money and goods and effort we put in, unless they themselves are willing to make a more determined collective attack on their problems. I think there is now a 75-percent chance that they will do it. They have gotten a glimpse of what goes on behind the iron curtain. They have seen the strength and the intentions of their own Communist minorities. They desire freedom now as never before. I think they are willing to make the necessary effort—if they have hope of assistance. On this first criterion I think our aid program is justified—and necessary.

The second condition necessary to give ERP a 50–50 chance of success is that Asia be kept free too, because if Asia is lost to the Soviets, in my judgment, we will lose ultimately in Europe also.

As China goes, so will go Asia. I talked about the situation in China when I was with you last, 3 years ago. Today, as then, the key question is not whether we are going to help the Chinese; it is whether they are to be in a position to help us; whether we are going to be able the keep the Chinese free and on our side in the struggle between the two worlds.

I am willing to hazard the prediction that future historians will agree that World War II from the beginning was a war more than anything else to determine who is going to control the development of Asia.

Suppose we go into the Marshall plan in Europe and we succeed even better than anybody expects. What do we have? Still two worlds: On one side Russia with her satellites; and on the other these 16 countries of Europe, the United States, Canada, Australia, and a few others—two great armed camps. Who holds the balance of power? The billion and a quarter people who live in Asia.

The crucial question of the twentieth century is this: Which way are the people of Asia going? With the free world, as overwhelmingly they prefer? Or in helplessness and despair with the totalitarian police state world?

Lenin understood that. He wrote about 1921 that the final decision would be made by the millions in Asia. In contrast, our Government's actions, or inaction, indicate it considers that what happens in Asia is of relatively little or no concern to us. Some of our key leaders have systematically built up and encouraged the widely-held attitude that if the Chinese Government—exhausted by 8 years of war against Japan and 2 against a Communist rebellion—can't solve its problems, let the Communists take over.

But for what did we fight the last war, pray tell? If China and Asia are not to be free then it would have been better for us to have them under Japan than under Russia. If China is not to be free, then the war against Japan was not only useless—it was criminal—because we are left with less security than before we resisted Japan.

If Russia is to be the strongest power in Europe, it would have been better for us to have Japan dominant in Asia rather than to have Russia the strongest power in both Europe and Asia.

One hundred thousand American boys died to win victory in the Pacific and it is all but thrown away in two and a half years by bungling, or worse, in our own Government, especially in our State Department.

When in history did a nation ever lose so much as we have lost by drift, indecision, default, and folly since VJ-day?

If China doesn't have the right kind of help from us quickly, she will collapse or be taken over by the Communists, just as Greece, Italy and France would have months ago if they had not had very decisive help—and as they and others will still collapse without help from us.

The State Department spokesmen say these European countries can't recover without help. Then they say that we can't help China until she recovers. That is precisely like saying to a desperately sick man, "You get well first and then we will give you the penicillin." But China cannot recover until she has help.

Conditions are indeed bad in China. During every prolonged invasion anywhere there is a break-down of morals and of morale, along with economic and political deterioration. Our own South didn't look very good, either, after Sherman got through with it. It took it 50 years to recover from 1 or 2 years of occupation.

But the Chinese had 8 years of invasion and occupation by the Japanese—8 years of disruption of their economy, their communications, their society. Eight years in which their people were taught that the ancient vices were now virtues, that it was patriotic and therefore honorable to cheat and steal and defraud the invader. Then the war ended and some Americans naively imagined those new habits could be reversed overnight—just like turning off the faucet that gives hot water and turning on another and getting cold water.

China has got to have help or it cannot resist the Communist inroads at a time when the Government and the economy are so weakened. If China goes down, then Russia will have control, through her ruthlessly efficient Communist fifth column, of the greatest body of manpower on earth, occupying the strategically advantageous central position—the hub—in Asia, just as Germany is the hub in Europe.

Then the rest of east Asia can be taken under the Soviet wing almost at will. The assassination of Mr. Gandhi removed almost the last remaining bulwark in that land against extreme violence and confusion which would leave the country so divided and chaotic that a disciplined handful of Communists with a program of attractive promises can take over. In no country they have seized does the hard core of Communist rulers constitute more than 2 or 3 percent of the people.

Then Korea will go.

Three months ago in Korea I talked one night to Mr. Kim Koo, who from about 1905 to 1945 was the head of the Korean Government-in-exile in China. After VJ-day, he was able to come back to Korea.

I said to him, "What should America do now? We have delayed 2 years hoping we could get agreement with the Russians that would reunite Korea, but cooperation with them hasn't worked here any better than anywhere else. Should we delay longer, waiting for the UN Commission to see what it can do? Should we go ahead in south Korea anyway, hold elections, set up a defense force and try to get the country on its feet and withdraw our forces? Or what?"

He studied a minute and then said, "It doesn't make any difference what you do now. There isn't any way to get Korea so that she can be independent and secure and self-sustaining, until you solve the Communist problem across the border in Manchuria."

He knows that if Russia controls Manchuria, the Communists, when we leave Korea, will take it over too.

Japan also will go. I talked one night for an hour and a half with General MacArthur, one of the greatest men I have ever met. He said he was no longer worried about Japan as such. What kept him awake at night, he said, is the situation in China.

All we do in Japan will stand or fall on what happens in China. Japan's problem now is basically economic. She simply doesn't have the raw materials to enable her to live without access to those of Manchuria, China, and other parts of Asia. She must either be supported indefinitely by us, or she must be able to restore much of her prewar pattern of trade with the Asiatic Continent, which she can never do if it is kept in chaos or is cut off by the iron curtain, as north Korea is cut off from south Korea and eastern Europe from western Europe.

So we have either got to go back on our pledges, turn over the Japanese to Russian control, and abandon the western Pacific, or else we have got to subsidize Japan with hundreds of millions of your dollars each year and defend her with your boys. Don't make any mistake about that.

We disarmed Japan. We wrote into her new constitution she never again can go to war. Therefore she can't have an army. What happens when we walk out? Why, of course, the Soviets take over.

The Japanese are realistic. They are about to write us off as a bunch of politically immature incompetents when it comes to handling our foreign relations. They are resigning themselves to what now seems to them almost inevitable.

Then the Philippines will go. Let no one imagine the Philippine Republic can ever become self-sustaining or secure, or long remain free, if the continent off which it lies and on which it must depend for most of its future trade is controlled by the Soviets.

Still further, how can the Marshall plan get England and Holland on their own feet and off the American taxpayers' back if East Asia is under the Soviets? They would not have been solvent before without their trade with the Far East. It was its tin, rubber, spices, oil, etc., which gave them most of the dollars they had then and lack of which forces us to supply them now. Does anyone think we are going to be able to stop subsidizing the British and the Netherlands in 1952 if they have not been able to restore, on a mutually beneficial basis, something like their prewar pattern of trade with those areas formerly their colonies?

Most important of all, Russia will have a far better chance of defeating the recovery program in Europe, if she can get first China and then East Asia under her control so she can focus her efforts more boldly and aggressively against our efforts in Europe.

We seem intent on making the same mistake a second time in one decade—the mistake of thinking that what happens in Europe is more important to us than what happens in Asia; or thinking that events in Asia are less likely to get us into war than those in Europe.

But we did not get into the last war in Europe. Hitler did not move against us until Japan had attacked us so he knew we would have to fight a two-front war. And Japan did not attack us until she thought she had China broken so she wouldn't have to fight a two-front war.

The tough men in the Kremlin are hardly so dumb as to get themselves into a two-front war. They are most unlikely to risk a showdown with us in Europe unless they can first get satellites and security along their Asiatic border so that if war comes they won't have to fight on two fronts.

It may well be that our single best hope of preventing World War III is to keep Russia compelled to divide her forces, her attention, her efforts between her east and her west. If she can beguile us into looking in the other direction until China goes down—as all our left wingers and their dupes have tried for several years, and successfully, to persuade us to do—then Russia can concentrate all her attention and her efforts on defeating recovery in Europe, which she has officially announced she is determined to do. My guess is that under such circumstances she can probably succeed. I don't like this conclusion but I cannot escape it.

So our choice in Asia is not between helping the present Chinese Government, and something better. I wish it were. Our choice is between the Chinese Government and the Communists—which is infinitely worse.

Right after Pearl Harbor the United States Congress passed a bill appropriating $500,000,000 for China. It wasn't a loan; it was an outright grant. It was passed with little debate and without a dissenting vote.

Why? Because there was a good government in China? An efficient government? A noncorrupt government? No, indeed. It was the very same government that is there now—the one we are being told is too bad for us to support or associate with. It was passed because we desperately needed China on our side.

Well, is an independent and friendly China less vital to our security now than then? I think not.

If it hadn't been so humiliating, it would have been comical to witness the great United States that had been supplying the Japanese militarists against China now practically down on its knees, pleading, "Please, China, please hang on, hold the Japanese three long years until we can rebuild our sunk navy, capture the islands one by one, develop the B-29 and the atomic bomb and then bring our superior power to bear on Japan."

China bled herself white buying that time for us—and now gets pushed aside allegedly because her Government isn't as democratic or efficient as we would like. China's weaknesses today are in large part the result of her loyalty, not of her disloyalty. Some of them are badges of honor, not of disgrace.

The Chinese leaders whom we now label Fascists or reactionaries are mostly those who warned Chiang Kai-shek we would throw China down. Now we insist that he kick them out. How can he kick them out when they were right? They urged after Pearl Harbor that he concentrate on eliminating the Communists, and let us fight the Japanese. After all, we were the ones who had made the money selling Japan the scrap iron and the oil—why not let us do the fighting?

But Chiang and most of his people believed our Government's promises; they assumed we would stand by them after the war as they had stood by us during the war. China is disintegrating today largely because of that misplaced faith.

But my primary concern is not for the Chinese. They know how to "eat bitterness." Somehow they will pull through. Besides they have clear consciences; they haven't betrayed anyone; they can sleep at night.

My greatest concern is for my own country. How much more will it cost us—in money and resources and men—to keep western Europe free, or even ourselves, if China and Asia go down?

In the long run we need them worse than they need us. Almost everyone in Asia sees that clearly. They wonder why we fail to, why a nation with all the aces insists on playing them so badly, or even throws them away.

I doubt that ERP can succeed in Europe if Russia gets control of China—which means Asia—as Russia will if we don't help effectively and at once.

An intelligent and immediate program of aid to China consisting of moral support, surplus munitions, American personnel for military training and advice at all levels, dollars to balance China's international payments, stabilize her currency, and loans for specified development projects would not cost more than a billion and a half dollars. If that billion and a half for China should make the difference between success and failure of the proposed seventeen billion for Europe, it would seem to me a good investment.

It is to save money, not to waste it, that I believe we must make a real effort to keep China independent and on our side.

The third criterion necessary to give ERP a 50-50 chance of success, in addition to vigorous collective effort by the European countries and prompt action to save the Far East, is that we get an organization to administer the program that can and will do it on a hard-headed, businesslike, efficient basis. Its personnel must have warm hearts but completely cold heads.

Money, materials, and good will alone won't do the job. We have to have top-notch men who will actually get the coal mines producing coal, get the railroads running, get the steel plants and the fertilizer factories producing, the fertilizer out on the fields, and so on.

There are plenty of Americans who have that administrative know-how. But there are not many in old-line Government agencies. And no one need expect that they will come in and work under such agencies. The old-line agencies are not set up and staffed to administer. They are set up to make studies and prepare reports, to consider and evaluate, to formulate policies and general plans.

Then, again, they operate on the seniority basis, or, as we call it, the senility basis. Every normal man wants to get ahead in life, and if you are in an outfit organized on the seniority basis, the one thing that is necessary for you to get to the top is just this: To live long enough.

Well, that is not quite true. You also must make no enemies. And what is necessary to make no enemies? You must never have an idea. You can't get ahead if you have ideas, if you exercise initiative and imagination.

In any bureaucratic organization operating on the basis of seniority there is a premium on conforming and a penalty on imagination, initiative, drive. This job can't be done by any such Government agency. It will require the very best executives America has to make it succeed.

I never can vote for this proposal if it is placed in or under one of the regular old-line departments or agencies, because they are not set up or trained or equipped to do it. They have to deal with other governments in traditional methods. Their main concern must be to avoid incidents or hurting feelings.

The administrator of this program has to deal with other governments and foreign business or industrial organizations on a basis of hard-headed efficiency and results in tons of food and steel. If it is not done that way, the resources and strength of the United States will be squandered and the desired results still not obtained, the people over there still not saved. I think we will get such an administrative set-up in the law—if the administration will cooperate and appoint top-notch men.

My fourth criterion is this: 'We must be willing to put in enough to win.

Would you like your doctor to say: "You have pneumonia, and you are mighty sick. I will give you a million units of penicillin, but I am telling you in advance that if you don't get well on the one million, I won't give you any more."

We don't say when we go to war. "We will spend $100,000,000,000, and if we don't win with that, we will quit, we will surrender."

When the President comes to us and says it has to be $17,000,000,000 or nothing, I can't accept that without careful scrutiny—because the $17,000,000,000 figure is merely the sum of about 17 other figures—one for each of 16 countries plus western Germany. Until each of those amounts is explained and justified to us, obviously the sum of them cannot be accepted.

So I do not know just what the proper estimate is. But I am convinced that if we are prepared to put in whatever it takes, it will

cost us less—rather than more—assuming the other criteria are also fulfilled.

That is, if we are willing to put in twenty or twenty-five billion if necessary to win, I don't think it will actually take $12,000,000,000. There are far larger reserves in those countries than are now visible. Farmers in France and Italy are not going to bring out their grain, their hogs, or chickens to sell for paper money when there isn't anything to be bought with it that they want, and as long as its value is steadily depreciating. But once there is hope of revival, of stability, of factories being put into operation turning out goods they want and need, you will find enormously greater resources than expected in commodities, in industry and initiative, and in productive capacity, both agricultural and industrial.

Russia hangs over their heads day and night. They are not sure who is friend and who is enemy even in their own countries. You can't expect them to be too bold in standing up against the Communists, unless they are reasonably sure they will be supported effectively. If we are willing to stay in and pitch until we win, I am confident they are stronger than either we or they realize. Together we can win if we go all-out. If we are not prepared to do that, I doubt that it is wise to start.

There was a very wise man who once said, "If you are going out to war and you find the enemy has 20,000 men and you have only 10,000 men, you'd better not get into that battle. Better try to resolve your differences some other way.

"If you are planning to build a house, first decide whether you have enough to complete it. If not, better not start at all."

His name was Jesus. He is usually thought of as a sentimentalist. Actually He was a hard-headed realist. We must have men in government with His wisdom and practical good sense.

The other day I participated in a forum on this issue, and one of my colleagues said, "We should attempt this recovery program even if we fail. It is better to try it and fail than not to try it at all."

I cannot agree for a moment. We had better not try it at all than try it and fail. That is inexcusable. It does no one any good, and can bring disaster. If we are not prepared to make a go of it, then let's not start.

And now the fifth criterion. We must move on to another stage in our foreign policy—from appease, then resist, then assist to reorganize and strengthen the United Nations.

At best, the ERP buys time—holds back the dictatorship world to give the free world time in which to try to get organized on a better, sounder basis. Will we use that time to get the United Nations re-formed, with its charter revised or amended so that it can take on the job of resisting aggression anywhere which we are compelled to assume in this emergency? We had to do it when Greece and Turkey were threatened. We have to do it now when Italy, France, and others are threatened. We are at present the only Nation with the resources and strength to do it. So we have to do the best we can. But we haven't the resources or wealth or strength to carry on this policeman's job indefinitely—and we haven't the wisdom. Furthermore, if we try to do it indefinitely the rest of the world will come to hate us in the process.

If we can win a little time, a breathing spell, and if we use that time to exercise positive, vigorous, imaginative leadership to get the nations together on a workable basis, since the present United Nations structure has proved not workable, then I think the program makes sense. We must get the world organization so it can handle emergencies like these—in the name and in the strength of humanity, not of just one or a few nations. We must get it with Russia if possible—without her if necessary.

Stalin and his Politbureau apparently think that we think we cannot get along without Russia, and we act as if they were right. I am convinced that if and when we demonstrate to the Russians that we and the other free peoples of the world can work without them, we will soon find we will be able to work with them.

Probably 80 percent of the people of the world is still willing and able to come along on such a program of organizing to resist further expansion of the area of slavery and dictatorship and to assist expansion of the area of freedom and federation. But they can't do it without our full participation—yes, our active initiative and leadership.

We went into the United Nations with the idea that the veto would be used only to block any possibility of the organization getting out of hand and making war unjustifiably on any member. We were so decent ourselves, and so naive, that we couldn't imagine any nation's leaders coldly planning to use the veto, not to block war, but to block peace. Actually the devil himself could not have thought up a more diabolically ingenious device by which any one of the Big Five with perfect legality and without reproach could use the veto to prevent the making of peace. Russia hasn't used the veto once to block war. She has used it over a score of times to block measures or decisions that were steps in the direction of peace.

We have got to get an organization with laws and a policeman which the peaceful nations can use to prevent aggression and make peace, and not one which a nonpeaceful nation (if one of the Big Five) can use to protect aggression and block peace.

The United States cannot carry this load indefinitely, or very long. Even this emergency program will be a terrific strain. If out of it comes 80 percent of the world organized on a workable basis of voluntary federation, then it will be a good investment, one of the best bargains in history. Without such a result we will have postponed, perhaps, but not prevented the crack-up.

I do not think war with Russia is inevitable, as so many assume. I do not think it is at all probable—if the United States and the nations still free prove worthy in this great crisis and challenge.

The Marshall plan alone is not enough. It is just one important component of the sound over-all foreign policy and program that we must develop and carry through with skill and efficiency if we are to win this political war so as to avoid an atomic war with unforeseeable destruction, if not extermination. No component is more important than getting the world organization reformed either under article 109 or article 51, so that it can function as it is clear the present structure is not functioning. Will we have the wisdom and the greatness to rise to this occasion?

We started out with the big five. China was included out of recognition of the great strength, and moral insight, the great fortitude and endurance she had contributed in holding the line almost alone for 13 years—and because of her enormous potentialities. Actually she was too exhausted to carry much of the load, so it really was the big four.

Then we discovered France was far more broken and divided than generally realized. She had to have help rather than give help. So it was really only the big three.

Then we discovered England was also desperately weakened. She has only a couple of deuces left, although she still plays them masterfully as if they were all aces. So in reality there are only the big two—the two worlds with which I began.

It must become the big one. Is it to be by Congress? Or by agreement?

I am convinced it can be by agreement. Whenever enough of the peaceful governments and peoples of the world get together on a basis that makes clear to the Kremlin that Russia doesn't need to go to war to get security or satisfaction of any legitimate grievances she may have, and that she can't succeed even if she does go to war—at that point agreement becomes more advantageous for Russia, for her own sake, than attempted conquest—and I believe she will come along.

She will still be what she is, yes, but will agree, along with the rest of the world, to stop when the light is red and go when the light is green.

She will come along, not because of anyone's persuasion or bribing or secret deals, as were tried before, but because there is more for her to gain by agreeing than by disagreeing.

As we stand at this great crossroads in our foreign relations, most people are asking, "What is the Kremlin going to do?" That really isn't the place to look. For the decisions in the Kremlin still depend on the decisions in Washington.

And, thank God, the United States is one of the few remaining places on this earth where common people just like ourselves still can determine what the decisions are to be in their Capital City.

And who can do more to shape the views and attitudes of our people toward the expanding role our Nation must assume than those who day in and day out have charge of the training of the minds and hearts of the Nation's children? How great indeed is your opportunity—how terrible your responsibility.

The Ruhr and European Unity

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 3, 1948

Mr. JAVITS. Mr. Speaker, in the current talk on the revival of German industrial production as it relates to the European recovery program, the practicability of a renewed German military machine striking yet a third time for world conquest should be constantly before us. A balance between productive usefulness, and a renewal of grave danger to the world's security must somehow be struck. Present thinking is in the direction of internationalization of the industrial productive resources of Germany, concentrated in the Ruhr. The following editorial from the New York Herald Tribune is illuminating on this issue:

THE RUHR AND EUROPEAN UNITY

Governor Dewey, in his Lincoln Day address, again called attention to one of the critical phases of a European settlement which American statesmanship has thus far failed to confront. "It was nearly 4 years ago," said Mr. Dewey, "that I proposed that the Ruhr be internationalized to prevent a revival of German militarism and that it then be started full blast as a servant of the people of Europe."

This concept is one which has widespread support within Europe. The nations of the western portion of the continent still fear Germany. They recognize that a recrudescence of German militarism is not a present danger; what they fear is that Germany may be built up, under predominantly American auspices, as a servant of the west and then abandoned, by some turn in American policy, to become its master. The American proposal for a long-term military alliance against Germany is a step toward

meeting this fear, but, in the existing political and economic chaos of the world, it does not carry full conviction to peoples who have seen the Nazi blitzkrieg sweep through their own lands; who, like the French, have been invaded from the east three times within three-quarters of a century.

Internationalization of the Ruhr poses many problems, to be sure. The desire of the Russians to participate is one of them, and a very thorny one. But when so much of the rest of western Germany is being organized without the Russians, and when the latter are already exploiting eastern Germany, it hardly seems that Russian objections should be considered a major stumbling block to the establishment of a western regime in the Ruhr. The dangers of a further fragmentation of Germany, with the possibilities of increasing nationalist tensions there and of weakening the economic structure of the already shattered western zones, must also be taken into account. But surely it is not beyond human ingenuity to internationalize the economic control of the Ruhr without decentralizing the political aspects of Germany beyond a practicable point. Moreover, the Ruhr should be made to work for Germany as well as for western Europe; its production should be available for obtaining foreign exchange for the other, less highly industrialized portions of the occupied territories.

Such a solution of the Ruhr problem would be a long step toward meeting French fears, which have thus far been largely ignored. It would also permit the participation of Belgium and the Netherlands, nations which have voiced some annoyance over the fact that they have not been consulted about a German settlement. It would give a solid core of partnership to a union of western Europe and stimulate progress toward that desirable goal. Above all, it would provide the form of control that would best combine a useful Germany with a safe Germany. Governor Dewey deserves credit for bringing this issue into the spotlight of the campaign.

The European Trade-Unions Are the Strata Through Which the Communists Will Seek To Wreck ERP; the American ERP Agency Must Contain Representatives of Free Trade-Unionism Working Shoulder to Shoulder With Representatives of Industry and Engineering Skill

---

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 3, 1948

Mr. KERSTEN of Wisconsin. Mr. Speaker, an Associated Press report from Helsinki, Finland, under date line of March 2, states that Finland's Communists today began organizing factory and trade-union meetings to support a military pact with Russia.

The Communists already have possession of the police in Finland and they are attempting to take over the trade-unions of that unfortunate country. The Communists make their most vital and forceful appeals to the workers of any country, promising them the millennium.

Recently Mr. Vino Leskinen, on a lecture tour in Sweden, told of the long-term efforts of the Communists to take over the trade-unions in Finland. He stated that he thought the trade-unions of the Finns could be taken over only by foreign intervention.

It becomes increasingly apparent that it should be the basic policy of our program of aid in the reconstruction of Europe that sound American trade-unionists should participate with the representatives of management, industry, engineering, and agricultural skill. We know that the Communists will attempt to wreck our efforts and that one of their main efforts will be in the trade-unions of Europe.

I wish to include in my remarks an excellent article set forth in Labor's Monthly Survey published by the American Federation of Labor on this subject:

THE ISSUE IS FREEDOM

As Soviet pressures move toward a climax in Europe, the American Federation of Labor is more than ever aware of the grave issues involved. A war is on, a cold war waged by the Soviet Union against our democratic way of life with its guaranties of individual rights and human freedoms. The Soviet objective is to bring free peoples under Moscow's police state, where every individual is subject to the will of the dictator, enforced by spies, police, prisons and the concentration camp, and where there is no recognition of basic personal rights or liberties. In the economic field, it is a struggle to end the system of free enterprise and free unions, and substitute the Communist system of party-controlled industry, where industrial managers are servants of the politbureau and unions have become merely transmission belts to carry the will of the dictator to the workers and get compliance. In countries under Soviet control, there is no such thing as a free union or a free election of union officers. Collective bargaining is unknown.

As the Soviet imperialistic purpose has unfolded in these postwar years, workers in all parts of the world have been roused to its true meaning for them. Although many were at first confused by Soviet propaganda and misuse of the word democracy, there have been strong groups in the trade-union movements of different countries who recognized the real issues from the start. Today free unions, alarmed for their safety, are coming forward to join together for common ideals and purposes, and to protect their freedom against a common enemy.

As the largest and strongest free union movement in the world, the American Federation of Labor recognizes its responsibility to help those unions who are daily struggling against the Communist menace at their very doors. This we owe to our own members as well, for our ultimate danger here in America is as great as that of free workers anywhere else. Moscow has its trained fifth column agents working in the Americas as in Europe and Asia, and is training more Quislings to replace or reinforce the Browders, the Fosters, and the Eislers of today.

A. F. OF L. AIDS FREE UNION MOVEMENT

Because the urge for freedom and self-government comes from people themselves and cannot be imposed from above, the federation's task is to give help where it is asked. This we are doing. Our work began during the war, when we organized relief for trade-unionists who were victims of totalitarian persecution in Europe and China, and tried to maintain relations with them even through the underground.

Today we are answering calls from millions of workers abroad who are giving all they can to save and rebuild their democratic organizations. Our representatives are working from three centers, helping with food, friendship, information, union supplies. In Tokyo, we are giving guidance in techniques of collective bargaining and education in trade-unionism. From our German center, we are aiding workers in Germany and Austria as they rebuild the once strong democratic union movements Hitler tried to destroy. In these two countries, a free trade-union movement is the cornerstone of democracy and the best guaranty against nazism, militarism, and communism. We do not seek to influence the type of union organization, but give wholehearted support to their freely elected officers. Cut off for 12 years from international union movements, these workers hungered for news of union experience. We have distributed literature, given supplementary food, helped to set up rehabilitation camps for young people, addressed forums and labor colleges. Our representative says: "If these movements continue under the idealism which governed them in the past, they will be the force to keep these countries free."

Our center in Brussels works with representatives of 30,000,000 unionists in 20 European countries, and has been effective in clearing up confusion caused by misleading anti-American propaganda of the Soviet Union. Our representative reports that European unions see in the Marshall plan the hope for economic recovery by democratic methods, a means of unifying Europe for mutual progress, a way to preserve free trade-unionism, and escape the new despotism that threatens them. To many, the AFL has become a strong partner in the struggle for justice, human values, peace, and democracy. By our own declarations on principles of genuine trade-unionism and against communism and our efforts to get declarations from the United Nations on freedom of association and human rights and against slave labor, we have tried to help them maintain courage and vision. The unions of western Europe are still free and democratic, although Communists have become leaders in some unions, supported by other members whose guidance comes from Moscow. In France and Italy, Communists in political parties and in the unions seek to control the labor movements by a system of terrorism, violence, and a gangster machine which prohibits free voting. In France, more than a million workers have broken away from the Communist leadership and set up a free union movement, the Force Ouvriere. In Czechoslovakia, the Communists, through their control over the trade-unions, the police, and the army, have seized the government and have overpowered President Benes, who insisted on rule by law and parliamentary procedures. The seizure of this country which struggled for democracy is a humiliation to all who believe in democracy.

HEMISPHERE LABOR CONFERENCE OF THE AMERICAS

At Lima, Peru, January 10 to 13, representatives of 14,000,000 workers in 16 American countries took forward steps in international labor organization. Representatives of the federation, the railway labor executives, and the machinists of the United States of America participated in the Inter-American Trade Union conference. Because all delegates represented free trade unions, frantic efforts were made by Communists and the government-dominated unions in Argentina to sabotage the conference, but efforts to misrepresent its aims, arouse opposition and create disorder were of no avail. The meeting exceeded all expectations in number of union movements represented, unity of purpose and constructive decisions. It was acclaimed by immense crowds of workers. By unanimous vote the delegates set up the Inter-American Confederation of Labor to become the permanent organization of free trade-unions in the Western Hemisphere. Delegates expressed as their common goals: To assure workers' right to organization and collective bargaining; to build strong effective trade-unions, guided by dem-

ocratic principles and subject to no outside control; to raise living and working conditions for all workers of the Western Hemisphere and especially those of Latin American countries which have long been depressed; to work for the maintenance of individual liberties and the establishment of permanent peace based on democratic principles. "We want a democratic Inter-Americanism without imperialism," said the United States of America delegation. They emphasized the importance of autonomy for each union group, and independence of trade-unions from control by political parties and governments. The constitution of the new federation bars from membership all totalitarian organizations and groups dominated by them.

Deeply conscious of the world-wide struggle of workers to maintain their freedom, the delegates passed resolutions to promote and strengthen world organization of free unions. They called for organization of a new International Federation of Trade Unions free from Communist domination. They also recommended that all transport and metal workers' unions affiliate with the International Transport Workers' Federation and International Metal Workers' Federation, respectively, thus strengthening the two pre-war international trade-union secretariats which still remain free. This action puts American labor in the forefront of the move to rebuild a genuine democratic world labor movement. Railway unions of the United States of America have already joined the International Transport Workers' Federation.

Bernardo Ibanez, of Chile, is president of the new confederation; George Meany and Bert Jewell, of the United States of America, and representatives of eight other countries are vice presidents. Serafino Romualdi, of the A. F. of L., is secretary of relations. As its contribution to the new organization, the federation has made him its Latin-American representative to devote full time to its affairs.

CONFERENCE OF FREE UNIONS IN MARSHALL PLAN COUNTRIES

The American Federation of Labor has steadfastly refused to join the Communist-dominated World Federation of Trade Unions because it is clearly an instrument of Moscow's foreign policy, unable to act independently or to promote the welfare of workers. The need for a genuine international organization of free unions is now keenly felt by the workers of many countries. For one thing, democratic unions in the Marshall plan countries want an opportunity to participate in promoting the European recovery program. They need an organization through which they can cooperate. Without the active cooperation of free unions, such an international undertaking could not hope to reach its goal of reconstruction and progress toward world peace and security.

As far back as last October, the federation proposed a conference of unions in the Marshall plan countries. This conference has now been called for March 8 in London. It can provide a means for rallying and activating the democratic forces that can save European civilization.

THE MARSHALL PLAN BEFORE CONGRESS

President Green appeared before both Senate and House committees to express the federation's wholehearted endorsement of the plan. We want to see a fully adequate program enacted by Congress, without crippling amendments. We are deeply concerned that workers shall have a full chance to participate and contribute to the plan's successful operation. President Green said: "I cannot emphasize too strongly that American labor can perform a basic and distinguished service in this program. We are the only national group that can communicate directly, forcefully, and convincingly to a parallel group in these 16 countries to secure the cooperation of workers essential to the success of the program." He urged that an advisory committee of representatives of functional economic groups, including industry, agriculture, labor, transportation, and finance be set up to assist the Administrator, and a similar committee to work with the executive in Europe. He insisted that the right of wage earners everywhere to join trade-unions of their own choosing be assured, for the purpose of promoting their program. Without this right, democratic institutions are impossible. Germany and Austria must share in the recovery, he said, and dismantling of their factories must stop at once, so they can get production under way in time to supply the needs of the program.

"Economic rehabilitation of Europe is in the interest of all wage earners," he said. "Soviet opposition * * * clearly reveals its rule-or-ruin policy. The American Federation of Labor understands that the European recovery program requires sacrifices and self-discipline on the part of United States citizens. We stand ready to make these sacrifices and to assume new responsibilities. We cannot shut our eyes to the fear and hunger that are the daily portion of those human beings who are close to armed Soviet aggression. We cannot stand by and watch the lights of freedom go out in those lands from which our forefathers came."

On February 17 the Senate Foreign Relations Committee unanimously approved a bill authorizing a 4-year European recovery program with $5,300,000,000 for the first year's operation. This sum provides the minimum amount which experts consider adequate. It will cost our country less than 22 days of World War II.[1] Prompt passage of this bill and its companion in the House, without crippling amendments or reduction of funds, will be essential to meet the April 1 deadline when temporary relief for these countries runs out.

FREE TRADE-UNIONS ARE THE BASIS OF A DEMOCRATIC SOCIETY

Workers are the largest group of citizens in most industrial countries. The meaning of trade-unionism in today's struggle for freedom and representative government is clearly illustrated in the statement below by Fritz Tarnow, an outstanding leader of the democratic trade-union movement in pre-Hitler Germany. Active under the Weimar Republic, forced to flee during Hitler's regime, he has now returned to help build a democratic Germany and aid free unions in their struggle against communism. He speaks from the experiences he has lived through, and represents a large number of German unionists. He shows why a free labor movement constantly struggles to realize and maintain democracy, and his statement, clearly specifying what democracy is and what it is not, will do much to clear up confusion caused by Soviet misuse of the word.

FRITZ TARNOW DEFINES DEMOCRACY AND UNION FUNCTIONS

Fritz Tarnow is zonal secretary of trade-unions in United States zone of Germany.

I. "The trade-unions represent the social and economic interests of the employed persons in the economy, the state, and society. The trade-unions declare themselves independent of the state, of private as well as public enterprise, and of the political parties. They declare themselves politically neutral, but they expect the political parties to pass legislation designed to further the interests and demands of the trade-unions with each party itself determining the relationship between itself and the trade-unions.

"The trade-unions fight for the basic human rights and freedoms of all those who respect the rights and freedoms of others. The safeguarding of the rights of man can only be attained within a democratic state in which all power emanates from the people and all organs of the state are subject to control by the people.

II. "As the existence and activities of trade-unions can be secured only under the freedom of a democratic regime, the fight for the realization of democracy is among their most important tasks.

"By democracy, the trade-unions understand a social order which guarantees the constitution of the state and constitutional institutions:

"1. A representation of the people chosen in general and free elections and having the exclusive right of legislation and the right to institute and dismiss governments;

"2. Freedom of opinion and its expression in speech and in writing, freedom of organization and assembly as well as the freedom to act according to one's religious and philosophical beliefs. These freedoms do not exclude restrictive measures against such activities as are directed against these freedoms or menace their existence. Measures of this kind, however, are admissible only if decreed by regular legislation, and their execution is reserved to the organs of the normal administration of justice.

"3. The obligation of the state to protect life and property of every citizen against arbitrary encroachments, searchings of his house and seizure of his property, which must only be carried through in accordance with existing laws and upon legal order. In cases where immediate police action is necessary, judiciary approval must be procured within 24 hours.

III. "In order to counteract the spiritual confusion caused * * * through the abuse of the word 'democracy', and in order to help to understand the difference between democratic and nondemocratic regimes, the trade-unions explicitly name the following as characteristic of an antidemocratic regime:

"1. Wherever the state leadership has seized power without the free elections by the people, and evades the control of the freely elected representation of the people—there is no democracy.

"2. Wherever plebiscites and elections are carried through without there being freedom of opinion and its expression in speech and writing; wherever a free and independent press is not permitted; wherever the means to shape public opinion are monopolized and at the exclusive disposal of the state authority and the ruling group, thus rendering democratic elections impossible—there is no democracy.

"3. Wherever criticism of state policy is prohibited, persecuted, and threatened with reprisals—there is no democracy.

"4. Wherever the executive power of a state is linked to a monopolized and privileged party, while other parties and movements are prohibited or suppressed—there is no democracy.

"5. Wherever there exists a secret political state police which stands outside the laws and the normal administration of justice, and which can terrorize the population without control through a democratic representation of the people—there is no democracy.

"6. Wherever there are concentration camps, forced labor and similar institutions, in which the ruling group is at liberty to deprive persons of their freedom without laws and legal judgment, where people are authorized by the executive power to maltreat and torture the prisoners in their power, to destroy their health and kill them without being called to account for it—there is no democracy.

"By thus pointing out some of the essential characteristics, every one of which suffices to recognize a regime which is in sharp contradiction to democracy, and which in shape of the criminal Nazi state has evoked the deepest horror and the contempt of the whole civilized world, the German trade-unions

[1] Expenditures from July 1940 to June 1946 to cover 1,364 days of war. Source: U. S. Treasury.

dedicate themselves to a true democracy of freedom, humanity, and respect for the dignity of man."

Mexican Trade Agreements

EXTENSION OF REMARKS
OF

HON. DANIEL A. REED

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. REED of New York. Mr. Speaker, the recent hearings before the Committee for Reciprocity Information concerning the so-called Mexican trade agreement were probably considered successful by the State Department. The purpose of these hearings was to hear complaints of exporters who felt that Mexico was applying restrictions on our shipments to that country. I cannot agree that in our democracy we will provide opportunity for exporters to be heard while domestic producers, farmers, and laborers are not allowed the same privilege.

Under leave to extend my remarks, I submit the following letter which I received concerning this matter and also extracts from a brief filed with the Committee for Reciprocity Information:

FEBRUARY 19, 1948.

Hon. DANIEL A. REED,
Acting Chairman, Ways and Means Committee, House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN REED: Since your committee will soon be considering whether or not to recommend amendments to or termination of the Reciprocal Trade Agreements Act, we felt that you would be interested in the enclosed brief presented to the Committee for Reciprocity Information on behalf of the American producers of fluorspar in connection with the currently proposed negotiation of a reciprocal trade agreement with Mexico.

The State Department announcement of these proposed negotiations with Mexico denies to American producers interested in imports from Mexico their absolute right, under the Reciprocal Trade Agreements Act, to appear and present their views before any trade agreement is negotiated or concluded with any foreign country. The State Department announcement invites only exporters to present their views, and states that the negotiation is limited to a revision of schedule 1 of the 1942 Mexican agreement—that is the Mexican concessions.

This is obviously an attempt to mislead the American public and to deny American producers interested in imports an opportunity to appear and present their views. Mexico terminated the 1942 trade agreement and abolished schedule 2 thereof effective December 20, 1947. It is obviously impossible to negotiate a revision of a tariff schedule that does not exist under a trade agreement that has been terminated by Mexico.

Our argument, briefly, is that since Mexico terminated the agreement on December 20, 1947, the President should, and at least morally is bound to, terminate his proclamation of December 28, 1942, which gave effect to the American concessions granted under that terminated agreement. If the President desires to negotiate a new trade agreement with Mexico under the Reciprocal Trade Agreements Act, he should announce that intention and publish a list of United States commodities on which tariff concessions will be considered, and thus give American producers interested in those commodities an opportunity to appear and present their views.

The President has no authority under the Reciprocal Trade Agreements Act to negotiate a limited agreement with Mexico by saying that we will give you the same concessions which we gave you in 1942 if you will give us a new set of concessions from your December 1947 tariff schedule which provides higher rates of duty.

The American producers of fluorspar have an absolute right to appear and present their views as do millions of other American producers, but this right is being denied them by the President and the State Department.

We have presented this brief to the Committee for Reciprocity Information but since the fluorspar producers are interested in imports and not in exports it is probable that the Committee for Reciprocity Information will refuse to consider it since they have limited the privilege of presenting views to exporters.

Very truly yours,

JOHN BRECKINRIDGE.

SUMMARY OF VIEWS

1. Mexico terminated the 1942 reciprocal trade agreement in accordance with the terms of article XVIII thereof on December 20, 1947, by abolishing schedule I of the agreement and publishing a new tariff schedule raising the rates of duty.

2. As a result, United States tariff concessions under the now-terminated Mexican agreement should no longer be permitted to remain in effect.

3. The President, under the intent of the Reciprocal Trade Agreements Act, should have terminated, on December 20, 1947, his proclamation of December 28, 1942, giving effect to the tariff reductions covered in the now-terminated Mexican agreement, thus restoring the tariff rates effective in 1942.

4. The reduction in the duty on low-grade fluorspar from $8.40 to $6.30 per long ton agreed to under the Mexican trade agreement was made ineffective by Mexico's termination of that agreement.

5. The proper current rate of duty on low-grade fluorspar is that prescribed in paragraph 207 of the Tariff Act of 1930—$8.40 per long ton.

6. It is impossible to negotiate a revision of schedule I of the Mexican agreement, as announced by the State Department, since that agreement was terminated and schedule I abolished and replaced by a new tariff schedule with higher rates of duty.

7. Any trade-agreement negotiation with Mexico must necessarily involve a revision of Mexico's new tariff schedule published in December 1947 and must necessarily be based on a reciprocal revision in United States tariff rates in effect in 1942 prior to the now-terminated agreement and properly in effect today.

8. The real intent, though not expressed in the State Department's public notice of December 30, 1947, apparently is to negotiate an entirely new trade agreement. The intent is to negotiate with Mexico an entirely new set of concessions to be granted by Mexico from the new and increased tariff rates recently imposed in the new tariff schedule in consideration of the President's failure to terminate, as contemplated by the Reciprocal Trade Agreements Act, the concessions made to Mexico in schedule II of the now-terminated 1942 agreement.

9. The President has no authority to negotiate such an agreement based on an unauthorized failure to terminate his proclamation of December 28, 1942, without giving those Americans interested in imports from Mexico an opportunity to express their views as to the concessions to be offered.

10. The President should terminate forthwith his proclamation of December 28, 1942, as required by Mexico's termination of the 1942 trade agreement and thus restore the 1942 rates of duty.

11. Thereafter the State Department should issue a new public notice announcing intention to negotiate a trade agreement with Mexico and list the commodities on which the United States tariff concessions will be considered.

In 1942 the United States and Mexico negotiated a trade agreement in which each country agreed to reciprocal tariff reductions or bindings on certain commodities imported from the other. The tariff concessions on each side were supposed to be roughly equivalent in value and conditioned on the continued effectiveness of the concessions on the other side.

This agreement was signed on December 23, 1942, and the respective tariff concessions became effective January 30, 1943, for a basic period of 3 years and thereafter subject to continuation indefinitely by mutual consent or termination by either government on 6 months' notice (art. XVIII).

The basic period of 3 years expired January 30, 1946. As early as the latter part of 1945 Mexico notified the United States of her desire and intent to revise and increase the tariff rates covered by the agreement. Mexico felt it essential to increase these tariff rates but could find no means of doing so without terminating the 1942 trade agreement with the United States. After long, closed-door negotiations, during which the United States tried to dissuade Mexico from terminating the agreement, Mexico, about July 1947, notified the United States of her positive intention to increase her tariff rates and terminate the agreement. This was not made public but Mexico finally did, effective December 20, 1947, unconditionally terminate the agreement by increasing the tariff rates on Mexican concession items (schedule I of the agreement) to rates equivalent to those prevailing in 1942 prior to the agreement (Decree of Mexican Government published December 15, 1947, in the "Diario Official" and effective December 20, 1947). Prior to that Mexico had already greatly increased her tariff rates on most products imported from the United States and not covered by the agreement.

By the terms of the agreement, this action by Mexico terminated the agreement and the President of the United States should have terminated his proclamation of December 28, 1942, thus restoring the 1942 tariff rates on United States concession items (schedule II of the agreement). However, the President has not taken this action. Only the reduced tariffs on United States concession items (schedule II) are being collected by the United States customs officials.

After a foreign trade agreement negotiated under the Reciprocal Trade Agreements Act has been terminated, there is no authority for the continued effectiveness of a Presidential Proclamation fixing the United States tariff rates covered by the terminated agreement. The authority of the President to proclaim modifications in tariff rates and other customs treatment is limited by the Reciprocal Trade Agreement Act to "such modifications * * * of existing customs or excise treatment of any article covered by foreign trade agreements, as are required or appropriate to carry out any foreign trade agreement that the President has entered into hereunder."

There is no, and since December 20, 1947, there has been no, "foreign trade agreement" requiring the customs modifications contained in the President's Proclamation of December 28, 1942, which covered customs modifications previously required by the terminated Mexican agreement. It therefore necessarily follows that continued effectiveness of the tariff reductions fixed in this proclamation is without any basic au-

thority. It is the President's moral and ethical duty to United States producers affected, if not his legal duty, to terminate forthwith his proclamation of December 28, 1942, and thus restore the affected tariff rates to the legal rates fixed by the Tariff Act of 1930 or an existing and effective foreign trade agreement.

The Reciprocal Trade Agreements Act does not specifically state that the President shall terminate a proclamation when the foreign-trade agreement to which it relates has been terminated. The act merely states that:

"The President may at any time terminate any such proclamation in whole or in part."

Undoubtedly this is the basis of the President's failure to terminate the proclamation covering the terminated Mexican agreement. However, this does not satisfy the President's obligation to the American producers affected by the unauthorized tariff reductions nor his obligation to Congress and to the American public to carry out the intent of Congress as expressed in the Reciprocal Trade Agreements Act and to collect the proper customs duties.

That Congress intended termination of any proclamation issued by the President on the basis of a particular foreign trade agreement immediately upon termination of that agreement, either by the foreign government (Mexico in this case) or the United States, seems too clear to require argument except for the President's recent inaction in so completely ignoring that intent. The Reciprocal Trade Agreements Act provides that:

"Every foreign trade agreement concluded pursuant to part III shall be subject to termination, upon due notice to the foreign government concerned, at the end of not more than 3 years from the date on which the agreement comes into force, and if not then terminated, shall be subject to termination thereafter upon not more than 6 months' notice."

It would take a warped sense of justice to argue that because the act merely says, "The President may * * * terminate any such proclamation * * *" the Congress meant that the agreement to which the proclamation gave effect could be terminated without at the same time terminating the proclamation. Also, to argue that Congress intended the termination provisions to apply only to a termination by the United States and not to a termination by a foreign country would take a warped sense of justice and would be an insult to the millions of Yankee traders in the United States and in Congress. No Yankee trader ever gave X an automobile for a dog and let X retain the automobile after X had taken the dog back.

Mexico has terminated the agreement with the United States and taken back the tariff reductions granted under that agreement, yet the President has not terminated his proclamation. The customs officials are still collecting only the reduced import duties specified in the terminated Mexican agreement. Is this proper merely because Congress put too much reliance in the good faith and common, Yankee trading sense of those who would administer the act and said "may" instead of "shall" terminate any such proclamation?

To hold that it is proper or to hold that the President is not required to terminate a proclamation giving effect to a particular foreign trade agreement when that agreement is terminated would be holding that the Congress intended all tariff reductions negotiated by the President to remain in effect permanently even after all foreign countries had terminated the trade agreements providing for such tariff reductions. In other words, every existing trade agreement could be terminated by the foreign (governments) contracting parties and still all the United States tariff reductions agreed to in those terminated agreements would remain permanently in effect if the President so desired. Certainly Congress did not so intend. A serious person could hardly argue that Congress did not intend to require the President to terminate the tariff concessions involved when the agreement providing for such concessions is terminated by the foreign government involved.

The duty on low-grade fluorspar (containing not more than 97 percent calcium fluoride) was set at $8.40 per long ton in the Tariff Act of 1930. This rate of duty was reduced to $6.30 effective January 30, 1943, by Presidential proclamation of December 28, 1942, under the 1942 trade agreement with Mexico. Since this trade agreement was terminated by Mexico effective December 20, 1947, the only authorized rate of duty is $8.40 per long ton. Yet the customs officials are collecting only the $6.30 rate because of the President's failure to terminate his proclamation.

The fluorspar producers of the United States are being injured by the failure of the customs officials to collect the full rate of duty fixed in the Tariff Act of 1930. Also every American taxpayer is being injured by the failure of customs officials to collect the full amount of the authorized tariff rate on fluorspar and other products covered in the now terminated Mexican agreement. The fluorspar producers respectfully urge that the President immediately terminate his proclamation and instruct the customs officials to collect the full rate of $8.40 on all future importations of low-grade fluorspar.

Any negotiation with Mexico should be the negotiation of an entirely new trade agreement. Intention to conduct such a negotiation should be announced by the State Department and all interested persons (including those interested in imports from Mexico) given an opportunity to express their views.

Department of State press release No. 968 of December 13, 1947, states:

"The United States has consented to this action (termination of agreement) in recognition of the acute need of the Government of Mexico to correct the imbalance in its trade relations with the United States and to afford a more reasonable measure of protection for Mexican industries until such time as the negotiations for a more definitive schedule I mentioned above can be concluded.

"Those negotiations will be undertaken immediately following the termination of the United Nations Conference on Trade and Employment now in session at Habana, and will be conducted pursuant to the Trade Agreements Act and in accordance with the procedures established thereunder. The customary public notice of intention to negotiate will be issued, and interested parties invited to submit views to the Committee for Reciprocity Information in writing and orally at public hearings. The contemplated negotiations will include, for the present, changes in schedule I only."

The public notice mentioned in the above quote was issued by the State Department on December 30, 1947, but only exporters were invited to submit views. The American public interested in imports from Mexico were not invited to submit views. This notice stated that such negotiations are to be limited to "the revision of schedule I of the trade agreement."

This is obviously an attempt to negotiate an entirely new trade agreement with Mexico based on the tariff reductions proclaimed by the President under the terminated agreement of 1942 in return for a new set of concessions from the new and higher Mexican tariff schedule. The purpose of this misleading attempt is apparently to deny that portion of the American public interested in imports from Mexico their absolute right under the Reciprocal Trade Agreements Act to appear and present their views as to what tariff concessions should be offered to the Mexican Government.

It is impossible to conduct a negotiation such as the State Department has announced to the public. To attempt to so mislead the American public is an insult to their intelligence.

Schedule I of the trade agreement does not exist. Mexico has terminated the trade agreement, abolished Schedule I and has published an entirely new tariff schedule for all items listed in the old schedule I. How can the State Department negotiate a revision of something that does not exist?

Obviously any negotiation with Mexico must look to an entirely new trade agreement and must necessarily be based on the now effective Mexican tariff schedule and the United States tariff schedule effective in 1942 and properly applicable today since termination of the Mexican agreement on December 20, 1947. The American public should be so advised and given an opportunity to present its views on any revision of the legal rates of 1942.

It is respectfully suggested that the President should terminate his proclamation of December 28, 1942 and thus restore the legal rates of duty effective in 1942, and that the State Department should issue a new public notice of intention to negotiate a trade agreement with Mexico, publishing therewith a list of commodities on which United States tariff concessions will be considered. This would give, as required by the Reciprocal Trade Agreements Act and Executive orders issued thereunder, those Americans interested in imports notice of the commodities on which concessions by the United States will be considered and an opportunity to express their views on each such commodity.

Without first giving any interested person, including those interested in imports, an opportunity to present his views, the President has no authority, in a trade agreement with Mexico, to agree to grant Mexico the same concessions which had been granted in 1942 under a separate and terminated trade agreement; or, to put it another way, to agree with Mexico, in return for a new set of concessions from Mexico, to fail to terminate his proclamation of December 28, 1942, as was intended by Congress and clearly contemplated by the wording of the Reciprocal Trade Agreements Act.

The Reciprocal Trade Agreements Act provides that:

"Before any foreign trade agreement is concluded with any foreign government or instrumentality thereof under the provisions of part III of this title, reasonable public notice of the intention to negotiate an agreement with such government or instrumentality shall be given in order that any interested person may have an opportunity to present his views to the President, or to such agency as the President may designate, under such rules and regulations as the President may prescribe."

It is thus apparent that the President has no authority to conduct the announced negotiation with Mexico without first giving all interested persons an opportunity to express their views. Those persons interested in imports from Mexico have not been given such an opportunity.

Address Before St. David's Society of Washington

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 3, 1948

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address

made by me before the St. David's Society of Washington, D. C., on March 1, 1948:

I bring you greetings tonight from the Welsh people of Wisconsin's Second Congressional District. Tonight, hundreds of Welsh-Americans are meeting in Wisconsin communities like Cambria, Wales, Dodgeville, Rewey, and Waukesha to celebrate St. David's day, just as their fathers and their grandfathers have done for many, many years. There will be Welsh food, and Welsh stories, but most of all, there will be the singing of the old Welsh songs.

For centuries, England has tried to assimilate Wales, but without success. For over 100 years, Welsh people have lived in Wisconsin. Their Welsh blood strain has been diluted by intermarriage with the Scotch, the Irish, the Germans, and the Scandinavians in Wisconsin, but through this more than a century in America, the Welsh of Wisconsin have steadfastly refused to be assimilated. It is all the more remarkable when you realize that the Welsh language has never been taught in our schools of Wisconsin, the Welsh tongue is seldom heard in our church sermons today, and the Welsh traditions have prevailed only because they have been handed down from father to son, and from mother to daughter.

The first Welsh came into Wisconsin in 1840, 8 years before Wisconsin became a State. They settled in the section of the State which I now represent in Congress, and they found their homes in the rolling hills, the moorlands and along the rivers and lakes of our district because this new land reminded them of home. They gave many of our communities the names of their homes in Wales. One such settlement in my home county is called Wales. Many of the other names are familiar to you people too, for we have Welsh Prairie, Jerusalem Prairie, Peniel, Ixonia, Bangor, Davis Corners, Somerset, and Sussex.

Unlike the German and Scandinavian peoples, who poured into Wisconsin in its early days, we never had large Welsh immigrant stock in Wisconsin. A census taken in 1905, for example, showed that in our entire State we had only 2,811 native Welshmen who had come to America, and they had 10,603 American-born children. That such a small group of people coming into a strange land could make so lasting an impact on the new country is proof enough of their character and leadership.

While the Germans and the Scandinavians spread over our entire State, the Welsh settled in colonies together and many of the farms in my district today are owned and farmed by direct descendants of those early Welshmen who came to our State shortly after 1840. As a result, many of us of Welsh blood are related to folks in all the surrounding area, and we have family kinships that are unknown in many States where settlers tarried for a time and then moved on.

In fact, that brings to my mind something that happened when I ran for Congress in a special election in our district last year. A friend of my opponent came over to my county and started campaigning against me among the farmers of southern Waukesha County. He soon discovered that he wasn't making much headway, and finally he asked the reason why.

"Well, I'll tell you," an old Welsh farmer in the town of Vernon said. "GLENN DAVIS is related to just about all the folks around here, and them that ain't related to him are related to his wife."

The Welsh came to Wisconsin originally for two reasons. Probably nine-tenths of those who came between 1840 and 1850 were dissenters, Calvinistic Methodists, Baptists, and Congregationalists, who objected to paying tithes for the support of the state religion in Wales. Other factors in causing Welsh people to leave home and come to Wisconsin were economic conditions, and dissatisfaction with landlords.

Due in great part to the Welsh influence, Wisconsin never has had the slightest direct relationship between church and state. And our farmers are widely known as hardy, independent folks who own and operate their own acres. So in Wisconsin the children of Welsh families found the freedom and choice of life that caused their forefathers to leave the homeland.

One of the settlements which sprang up in the section that I now represent in Congress is Cambria. A thriving little community of about 1,000 persons, it is distinctly Welsh. A survey made there a few years ago revealed that 60 percent could speak the Welsh tongue. But even if the native language had been forgotten, and folklore no longer was passed on, their names would still betray their nationalistic origin.

For the survey revealed there are 33 Jones families, 20 Williams families, and many Rowlands, Roberts, Edwards, Thomas, Hughes, Davies, Owens, Morris, and Evans families in Cambria. For many years it was customary to distinguish among the many Jones families by adding to their full names some Welsh word that described where they lived—a handle for distinction, they called it. Some of the words, translated into English, mean hilly slope, big woods, brick house, and highest mountain.

Tonight at the Hughes Restaurant back in Cambria, the Welsh people will be celebrating St. David's Day, just as you are here in Washington. Probably only a handful of them actually have seen Wales, but the tradition and the songs of the homeland live on, nurtured by a love of land their fathers recalled.

For many years the Welsh language was heard every Sunday in Sunday schools and churches of these Wisconsin Welsh settlements. Today it is only in three communities that Welsh sermons are preached, and there only at irregular intervals. But it was not until 1920 that the Welsh churches lost their separate identities. In that year the Welsh congregations of Wisconsin affiliated with the Presbyterians as an independent Welsh synod. For the most part, church services now conform with those of other Presbyterians.

But in all this gradual change, there has been one thing that the Welsh have retained without any deviation. That, of course, is their singing. This love of music and of poetry, the Welsh have passed on to their children and to the entire State. All Welshmen try to attend at least one Gymanfa Ganu, although sometimes the Welsh have trouble getting inside the building because there are so many Irish and Germans and Scandinavians already inside to listen to but not participate in the music. Most of these singing festivals are led by trained choirmasters brought in from Milwaukee or Chicago, and the affairs last for hours, with time out only for the serving of delicious foods.

Many of Wisconsin's sons of Welshmen have gone on to earn national fame, and with pardonable pride, I would like to mention a few of them.

There was Evan A. Evans, of Baraboo, who was appointed Federal judge at Chicago by President Wilson and has served there with distinction for 30 years. William A. Jones, of Mineral Point, served as Commissioner of Indian Affairs during the administrations of Presidents McKinley and Theodore Roosevelt. Joseph E. Davies, of Watertown, whose father was a Welsh minister and whose mother was a poetess, was ambassador to Russia under President Franklin D. Roosevelt and his book on Mission to Moscow later was made into a movie. The Reverend Jenkin Lloyd Jones, of Madison, was head of the Abraham Lincoln center in Chicago and his son, Richard Lloyd Jones, a newspaper publisher, is generally credited with having brought about the preservation of Lincoln's birthplace at Hodgenville, Ky., through a series of articles written when Jones was associate editor of Collier's magazine. Peter Houston, who came to the Welsh settlement at Cambria, Wis., with his parents in the early 1840's, invented the folding film roll of Kodak, later purchased by George Eastman. All of you have heard of another Wisconsin Welshman, Frank Lloyd Wright, of Spring Green, admitted to be one of the world's outstanding architects.

I have spent considerable time talking to you about the part that Welshmen have played in Wisconsin's early development. I have done so intentionally, because I felt this probably was the one new bit of information I could bring you on St. David's day.

But no discussion of anything Welsh on this day would be complete without mention of the patron saint of Wales that we honor with our attendance here tonight. The Irish may have their St. Patrick and the Scotch may have their St. Andrew, but today is the Welshman's day, for this is St. David's day.

Recently I put a little item in my news letter to the folks back home in my district, telling them of your kind invitation to attend this dinner tonight. But something went wrong in the typing of that letter, and when the folks back home received it they discovered to their horror that Welsh had been spelled W-e-l-c-h. I don't have to tell you that I heard about that letter from many of my constituents. One of them wrote me that it was not only a shame but a blasphemy for a Welshman to misspell that word, and he closed his letter with this crackling remark: "Always remember that we are a people, and not a grape juice."

One of the reasons that the Welsh are a people, and never have been assimilated by conquesting races, has been the steadfast devotion through all the years to the principles of religion. And, of course, it is because of St. David that this is true.

It is unusual, however, that so little should be known today about this patron saint of over 2,000,000 native Welshmen and countless descendants of Welshmen throughout the entire world. Although historical facts may be lacking, Welsh traditions are rich in stories about St. David. But one thing we do know from history, and that is that it was St. David who saved Wales from the beliefs of religious fanatics; and his canonization about 1120 by Calixtus II at the personal urging of King Henry I, represented a tribute to the leadership of one man who brought about final victory in his land for Christ over a host of pagan deities.

Today, the history of Wales stands as a shining hope for the rest of the world. Again pagan forces are seeking to roll across Europe and subdue many peoples in a godless system called communism. Poland, Hungary, Rumania, Yugoslavia, Albania, and now Czechoslovakia already have fallen before the onrushing forces of communism, and Finland may be the next victim. But the history of Wales leads us to hope that the religion, the culture and the democratic beliefs of once-free people of those European countries may still survive under foreign rule and one day emerge into the light of freedom again.

For just as in Wales the majority of the citizens never embraced the beliefs of the invaders, so do we believe that in the majority of nations now under the heel of communistic rule, the people themselves are not in sympathy with communism. That is the reason behind the move in Czechoslovakia. In May, that nation would have held a free election which no one doubts would have tossed out the Communist leaders who now have seized power. The Commies had to move fast or lose out by democratic processes.

Unless past examples are a poor guide, the iron curtain will fall on the Czechs now, and we will hear very little of actual happenings in that unhappy nation in the next

months. Non-Communist political opposition will be liquidated, certain Czech patriots may face imprisonment or death on false charges to remove them from the political scene, and the oppression and terrorism of a police state is ahead for the people of Czechoslovakia. It is a sad future for the decent, God-fearing, traditionally democratic people of the little nation that Woodrow Wilson created out of World War I.

The Russian Government speaks of true democracy under communism. Let us recall a recent cartoon by Bob Ripley that aptly shows how much freedom and liberty a Russian has today, compared with Americans. Ripley pointed out that no Russian citizen may own land, be tried by a jury, choose his own job, absent himself from work, strike, picket, employ labor, travel, own jewelry, ring a churchbell, or be friends with a foreigner. He is forbidden freedom of speech, freedom of assembly, freedom of religion, and freedom of soul. That is the kind of thing that Russians call true democracy. We know it for what it is, slavery under a police state.

Welsh people can sympathize with those under the domination of communism, for they too were oppressed for many years. But many were able to come to America, and when the Declaration of Independence was signed, there were no persons more proud or more freedom-loving than those sons of Wales who were among the leaders in formation of our American Republic.

It is to America today that liberty-minded people of all the world look for inspiration and leadership. Great Britain is in no position to be a world leader today. She is waiting for another David Lloyd George to come out of Wales and lead her back from the pits into which the present Socialist government has hurled her.

And as the world sees the forces of communism battling against religious, democratic peoples, the world too is waiting for someone with the spirit and courage of another St. David to carry the banner of right through to final victory. Ultimately, we know and trust, the forces of Christianity will win out and after these trying times that the world no faces, we may emerge into a day of peace and happiness, where a man's right to liberty, and his chance to worship his God according to his own conscience will go unquestioned. To that cause, and to the speeding of that day, all of us who take our hope from the history of the people of Wales pledge our strength and our united support.

Communist Plans for American 1948 Elections

EXTENSION OF REMARKS
OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 3, 1948

Mr. KERSTEN of Wisconsin. Mr. Speaker, in the June 1947 number of the magazine called Political Affairs is an official Communist plan for the 1948 American elections. The monthly magazine Political Affairs is published by the New Century Publishers, 832 Broadway, New York, N. Y., and is designated in its title as "a magazine devoted to the theory and practice of Marxism-Leninism." The publication Political Affairs was formerly known as The Communist. The change in name occurred in December-January, 1944–45. The last issue of The Communist was in December of 1944 with Earl Browder as editor, Eugene Dennis as associate editor, and V. J. Jerome, managing editor. This was designated as volume 23. The first issue of Political Affairs was January 1945, with Earl Browder as editor, Eugene Dennis as associate editor and V. J. Jerome as managing editor. This was designated as volume 24.

A perusal of the names of the contributors to the various numbers of The Communist and Political Affairs will indicate that it is an organ used by leading Communists from everywhere. The names of Togliatti, William Z. Foster, Smirnov, and other well-known Communists will be found among its contributors.

The article to which I would like particularly to refer is contained, as I previously stated, in the June 1947 issue. It is by Alexander Bittleman. The title of the article is "Problems of Peace, Democracy, and National Independence."

Bittleman is a chief theoretician of the Communist Party in the United States and is a chief writer on theoretical political matters. It is my understanding that everything he writes is approved by Moscow in advance. For years he has been a leading member of the political committee of the Communist Party. On January 14 of this year he was arrested as an alien and is now, as I understand, out on $5,000 bond.

By quoting a portion of his article, I should like to illustrate the Communist line as laid down in June of 1947 to be used by American Communists for the 1948 American elections. Bittleman's article is a severe criticism of Earl Browder's book War or Peace With Russia. The article was written after Browder had deviated from the official Communist line. Bittleman speaks with the authority of Moscow in dictating the path of the American elections for 1948. I quote from his article as follows:

In the face of these facts as distinct from Browder's fictions, what is the problem of a "joint" American-Soviet peace? It certainly cannot mean the "joining" of the Soviet policy of a democratic world peace with Wall Street's policy of world domination. It can only mean that the American people have to combat, check, and defeat Wall Street's policies, expressed and enforced by Truman, Vandenberg & Co. It can and must mean, further, that the American people have to consolidate a democratic and anti-imperialistic coalition capable of materially influencing and, eventually, determining the policies of the American Government in the direction and in favor of a democratic and people's peace. Thus and only thus will the American and Soviet policies begin to be "joined." But then the product of this process will tend to be not just a "joint" American-Soviet peace but a democratic and people's world peace. And this is exactly what is dictated by the national interests of the American people as opposed to the selfish imperialist interests of the American monopolies.

* * * * *

ROOSEVELT, TRUMAN, AND THE PEOPLE'S COALITION

* * * * *

What about the Truman doctrine? Is that also in accord with Roosevelt's foreign policies, according to Browder? This doctrine did not just fall down from heaven, but was a culmination and full development of an imperialist line of aggressive struggle for world domination which Truman had been following for a long time. True, he was following that line under the pressures of the more extreme imperialists and reactionaries—Dulles, Vandenberg & Co.—but he was following that line, the "get tough with Russia" line, which contains all the elements of the Truman doctrine.

THE 1948 ELECTIONS

* * * * *

To Marxists and responsible anti-Fascists and progressives generally, the exact forms in which the people's anti-Fascist and anti-imperialist coalition (to be strictly differentiated from Browder's fictitious monstrosity) will participate in the 1948 election struggles, are still under discussion. Why? Conditions are much in flux and changing almost daily as far as the rapidity of political realinements is concerned and as far as the moods of the people are concerned. Many surprising developments, favorable to the cause of the people's coalition, may yet take place between now and the 1948 elections. But it is equally obvious to responsible anti-Fascists and pro-Roosevelt progressives that the forces of the people's coalition will have to act as an independent political force—a democratic, progressive, anti-Fascist, anti-monopoly, anti-imperialist force—in the election struggles of 1948; that the forces of this people's coalition must strive to bring into existence a pro-Roosevelt progressive united ticket for 1948; that the people's coalition must make the election struggle of 1948 a major stage in the process of consolidating a third, a people's antimonopoly party in the United States.

* * * * *

Wallace said, when asked in London if he will support the Democratic Party in 1948, "I shall be campaigning in 1948 with all my power, but I will be campaigning for the ideals of one free world and the men who best express these ideals. I hope, but I cannot guarantee, that they will be on the Democratic ticket." (New York Times, April 12, 1947.) Thus spoke a leader, a fighter for the Roosevelt policies, who is in no hurry with the creation of a third party or even ticket, but who is determined that the people shall have the opportunity to support in the 1948 elections Roosevelt men and policies whatever the party ticket, even though he hopes it may be the Democratic Party ticket. Wallace is in no hurry to leave the American people, as Browder is, with no choice but Truman.

* * * And these new developments are operating powerfully among the masses of the people to produce large scale independent political action, to stimulate the growth of independent people's and labor's political organizations, to create conditions favorable for the further growth of that new political realinement called the people's antimonopoly coalition, to create favorable opportunities for a united, pro-Roosevelt, progressive ticket in 1948, and for the consolidation of a third, a people's party.

Furthermore, for Marxists there can be no question of the objective necessity and need for a third, a people's party, in the shortest possible time. Only such a party can make fully effective in the political life of the country the objectives and policies of the people's antimonopoly and anti-imperialist coalition.

* * * * *

The question of the exact forms of political and party organization to be created and adopted by the people's coalition in the national elections of 1948 is one of major importance, and is now being discussed very intensely in the ranks of the coalition. It is becoming clear that whatever will be the final decision by the basic forces of the coalition, the objective need and possibility for a

third, a people's ticket in the national elections of 1948 is becoming ever more urgent and favorable. It is also becoming clear that the forces of the people's coalition must therefore concentrate their energies on creating all necessary conditions—political and organizational—for the launching of such a ticket in the 1948 elections.

Naturally, this does not prejudge any of the tactical questions of form or alliances which the coalition forces will finally decide upon. Much will be happening all the time. But one question needs decision now. It is the question of creating all necessary political and organizational conditions for the successful launching of a third, a people's ticket in the national elections of 1948. It is necessary to decide now that the main efforts, all efforts, of the independent forces in the coalition must be directed toward creating the conditions for a third ticket. We must make absolutely sure that when the people of this country decide * * * they will find a people's ticket or a people's party through which to express themselves in the national elections of 1948.

Thus, Mr. Speaker, it is clear that the official Moscow line has directed that a third party be formed in the United States. This is because the Democratic Party has finally recognized the mortal danger in alliance with the Communists. The Republican Party has recognized at all times that you cannot make a political alliance with the Communists. The grand design of Roosevelt to win the Communists by appeasement has proven a gigantic failure. The grand design was taken in by the grander design of Stalin.

The events in Czechoslovakia are just the latest instance of proof that you cannot cooperate with the Communists.

The American people should know that the official Moscow line is to formulate a third party and that that line was laid down as early as June 1947, by the American Moscow agent, Alexander Bittleman.

America's Historic Goals

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, March 3 (legislative day of Monday, February 2), 1948

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "America's Historic Goals," written by President James B. Conant of Harvard University and appearing in Think magazine for February 1948.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICA'S HISTORIC GOALS

(By James B. Conant, president, Harvard University)

A number of writers have recently emphasized that the problem of getting on with Russia is basically a problem of the vigor of our own society—our own fitness to survive. Few would deny that our survival in turn depends on a vigorous demonstration in the next decade that we can make our form of democracy function even in a war-torn world. This in turn means imaginative and bold policies both abroad and at home; a realization of our international responsibilities as a great power, and a satisfactory development of our internal economy; above all, a realization of the unique nature of American democracy and a determination to move a few steps nearer our historic goals.

All of which is admittedly a large order. To discuss all the problems implicit in even this brief summary of the challenge before us would require a volume of many pages. I propose in this short article to consider one group of questions which seems to me central to all discussions of the future of this country. What are the historic goals of the United States? That is, what sort of society do we wish to develop in the next few decades here in the United States? If this society is to be continuous with our past development and a reflection of our traditional aspirations, we must know what are the basic ideals of American democracy and how we can further their realization.

I have referred to the uniqueness of American democracy. To my mind we rarely do justice to this fact. Of course, on many counts the evolution of our political and legal systems may be considered as only a slight variant of a much wider pattern. We share with Great Britain in particular many ideals, traditions, and even details of operating a democratic government. Representative government, universal suffrage, and free elections are in this century the basis of all truly democratic governments. All nations which have this minimum in common are drawn together in this period of history as never before. But without in the least weakening this vital international link, we would do well to emphasize the special nature of the ideals which characterize us as a nation. These have arisen from our history and should, if we meet the challenge of our day, point the way for the next stage of our journey.

Our Nation, unlike almost any other nation, has not arisen from a state founded on military conquest. Therefore, we have nowhere in our tradition the notion of an aristocracy entitled to rule by right of birth. Run through the other democratic nations of the world and, if you recall their history, you will see how striking is our exceptional origin and growth. Neither political nor economic nor social privilege comes to one by right of birth according to our American ideals. On the contrary, the members of each new generation are supposed to start from scratch. Merit alone should win.

The cynical may shrug their shoulders and say this is theory—the facts of modern American life are far different. Granted; but such comments betray a failure to understand that in an open society like ours ideals represent goals toward which men and women may move by concerted action. They never can be reached in practice, almost by definition, but we can readily recognize whether we are moving toward them or retreating. Our American ideals in part correspond to the goals of all democracies; in part they represent a special contribution to the world. If we are to survive, we must make these ideals explicit by our actions; words alone will not suffice.

The United States has developed its greatness as a Nation in a period in which a highly fluid society overran a rich and empty continent; one of the highly significant ideals of the American Nation has long been equality of opportunity. This concept may well represent an exportable commodity sorely needed by the other democracies of the world today. There is considerable reason to believe that the absence of this idea in France and Italy, for example, has been responsible in no small measure for the large inroads of communistic philosophy and the subsequent sympathy with Soviet foreign policy. To the degree that we can demonstrate in the next few years that this unique American ideal is no mere myth or legend, we may both contribute to the stability of other nations and forward our own democracy along its historic path.

Our free, tax-supported schools represent in concrete form those special ideals which characterize this country. Our educational system of universal education with its emphasis on flexibility and careers open to the talented is unlike any other either now or in the past. Our public schools are the sinews of our democracy. We must keep them strong. The machinery of our democratic form of government must likewise be vigilantly maintained. Our educational system, our political institutions, and our social ideals form a closely interwoven pattern. Equality of opportunity could be realized only in a political democracy; it would have meaning only in a competitive society in which private ownership and the profit motive were accepted as basic principles.

I hardly need remind the reader that a a competitive society, which each generation draws nearer to the goal of equal opportunity, is not to be had just for the asking, nor is it just a question of economics. There are few today who would deny that economics, politics, and social ideals are thoroughly interwoven. The history of this century has taught all thinking men that neither do modern industry and trade proceed in a vacuum nor do human beings behave in reality like economic symbols. The problem of morale exists in almost every working group in our society.

As never before, business needs men who appreciate the responsibilities of business to itself and to that unique society of freemen which has been developed on this continent. Such men must understand not only the practical workings of business organizations but also the economic and social climate in which business operates. Management and labor share with the statesmen whom we elect to office the responsibility for our future. Less directly but ultimately to an equal degree, so do those who guide our vast system of public schools. They should be statesmen, too. Professional men and leaders of opinion, particularly members of the bar and the press, are likewise heavily involved in this question of our survival. Cannot all these people, indeed the majority of our citizens, subscribe to a common set of postulates as to what we desire to accomplish in the coming years? The goals of equality of opportunity, a minimum of class distinction, a maximum degree of individual freedom, and a wide distribution of centers of initiative are inherent in the American creed. If the United States is to continue as a vigorous and healthy republic of freemen, it must continue to move toward these historic goals.

The going will be tough; no one can gainsay that. Statesmanship will be required not only in affairs of state, but in other vital areas. I have in mind two in particular, not usually associated together: industry and education. One may reach this conclusion from the following considerations.

The future prosperity of America depends on the capacity of its economy to remain dynamic while providing satisfying employment for all capable of employment. Perhaps you will all agree to that. But every year some two or three million boys and girls mature and enter our society looking for jobs. We believe they are all entitled to a fair chance. Our schools are to a large degree ladders of opportunity.

In short, our educational system must guide and educate a diversity of talent for the best interests of the Nation. Particular emphasis should be placed on the word "guide" in the preceding sentence because the process of helping people to determine the activity for which their abilities best qualify them is of great importance at all levels of our schools and colleges. I may state parenthetically that we are beginning

to have sound knowledge as to how such guidance can be provided.

Now it is obvious that the best minds of the country should be devoted to a study of the many problems arising as a consequence of our endeavors through industry and education to keep our society prosperous, strong, and democratic. It is at this point that I believe our universities have a special contribution to make. The methods of certain of the social sciences have already been developed to a point where studies of society by competent scholars can provide basic information to assist the leaders of industry and of education. Both fundamental investigations as to the nature of man and society and immediate studies of specific problems are required.

The morale of a small group of men or a large nation (if it is a free nation) depends in no small measure on agreement as to the ends for which all labor. If we can agree on the goals toward which we desire to move, the knowledge and skills of our younger social scientists and scholars can be mobilized as never before to assist the peaceful development of the Nation. Without expecting any miracles I have confidence that in the years ahead our universities can play a major role in assuring that in the future American society will be a strong, vigorous, and united body of freemen.

What Time Is It, Buddy?

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 3, 1948

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial in the Palm Beach Post, West Palm Beach, Fla., written by Charles Francis Coe, editor and publisher, entitled "What Time Is It, Buddy?" This is a very timely and thought-provoking article:

WHAT TIME IS IT, BUDDY?

By "Buddy" we mean every citizen of this Republic.

Whether you swing a 1 pound hammer or a 10-ton pile driver, you are asked that question. There looms on your doorstep a hydra-headed monster that is possessed of two things. The first is the power to destroy you. The second is the willingness to use that power.

For 15 years, you have steadily been jockeyed into the shadow of the ominous thing called inflation. While you labored and saved, this giant grew fat on the idiotic mental gymnastics of crackpots in power.

Your home became surrounded by bureaus. Your doorstep sagged under the weight of incompetents in sudden glory. The dollar you saved would buy less and less of the things you saved to buy. While you deposited it snugly in the bank, this giant inflation calmly invaded it.

He did not steal the dollar bill from the vault, of course. He just let it lay there and grow smaller and smaller in purchasing power. The dollar you placed there a year ago is not worth nearly as much today as it was when you placed it there.

Yet you saved it. You sacrificed to make that deposit. You, hand in hand with Uncle Sam, saved that dollar by application of your sweat, your intellect, your integrity, and your faith in the American way of life. As scaly a group of speculators, chiselers, mountebanks, and sheer incompetents as ever assaulted the body politic, has robbed you while you slept.

The attrition of your liberties has kept pace with the shriveling of your savings. Rubber money has been used to smoke screen this devilish operation. Now, what time is it?

While you have a watch, you had better look. We beg of you to look. We beg of you to fire your soul with the spirit which made this free people. We beg of you to realize that sacred trusts are in the management of men with so little sense that their whole thinking apparatus would be lost in the palm of an anemone.

Into that vacuum of intellectual powers has crept the inevitable political connivance which fattens upon the lethargy of the people. What time is it, Buddy? We will tell you what time we think it is. But your opinion is the one we seek, primarily.

It is time you awakened to the destruction of your property values. It is time you recognized that between worker and manager there is a relationship which must not be transgressed by greed. It is time you realize that rising prices are the direct gift of inadequate government in the patriotic sense and excessive government in the political sense.

It is time that we heard again the ominous roll of drums, thunder of the guns, moans of the anguished. It is time that we fired our spirits to the defense of our homeland, so that these horrendous sounds may not encroach again upon our homes and families.

It is time that we dismissed every school teacher, from primary to college, who repudiates the Constitution of the United States and its Bill of Rights. It is time that we rose in peaceful but irresistible power, just as there rose our forefathers before us. It is time we uproot from high places the sycophants and satellites who obscure the road to continuing freedom.

It is time we give heed to our children; time we assume again the burden of self-government; time we read plainly the all too plain signs of political bartering, while our Republic stands too near the flames; time we turn again to the simple faith and stalwart courage of our founders; time we kick out our regional hatred, racial disputations, religious bigotry; time we turn our faces to the God of Liberty who has so faithfully guarded our democracy in days agone.

It is time, Buddy, that we compare again the fruits of communism with our own lot in life; the simple, direct statements of the early patriots, with the double talk of the current crop of political plunderers. It is time that we, you and you, and you, who make America, face a few bald facts.

We stand to be taken over by political polluters. Our wages to be set by bureaucratic nitwits, our prices to be set by bureaucratic dimtops, our hours of labor, manner of labor, privilege of labor, to be set by goons and disbrained profiteers who garb themselves in the habiliments of the godly but grub themselves with the abandonment of special privilege.

You do not care what time it is, Buddy? Then turn your back to our war dead. Cast your insubstantial shadow across the grave of freedom. Sneer at our flag. Tread upon our sacred institutions. Cast aside your home, your life insurance, your savings, in whatsoever form they may be.

In that event, unfurl your banner of selfishness, taunt your offspring with the lyrical lie of communism. Sing your litany of lust. Let it flow upon the ears of Americans. Join the throng who forgot what time it was in Russia, Italy, France, Germany, China, Japan. Join the blinded throngs who deserve no liberty because they know not how to defend and preserve it.

Throw away your watch. There is no time but the moment. All is well without your vote. All is good and fine, and true and permanent. The pathway for your children's feet is paved smoothly. Your obligation to God and country is a myth.

What time is it, Buddy? In reverence, in affection, in prayerful sincerity, we make bold to suggest to you, Buddy, that it is time you found out what time it is.

CHARLES FRANCIS COE.

Soil Conservation of the Future

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 3, 1948

Mr. MURRAY of Wisconsin. Mr. Speaker, the soils of the United States have been continually depleted in fertility since the first settlers arrived in our country.

In many sections the soil fertility has in effect been mined by the crop practices followed. In other sections, where livestock farming has prevailed, the losses of soil fertility have been greatly reduced. However, in the greatest livestock and dairy sections there has been and now is a constant loss of the mineral elements like phosphates and potash, although in many of these sections the nitrogen content of the soil has been maintained by the raising of clovers, alfalfa, and other legumes.

While the problem of soil conservation has been dramatized the past few years, the fact still remains that soil fertility is not being maintained.

A bill introduced by our colleague from Illinois, the Honorable EVERETT DIRKSEN, H. R. 4752, is an approach to this soil-fertility problem that merits our consideration and approval.

At this point I include table 12 from Bulletin 607 by the New Jersey Agricultural Experiment Station:

TABLE 12.—*Annual balance of plant nutrients in soils of the United States, 1930*

	N	P	K	CA	Mg	S
	Tons	*Tons*	*Tons*	*Tons*	*Tons*	*Tons*
Losses (harvested crops, grazing, erosion, leaching)	22,899,046	4,221,302	50,108,560	68,185,730	24,557,881	12,043,911
Additions (fertilizers and liming materials, manures and bedding, rainfall, irrigation waters, seeds, nitrogen fixed)	16,253,862	1,447,835	5,151,076	12,561,673	4,040,813	9,029,690
Net annual loss	6,645,184	2,773,467	44,957,484	55,624,057	20,517,068	3,014,221

All figures subject to change and correction.

ANNUAL BALANCE SHEET

By deducting the annual net additions from the annual net losses of plant ingredients, we are able to ascertain the annual net loss from our inventory. This is indicated in table 12.

The annual additions and losses are summarized in table 12. The figures show that our soils are suffering enormous losses of the six important plant nutrients. The significance of these figures will become more clear if we bear in mind that such credits as atmospheric precipitation apply to about three-quarters of our land area. On the other hand, the losses of plant nutrients are relatively much greater from land used for the growing of harvested crops and the more intensive types of livestock grazing. Attention should be called, in the first place, to the net losses of calcium, potassium, and magnesium. The removal of these elements involves a gradual rise of soil acidity. With the loss of the basic substances of which these elements are a part, there is a more intense loss of phosphorus. Indeed, too much stress cannot be laid on the fact that our soils are suffering a net annual loss of about 3,000,000 tons of phosphorus—or almost 10 times as much as is supplied by chemical fertilizers. It is well known that in some countries where the cumulative losses of basic materials have not been made up by liming, marling, and so forth, there has been a striking increase in soil acidity, a serious loss of phosphorus, and a marked shrinkage in the size of domestic animals.

The net annual loss of nitrogen, indicated at about 6,500,000 tons, is really much greater insofar as our cropland is concerned. An assumed annual loss of 10,000,000 tons of nitrogen in our agricultural land would be a reasonably conservative estimate. This would be equivalent to more than 30 times the amount of nitrogen supplied by chemical fertilizers.

The losses of the plant nutrients mentioned, as well as of sulfur, are of such a character as to call for the prompt adoption of measures which would offer to us assurance of more or less effective conservation and of a lessening drain on our resources of plant nutrients. Changed methods of soil management, which would include proper provision for lessening the losses due to erosion and leaching, would represent a major conservation measure. Such changes in our soil- and crop-management systems as would permit a lessening in the run-off, an increase in the amount of water stored in the soil, an increase in the area occupied by legumes, an increase in nonsymbiotic nitrogen fixation, and a decrease in the excessive oxidation of organic matter would almost, if not quite, permit the elimination of the annual deficit in respect to our soil-nitrogen resources.

It is hoped that the data recorded, even though they be preliminary and very general in character, will draw attention to a situation which is of major economic and social significance. They should be a helpful contribution to the effective use of our soil and land resources.

In compiling and organizing the information given in this bulletin, the writer had the help of a group of technical and clerical assistants, to whom he feels deeply indebted. Much of this work would not have been possible without the aid which was received from CWA, ERA, and WPA. The loyal cooperation and the friendly help of the county, State, and Federal personnel of these administrations are herewith gratefully acknowledged.

The Dirksen bill would provide the machinery to correlate the findings in the soil studies of the various State experiment stations.

HOW SECTION 32 FUNDS ARE DISTRIBUTED

Mr. Speaker, the following official table indicates the use that is being made of section 32 in the Eightieth Congress:

Exportation and domestic conservation of agricultural commodities—Approved programs and obligations by commodities (July 1, 1947, to Jan. 31, 1948)

	Approved programs as of Jan. 31, 1948	Obligation incurred	
		July 1, 1947, to Jan. 31, 1948	During January 1948
Purchases for direct distribution:			
Apple, fresh	$2,445,000.00		
Pear, fresh	393,750.00		
Apple, peach, prune, raisin, dried	4,850,000.00	$2,569,715.09	$1,453,697.76
Fig, dried	1,220,000.00	992,055.15	992,055.15
Grapefruit juice, canned	3,500,000.00		
Irish potato	6,250,000.00	3,632,464.42	514,603.48
Sweetpotato	1,500,000.00	548,837.61	61,692.53
General vegetable	1,125,000.00	119,047.39	3,957.02
Egg	750,000.00	608,771.46	172,570.44
Prior year transportation costs	157.12	157.12	
Total	22,033,907.12	8,471,048.24	3,198,576.38
Exportation: Cotton	2,000,000.00	1,407,784.82	263,411.22
Diversion:			
Cotton:			
Insulation	1,000,000.00	813,625.00	345,000.00
Paper	200,000.00		
Pear, fresh	135,000.00		
Irish potato	1,000,000.00		
Total	2,335,000.00	813,625.00	345,000.00
Administration of marketing agreements	700,000.00	335,875.00	62,500.00
Other administrative expenses	1,060,000.00	754,269.12	83,811.47
Total	1,760,000.00	1,090,144.12	146,311.47
Grand total	28,128,907.12	11,782,602.18	3,953,299.07

Delaware Selected for National Chicken Production Contest

EXTENSION OF REMARKS

OF

HON. J. CALEB BOGGS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 3, 1948

Mr. BOGGS of Delaware. Mr. Speaker, a matter of interest to housewives throughout the Nation and to all those engaged in the production of chickens is the fact that after 3 years of intensive experimentation, the final stages of the National Chicken-of-Tomorrow Contest are now under way.

As every chicken producer in the Nation knows, the over-all objective of the program, of this search for that barnyard bird now known as the chicken-of-tomorrow, is to produce poultry which will be in a better position to compete with other foods for a place on the country's dinner table. It is to produce a meatier, broader-breasted chicken having a larger proportion of flesh to bone. As a result of this National Chicken-of-Tomorrow Contest, we are also certain to see completely new methods in the production and marketing of poultry meat.

The State of Delaware is proud to have been selected as the site for this contest. It will be staged at the University of Delaware's agricultural experimental station, located at Georgetown, Del., from March 24 to June 24, 1948. Although many other States were extremely active in their efforts to obtain this national contest, the National Chicken-of-Tomorrow Committee selected Delaware because of its superior facilities and established leadership in the production of chickens.

Mr. Speaker, this is no idle statement. Let us consider these facts for any substantiation which may be needed. More commercial broilers are produced annually in the State of Delaware than in any other State in the Union. In fact, during the past several years Delaware has produced nearly one-fourth—between 20 and 24 percent—of the entire number of commercial broilers placed on the market in the United States. The size of this industry in Delaware may be further emphasized by pointing out that approximately 60 percent of Delaware's agricultural income is from the production of chickens. In Delaware the income from this industry has reached the amazing total of about $65,000,000 per year. The Delaware broiler is rapidly becoming known from coast to coast.

It is no accident, Mr. Speaker, that Delaware is the leader in the broiler-production industry. It has achieved that top ranking position because of its easy access to large marketing areas, because of the high quality of feed avail-

able there, because of its tremendous hatchery facilities, and because Delawareans by long experience have developed the all-important know-how.

According to Professor A. E. Tomhave, chairman of the Delaware Chicken-of-Tomorrow Committee and head of the department of animal and poultry industry at the University of Delaware, this Nation-wide contest will provide valuable data concerning hatchability, rate of growth, feathering, feed consumption, percentage of mortality and culls—all of which are of the utmost importance to the successful production and marketing of chickens.

Professor Tomhave also points out that this event will focus attention of the entire poultry industry upon Delaware during the next few months, for in the finals of this 3-year-long national contest will be 40 chicken breeders from 26 States. As a matter of fact, poultrymen in 44 of our States have actually participated in the State and regional contests conducted during 1946 and 1947.

This contest is also an educational program and has had the effect of turning the country's hen houses into a Nation-wide chicken-breeding laboratory.

During last month each of the 40 finalists from 26 different States shipped into Delaware 720 hatching eggs. Two days ago these were set, and they will be hatched on March 22. For the following 12-week period they will be reared at the University of Delaware's experimental substation under identical conditions. Then, on June 22 and 23, the entries will be judged. The prize-winning breeders will be announced in the Chicken-of-Tomorrow Field Day at Georgetown, Del., on June 24, 1948. This field day will be a gala affair, attended by an estimated 1,000 out-of-State visitors as well as editors of poultry magazines and farm-news radio broadcasters. An interesting educational program and a display of both live and dressed specimens of birds entered in the contest will be among other features of this closing event of the 3-year chicken-of-tomorrow program.

Delaware is indeed proud of its achievements in the chicken industry and proud of its selection as host to the Nation's outstanding and most successful chicken breeders.

Humility Begets Greatness

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 3, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following article which appeared in the Lynn Telegram-News, Lynn, Mass., Sunday, February 29, 1948:

HUMILITY BEGETS GREATNESS

It is representative of ecclesiastical leaders that their shining temporal and spiritual achievements remain comparatively obscure through the years and duly deserved recognition often comes belatedly. The lives of the saints reflect such a circumstance.

And yet they who so dedicate their lives would not have it any other way. Of all the virtues practiced so militantly, they practice none more constantly and faithfully than that of humility.

Today, people of all faiths throughout the Nation, and abroad, recognize the great spiritual and temporal leadership of Archbishop Richard J. Cushing. His amazing talent, and seemingly unlimited capacity, for benevolent leadership and organization was not dormant during the earlier years of his life but was exercised with such humility that the greatness of it was not readily discernible.

But humility begets greatness and thus the greatness of Archbishop Cushing emerges into full view.

Rev. Arthur V. Lyons was among the people of Lynn for 18 years. But his ecclesiastical duty was performed so unobtrusively that his real stature was not recognized.

No clergyman in this city's bright history epitomized more benevolence and humility as clearly as Father Lyons while he was curate at St. Joseph's Church. He assisted in the latter years of his curateship in the administration of the parish with the late pastor, Rev. Michael J. Welch. Yet, while he became endeared to people of all faiths in the community, it is only now that the real stature of the devoted priest emerges.

Today, Father Lyons is archdiocesan director of cemeteries and business manager of the Pilot, official weekly Catholic publication in the archdiocese.

Each assignment in itself is a tribute to Father Lyons' executive ability. As archdiocesan director he will reorganize and supervise 68 cemeteries embracing vast acreage of land. A burial lot is a hallowed recess in the eyes of every Catholic family. The scope of Father Lyons' duties as director might be estimated from the fact that there are some 20,000 burials a year in the 68 cemeteries which he supervises including the 21 on the North Shore. The detail attendant on current interments, together with care of graves of the faithful departed through the years, constitute a project of immense proportion. Already Father Lyons has acquitted himself admirably in this directorship.

As business manager of the Pilot, Father Lyons participates actively in the publication of a periodical which brings the weekly news into more than 60,000 Catholic homes in the archdiocese. Again, guiding the destiny of the 119-year-old Pilot constitutes a highly important undertaking in itself and such an undertaking benefits by Father Lyons' store of business acumen.

Archbishop Cushing called a devoted curate to the two important administrative posts and Father Lyons has responded with the same zeal and humility which characterized his 18 years of priesthood in Lynn. But as ecclesiastical duty called for administrative and financial attributes it is learned that he possesses a lore of such matters as well as innate piety.

Father Lyons may continue the demanding tasks of his duties with the knowledge that the entire archdiocese joins the city of Lynn in a full measure of constant support of his mission.

American Youth Makes Its Choice Between the Two Parties

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 3, 1948

Mr. BRADLEY. Mr. Speaker, in order that the Members may understand just what type of Americanism the younger members of the Republican Party are advocating, I take pleasure in presenting herewith the principal part of an address made by Mr. Ralph Becker, chairman of the National Young Republican Federation, before the Republican Women's Study Club of Long Beach, Calif., on February 16, 1948:

We have been living in an era of indifference toward politics on the part of many people. These people flatly refuse to participate in public affairs in any way whatsoever, and some of them will not even vote. They are perfectly willing to let the business of government go by default to second-raters or even to racketeers and criminals. Strangely enough, they are usually men and women of action—in business or professions or service, lawyers, doctors, engineers, and the like. They are unquestionably able people and otherwise good citizens. Yet while they flatly refuse to have anything to do with politics, while on election day many of them insist on going out and playing golf or indulging in some other form of personal amusement at social get-togethers, they will invariably make speeches to the effect that the country is "going to the dogs," that political parties "have no leadership," that "there ought to be a law," and "why doesn't somebody do something about it."

These people look down on the business of government as something which is not worth their time or their effort, as something which is not quite honest and perhaps not even clean. They have an idea that people in politics don't wash behind the ears. To them government and politics is something which operates on the wrong side of the tracks. Personally, I feel that these people are relics of the past. They are not living in the present time. They are living in the realm of thought of days gone by when politics and government could be mere incidentals to personal life.

Interestingly enough, however, there is a different attitude on the part of young people today, and by the phrase young people of today, I refer specifically to the Young Republican Group; people who are in their 20's and 30's. We have an attitude which is entirely different because we young people have been brought up under entirely different circumstances from those of our fathers. We have been brought up during the period of the most intense warfare between ideas which the world has ever seen.

* * * * *

In addition to that, we young people have been exposed to a rough war between the free-enterprise capitalistic system on the one hand and the novel ideas of communism and socialism on the other. On the domestic front, during the nineteen thirties, the New Dealers loudly predicted that our free-enterprise system was through, that capitalism was passing from the earth, that our society would never again be the same. This was in contrast to the economic theory with which the country had grown up, the theory that our prosperity was based primarily upon our system of free-enterprise capitalism. We young people could not help being exposed to this warfare of ideas between free enterprise and left-wing theory. We had to think about these things and reach conclusions for ourselves. We were striving to make our way in the world and, unlike some older people, we had no established pattern of thinking, no established habits of living to carry us through without further mental effort.

And on top of all these troubles at home, we have been exposed to catastrophic events in the field of international affairs, which have also been accompanied by a warfare between ideas. At the present time not only do we have the propaganda of Soviet Russia to the effect that communism is superior to free-enterprise capitalism; we have also

just been through the period of the Hitlerite and Mussolini dictatorships, which in their turn advocated new and startling ideas. They advocated the Nietzsche doctrine that there were supermen and superraces in the world which were destined to rule the rest of the people; and we had to think that one over, too. Were there indeed supermen and superraces who were destined to rule the rest of the people in the world; or is there a real basis, as set forth in our Constitution, for individuals of all kinds, types, races, colors, and creeds, to live together in reasonable harmony on a foundation of principles of fair play and mutual respect? And don't forget too that Hitler and Mussolini proclaimed that dictatorship was the only efficient system of government; that the democracies were decadent and bound to disappear from the earth as outmoded relics of the past. We had to think all these things over because we have our own future to work out. And we gradually came to realize that all these ideas were basic to the working out of our own destiny.

Thus out of this warfare between ideas, this rough and tumble battle of conflicting ideologies to which we young people were exposed in the plastic years of life, two significant conclusions emerged. The first conclusion was this: Government is the basic factor, of more importance by far than anything else in everyone's life. It is the pattern of government which, more than anything else, sets the pattern for the life of the individual. Look at the miserable life of the people today in Soviet Russia. Think of what the people in Germany went through, and are still going through because of Adolph Hitler's dictatorship. And look at the relative prosperity and stability which we enjoy in this country under our form of government. If we look at all these things we simply must come to the conclusion that government, its form and administration, is, far more than anything else, the basic factor in everyone's life, the thing which gives direction to the life of the individual, the thing which either enables the individual to work out his own destiny and make the most of his own opportunities, or keeps him in chains. So we young people came to the conclusion that we had better take a hand in this business of government, if we wanted to help shape our own future and destiny.

The second conclusion which we came to is that government is not something which just happens all by itself. The business of government is not something which just appears mysteriously out of nowhere. On the contrary, it is something which is based on the laws of human nature. It is set up and run by people, and the participation of people in public affairs we call politics. The result is that, as we young people decided to take an interest in the business of government, we necessarily also decided to take an interest in politics. Just as the pattern of our individual lives depends more upon our system of government administration than upon anything else, so the caliber and tone of our government administration depends upon political leadership. In its turn, the leadership in ordinary politics depends upon the type of people who get into it. We young people have come to the conclusion that we must continue to produce leaders, real leaders on the political scene who can eventually improve our government administration. After all, the demand for leadership in public affairs is not equalled anywhere else. Unless the leaders among the people become also the leaders in politics and in government, we cannot expect the best results in government administration, nor the best results for us as in our individual lives.

That means that we young people have been squarely up against the problem of choosing between one of the political groups in this country and, thus in the main, to choose between the Republican and Democratic Parties. So let me state frankly some of the things which we Republicans stand for, as I see it. Some of these things you will find in party platforms. Some of them you may find only between the lines. Some you will find only in the feelings of people. But there are differences between the two major parties and I will try to explain them as I undertsand them.

First, we Republicans stand, beyond any question, for a republican form of government, that is, representative "democracy" where the people choose their own leaders to represent them. Nobody can question our stand on that.

* * * * *

Second, another thing we Republicans stand for is the two-party system. We are flatly and unalterably against the one-party systems of Soviet Russia, Germany, and Italy. We are also against the multiparty system, which prevents any single issue from being squarely presented on a yes-or-no basis to the people. One great trouble with the governments of certain European countries during these past decades is that the prime minister or chief of state is selected by a parliament composed of a number of different parties. The cabinet, in its turn, is composed of a coalition between those parties. If the cabinet falls, there is no new election by the people, and the people have no chance to express themselves. Instead, the hodgepodge parliament selects another prime minister and he selects another coalition cabinet, which is another hodgepodge of ideas. Hence no administration can present or pursue a clear, distinct philosophy and give it a chance to work out. Instead, each one necessarily becomes a conglomeration of ideas, compromise, and intrigue. It tends to prevent any clear issue from being put to the people. Let's not delude ourselves. Issues have to be decided on a yes-or-no basis sooner or later. Ideas have to be worked out. Either they are good or they are not so good, and the more the process of working out ideas is delayed, the more confusion and chaos result. This is what the multiparty system does. It prevents the presentation of simple issues to the people and the crystallization of ideas.

* * * * *

Third, another thing which we Republicans stand for is free-enterprise capitalism or individualism, as opposed to communism, socialism, and other left-winged theories. Let there be no mistake about that. We believe in the capitalistic system, without reservations, and we are not ashamed to say so. We do not believe in dictatorship and central planning. We do not believe in the cartel systems of state-sponsored monopoly which are in vogue elsewhere in the world. We want free-enterprise capitalism; we believe in individual incentive, initiative, and responsibility. We don't want to compromise with these things, and we are not ashamed to say so. It has weaknesses, but none which cannot be corrected. It is that system, combined with the political stability provided by our Constitution, which has given this country its great prosperity, its high standard of living for the average fellow, that high standard of living and opportunity for prosperity and happiness which, so far as I know, is unequalled elsewhere on the face of the earth.

Let me explain a little more what I mean by free-enterprise capitalism, because those words have been kicked around a good deal in the last few years, and I am afraid many of the people who do the kicking don't understand what they are talking about. By free-enterprise capitalism, I mean an economic system where government regulation is kept to the necessary minimum to prevent crime, fraud, monopoly, and other economic practices which are inimical to the public welfare. We simply have to have that kind of government regulation in order to be able to live together on a basis of fair play, mutual respect, and harmony. But free-enterprise capitalism is diametrically opposed to a system where economic controls are imposed so as to set up a system of central planning. It is diametrically opposed to the idea of the service state, or the welfare state, which runs everybody's life on the theory that people are incapable of taking responsibility for their own lives and working the problems of everyday life out for themselves; the theory that the state must plan, service, and control everyone's life. We are against that. That is what they have in Russia, Germany, and Italy. It is what they are tending to in England today, and that is what the Democrats have been telling us we have to have here. But we Republicans don't want it. We want free-enterprise capitalism, not paternalism, central planning, and abdication of responsibility by the individual.

Fourth, we Republicans stand for the use of careful thinking and sound methods. We do not believe that a political party should trot out any half-baked, wildcat scheme as a basis for Government action, just because it will make good headlines in the newspaper. Every time some hairbrained idea is tried, it costs the taxpayers money, upsets people's lives, and accomplishes very little.

* * * * *

We were exposed to a lot of things like that in the thirties. It is hardly necessary to mention more than a few. We had, for instance, the gold-buying scheme, that is, the theory that as the price of gold was increased the price of commodities would automatically increase. Wonderful, wasn't it? The only trouble with it was that it wouldn't work. It was contrary to the views of the sound economists and it cost the American taxpayers large sums of money. Then we had the NRA. In its time that, too, made good headlines. Indeed, the newspapers screamed with publicity about the NRA when it was in vogue. It was going to save the world; but it, too, was a colossal failure, simply because it didn't work. It would have been repealed if the Supreme Court had not pointed out that it did not fit our dual system of government. It cost the American taxpayers large sums of money; it disrupted American business and, in effect, ripped the controls out of our economy at a critical time; and it finally disappeared in a haze of confusion and disillusionment, leaving a sorry wake of disruption in business.

That is not the style, the method, or approach of us Republicans. We do not believe that the objective of a political party is to dazzle the public by any means at hand, regardless of how dishonest, superficial, or unsound those means may be, in order to obtain their votes. Frankly, we believe that the business of government is a much more serious thing. The result is that our method of approach to the business of government is one of an effort to use careful thinking and sound workmanlike methods. To be sure, no man or group of men has any mortgage on good ideas or the right answers to the problems of modern life. We Republicans cannot claim, any more than anyone can claim, that we always get the right answers, rather than to dazzle the public for shallow political purposes; and we believe that we can only obtain the right answers to the pressing problems of today and every other generation, by trying to use careful thinking and the use of sound, workmanlike methods.

Now, these are some of the things for which the Republican Party stands, as I see them: (1) A Republican form of government; (2) the two-party system; (3) free-enterprise capitalism; and (4) realistic thinking and sound workmanlike methods. These are things which all we young people have been thinking a great deal about, for, as I said earlier, we are more interested in government and in politics than our prede-

cessors were some 20 years ago. And as we interest ourselves in politics, we must make a decision as to which political party we prefer. In the main this boils down to a choice between the two major parties. Which one are we going to choose? Before we can decide that, we must ask ourselves exactly what we believe in.

Without any question we are in favor of our Republican form of government and the two-party system. But the last two principles of the Republican Party which I have described, that of free-enterprise capitalism and the use of realistic thinking and sound workmanlike methods, have a special appeal to young people. Let me explain these as I see it.

Youth has high aspirations. It wants to see the world become a better place in a great many respects, and it does not want to suffer the dismal pain of disillusionment and frustration. And this is where we come to the Republican Party. The Republican Party also wants to see the world become a better place; but it does not believe that that objective can be accomplished through the use of sloppy thinking, half-baked methods, and shallow political expediency. The use of methods of that kind can, in the long run, only bring to young people disillusionment and frustration. The objectives of youth can be realized only through the use of careful thinking and sound workmanlike methods.

Now what about this other Republican principle, free-enterprise capitalism, or individualism as I like to call it? Here is how we young people feel about it, as best I have been able to ascertain.

We young people do not want to subordinate ourselves to the state. We want opportunity, and we are not afraid of responsibility—the things which are afforded by individualism. So believing, we simply cannot affiliate ourselves with the Democrats, because they are the political bedfellows of the Communists and left-wingers, and the advocates of central planning by the Government. If we are to keep faith with ourselves, with our desire for opportunity, and our willingness to take responsibility, our destiny lies with individualism and the Republican Party. We don't want to kid ourselves. We are all interested in own own economic future, and in carrying out our own destiny. We do not believe that Utopia is just around the corner and that we can get in without any trouble and even without an admission fee by leaving all responsibility to the state. We do not believe that there is any easy road to success and fulfillment. We are willing to do our share of the work. So, if we are to follow these principles, which are basic to the ideals, the hopefulness, and enthusiasm of youth, we must necessarily stick to the Republican Party. Only through its faith in the ordinary individual, and its basic approach of careful study of facts, realistic thinking, and sound workmanlike methods, can youth realize its dreams and accomplish the things of which it is capable.

Housing for Veterans

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 3, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following resolution of the general court of Massachusetts memorializing the Congress of the United States to enact into law the Taft-Ellender-Wagner bill, facilitating the construction of housing for veterans of World War II and others:

Resolutions memorializing the Congress of the United States to enact the Taft-Ellender-Wagner bill, so called, facilitating the construction of housing for veterans of World War II and others

Resolved, That the General Court of Massachusetts memorializes the Congress of the United States to enact into law the Taft-Ellender-Wagner bill, so called, facilitating the construction of housing for veterans of World War II and others, as provided therein; and be it further

Resolved, That copies of these resolutions be transmitted forthwith by the State secretary to the President of the United States, to the presiding officer of each branch of Congress, and to the Members thereof from this Commonwealth.

In house of representatives, adopted, February 19, 1948.

LAWRENCE R. GROVE,
Clerk.

A true copy.
Attest: F. W. COOK,
Secretary of the Commonwealth.

"Why I Am for MacArthur"—Article by Hon. Arthur H. Vandenberg, of Michigan

EXTENSION OF REMARKS
OF
HON. MAX SCHWABE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. SCHWABE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like at this time, to present a magazine article written by a great American statesman who has frequently demonstrated a selfishness willingness to place the good of his country above personal thought and feeling.

Some of us have read his speeches on the floor of the Senate and been swayed by their logic.

I refer to Senator ARTHUR H. VANDENBERG, of Michigan, chairman of the Committee on Foreign Relations, and frequently mentioned as a candidate for the Republican nomination as President of the United States.

The magazine article written by the Senator appeared in Collier's magazine on February 12, 1944, and presented sound and logical reasoning for his position on the need of these United States for inspired leadership in the crisis existing at that date.

I feel that the reasons advanced for Senator VANDENBERG's position as taken in his article 4 years ago are as sound today as they were when the article appeared, though the nature of the crisis then, and the crisis existing today are technically different.

The article was entitled "Why I Am for MacArthur."

Mr. Speaker, the text is as follows:

WHY I AM FOR MACARTHUR

(By ARTHUR H. VANDENBERG, United States Senator from Michigan)

All right, Collier's, I'll answer your question. I'll tell you why I favor Gen. Douglas MacArthur for the Republican nomination for President of the United States. It's the first time I have put it down in black and white. I have not wanted to say or do anything which might embarrass a great friend, a great soldier, a great citizen, and a very great American.

But with so much at stake, 1944 ought to be a year of plain speaking and, with a number of MacArthur critics now significantly busy trying to head him off, I think I am entitled to state why, with the greatest respect for other distinguished and available Republicans, I am for MacArthur—not only because I believe him to be the strongest candidate but, more important, because I believe he would make the strongest President in the tough days that lie ahead.

First let me clear up my own status in this affair. If circumstances have seemed to identify me prominently with a MacArthur movement, it is entirely the result of the circumstances. I speak for no organization. Most emphatically I do not speak for MacArthur. I speak only for myself. It all started as the result of a casual newspaper interview 1 year ago. Since then I have spent about half of my time answering "MacArthur mail."

Apparently there are thousands of kindred spirits up and down the land. Doctor Gallup and other temperature-takers have spectacularly found that out, and it's an amazing phenomenon in view of the total lack of any sort of an organized MacArthur campaign.

To one and all I have said one simple thing. MacArthur can only be nominated as the result of a pure draft (which no American can refuse, no matter what he says ahead of time). It cannot come from any ordinary, preconvention, political methods. It can only come through the free decision of a free convention and in response to a spontaneous demonstration of popular faith. He can have no part in the campaign.

A MIRACLE IS ALWAYS POSSIBLE

The politicians tell me such miracles do not happen. But I saw Mr. Justice Hughes nominated that way in 1916 and I have seen other miracles in this democracy since Pearl Harbor. Besides there is such a thing as destiny and there still is such a thing as logic.

It may not happen. But that is beside the point. You have asked me why I am for MacArthur. Here is the answer to your question. This is what I think—win, lose, or draw:

First: The American people will be thinking more about the election of a Commander in Chief next November than about the election of a President as such. That will be their conscious or subconscious thought. If the war is over in Europe (which, pray, it may be), there will still, and even more significantly, be the war in the Pacific. I judge that President Roosevelt himself agrees with me about this, in view of his adroit and subtle suggestion that he wants to substitute a fourth term "Win the War" slogan for his three term New Deal trademark. When it comes to politics, you will never go far wrong by taking a leaf out of F. D. R.'s book. He intends to run primarily as Commander in Chief. He expects the people to vote for a Commander in Chief.

Well—

Need I go on? Should we not offer the people a better Commander in Chief—not merely for political reasons, but fundamentally for the sake of the war effort? Isn't that our paramount business? By common consent, is there any greater soldier in the world than MacArthur? Could there be a more eligible Commander in Chief? And won't this be even more emphatically obvious if, by next November, we are concentrating on wiping Japan from the Pacific map?

Suppose the Republicans nominate an eminent civilian without war experience, how impressive will he be as prospective Commander in Chief against Roosevelt's "Win

the War" appeal and against swapping horses, etc.? Must we not wholly answer the patriotic anxieties which will dominate the minds of all our people—in particular the anguished hearts of 10,000,000 fathers and mothers of 10,000,000 soldier sons and daughters? Must we not answer with a wholly competent Commander in Chief? How could we successfully turn mass electoral attention to the dreadfully important domestic issues, which ought to control next November's decision, unless we first get over this hump?

My correspondence suggests that many of our good people think MacArthur is so good a soldier that he ought to stay where he is. They think he is too badly needed as a field commander in the Pacific war to be drafted into the Presidency; but they only unwillingly confirm my point. If he is indispensable to us as a four-star general, then we simply give our country and the United Nations the maximum use of his tremendous military genius when we promote him to commander in chief and thus give him total sway over the military decisions which we think he is so incomparably qualified to make. He would not be deserting Bataan, which he would never do, if he is promoted by the American people from general to commander in chief; he is simply given supreme command. He is released to his maximum utility. He can then deliver the goods without handicap or hamper. This isn't politics, It is vital, vivid service to humanity.

LET'S GET ON WITH THE WAR

In response to all questions about his own future, MacArthur consistently has been content to say, "Let's get on with the war!" It is a torch in his soul. Isn't he getting on with the war? And how! If he becomes commander in chief, as I conceive the situation, he would never, for an instant, leave his present responsibilities until the final moment when, without the slightest campaign participation on his part, he would become the President of the United States. Then he would accept more responsibility, not less. He would enlarge his responsibility but he would leave none behind.

MacArthur is the son of a great soldier. He was born in peril and, for his country's sake, he has lived in peril almost ever since. He was a great soldier in the First World War. He led and personified the tremendous Rainbow Division in France. He was gassed. He was wounded twice. He was decorated 13 times for extreme bravery under fire. He was cited seven additional times for bravery. I quote just one citation:

"He displayed indomitable resolution and great courage in rallying broken lines and in reforming attacks, thereby making victory possible. On a field where courage was the rule, his courage was the dominant feature."

Whatever else we do, and regardless of 1944 vicissitudes, let's not forget our history or our debt. Against this unparalleled record, the petty, little slingshots of today deserve nothing but the contempt they so richly merit. Let's not befoul our own pantheon.

MacArthur subsequently became a great peacetime Chief of Staff, so great that President Roosevelt reappointed him, which was without a precedent. His demands upon Congress were replete with prescient pleadings for modern arms—motorized and aerial—to prepare against the day of judgment. He was an exceptional administrator, an important quality not to be ignored in the current discussion. He became a great generalissimo in the Philippines where he organized the defenses of the new commonwealth. His record in World War II is an equal epic.

It is not too much to say that he became the living symbol of our own bruised but indomitable hopes in half a world when our fortunes were at lowest ebb. Never has a commander done so much with so little. His critics can spread all the petty smears they please. Against them, he will stand upon the horizon like a monolith of honor, courage, devotion and achievement.

I can't help but think that's the kind of commander in chief Mr. and Mrs. John Q. Public would like to choose when, pursuant to the formula dictated by President Roosevelt himself, the next campaign is settled on a win-the-war basis. At any rate, that's the kind of President I want when he is to become our new commander in chief. And that's the kind of candidate I want to stand as F. D. R.'s opposite number on the ballot. And that, Mr. Editor, is my reason No. 1 in response to your question.

Now for reason No. 2: Anyone who has any practical familiarity with Washington knows that the next President of the United States must make hard, harsh decisions every day of his administration when the time comes to put this country back on its postwar feet. Many of our postwar tasks will be even more trying to men's souls than the war itself if we are to renew free institutions and free enterprise. The next President will have to consult solely the independent welfare of our whole citizenship. He can never flirt with pressure groups, no matter how powerful politically. He can never yield to special pleaders for special privilege in any direction. He must have but one unselfish devotion. He must travel the undeviating line of duty. We shall need a Gibraltar in the peace just as desperately as we need it in the war, an American Gibraltar personified at 1600 Pennsylvania Avenue. Probably it is a one-term job, with no thought of the consequences.

I may be wrong about it, but I sometimes wonder whether this characteristic (in sufficient quantity) can stem from ordinary, political soil. At any rate, this I know: I know that MacArthur has been making hard, life-and-death decisions all through his sturdy career. Then he has been seeing these decisions through to a conclusive finish. I know that MacArthur is the embodiment of loyalty to our American destiny at any cost. The proof stands on the record.

I know that he is as devoid of political entanglements as he was of reinforcements at Bataan. I know that he would come to the White House with no thought or purpose except to serve America, at home and abroad, in the climax of his devoted career. Any racketeer of any sort would last about 1 minute in his presence. I know that he has never shirked a tough job in his life or compromised with it. He is granite in the face of duty.

WHAT I'D LIKE TO VOTE FOR

That's not my enthusiasm speaking. It is the voice of time and events. I know that his training and experience produce an integrity of character which will persist in any assignment he accepts. I'd like to vote for integrity of character. It means more to me than a thousand campaign promises. Isn't that what America needs? Isn't it?

MacArthur would be nominated as a Republican, and that's appropriate because he comes of Republican stock. Of course he would play team ball because no one knows better than he that it is finally the team that counts, and I would expect him, on the basis of the record, to put together the best team we have seen in many a day. He has the know-how because he has dealt with Government all his life. But my view of it is that he would be elected, in this emergency, as something vastly more than a Republican in any narrow, partisan sense. He is utterly detached from our party schisms and our party feuds and our interparty divisions. More than any other Presidential possibility, he would be elected as a great, unifying American who would win his country's unified support by deserving it. The very nature of his draft, void of any obligation save to his country, would dramatize and implement his selfless dedication. That's the kind of President I want next time and, incidentally, perhaps that's the reason so many southern Democrats tell me that he is the one Republican nominee who could crack Mason and Dixon's line. And I know plenty of northern Democrats, including one of the biggest, who feel the same way about it.

Now let's come down to reason No. 3, Although MacArthur has been a soldier all his life, I never knew a man in whom spiritual values are more predominant. He is infinitely more than a soldier. This is important because the family hearthstone means more to us, in our ideology, than battlefields; and it means infinitely more to him. He once said at a reunion of his Rainbow Division, "No one desires peace as much as the soldier, for he must pay the greatest penalty in war."

THE KIND OF PRESIDENT I WANT

I repeat that spiritual values rule his mind. This blossoms in every speech he ever made (and, by the way, he has an incomparable gift of tongue) and in every statement he ever uttered. I recall his thrilling, sanctified radio message from the hard-pressed Philippines to the little church in Arkansas where he was confirmed as a boy—the message sent on a beleaguered Easter morning—a message eloquently suggesting that we need God on our side in this titanic struggle and humbly asking for His aid. I find everlasting consolation and assurance in this simple Christian's reliance upon divine grace.

That's the kind of President I want, Mr. Editor.

In my opinion, such a President will never go far wrong. I would not for an instant suggest the absence of this quality in others. I simply certify to its abundant reality in the MacArthur character.

When a group of Canadian newsmen recently interviewed MacArthur—off the record—he talked frankly with them for some 2 hours. They couldn't report what he said, but one of them did print the opinion that he rivaled even Churchill in his command of our common language (which would be the final British compliment) and that he quoted constantly from three favorite authorities—the Bible, Adam Smith, and Abraham Lincoln. I know of no better key to his thinking on sociology, on economics, and on the realities of life in the pattern of American ideals. Meanwhile, the Republican national platform will spell out the details. We ought to be able to agree upon those authorities. At any rate, that's the kind of President I want.

No, it doesn't answer all the detailed questions regarding national policies upon which one might wish more specific enlightenment. But I have come to believe that the basic characteristics of a man are more important than campaign promises, and I think I know this man from days of old.

It is unfortunate that MacArthur cannot stump the country. It would be a landslide. But he can't. He must stay where he is. He must just "get on with the war." But answering for myself, I assert my complete confidence in a superlatively fine American mind which has developed on sound American doctrine and which certainly knows—the hard way—what our position, at home and abroad, must be in the postwar world.

No one could be more a "citizen of the world," with an experience and vision that roam the hemispheres; yet no one could have more faithfully dedicated a loyal lifetime to his own United States. Yes; that's the kind of President I want in lieu of a fourth-term dynasty.

Oh, I am familiar with much that is being said—and make no mistake—often being deliberately propagandized by those who politically fear this powerful personality. Envy and malice and fear have always chosen shining targets. MacArthur has been pursued by them all his life—and never with so much at stake as now. I'm familiar with

some of the often earnest but mistaken prejudice against him (such as always rises against any formidable Presidential probability).

For example, I have heard from some bonus marchers whom he, in line of duty, was ordered to evict from Washington—once more doing his hard, tough duty under orders which a soldier must obey. But I haven't heard that he was responsible for the loss of a single life in the way he did the job. I haven't heard that he delegated this repugnant task to some subordinate. But I have heard, in person, from one of the top commanders of that bonus army that he is for MacArthur—as am I—and that he is prepared to go anywhere, any time, to prove that, even in that tragic hour, MacArthur was a soldier's soldier and the soldiers' friend.

Anyway, he faced and did his hard duty to his Government on an assignment not of his own choosing. Let's separate his duty from the event itself. On that basis, it simply helps to clinch my point. On that basis, I'll say again that's the kind of President—tried by fire and by the acid test—I want, and that the country needs next year.

I have heard it said—perhaps for want of some better brick to throw—that historically General McClellan made a poor nominee and that General Grant made a poor President. So what? Does that forever bar every other general? Any such analogy is ridiculous, pro or con.

It would be just as logical to speak of General Washington or General Andrew Jackson as exhibits to the contrary. And how about the fact that the military was the background for almost every President from Hayes to Taft, during great epochs in our national life? Yes; and Gen. Leonard Wood would have been elected President in 1920 instead of Warren Harding if he could have been saved from a few of his misguided friends.

I venture the prediction that when 10,000,000 of our fighting sons are home again, every President for two generations to come will have been a stalwart figure in this fighting war. I do not run from such a prophecy. I think it is sound democracy. Who has better earned the right? Who has better kept the faith? Who has better served the Republic? Who better knows what America is worth? In my view, MacArthur is richly endowed to be the monitor in this regard. This isn't militarism. It is the exact opposite, because no one hates war quite so much as its own veterans. It isn't militarism; it is practical citizenship.

LET THE PEOPLE SPEAK

I constantly hear it said that a "pure draft" of a Presidential nominee is impossible. Maybe so. Certainly if General MacArthur is nominated, it will be a "pure draft" so far as he is concerned. But that does not alter his eligibility—and I am discussing only that theme at the moment. It will remain for the Republican National Convention, which I hope may be dominated by uninstructed delegates who sit in a truly deliberative party parliament to determine whether this eligibility is greater than that of any of the other distinguished and able Republicans who will be similarly weighed. It will be for the people, meanwhile, to speak their minds.

That is what I am doing, Mr. Editor, in answer to your question. I think I know at first hand something about what the next Presidency will require. I believe that General MacArthur has what it takes in full measure. He is a composite of all our necessities. He is unique in respect to many of them. He has the maturity of vast experience, yet he is in his physical and mental prime. If nominated, he will be elected. If elected, he will bring a great mind, a great heart, a great capacity, and a great devotion to the proud leadership of a great Nation. And now—on with the show. And may the best man win.

Greek Royalists Make Us Uncle Sap

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to include the following article by William L. Shirer in the New York Herald Tribune, February 22, 1948:

GREEK ROYALISTS FOUND SNIPING AT UNITED STATES MISSION AND REPORTERS—POLITICOS IN POWER, SHIRER SAYS, CALL AMERICANS REDS, USE SAME ARGUMENTS AGAINST THEM AS COMMUNISTS DO; ATTACKS SEEN AS EFFECTIVE

(By William L. Shirer)

Those extremely able, calculating, hard-boiled, and not-too-scrupulous Royalist politicos who run Greece, which President Truman said last week was "still a free country," must really subscribe to the gag about the United States being good old Uncle Sap.

At the moment last week when the President was asking Congress for more millions to bolster the Greek Army's war against the guerrillas, whom it outnumbers 10 to 1, the right-wing forces in control of Greece were actively conducting a two-pronged campaign against the American-aid mission and against most of the American correspondents in Greece, whose insistence on reporting the facts has so alarmed the Royalists that they have begun to resort to tactics which Americans, who are footing the bill in Greece, ought to know of.

These are matters which Mr. Truman did not touch on in his second quarterly report on aid to Greece and Turkey last week. But the intelligence I get from responsible Americans in Greece—not to mention from Greeks—is so startling that perhaps it should be passed on.

DIRECTLY TO THE BOSS

Responsible American reporters for every conservative American newspaper have already grown accustomed to being called Communists by the reactionary clique which dominates Greece. But they may not have been prepared for a new tactic which the Greek Government recently has used in an attempt to prevent American newspapers and radio from publishing and broadcasting the truth.

This consists of the Greek Government complaining directly to the correspondent's boss in the United States.

I know of one case where the Greek Ambassador, Vassili Dendramis, wrote to the American employer of one of the best of our reporters in Athens, complaining of the journalist's "exaggerations" and "complete distortions of the truth." If the Greek Ambassador, unmindful of the American tradition of press freedom, thought that in this case he might bring about the correspondent's recall, he was sadly mistaken. I am glad to report that the employer in this case fully backed his correspondent.

There may be need of solidarity among our press and radio executives, for the American reporters in Athens feel there may soon be an attempt by the Royalist clique, which is becoming impatient for a Royalist dictatorship, to remove all the fearless correspondents.

The treatment of thes American correspondents has become a scandal, and I am surprised that the President and the Congress are not more concerned about it. If the American taxpayer is to continue to cough up the money to keep Greece going he at least has the right to be informed by his own press and radio of what is going on there. The official State Department reports are of not muct help.

Our correspondents in Greece work under great difficulties. The Greek Government constantly thwarts their efforts to travel around the country to see what is up. It obstructs their work in dozens of ingenious ways. It stoops to having agents spread malicious slander about correspondents whose stories displease it.

HOPE TO FRIGHTEN MISSION

The purpose of the right-wing attack on the American mission in Greece apparently is to make it afraid to take a firm line in cleaning up the corruption and the injustices of the present regime. How effective this campaign has been may be judged by the fact that 90 percent of the American personnel of the mission wan. to come home by June 30, when their contracts run out.

Amusingly enough, but indicative of the mentality of the Greek Royalists whom we keep in power, one charge against the American mission is that it is full of Communists—the very people President Truman says we're spending our millions to fight in Greece.

Recently, the Royalist newspaper Estia suggested that the American mission had become infiltrated by Communists and that the American Federal Bureau of Investigation should come to Greece to investigate. Commenting on an airfield which the Americans were building for the Greeks, Estia expressed the sarcastic hope that the field was not being constructed by "Americans who are Communist-minded, like so many American mission members."

Experiments turned out on investigation to be nothing more than the honest and sincere efforts of our mission to get food, medicine, and blankets to the half-million starving Greeks.

Finally, my informants in Greece report the supreme irony of all. They find that since the first of the year the propaganda line of the Communists and of the dominant Royalist Populist Party in regard to America has become almost identical. Both charge the United States with interference in internal Greek affairs. Both say that Washington is trying to use the Greek people to further its own ends.

The Communist line is well known, but it will come as a surprise to many to learn that the group we support in Athens because it is against Communists is now also plugging the thesis that the United States is trying to establish a puppet government in the Greek capital so that Greeks will fight America's war against the Soviet Union.

This was expressed in part recently by Greece's second-largest newspaper, the Royalist Vrathini. "If one observes the notices," it observed, "being issued to the Greek Government by American Administrator Dwight P. Griswold, one must conclude that these were formulated in Tokyo, addressed to the conquered Japanese or some other gangster-dominated country. * * * Ironically, these tactics are being used by a people who surrendered Europe to the worst of enemies and now are trying to win the war which was lost at Yalta and Potsdam. * * * Further, the Americans, and our other allies, are chiefly to blame for the misery, devastation and loss of life in Greece during the last year because of refusal to give the Greek army sufficient arms for use against the bandits in the hills."

One might reply, of course, that we already have given the Greeks $172,000,000 worth of arms and that Maj. Gen. William G. Livesay, military adviser to the American Aid Mission, recently said that the arms and equipment of the Greek army are superior in every respect to those of the guerrillas.

But, as the President rather ruefully admitted, in fact, last week, this equipment has not done much good. Is Greece, perchance, a bottomless pit?

Tinkling Cymbals and Sounding Brasses

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 2, 1948

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lincoln County Times of Brookhaven, Miss.:

TINKLING CYMBALS AND SOUNDING BRASSES
(An editorial by T. P. Brady)

The eyes of our Nation are upon the South. Mississippi has spoken and the Nation is looking to ascertain what Alabama, Georgia, Tennessee, Florida, and all the other Southern States are going to do. The Nation knows the South gave it the true Democratic Party. It knows that we are the heart and soul of that party and that we alone can now save it from destruction. The sneers of northern Democratic political bosses are fading from their faces. The slurs of northern writers and news commentators are being silenced. Northern "raw deal" Democrats realize now that the true Jeffersonian Democrats throughout the Nation are aroused, united, and determined to purge the party of its un-American leftists. With wondering eyes they peer to see if a united South can accomplish this purge.

Their sneers and slurs will be abandoned, but in their place appeasement, threats, and coercion will be substituted and utilized. The selection of Representative WILLIAM M. COLMER, of Mississippi, as ex officio chairman of a committee of southern Democratic Representatives consisting of 12 members has convinced the most dubious that 30,000,000 white southern Democrats are determined and will not be denied their constitutional rights by 3,000,000 Negro Democrats of the North; 76 of the 108 southern Democratic Congressmen have promptly responded to the demand of their 30,000,000 constituents, and the other 32 will do likewise without having to be shown the expediency of such a response. This committee of southern Congressmen, through its chairman, Representative COLMER, today will endeavor with Gov. Strom Thurman, of South Carolina, chairman of the southern governors committee, and Governors Laney, of Arkansas; Cherry, of North Carolina; Jester, of Texas; and Tuck, fo Virginia, to convince J. HOWARD MCGRATH, national chairman of the national Democratic Party, that 14 Southern States will be denied their constitutional prerogatives, and 30,000,000 white Jeffersonian Democratic citizens their constitutional rights by President Truman's vicious four-point anti-southern program.

It is proposed that this gallant gesture should be made, but it is a futile one. Today J. HOWARD MCGRATH will not sneer at nor slur these 12 Jeffersonian Democrats. He will smile and smile and blandly assure them he will be glad to discuss their requests that President Truman withdraw his four recommendations for the enactment of anti-segregation, antipoll tax, antilynch, and FEPC Federal legislation with the titular head of the Democratic Party. That will end the gesture. President Truman knew of the Southern Governors Conference. He also knew of the scheduled meeting with Chairman MCGRATH and the 12 southern Congressmen, and either fearing this meeting, or indifferent thereto, he has flown to Haiti and today is in conference with more distinguished dignitaries upon more important matters on a well-timed vacation.

Upon the Missourian's return, the northern Democrats with their Negro cohorts will initiate their machine strategy. Appeasement will be their first line of attack, and realizing this will fail, then threats will be forthcoming followed closely by coercion. We are not deceived; we cannot be placated with baubles. We realize we were recently given a Vice President and this bauble has availed us nothing. We cannot be intimidated and we cannot be coerced. We are the Democratic Party and we are going to remain so. We are furthermore determined to purge the Democratic Party of the canker that is slowly eating into its vitals before our party is utterly destroyed.

Any representative of any Southern State, be he United States Senator, Congressman, governor, Presidential elector, committeeman, or what not, who does not realize this fact or for any reason whatsoever fails to do all within his power to block these four vicious, discriminatory proposed Federal enactments and purge his party of these mongrelizing elements which will destroy it, is not worthy of bearing the name of a southerner or a Democrat. The mongrel Democrats of the northern wing will utilize, in their coercive strategy, the tinkling symbols of the South. These tinkling symbols consist first of a few misguided educators, religious fanatics, and racial minority groups who have been inoculated with Russian Soviet philosophy which did not take, but did produce an unhealthy pink rash. Many of this number are conscientious in their misguided diluted beliefs. They are easily recognized and will be quickly reconverted or silenced.

A second group of tinklers are more formidable. It is composed of selfish and frequently benevolent southern Democrats who do not appreciate the seriousness of this crisis and who have capitalized on northern Democratic assistance in many forms, and on southern tradition, utilizing often a controlled Negro vote for their selfish interest or ambition. This group will have to be reckoned with. If they will not conform to our idealogy and customs voluntarily then they must be forced to do so.

A third group consists of the so-called intellectual Negroes. In this group can be found a few who honestly realize that the abolition of segregation and the poll tax would produce a catastrophe in the South for white and Negro alike. The majority, however, because of the rash, politically expedient promises of the northern Democrats, have adopted these futile promises as their dearest objectives. The thought of mating a vulture with an eagle, contrary to the laws of God and nature, is appealing to them. Just as they left the Republican Party when they were promised these Utopian privileges, contrary to said laws of God and nature, after carpetbag days, so they will leave the northern Democratic Party for the Communist Party when it promises the same or something even more attractive. The eyes of communistic Russia are upon the South today. God have mercy on the South and the United States if the northern Democrats should franchise the Negro and the Communist Party assimilate them. As the iron curtain has fallen over the mongrelized communistic nations of Europe, so will it then fall over and encircle these United States.

As for the sounding brasses which will blow from the North, they will shout and scream party loyalty when they do not even know the meaning of the words. Northern Democrats will thus endeavor to deceive and mislead conscientious, misguided, loyal, southern Jeffersonian Democrats. Millions of dollars furnished by northern Negro Democratic organizations under the control of Walter White, the Negro secretary of the National Association for the Advancement of Colored People and the titular head of 763 branches of Negro youth councils which has a paid membership of 350,000, augmented by funds from un-American racial minority groups in the North and even the Communist Party are at their command to keep the brasses blowing throughout the South and Nation. Federal patronage and Federal projects are within the control of the left northern wing of the party which will affect thousands upon thousands of southerners. They too, will be sounding off. Coercion in its most sinster forms will be the instruments of destruction used by the northern sounding brasses!

But, in the last analysis, the solution and answer to this great crisis which faces the South and our Nation will hang on one question. That question is—Does the true Democratic Party have the leadership to cope with this problem? Are the descendants of Thomas Jefferson, Andrew Jackson, Sam Houston, Jefferson Davis, Robert E. Lee, John C. Calhoun, Claiborne, Pinkney, and the thousands of other true Democrats, who gave us this heritage and party, strong enough and willing enough to fight and if necessary die for the preservation of their party? Do the true Democrats of the South value their honor, their heritage, the sanctity of their homes, the protection of their mothers, wives, sisters, daughters, and sweethearts more than mercenary, selfish benefits which will be offered in barter for these priceless traditions and heritage?

The answer to this question has never been doubted. Thirty million white Democratic citizens will rise as a man and our brothers in the North and West who believe as we believe, who trust as we trust, and who love their country as we do, will rally to our aid and this malignant canker will be eradicated. A regeneration of true democracy must and will come to our party, the American Democratic Party of sovereign States and our Government, a union of these sovereign States, will be protected and its continuation insured.

National Defense

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 3, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following resolution of the General Court of Massachusetts:

Resolutions memorializing the Congress of the United States to enact legislation and to provide adequate appropriations for the preservation of the security of the Nation, by the creation of the world's strongest Air Force and Air National Guard and for the creation of a National Science Foundation for scientific research, to make available scientific discoveries and knowledge for the information and guidance of officials responsible for our national secuirty

Whereas In World War II the value and importance of the Regular Air Force and Air National Guard as component parts of our national defense and security program were demonstrated, and in the development of said air force, the need for scientific study in the field of science related to national defense and security was demonstrated and continues to exist: Therefore be it

Resolved, That the General Court of Massachusetts hereby memorializes the Congress of the United States to enact legislation to provide for the world's strongest Regular Air Force and Air National Guard and to provide for an adequate appropriation of funds to permit this to be done; and be it further

Resolved, That the General Court of Massachusetts hereby memorializes the Congress of the United States to enact legislation providing for the establishment of a National Science Foundation, with the appropriation of sufficient funds to encourage scientific research to be conducted which shall be made available to the directors of the armed forces and insure national security in the future; and be it further

Resolved, That copies of these resolutions be transmitted forthwith by the secretary of the Commonwealth to the President of the United States, to the presiding officers of each branch of Congress, and to the members thereof from this commonwealth.

In house of representatives, adopted, February 12, 1948.

LAWRENCE R. GROVE, *Clerk*.

In senate, adopted, in concurrence, February 19, 1948.

IRVING N. HAYDEN, *Clerk*.

A true copy. Attest:

F. W. COOK,
Secretary of the Commonwealth.

Tolerance

EXTENSION OF REMARKS
OF
HON. ELLSWORTH B. FOOTE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 3, 1948

Mr. FOOTE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I should like to include an article published in today's issue of the Washington Times-Herald telling of the friendship between the new archbishop of Baltimore and a Jewish tailor of New Britain, Conn., which I believe is a splendid example of tolerance:

NEW BALTIMORE ARCHBISHOP HONORS EARLY JEWISH MENTOR

NEW BRITAIN, CONN., March 2.—Forty-five years ago Samuel Greenberg, a Jewish tailor, encouraged a little boy called "Frankie" to study for the Catholic priesthood.

The boy, devoted to the neighborhood tailor who used to put patches on the seat of his pants, is now the Most Reverend Francis P. Keough, 56, new archbishop of Baltimore.

Sam and his wife have just returned from Baltimore where they were honored guests at the elevation ceremony.

This is the story Sam, now 75, told today in his little Seneca Street shop:

"When I heard 'Frankie' was to be made an archbishop, I did not suspect I would be beside him at his consecration. Then an invitation came.

"I borrowed money from my daughter, and my wife, Sonia, and I got on the train. When we arrived, a priest met us at the station and ushered us to a pew set aside especially for us."

The aged tailor continued:

"When Keough passed by our pew, flanked by all those church dignitaries, he stopped and said: 'Hello, Sam.' I was so amazed I was scared."

That was not all the bishop did for his old friend. He kept the Greenbergs in Baltimore for a week, expenses paid—and provided kosher meals throughout the visit.

We Have a Federal Power Policy

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 3, 1948

Mr. HORAN. Mr. Speaker, for the past many months I have heard any number of voices raised on this floor to the effect that we need a Federal power policy for the United States. What most of them have meant, I am sure, was that they wanted a different power policy. But in working toward that end, they have contrived to spread the impression that there was no present, organized Federal policy on electric power.

Since there has been so much said on this subject by those who want to change our Federal power laws to their own designs, it should be in order at this time to insert into the RECORD the full text of a declaration and petition on Federal power policy, agreed to by the Northwest Public Power Association, which is the organization comprising all local public power distribution agencies in the Pacific Northwest, at its recent convention at Lewiston, Idaho.

This document is important chiefly because it points up the fact that we do have a Federal power policy; that, while it has some faults, it is effectively working in the people's interest; that it has been developed over a period of some 65 years—or since the advent of electric power; and that any attempt to tamper with it should be made in at atmosphere of caution and due regard for the precedents and principles which have been established for so long.

I do not say that I necessarily agree with each and every point outlined in this declaration. I am deeply gratified, however, that the association apparently tried to allow for such differences of opinion by stating broad general principles, rather than specific limitations.

As an example, the March 1948 issue of Rural Electrification magazine in its discussion of the declaration, points out that—

The association delegates recommended regional and national control with a maximum degree of home rule consistent with national objectives and propose local representation on advisory and administrative boards and councils.

The magazine goes on to comment:

Proponents of a Columbia Valley Authority and Representative WALT HORAN'S competing proposal differ on these points in pointing out the advantages of their bills. The NWPPA declaration doesn't mention either bill, and makes a studied effort to incorporate the advantages of both proposals.

It is only by such willingness to allow for the different points of view that we can ever evolve a firm and acceptable Federal power policy. It is the all-or-nothing attitude of extreme partisans which makes for continuing controversy and confusion.

I cannot urge too strongly that every Member of this body who is interested in the conservation and development of our country's electric power potential read this document carefully. I urge them that in so reading they recognize that the sponsoring organization is the chosen representative and duly-elected voice of the hundreds of thousands of citizen-owner-customers who have their money and their future invested in the power distribution systems which serve them.

Every citizen has a stake in the evolution of our Federal power policy. Federal power revenues already are committed to the repayment of more than $1,000,000,000 in subsidies to reclamation and other natural resource development, in addition to the liquidation of the investment in Federal power plants themselves. Federal power plants already have increased the taxable valuation of newly developed sections of the country by hundreds of millions of dollars. Federal power plants gave us the electric energy which won the war of production and is winning the production battle for peace.

The Federal power goose has been laying golden eggs for many years, to the benefit of all our people. Let us think long and cautiously before we allow any man to swing an ax over its head.

Mr. Speaker, under leave to extend my remarks, I include the declaration and petition of the Northwest Public Power Association relating to Federal power policy at this point in today's RECORD:

THE FEDERAL POWER POLICY

(A declaration and petition of the Northwest Public Power Association, Inc., Vancouver, Wash.)

The public power systems of Washington, Oregon, Montana, Idaho, and Alaska represented by delegates in convention at Lewiston, Idaho, this 6th day of February 1948 as members of the Northwest Public Power Association, a nonprofit service corporation in the State of Washington

Declare and publish certain fundamental principles and considerations relative to the continued formulation of a sound Federal power policy to the end that such policy may guide and render more effective the Federal power program, and furthermore do

Petition the Congress of the United States to preserve intact these principles and to strengthen this policy by means of legislation providing administrative coordination, legislative consistency and more business-like financing.

I. PREAMBLE

The furnishing of electric energy has developed since 1882 into the second most important public utility function of government, second only to the furnishing of safe domestic water supply. To help meet this need for electric energy the Congress has evolved over the past half century a Federal power program. This program has demonstrated the constitutional authority of the Congress to generate electric energy at flood control, navigation, irrigation, and other multipurpose projects, including the right to construct supplementary fuel-burning generating plants and the transmission lines necessary for the marketing of such electric energy. The Congress has also recognized the importance of the role of electric energy in increased national production, both in time of war and peace, and secondly, the role of rural electrification as a means to greater agricultural production and for the improvement of the general welfare, and thirdly, the role of the Federal power program as an integral part of the broader program for the conservation and development of the natural

resources. By these actions the Congress has assigned to various Federal agencies the important public-utility responsibility of supplying adequate supplies of electric energy. In certain sections of the Nation, and particularly in the Pacific Northwest, the Federal Government is the predominant supplier of electric energy. And it is as a guide for the conduct of the Federal power program that the Congress has written into law and has frequently reiterated the fundamental principles which constitute our Federal power policy.

II. BASIC PRINCIPLES

We favor the continued formulation and implementation of the Federal power policy based on the following four historic principles:

A. To encourage the most widespread use of electric energy.

B. At the lowest possible rates to consumers.

C. Consistent with sound business principles.

D. With preference to public bodies and cooperatives.

III. RIVER BASIN DEVELOPMENT

We favor the policy of the Congress, long established in law, providing for the development by the United States Government as rapidly as practicable of all the potential hydropower of our rivers as an incident and principal self-liquidating factor in the broader program of controlling the floods, aiding navigation, providing irrigation, and for other conservation purposes. In the planning of multipurpose river projects due consideration and proper weight shall be given to the preservation or relocation of the fish and other marine and wildlife, and to the scenic and recreational values of the area.

IV. NATURAL RESOURCE DEVELOPMENT IN THE PACIFIC NORTHWEST

We recommend that the natural resources of the various States be developed on a regional and national basis. We urge that the development in the Pacific Northwest be executed in accordance with the broad outlines laid out in the following detailed reports:

A Pacific Northwest Regional Planning Commission Report issued by the National Resources Committee in May 1936.

B. Proposed Program of Development of Columbia Drainage Basin, issued December 17, 1943, by the Northwest States Development Association consisting of the Governors of Washington, Oregon, Idaho, Montana, and Wyoming.

C. Advance Program of System Development, 1948–54, preliminary report issued by the Bonneville Power Administration October 1947, as amended and endorsed by the Columbia Basin Interagency Committee in November 1947 and issued in final form February 6, 1948.

D. Development of Resources and of Economic Opportunity in the Pacific Northwest, published in October 1942 by the National Resources Planning Board.

V. LOCAL AUTONOMY

Where the natural resources of a State or a region are proposed for development by a Federal agency, we recommend a maximum degree of home rule consistent with national objectives, and that this policy shall be implemented by means of local public hearings, and by local representation on advisory and administrative boards and councils.

VI. THE BONNEVILLE ACT

We endorse the Bonneville Act as amended, and we recommend in addition the following amendments:

A. The Bonneville Act should be amended so as to enable the Bonneville Power Administration to employ the revenues for maintenance, operating and administrative purposes, and secondly to set aside revenues in excess of operating, maintenance, and administrative expenses, interest and debt amortization charges, and to employ such surplus revenues for capital purposes, including investment in transmission lines, substations and related facilities except major transmission facilities into an area not previously approved for service in connection with an appropriation act.

B. We recommend that the Bonneville Act be amended to authorize the Bonneville Power Administration to borrow capital loan funds from the United States Treasury for the construction or replacement of transmission lines, substations, and related facilities.

C. We recommend that those provisions of the Government Corporation Control Act relating to business-type budgets be made applicable to the Bonneville Power Administration. In addition to the financial controls in the Government Corporation Control Act, the Congress in reviewing the business-type budget may reject the proposed expenditure of borrowed capital loan funds for the construction of major transmission facilities into an area not previously served by the Administration.

D. The Bonneville Act should be amended for the purpose of designating the Bonneville Power Administration as the exclusive marketing agency for surplus electrical energy generated at Army constructed flood control or navigation dams in the States of Washington and Oregon and on the Columbia River and its tributaries, and from such Bureau of Reclamation hydroelectric facilities as the Secretary of the Interior shall designate.

E. We recommend that the Bonneville Act be amended for the purpose of authorizing and directing the Bonneville Power Administration to determine power rates and schedules for the repayment of Federal investment in power facilities, both subject to approval of the Federal Power Commission, and that in making such determinations the Bonneville Power Administration shall set rates and repayments on a system-wide basis rather than on an individual project basis, provided that payments should otherwise conform to existing laws. In other words, two or more related projects may be considered as a unit.

VII. FLOOD CONTROL ACT OF 1944

We endorse and urge the retention of section 5 of the Flood Control Act of 1944, and furthermore urge the extension and application of the provisions of section 5 of the act to all other flood-control and navigation projects constructed or in future to be constructed by the War Department. We oppose most vigorously any proposed legislation which seeks to eliminate the benefits of section 5 of said act. The applicable section of the Flood Control Act of 1944 reads as follows:

"SEC. 5. Electric power and energy generated at reservoir projects under the control of the War Department and in the opinion of the Secretary of War not required in the operation of such projects shall be delivered to the Secretary of the Interior, who shall transmit and dispose of such power and energy in such manner as to encourage the most widespread use thereof at the lowest possible rates to consumers consistent with sound business principles, the rate schedules to become effective upon confirmation and approval by the Federal Power Commission. Rate schedules shall be drawn having regard to the recovery (upon the basis of the application of such rate schedules to the capacity of the electric facilities of the projects) of the cost of producing and transmitting such electric energy, including the amortization of the capital investment allocated to power over a reasonable period of years. Preference in the sale of such power and energy shall be given to public bodies and cooperatives. The Secretary of the Interior is authorized from funds to be appropriated by the Congress, to construct or acquire, by purchase or other agreement, only such transmission lines and related facilities as may be necessary in order to make the power and energy generated at said projects available at wholesale quantities for sale on fair and reasonable terms and conditions to facilities owned by the Federal Government, public bodies, cooperatives, and privately owned companies. All moneys received from such sales shall be deposited in the Treasury of the United States as miscellaneous receipts."

We further urge the amendment of section 5 by striking the last three words "as miscellaneous receipts" and adding the following language "to appropriate accounts and funds credited to the respective Federal agencies."

VIII. BUS BAR SALE

We oppose any proposed legislation requiring the sale of hydroelectric energy from Federal projects at the bus bar.

IX. PREFERENCE TO PUBLIC BODIES AND COOPERATIVES

We recommend that the Department of the Interior in carrying out the policy of the Congress requiring that preference in the sale of electric energy be given to public bodies and cooperatives should be required to construct or purchase electric transmission lines, substations, and related facilities necessary to deliver the energy at wholesale to the load centers of the public body or cooperative at their required voltage.

X. ENERGY SALES BY THE FEDERAL POWER COMMISSION

We oppose any proposed legislation requiring or permitting the Federal Power Commission to market electric energy or to exercise authority over contracts for the sale of energy by any Federal agency. We believe that as a police or regulatory agency, the Federal Power Commission should be excluded from the proprietary or business side of the Federal power program. The quasi-judicial functions of the Federal Power Commission preclude, under our theory of the separation of governmental powers, the annexation of proprietary or managerial authority such as selling energy or passing on power sales contracts.

XI. RETAILING OF ENERGY BY THE FEDERAL GOVERNMENT

We favor the policy of the Congress in limiting the marketing authority of Federal agencies to wholesale accounts. In accordance with this policy the retailing of electrical energy by any Federal agency should be discontinued as rapidly as practicable. Furthermore, we believe that no Federal marketing agency should sell power to private industries within the distribution area of any public body or cooperative unless expressly requested by such public or cooperative body.

XII. RURAL ELECTRIFICATION

We urge the most expeditious electrification of the 2,250,000 unelectrified farms of this Nation. To this end we urge that the Congress adopt a policy of granting appropriations to the Rural Electrification Administration sufficient to make available capital-loan funds to REA borrowers in all cases where the project is determined to be financially feasible on a self-liquidating basis. Secondly, we urge adequate appropriations for the cost of processing these loans. Thirdly, we endorse the program of the Agricultural Research Administration for research in the rural utilization of electricity, and urge that the Congress appropriate sufficient funds to carry out this program. Fourthly, we disapprove of any riders or restrictions on the making of loans to REA borrowers for the construction or purchase of generating facilities. We feel that the rural-electrification program should be executed with dispatch in the interest of increased agricultural production and for the

purpose of reducing the inconveniences of rural living.

XIII. NATIONAL DEFENSE

We consider an adequate supply of electric power as a critical element in the national defense, and we must point out that the present Nation-wide power shortage is a definite indication of military weakness and unpreparedness. We note that in the recent war, the strength of our enemies and of our allies was largely in proportion to their supply of electric energy. We note that our War Production Board translated large military orders into electric-power demand and then ordered the building of defense plants in areas where electric energy either was available or could be made available. The War Production Board regarded the electric-energy supply as more important than any other production factor except manpower. Under the War Production Board we installed the remaining Bonneville Dam generators and diverted two Shasta Dam generators to Grand Coulee. This was done for increased war production. We believe that this Nation, strictly from concern for the national defense, should install generating facilities at such a rate that we shall always have a reserve of at least 10 percent excess generating capacity above peak loads. We deplore the lack of a national military policy providing for adequate supplies of electric energy. To correct this deficiency we urge that the Congress by law require the Secretary of the Defense, through his National Security Resources Council, and in cooperation with the Federal Power Commission and other agencies, to conduct continuing surveys of our national electric-energy requirements for war production and to make annual or more frequent reports to the President and to the Congress with recommendations for the meeting of such electrical requirements.

XIV. FUEL CONSERVATION

We urge the development of the potential hydroelectric sites of the Nation as a measure for the conservation of fuel oil and other expendable energy sources, the timing of such development to be governed by the financial feasibility of each project or group of projects.

XV. SOUND BUSINESS PRINCIPLES

Inasmuch as the operation of Federal hydroelectric facilities, transmission lines, and substations is a business of proprietary function, we believe that these activities should be managed and financed on a businesslike basis. Firstly, the management of an electric system requires a business type of administrative structure preferably with most of the attributes of a corporation. Secondly, we recommend that the following provisions be made for the orderly financing of the Federal power program:

1. That accounting and budgeting practice should clearly distinguish capital and operating accounts.

2. That each Federal power agency should be required to repay the reimbursable costs of the projects on the basis of the useful lifetime of each project or group of projects.

3. That each Federal power agency should be authorized and directed to borrow capital loan funds and to use its revenues in order to carry out its public-utility responsibility.

XVI. REGULATION OF THE ELECTRIC UTILITY COMPANIES

We recognize that private electric companies in performing public-utility functions are operating under special privileges granted by the various units of government. They are given governmental power to condemn private property, they are granted franchises and certificates of convenience and necessity and are given the use of highway right-of-way. We recommend that the Congress order a comprehensive investigation of the electric public-utility industry for the following purposes:

1. To determine the effectiveness of present governmental regulation, Federal, State, and municipal.

2. To determine the extent of propaganda, political and lobbying activity of the private electrical companies.

3. To determine the efforts being made by the companies to thwart and discredit municipal and cooperative electric systems.

4. To determine the extent to which the electric public utility industry is meeting its public utility responsibility.

5. To determine the extent to which the purposes of the Public Utility Holding Company Act have been carried out by the Securities and Exchange Commission.

This investigation should be made by the Federal Trade Commission and should be in addition to the surveys now required by law to be made by the Federal Power Commission and in addition to any military surveys which the Congress may require of the Secretary of the Defense.

XVII. ADMINISTRATIVE COORDINATION

We recommend that the responsibility for administrative coordination of the Federal-power program be placed in two agencies as follows: The Federal Power Commission to be assigned all authority with respect to the policing and regulation of certain activities of both private and public power systems. With respect to the Federal power program the Federal Power Commission should be assigned uniform authority reviewing the allocation of the cost of Federal projects to power and other purposes, secondly the requiring of a uniform system of accounts and accounting practices, thirdly approval of rate schedules, and fourthly consultation in connection with project and market surveys if made by any agency other than the Federal Power Commission.

On the other hand, we recommend that the Department of the Interior be assigned the responsibility for coordinating the proprietary or business component of the Federal power program, particularly with respect to the marketing of electric energy and the construction of electrical facilities. Under this policy neither the Army nor the Federal Power Commission would be enabled to market energy. Nor would the assignment of coordinating responsibility in the Department of the Interior preclude the granting of a measure of local autonomy within the various regions.

The Department of the Interior would also be in the best position to coordinate hydroelectric development with the other objectives of multipurpose projects. As the Department primarily concerned with the conservation and development of natural resources, this Department would best insure that the Federal power program would be conducted as an integral part of the national conservation program.

XVIII. LEGISLATIVE COORDINATION

The recognition of the Federal power program as a component part of the national conservation program would suggest that one committee in each House of Congress be assigned to the study of legislation relative to conservation, including all power matters. Under the same concept the present laws relating to the Federal power program should be recodified at the time of the next revision of the United States Code and placed under title 16, Conservation.

XIX. SOUND ENGINEERING

We believe that a sound Federal power program requires a close coordination among three factors.

1. Continuing load studies: To provide sound estimates of future electrical loads.

2. Engineering studies: To plan the construction of facilities for generating and delivering the power to the various electrical regions of the Nation.

3. Congressional appropriations: To meet the construction costs and operating expenses of the various Federal power agencies.

If the load studies and the engineering studies are sound, we believe that appropriations based thereon will be sound.

We further submit that technological considerations dictate that within the various electrical regions high-voltage transmission lines should be constructed to interconnect the various electric-power plants with one another and with the various load centers of the electrical region together with high-voltage interregional tie lines.

XX. CONCLUSION

We respectfully submit that most of the desirable elements of a sound Federal power policy already exist in the form of Federal laws. These laws are scattered at present and should be brought together. Administratively a large measure of coordination is already being effected through the Department of the Interior. Further coordination is needed. The vigorous prosecution of the rural-electrification program, of multi-purpose-project construction, and the building of transmission lines is necessary not only as a means for the increase of our peacetime productive capacity but likewise for the strengthening of our national defense. The sale of electric energy from multi-purpose projects, furthermore, facilitates the carrying out of many other conservation activities. Electricity in many respects is the paying partner. We in the Pacific Northwest are generally happy over our experience with Federal construction of multi-purpose projects and transmission lines as well as with the administration of the Bonneville Power Administration in wholesaling the energy to the load centers of public bodies, cooperatives, and other large users of energy. We consider this pattern of administration and construction to be highly effective. We would like to see a more businesslike administrative structure and a more businesslike method of financing. The most critical accounting analysis also reveals that this approach enables us to enjoy low-cost energy, development of our natural resources, and therewith the satisfaction that the Federal Government will be repaid its entire investment in the power facilities together with interest.

School-Lunch Program

EXTENSION OF REMARKS

OF

HON. EDWARD G. ROHRBOUGH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 3, 1948

Mr. ROHRBOUGH. Mr. Speaker, under leave to revise and extend my remarks, I include the following letter which I received recently from Celia Ferrell, secretary of the Hattie Harden School Mothers' Club, of Salem, W. Va., concerning the school-lunch program:

SALEM, W. VA., *February 29, 1948.*

Hon. EDWARD G. ROHRBOUGH,
Member of Congress,
Washington, D. C.

DEAR SIR: At the regular monthly meeting of the Hattie Harden School Mothers' Club on February 18, 1948, a resolution was passed by that organization deploring Congress' action in reducing the appropriation for the school lunch from the $81,000,000 allotted for that purpose during the previous year to the $65,000,000 appropriated for the fiscal year 1947-48.

We understand that this reduction was actuated by Congress' desire to economize. And while we consider this desire laudable when not carried to the extreme, we feel, and feel most strongly, that a reduction in funds which vitally affects the health of the Nation's school children, many of whom are inadequately fed at home, is a false economy, indeed. We therefore go on record as advocating that for the fiscal year 1948–49, the amount be increased to a sum commensurate to meet the needs of the increased school enrollment and the rising cost of living

So, as mothers with the interests of both our own children and other mothers' children at heart, we are appealing to you for support of this vital measure. We trust that you will not let us and the children down.

Very truly yours,

HATTIE HARDEN SCHOOL MOTHERS' CLUB,
By CELIA FERRELL, *Secretary*.

The Plot Thickens

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, Februcry 24, 1948

Mr. REED of New York. Mr. Speaker, the New Deal sold the United States to Soviet Russia; it sold Poland to Russia; it armed Tito; it armed Japan; and now the same crew of despoilers is asking for $12,000,000,000 to further lower our prestige abroad and also weaken our whole economy at home through an accentuated inflation of prices which is bound to result from the Marshall plan.

Under leave to extend my remarks, I am including the following article by Dorothy Thompson in the Washington Star March 3, 1948:

UNITED STATES FOREIGN POLICY SEEN CRUMBLING AS RUSSIA BUILDS FORTRESS EUROPA

(By Dorothy Thompson)

The fact is that our foreign policy is crumbling to bits.

In Czechoslovakia another most valuable piece of Europe has fallen away. Others will follow in due time.

The eastern zone of the German Reich is long since lost to communism and Russian revolutionary-imperialism, a fact of far greater long-range consequence than last week's events in Czechoslovakia. For Germany will not remain forever divided into two patterns of civilization; it will all be one or the other.

Eastern Europe was lost at Teheran, Yalta, and by agreements regarding the disposition of Allied armies. When General Patton was forced to halt his troops an hour's march from Prague and to stand helpless while some 2,500 Czechs were slaughtered in a last battle with the SS, waiting for a Russian tank corps to travel 300 miles from Berlin, the certainty of last week's events was fixed.

ASSIGNED TO RUSSIAN SPHERE

Czechoslovakia, as Dr. Benes' memoirs clearly show—and like Poland—was simply assigned to the Russian sphere. That it becomes, as a result, a totalitarian Communist state is logical. Belated expressions of outrage and sympathy leave this columnist cold. The Czech people do not want communism; true. Neither did they, nor the Poles, want to be disposed of like so much rubbish. What have the wishes of peoples got to do with anything, today?

Until a year ago, it was positively dangerous for any writer in this country to criticize whatever arrangements had been made. Pressure did not even come from the Government, but from organized claques in the public. To be pessimistic, to utter any warnings, to criticize the structure of the United Nations—above all, to question the measures for Germany—was interpreted as tantamount to treason against peace.

But the chickens always come home to roost.

This columnist went down to Washington to testify against the Italian peace treaty. That testimony is on the record, I presume. I said the treaty would cost the west the loss of Italy, and I stand by it. While we tried to hold Greece we laid Italy wide open to Tito and the Russians. We gave the Italian Communists the opportunity to win back Trieste and Venezia Giulia for Italy. Do you think Stalin would not force Tito to cough up this loot for a Communist Italy? What would frontiers matter in an all-Communist Europe?

If Italy goes, Greece, Palestine, and the Middle East are lost.

GERMANS OFFERED IDEA

Similarly only Stalin can restore to Germany all or part of the Prussian lands lost to Poland.

Does Stalin have to worry about Poland if he has a Communist Germany?

And what do we and the rest of Europe offer Germany? Perpetual military occupation? Incorporation in a European confederation? On what terms?

I believe I know something about the German mind. Germans can live almost without food, almost without shelter. But they cannot live without an idea. A bad idea, to the Germans, is better than no idea.

The Russians offer them an idea—a place in a tangible scheme. They also, and very importantly, offer them individual atonement. Any Nazi can wipe out his past record by joining the Communist Party.

The Russians are building a system—a "Fortress Europa." While the west talks about a European confederation, the Russians are making one. The Russians long have been prepared for what they are doing. But all our moves are last-minute reactions to the Russian initiative. Back in 1943 Winston Churchill proposed (as a war aim) a council of Europe, a confederation. It was turned down in our State Department. Why?

Our Government has never told us the why of any measures it has taken.

Export of Oil

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 3, 1948

Mr. HESELTON. Mr. Speaker, I am grateful to the chairman of the subcommittee, the gentleman from Nebraska, for his courtesy in obtaining permission for me to extend my remarks at this point in the RECORD. I regret that an executive committee meeting detained me so that I could not take advantage of the time allotted to me.

First, I wish to report with very real regret that I have received a message from Mr. David Bruce, Assistant Secretary of Commerce, that—

The position of the Department of Commerce on the export of petroleum products to Europe remains unchanged.

I interpret that to mean that the refusal to release any of the reserve items for transportation to the Northeast and Midwest applies to exports to any country and, consequently, I have abandoned my hope of a solution of our problem along these lines. I believe it would have been a most constructive solution if the Department had been willing to act as requested, but I recognize it must discharge its responsibilities as it deems best. I think it is crystal clear that we must now accept the discharge of our full responsibility, and I hope this will take the form of prompt enactment of House Joint Resolution 323, as reported by the House Committee on Interstate and Foreign Commerce.

Next, I want to discuss briefly an amendment I wish to offer during the course of the reading of the appropriation bill now being debated, H. R. 5607. I have furnished the chairman and ranking member of the committee with a copy of this amendment and have, also, discussed it with the clerk of the committee. I have sent a copy to the gentleman from Oklahoma [Mr. MONRONEY] because of his concern as to whether this form of an amendment is entirely wise. I want to repeat that I shall join gladly with him or with anyone else in perfecting the language of these amendments so that no hardship or uneconomic action may result.

My sole objective is to make certain that we will not have a recurrence of the very unfortunate action at the marine hospital in Boston last December when the heating units were converted from coal to oil at substantial expense and cannot now be reconverted without long delay and further expense. I know you will recall that with two burners operating that hospital is consuming a much-needed type of fuel oil at the rate of 1,200 gallons a day. This is not only an economic waste but an exhibition of the poorest kind of judgment, for which no explanation or apology has ever been made.

The bill contains a substantial appropriation for the Federal-aid airport program. I have discussed the matter with Mr. H. A. Hook, Assistant Administrator for Airports, by telephone this afternoon. He advises me that it would be almost impossible to give me full information as to the building program, but he thinks approximately 60 buildings are involved, most of them relatively small. I understand the largest is to be located in Seattle. The function of the Civil Aeronautics Administrator is to determine whether the plans submitted are appropriate and reasonable, and I do not think any particular stress has been laid upon the wisdom of installing new oil-burner units.

I have, also, discussed the item covering the boiler at the Washington National Airport, to which brief reference is made at page 415 of the hearings. Mr. P. F. Steiner, assistant airport administrator, told me that this boiler heats partially by oil and partially by coal. It is mainly

intended to provide heat for five new hangars. I understand that the work has been actually completed and that there has been no substantial change in the type of heating since 1947. However, Mr. Steiner did advise me that the method of heating had been changed twice since 1944, largely depending upon fuel conditions. Mr. Steiner does not feel that this would be of any great moment, relatively speaking. While I can agree with him as to that, on an over-all basis, I still feel that when individuals are urged to conserve and when some homes and buildings are actually cold, it is incumbent upon the Federal Government, through its agencies, to set the example of conservation and to undertake no conversions or new installations unless they are certain that they can obtain an adequate supply without diminishing the supplies available for providing citizens and industries.

I cannot help but refer to the fact that we now know that The Alaskan Railroad contemplates placing Diesel engines to the number of 33 in operation. While justification is sought in the argument that such engines must be operated through the tunnels, it remains the fact that the ordinary three-unit Diesel engine is said to consume on an average run from 800,000 to 1,250,000 gallons of Diesel oil in a year. At a minimum, this is more than the total consumption of 433 domestic oil burners or a maximum of 625. I am further informed by a reliable person that quite recently a streamlined Diesel unit was placed in operation on that railroad, which had to be abandoned because the engine was found to be too heavy for the tracks. It has been suggested that inquiry should be made as to whether the railroad did not originally own the coal mine and then leased it, and that a further inquiry should be made as to the comparative price of coal under railroad ownership and under this lease.

It is my deep conviction that adoption of this amendment cannot conceivably do any harm, and it may do a great deal of good in terms of the threatened recurrent fuel-oil shortages in the coming years. Basically, it is only a warning to the several agencies to present a thoroughly satisfactory case for any such conversion or any new installation. I have supreme confidence that the several subcommittees of the Appropriations Committee will see that any such requests are thoroughly considered and authorized if they are in the interests of the Nation as a whole.

I hope very much that the members of the subcommittee will see fit to accept this amendment as was the case when we had the independent offices appropriation bill and the deficiency appropriation bill before us.

The amendment follows:

On page 74, line 23, after the word "law", insert a new section 502: "That no part of the appropriations contained in this act shall be used for the purpose of converting any coal heating units to oil or natural gas in any federally owned or rented buildings in or outside the District of Columbia, or for the installation of oil heating units in any new construction."

And renumber section 502.

Put Europe on a Production Basis

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 3, 1948

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Hennepin County Review, Hopkins, Minn., which appeared on February 19, 1948. This editorial is a constructive analysis of the original Marshall plan and it is based on sound judgment. I commend the thoughtful suggestion to my colleagues. The editorial recognizes the need and the merit of sound reasonable assistance to Europe without falling into the fallacy of the hysterialists who demand that the highest suggested amount be appropriated practically without inquiry and without any restrictions for administration by an agency without experience. There is a need for haste, but there is room for inquiry. There is a need for money, but the future need will be less and will be met more willingly if we prescribe reasonable precautions to prevent this from becoming a European WPA.

The editorial is as follows:

WHOSE STRATEGY?

The Wallace people are now urging the Truman people to bury the hatchet so far as the Presidential race is concerned and "concentrate" with them in the job of electing progressive Senators and Representatives.

Whether this turns out to be a good idea or not depends on who the Wallace high command decides to support for the congressional seats. If they make it their rule that no candidate for Congress can be supported unless he denounces the Marshall plan, then the idea certainly can be regarded a Communist Party idea. There will be many progressive candidates for Congress this year, including some incumbents, whose progressive records on all domestic issues have been 100 percent and who are also supporting the so-called Marshall plan. To oppose these candidates simply because they support the Marshall plan will be for the Wallace people to admit their strategy is being formed by the Communists.

It is the wish of the Soviet Government at Moscow to smash the Marshall plan. If this is done it means we will pull out of Europe, leave Europe to its misery and the influence of Russia. So it becomes the duty of American Communists to oppose the Marshall plan. If opposition to the Marshall plan then is a must for all candidates for Congress who get the support of the forces behind Henry Wallace, the deep suspicion that the Communist influence is the principal influence behind the Wallace candidacy will indeed be pretty well grounded.

This is going to be a mighty interesting angle to watch, and the ultimate policy in this respect will pretty well tell the story as to who is who on the top levels of strategy in the Wallace headquarters.

Some sort of a Marshall plan is a must in the present Congress. It is the moral obligation of the world's breadbasket to help feed the starving millions of Europe, and to assist them intelligently in putting themselves on a production basis at the earliest moment. Many who have some fault to find with the Marshall plan as it is presently shaping up are freely accused of preaching the "'Commie' line." This should not deter them from putting their views plainly before their representatives at Washington.

The plan in principle is good, but it must not be twisted and distorted until it becomes simply a glorified hand-out to those countries whom we can depend upon to trade with us and to boycott Russia. Within such a dishonest framework it can never accomplish any lasting benefits, but on the contrary is certain to add to the continuing woes of the world in general and Europe in particular.

Here's one item on which we can go along with Joseph Lincoln Ball: a little less than $262,000,000 worth of tobacco for the beneficiaries of the Marshall plan in the first 15 months.

Italy—Stalin's Target No. 1

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 3, 1948

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mario P. Alfieri, from Plain Talk for February 1948:

ITALY—STALIN'S TARGET NO. 1

(By Mario P. Alfieri)

Upon returning to the United States from Rome after nearly 2 years, I was quite surprised by the lack of accurate information Americans have about Italy. The average American with whom I have talked considers Italy a washed-up, demoralized country whose starving people we are expected to feed. Americans don't object to feeding starving Italians, but they usually fail to see how any possible good could come to the United States by so doing. They fail to see Italy's importance in that strategic "no man's land" between two worlds that are ideologically opposed. They have never been told of communism's plan for Italy as the No. 1 target in the conquest of the western world.

Despite the optimistic reports of many of our columnists and Government officials that the political tide in Europe has now turned in our favor, the Communist Party in Italy has never lost ground; it has steadily gained. The best that can be said at present is that its rate of progress has been reduced. The Communists are generally acknowledged to control 30 percent of the votes. Even if they gain no more, they will be the strongest single party in the first parliamentary elections of the new Italian Republic, to be held this spring. I am sure that, if the Communists in Italy are not checked within a few months, they will surge to complete control by next summer. The European recovery program is Italy's last hope. If it fails, the Italian people will resign themselves to their fate, a fate which millions have already accepted.

In cold reality, we have tragically and unwittingly and indirectly sponsored communism in Italy, yet there is still hope of turning the tide if the United States acts speedily and intelligently. We paid the bill, but the Communists are taking over. Our occupation was temporary, but that of Russia is designed to be permanent. The omnipresent Red shadows are now gradually emerging from the background. The showdown is near.

The time for that showdown had to be delayed until Allied troops had departed. Meanwhile, the Communist position has been consolidated and strengthened, not only in Italy, but throughout the international Red periphery. In 1946, and until late in 1947, Communist political and economic sabotage in Italy was limited and camouflaged to a degree sufficient to steer internal developments more or less in the direction desired, while forcing responsibility for ineffective

government and economic and financial chaos upon the Communists' political opponents. The plan has been brilliantly successful.

While the United States said with innocent faith to a liberated Italy, "Rehabilitate yourself democratically, and you will be left in peace in a world that wants peace," Russia gazing through the refocused lenses of world revolution, saw Italy for what it really is—a geographical, psychological, and spiritual gateway to world conquest. Russia knows that the Italian boot offers access for world revolution into Europe, Africa, and the entire West.

More than a year ago—in November 1946—I attended a Communist meeting in Rome. The audience was told that Henry Wallace had already organized the third party in the United States. Within 2 months that piece of information was widely disseminated in Italy. The official act would be a mere formality, said the Italian Communists in 1946. The implication was that the United States was trying to stop communism in Italy, but that it couldn't even stop communism at home.

On February 6, 1947, identical public forums on the topic, Where Is America Going? were held in all 52 of the Communist Party's sectional headquarters in Rome. I attended the meeting in the Piazza Bologna area. When the principal speaker, Avv. Natoli, had finished, I am certain that the crowd would have lynched me on the spot had they known that I was an American.

The audience was entirely convinced that Italy's plight was caused by an international conspiracy of United States capitalists. The new and tremendous industrial establishment of the United States can survive and prosper only by a program of imperialism and expansionism, the speaker said. Without such a program, a terrible economic depression would soon be precipitated. All unfavorable postwar developments in Italy were due to the United States master plan to secure a stranglehold on the economic structure of the world. Even UNRRA was depicted as a United States instrument for suffocating Italian industrial rehabilitation.

In one night, in Rome alone, more than 10,000 easy-to-convince people had heard the same story. But the program didn't stop there. Within a few days it was repeated at every Communist headquarters throughout Italy. The next day, the hundreds of thousands of Communist "cells" took up the torch. Each cell member promotes in his daily life the gospels he hears at headquarters. Virtually every working-class Italian, therefore, is subjected to organized, carefully prepared propaganda. It is especially effective because it is delivered at close range, by plain people, by the friends and neighbors of millions of unsuspecting victims.

In any central square, on almost any night, two cell members open an argument between themselves. The conversation gets lively. The crowd gathers. And the subject is "Where Is America Going?" Who wins every point of the argument? You guessed it—the Communist Party, the same party that prepared the "impromptu" conversation.

To bolster and steer the activities of the Red cells, various leaflets and publications containing vicious anti-American propaganda are given a limited distribution. But, very shrewdly, the Communists have maintained relatively moderate tone in the attacks on the United States in their official daily press organs. By this method the man in the street hears the awful "truth" from outside sources, not clearly identified as Communist, and the official Communist allegations therefore appear reasonable and authentic. The same strategem has served to conceal from American observers the true intensity of anti-American propaganda.

Communism became the dominant political force in Italy during the war. While the Allies were gradually liberating the peninsula from the Nazi-Fascist, the Italian underground, in the form of partisans, was slowly organizing itself into political as well as military forces. Russia, while still fighting for survival on the eastern front, did not fail to recognize a golden opportunity to establish a Communist beachhead in northern Italy. Communist agents with Communist finances found little difficulty in organizing the majority of the partisans under the Red banner. That 1944 beachhead has now engulfed all of northern Italy and extended itself deep into southern Italy. It has paid enormous dividends to Russia.

After the liberation, Communist partisans or their families were skillfully implanted in all fields of economic, political, and social endeavor in the north. They took many leading roles in the police force, local government, organized labor, transportation, commerce, and agriculture. Before it was realized, the Reds were supreme in the rich industrial and agricultural heart of the nation. The partisan associations of different political color were gradually reduced to relative unimportance. In accordance with our naive principles of those days, the AMG drew no political lines.

Complete regiments of Communist partisans were transferred directly into the Public Security Forces, Italy's national police structure. The Communists became the strongest force in organized labor, a mighty political weapon. At first gradually, then at a rapidly accelerating rate, the non-Communist officials were eliminated from the General Confederation of Italian Workers (CGIL) and the National Association of Italian Partisans (ANPI), until Communist domination became Communist monopoly early in 1947. Members of the CGIL are now effective Communists whether they like it or not. The ANPI will eventually become a 100-percent Red front.

The number of partisans has probably doubled since the liberation. ANPI officials simply issue false documents to their faithful. The Italian Youth Front and Democratic Union of Italian Women, with centers in every city and commune, are also well organized and financed. No similar anti-Communist movements of significance exist to compete with them.

As the 1946 elections approached, Italy's new democracy seemed to be making commendable progress. The Allied Commission in Rome was quite pleased with itself. The Communists were avoiding political agitation and demonstrations which might have interfered with the elections, for they knew that only after the elections would Allied control be relinquished.

The complacent Allied Commission decreed that all Americans stay away from all voting places in order to permit the Italians to do it in their own way. That gives a fair idea of the absolute lack of apprehension about communism that existed in Italy among American forces during 1946. Yet competent, though disregarded, observers had reported months before the elections that the Communists had carefully planned a deliberate campaign to sell out the government of which they were to become a part, and to sabotage all efforts for the democratic rehabilitation of Italy.

The elections came, and a new republic was born. The Demo-Christians, a left-of-center, anti-Communist party headed by Alcide De Gasperi, polled roughly 40 percent of the votes, about the same percentage as the Communists and the Socialists combined. The Communists were in third place. "I told you so," was a common expression in Italy after the results were known. "Italy will never go Communist." Yet 4,000,000 people previously wary of communism had voted the Red ticket.

Few of us at that time stopped to think that the Communists already held the real power—the power to paralyze industry, commerce, and transportation. We remained oblivious to this fact for a long time because we were half blind, and because Palmiro Togliatti, Italy's Red chief, has administered his power by prescribed doses only. His policy has been guided by two broad considerations: (1) the Italian Communists were rapidly building up popular support as a democratic party, and open attempts to sabotage recovery would have meant loss of votes; (2) international communism was advertising itself as "true democracy," and aggressive tactics in Italy, still outside the iron curtain, would have hastened the advent of the United States "containment of Russia" policy.

While the Communists were building support among the masses, they obstructed all governmental efforts toward economic recovery. Throughout the country, the people were approached at close range by members of Communist cells and offered guidance and assistance. Sharecroppers were told that "the land belongs to those who work it." Hundreds of small local groups of sharecroppers were led in uprisings and the land was appropriated. In the factories, the Communists clamored for workers management councils. In local government (where non-Communist communal councils were in office), they formed their own councils of the people to "democratically represent the workers and their interests to the competent authorities." The people were constantly told that their insufficient rations and sad economic situation were the fault of the reactionary government.

From the very first the Reds advocated the doubling of wages and all-out worker benefits which they knew to be impracticable and conducive to an inflationary economy. Nevertheless, this portrayed the Communist members of the coalition cabinet as the only real champions of the working people.

In the late summer of 1946, when the weak De Gasperi government was faced by a runaway financial situation, a new Treasury Minister, the conservative Corbino, outlined an excellent anti-inflationary plan. It never advanced beyond vague plans and speeches, for the Reds opened a full-scale offensive. Not only were Corbino's policies condemned, but a wild cry went up for higher wages and for payment of a bonus to all workers. Strikes and demonstrations, controlled by CGIL, broke out like a rash.

The average citizen understood nothing about inflation. All he knew was that the Communists wanted to give him bread and work, while the Government sought to take it away. The Communists held the Finance Ministry and controlled sources of revenue. The Government's program was paralyzed. Corbino finally resigned in disgust, and the hapless cabinet collapsed after him. The Communists had won a tremendous victory.

Ever since the Corbino affair, the Communists have successfully manipulated labor and the general economic front for their own purposes. The fact that they took over control of all local government in Milan in a demonstration during the last week of November 1947 is a clear indication of their strength in Italy's industrial capital. The Milan incident was only a dress rehearsal, designed to test the Communist military apparatus.

Manipulation of food supplies is helping communism to catch on in the South. The northern cities, where local government is dominated by the Reds, always got their bread and pasta ration on schedule. In other cities, like Naples and Bari, where a rightist local government had been voted into office, rations would not be delivered. When Naples and Bari were finally starved into agitation, the Communists came to their aid, denounced the local administration and forced the Rome government to make emergency provisions to meet the situation. The Reds took all the credit and enrolled many new Communists.

The stories of mass starvation in Italy are exaggerated. Italy, like England, is greatly in need of austerity measures. But no country in Europe has as much food or other consumer goods to offer in its markets. Apparently limitless stocks of meats, cheeses, and vegetables are always available in countless neighborhood shops and outdoor markets. To the superficial observer, Italy is a land of plenty. But the vast majority of the population eats poorly, and a large part are definitely underfed. The official ration is too low to meet minimum subsistence requirements. And the average Italian does not have the purchasing power to buy a sufficient quantity of the proper food from the only available source, the black market.

For more than 2 years the government has been warning that it intends to confiscate war profits, convert all currency with new issue, impose a high tax on personal wealth, etc. The result of such an all-talk-no-action policy has been to goad the paper-rich minority into buying everything they can, and consuming far above their normal requirements. This free spending is constantly contributing to the spiraling inflation. A sound financial program would have stopped it long ago.

Certainly that which Italy has could be made to go much further. More people should be better fed and better clothed. But before such a program can be realized, the lira must be stabilized, the economic structure strengthened, and reconstruction accelerated. But who is to wield the steel broom? After more than 2 years of floundering, the Italian Government, hopelessly stalemated by incompatible extremes, has gotten nowhere along these lines. The Communists are doing all they can to deepen the economic chaos, and ironically, they are receiving the cooperation of their mutual enemies, the neo-Fascist fronts.

As long as Italy's government is weak, the fanatical, greedy residue of fascism will remain among its subversive elements. The neo-Fascists do serve as a definite threat to public order and they have contributed to undermining political and economic stability. But they are now weakly organized and poorly financed, and they lack party discipline and outside support. The successful modern dictator must be "democratically minded" and clever enough to convince the people that only he can bring them freedom and well-being. So today there are only two potential dictators in Italy worth considering. Giannini, the monocled playwright boss of Italy's monarchic-reactionary, rightist conglomeration called the Qualunquists (L'Uomo Qualunque or Common Man front) is one. The other and immeasurably the stronger is Togliatti, the Red boss, who has proved conclusively that communism is not an ideology, but cold and calculating tyranny that opportunistically shapes its policy in accordance with the public pulse.

The Demo-Christians, the only real force opposing communism, are a relatively weak party. They have but a small following in the Communist-controlled north. In the south they are weaker than the Qualunquists and other rightists combined. Their vote failed to match that of the Reds even in Rome, where they are the Vatican-directed rallying point against communism.

Togliatti's anti-Vatican propaganda has been calculated to show that Communists are among the most ardent of Catholics. The official Communist propaganda is therefore always pro-Catholic, but anticlerical. Leading clergymen are depicted as fellow-conspirators of United States capitalists in their plot to enslave the working classes. That is why the Vatican has chosen to attack communism, Togliatti explains.

By their use of independent tabloid-type periodicals, the Communists have carried on a vulgar and sacrilegious campaign against the clergy. Obscene caricatures show priests committing shameful deeds; their brothers in sin are usually Mussolini, greedy industrialists, or American capitalists. Don Basilio, the worst of these scandal sheets, set the pace in 1946 when it first dared to caricature the Pope himself.

The prime reason why it is important to the Kremlin to gain domination over Italy is because the ancient gray-walled Vatican stands inside Rome. Long before the United States was aware of it, the Catholic Church had identified the demagogic tyranny which called itself communism and sought to rule the world by starving the human spirit and reducing the human body to a commodity.

The Vatican intelligence service is the best in the world. And, like any supreme authority, the Vatican is well equipped to recognize its enemies and to mobolize its worldwide resources for resistance. Russia wants Italy just as it wants Austria and France, but it also wants Italy because through Italy it can get to the Vatican in a direct and physical sense. Make no mistake about it, once Togliatti has delivered Italy, the iron curtain will eventually be drawn around and over the Vatican, and the most important anti-Communist force in the world will be neutralized. But that is not all. Through Moscow's new concept of extraterritoriality, the Vatican may conceivably be converted into a puppet Kremlin outpost: There would have to be a change of personality, of course, but such a maneuver would nevertheless be very effective for spreading propaganda to Communist-dominated countries. Possibly this has a connection with the Soviet policy of would-be religious tolerance.

A second reason why Stalin has signified Italy as a primary target is the fact that Mussolini's almost perfect police state structure still exists there, merely waiting for a new dictator and a partial change of staff. Italian police are of two broad categories—military police (Carabinieri), with jurisdiction over civilians, and straight civilian police (Forse di Publica Secureza). There is no regional police autonomy; all final police authority emanates directly from the office of the Ministry of the Interior in Rome, though the Ministry of War retains limited jurisdiction over the Carabinieri. Such military and civilian interrelationship of police authority makes for total and absolute centralization of control over all phases of Italian life. It gives any potential dictator a police-state structure that controls not only all civilians but also the military.

Secret agents exist in both arms of the police force. Their lists of special informants could easily be converted into an organization such as Mussolini's dreaded OVRA. The process is already underway. Telephone tapping is a past art which the secret agents do not leave neglected. How well I know it. Many restaurants and other public places are still lined with microphones. Though most of them have been dropped from the "active list" for the present, the whole system perfected by the Fascists could be easily shifted back into high gear.

In general the police forces are now functioning democratically, because all political factions are still represented. But the Communists are infiltrating the lower ranks rapidly. The formality of switching the top men will be simple in the event that the Communists succeed in gaining control of the Ministry of the Interior.

There is only one key to control of Italy—the Ministry of the Interior. It provides and controls all Italian police, it also administers, polices, and regulates all elections—a perfect formula for one-party supremacy. As the strongest party the Communists would have the right to this ministry. And one year after they took it over Italy would be a strong-arm, one-party police state.

This totalitarian police structure seems to me the most overlooked, but nevertheless the most critical information about Italy. The Italians are ignorant of it because they have never known another system, and the Americans have just failed to look.

At the close of the war no people were more anxious to try democracy than the Italians. With the United States, the greatest of all democracies, present to guide and to help, optimism and hope were high. But in little more than 2 years the Italians have again resigned themselves to the old ideas of dictatorship, patronage, corruption, deceit, and fear. Communism, once the most hated of all systems, has emerged as the most powerful public force in Italy.

The odds have turned against us, but democracy may still win if we really get down to business. Swift, decisive, and authoritative action is needed—a good program and, above all, good men. The second-raters, the joy riders, the blind, and the indifferent have been there long enough.

We should try to help Italian industry by sending larger numbers of skilled industrialists directly into Italian factories. Their job would be to arrange for delivery of needed equipment, factory by factory, and to stay at the plant long enough to see it in use. We should assign agricultural experts, province by province, to supervise the distribution of fertilizer and equipment. We should have crop estimators there to measure the results.

We should help Italy to stabilize its currency, something we failed to do in 2 years of occupation. Money in circulation has officially increased more than 250 percent; no one knows how much counterfeit money has been printed. There are many other things we should do, but most of all we should launch a strong pro-American propaganda campaign, designed not only to counteract the Communist propaganda against us, but to let the Italians know of our help to them and of the benefits of democracy. The truth of words should be backed up by the truth of action.

There are only a few months left in which to act.

Opposes Women in the Navy

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD a letter written by a disabled Navy veteran to the editor of the Washington Star of March 2, 1948, in which the veteran expresses his views with reference to S. 1641:

OPPOSES WOMEN IN THE NAVY

To the EDITOR OF THE STAR:

Not that I think it will do very much good, but I'd like to add my 2 cents' worth to the almost unheard voice of protest about the Navy's enlisted men being sold down the river at last Wednesday's hearing on the WAC-WAVES bill, now under consideration by the House Armed Services Committee (Subcommittee on Organization and Mobilization).

The most junior of the five persons testifying at that hearing was packing four twinkling stars. It's been so long since any of them had direct, man-to-man conversation with any enlisted men that they seem to have forgotten how they think. This may serve to refresh their collective memory a little.

The enlisted men of the Navy are bitterly opposed to the inclusion of a regular female complement in their service, and with good reason. They admit that the WAVES did a good job during the war, but think that

they should go home now. A poll taken by Our Navy Magazine last fall proved this beyond a shadow of a doubt. The main arguments advanced against it are:

1. If the WAVES cannot be placed on an equal footing with men in all matters (and they obviously cannot) there is no valid reason for them to be given equal pay, rate, and privilege.

2. The WAVES, by reason of their sex, will not be available for much assignment outside the continental limits of the United States, thereby cutting down the chances of shore duty for men in our fleet.

3. The passage of this legislation (S. 1641) would keep many male members of the service from steady routine advancement from one pay grade to the next highest. The WAVES cannot meet the same requirements for advancement required of men. For example: For a man to advance from first-class petty officer to chief petty officer, he must serve at least 3 years as first class, 1 year of which shall be served at sea. How does Admiral Denfield propose to get around that if he intends to place women on an equal footing with men in the Navy? An interesting sidelight on the rate situation is that there are 1,787 enlisted WAVES on active duty, of which only 68 do not hold petty-officer ratings.

4. Passed off as it may be by some people, it is the traditions of the Navy and of the sea that keep many men in the service for 20 or 30 years. The history of the Naval Establishment is weighed down with such traditions as "Men make the Navy and the Navy makes men," "Iron men and modern ships," "Men of the sea," the time-honored belief that women and ships don't make a good mixture, and many others of a similar type. Perhaps it's romanticism or even foolishness but the fact remains that a great number of sailors believe in it.

5. A great many women's organizations are opposed to the measure for moral reasons, and, as a reminder to the Congressmen on the committee, these women vote.

The Navy Department seriously should consider these arguments before going all out for a permanent female complement, as should Congress. They may build up their immediate strength, but it's highly probable that each woman brought in will mean a man lost, and it still takes men to sail and fight ships, regardless of what arguments Navy top rankers can muster in favor of S. 1641.

A DISABLED NAVY VETERAN.

Federal Highways

EXTENSION OF REMARKS
OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. CRAWFORD. Mr. Speaker, a few days ago an appropriation bill cleared through the House carrying certain appropriations for building and maintaining highways.

Throughout the United States the people who use the roads are now paying tremendous sums of money into the Federal and State treasuries in the way of automobile and truck license fees, and State and Federal taxes on gasoline and lubricating oils.

I repeat, when these payments are taken as an aggregate they constitute extremely large sums of money. From day to day more trucks and more automobiles are being registered, and this fact in addition to the fact that we have substantial highways already constructed, many miles of which are in a first-class state of repair, are facts which take on great significance when considering appropriations for building highways and maintaining highways.

In my opinion, Prof. John S. Worley, of the University of Michigan, is one of our outstanding authorities on highway problems. He has just released a statement dealing with the question of how much Federal highway funds are needed. I submit his statement for the information of those who are interested in this subject:

NO FEDERAL HIGHWAY FUNDS NEEDED

(By Prof. John S. Worley, University of Michigan, Ann Arbor, Mich.)

At this time—February 1—there are three bills before Congress which provide for annual Federal appropriations ranging from $300,000,000 to $500,000,000 for highway improvements, the periods for which such appropriations would run varying from 3 to 5 years to "in perpetuity." The adoption or rejection of any one of these proposals should depend upon whether or not such help is needed from the Federal Government and upon whether the public benefits would justify the cost.

The proponents of such legislation claim that the war traffic did great damage to paving surfaces—a plausible statement. The writer, during the period since the war, has driven over the main highways of a majority of the States, without finding evidence of the destruction which has received such emphasis. Questioning of those in position to know likewise brought forth no evidence to support such a claim. If a few short stretches of road, 1 or 2 miles in length, were damaged, this was likely due to poor construction or soft subgrade.

It has been said that the "extensive damage" was due to a large volume of traffic and excessive loads. The official statistics of motortruck traffic, private and for hire, as reported by the ICC for the years 1939 to 1945, indicate that there was little, if any, increase in the ton-miles passing over the highways. During the war period, five States increased their allowable axle loads to 18,000 pounds and their gross loads to conform with those of adjoining States. A total of 11 States granted, as a temporary war measure, an increase in gross loads. In a few instances special permits were granted for larger loads, but this was unusual. Neither the volume of traffic nor the size of loads during the war period support the theory that they had a damaging effect upon our highways.

MAINTENANCE HAS GONE ON

Superimposed upon the claim of destruction of our highways by war traffic is the claim of deferred maintenance. During the war period (1942 to 1945, inclusive), passenger-car-miles totaled 1,397,000,000 compared with 1,970,000,000 for the 4 years just preceding the war. We have already seen that there was no material increase of truck traffic. But the amount spent for highway maintenance has a bearing upon the subject. The Public Roads Administration reports that for the years preceding the war (1938 to 1941, inclusive) the cost of administration and maintenance was $2,922,000,000 and for the 4-year war period (1942 to 1945, inclusive) it was $3,206,000,000. In light of the foregoing, it is difficult to see how deferred maintenance, if any, could have been a significant amount.

Then we hear that the construction of additional highways was stopped during the war. This is partially true. However, the Public Roads Administration reports $3,503,000,000 spent on new construction for the 4 years preceding the war and $1,877,000,000 during the years 1942 to 1945, inclusive. Totaling the two, observe that for the 4-year war period there was spent for the construction and maintenance of roads and streets $5,173,000,000, compared with $6,495,000,000 for the 4 years just preceding the war. Attention is called to the fact of an increase in costs particularly during the last 2 years of the war.

Among the other reasons advanced for large Federal appropriations for highways is the desire to build safety into our roads and streets. Motor vehicle accidents are our No. 1 headache. Safety should be a dominant factor in the design and construction of roads and streets. However, a study of highway accidents frequently shows that they are caused by something other than the physical characteristics of the road and that the expenditure of large sums of money is not necessary to correction.

MILITARY ASPECT IMPORTANT

The development of a highway plant capable of meeting our future military needs furnishes more justification for the appropriation of Federal funds for highway purposes than all others. The location of the improvements, their nature, and the cost as it pertains to national defense are subjects for military determination. However, it is reasonable to suppose that they will largely be confined to and consist of the improvement of the existing interstate highway system, the length of which is less than 40,000 miles.

A highway system to meet our permanent future domestic needs is of great importance. Currently, improvements are needed for exit and entrance to our urban areas—not the improvement of every road, but rather, the main arteries of travel. The length of a road and the nature of its improvements will depend upon each particular situation and the size of the urban community. With few exceptions, these improvements will be needed for cities of 50,000 population or more. Of these there are 188 in the United States.

Then there are expressways, grade separations, and detours which should be built. Rural roads not immediately adjacent to or entering cities of less than 50,000 population are, as a rule, sufficient for current needs. Some natural-resource arteries, as well as some farm-to-market roads, need to be built or improved. But all of these are local projects—the benefits are for the citizens of the community or State and they should pay the full cost of construction and maintenance.

HIGHWAY PLANT ABOUT ALL PAID FOR

An examination of highway financing sheds some interesting light upon the subject. As of January 1, 1947, we had a road and street system which cost approximately $32,000,000,000. There is, however, a $1,173,000,000 outstanding State-highway indebtedness and an estimated $2,066,000,000 county- and city-highway indebtedness. That is to say, we have a $32,000,000,000 plant for future use, all of which has been paid for, with the exception of an indebtedness of approximately 10 percent.

As of this time, we have a highway system which largely meets our domestic needs. Its cost has largely been met by current highway revenues. The additional improvements during the next 27 years will probably not be more than those of the last 27 years, in which the present system was constructed. Our present system of taxation is such as to provide annual highway revenue in excess of that of past years. This highway revenue will be further increased by an increase in the number of vehicles using our roads.

The foregoing analysis can lead to but one conclusion, that, excepting for military purposes, we are not in need of Federal funds to provide a highway system which will be in keeping with our social and commercial

needs. The bills before Congress should be amended to provide only funds for the improvement of the interstate highway system and roads located within Federal reservations.

Tax Reduction

EXTENSION OF REMARKS
OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 4, 1948

Mr. PLOESER. Mr. Speaker, I want to extend the following address made in my district recently by a friend of mine Mr. Albert E. Schoenbeck:

ADDRESS DELIVERED TUESDAY, FEBRUARY 24, 1948, BEFORE THE TWELFTH WARD REPUBLICAN CLUB, 4704 HAMPTON AVENUE, BY ALBERT E. SCHOENBECK, ATTORNEY, AND MEMBER OF THE ST. LOUIS CIVIL SERVICE COMMISSION

Mr. Chairman, neighbors and friends, in a national election year, possibly no problem of the Federal Government can be considered wholly nonpolitical. If, however, there is any domestic issue upon which both major parties should now agree, it is that the Federal individual income-tax law should be revised and the tax rates reduced.

America needs a tea party, not a social affair for gentle ladies, but a blood and thunder protest of the 1775 variety when American men and women, sick of taxation without representation and tired by years of fruitless waiting for action by the British ministry, finally took things into their own hands by dumping His Majesty's tea smack into the Atlantic Ocean.

For 2½ years now, the American people have been waiting for sensible revisions in the individual income tax law and substantial cuts in the confiscatory, wartime rates. During the war, although some grumbled, most Americans were willing to pay abnormally high taxes. They felt that in doing so, they were in some measure helping in the conflict in which their sons and daughters, brothers, sisters and friends were sacrificing the comforts of home, good-paying jobs and even their lives. But the war is now over. It has been over for 2½ years, and for that long the American people have been waiting for a cut in wartime tax rates.

In 1946, the American people voted for tax reduction. That was one of the clear-cut issues of that congressional campaign, and the overwhelming manner in which Americans turned out the "ins" and voted in the "outs" was conclusive evidence of their feelings. They wanted their taxes cut.

And so when the Eightieth Congress organized in January 1947, the very first bill introduced into the House of Representatives, H. R. bill No. 1, was a tax-relief bill. You are familiar with its fate. After being passed by both Houses of the Congress, it was vetoed by the President. Later in 1947, a second tax-relief bill was adopted by Congress but it too was vetoed by the President. The House voted to override the veto, but a corporal's guard of hold-over Senators—it only takes one more than one-third of those voting—voted to sustain the veto. Thus, for 2½ years, the fulfillment of the desire of the American people for tax relief has been thwarted by the President and a handful of Senators.

Now there is a new tax bill before the Congress, House bill No. 4790, known as the Knutson bill and hopefully entitled "The Revenue Act of 1948." The bill, after being recommended by the House Committee on Ways and Means, was enthusiastically passed by the House of Representatives by a vote of 297 to 120. That is 19 more votes than necessary to override a Presidential veto. It is now in the Senate where it, as its ill-fated predecessors, must run the gantlet. There are some indications that the bill may be amended in the Senate. If it is, it will have to go back to the House for passage there. And then, of course, will come the most rugged part of its journey into law, the trip through the White House.

The Knutson bill, if enacted, will do three things. It will reduce the wartime rates of the individual-income tax. It will give relief from the high cost of living to all taxpayers, particularly those in the low-income brackets. It will equalize the tax burdens of married couples in common-law and community-property States.

Each one of these things sorely needs to be done. Certainly the wartime rates of the individual-income tax must be reduced to again encourage the initiative, skill and ingenuity of the American people. The present rates are so high and so quickly ascend to confiscatory levels that it is almost impossible to take home more than a limited amount of pay. For regardless of how high a man's wages nominally are, when he goes to the paymaster's counter on pay day, he learns that the tax collector has been there ahead of him and has cut a big piece off the check. If the following week he works harder and longer, and then once more makes his way to the paymaster's counter, he again finds that the little man with the big hands has been there first and has grabbed an even bigger chunk from his check. The tax collector is never satisfied; the more you make, the bigger percentage of your pay he takes. You can't win.

The ultimate effect of these confiscatory tax rates is to limit, arbitrarily, what a man can make. Abraham Lincoln in an address before striking shoe workers in New Haven, Conn., told the men that he believed in the right of workingmen to strike, but went on to add:

"I don't believe in a law to prevent a man from getting rich; it would do more harm than good. So while we do not propose to war upon capital, we do wish to allow the humblest man an equal chance to get rich with everybody else. When one starts poor, as most do, in the race of life, free society is such that he knows he can better his condition; he knows that there is no fixed condition of labor for his whole life."

We need to replace the present theory of limited incomes, bound by confiscatory taxes, with the concept of freedom of opportunity for all. The young people of America have a real stake in seeing that this is done and done quickly.

Although an economic philosophy of limited incomes for all was temporarily accepted by Russia, it was soon abandoned as unworkable. Certainly, the disciples of the Kremlin in our midst should not be permitted to saddle us in times of peace with a tax policy that destroys rather than builds nations. High on the list of factors which have made America great has been our national concept of free enterprise. This concept is founded in part upon two Christian principles. As a people, we recognize the fact that to some have been given five talents, to others, two, and to some, one; we also recognize that every laborer is worthy of his hire. The Soviet-born theory of leveling all incomes would strike down those principles.

For too long now too many Americans, fully realizing that the bigger their pay checks the bigger percentage of them is grabbed by the tax collector, have been saying: "What's the use?" and "Let's not work any longer since we're working for the tax collector anyway." That philosophy cannot longer continue without harming the character of the American people. When individual income-tax rates are so high that they place a premium upon laziness, poor work, and lack of ingenuity, they can morally bankrupt a people. Economic bankruptcy usually follows moral bankruptcy. Point to a good-for-nothing loafer and you usually point to a penniless bum.

The Knutson bill would permit the worker to receive a larger share of his earnings, and in doing so it will encourage his normal and healthy desire to get ahead in life and to better provide for himself and his family. The bill grants reductions in the rates of taxation ranging from 30 percent in the low-income brackets to 10 percent in the high-income brackets. Persons with annual net incomes of $1,000 or less after exemptions would receive a 30-percent reduction in their tax. Persons with incomes of $1,000 to $1,400 after exemptions would receive a reduction of from 30 percent to 20 percent in their tax. Those with net incomes of from $1,400 to $4,000 after exemptions would receive a reduction of 20 percent in their tax.

Those having net incomes of $4,000 after exemptions would receive a reduction of 20 percent in the tax on their first $4,000 of net income after exemptions and of 10 percent in the tax on any remaining net income. Now, although you will find that even with these reductions, your taxes will still be high enough, at least it will be some encouragement to get these reductions.

The second reason that the Knutson bill should be enacted into law is that it will give relief from the present high cost of living to all taxpayers, particularly in the low-income brackets. Every man and woman present is keenly aware of the tremendous rise in the cost of living which has occurred since 1939. If the period of 1935 to 1939 be considered as reflecting the normal cost of living, and a price index of 100 is assigned to that period, then based upon the same index, the cost of living has risen until by March 1946, it was 156 percent, and by November 1947 it was 165 percent. And although the wages of many have increased in the same period, there is substantial evidence to show that individual income after taxes has not kept pace with the cost of living.

"On a per capita basis and in 1947 dollars, income after taxes has shrunk from an average of $1,285 in the first quarter of 1946 to $1,188 in the fourth quarter of 1947, a drop of nearly $100." (Report, House Committee on Ways and Means on H. R. 4790, p. 35.) And while wages and prices have continued to spiral, people whose incomes are fixed, those who are retired or aged, those who are blind, have suffered.

It is time that relief from the high cost of living be given all taxpayers, particularly in low-income brackets, and the one way to give it without increasing the inflationary forces of new wage increases is to cut taxes. The American breadwinner who saves a dollar from the tax collector has a dollar of greater worth than one given him in a wage increase.

The Knutson bill increases the personal exemption of every taxpayer and for each of his dependents from $500 to $600 per year. This will put dollars into the pockets of the American people—real dollars, not cheaper dollars—and surely all of us could stand a few more real dollars today. The bill grants an additional exemption of $600 to a taxpayer who is 65 years of age or over. If both the husband and wife are 65, each receives that exemption. An extra exemption of $600 is granted to a taxpayer who is blind. Certainly these humanitarian aspects of the bill are justified to aid those of our aged and blind who are taking care of themselves under the severe handicap of the present cost of living. This, then, is the second good reason why the bill should be enacted.

There is a third reason: The bill extends to married couples in common-law States, such as Missouri, the same advantage of being able to split their income for tax purposes as is now enjoyed by couples in 13 community-property States, such as California.

At present, married people in Missouri and other common-law States, whose net income is greater than $4,000 per year pay from 3⅓ percent to 40 percent higher Federal income taxes than married couples in community-property States. This is obviously unfair. Federal income taxes should fall equally upon people of like income in all 48 States, and the Knutson bill will cause them to do so. Incidentally, there is an advantage for single persons under this feature of the bill, for inasmuch as the maximum standard deduction for married couples is increased to $1,000, the standard deduction for a single person is likewise increased to $1,000.

Here are three examples of what the Knutson bill, if enacted, will do to the income taxes of various individuals:

1. A single person who has no dependents whose net income is $150 per month now pays a $247 tax per year; under the bill, he would pay $173 per year, a saving of $74.

2. A married person who has two dependents whose net income is $250 per month now pays a $190 tax per year; under the Knutson bill, he would pay $80 per year, a saving of $110.

3. A married person whose wife and he are both over 65 years of age and whose net income is $150 per month now pays a $152 tax per year; under the bill, he would not have to pay any Federal income tax, a saving of $152.

These, then, are some of the things which the Knutson bill will do. Although it is just a step in the right direction of revision of the individual income-tax law and substantially lower rates, it is at least a step. Let's hope that it does become the Revenue Act of 1948. Surely the President and a few Senators have made us wait too long for this needed revision and reductions in rates. It once took the Boston Tea Party to get rid of taxation without representation; possibly it will take a national election to get rid of it now. But, whether it does or does not, we shall not have to wait too much longer for tax relief.

The Continuance of Veterans' Flight Training Is Vital to Both Civilian and National Defense

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 4, 1948

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include several letters from constituents and others who are greatly interested in the continuance of the veterans' flight-training program under the Servicemen's Readjustment Act of 1944. These letters are representative of numerous communications received from students, instructors, operators, and officials of educational institutions—all appraising the benefits of the veterans' flight-training program and the need for continuance of aviation instruction during this the air age of America.

The letters are as follows:

THE AMERICAN LEGION, POST NO. 5,
Nashville, Tenn., February 26, 1948.

Hon. JOE EVINS,
Congressman, Old House Office Building, Washington, D. C.

DEAR JOE: I understand that the House Veterans' Affairs Subcommittee, under Chairman RAMEY, of Ohio, is considering the matter of continuing or discontinuing appropriations for flight training under the GI bill.

I want to urge that you lend your efforts to have this training continued and the necessary appropriations made therefor.

There are 63 of these schools in Tennessee, 56 percent of them owned by veterans. They have 473 employees, 256 of which are veterans.

Twenty-five percent of the gasoline-tax revenue accruing to the Tennessee bureau of aeronautics comes from these operations, and this money is used to improve air fields in the State.

These flight-training schools in Tennessee represent an investment of $3,500,000.

Personally, I think the veterans who want to take up pilot training under the GI bill should have the right to do so.

I am in favor of a continued program of flight training for the youth of our country, because we are going to have to call upon them to furnish the manpower for these National Guard squadrons, flying fighter planes when the present World War II veterans become too old for this type of flying.

Appreciating the kind consideration you have always given our requests, I beg to remain,

Very truly yours,
RICHARD D. GLEAVES.

FEBRUARY 11, 1948.

Hon. JOE EVINS,
United States Congress,
Washington, D. C.

DEAR SIR: We are writing on behalf of the flight-training program, and appeal to you for support for the continuation of this phase of training under the veterans' GI bill of rights.

At the beginning of flight training we prepared ourselves and equipped our school for a program of 7 years' duration, which required a considerable investment.

To suddenly stop this program would be catastrophic to every individual and business interested in progressive aviation.

Our veteran graduates have maintained a high sense of responsibility during and after completion of these courses at our school. Approximately 95 percent of our graduates have gained employment in the aviation industry. Some have established flight schools operating under Veterans' Administration contracts.

This company last year paid more than $7,000 in licenses and Federal and State taxes; paid a gross pay roll to 100 percent veteran employees of more than $23,000.

The value of this training to the veteran, and of them in turn to our country's defense, cannot be expressed in dollars if there is ever another national emergency.

We respectfully urge you to support the continuation of flight training under the GI bill of rights.

Yours very truly,
KNOXVILLE FLYING SERVICE, INC.,
MELVIN M. CAYLOR, *President.*

TENNESSEE AVIATION ASSOCIATION,
Clarksville, Tenn., January 19, 1948.

Hon. JOE EVINS,
Representative from Tennessee,
House of Representatives,
Washington, D. C.

DEAR MR. EVINS: According to a recent Associated Press release, President Truman has recommended to Congress that the GI bill of rights (Public Law 346) be amended to eliminate courses of study which are not constructively vocational. The writer of this press article has interpreted the President's views on courses which are not constructively vocational to include the GI flight-training program.

I wish to emphasize the importance of this training program to the economic structure of the aviation industry of the United States. In anticipation of a full 7-year program, flight operators throughout the country have increased in number four-fold in the past 2 years and have made heavy investments which cannot be financially realized unless the program follows through a normal development and recess in a natural sequence. An unnatural, abrupt termination of such a vital phase of the aviation industry would indeed be a catastrophe.

In behalf of the aviation operators of Tennessee, and in behalf of the thousands of veterans who desire the course, I am urging you to defend the GI flight-training program.

Sincerely yours,
BUFORD B. LEDBETTER,
President.

(Enclosure: Copy of letter from Dr. C. H. Gilmore, director of research, Department of Education, State of Tennessee, Nashville, Tenn.)

STATE OF TENNESSEE,
DEPARTMENT OF EDUCATION,
Nashville, February 25, 1948.

Mr. BUFORD B. LEDBETTER,
President, Tennessee Flight Operators Association, Clarksville, Tenn.

DEAR MR. LEDBETTER: I have been informed that the Veterans' Administration is taking the position that flight instruction is largely avocational and the major vocational opportunity is as commercial air-line pilot. I am unable to go along with this position. In the first place I feel that ground-school and flight training have an important bearing on one's concept of world geography and world problems. As coordinator of the civilian pilot-training program, the Navy War Training Service, and as director of aviation education in the State department of education, I found that relatively few people teaching geography even in college really had a clear understanding as to what the airplane has done, not only to the size of the world, but also to the development of new routes of travel. It is my opinion that many high-school students who have had aviation training have a better understanding of these problems than most adults.

I have every confidence that aviation is going to continue to develop as a great industry The pilot end of aviation is only one of the vocational opportunities available. However, ground and flight training are an important phase of education of individuals who hold positions in related areas. For example, in my experience as director of aviation education, I only found one man in Tennessee who had a rather thorough understanding of aviation insurance. He got his stimulus and basic understanding by virtue of the fact that he had had flight training. As a result of his knowledge of the problem his company was given the contracts for all of the insurance under our State programs because of his ability to work out satisfactory policies and continually reduce the cost of the premiums.

In my opinion, every aviation mechanic and every person working around an airport should have as a part of his training flight experience. He not only has a better understanding of what is involved in his job, but in practically every case is more enthusiastic and is a better salesman for the service which he is rendering.

Yours very truly,
C. H. GILMORE,
Director of Research.

WILKS FLYING SERVICE,
Fayetteville, Tenn., January 21, 1948.

The Honorable JOE L. EVINS,
House of Congress, Washington, D. C.

MY DEAR MR. EVINS: Reports say that according to the President's speech of the 12th of January, the GI program for flying may be eliminated. This is causing me, as well as thousands of other airport operators, great consternation, after all our efforts to bring our fields and equipment up to meet the strict demands of the Veterans' Administra-

tion. They alone have caused us to spend what seems an uncalled for amount of money on our projects.

We operators have been told that we can train a man to fly at an expense far less than the Government can through the Army or Navy. That alone is something to think about. In training these boys now, we are aiding to promote aviation to its place in the industries of America today, as it should be. We feel, too, that if we train these boys to fly now, they will be better qualified to meet the needs of Uncle Sam, if and when the occasion arises again, and we all feel sure that it will.

Then there is this viewpoint, if it wasn't for the GI program, many of our boys and girls would not be able to take the many courses in aviation that they are now afforded. If you could only hear the opinions of some of the veterans who have taken these courses, you would see that there is no need for question as to whether the program should be continued.

I am writing you this, hoping that my letter will help you to see our viewpoints on the matter, and what it means to us. When the matter is brought up in Congress, I hope that you will give it your ultimate attention.

Very respectfully yours,

CLYDE W. WILKS.

HARRIS FLYING SCHOOL,
White Pine, Tenn., February 16, 1948.

Hon. JOE EVINS,
House of Representatives,
Washington, D. C.

DEAR SIR: At present there is a bill before the House of Representatives to amend the GI bill of rights and exclude flight training thereunder, or to give the Veterans' Administration full authority to approve or disapprove a veterans' request for flight training.

Either amendment to the GI bill would be a serious detriment to aviation and an unfair decision to the veteran. I sincerely hope that any amendment to the bill taking away part of the training program and privileges under the GI bill will not pass. Although it is true that I have a pecuniary interest in this matter, as I earn my living by teaching flight training, I am against the exclusion of flight training for many other reasons.

Everyone knows that the world political affairs are more unsettled now than during the period preceding the last war, and I feel that during such times flight training is exceedingly important. The Veterans' Administration now terms flying as a "frivolous avocation," but it was not considered so when we were flying troops and cargo for the war effort. Preparedness seems to be the only answer against aggression. I was an Army pilot during the last war and I well know the importance of proper training.

Most all flight operators in the country have expanded their operations accordingly to take care of the veterans' training program and much of our investments will be lost if the training is terminated on such short notice. I hope that you will see fit to oppose this amendment.

I thank you for your time in reading this letter, and I wish you the best of health and success.

Respectfully yours,

ROBERT C. HARRIS,
Manager.

FAYETTEVILLE, TENN., *February 18, 1948.*

The Honorable JOE L. EVINS,
House of Representatives,
Washington, D. C.

MY DEAR MR. EVINS: I have heard and read about the act being brought about in Congress to wipe out the GI flight-training program. This, in my point of view, is rather a drastic thing to do, when you stop to think of all the things that are being done to promote aviation in America today. The Government is asking for greater air power, they're helping to build bigger and better airports all over the country, they're teaching boys to fly in various contracts and spending lots of money different ways to help support aviation. Then, why should they attempt to damage the other part that is being done by cutting out the one most important way they do have to create interest in aviation. Most small airports anyway will be greatly damaged by the discontinuation of the GI program, many to the extent that they will be forced to close. Every airport today is doing its best to promote the good will of aviation and without the ones that will have to close much of this will be discontinued too.

I am a veteran of the Second World War and I entered a course of flight training for a commercial license so that I may be able to fly for hire and, by doing so, have a means of support. I flew on this program until my entitlement exhausted and now I am still training on my own resources. I am happy for those boys that can train on the GI program and I know it means a lot to them. I, knowing from experience just what the program did for me, would hate to see the program taken from them.

Very respectfully yours,

AUSTIN WILLIAMS.

Compulsory Military Training

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Thursday, March 4 (legislative day of Monday, February 2), 1948

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement dated October 1, 1947, issued by the Senator from Ohio [Mr. TAFT] in opposition to universal compulsory military training.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

AGAINST UNIVERSAL COMPULSORY MILITARY TRAINING

On my recent trip I have been asked several times my position on universal compulsory military training. As I understand it, no one is proposing to conscript men for service in the Army, but only for training. Therefore, the question has no relation to the problem of securing enough men for the Regular Army.

The question of universal compulsory military training is of course directly connected with our foreign policy and the armed forces necessary to maintain it, which I discussed at Tacoma.

It cannot be justified merely as a method of education unless we are prepared to turn over to the Federal Government and the Army an active part in conducting the education of our youth. I have always regarded the local administration of education as one of the foundations of American freedom. Each community must retain the right to decide how their children shall be educated, if we wish to avoid the dangers of a totalitarian state.

I set forth at Tacoma what I thought should be the keystones of our foreign policy. The first principle of any American Government, in my opinion, should be to maintain peace as long as world conditions do not threaten the freedom of the people of the United States. In my opinion that has not been the guiding principle of our foreign policy in the last 15 years. I do not feel confident it is the guiding principle of our Government today.

Secondly, I believe our foreign policy should be built around the United Nations, changing the whole emphasis of the organization to the establishment of law, and equal justice under law, and on the new Pan-American Treaty. We should join in giving the United Nations an adequate military force.

Third, we should fight the ideology of communism in the United States and do everything reasonably effective for other countries to help their people fight communism, including loans effective to increase their productivity.

Fourth, we should make peace with Germany and Japan and permit them to develop a self-supporting economy, with military restraint to prevent their developing any new power to make war.

For all of these purposes, for the present, we must maintain an Army, Navy, and Air Force strong enough to resist any attack on the United States by any combination of nations; and while the Russian attitude remains what it is, we had better retain the atomic bomb.

I do not agree that our Army, Navy, and Air Force have fallen to pieces, and I am supported in this by competent observers. Our military machine is still the most powerful in the world unless we want to fight the Russian millions in eastern Europe. If we cannot maintain adequate armed forces with an expenditure of ten and a half billion dollars a year, then we must have an inefficient management of the Army and Navy. We know that is not so.

We want the most expert, best trained, and best equipped armed forces in the world to meet the contingencies of modern warfare. This Congress has already taken the most important steps in that direction by unifying the armed services under one department of national defense, and modifying the seniority system in the Army to provide for greater promotion by merit. The greatest essential of defense is brains and organizing ability.

To secure such an Army we need the best research for military purposes. We have provided money to secure it.

We want the best organized intelligence service. The unification law attempts to provide it.

It is also desirable that we have organized reserves to back up the million and a half men in the armed forces. I have never felt, however, that universal compulsory military training is the best method of providing such reserves. Many military experts agree with that position. Universal compulsory military training would train about 1,000,000 boys a year at an expense of two or three billion dollars. The training of most of them would be superficial.

Nor would we have need for 10,000,000 half-trained men of military age, much of their training out of date, unless we were again forced to invade Europe or Asia with mass armies. It would take 2 years to get the new and up-to-date equipment necessary for such an expedition, which would give time to train effectively by the most modern methods applicable to the war conditions then existing men who would actually compose such an expeditionary force.

For defense we need as reserves a much less number of technically trained men. I believe they could be secured on a voluntary paid basis through a National Guard organization more closely coordinated than heretofore with the National Military Establishment. If physical training is the result sought, it could be obtained through the stimulation of physical education programs in all of our schools, assisted by the Federal Government.

We should explore every possibility of providing such an expert technical reserve by the best possible means and not plunge into a huge bureaucratic organization required for universal compulsory military training by the Army. The expense of that organization alone might lead to the skimping of vital appropriations for the Regular Army and Navy, for research and for intelligence service. In my opinion it would not as well serve the purposes of our foreign policy as the organization which I have outlined.

Furthermore, I believe the adoption of universal compulsory military training by the United States would force the same policy on every nation in the world and prove an obstacle to peace. In the end I think it would encourage war rather than discourage it.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. C. WAYLAND BROOKS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, March 4 (legislative day of Monday, February 2), 1948

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "University of Chicago Professor Tells Off Harvard on Marshall Plan," written by George Weller and published in the Chicago Daily News of March 2, 1948.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNIVERSITY OF CHICAGO PROFESSOR TELLS OFF HARVARD ON MARSHALL PLAN

(By George Weller)

CAMBRIDGE, MASS.—A farm-bred teacher from the University of Chicago boldly gave Harvard the hotfoot last week end.

Charging in substance that the Marshall plan has become a gigantic export racket, Prof. Theodore Schultz, head of Chicago's department of economics, provided Harvard's dominantly pro-Marshall faculty and students with their stiffest criticism in months.

Schultz's challenge, that the Marshall plan is actually an adventure in state-trading contrary to American principles, has set Cambridge buzzing.

SEES PROFIT MOTIVE

The Chicagoan told meetings of both students and professors that well-heeled lobbies of industrialists and farmers were backing the European recovery program for profits rather than for European recovery.

The Marshall plan in operation, if not in inspiration, is prolonging artificial "prosperity" by Government buying of surpluses at inflated prices, Schultz charged.

The views of this Midwesterner, who is known for leading the "oleomargarine revolt" at Iowa State University, broke with star-shell effect at Harvard because only Communist or Wallace opposition to the Marshall plan has so far gained much hearing.

The Ambassadors of France, Britain, and the Netherlands are lecturing here in favor of European aid.

DUMPING OPERATION

Schultz threw discord into this chorus of agreement by charging that the Marshall plan is actually a vast dumping operation aimed to relieve a glut of farm and industrial products and head off price declines.

Schultz agreed with Harvard's distribution expert, Prof. Seymour Harris, that many American middlemen, besides manufacturers and farmers, are planning to get their slices of Marshall money before aid leaves American shores.

ADVANCE ORDERS

The Chicago teacher said he knew cases where European governments had placed advance orders with American exporters for filling only if Marshall aid is voted. Such conditional orders encouraged lobbies to push the Marshall plan through Congress, he suggested.

The Marshall plan is causing another split in American foreign policy, Schultz pointed out.

While American delegates at the Habana world trade conference are fighting subsidies and dumping, the Marshall plan is promoting state-supported exports on a colossal scale, Schultz warned.

The Battle for Bread

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, March 4 (legislative day of Monday, February 2), 1948

Mr. CAPPER. Mr. President, I send to the desk and ask unanimous consent to have printed in the Appendix of the RECORD an article by Dr. Clinton N. Howard, editor of Progress magazine, and general superintendent of the International Reform Federation, of Washington, D. C., which will appear in the March 1948 issue of that magazine under the title "The Battle for Bread."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE BATTLE FOR BREAD

The first engagement in the battle for bread launched by President Truman led by "Commander" Charles Luckman, the soap king, ended in a fiasco. When this top $300,000 per year salaried industrialist took over, the first order he issued to feed a hungry world was a slice of bread less per day at every American table. There was also to be a similar sacrifice made by the chickens and cattle, but not by the brewers and distillers, who with 6,000,000 gallons of surplus whisky in Government bond, and an output of 86,000,000 barrels of beer, were pouring 150,000,000 bushels of food grains into the vat and still for home consumption, while the President proclaimed that we were 50,000,000 bushels short on our pledged allotment to feed the starving in Europe.

THE SECOND BATTLE

The distillers were summoned to the White House for a conference, and under heavy pressure agreed to a voluntary holiday of 60 days' shut-down, which was proclaimed as a patriotic sacrifice and a saving of at least 100,000,000 bushels of food grains for bread. But the second engagement ended in another fiasco worse than the first, as no restriction was placed upon the industry in the purchase of enormous supplies of food grains prior to the shut-down, while the surplus of whisky in bond kept the consumption at par, so that at the end of the voluntary 60-day holiday, which expired on Christmas, the industry shot their 2,500,000 allotment per month up to 6,000,000 from the surplus they had purchased in the unrestricted market from December 1946 to the 25th of October, 1947, when the distillery holiday went into effect.

Not a bushel of grain was saved for human food despite the sacrifice of the children, the poultry, the hogs, and cattle. The fact is that the 67,000,000 bushels of grain used in 1947 was the equivalent of 4,500,000,000 loaves, or 1,100,000,000,000 slices of bread. The only effect of the Luckman plan was to increase the cost of these essential commodities to the consumers at home and reduce the quantity of grain for export abroad. Thus the second battle for bread was a worse defeat than the first.

THE THIRD BATTLE

The third battle began when the Senate passed the bill to revive the war powers of the President to extend the 2,500,000 allotment. When this bill reached the House Banking Committee the wet chairman, WOLCOTT, of Michigan, had the bill pigeon-holed by his committee and went West. Still the battle for bread raged in both Houses.

KANSAS TO THE RESCUE

In the meantime Congressman REES, of Kansas, a trustee of our Federation, introduced a bill in the House to stop the use of grain for the manufacture of intoxicating liquors for 1 year; and Senator CAPPER, another of our trustees, introduced a similar bill in the Senate, February 20, now before the Senate Committee on Banking and Currency. These two bills brought a joint meeting of the House and Senate Banking and Currency Committee, which reported favorably Senator FLANDERS' Senate bill, Senate Joint Resolution 186, extending the war powers of the President to limit the use of food grains by the distillers to 2,500,000 bushels per month, while the normal consumption for distillers is five to six million bushels per month, and the brewers 8,000,000 bushels.

VICTORY IN SENATE COMMITTEE

After several hours of debate this bill, with certain discretionary powers to the President, extending the 2,500,000-bushel limitation to the distillers until October 31, 1948, passed the Senate on February 26. It now goes to the Banking and Currency Committee of the House, where its chances for favorable action are not so good. Indeed, there is no telling when and whether the chairman of the House committee, Mr. JESSE WOLCOTT, will agree to a vote. But progress in the battle for bread has been made, and can be won if the members of the committee hear from back home.

The editor sat in the gallery of the Senate yesterday and listened to the debate, led by Senator BARKLEY, Democrat, of Kentucky, and Senator MYERS, Democrat, of Pennsylvania. There were many surprising statements, but the most surprising of all was by Senator MYERS (Catholic, of Philadelphia), "As for me, I think it would be better to stop all distilling now; not to the extent of 2,500,000 bushels of grain, but entirely. I do not think distilling is necessary. If the situation is so critical that we need to have the grain, then I, for one, would immediately say that we should not allocate for any distilling purpose." Let the Protestant Members take notice.

"OUR DAILY BREAD"

That is what the Son of God taught his church to pray for—our daily bread. That is what the world is starving for—our daily bread. That is what the little children in many lands are crying for—our daily bread. Bread is the one universal food on which the world depends.

The prayer may be interpreted to include food, but bread is the one essential and universal element in food. Almost every other kind of food is dependent upon grain from which comes our bread, without which we would have a limited supply of milk, meat, eggs, and butter, which make up a large part of the food supply of the world. Grain is the one basic commodity upon which the life of humanity depends.

NOT ME, NOT MINE—US

A failure in the grain crop means famine, disease, disorder, death, and completely upsets the social order unless the shortage is supplied by some more favored and prospercus nation. That is exactly the situation in which the nations find themselves today. Their hands are stretched across the sea saying to the United States, "Come over into Europe and help us." The United States is the only hope of the dying nations of Europe who are faced with famine, haunted by hunger, disease, destitution, and ravaged by war. The "us" in our Lord's prayer includes them.

It seems that every agency in America today is responsive to that prayer except one—the liquor interests. They know only one prayer, "Give us this day our daily drink," even if it should take the bread out of the mouths of the starving millions across the sea. It offers them a choice between hunger and hooch; hunger for them, hooch for us.

With several years' supply of whisky now on hand, and millions of gallons more in Government bond, the distillers are moving politics and perdition to increase their supply at the cost of human hunger, using up the substance of bread at this very moment on the basis of 6,000,000 bushels of grain per month to answer their prayer for prosperity, for profits, for surplus, for that which is not bread, and satisfieth not, for which their victims spend their money, despite the woes pronounced upon their business by Almighty God. In coast to coast full-page ads they ask, "Is prohibition coming back?" You can bet your bottom dollar it is, and soon.

Civil Rights Agitation

EXTENSION OF REMARKS
OF
HON. TOM STEWART
OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, March 4 (legislative day of Monday, February 2), 1948

Mr. STEWART. Mr. President, I ask unanimous consent to place in the Appendix of the CONGRESSIONAL RECORD an editorial entitled, "From the Grass Roots, the South Is Acting," printed in the Nashville Banner, at Nashville, Tenn., on March 1, 1948.

This editorial very forcefully expresses the feeling of the majority of the people of my State and probably the entire South toward the so-called civil-rights planks.

It is a source of deep regret among the southern Democrats that this misnamed civil-rights agitation should have been brought before the Congress. It can do nothing except create racial strife at a time when national unity is indeed most important.

It is my sincere and earnest hope, as it is the hope of all other southerners I am sure, that this situation can be relieved, because there is not a single plank in the entire list that is needed or is even desirable. The people of the South, both black and white, are working out their own problems, and in the past 25 years have made most remarkable progress.

I commend two Tennessee Congressmen, the Honorable WIRT COURTNEY, of the Seventh Congressional District of Tennessee, and the Honorable TOM MURRAY, of the Eighth Congressional District of Tennessee, for their outspoken denunciation of this unnecessary agitation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FROM THE GRASS ROOTS, THE SOUTH IS ACTING

There's no misreading the grass-roots sentiment of the South where Mr. Truman and his force bill of reconstruction are concerned.

The tide stirred by these vicious planks—again disinterred by vote-desperate titular leadership to recapture the leftwing vote—swells as each passing day gives the southern people new opportunity to speak their mind about it. The outburst of indignant protest was spontaneous. In formal resolutions crystallized out of that sentiment they are now acting in unison, laying the ground work for climactic action in November.

Down at Somerville, in Fayette County, the voice of Tennessee democracy was heard, a forerunner of district-wide, State-wide action in denunciation of the reconstruction move. The people are not, in that, being led. They are leading, and what they are saying will be heard clear to Washington, D. C.

They do not expect Mr. Truman and his political tacticians—blind and indifferent to the realities of this southern sentiment—to alter in any degree their vicious program of force; a program of contempt and abuse that follows perfectly the pattern designed during 15 years of New Deal treatment of the South and its Democratic constituency. It is just as well that this is the reality of the case, and Mr. Truman's unswerving devotion to that force principle recognized for what it is; for retraction of it in a moment of expediency would only hold it in abeyance until its sponsors secured (if they secure) the opportunity to put it over on the South. The South is acting to assure against that betrayal, and there is only one way to do that.

This is a grass-roots movement, the people of the South having detected the monstrous character of an FEPC proposal, and attendant force bills transgressing both the letter and the spirit of the Constitution. The people of the South are tired of being pushed around, subjected to abuse, invaded by a constant influx of odd characters bent on reforming it to suit their own designs of reconstruction. They don't want that from any source, and are outraged that this endless inquisition stems from interloper elements using their own party to accomplish it.

Two Tennessee Congressmen, WIRT COURTNEY and TOM MURRAY, speak the sentiment of their State and their Southland, when they joined southern delegations denouncing at Washington the Truman force bill. Voters of their districts commend the forthrightness of their position.

In sheer desperation to match Wallaceism with Wallaceism—if not actualy outdo that outright pinko amalgam in social and socialistic operation—Mr. Truman chose to throw the South overboard as a sacrifice to the political gods of radicalism. He did that deliberately.

The South sees that. It is acting in the light of what it sees.

International RFC

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, March 4 (legislative day of Monday, February 2), 1948

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the RECORD a letter I have received from William H. Krieg regarding the international RFC.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

INDIANAPOLIS, *February 16, 1948.*

Hon. HOMER E. CAPEHART,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR: I have read with great interest not only the newspaper accounts and various complimentary editorials, but also a complete reprint of the address which you delivered before the Illinois State Bar Association last Saturday, February 7, concerning your plan now commonly referred to as the "International RFC."

Your plan is simple, brilliant, and so far as I know, without a flaw. Our activities in foreign relations since the end of World War I, have been a dismal failure. The billions we have spent and given away in treasure, man work hours, and energy to our foreign friends have been without benefit to us. Certainly we have learned our lesson that the American dollar given to help others has paid us nothing good in return. It has given the recipients of our wealth a feeling of animosity and ingratitude, and has in no way stopped or possibly even hindered the machination of those people in the world who seek power and authority by force of arms. Are our memories so short that we fail to recollect that when we tried to collect the first war debts which were decently made and honestly received, but indecently and dishonestly repudiated, we were known throughout the world as Uncle Shylock?

Why repeat the same mistakes through the medium of the Marshall plan?

While I am perfectly in favor of helping starving peoples to avoid death by starvation, and freezing peoples to avoid death from the cold, I am unwilling to lend $1 in Europe or elsewhere for business purposes except on a business basis. The Marshall plan is not businesslike; your plan is. The salutary feature of your plan is that it will permit the economy and industrial recovery of Europe through dealings between the individual businessman of Europe and the individual businessman of America, rather than foster monopolistic buying on the part of our Government for goods to be delivered to European governments which, in turn, will sell the merchandise, or give it away to their own nationals. Such is proposed in the Marshall plan.

I have discussed your "International RFC" with possibly 25 business and professional men in my own community, and each one is in favor of your plan and against the Marshall plan, with one exception. One man raised the objection that your plan would require the French, for example, to force its nationals to sell or hypothecate their investments in America and to take in exchange therefor French francs in order to provide the dollars for the French Government to invest in the capital of the RFC. This man was opposed to our Government causing the French Government to "confiscate" its own nationals' property.

This objection is ridiculous and the answer is simple. In the first place, the French Government would not be asked to confiscate its nationals' wealth, but rather the French Government would exchange the official money of France for the dollars owned by its nationals. This is less drastic and autocratic than our own Government's repudiation of the gold standard.

Under the Marshall plan, my own Governernment, by way of taxation, will confiscate my dollars to give away to Frenchmen and the other 15 governments. It's high time that our own Government had some regard for the confiscation of the earnings of the American citizens by way of income and other taxes. Certainly it would be fair and

more equitable for the Frenchman, for example, to exchange his dollars for his own Government's francs to help himself, his Government, and other Frenchmen, than for my Government to confiscate my dollars for the purpose of helping Frenchmen and the French Government through the Marshall plan.

I apolcgize for the length of this letter, but thought it my duty as an American to tell you what's in my mind and heart on this important issue.

I wish you total success in persuading your colleagues in the Congress of the United States to pass legislation embodying the principals of your wonderful plan and in defeating the Marshall plan as now proposed.

Sincerely,

WILLIAM H. KRIEG.

Depreciation to Fore as Inflation Problem

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Thursday, March 4 (legislative day of Monday, February 2), 1948

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Depreciation to Fore as Inflation Problem," by George Ericson, editor of the financial pages of the Christian Science Monitor, from the Christian Science Monitor for February 21, 1948.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEPRECIATION TO FORE AS INFLATION PROBLEM

(By George Ericson)

The question of depreciation is one which has a most important bearing on taxes, profits, and dividends. Therefore, it should commend itself to the attention of all students of our economy despite the fact that it appears to be largely an accounting procedure problem. The reason for the emergence of this question to a more prominent place on the basket of national thinking is the inflation of currency visible in the loss of dollar purchasing power.

This shrinkage in dollar value has reached a point where competent authorities are urging business in general to take account of the need to set aside an adequate portion of earnings to replace worn or obsolescent fixed assets.

DEPRECIATION CHARGES HELD INADEQUATE

Thinking among businessmen on this subject has been sharpened in recent months because of extremely high replacement costs. It is estimated that current depreciation charges are hardly more than enough to take care of half the money required to replace worn-out facilities. Therefore companies have had to go out in the capital market to maintain their equipment at full efficiency or to meet increasing demand.

This has resulted in business expenditures for durable equipment or fixed assets running recently at a rate well in excess of $20,000,000,000 a year. Despite the fact that union spokesmen repeat that corporate profits are too high, the earnings of a great many concerns have not been in available cash, but were largely absorbed by the higher dollar inventories and investment in higher-cost plant and equipment.

The question then arises as to what extent earnings currently reported are being overstated in view of the fact that depreciation charges are generally based on original cost. Such a situation could mislead employers, employees, and the public as well, since partly fictitious profits would be reported unless adequate provision is made for higher replacement costs. The tax laws and Treasury regulations based on them are regarded by many executives as a deterrent to proper reserves for depreciation.

MORE TAXPAYER DISCRETION SOUGHT

It is to be noted that there has been very little change in the attitude of the Bureau of Internal Revenue toward depreciation and its uses since 1913 when taxation of income by the Government came into being, unless it has been to reduce taxpayer discretion. Prior to 1934, it was the policy of the bureau to allow, within limits, business judgment to decide the rate of depreciation on capitalized assets. But in that year a rule was adopted which placed the burden of proof flatly on the taxpaying concern to justify whatever depreciation rate was used. Designed to expand revenues, its effect was to cut sharply the allowed annual rate of depreciation and to extend the life expectancy base of certain assets.

Much of industry today is irked by the abandonment of the old rule. It feels that this rule, whereby depreciation deductions taken by taxpayers "will not be disallowed unless shown by clear and convincing evidence to be unreasonable," was entirely proper, fair and not against public interest. This would be in the interest of soundly dealing with the rise in replacement costs and of stimulating capital expansion. Another proposal is that the Government permit a special tax-free replacement reserve, such allowance to be authorized for a limited period, say, of 3 to 5 years.

TREASURY POLICY MODIFICATION ASKED

The last suggestion receives the support of the Brookings Institution, which urges that any tax-free credits to replacement reserves must be used in not less than 8 or 10 years. The institution thinks the time has arrived for a modification of Treasury policy on depreciation and offers three changes for consideration: (1) Large initial depreciation; (2) accelerated rates, especially on new investments in machinery and equipment; and (3) greater taxpayer discretion in fixing depreciation allowances.

Both Nos. 1 and 2 were in use during the war under the sanction of the Office of War Mobilization and Reconversion, which said in September 1944 that such action "would induce many companies to hazard new ventures, thereby increasing employment. It would give a real incentive to companies to keep our industry ahead of the rest of the world technologically." Great Britain also permitted high initial depreciation allowances in the Income Tax Act of 1945. The adoption of No. 3 would not be disadvantageous to the Government, since any immediate declines in revenue would be offset in later years. Moreover, it would tend to induce management to adopt more rapidly the latest improvements and so tend to increase production.

NEED TO RECOVER CAPITAL VALUE

While there are some objections by certain industrial firms and by the Government to adjusting depreciation policy to allow for shrinkage in the dollar, it is generally admitted that capital is fully recovered only, as George Terborgh says, when the recovery is equal to the original investment in terms of purchasing power. Industry must set aside enough of its income to maintain its efficiency and ability to produce.

Today, generally speaking, business is setting aside depreciation reserves on the bases of original purchase price. Yet today it costs far more, twice and in some cases three times as much, to renew or replace plants and machinery as it did originally. Hence it is plain that under such a policy taxes are being levied on a portion of profit which is not an actual profit, since it contains a certain percentage of unrecognized depreciation.

Security holders who buy stocks of these concerns whose net income has not been properly shrunk by deduction of sufficient depreciation for obsolescence or depreciation are being duped. Keen eyes eventually discern such practices. And whether a depreciation policy which aims at a realistic provision for its own physical perpetuation is recogniz d for tax purposes or not, it is good accounting procedure and, better still, common sense. Senator CAPEHART and Representative GRANT of Indiana recognize the need for legislation on this subject and are proposing a liberalization of the revenue law so that true income and not capital will be taxed.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Thursday, March 4 (legislative day of Monday, February 2), 1948

Mr. MARTIN. Mr. President, I call the attention of the Senate to an editorial entitled "Question of Hawaiian Statehood," from the Chester (Pa.) Times of February 21 last. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

QUESTION OF HAWAIIAN STATEHOOD

(This is the second of several editorial articles having to do with a recent western trip by the editor of the Chester Times.)

On the day of our arrival in Honolulu, Senator CORDON, of Oregon, was completing his official visitation with the expectation of reporting back to the Public Lands Committee of the United States Senate, which has present consideration of Hawaiian statehood.

There was a gigantic luncheon affair with 600 present to hear not only Senator CORDON, but also JOSEPH FARRINGTON, Island delegate to Congress, and a distinguished vacation visitor, Gen. Mark Clark. It was an impressive affair. Those in attendance were alert, cheerful people, who, in our language, may be described as typical Americans. That description goes also for the sprinkling of persons of oriental descent, aggregating about one-tenth of the attendance.

There was the same good-natured banter characteristic of a civic gathering on the mainland (as it is always referred to on the islands) Senator CORDON was relaxed and friendly. His audience understood that he could make no official commitment, but we have the word of A. A. (Bud) Smyser (older brother of the Chester Times' Dick Smyser) that Senator CORDON had become convinced that Hawaii is ready for statehood. Smyser, as a reporter on the Honolulu Star-Bulletin, had been a shadow of Senator CORDON throughout his visit.

Following the luncheon the writer greeted JOE FARRINGTON with whom he had served as a reporter on the Philadelphia Public Ledger back in 1919 and 1920. In a few minutes we were in an automobile with FARRINGTON and Senator CORDON driving back from the Waikiki Beach resort where the luncheon had been held, en route to the historic Hawaiian capitol building where temporary offices had been established for Sen-

ator CORDON. The Oregon Senator, who in private life was a small-town Oregon attorney, spoke repeatedly of his favorable impressions of the islands, and particularly of its whole-hearted friendliness and hospitality. He had been the recipient of much testimony including the voices of a limited few who feel that Hawaii should wait still longer before being admitted as the forty-ninth State. CORDON has found, however, overwhelming favorable evidence.

There are more than one-half million people living in the islands which produce well over 90 percent of America's pineapple. They provide about one-seventh of America's sugar. In 1946 Hawaii's effective buying income averaged $5,400 per family. That is considerably larger than the average family's buying income on the mainland. Last year Hawaii paid, in Federal taxes, more than were paid by 14 States.

A repeated argument against statehood is the diversified population—Hawaiian, Chinese, Japanese, Caucasian, Korean, Filipinos—all kinds of people, but it is amazing how they live together happily.

There is the testimony of Admiral Nimitz: "Before World War II, I entertained some doubt as to the loyalty of the American citizens of Japanese ancestry in the event of war with Japan. From my observation during World War II, I no longer have that doubt." The performance of AJA (meaning Americans of Japanese Ancestry) troops on European battlefields particularly substantiates Admiral Nimitz' evidence.

It is not the purpose of this article to make a formal case in behalf of Hawaiian statehood. The fact remains that for nearly a half a century, as a Territory of the United States, Hawaii has pleaded for statehood and today stands on the threshold of achievement. The House has already approved the measure for statehood, so final decision is up to the Senate.

For more than a fortnight on the islands, meeting numerous friends of long duration, we asked questions to bring out frank opinion. The fact that Harry Bridges of the longshoremen's union has organized field workers into a gigantic combine is the basis of much concern. The objection is not to the labor organization, but to the judgment that too much power is given the CIO leader due to his control of shipping, which obviously is vital to Hawaii's economy. However, the independence of the mixed population in Hawaii is dramatically proven by the fact that following a long and costly strike among sugar workers, a similar strike among the pineapple workers failed miserably in 5 days. They (a large population of oriental descent) simply wouldn't go along.

The two daily newspapers in Honolulu are the Evening Honolulu Star-Bulletin with 80,000 circulation and the morning Honolulu Advertiser with 50,000 circulation.

This observer admits that, vacation or no vacation, he is unable to restrain an overwhelming impulse to make it a busman's holiday and acquaint himself with the inside workings of the available newspapers.

Undoubtedly because of the fact that the islands are 2,200 miles from the United States, there is a strong tradition on the part of both newspapers to emphasize local news to a greater degree than many newspapers, on the mainland. That doesn't mean that international and national affairs are not given reasonable coverage.

As the publisher of a newspaper which holds its distinctive place within a few miles of Philadelphia, we can testify as to the desire for local news. The newspapers of Honolulu actually are more adequate publications in serving their community than the average newspaper in cities of similar size in the States. The Honolulu newspapers proved an inspiration to this "visiting fireman."

Delegate FARRINGTON is devoting 99 percent of his energies in quest of statehood and the favorable vote of the House of Representatives was undoubtedly a personal tribute. It might be mentioned that in private life Mr. FARRINGTON is the controlling owner of the Honolulu Star-Bulletin and prior to his taking office he was an active newspaper executive.

Our Forests

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 4, 1948

Mr. TRIMBLE. Mr. Speaker, the Members of this great body are almost unanimously, if not unanimous, in favor of conservation of our natural resources. Among those resources is our timber. In our State we have the Ozark National Forest, and I have received the following information, which I requested, from Mr. Paul H. Gerrard, forest supervisor of the Ozark National Forest, Russellville, Ark., and which I will include in the RECORD as a part of my remarks:

DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
OZARK NATIONAL FOREST,
Russellville, Ark., February 25, 1948.

Hon. JIM TRIMBLE,
House of Representatives,
Washington, D. C.

DEAR MR. TRIMBLE: The report of the Chief of the Forest Service for 1947 deals mainly with the Nation's water resources. It ties in so closely with the water problems and what the people in Arkansas are attempting to accomplish in the Arkansas, White, and other river basin areas that I thought you would be especially interested in it.

The act of June 4, 1897, creating the national forests states in part: "For the purpose of securing favorable conditions of water flow and to furnish a continuous supply of timber for the use and necessities of the citizens of the United States." The 1,000,000 acres of the Ozark and 1,400,000 acres of the Ouachita National Forests are a stabilizing influence on the flow of headwater streams of our most troublesome rivers. They also provide water for some of our main cities; namely, Little Rock, Fort Smith, and others. Forest Service policies and management on the national forests in Colorado affect the Arkansas River as well as the private land. Hence, the sections "How Forest and Range Treatment Affect Watersheds" and "National Forest Watersheds", will be of interest to those desiring a comprehensive flood control program on the lower Arkansas.

Along with watershed management, we have timber, grazing, and wildlife management, as well as recreation and other special uses. In other words, we are operating on a multiple use system, devoting the land to its most productive use or uses, correlating these so as to provide maximum benefits to the greatest number of people. Other Forest Service activities include research, cooperative assistance to the State in fire control, providing tree seedlings, and farm forestry. (A total of $161,000 Federal funds were provided for these cooperative projects.) These are covered in the report. Also attached is a brief statement of forest facts for Arkansas.

Like other people, we have many problems in administration of the national forests in addition to trying to obtain full value for the taxpayer's dollar which we spend. Hence, any suggestion or comment you have to offer concerning the forest or ways and means of increasing benefits to the people will be gladly received.

Very sincerely yours,
PAUL H. GERRARD, *Forest Supervisor.*

Facts and figures, fiscal year 1947, national forests

	Ozark	Ouachita	Total
Area, Arkansas (acres)	683,316	1,308,742	2,292,058
Area, Oklahoma (acres)	----------	167,000	167,000
Receipts (timber, grazing, special use, etc.)	$298,207	$386,744	$684,951
Forest products cut (thousands of board feet)	19,423	38,801	58,224
Forest fires (number)	172	245	417
Acres burned, United States land	2,028	3,242	5,270
Roads maintained (miles)	1,220	1,631	2,851
Recreation developments	17	15	32
Game refuges (number of areas)	5	4	9
Acres	41,200	103,240	144,440
Number of deer	9,000	4,000	13,000
Number of elk	150	None	150
Number of turkey	150	250	400
Recreation visitors [1]	163,000	125,000	288,000
Hunters, fishermen, and trappers	29,000	25,200	54,200
25 percent receipts to counties:			
Arkansas	$74,552	$85,742	$160,294
Oklahoma	----------	$10,944	$10,944
Rate returns per acre	$0.075	$0.065	----------

[1] Includes hunters, fishermen, and trappers.

COOPERATION WITH STATE

Division of forestry

Fire control: In fiscal year 1947 some 11,083,000 acres protected, at a cost of $344,384, of which $158,589 was Federal funds, balance from State and private sources. In calendar year 1946 (1947 data not yet available) 59,980 acres protected land burned, or 0.5 percent, whereas 11.8 percent unprotected land burned. State now extending protection to new areas.

Nursery—Tree seedlings: Seedlings totaling 5,500,000 produced and distributed by State forester. Federal funds supplemented those of State. Demand for seedlings exceeding supply and State forester is increasing production.

Extension service

Federal funds helped to provide one farm forester for on-the-ground technical council in proper management of small woodlands; 109 owners assisted, involving 12,000 acres timberland, 1,292,000 feet of forest products, with value of $24,740.

Game and fish commission

Cooperative game studies concerning number of deer and distribution on White Rock and Sylamore. Also deer-browse or game-management study on Sylamore district; 350 deer on forest trapped for stocking various areas in State; no forest-service cooperative funds involved.

FOREST EXPERIMENT STATIONS

Ozark branch, Harrison: Research forest-management practices with upland hardwoods. Also forest-grazing, game-management, and red-cedar studies.

Crossett branch, Crossett: Research forest-management practices with pine, includes farm woodland.

Southern station, New Orleans: Forest survey, northwest Arkansas; dry-kiln course, cooperation Arkansas lumbermen; wood utilization, cooperation Arkansas lumbermen; lumber production, Arkansas mills.

Wages Lost Through Strikes

EXTENSION OF REMARKS
OF
HON. GERALD W. LANDIS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 4, 1948

Mr. LANDIS. Mr. Speaker, the wage earners who were on strike in 1946 lost a total of $920,000,000—at the rate of $8 per day—in comparison to $281,600,000 lost in 1947. The $920,000,000 would have given 1,277,777 old people $60 per month for 1 year.

The State of Pennsylvania led the list with a loss of $160,800,000. Michigan and Ohio tied for second with a loss of $84,800,000 each. Indiana lost $43,760,000. Workers in Indiana industries that lost the most through strikes were: Automobile, $12,320,000; iron and steel, $11,280,000; machinery, $6,248,000; electrical, $4,936,000; and those in mining lost $4,912,000.

Workers in Indiana's largest industrial cities lost the following amounts: Indianapolis, $5,400,000; Gary, $5,304,000; East Chicago, $3,128,000; South Bend, $1,376,000; Evansville, $249,600; and Terre Haute, $148,000.

The following shows the loss of wages through strikes in 1946 by States:

States	Stoppages	Workers	Man-days idle	Loss in wages at $8 per day
Alabama	118	121,000	2,060,000	$16,480,000
Arizona	20	6,980	257,000	2,056,000
Arkansas	40	14,300	226,000	1,808,000
California	246	258,000	6,090,000	48,720,000
Colorado	26	26,200	590,000	4,720,000
Connecticut	86	59,200	3,160,000	25,280,000
Delaware	17	5,890	95,000	760,000
District of Columbia	29	21,800	180,000	1,440,000
Florida	42	17,200	152,000	1,216,000
Georgia	61	27,700	540,000	4,320,000
Idaho	13	3,290	33,100	264,800
Illinois	438	339,000	9,040,000	72,320,000
Indiana	171	178,000	5,470,000	43,760,000
Iowa	66	40,700	561,000	4,488,000
Kansas	33	31,400	290,000	2,320,000
Kentucky	165	138,000	2,960,000	23,680,000
Louisiana	50	29,000	372,000	2,976,000
Maine	22	10,500	44,800	358,400
Maryland	53	80,700	1,400,000	11,200,000
Massachusetts	266	111,000	3,230,000	25,840,000
Michigan	311	248,000	10,600,000	84,800,000
Minnesota	55	45,100	873,000	6,984,000
Mississippi	26	14,600	147,000	1,176,000
Missouri	168	63,800	1,700,000	13,600,000
Montana	15	11,300	223,000	1,784,000
Nebraska	19	15,500	235,000	1,880,000
Nevada	9	2,260	17,000	136,000
New Hampshire	23	5,540	130,000	1,040,000
New Jersey	247	193,000	6,530,000	52,240,000
New Mexico	15	5,870	103,000	824,000
New York	679	432,000	9,350,000	74,800,000
North Carolina	66	14,400	452,000	3,616,000
North Dakota	9	4,250	61,000	488,000
Ohio	396	450,000	10,600,000	84,800,000
Oklahoma	42	16,800	329,000	2,632,000
Oregon	45	21,400	272,000	1,376,000
Pennsylvania	639	877,000	20,100,000	160,800,000
Rhode Island	45	11,400	257,000	2,056,000
South Carolina	19	10,200	388,000	3,104,000
South Dakota	7	2,300	13,700	109,600
Tennessee	131	64,900	1,110,000	8,880,000
Texas	97	94,800	2,010,000	16,080,000
Utah	17	16,700	782,000	6,256,000
Vermont	7	2,600	16,100	128,800
Virginia	108	72,200	1,240,000	9,920,000
Washington	79	49,600	884,000	7,072,000
West Virginia	150	229,000	5,600,000	44,800,000
Wisconsin	91	73,700	4,820,000	38,560,000
Wyoming	10	10,600	205,000	1,640,000

Sixty-four-dollar question: How much did the labor leaders lose in wages in 1946?

Rent Control and the Veteran

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 4, 1948

Mrs. DOUGLAS. Mr. Speaker, last Sunday and Monday several thousand veterans, members of all national veterans' organizations, assembled here in Washington to urge action by Congress to help solve their serious housing problems.

Veterans are as a group the most acutely affected by the housing shortage. The Census Bureau in October 1947 reported that in April 1947 about 27 percent of all occupied dwelling units contained a veteran household. About 14 percent of such dwelling units contained doubled-up families as compared with only 4 percent of the nonveteran households. About 2,764,000 married couples, or 8.3 percent of all married couples in private households, were living doubled up in April 1947. This represents an increase of about 50 percent over the corresponding number, 1,846,000, who were living doubled up in 1940.

The Housing Expediter, in his testimony before the House Committee on Banking and Currency, stated his studies showed that monthly rents on dwelling units decontrolled under the 1947 act had on the average rise about 70 percent—the individual increases varying from very little up to over 300 percent.

Veterans are having to compete for these uncontrolled accommodations, including newly-built units, and when fortunate to get shelter at all they are forced to pay exorbitant rents.

The Senate on February 24 passed a bill continuing the requirement that newly-built rental units must first be offered for rent to veterans. But the law provides no limit on what rent the owner can demand of the veteran. Many newly-built rental units are being legally rented to nonveterans because within the required 30-day period no veteran who can afford the outrageous rents can be found. What a farce.

Furthermore, the Senate in the new law proposes to exempt from rent control rooms in private homes. This is to enable home owners who are mostly nonveterans to gouge veterans, both single and married, who are forced by the housing shortage to live in furnished rooms. This open season on veterans will especially hurt those trying to make ends meet on veterans' allowances while attending colleges and universities.

The Senate, in continuing the inflationary lease device, further hurt veterans. Under the 1947 act such leases had to be made with tenants who were in possession. Under the new law the Senators provided that new tenants—most of whom will be veterans—can also be stuck.

The Senators, on the initiative of Senator MILLIKIN, of Colorado, provided that landlords may willfully flagrantly violate the rent law without any criminal prosecution or punishment. The Senate in its effort to pass a law which controls rents, in name only, also denied the Housing Expediter the necessary authority to sue for treble damages those landlords who illegally overcharge.

The Senate bill allows landlords to evict tenants without notice to the Rent Administration and without an adequate waiting period where eviction is sought for reasons beyond the tenants control, such as for occupancy by the owner or a relative, a new purchaser, or to alter the accommodations or to withdraw the unit from the market.

The assembled veterans, recognizing these shortcomings of the proposed rent bill, unanimously passed the following resolution:

RENT CONTROL

Whereas rent controls are scheduled to expire on April 1 unless Congress acts to further extend it; and

Whereas thousands of families will be thrown into economic chaos following termination of controls; and

Whereas hundreds of thousands of veterans and their families will be left homeless if the eviction provisions of the law are terminated; and

Whereas the passage of the T-E-W bill will not relieve the rental problem for several years: Therefore, be it

Resolved, That the National Veterans' Housing Conference hereby goes on record demanding that Congress immediately enact a strengthened rent-control law that will be in effect until the housing shortage has been relieved. And that the bill contain provisions for adequate enforcement, strengthened provisions against evictions, and the elimination from the pending bill of the clause permitting landlords to remove their properties from the rental market for the purpose of creating a false surplus.

Hon. William M. Whittington

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 4, 1948

Mr. COLMER. Mr. Speaker, some days ago the Honorable WILL M. WHITTINGTON, the able and distinguished Representative from the Third Congressional District of the State of Mississippi, announced that he would not be a candidate for reelection to the office in which he has so long and ably served.

This came as a distinct shock to his many friends and admirers in and out of Congress. And while it is customary to wait until a man is dead to pay tribute to his virtues, I want to depart from that custom and place this flower in his lapel while he is enjoying the fullness of life.

WILL WHITTINGTON came to Congress from that rich delta section of Mississippi designated as the Third Congressional District on March 4, 1925, and he has served with ability and distinction in this body continuously since that time. Prior to his service here, he served as a member of the State senate in the State legislature

of Mississippi where his ability, sound judgment, and forceful character made him a leader of that body even as he has become a leader in the Nation's legislature. Few men in the Congress of the United States today enjoy the respect and confidence of their fellow members more than does our able colleague. This is no accident. WILL WHITTINGTON has risen to this place of eminence in Congress because of his ability, hard work, and attention to the Nation's business. He is recognized as an outstanding authority on flood control. For several years during the Democratic administration he served as chairman of the Flood Control Committee of the House of Representatives, and has been largely responsible for much of the constructive program of flood control in the Nation. His capacity for hard work is apparently limitless, and I doubt if any Member of this body has been more conversant with and made a more studious effort to study the many bills which have come to the floor for consideration and enactment. His deep sense of conscientious duty has impelled him to meticulously study the various bills which came up for consideration. His Delta district, which has profited so enormously as the result of his representation here, and the country at large, can ill afford to lose his services at this time. But WILL WHITTINGTON has arrived at the conclusion, reluctantly I am sure, that after these long years of service, he is entitled to enjoy his remaining years in his beloved delta section of Mississippi where he can devote his time to his plantation, and enjoy his friends and the companionship of his family.

Mr. Speaker, in this connection I submit the following from a number of editorials which have appeared in the press lauding the efforts of our colleague who will leave us with the respect and best wishes of his colleagues on both sides of the aisle:

[From the Greenwood (Miss.) Morning Star of January 3, 1948]

WHITTINGTON WON'T BE CANDIDATE AGAIN, RETIREMENT TO BE AT EXPIRATION OF TERM—BIG SHOES TO FILL

The citizens of Greenwood and the Third District of the State of Mississippi and the Democratic Party as a whole will have big shoes to fill when Representative WILL M. WHITTINGTON writes finis to his career as a Congressman at the expiration of his present term.

Only last summer Mr. WHITTINGTON, known throughout the State and the Nation as one of the most powerful and influential men in the House of Representatives, turned down requests from Mississippi supporters to enter the race for a United States Senate post. His long record of service and legislation caused strong support to swing to the drive to urge him to run in the November election for the senatorial seat left vacant by the death of Theodore Bilbo, but he rejected the bid to run.

As the head of the powerful Democratic caucus during past administrations the Greenwood Representative has long been regarded as one of the powers in the Democratic Party. His record in flood-control legislation, compiled under his leadership as chairman of the vital committee, speaks for itself.

At present he is a ranking member of the Committee on Public Works and a ranking member of the Committee on Highways. He also compiled a long record of work in tax and revenue legislation.

The last paragraph of Mr. WHITTINGTON'S statement of yesterday characterizes his every thought according to men associated with him: "The welfare of my district, State, and country always came first with me as a public official, and will continue first with me as a private citizen."

Representative WILL M. WHITTINGTON, veteran Congressman from Greenwood and this district, announced yesterday that he would retire as a Member of Congress at the expiration of his term and would not be a candidate for reelection.

Mr. WHITTINGTON made the following statement in announcing his retirement: "I shall be 70 years of age next May. I would like to retire as a Member of Congress at the expiration of my term. I shall not, therefore, be a candidate for reelection.

"The people of the Third District have been kind and generous to me. I am deeply grateful for election and reelection for 24 years.

"The welfare of my district, State, and country always came first with me as a public official and will continue first with me as a private citizen."

[From the Jackson (Miss.) Daily News of January 18, 1948]

A WORK WELL DONE

Congressman BILL WHITTINGTON, veteran House Member from the third district, is one of the few men in public life who has accomplished practically everything he started out to do at the beginning of his political career. To put Old Man River under control in its devastating sweep from Memphis to the Gulf was his main objective and engineers regard that as practically accomplished. All the levees along the river have been rebuilt, enlarged, and strengthened. Protection of the Yazoo delta from inundation was another objective. Four of the largest flood-control dams in the Nation have been authorized along the tributaries of the Yazoo, two of which are completed and two others are well under way. Some other objectives were in his program and they have been given the stamp of approval by Army engineers and now await appropriations. BILL WHITTINGTON has had a long and honorable career.

He shows good common sense by deciding to retire gracefully, before he becomes old and useless, like some men in public life, and it is certain he will retire gratefully, holding in keen appreciation the honors showered upon him.

[From the Memphis (Tenn.) Commercial Appeal of January 20, 1948]

HE HAS SERVED US WELL

Announcement by Representative WILL WHITTINGTON that he will not seek reelection to Congress is a reminder to the entire Mississippi Valley, as well as sections elsewhere, of the tremendous debt they owe him.

His departure from the House will deprive it of its foremost flood control expert and one who labored indefatigably in behalf of all areas where floods are prevalent. His is no mere legislative knowledge. When he entered Congress more than 20 years ago, he was already an advanced student of flooding rivers. He knew the flood propensities of China's Yellow River and Egypt's Nile as well as he did the Mississippi. Through all the years following he studied zealously to add to that knowledge until he became the most proficient member of the House on the subject. It was knowledge which served him invaluably during the many years he was Chairman of the old Flood Control Committee.

He has served Mississippi with dignity and well. He was unselfish in laboring for sections outside of his own State. He has displayed fine qualities of statesmanship. He has worked without regard for hours or personal discomfort.

His retirement is a matter of personal decision. It is the choice of a man who can seek rest with finest of conscience.

[From the Jackson (Miss.) Daily News of January 4, 1948.]

BILL WHITTINGTON

No man in the political history of Mississippi ever served the Commonwealth more capably, faithfully, and energetically than Congressman W. M. WHITTINGTON, of the Third District, who announces that he will retire at the expiration of his present term.

When BILL WHITTINGTON leaves the Halls of Congress 1 year hence it will be a distinct loss to the State and Nation.

The lower House of the national lawmaking body has 435 Members, but its actual work is handled by a body of not exceeding 40 Members, and BILL WHITTINGTON happens to be among that 40. He has, since almost the beginning of his long tenure of office, been one of the most influential Members of the House, and as chairman of the Committee on Flood Control he framed and piloted the passage of legislation that has placed the Father of Waters under control and the Southland is no longer afflicted with disastrous floods.

Our Third District has always been ably represented in Congress. Mr. WHITTINGTON'S immediate predecessors were two truly great men, Gen. Thomas C. Catchings and Benj. Humphreys. The latter's son served a short term after his father's death and was succeeded by Mr. WHITTINGTON who is now completing his twelfth term in the body.

The Marshall Plan

EXTENSION OF REMARKS

OF

HON. PETE JARMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 4, 1948

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of yesterday.

REAL, GRIM, AND URGENT

Senator VANDENBERG has not strayed into a land of hobgoblin make-believe in appealing to Congress for swift adoption of the Marshall plan to help stop World War III before it starts. The dark realities of the hour fully justify the note of alarm and urgency in his eloquence. A ruthless and vaultingly ambitious tyranny—the tyranny of Red totalitarianism—is on the march. If it is allowed to keep marching, then the chances are that on some tomorrow, not many years from now, there will be a titanic death struggle between it and what is left of the earth's free nations, meaning chiefly our own.

This danger is as real as life. It is not part of some bad dream that jittery or emotionally unstable men are dreaming in the night. It exists just as surely as the Soviet Union itself exists, and it threatens not only the whole of free western Europe, including Britain, but America as well. One by one, Poland, Rumania, Bulgaria, Hungary, Yugoslavia, Albania, and Czechoslovakia have succumbed to it, and Finland now is in the process of going the same way. Unless the

non-Communist lands unite against it, therefore, and make effective use of such imperative measures as the Marshall plan, France and Italy may be the next to fall. Then, as Mr. VANDENBERG warns, the iron curtain would be clamped down all the way to the rims of the Atlantic, the British Isles would be almost hopelessly vulnerable, and our own country—with precious few allies left in a largely hostile, Red-dominated world—would have to prepare for the eventuality of either abject capitulation or total war.

If there are Americans—in Congress or out—who are inclined to scoff at warnings of this sort, they owe it to themselves and their country to think twice about the matter, and to think soberly and long. They would be well advised, certainly, to read with the greatest care such searching and well-documented reports as the one just published by a subcommittee of the House Committee on Foreign Affairs. Dealing with the strategy and tactics of world communism, it makes a thoroughly persuasive case for the thesis that the Soviet dictatorship—representing the most backward and oppressive system of the age—is working toward one goal only, and that that goal is universal dominance through universal revolution. To that end, operating through Communist fifth columns in all lands, the men of the Kremlin have been systematically seeking to promote chaos in the west in preparation for what they believe to be inevitable—namely, a final catastrophic war culminating in the overthrow of capitalism and the triumph of Red totalitarianism on a global scale. In short, according to the report, they are dedicated to objectives of extreme violence and, unless firmly countered now, will pursue those objectives even to the point of setting off a world-wide explosion.

That is why Mr. VANDENBERG is completely right when he says that "aggressive communism threatens all freedom and security in the Old World or the New when it puts free peoples anywhere in chains." That is why every wide-awake American must agree with his solemn warning that if there are risks in adopting the Marshall plan, the risks of rejecting it, or whittling it down, would be far greater. Of itself, of course, it cannot be the answer to everything. But it is an indispensable key part of all that the democracies must do together now to cope with the immense danger before them. The situation is not an imaginary one. The Soviet Union has made it very real, very grim and very urgent.

The St. Lawrence Seaway Project

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, February 27, 1948

Mr. LANE. Mr. Speaker, I wish to include herein a copy of my radio address over Station WMEX, Boston, Mass., on Thursday, March 4, 1948, on the St. Lawrence seaway project:

Fellow citizens of Massachusetts and New England, the St. Lawrence seaway project is a threat, and a challenge, to all people who make their living in New England.

This twin project, designed to provide a channel for ships traveling between Europe and the Great Lakes of our Middle West and to provide for hydroelectric power, will cut off our region and reduce it to economic serfdom.

Boston is a major port. It is nearer to Europe than any other port on the Atlantic seaboard. Through it come the raw materials which are the lifeblood of our industries, and the westbound freight which is a vital part of our transport business. Boston is also an export outlet to Europe. Its strategic position along the routes of travel and trade is a "natural." By land, by sea, and by air, this hub of New England is the western terminal for trans-Atlantic traffic.

But for 25 years those behind the St. Lawrence seaway project have been trying to put it over on the unsuspecting public of the United States. From time to time they change the emphasis. First it is essential for navigation. Then it becomes a power imperative. Later on it is termed a "must" for national defense. When these arguments fail to break down our resistance, they try to scare us into it by using the word "depression" and representing the project as a means for creating jobs. Lately, in view of our huge national debt, they try to prove that this white elephant—whose eventual cost might reach a billion dollars—will pay for itself through tolls.

They do not mention the blow to Atlantic coast shipping and railroads. Or the taxes to be levied on New England, for instance, for the purpose of bypassing its economy and turning its industrial cities into ghost towns with a past instead of a future. They do not even extend to us the comfort that such a project might help to solve our soil-erosion and flood-control problems. They simply say to New England, "You are finished, through, hand over your business to the Middle West, and retire to your rocking chair and your memories."

The initial cost of this project to the people of the United States would be $500,000,000, but our experience with the Panama Canal, and other such developments, is that the final cost is several times that of the original estimate.

Who is behind this fantastic proposal, anyway? Year after year it crops up with a persistency that will not admit defeat. Middle western interests are the chief sponsors. The Great Lakes cities want to be ocean ports. They propose a 27-foot channel for the St Lawrence, so that seagoing vessels could bring and take goods directly from foreign ports to such inland cities as Cleveland, Detroit, Milwaukee, and Chicago. They also claim that the iron-ore deposits in Wisconsin and Minnesota are running out. To counter this, they must develop low-grade ores at great expense or transport available ores by water from Labrador and Newfoundland.

So, advocate a 27-foot channel, whereas the ship channel already in use at Boston is 40 feet, at Montreal 32 feet, and at New York 42 feet.

Behind the gaudy camouflage is the intent to develop a channel to accommodate ore boats and not oceangoing steamers. No publicity has been given to the fact that ocean and inland steamship companies are either indifferent or hostile toward the project. Ocean shipping experts say that their ships are not designed for operation on calm waters with a swift current in narrow channels and at low rates of speed. Their hulls, engines, and steering gear are not built for this type of service. Insurance on ocean shipping using these canals would be at a very high rate, so as to make the movement of larger vessels on the canals uneconomical.

In addition, ocean and inland steamship operators alike know that the shortness of the season on the St. Lawrence route cancels out any advantages to be gained by an enlargement of the canal system. For any shipping interests using this route can only benefit from expenditures on it for part of the year. During the winter months it is ice locked, and traffic has to be carried by rail to the ice-free ports on the Atlantic coast.

Furthermore, the Great Lakes are fresh water, and the St. Lawrence, up to the rapids, is salt water. Great Lakes steamers are not equipped to convert salt water to fresh water for their boilers, and the cost of operating Diesel engines on the lakes is prohibitive.

Coming down to the question of the ability of the project to pay for itself, note the results of a recent survey. On a traffic estimate of 4,000,000 tons during the open season tolls of six to fifteen dollars a ton would be required, without a Government subsidy. The bill in the United States Senate would limit the tolls to $1.25 a ton. This would only produce a revenue of two and a half million dollars each year. But the actual cost of operating the seaway would run from $25,000,000 to $62,000,000 annually. Self-liquidating? Impossible. A Government subsidy would be necessary to make the project pay its way, and that would mean more money taken from our pockets. We already have railroad and east coast port facilities to handle this flow of commerce. It does not seem sensible that we should junk them in favor of this grand illusion.

Supporters of the St. Lawrence seaway claim that it is necessary for national defense, both as an artery of transport and as a source of hydroelectric power.

A channel depth of 27 feet is inadequate for modern navigation needs. The modern oil tanker, for example, draws well over 30 feet when fully loaded. Those in favor of this project are trying to sell it to public opinion on a minimum-cost base. They know that once the authority for it is granted the plan will be revised to call for a 35-foot channel, and maybe more, at a cost running into billions.

Consider the history of the Panama Canal, to see what I mean. Original estimates called for an expenditure of $200,000,000. It cost over four hundred million. In order to improve it as a lock canal, with greater depth and width and larger locks, we would now have to pay close to two and a half billion dollars.

Ships using the St. Lawrence waterway would eventually depend upon some 50 locks in all. A determined enemy attack by air, hitting one out of six locks exposed to destruction, would put the waterway out of commission.

From surveys made at Panama, we are warned that a lock canal, even with improvements, would still be deficient in resistance to modern weapons and could be destroyed by sabotage. We are considering the building of a new sea-level canal at Panama, or Nicaragua, as the only safe type to meet national-defense requirements. However, it is impossible to construct a sea-level canal between the Great Lakes and the Atlantic Ocean, along the St. Lawrence.

To defend the lock system of the St. Lawrence seaway, we would have to divert a large portion of our armed forces, together with their guided missiles, robot planes, and atomic bombs. It would therefore burden us with additional responsibilities.

As the proponents for the St. Lawrence seaway jump from argument to argument, trying to establish a solid base for their claims, they finally wind up with a brief for the hydroelectric power to be gained from it. What started out as a seaway becomes a public power development shared, strangely enough, by Canada and the State of New York.

As the Quebec Chronicle Telegraph stated on December 1, 1947: "To sum up, the new project is a power scheme. Its advantages should be judged wholly on that basis, and its costs should be borne entirely by those communities which would benefit from the additional provision of power."

Personally, I have always favored such public power developments as the Tennessee Valley Authority, to develop more and cheaper electricity from the flows of waters in our rivers. I have consistently worked for the establishment of a Merrimack Valley Authority to benefit the people and the industries of this area. The over-all, integrated project for the full utilization of a river is tied in with flood control, the prevention of soil erosion, the elimination of pollution, and to generate power for our homes and factories.

As a Congressman from Massachusetts, I am disturbed by the slow but steady migration of our industries, as they leave New England to locate in the South, where they are serviced by a full supply of low-cost power.

The lack of adequate power in New England became noticeable during the war. Recurring shortages in the supply of coal and fuel oil, during the post-war period, have underscored our dependence on outside sources from which we want to free ourselves.

New England has the potential water power, which it should develop for its own use.

Under the proposed seaway plan, New York would be given sole ownership of the project's power, and control of its distribution. This does not suit New England's regional needs.

Furthermore, in the event of any future national emergency, such a concentrated power plant would be a prime target for an enemy. He would only have to destroy it, and in doing so, seriously curtail production in haf of the Atlantic Seaboard States. To my mind, we've got to disperse our installations, as the best method of defense. It is time that the many smaller river projects, like the Merrimack, be developed, rather than the few big ones whose break-down would paralyze the Nation.

What the St. Lawrence seaway would do to the railroads and shipping of the New England coastal States, is sad to contemplate. It would result in unemployment. It would sidetrack our development.

Those who would make us a dependency of another region, miscalculate the enterprise and independence of New Englanders. They overlook the fact that more GI's are settling in New England and California than in any other sections of the country. Plainly, these young men and women believe that they will have a future here. So must we.

Alert to our own needs and untapped resources, we refuse to support the St. Lawrence seaway. We will not become the end of the line, when our position on the map shows that we are a natural transfer station on air, land, and sea routes between the heart of America and the nations of Europe.

But something more than passive resistance to the seaway is necessary. Unless we actively oppose it we shall wake up some day to find this extra burden saddled on our backs—forevermore.

The soundest criticism is that which is constructive. We resist the St. Lawrence project and counter with a better plan, and that is a demand for the long-overdue development of our home resources—meaning New England's waterpower.

We already have rail and shipping facilities which connect Europe, through us, to the Middle West. We shall improve on that service when our economy is strengthened by a cheap and abundant supply of hydroelectric power made in this region.

New England's answer to the stubborn challenge of those who sponsor the St. Lawrence seaway is this:

We shall produce the power we need, from our own waterways, and we shall do it first.

Strength in Our Soil

EXTENSION OF REMARKS
OF
HON. WILLIAM C. COLE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 4, 1948

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Joseph, Mo., Gazette:

STRENGTH IN OUR SOIL

Awakening of the American people to the importance of their farm products in the diplomatic struggle for American security and world democracy has been accelerated by E. H. Taylor, associate editor of the Country Gentleman and one of the country's leading authorities on American land policy.

"Without the products of our soil," he said in a recent speech before the Soil Conservation Society of America, "the European recovery program or any other effort to stay the march of communism in Europe will be impotent." He believes, not only that food production on American farms must be stepped up now to ease the foreign policy crisis, but that the United States must back its show of military power in world affairs by increased food production if it is to maintain its security.

His plea is, of course, for conserving the country's soil resources. The food reserves upon which the American people have depended in all wars to make them strong are now gone. The fertility of the soil is being used up more rapidly than it is being replaced.

He put the question to the American people in these words: "Shall we repeat the folly of past nations that now 'whisper out of the dust'? Or shall we realize, in time, that a stock pile of productivity, stored in the soil, is as necessary to the national security as a stock pile of bombs or other weapons?"

Saving and adding to the fertility of the nation's soil calls for no more than carrying out a land-use program which every progressive American farmer knows all about. But what the farmer needs is not the know-how, but the support of a national soil policy that will recognize his place in world recovery and encourage and reward him accordingly. He needs to be protected from the Congressman who last year foolishly cut down the Federal appropriation for soil conservation instruction and technical help. He needs statesmanship in Washington.

Ownership of Tide and Submerged Lands

EXTENSION OF REMARKS
OF
HON. HOMER R. JONES
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 4, 1948

Mr. JONES of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement I made before the Joint Senate and House Judiciary Committee on S. 1988 and H. R. 5443:

Mr. Chairman and gentlemen of the committee, I represent the First Congressional District of the State of Washington and appear today to present a brief statement in support of the passage of proposed legislation incorporated in Senate bill 1988. I have introduced a similar measure in the House, namely, H. R. 5443, believing that this legislation when passed will provide the equity and justice undeniably due the State of Washington and all other States wherein title to tide and submerged lands has been or may be contested, and where a cloud has been cast upon the status of inland waters and the lands beneath them.

Mr. Chairman, you have been informed by the Office of the Commissioner of Public Lands of the State of Washington the revenues from oil and gas permits have not been large and the potentialities thereof are as yet unknown. However, in consideration of the port and harbor developments, the fishing industry, other industrial activities, and the possibilities of further mineral production, the State of Washington certainly has a stake and a duty to defend all trusts imposed upon it. The State of Washington, Mr. Chairman, ranks eleventh among all the States in the area of inland waters lying within a State boundary. Computations by the General Land Office of the Department of the Interior indicate these inland water areas to be 1,215 square miles, out of a total area within the State's boundaries of 66,836 square miles.

The incongruity of the existence of any claim other than the State of Washington to the tide and submarginal lands covering thus so vast an area, Mr. Chairman, must be emphasized. The existence of any cloud on titles to these inland waters must not be permitted. The Constitution of the State of Washington, pursuant to an enabling act of Congress approved on February 22, 1889, and proclaimed by the President in Proclamation No. 8, dated November 11, 1889, cited in Twenty-sixth Statutes 1552, provides specifically as follows: "Declaration of State ownership: The State of Washington asserts its ownership to the beds and shores of all navigable waters in the State up to and including the line of ordinary high tide in waters where the tide ebbs and flows, and up to and including the line of ordinary high water within the banks of all navigable rivers and lakes."

In consideration of this ratified statement of ownership and the uncontroverted fact that all States were admitted to the Union on an equal footing in all respects whatsoever, the incongruity I have referred to that the title of any State to tide and submerged lands should be questioned, is obvious.

Therefore, Mr. Chairman and gentlemen of the committee, faced as we are with the decision of the Supreme Court in the case of *United States* versus *California*, which decision can be considered only the first of an extensive series of similar decrees yet to come unless there be enacted clarifying legislation as provided in the bill before you—I urge that favorable report be given by this committee to S. 1988. The ultimate passage of this measure will dispose of the myriad of problems as to titles and equities in the manner suggested by the Supreme Court in the statement: "We cannot and do not assume that Congress, which has constitutional control over Government property, will execute its powers in such a way as to bring about injustices to States, their subdivisions, or persons acting pursuant to their permission."

The passage of S. 1988 or the similar companion House measures germane to this subject will be consistent with this statement of the Court, Mr. Chairman, and will eliminate the now existing confusion in titles and rights which has resulted and which will continue to exist in the absence of this subject legislation.

I earnestly urge upon you, Mr. Chairman and members of the committee, immediate favorable consideration of the measure.

The Late Honorable Clarence Hancock

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 4, 1948

Mr. ROONEY. Mr. Speaker, all our hearts were saddened by the passing of our dear friend and former colleague, the Honorable Clarence Hancock, who while in Congress represented the Thirty-sixth Congressional District of New York.

As one of the younger Members from the State of New York, I did not have the years of personal association and contact with him that some of my other colleagues have had. However, during my service here I soon realized that he was a man of the very highest character and one who possessed those attributes that endeared him to all who had the privilege of knowing him. He was benevolent and kind and considerate of others and won the friendship of the entire membership of the House. His district, the State of New York, and the Nation have lost an able and faithful public servant.

Salary Increases for Federal Employees

EXTENSION OF REMARKS
OF
HON. HOMER R. JONES
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 4, 1948

Mr. JONES of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement I made on Federal employee salary increase legislation befor the House Committee on Post Office and Civil Service, March 3, 1948:

Mr. Chairman and members of the committee, I appreciate the opportunity of appearing in support of legislation providing an increase of not less than $800 a year in the base pay of employees of all Federal departments and agencies and the government of the District of Columbia. I want to call your attention, particularly, to two bills which I have introduced on this subject, namely, H. R. 4727, which I introduced on December 15, and H. R. 4773, which I introduced on December 17 of last year.

As one who during the course of his career has worked for wages, I can appreciate just how difficult it is for the honest, faithful, and efficient employees to make ends meet under present cost-of-living conditions. Government pay has fallen behind the rising cost of living to such an extent that thousands of employees are compelled even to do without the bare necessities of life. Recent trends in the commodity markets to the contrary, we all know that there has been no decline in the cost of living in recent months or weeks, and if we may judge by the recent increase in the price of semifabricated steel, there is not likely to be any serious reduction in the cost of living in the near future.

I would say to my colleagues who sit as members of this subcommittee that the need for higher pay has reached the state of a virtual emergency, insofar as Federal employees are concerned. Evidence of this fact can be gained by reviewing a schedule of increased indebtedness incurred by postal employees as determined from reports of the postal credit unions for the years 1945, 1946, and 1947. I should like to incorporate the schedule into the record at this point. I should call your attention, in so doing, to the fact that it pertains to a period following the most recent legislation on the subject. It is my understanding that the totals of this report are already in the record of these hearings, having been introduced by Mr. E. C. Hallbeck, legislative representative of the National Federation of Post Office Clerks. The whole schedule, however, I believe, is of primary importance to the considerations of this committee, for the breakdown by cities conclusively demonstrates that the condition is not confined to a particular locality but prevails throughout the Nation.

The increasing indebtedness of postal employees as determined from reports of postal credit unions for the years 1945–47

	Dec. 31, 1945		Dec. 31, 1946		Dec. 31, 1947	
	Number loan accounts	Total loans	Number loan accounts	Total loans	Number loan accounts	Total loans
Louisville, Ky.	345	$40,856.25	391	$62,655.66	466	$81,687.50

Buffalo, N. Y.	246	41,599.83	266	55,726.68	346	85,177.80
Houston, Tex.	380	90,634.63	480	102,952.39	553	127,523.12
Norfolk, Va.	81	12,506.16	125	22,439.24	151	28,919.58
Los Angeles, Calif.	742	277,962.46	1,023	507,955.72	1,700	915,017.86
St. Louis, Mo.	1,224	199,132.15	1,384	291,592.35	1,687	454,319.42
New York, N. Y.	251	14,747.81	293	32,042.99	466	71,071.40
Total	7,469	1,378,349.26	8,735	2,147,736.64	10,949	3,158,982.21
Cleveland, Ohio	440	45,596.71	481	67,114.41	574	81,954.64
Oakland, Calif.	788	270,046.31	868	399,819.87	1,003	651,728.10
Boston, Mass.	1,850	180,150.00	2,200	201,635.00	2,488	289,450.00
San Francisco	675	133,187.79	975	176,452.11	1,300	232,709.73
Grand total	11,222	2,007,330.07	13,259	2,992,758.03	16,314	4,414,824.68

The emergency condition thus indicated is so acute, Mr. Chairman, that I believe you will agree with me that the need now for increased pay is undebatable. The only problem is to ascertain how much will be needed to bring Government employees back to something approximating their economic position before price increases robbed them of so much of their buying power.

Now, Mr. Chairman, in submitting this plea for higher pay, I do not confine my remarks to the employees who receive an annual salary but I earnestly urge equivalent relief for those whose compensation is at an hourly rate. I would exclude from present consideration those whose pay is fixed by wage boards. I would suggest, further, that the wage rates for the hourly employees be advanced 40 cents an hour.

Government salaries and wages have been slow to rise. The first raise for per annum employees was in the form of overtime, and therefore, actually not a salary increase. When the basic rates for employees under the Classification Act were finally raised, the war was nearly over; Germany had capitulated and the price rise was already on its way upward. That first increase became effective July 1, 1945. A year later another raise was granted, but pay rates still lagged behind prices. Neither increase restored the 1939 buying value of rates of pay. This purchasing power must be restored at once in order to enable Government employees to live in accordance with decent American standards.

A year and a half has passed since the second increase, but the passing months have served only to emphasize its insufficiency and the need for increasing pay without further delay. Taking the years immediately prior to the outbreak of the war as the standard of measurement of value of the income of Government employees, and assuming that $1 bought a dollar's worth of the commodities they need, it is evident that it has been difficult—yes impossible—to meet the demands, in many cases, of even a subsistence plane of living.

Measured by the official price index of the Bureau of Labor Statistics, the buying power of a dollar had shrunken to approximately 60 cents by the end of 1947. Thus, a Government employee has 60 cents to spend today as compared with $1 before the war. But that is his buying power as measured by the combined effect of all prices. When he buys food, the situation is even worse. And this is what confronts the married man who is the support of a family. By December 1947, his dollar for food alone was worth only 48 cents.

How much should pay be increased to provide some semblance of relief in the face of such an emergency? Why do I suggest $800? I have selected that figure because it can be substantiated factually as the minimum amount that would provide a reasonable addition to existing pay rates to bring them to a bare cost of living basis.

Of course, Mr. Chairman, there are several ways to approach the problem of determining how much the increase should be. Cost of living appears to be the most direct and sound method of ascertaining the amount pay should be raised. It may be pointed out that some of the arguments that may be used for workers in commerce and industry lose their force or significance when applied to Government workers. The latter cannot relate their request for salaries or wage increase to increased productivity, disproportionate profits of an employer, or industry's ability to pay.

It is true that Government employees' take-home pay has shrunken disastrously and that salaries and wages of persons employed in industry have advanced considerably. To relate the whole problem of the Government worker directly to the over-all cost of living provides the most direct method, as well as one which would cut across the variations in the plane of living, personal obligations and responsibilities, and those other factors that differentiate the single person from the married, and the person with no dependents from the man who must support a wife and children.

The $800 figure which I am urging as the minimum annual increase for Government employees has been determined on the basis of the average salary of $3,000. From July 1946 to the end of 1947 the price index of the Bureau of Labor Statistics, which is used to measure living costs, rose from 133.3 to 167.0. It has been estimated that prices have undergone a further increase since the end of the year, with the result that the rise in living costs since July 1946 has been about 27 percent. To bring the salaries of Government employees up to a bare cost of living level, it will, therefore, be necessary to add 27 percent to existing pay rates. Twenty-seven percent of the average annual salary is slightly more than $800. I believe that an $800 increase will be fair to all employees, since it represents a figure based on average pay for the whole group.

It is reasonable to expect Mr. Chairman, that when further measures are taken by the Congress to control the upward advance of prices, these legislative actions will not halt the current advance abruptly, nor will prices drop appreciably below the present level for some time to come. To bring about such a decrease too rapidly would be dangerous to many phases of our national economy. This was recognized when Congress acted recently on the anti-inflation measure. Even if control is gained over the price rise, the Government employee—or any other worker—will still have a buying power far below that of prewar days. This is, in my opinion, evidence that basic pay rates should be raised at once and that $800 added to current rates provides an amount that will represent a minimum need for months to come.

I was delighted to learn that Mr. William Green, the president of the American Federation of Labor, had appeared before this subcommittee in support of this legislation and while I did not have the opportunity to hear his statement, if one may judge from the newspaper accounts, he made a very impressive argument in favor of substantial increases. His statement that "The way to get most efficient, economical, and high-quality work is compensation that will enable employees to live in accord with American standards and save for future needs," has my complete approval. Speaking as he does for more than 7,000,000 taxpayers, I believe he was voicing a collective opinion reflected throughout America on this subject.

Present day postal and Federal salaries are not sufficiently high to attract the best qualified people to Government employment and when that condition exists the public welfare must suffer. We should attract the highest type of people to Government service and it is not sufficient to offer them merely a subsistence wage that allows them to live in a state of shabby aristocracy, content in the knowledge that they are performing a service for all of the people.

It is my considered opinion and I wish to repeat what I have already stated, that the legislation to be enacted should be permanent legislation, providing for increases in the basic salary, and that such legislation should be retroactive at least until January 1 of this year in order to allow these employees to pay some of the debts which they have accumulated during the past year. I further believe that the long-established principle of enacting separate legislation for postal and other Federal employees should be continued. My information is that previous attempts to solve this problem by means of a single bill have led to difficulties of administration which should be avoided.

I, therefore, urge the enactment of legislation providing for a base pay increase of not less than $800 per annum for all employees of the Federal Government and the Government of the District of Columbia.

In addition to this, I urge an increase of income, or increased pay, for those employees not under wage boards, who are paid on a per hour or per diem basis of 40 cents per hour.

Furthermore, I would oppose any legislation which has for its purpose the absorption of any pay raises by: (1) Reduction in force; (2) extension of hours of work; (3) downgrading or reclassification for the purpose of saving money.

I urge my colleagues of the subcommittee to make an early report to the Committee on Post Office and Civil Service so that we may take prompt action to correct the present situation, and while I am not one to suffer from the pangs which accompany a "pride of authorship," I hope you will give earnest consideration to H. R. 4727 and H. R. 4773.

Extension of Aid to China

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 4, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram from Gen. Douglas MacArthur:

MARCH 3, 1948.

From: CINCFE, Tokyo, Japan, signed "MacArthur."

To: The Honorable CHARLES A. EATON, chairman, Committee on Foreign Affairs, House of Representatives, Washington, D. C.

Information: Department of Army (CSUSA).

I am grateful to the Committee on Foreign Affairs of the House of Representatives for the confidence reflected in its desire that I appear before it to give my views on American policy in the extension of aid to China. The pressure of my operational duties in the administration of Japan especially at this time of change in the Japanese Government, however, renders it impracticable for me to leave my post. And even were it otherwise, I gravely doubt that I could give constructive and helpful advice as to details involved in pending aid proposals, which I have not seen nor had any opportunity to study. China, as you perhaps know, is a theater of United States Navy control, outside the scope of my existing authority. I have no representatives there, and, apart from general background knowledge, such detailed information as has been made available to me has been derived largely by indirection. Exhaustive investigations of the Chinese situation have been made by responsible United States officials, but these studies are not within my channel of information or command, and in consequence I am not adequately familiar therewith. I have, furthermore, not had the opportunity to visit China for many years. With this background, you will readily perceive I am not in a position to render authoritative advice with reference to the myriad of details on which a definitive policy for this particular area must necessarily rest.

In general answer to your specific questions, I can say without the slightest hesitation that a free, independent, peaceful, and friendly China is of profound importance to the peace of the world and to the position of the United States. It is the fundamental keystone to the Pacific arch. Underlying all issues in China is now the military problem. Until it is resolved, little progress can be expected toward internal rehabilitation, regardless of the extent of outside aid. Once it is resolved, however, there is little doubt but that China's traditional resiliency will provide the basis for rapid recovery to relative stability.

The Chinese problem is part of a global situation which should be considered in its entirety in the orientation of American policy. Fragmentary decisions in disconnected sectors of the world will not bring an integrated solution. The problem insofar as the United States is concerned is an overall one and can only be resolved on the broadest possible global basis. It would be utterly fallacious to underrate either China's needs or her importance. For if we embark upon a general policy to bulwark the frontiers of freedom against the assults of political despotism, one major frontier is no less important than another, and a decisive breach of any will inevitably threaten to engulf all. Because of deep-rooted racial and cultural and business ties, we are prone to overconcentrate on happenings and events to our east and to underemphasize the importance of those to our west. America's past lies deeply rooted in the areas across the Atlantic but the hope of American generations of the future to keep pace with the progress of those of the past lies no less in the happenings and events across the Pacific. While fully availing ourselves of the potential to the east, to our western horizon we must look both for hope of a better life through yet untapped opportunities for trade and commerce in the advance of Asiatic races, and threat against the life with which we are even now endowed. For beyond horizon upon the outcome of the ideological struggles in which opposing forces are now engaged and the restoration of political, economic, and social stability, rests war or peace, assurance or threat, hope, or fear.

The international aspect of the Chinese problem unfortunately has become somewhat clouded by demands for internal reform. Desirable as such reform may be, its importance is but secondary to the issue of civil strife now engulfing the land, and the two issues are as impossible of synchronization as it would be to alter the structural design of a house while the same was being consumed by flame. Friendly and searching as our interest may be in the reformation of China's institutions and practices to bring them closer into line with our own concept of liberty and justice, and right and wrong, the maintenance of China's integrity against destructive forces which threaten her engulfment is of infinitely more immediate concern. For with the firm maintenance of such integrity, reform will gradually take place in the evolutionary processes of China's future.

The flow to China of military supplies surplus to our own requirements has been resumed. Additional material support should be measured in equitable relation to such global aid as may be determined upon in the orientation of American policy, without underrating the strategic importance to us, as to the world, of a free and peaceful China, without ignoring her impoverishment and fatigue in consequence of so many years of violent struggle over her soil, without failing accurately to assess her potential in the stability and advancement of our own future standard of life, and without neglecting to recognize our long and friendly relationship, well tested through years of peace and years of war.

In the determination of our global policy care must, of course, be exercised to avoid commitment of our resources beyond what we can safely spare—the sapping of our national strength to the point of jeopardy to our own security—and the overburdening of

our people beyond their capacity to maintain a standard of life consistent with the energies with which they are naturally endowed. For it would be illogical for us to yield our own liberties in the safeguard of the liberties of others—to forfeit our own heritage of freedom in securing the freedom of others. No less illogical would it be to extend our material aid beyond hope of reciprocal repayment through contribution in one form or another to human progress. For it would not serve our purpose merely to create in return for our sacrifice a condition of indigence and mendicancy elsewhere, to become a brake upon human advancement.

It is one of the traditional characteristics of the American people that in time of great crises they have never failed to rise to masterful height to meet the challenge of the time. Never before has our wise, fearless, and positive leadership of a confused world been more needed as a stabilizing influence. Never before have the American people been more ready to assist others if it be a purposeful sacrifice. For we on American soil bare before the eyes of the entire world the working of a way of life which, despite the veil of confusion and disorder and self-serving ambition, is the cherished hope and goal of all mankind. Let us above all else preserve it.

Schedule of Vested Property Returned as Included in Return Orders as at February 6, 1948

EXTENSION OF REMARKS
OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 4, 1948

Mr. BECKWORTH. Mr. Speaker, I include in the CONGRESSIONAL RECORD some information which has been furnished me by the Alien Property Custodian.

SCHEDULE OF VESTED PROPERTY RETURNED AS INCLUDED IN RETURN ORDERS AS AT FEBRUARY 6, 1948

Enrique Kummerfeldt, a/k/a Enrique Kummerfeldt Koops; a/k/a H. Kummerfeldt: 362 shares of common capital stock and $26,426 in cash.

David Jona: A one-fourth interest in a patent.

Fritz Hohenemzer: $7,753.68 in cash.

Helene Zentgraf: $3,442.54 in cash and life interest in trust.

Georges Joseph Christian Simenon: Copyright and royalties in the amount of $8,483.79.

The First National Bank of Chicago, administrator with the will annexed of the estate of Alfred Quensel: $30,861.84 in cash.

Rudolf A. Sems: $1,658.96 in cash.

Clarence A. Hearley: A one-half interest in a patent.

Lawrence Harbury: A patent.

Henry J. Beal: $111.76.

Joachim Kolbe: 9 patents.

Rose Latino, Agnes Latino, Frank Latino, Biagie Latino, Carmela Latino: $1,229.37 in cash and real estate.

Stephanie Schybilsky Posament: $2,666.49 in cash.

Josephine M. Lorsch: $14,197.57 in cash.

Henri Wouter Jonkhoff: Four patents.

Underwood Corporation: 59 patents.

Emma Lochner: $12,853.58 in cash.

Herman H. Frischer: 7 patents.

Karl W. Posnansky: A patent.

Raoul Roland Raymond Sarazin: Three patents.

Joseph Mahler: A patent.

The Sanodarm Co., Inc.: A patent.

Francoise Seignobosc: Copyrights and royalties in the amount of $2,198.87.

Raymond Saulnier: 11 patents.

Standard Brands, Inc.: A patent.

Titan Co., Inc.: A patent.

Hensea Corp.: $16,264.14 in royalties and 40 percent interest in the property.

American Chain & Cable Co., Inc.: A patent.

Antonina Vallentine Luchaire: Copyrights and royalties in the amount of $23,182.63.

Builders Iron Foundry: A patent.

Shell Development Co.: A patent.

Ottmar Loew (formerly Ottmar Makoto Loew): A one-half interest in a patent.

Ellis Miller: 4 patents.

Eastman Kodak Co.: A patent.

Rolf Bie: A patent.

Dr. August von Borosini: A patent.

Radio Corp. of America: A patent.

Kislyn Corp.: 7 patents.

Charles N. Ehrlich: A patent.

R. Hoe & Co., Inc.: A patent.

The Light Conditioning Co. of America, Inc.: A patent.

Pyrene Development Corp. (formerly Pyrene-Minimax): A patent.

Herbert Raymond Loder: $5,776.36 in cash and a life interest.

Albert H. Stronstorff: A patent.

Societe Nationale des Chemins de fer Francais: $207,199.61; $30.04; $613.21; $111,487.43; $4,817.70 in cash; $52,000 Kingdom of Belgium 6 percent bonds and $80,000 Kingdom of Belgium 6½ percent bonds; and other miscellaneous property.

Clair L. Farrand: A patent.

Andrew A. Kramer: A patent.

Dr. Walter R. Hearst (formerly Dr. Walter Herz): A patent.

Maywood Chemical Wks.: 9 patents.

The Singer Manufacturing Co.: A patent.

Jackson & Perkins Co.: 2 patents.

The Celotex Corp.: 2 patents.

Christian Heinrich Hofsess: $128.50 in cash.

Walter M. Weis: A patent.

Bagpak, Inc.: 2 patents.

The Bates Manufacturing Co.: A patent.

Celanese Corp. of America: A patent.

Petrolite Corp., Ltd.: A patent.

Rudolph Waldman: A patent.

Rudolph Grodetzky and Paul Schleissner, co-partners, doing business as Uneeda Notions Manufacturers: A patent.

Emil Zipper: 3 patents.

Verne Haas: A patent.

International Shoe Co.: A patent.

California Spray-Chemical Corp.: A patent.

Walter H. Lowston: A patent.

Hans Lewin: 2 patents.

Ingersoll-Rand Co.: A patent.

James P. Robinson: A patent.

The Philippine Manufacturing Co.: 6 patents.

Arno Brasch: 5 patents.

Gaston Desagnat: 6 patents.

Arnold Janowitz: A patent.

Paul Nickelsberg: A patent.

Franz Schatzky: A patent.

Arthur M. Seligman: 7 patents.

Delamere Co., Inc.: A patent.

Norbert Bernheimer: A patent.

Max Jacoby: A patent.

Inter-Allied Patent Corp.: A patent.

Harriot Daly Sigray: $40,827.36 and $4,985.02 in cash, and life interest in trust, remainder interest under will, and bequest of personalty and one-fourth interest in residue.

E. A. M. Biering: $67,066.55 in cash.

Elizabeth P. King: $9,058.12 in cash and an interest in real estate.

Amalie Frese: $874.69.

Emil Reichert: 19 shares of stock and $126.79.

Julien Dungler: Two patents and $16,960.

Anemostat Corp. of America: One patent.

Nichibei Kinema Co.: 135 Japanese films.

Erica and Hagbarth Rotheim: Six patents and $1.

Aaron & Dautch: $266.50.

Kremer & Leavitt: $237.32.

John L. Nicholas: $246.83.

Barbara Gwiazdowski: One copyright and $218.36.

Sophie Carpenter Gordigiani: $7,696.69 and interest in two trust estates.

Babette Brehm: $167 and a one-ninth interest in real property.

Staatsbedrijf der Posterijen Telegrafie en Telefonie: One patent.

Alfred Edouard Lamarthe: One patent and $4,138.98.

Gaston Fleischel: 13 patents.

Serge Koussevitzky: $4,208.10 and one copyright.

Erminia Binda: $5,362.46 and real property.

Leslie Co.: One patent.

Kurt M. Vogel: 13 patents.

Carolyn Kent di Rcbilant: $599.31 and $22,213.59, real property and securities.

Elizabeth Lewin: One patent.

Societe Normande de Produitz Chimiquez: Two patents.

Isaac Frenkel: One patent.

Diedrich and Anna Burgdorff: $8,834.26.

Laura Guenebaum-Oppenheim: $7,802.65 and interest in a trust.

Heberlein Patent Corp: Six patents.

Puiseux, Boulanger et Cie, Societe en Commandite par Actions (formerly known as Michelin et Cie): 14 patents.

Oesterreichische Magnesit A. G.: Six patents and 1,886 shares of $100 par value preferred stock.

Rafael Gimenez Ruiz Makati, Rizal: One patent.

Walter C. Voss: Seven patents.

Ella Miller: One patent.

Anna Andreyev: One copyright and $790.56.

Jeanne Marguerite Badaire: One copyright and $526.68.

Etienne Gilson: Two copyrights and $1,372.83.

Marie Eugenie Decourbey Goguel: One copyright and $868.98.

Martha Loeb Bonatz: $2,675.15 and interest in a trust.

Gisela Altschul: $1,626.21.

Yettchen Behr: $1,853.01, one $1,500 United States Treasury 2¾-percent bond, and interest in one trust.

Max Hoch: Nine shares of stock, and $657.

Era McMurtrie Licari: Interest in one trust and $1,490.14.

Louis Marx & Co., Inc.: One patent.

Ludvik Rasch: Two patents.

Nicholaus Per Mathiesen: One patent.

Millicent Drake: $15,948.67; 5 shares valued at $600; 7 shares valued at $897; 3 paintings and 21 pieces of jewelry.

Franz Vasarhelyi: One patent.

Consolidated Amusement Co., Ltd.: 105 Japanese films.

Adelma Dennini: Three parcels of real property; $13,817.14.

A Thinking Citizen's View of the Marshall Plan

EXTENSION OF REMARKS
OF

HON. MAX SCHWABE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 2, 1948

Mr. SCHWABE of Missouri. Mr. Speaker, recently the Gallup poll reported that a majority of citizens who know about the Marshall plan are for it. Under leave to extend my remarks, I insert an excellent, thought-provoking letter received this morning from a young man in my district, Mr. Perry Ewing, Jr., of Columbia, Mo., explaining why he is against the Marshall plan. I dare say that the random poll above mentioned did not include many who had given serious thought to the plan but instead accepted the administration's propaganda on the radio, in the press, and in the movies. I quote:

COLUMBIA, MO., *March 1, 1948.*

Congressman MAX SCHWABE,
New House Office Building,
Washington, D. C.

DEAR MR. SCHWABE: It is gratifying to have the privilege to write to one of the lawmakers in this land of ours and express my heartfelt views on one of the major decisions now being considered there in Washington, the Marshall plan.

Some time ago you sent me a questionnaire, contained therein and the last question was "Do you favor enactment of the Marshall plan?" I am sorry to say that I neglected at the time to return this questionnaire to you. Then and now I am still against the enactment—the Marshall plan.

Here is why I am against it. It is not sound economy. It is not sound politics. It is not good business. It is not good international public relations. It constitutes a weak foreign policy. It would invoke a burden of sufficient magnitude on the American people to weaken America as a nation, draining twenty billions in national resources, labor, transportation, and all the other complexities involved in such an undertaking of this magnitude.

It is not sound economy because the coal, iron, grain, and raw materials can never be replaced and we will be weakened as a future producing Nation. Our future lies in a strong economy here at home and exploitation of our national resources now means less in the future. I am thinking of America now and her future position as a world power.

It is not sound politics because American goods delivered under the Marshall plan go to various foreign governments, who in turn sell our products to their citizenry. The French peasant and the Italian office worker have to pay for the American goods. Were I in their position I would feel embittered toward a country who supposedly promises to give, then through my own country charges for those commodities. Where the money goes makes little difference when I have little money to buy with and each meal is a hardship. I would not like it.

It is not good business because of our uncertain position at home. Our Army has practically evaporated and our Air Force and Navy are far below good protective strength. If we pour billions into certain European countries will we ever get any returns? I doubt it. If after spending three billion in Italy, some agressor nation decides to bring Italy into its sphere of influence, either by invitation, civil uprising, or outright walking in and taking over our three billion has definitely strengthened the resources of that aggressor nation. Should such a thing occur I don't think the United States could or would do anything about it. Our present policy in Palestine leads us to believe this would be the case. I can see where half the Marshall plan's appropriations could go this way and we would sit by and watch.

We paid for World War II in dollars and commodities to the tune of more than all the rest of the participants combined. We went to war because of German aggression. The 3 years since the war have brought a greater change in the map of Europe than all the years preceeding the war—and don't forget China and Asia on the other side.

The administration of the Marshall plan both here and abroad would be a gigantic task. I feel sure that graft, politics, and favoritism would run rampant in those foreign countries where this multitude of goods went.

Now, just suppose this vast amount of American wealth were used to strengthen economically such countries as Canada, Brazil, Mexico, and our other neighbors here in the Western Hemisphere, I believe we would have a greater bulwark against aggressor expansion and we could figure on some returns in aid. Economically and militarily in the event we are again faced with participation in a global war, this time it would be for our very way of life.

There is no way short of war in stopping Russian expansion in western Europe and in Asia for that matter. Diplomacy, compromise, and fair dealing, as we think of

them, are not in the Russian vocabulary. With them any means justifies the end.

Were I sitting in the Kremlin, I would like nothing better than to see the Marshall plan enacted. It would and will sweeten the plums on the European tree which I would be about to pick. If I could get all the wealth of America scattered in Europe, then control that Europe, there would be no need for me to worry about the potentialities of America as a dominant force in world affairs.

I am speaking as a taxpayer now. I would rather give my additional taxes that will be imposed upon me if the Marshall plan is enacted to the Canadian Government than pay them to the Collector of Internal Revenue here and have him turn them (indirectly) over to Russia.

Thanks for listening.

Sincerely yours,

PERRY EWING, Jr.

How Loud Is the Farmer's Voice?

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 27, 1948

Mr. TEAGUE. Mr. Speaker, I feel sure that many Members of Congress will want to read the article which appeared in the February issue of the Southern Agriculturist magazine entitled "How Loud Is the Farmer's Voice?" It is a careful analysis of the work done by the farm organizations here in Washington by officials of the three largest farm groups—Farm Bureau, Grange, and Farmers Union.

Wayne Darrow, who publishes his Washington Farmletter as a private weekly report for agriculturists and other businessmen, supplied the editors of the Southern Agriculturist magazine with most of the information about the farm organizations and how they present the opinion of their group on legislation pending in Congress. Mr. Darrow, a Texan from the district I represent, is highly qualified to report on agricultural matters and it is a pleasure to commend him for this careful study of farm organizations.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the article entitled "How Loud Is the Farmer's Voice?" which was published in the February issue of the Southern Agriculturist magazine:

HOW LOUD IS THE FARMER'S VOICE?—THE LANGUAGE OF THE CROSSROADS IS CLEAR AND AUTHORITATIVE BY THE TIME IT REACHES WASHINGTON—WILL CONGRESS LISTEN TO YOUR SPOKESMAN?—AND WHAT WILL HE SAY?

(By the editors of Southern Agriculturist)

The power of organizations is the greatest influence on Federal legislation. Sometimes this power is used rightly—sometimes not. How is the power you lend your farm organization used? In your name, all manner of laws are passed, rulings made, programs built.

Politically, the farmer has come of age in the last 20 years. He has done it through organization.

His strength is at the grass roots, but his voice is heard clearly in the halls of Congress, in the White House study, and in the corridors of the south Agriculture Building.

The farm spokesmen most recognized in Washington are the Big Three general farm organizations—Farm Bureau, Grange, Farmers' Union.

Next to them in importance, notably on specialized marketing issues, are the National Council of Farm Cooperatives and the National Cooperative Milk Producers' Association.

The Big Three have a combined membership representing about 1,250,000 of the 4,000,000 farmers whose primary occupation is farming. Farm Bureau claims 1,275,000 members; Grange, 825,000; Farmers Union, 145,000. Outsiders estimate the farmers represented by each in the rough ratio of 7-3-1: Bureau, Grange, Union.

Next to the Midwest, the South is the stronghold of the Farm Bureau. There the Grange and Farmers Union are weak. The South, with about half the total United States farm population, has only one-quarter of the total Big Three farm organization membership.

Yet the South, with its strong southern farm bloc in Congress, for years has swung a preponderant weight in national farm affairs, despite the inclination of many Southern States to ignore the lead of their national group.

Like labor, agriculture is only about 40 percent organized. Add in co-op membership and it won't run above 50 percent. And like organized labor, organized agriculture is badly split. Farm leaders find it hard to agree on more than a few things.

In spite of family quarrels, and of being a minority group in society, agriculture is no longer the Nation's underdog. The Big Three can point with pride to a long list of laws—mostly constructive—to the fast-growing co-op movement, to strong influence in local affairs, and to its farm lobbies, rated the most potent in Washington.

Farm Bureau has the most influence in the Capitol, but not as much as a few years ago. The Grange has come to the front fast, especially since Republicans captured Congress.

Farm Bureau's setback—perhaps only temporary—is chiefly due to antagonisms aroused among some Congressmen and in other farm groups by its hard driving pressure politics. The Bureau overplayed its very strong hand.

Led for years by likable Ed O'Neal, of Alabama, with tireless Ray Ogg doing the spadework, the Bureau pressed hard to win its points, knew all the tricks of the trade, and used them.

The Farm Bureau now has a new president. The resignation of O'Neal, the Alabamian, was accepted last December, and an Iowan, Allan Kline, who had been vice president, was elected to sit in the top chair. R. E. Short, of Arkansas, was elected vice president.

What Kline's new leadership may mean can only be a matter of conjecture this soon. Moreover, the Farm Bureau is anything but a one-man organization, and it's not likely to undergo any violent changes in its system or "tactical warfare" just because the venerable O'Neal has departed and someone else is the chief.

On the other hand, Kline, although a comparatively silent sort of man in the past, is generally believed to be more liberal in his views than his predecessor from Montgomery—and some effect of this newer farm philosophy is likely to be seen, sooner or later, in the principles and practices of the Bureau.

Even more specific, there's a decisive geographical difference in these two men's background. Alabama is definitely not Iowa, not even agriculturally speaking, and this presidential hop from Montgomery to Des Moines may be an important factor in the Bureau's future.

But the way the Farm Bureau gets things done isn't going to change. It's a highly efficient organization. It puts in its best licks back among its county membership. There, in each Congressman's district, the fires are laid and nourished by the local farm bureaus. In Washington, the Farm Bureau lobby waits just long enough for the Congressmen to feel the fire getting hot—then it moves in to get action.

The American Farm Bureau Federation threatens no Congressman's political life—that's done back home.

Farm Bureau communication lines from grass roots to Washington are fast, and the whole pressure system is remarkably effective. On a more limited scale, Farmers Union uses the same tactics.

The Grange communication lines into Washington operate more slowly, and pressure politics are avoided. The Grange makes a point of never asking Congressmen to vote its way. Its lobbyists simply explain the organization's position, and let it go at that.

The Grange swings political power, just the same. Throughout the long Democratic regime, its leadership has rated here as predominantly Republican. This is natural since its membership is heaviest in the normally GOP dairy, poultry, livestock, and fruit and vegetable areas of the Northeast, Lake, and Midwest States, and the Pacific Coast. When the GOP took over Congress the Grange just naturally had the inside track.

National master of the Grange is Albert Goss, as quiet and cautious as Ed O'Neal was colorful and bold, or as Farmers Union's Jim Patton is forceful and eloquent.

Two southerners have great influence in National Grange headquarters in Washington: Fred Bailey, publicity director, and ex-newspaperman from Texas, and Dr. J. T. Sanders, legislative representative, a former professor of economics at Oklahoma A. and M. College.

Farmers Union influence in Congress is mostly through left-wingers—of whom only a handful remain. This is one reason the union cut its Washington staff to one man—Russel Smith, a Georgian. (The Grange has 14, the Farm Bureau, 9.)

Where the Bureau is rich, and Grange well-off, the union is poor. It is small in membership, and its dues are low. Its ideal is the family-type farm, and it champions the small farmer.

Second oldest of the three, founded in Texas in 1902, Farmers Union's greatest strength is in the Great Plains. North Dakota is its No. 1 State. This may explain its radical tradition, for it is the plains that gave birth to populism, the farmer-labor movement, and the late Senator George Norris, "father" of TVA.

In Washington the union and its dynamic, young Coloradan president, Jim Patton, have strong backing from labor and liberal groups in the East. Some see this as the union's weakness—charge that it's stronger in New York City than in the Corn Belt.

Yet this backing, plus its plains strength and Patton's strong personality, have given the Farmers Union a national influence out of all proportion to its membership.

Patton himself is an eloquent speaker, a master of the bell-ringing phrase. Some examples:

"Every dollar of every price boost gives roughly 90 cents to those farmers who are better off and 10 cents to those who most need increased income * * * the children and the land are the long-time victims of rural poverty * * * while prices must be protected, something more needs to be done."

Grange leaders believe that the Farm Bureau's new president, Kline, thinks more nearly as they do on the fundamental differ-

ence between the two organizations—the part government should play in farm affairs.

The Farm Bureau would have the Government go much further in underwriting farm prices, and consequently regulating farm production, than would the Grange. The Grange sees the primary responsibility on the farmer, with the Government coming into the picture only when conditions get beyond control of the individual.

In the 1930's the Grange took little interest in AAA and other programs the Farm Bureau pushed. The Grange is old, conservative, and not easily excited.

The chief things Grange and Farm Bureau agree on are the new market research program, marketing agreements, protection for co-ops and the need for soil conservation—but there's complete disagreement on methods. The Farmers Union would also agree on these same things.

The Farm Bureau would abolish the Soil Conservation Service and turn it over pretty much to the Extension Service and state experiment stations. It has four bills in Congress to do this.

Bot' Grange and Farmers Union are fighting this—they always team up against the Farm Bureau on its tie-up with the Extension Service. They claim this is unfair public subsidization of one farm organization to the exclusion of the others.

Goss, however, at last November's annual session of the Grange at Columbus, Ohio, made a statement about soil conservation that deserved more attention than it got. It was plainly critical of the present system by which soil conservation work is carried on.

"One of our most serious domestic problems," he admitted, "is the continual drain on our soils largely through erosion. While we have made wonderful progress in soil conservation as compared with the past, we must recognize," he added, significantly, "that a system which pays cash bonuses to farmers for doing what good farmers ought to do anyway, and which does not reach land owners who persist in allowing their soils to wash away, can hardly be considered the basis for a sound, permanent program."

On the other hand, the Grange is fighting against and the Farmers Union is supporting the Farm Bureau fertilizer bill. This would expand Government fertilizer manufacture and distribute it cooperatively on a demonstration basis. Bureau and Union want more fertilizer and think it proper for the Government to help get it. Grange isn't against more fertilizer, but thinks private industry can supply it, and sees the bill as a step toward State socialism.

The Grange stands for accepted things like conservation, research, and hard money. It's not unprogressive, but moves cautiously. It makes much of its fraternal rites and local social affairs.

At the other extreme is the Farmers Union, which prides itself on having advanced ideas on most subjects. In McNary-Haugen days it went for cost-of-production. In New Deal days it fathered crop insurance and took the old Farm Security Administration under its wing.

During the war it urged full production by complete use of all land and labor down to the last sharecropper and Government contract with farmers to assure fair dealing. Now it advocates a cradle-to-the-grave farm program that promises more than any long-range program yet offered.

Between these two extremes stands the Farm Bureau, which comes nearer in its outlook to representing the business farmer than the others. This isn't to say the Bureau doesn't have many small farmers—perhaps more than any other organization—nor that the majority of Grange and Farmers Union members aren't business farmers.

It's simply that Farm Bureau councils seem most concerned with the economic needs of the growing class of business farmers.

Looking to the future, all three are more or less haunted by the farmer's fear of surpluses, but their responses are different. Farm Bureau would control production through AAA. Grange would adjust production by lowering price supports for surplus commodities. Farmers Union would avoid surpluses altogether by having the Government underwrite full industrial employment, consumption, and farm income.

On price supports, the Farm Bureau would keep them high; the Grange would have them low, but adjustable up or down; the Farmers Union would have the Government guarantee annual prices agreed upon every year by representatives of agriculture, consumers, and the Government.

All would push markets to the limit, but their limits differ. Farm Bureau would subsidize exports, but not domestic consumption. Grange opposes export subsidies, but in a pinch might agree to subsidize food for low-income groups. Farmers Union would do both. It sees no limit until hunger is banished from the earth.

As to farm programs, all three will fight to keep the Commodity Credit Corporation as the giant bank for farm price support. All would retain the farm credit system, but the Farm Bureau and Grange would make it independent of the Department of Agriculture. The Farmers Union would liberalize it, and slant it more to the needs of the small farmer.

All three back soil conservation, but vary on methods. All favor extension work, but the Grange and Farmers Union would divorce it from the Farm Bureau in States where there is a close tie-up.

Farm Bureau and Farmers Union believe in local farm program administration by elected farmer committees. The Grange, perhaps because it sees less need for Government programs, is lukewarm on this.

The Grange is the most conservative as to lowering tariff barriers and freer world trade; Farmers Union is the most liberal. All three agree in hearty support of Food and Agricultural Organization as the one United Nations agency which is agriculture's own. They see it as a means of improving world food production and distribution and of spreading agricultural know-how to all.

Each believes it is fair toward organized labor, but labor leaders usually rate the Farm Bureau and Grange as hostile. Farmers Union is outright prolabor. The view is growing among all, however, that labor is the farmer's chief customer, and that labor's record in support of farm measures is good.

The total different farms represented by members in southern agriculturist States, as claimed by each organization—subject to small reductions in Farm Bureau figures in a few States because of contributing members in towns and cities, and of scattering but unorganized Grange members unreported in a few States—are:

	Farm Bureau	Grange	Farmers Union
Alabama	55,111	----------	1,000
Arkansas	40,012	400	2,000
Florida	6,201	----------	----------
Georgia	45,922	----------	----------

Civil Rights Controversy

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 4, 1948

Mr. LANHAM. Mr. Speaker, under leave to extend my remarks, I am introducing into the Appendix of the RECORD a most thought-provoking article written recently by Wright Bryan, editor of the Atlanta Journal, Atlanta, Ga.

I am in hearty accord with what Mr. Bryan says with the reservation that I favor a white primary if such can be maintained within the framework of our Federal Constitution.

The article follows:

THE SOUTH HAS ONE BEST ANSWER IN CONTROVERSY OVER CIVIL RIGHTS

(By Wright Bryan)

The South can, if it will, make a more effective answer than any yet sounded to the clamor from other sections for forcible protection of civil rights.

That answer will come through actions, not words.

The South can see to it that Negroes are protected in their lives and property, their freedom of person and of speech, as well as other citizens are protected.

The South can insure its Negroes equal justice through police authorities and courts.

The South can grant to qualified Negroes the right to vote in all elections and deny the franchise to individual Negroes only on the same basis that unqualified white persons are denied it.

The South can provide for its Negroes education and public-health services and economic opportunity which will raise the living standards of all our people, white and black.

SOUTH MUST LEAD

The South can do all those things through its own leadership and with its own methods.

In many places and in many ways the South is moving toward those goals. Progress has been made and is being made—but not enough.

Until the South does those things for itself, we can expect to be the target of outside criticism and of unworkable plans for securing civil rights by Federal fiat.

Many of those outside demands are made for cheap or dangerous political purposes. No wonder the South denounces them.

Some of them, it must be conceded, are made by sincere and well meaning people who do not understand the effect of such controversy.

HERE IS TRAGEDY

The tragedy of it is that this insistence on sudden and forcible over-turning of deep-rooted customs, customs for which good reason exists, encourages and provides ammunition for political demagogues and self-serving apostles of violence.

It helps nobody but the hatemongers.

At the same time it makes immeasurably more difficult the task of southern men and women of good will who strive to deal with conditions fairly and justly and helpfully.

It arouses in some of them, and in many of the people with whom they must work, a spirit of antagonism instead of a spirit of cooperation.

They cannot afford, however, to let irritation and anger deflect them from their task.

The South must press forward for itself.

The best answer, the only effective answer the South can make to what is being said elsewhere is to set our own house in order.

POLITICIANS HAVE CHANCE

Southern political leaders who actually are as aroused as they claim to be can accomplish more by working within the South for improvement of our own conditions than by name-calling and threats of vengeance.

One of the clearest statements yet made of their need was in an editorial of the Arkansas Gazette, which said:

"There is still time, however, for the South to give an affirmative answer to its critics. We can do this by substituting intelligent, concerted action for the lip-service we have all too frequently given our own ideals of fair treatment for the Negro race. We can accept, without reservation, the special responsibility that falls upon the dominant race and discharge it in good faith, giving the Negro educational, economic, and political opportunities not because we are forced to but because we recognize his right to them. In this way, and only in this way, can we justify the principle of social segregation to which we are dedicated."

Tax Revision a Must in the Eightieth Congress

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 4, 1948

Mr. ROBERTSON. Mr. Speaker, it is imperative, if this Nation is to remain strong and hold its leadership, that we must not lose sight of one very important fact that stands out in this confused situation of the national viewpoint.

There are so many things to think about in our now complex society, there are so many people demanding so much of government, there are so many people demanding a further concentration of power in Washington, and apparently a refusal to accept the responsibility that goes with citizenship of a State.

In this confusion, no more important matter must claim the attention of the American society than the revision of taxes. If the Nation is to grow and expand and employ labor and hold its place under our system of profits, we must have profits. Money must be rewarded, whether it be in the hands of a laborer or an investor, because it is the sum total of investors' money which makes expansion of American business, and this makes for permanent employment. And more than that, it makes for added employment. And so the question, Mr. Speaker, to me is clear-cut. The Nation must have tax relief. That is a must for the Eightieth Congress.

Under unanimous consent, I include the following editorial taken from the Bismarck Tribune, Bismarck, N. Dak., of March 1, 1948:

TAX REVISION NEEDED

No truer words were ever spoken than those uttered recently by Gwilym A. Price, president of Westinghouse Electric Co., when he said: "If the dynamic business pace which this country has experienced since the end of World War II is to continue, there is a very real need to stimulate the investment of equity or venture capital in industry."

Everyone with common sense will agree with this since continued expansion is vital to the successful operation of the capitalistic system. It is the only way we can insure jobs and maintain a high standard of living.

As Mr. Price points out, investment capital now is taxed twice; first as a corporation tax and second as a tax on the individual who receives dividends. His proposed remedy is to exempt from tax liability dividends received by stockholders.

A better way would be to exempt corporations from taxation on that portion of their income paid out as dividends. It might require a bigger tax-collecting machine to do the job, but it would be fairer and would have the added benefit of making every individual fully aware of the taxes which he pays.

In any event, regardless of the way it is done, we must find some practical method of keeping the investment system going. The alternative is eventual changes in our basic system of operations.

The Palestine Question

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 4, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the very interesting and timely statement of Harold L. Ickes, former Secretary of the Interior, entitled "Man to Man":

MAN TO MAN

(By Harold L. Ickes)

The question of Palestine involves more than giving the Jews the abbreviated homeland that has been promised them. The good faith and honor of the British Empire is involved. More important still, from our point of view, the good faith and honor of this country is involved.

Nor do these tell the tale. The very life of the United Nations and its promise for world peace, even though at times feeble, may depend upon what happens in Palestine during the next few months.

Every American knows that the Balfour Declaration, issued at the end of the First World War, promised Palestine to the Jews as a homeland. This was underwritten by the United States. Moreover, it had the approval of the Arab leaders of that day. Then during the late war, Great Britain, by its iniquitous white paper, brought to a stop the immigration into Palestine. The United States meekly acquiesced in this betrayal.

Then the Arabs, when the Allies had freed them from the Ottoman Empire, became truculent. They insisted that a stop be put to Jewish immigration into the Holy Land. There was a time, after the latest defeat of Germany, when Great Britain and the United States, acting in concert, or even separately, might have grasped this Arab nettle firmly and insisted upon enforcing the original agreement as expressed in the Balfour paper. But these two strong nations stood with quaking knees before a few weak Arab tribes.

A commission of inquiry composed of British and Americans visited Palestine. Bevin had promised that if this commission should make a unanimous report, Great Britain would agree to it. It did make a unanimous report, but again Great Britain broke faith. The United States, through President Truman, pretended to accept this report, at least to the extent that 100,000 homeless Jews be at once admitted to Palestine. But President Truman, if he meant what he said, did nothing to make good on his promise.

Then the question came before the United Nations, which set up another committee consisting of representatives of some of the smaller nations of the world. This committee visited Palestine and recommended that there be created two independent states, one Jewish and one Arab. This proposal was accepted by the United Nations, including Russia. The Jews were willing to take the half loaf instead of the whole one that had been promised.

Ever since this agreement the Jews have been calling for action. They have wanted the United Nations to send to Palestine at least a token police force, which, of course, would include Russians. However, the UN continues to sit supinely while the only action taken by the virile United States has been to refuse the Jews the right to purchase arms for the defense of the territory that the United Nations has decreed should be theirs. But the Arabs, who are the aggressors against Palestine, are able to buy arms to use against the Jews.

Here is an international scandal of the first order. Here is weak indirection. Again is the United States in default of its good faith and honor. Again has a road to a hell on earth been paved with good intentions. Meanwhile, President Truman pretends to be supporting the partition of Palestine. He represents to the Jewish leaders in the United States that he favors redressing the wrongs of their people.

But this cannot be real, because it is the Secretary of Defense, James V. Forrestal, who, under cover, to be sure, is leading a belligerent fight for the Arabs. It is Secretary Forrestal, who, in whispered conversations with congressional leaders on the Hill and at cocktail parties, is attempting to defeat the supposed objective of his chief, the President, with respect to Palestine.

If President Truman is sincere in his concern for the shrunken Palestine as a homeland for the hapless Jews of the world, he will call in his Secretary of Defense and tell him sternly that he will either be loyal or get out. He will also tell Mr. Forrestal that he does not credit the statement that he made to the press last week that he is not opposing the partition of Palestine, because he has been doing that very thing.

And in his opposition, he has the enthusiastic support of at least part of the staff of Secretary of State Marshall, which is also attempting to run with the hares while hunting with the hounds. President Truman is entitled to loyalty in his own Cabinet, just as Secretary Marshall is entitled to loyalty in his Department. Neither is getting it. But either can put a stop to disloyalty, if that is what he wants to do.

Secretary Forrestal is trying to defeat the legitimate aspirations of the Jews for reasons of security, which in this instance means the oil of the Middle East, particularly that in Saudi Arabia. But where, I venture to ask Secretary Forrestal, would the Arabs be able to sell their oil for dollars except to American companies, and how long would Saudi Arabia be able to exist economically if it were not for the royalties that it gets for its oil?

The War Menace

EXTENSION OF REMARKS

OF

HON. ALBERT GORE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 4, 1948

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a thoughtful letter from Dean

A. W. Smith, of Tennessee Polytechnic Institute, Cookeville, Tenn.:

TENNESSEE POLYTECHNIC INSTITUTE,
Cookeville, Tenn., March 1, 1948.

Hon. ALBERT GORE,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE GORE: Russia must be stopped now. This is a mighty duel between her and the United States. Dillydallying will be fatal. It may mean war of the most vicious character with us making the first move in the dark. The day of ethics in war has gone. When one deals with the devil he must use devilish means.

The United Nations cannot work with the present world condition. That organization is based on democracy and Russia does not fit into it top side or bottom and cannot. It is ridiculous to think of a dictatorship playing democracy. If Russia were knocked out, the rest of the nations would immediately join the UN and it would work at least for years to come. Nothing, perhaps, will keep peace forever.

When Russia says she must have security she means against us and that means she must control Europe, Africa, and Asia.

The time and method used by us in the next war cannot be made known to the American public nor discussed publicly in Congress. The destiny of every American is in the hands of the Government and that Government must act largely without his knowledge or previous consent. I do not want to know what is being done but I do want to know that the Government has the knowledge, the courage and determination to strike when and where unheralded, if necessary, to make us secure.

When we lose there will be no trials. Nothing but calling of names and crack of rifles. We are in it up to our eyes and we must see the world through. We are the only ones who can. The world is praying not so much to God as to America.

Good luck.

AUSTIN W. SMITH.

Helpless Finland

EXTENSION OF REMARKS
OF
HON. JOHN B. BENNETT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 4, 1948

Mr. BENNETT of Michigan. Mr. Speaker, under leave to extend my remarks, I include an editorial in this morning's Washington Post entitled "Helpless Finland." Finland's tragic difficulty today arises primarily from the vicious unilateral treaty that was forced upon her by the Russians prior to the end of World War II.

The editorial follows:

HELPLESS FINLAND

Finland's helplessness makes the Soviet insistence upon a military alliance with Finland a tragic joke. Under the peace treaty the thousand-mile frontier with Russia was so rearranged that Finland could neither attack Russia nor defend herself from Russia. In the south, Karelia, the traditional gateway, is now Russian; in the center, the Finnish waistline was so narrowed as to make it easy for Russia to cut the country in two; in the north, the Russians made adjustments allowing of swift control. In addition the Gulf of Finland was Russified, and the capital at Helsinki was put within Russian cannon's reach by acquisition of a military base at Porkkala. Yet the Russians insist on new military guaranties. The reason lies in the Stalinist fear-struck phobia militarily to consolidate the territory behind the iron curtain and to bludgeon oppositionists into compliance or silence.

It is sad to see all independence in process of extinguishment in a country which raised itself after its liberation, consequent upon the First World War, into an ideal commonwealth. In 1939, when Russia fell upon Finland, the decline started, for Finland suffered great losses in manpower and resources. The decline was accelerated by the fresh travail incurred when Finland was dragged into a new war with Russia after the German assault upon Russia. Since the peace the Finns, perhaps the hardest working people in the world, have been trying to pay the reparation bill imposed by Moscow. They were resigned to the task, and the Soviet Union, so far as can be discovered, had nothing to complain about. But the Soviet seemingly cannot afford even the possibility of a tug-of-war behind the iron curtain. Even the nominal independence left to Finland is something that cannot be tolerated. As one country after another is ground under the Slav heel, the lesson for the free world is clear. It is to unite before it is too late. The Kremlin will not be satisfied as long as there is any liberty left anywhere.

Pay Raises for Federal Employees

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 4, 1948

Mr. GARMATZ. Mr. Speaker, under leave to extend my remarks, I wish to insert my testimony before the House Committee on Post Office and Civil Service, advocating favorable action on pay-raise legislation for Post Office Department and other Federal employees:

Mr. Chairman, during the past few weeks I have received a great many communications from my constituents, stressing the need for legislation to grant salary increases to postal workers, as well as other Federal employees.

Whenever the cost of living rises, as it has been doing for the past few years, we know that persons living on fixed incomes suffer most. While some workers are able to secure raises to offset the higher living costs, those persons whose salaries are fixed by law, have a difficult time in keeping up with the rising prices.

The last increase in salary seemed adequate at the time, but soaring prices have far outstripped increased wages. The trend in living costs is definitely upward, and likely to remain so. The tremendous loss in buying power in the last few years has created undue hardships on the majority of Government workers.

In a great many cases, salaries are not sufficient to provide even the bare necessities of life. Many Federal employees have found it necessary to cash their bonds and use what little savings they had. Many have had to secure outside employment, in addition to their Government work. The present inadequate salaries deny them their rightful participation and their equitable share in the material and social prosperity of our times.

It is true there has been a slight decline in food prices within the past few weeks, but the decline has been so slight that it is insignificant. Furthermore, this small decline has been more than offset by the rise in the cost of other consumer items, such as clothing, fuel, household products, etc.

We expect efficient work from Federal employees. But they certainly cannot do their best work when they are living under an economic and financial strain, or when they are compelled to hold more than one job to make ends meet.

We cannot expect Government employees to hope and pray that prices will return to normal, or prewar levels. There is no indication that they will. Workers in private industry resort to strikes to gain an increase in wages, but Government workers cannot do that. They must wait patiently until the realization dawns on the Members of Congress that if we wish to maintain governmental efficiency, we must grant living wages. They are asking, and have a right to expect, a salary that will permit them to live according to our American standards.

I am sure that statistics have been cited many times during these hearings and that they will prove the need for salary increases.

I am convinced that an increase of not less than $800 is fully justified at this time; and feel that in the consideration of appropriation bills for the coming fiscal year, sufficient funds should be appropriated to provide for the increases.

It is my sincere hope that the committee will approve a bill to make possible the much-needed salary increases.

Water Power "Sparks" a Town

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 4, 1948

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following article, which appeared in the magazine section of the Christian Science Monitor of February 28, 1948; and a letter I received from Mr. P. O. Davis, Director of Extension Service, Alabama Polytechnic Institute, Auburn, Ala., dated February 28, 1948:

WATER POWER "SPARKS" A TOWN—DECATUR, ALA., RISES FROM SLUMP AND BECOMES "SUCCESS STORY"

(By Sidney Ross)

Towns go bankrupt for various reasons. It happened to Decatur, Ala., a community of some 20,000 residents hugging the Tennessee River, in the northern part of the State.

It happened in 1931. Decatur, already staggering from the effects of the depression, just folded up when its one real industry, the Louisville & Nashville Railroad repair yards, closed. Employing 2,000 people whose pay checks literally supported the town, when the L. & N. moved away the glimmering hopes of Decatur's citizens went with it.

Not only the industrial workers and the business people of Decatur, but the hard-bitten "one crop" farmers were ready to call it quits. Many families packed up and moved away.

That was before Tennessee Valley Authority.

It's different now. Today the amazing transformation of this small southern city can be written in three short words: "TVA—Success Story."

Today Decatur, Ala., is a thriving and enthusiastic community with tremendous confidence in itself and its future. As Barrett

Sheldon, editor-publisher of Decatur's one newspaper—the Daily—puts it—"TVA showed us how to get up again after being knocked on the floor for what looked like keeps."

"It wasn't magic," continued Mr. Shelton, "TVA made us want to help ourselves. We have done just that."

TVA means many things to Decatur, and for that matter to all of the communities, large and small, in the shadow of the broad Tennessee River, which has been harnessed and put to work by the great Government project.

To the worker it has meant a job, because TVA has brought navigation to the Tennessee River and attracted varied industries employing many hundreds of people to Decatur.

To the housewife it has meant a better life, with cheap power and the resultantly phenomenal increase in use of modern electrical appliances.

To the farmer it has meant electric lights perhaps for the first time in his life, and soil conservation and new agricultural markets.

To the mother it has meant better conditions for her children.

To the occupant of low-lying land it has meant an end forever to the concern of flood.

Actually, all of these things are not separate. They are like the fingers of a hand working cooperatively and complementing each other—applying to every one alike, child and adult, farmer and businessman, worker and banker.

Most people think of TVA as synonymous with cheap power. Yes, TVA means that. But as the proprietor of a store on Decatur's Second Avenue explained: "They can take the power out of TVA if they want to. Just leave us the flood control and health improvement."

The store proprietor made this comment at the time last summer when the rampaging Mississippi and Missouri Rivers were wreaking destruction upon wide areas of the Middle West.

In 1934 (the first year of Decatur's coexistence with TVA), there were 29 industries in Decatur, employing 1,420 workers, with a total pay roll of $1,060,000.

The last report available as this was written was issued on September 1, 1946. It showed 81 industrial establishments, giving employment to 4,275 men (and women), Negro and white, with a total annual wage of $7,481,646, a better than 700 percent increase.

Bank deposits highlight an even more startling contrast. In 1933, Decatur's citizens were able to put away the none-too-impressive sum of $291,736. But during 1946, the bank-deposit slips added up to $17,154,462.

To Maynard Layman, Decatur Daily agricultural editor and effervescent one-man chamber of commerce for his home town, TVA's greatest accomplishment has been its sociological effect in transforming the thinking patterns of the people.

"In pre-TVA years," asserts Mr. Layman, "our people had one-track minds. Nobody much cared about the farmer, and the farmer didn't see further than his one crop—cotton. We thought only in terms of industry—factories. Now we think of farmer and industry in the same breath."

The result has been a healthy integration of farm and city economy. The farmer used to sweat out his 5-cent cotton and was at the mercy of the mills. The best that he could get for himself was a pair of overalls, no shoes. He got poorer and poorer and nobody had a solution.

"Look at this," said Mr. Layman, shuffling through a litter of papers, and finally coming up with his latest yearly agricultural report. "During 1946, farmers in the Decatur area received the sum of $15,644,219 for farm products marketed or processed through Decatur plants. Since TVA, the farmer has been really introduced to livestock and dairy herds; to better care of the soil, providing not only a longer staple (better grade) cotton, but also a diversification of crops."

Let's take a look at industry since TVA. Suppose we examine the case of the Ingalls Shipbuilding Corp., which located in Decatur in 1934 on what had been an old cotton patch.

Why did Ingalls, which thus became Alabama's first industrial development on the Tennessee River, choose Decatur? There was a good skilled-labor supply available from pre-TVA days, but without the new navigational facilities linking the city with the Gulf of Mexico, 1,300 miles away.

The Ingalls organization's 600 workers are busy these days turning out self-propelled river barges for the French Government. The barges are loaded in half sections on ships, floated to the Gulf, and then transported across the Atlantic.

Or examine the Southeastern Metals Corp., which operates the biggest aluminum press in the South. Southeastern began in 1945. Although it made Army canteens under contract for a while, it wasn't a war baby that grabbed big money and then quit.

From Army canteens they turned to Boy Scout camping kits. These days they're stamping out thousands of complete household utensils every week, from dishpans to dippers. They employ mostly women with no previous industrial experience.

Southeastern was started from scratch. Ask R. A. McMasters, vice president of the firm, why they picked Decatur to locate their plant and this is his answer:

"Sure, it was our home town. But more important, it had cheap power. Because of navigation on the river, we can get our raw product directly from Reynolds Alumium at Lister Hill, Ala., which exists itself only because of TVA. We used to get all of our household wares from the East. We're the first aluminum household-products manufacturer in the South. We sell our products not only locally (at a saving to our people), but also all over the United States of America, and for export.

Looming up impressively by the river is the gleaming white concrete colossus that is the Alabama Flour Mill, which opened for business in 1941, and which grinds approximately 1,200 barrels of brand-name flour per day.

"The reason we have to keep on fighting for TVA," says editor-publisher Barrett Shelton of the Decatur Daily, "is not because TVA is a failure, but because it has been successful. From its very inception we have had to practice eternal vigilance."

ALABAMA POLYTECHNIC INSTITUTE,
EXTENSION SERVICE,
Auburn, Ala., February 28, 1948.

Hon. ROBERT E. JONES, Jr.,
Member of Congress,
Washington, D. C.

MY DEAR BOB: In talking to the home demonstration council here recently, about which you wrote me, I first called attention to a statement made by President Truman in his message to Congress that in 1946 per capita farm income was $779 against $1,288 for nonfarm people.

This means that during 1946 when farm production in the United States hit its peak to date the nonfarm person had an income of better than $3 for each $2 per farm person.

There are several ways which farmers can increase their income, but the best one is higher production per person with a fair price per unit.

Farmers increase their production by expanding their acreage per person or by increasing the volume per acre or per animal. This, of course, involves shifts from crops to livestock and a greater use of machines.

On the matter of land, we found that in the United States and Canada the per capita amount of cropland is 3½ acres, of which 3 produces for our use and one-half for export.

Russia has 2 acres of cropland per capita; Europe, except Russia, 1 acre; China, one-half acre; Japan, one-fourth acre.

These figures explain why people of the Orient can never have a diet of meat, milk, and eggs. They don't have that much land.

A diet of meat, milk, and eggs requires four to eight times as much land as a diet of grains.

Incidentally, one-fourth acre in sugar beets or sugarcane will produce as many calories as an average person should consume in a year.

I then gave them a few facts about rural health, quoting from Secretary Anderson that during the Second World War the rejection rate for farm people for military service was 53.4 percent compared to an overall of 43 percent; and that in the 18–19 age group farmers were turned down at a rate 40 percent higher than for all others based upon physical defects alone.

The women were interested in a survey conducted by Successful Farming on Why Don't Farm Boys Marry Earlier? Answers from farm people were as follows: (1) 32.5 percent unwilling to live on farms; (2) 28.1 percent said farm girls go to cities at the usual marrying ages, with the result that farm boys don't have a chance to meet either farm girls or city girls; (3) 23.5 percent said farm boys postpone marriage because they are kept too busy on the farm; (4) 9.3 percent mentioned financial insecurity.

Distaste of women for farm life is accented by a poll of Iowa farmers, published in Wallace's Farmer.

Only 46 percent want their daughters to marry farmers, although 66 percent want their sons to farm. Main objections mentioned by farm wives were outdoor work and lack of conveniences.

Similarly the Farm Journal (February 1947) reports a survey of college girls by Dr. Hazel M. Cushing of Washington State College. Only 24 percent of the girls with farm backgrounds and 6 percent of the city girls prefer to marry farmers. Most of the girls in each group would marry farmers if all else were equal, but this would demand that the farmer have as much education as his college wife, devote himself mainly to cash crops and keep away from poultry farming. In other words they wanted to live on farms with high incomes and less drudgery work for wives.

During the discussion I referred to some statistics presented recently by Dr. O. E. Baker, of the University of Maryland. Dr. Baker has spent much of his life studying people along with geography. In a recent article he predicted that the population of the Orient a century hence will be double that of today, with a half billion more in Russia and her satellites, but fewer in the remainder of Europe, and much fewer in the United States.

With every good wish, I am
Sincerely yours,

P. O. DAVIS, *Director.*

The Holloway Plan

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 4, 1948

Mr. RIVERS. Mr. Speaker, the Holloway plan, known as the naval officer pro-

curement plan, is a most comprehensive and well conceived means of obtaining officers for the United States Navy. This plan not only utilizes the United States Naval Academy at Annapolis but 52 colleges throughout the Nation as a means of obtaining the best possible officer material for the navies of the future.

Fleet Admiral Nimitz, on September 15, 1947, commended this program to all the personnel of the Navy. I need not remind the Members of the House of the contribution made to the winning of the war by this the greatest of our modern-day admirals.

I commend knowledge of the Holloway plan to all Members of the House, and under leave to extend my remarks, I hereby include herewith the letter from Admiral Nimitz, along with a summary of the Holloway plan:

THE HOLLOWAY PLAN (NAVAL OFFICER PROCUREMENT PLAN)—A SUMMARY VIEW AND COMMENTARY

NAVY DEPARTMENT,
OFFICE OF THE CHIEF
OF NAVAL OPERATIONS,
Washington, D. C., September 15, 1947.

To the EDITOR, UNITED STATES NAVAL INSTITUTE PROCEEDINGS, ANNAPOLIS, MD.:

Although the postwar system of procuring and training officers for the United States Navy has been in effect for some time, I believe that there is still considerable misapprehension among the public and even among some naval personnel as to its operation.

Hence I read the present article with interest, and I am glad that the Naval Institute Proceedings is publishing such a complete and definitive exposition of the plan, its purpose, and its procedure. I hope that it will be read by all naval personnel, and that it will be reprinted by newspapers and other media for the general information of the public as well.

Sincerely,

C. W. NIMITZ,
Fleet Admiral, United States Navy.

Comment by many having knowledge of the United States Navy's new plan for training officers has dealt, on numerous occasions, with categories and phases of particular interest to the group addressed. This is natural and very much in order.

However, questions asked and comments made by people within and without the service indicate that the over-all and general understanding of the plan can be greatly improved. And full understanding by the Navy and by the interested public is essential to effective implementation.

The opportunity to know this plan well, in both policy and administrative areas, has been accorded me by circumstance. The object of this paper is to assist in attaining a widespread understanding of the Holloway plan by presenting here, in an overview, the entire plan. The perimeter of the summary and comment is calculated to encompass all parts and categories and to show the plan's pattern with all its features simultaneously brought to light in integration.

GENERAL OBSERVATIONS

Fundamentally and in all its phases our postwar officer education and procurement plan is one of integration. Superimposing any group above another, or introducing blocs of special categories in the line is not envisioned.

The first nationally screened input of regular NROTC midshipmen enters the 52 NROTC institutions this fall. Graduation for them is 1951; 2 years' service as ensigns, United States Navy, is completed by all, after which some return to civil life and some enter upon regular Navy careers in 1953. Career men as lieutenants (junior grade), together with Naval Academy contemporaries, go to general line school about 1956 and become available for assignment at senior watch and division level in 1957-58. At that time high-grade university men, adequately seasoned, matured in, and pointed for active naval service, in appreciable number will appear as regular officers of experience—flight section leaders, destroyer engineer and gunnery officers, flag lieutenants, and so on, fully correlated in assignments with their Naval Academy brethren. In other words, 10 years are involved to see the pipe line filled, and integration accomplished as planned. The Department and the Service must be patient and tenacious to see the plan through for a decade to prove it, as time surely will.

The Marine Corps participates fully in the plan. Some 17 percent of all the students of each NROTC unit of the program may in their junior and senior year select the Marine Corps training; each NROTC unit has one or more marine officers as assistant professors of naval science, and marine officers are assigned as professors of naval science in charge of the unit in several instances. Marine Corps integration in the program is close and complete.

BACKGROUND

Immediately after the war the Navy Department embarked upon three important projects:

I. Demobilization, in which we separated some 3,000,000 officers and men from the naval service in 12 months.

II. Preparation of a force operating plan envisioning an eventual naval strength of approximately half a million men and 50,000 officers.

III. Personnel procurement and training plans to implement this force operating plan.

Ready on VJ-day was a plan calculated to supply the officers for a four to five hundred thousand man Navy by channeling all new officer material through 2 years at the Naval Academy after 3 years of college. The Navy Department did not elect to adopt this plan, and set up the Holloway Board to study and recommend the form, system, and method of education of naval officers. The Board consisted of the following members: Rear Adm. James L. Holloway, Jr., United States Navy, senior member; Dr. James P. Baxter, president of Williams College; Dr. Henry T. Heald, president Illinois Institute of Technology; Capt. (now Rear Admiral) Felix L. Johnson, United States Navy; Capt. (now Rear Admiral) Charles D. Wheelock, United States Navy; Capt. (now Rear Admiral) Stuart H. Ingersoll, United States Navy; Capt. John P. W. Vest, United States Navy; Capt. Arthur S. Adams, United States Navy (retired), (now provost of Cornell University); Commander Charles K. Duncan, United States Navy; and Commander Douglas M. Swift, United States Navy, member and recorder.

Studies indicated that the annual input required to maintain the officer strength envisioned for the postwar Navy could be obtained in general terms in three ways:

1. The channeling of all career officers through the Naval Academy in a reduced 2- or 1-year course designed to follow 2 to 4 years in civilian college;

2. The building of a second Naval Academy, at the same time expanding our present plant here at Annapolis; or,

3. Utilizing the NROTC and the Naval Academy, maintaining the 4-year undergraduate pattern in each category.

Scheme 1, that is, converting the Naval Academy to a graduate or semigraduate institution, was rejected. Rejection was unanimous on the part of the Board because of the importance all members placed on the 4-year undergraduate pattern in a single institution. The record of the Naval Academy in developing, in students together there for 4 years at undergraduate level, a permanent desire for naval service was also an important consideration.

Scheme 2, that is, construction of an additional Naval Academy, was rejected because of the delays involved in establishing such a plant and expanding the existing one. Furthermore, it was deemed wiser that the Naval Academy at Annapolis, with its history and traditions, be the single institution representing in its contribution the ultimate in professional and personal standards, and a principal binding force in the creation of loyalty and ideals of service in the Navy as a whole.

Scheme 3 was recommended and adopted because it employs methods that have been proven in the case of the Naval Academy throughout its history, and also in the case of the NROTC (and its closely associated V-12 and Midshipmen School programs) both before and during World War II. This scheme also provides flexibility in that, by means of varying the input of career officers from the NROTC line, changes in personnel requirements can be best accommodated. It permits employment of the short-term commission on an eminently fair and advantageous basis in connection with the Regular (fully subsidized) NROTC student, which has the advantage of providing a continually replenished reservoir of young and experienced Reserve officers composed of those who return to civil life after their 2 years' service. It further provides the great number of junior officers needed in active service without launching an unnecessarily large number upon permanent careers, an arrangement serving to greatly lessen forced attrition and accompanying waste and expense of retirement in an officer's highly productive years.

OUTLINE OF THE HOLLOWAY PLAN

Part I

There are essentially three parts to this plan. The first deals with the undergraduate phase of officer procurement. The two major and fundamental lines of procurement are the Naval Academy and the NROTC. This is stressed because it is sometimes overlooked that the Naval Academy is incorporated in and as much a part of the Holloway plan as is the NROTC.

Other sources of initial procurement are:

(A) The Naval aviation college program, in which the candidate selected for flight training may attend any college of his choice for 2 years, followed by 2 years of flight training and active service in fleet aeronautical organizations. This program is currently carried at diminished numbers, as experience and review indicate desirability of taking the NROTC and Naval Academy graduate alike into flight training after a year or more of service in the fleet, as the basic and major method of obtaining aviation officers. (Entry into the NACP has been suspended for the fiscal year 1949 in accordance with ALNAV No. 179.)

(B) Commissioning a limited number of particularly qualified graduates of any college or university. (This to include unsubsidized NROTC students.)

(C) Commissioning directly a substantial increment of enlisted men annually.

Part II

The second major part of the plan deals with the education and training for officers transferred into the Regular Navy after World War II. This part of the plan is now being implemented vigorously by the Bureau of Naval Personnel and is mentioned solely to round out the picture and to indicate the firm integration envisioned; integration in precedence, in spirit, and in professional and academic education.

Part III

Part III of the Holloway plan deals with the graduate education of permanent commissioned officers, and it likewise is now in the process of Departmental implementation in all essential features. This phase is mentioned here because it plays an important part in the over-all integration of officers from all sources. I regard its fundamental cornerstone to be the General Line School for all officers, regardless of source, upon the completion of their fifth to eighth year of commissioned service. At this time maturity has developed, actual experience in the field renders the reaffirmation of professional subjects significant to a higher degree, and there exists a greater opportunity for mutual social and professional understanding than at any prior period in the officer's career.

Before discussing the details, the advantages, and the contributions envisioned of the two major sources of procurement, that is, NROTC and United States Naval Academy, and the integration of these, we might profitably recapitulate the departmental action in approving the plan. On October 30, 1945, the Secretary of the Navy approved the Holloway board report in general terms as follows:

The total output of the Naval Academy (less those who fail to meet aptitude requirements during the probationary commissioned service) will be utilized to provide career officers for the Navy.

Career officers required annually in addition to those obtained from the Naval Academy will be obtained from the other sources provided under the Holloway plan; this means that numbers required additional to those from the Naval Academy for purposes of career will be drawn principally from the NROTC graduates completing their 2-year short term commission commitment. Legislation incorporating NROTC features of the plan passed both Houses of Congress unanimously and was signed by the President and became law on August 13, 1946.

The plan providing for the education and training of the Reserve and temporary officers transferred to the Regular Navy was approved for immediate implementation.

That part of the report concerning the graduate education of naval officers was approved in principle, with the direction that such action be taken now and at later dates as would best effect the accomplishment of the plan.

NROTC

The selection of candidates to go, under Navy subsidy, to the 52 NROTC institutions is geographical, and is basically that employed in screening for the V-12 during the war, with which is combined the bilateral selection on the part of the college and individual wherein the latter selects his college, presents his Navy certificate and his secondary-school credits, and in turn is selected by the college of his choice. This unique provision has been accepted wholeheartedly by all the colleges and universities of the program. The first national screening, early in 1947, covered some 50,000 young men, of whom 10,000 passed high enough to be presented to the State boards and from whom the State boards selected some 3,000 to enter the institutions as freshmen in the fall of 1947. This indicates the high quality of officer material we should get. It is agreed that this input can be considered not simply the subsidization of boys who would go to college anyway, but that it will represent in effect an increase in the total number of outstanding youths of our country who are able to go to high-grade institutions.

The stipend paid the NROTC student selected for the program (regular) under discussion is a good one compared with undergraduate scholarships in force throughout the United States. In addition to $50 per month the student receives his books, tuition, and laboratory fees. Out of this amount the student must clothe, house, and feed himself. If that is insufficient, he must obtain funds either from home or by working at college. It was interesting to observe on a recent visit to an eastern university that quite a few of the NROTC students were waiting on table in the dining hall, and that many of these students indulge in this type of self-help rather than lean heavily on home assistance. This is pointed out to correct an erroneous impression held in the service and other circles that the $50 a month is over and above board and lodging. Substantial though the sum may be, it is insufficient in most schools to carry a boy through unless he makes additional effort or receives home assistance. I believe this scholarship is the optimum in view of the benefit imparted to the country through the higher education of more worthy youths than would otherwise be the case, and in the return given the Navy in the form of 2 years' active service in the fleet as Regular officers, followed by service either as career officers or as Reserve officers.

The advantages to the NROTC subsidized student can be summed up somewhat as follows: He can go to the civilian college of his choice (subject, of course, to his own negotiation and his acceptance by that college). He receives one of the best undergraduate scholarships in existence. He is limited as to the courses he takes only in that in his first 2 years he must satisfy certain fundamental conditions in mathematics, physics, and English, and must take during the 4 years some 24 semester hours of naval professional studies. This means that, except in very difficult courses in engineering schools and colleges, the student has great freedom of choice; he can take pre-law, or a professional course at undergraduate level, or general academic, as he may choose, subject only to minimum requirements to ensure his reasonable and immediate usefulness as a junior officer in his 2 years of active service. To use a common expression, he is to a certain extent having his cake and eating it too, in that he is obtaining an excellent civilian education and preparation for civilian life at Government expense, with the power of decision as to following a civilian career or a naval career (unlimited in the first instance, though limited as to naval career by selection and need on the part of the Navy), though he does give 2 years' active service in the fleet and appreciable service in the Reserve in return for the Government stipend.

While the NROTC source of procurement for the Navy may be considered to represent an optimum return to all interested parties, it is nevertheless true that, unless it was a plan of positive merit and advantage to the Naval Service, it is not conceivable that it would have been proposed and adopted. It is in this area of advantage to the Naval Service that much misunderstanding lies. Those who evolved this plan believe that the integration of the best type of college and university man from the outstanding institution associated with the NROTC will be of positive benefit to the Navy; benefit in that there will be associated, in the permanent and career officers, outstanding young college men of diverse and superior educational background representing a wide and catholic range of interest, imposing and introducing a critical sense of values, frankly unregimented in a professional sense, but so equipped withal by practical experience on summer cruises and a modicum of essential nomenclature (that is, language of naval equipment, method, and custom) as to permit their immediate and reasonable usefulness as junior officers in the Fleet and their development into capable senior officers as well.

In accepting the above advantages and conditions, those evolving the plan had no thought of establishing extensions of the Naval Academy in the civilian college campuses. They recognized essential differences from the Naval Academy in that professional content of education and training, financial support, and commitment and obligation to the Navy are not as all-embracing. These differences were recognized and considered desirable as productive of a healthy and dynamic spirit for incorporation in the naval service.

Another contribution offered by the NROTC will be an active Naval Reserve composed of young officers of superior talents and a high order of education who have had 2 years' active service in the fleet; this will represent a Reserve of effectiveness and dynamic capacity unequalled in the history of this country, or of any country. We will have young men—later, older, and mature men—in the Naval Reserve and in civil life with naval associations based on life in the fleet with those officers who go on in their career and later become senior commanders, administrators, and policy makers. There are mutual understandings and sympathies created by this which will continue through the life of those concerned.

UNITED STATES NAVAL ACADEMY

The conditions of education and incorporation into the Service of the NROTC, and the envisioned contribution to the Navy have been outlined. It is in order that the contribution of the Naval Academy to the service be considered next.

The following is quoted from the Superintendent's statement to the Board of Visitors in 1947:

"We believe the role of the Naval Academy to be more important than at any other time in its history. We believe the Naval Academy should represent the ultimate in professional and personal standards, and that it and its graduates should be a tremendous binding force in the creation of a solidarity of loyalty and ideals of service in the Navy as a whole."

I am convinced of the paramount importance and essentialness to the service of this role. I conceive the contribution of the Naval Academy to be both spiritual and professional. The daily life of the Academy is one of discipline, frugality, and subordination of personal freedom, all pointed to ideals of devotion to duty and responsibility to country. The role of the austere life in connection with training and leadership and character is well recognized by students of military education and leadership. The Naval Academy is an undergraduate institution which no man should enter unless he wishes to make the Navy a life career. It is a known quantity in having a capacity to inspire large groups and high percentages of graduates of intelligence and character to stay in the Navy in years of comparative penury and hardship, and to be available in the hour of war.

West Point and the Naval Academy face squarely this question of instilling a permanent desire for military and naval service, and have achieved a great measure of success. This professional esprit must continue to permeate the services as the touchstone and binding force in loyalty and devotion to the public interest.

Statistical evidence of the Naval Academy graduate's capacity and readiness for devotion and self-sacrifice in line of duty is available so that he who runs may read. Forty-six Naval Academy classes (classes of 1901 to 1946, inclusive) served in World War II. Six and three-tenths percent of all these graduates in service were killed in combat. The classes graduating during the 10 years prior to Pearl Harbor, who furnished such a large number of destroyer, submarine, and air squadron commanders (that is, field officers), lost 12 percent killed in combat. The classes

of 1934, 1935, 1936 lost in action 12 percent, 14 percent, and 16 percent, respectively.

A factor contributing strongly to the Naval Academy's role is its singleness of purpose and the fact that it stands alone in this purpose. This was previously mentioned in discussing the board's rejection of a second Naval Academy. I am completely convinced of the value to the naval service of maintaining the one Naval Academy at Annapolis that can inspire continuity of tradition and professional excellence, and can serve as an important factor of correlation for the Navy's undergraduate education. I cannot forbear to remark in passing that this value and this factor would be almost entirely defeated by converting the Naval Academy to a graduate or semi-graduate institution.

We should include for recognition, among the factors developing the Naval Academy's role, the manner in which its candidates are selected.

The method of screening and obtaining candidates for the NROTC is one of which I approve, but I do not favor putting all our eggs in one basket insofar as methods of initial procurement are concerned. Just as I believe that there is health, vigor, and dynamic characteristic to the integration of superior young officers of different categories (the NROTC and U. S. N. A.), so do I think that there is merit to different types of selection. The system of congressional appointments has advantages which I hold most important. The participation and the interest on the part of the Members of Congress is of great importance in maintaining our best American traditions, and I am not sure that a purely mechanical and academic aptitude test, if such tests were the only one employed for the Navy as a whole, would produce the optimum. It is undoubtedly true that many of our effective leaders, civic, professional, and otherwise, matured slowly but with considerable firmness for the long drag, and would not, at the ages of 17 to 21, have shown in the top brackets if subjected to some of the testing methods currently employed. Even so, any candidate nominated by the Congress is in strong competition academically with his alternates and must attain high standards physically.

The Congress has made available for enlisted men of the Navy and Naval Reserve a larger number of annual appointments to the Naval Academy than at any prior time. This represents another healthy influx and method of selection. In selecting candidates for the examinations to enter the Naval Academy, commanding officers base their decisions not only on their evaluation of the candidate's academic aptitude, but also upon his moral integrity and the elements of character and leadership exhibited.

The financial status of the midshipman at the Naval Academy is an important factor in his development. Having accepted a disciplined life of restricted personal freedom and one pointed not for a civilian pursuit but solely for professional career in the Navy, and in pursuance of this having figuratively burned his bridges behind him, the midshipman, United States Navy, is supported financially by the Government. His pay is $78 per month, with a ration allowance of $1 a day—or in pay and emoluments, over $100 per month. Even though this amount is adequate for his full support, frugality and modesty of circumstances must characterize the conditions of life of the midshipmen at the Naval Academy. For that reason many of us feel that the Academy is basically one of the most democratic institutions in the world, and in that area is a genuine contribution. Once through the gates of the Naval Academy, the young men stand on their own feet, receiving identical stipends, in a life where no one knows or cares what one another's social or economic background may have been.

The curriculum, professional and academic, figures importantly in the Naval Academy's role in representing the ultimate in professional and personal standards. In the field of curriculum the Naval Academy stresses a broad basic education to include the fundamental sciences, the humanities, and the fundamentals of professional education (including aviation as a basic category such as navigation and seamanship), and gives considerable effort and time in the academic calendar to leadership and the study of human relations. Encompassed within a disciplined life of subordination and a high order of effort, it is pointed completely to the naval life.

Personnel in whom the professional side is strongly developed, and who are charged, furthermore, with great moral responsibility in effecting genuine integration, have a paramount need for effectiveness in human relations and leadership. I hold the thought that warmth and sincerity of feeling oriented to devotion, self-sacrifice, and loyalty, are basic, but that they must be supplemented by technique in the psychological area.

INTEGRATION

The basis of integration lies in the nuances of mutual emulation and respect. Each source of young officers contributes to the body of naval officers as a whole. The experience of the Marine Corps has been that loyalty to corps, to service, and to the country is the over-riding feeling, and the undergraduate school from which each officer came is of small moment. Sophomoric prejudices are not characteristic of high-grade personnel; mutual appreciation and enthusiasm are characteristic of people of intelligence and character.

Precedence among officers upon being initially commissioned is established by integration in the truest sense of the word. The detailed method of accomplishing this is set forth in a Navy Department directive. Furthermore, the Navy's new promotion law is so drawn as to provide equity and assurance of opportunity to career officers for promotion and assignment, regardless of source of initial entry.

The contributions to the service envisioned for the two major sources of entry—that is, the NROTC and the Naval Academy—are set forth under the appropriate captions above. The contributions are presented, not for invidious comparison in detail, but to indicate the areas of individual development available and stressed. Great merit would appear to be in the firm integration in the service of the fine but different qualities of each. It is doubtful that in one institution or category, and in one curriculum, there could be attained at once and at the same time the qualities which can be contributed on the one hand by the NROTC graduate and on the other hand by the Naval Academy graduate.

Today, of our regular and permanent officers, totaling some 20,000, about 11,000 are graduates of the Naval Academy and some 9,000 come from other schools and sources. Thus the problem and necessity for genuine integration confronts us on a grand scale, in addition to those pertaining to initial entry in the postwar period. All is in the same administrative problem being solved by genuine integration, equality of opportunity, and fairness in assignment. A contributing measure to this over-all solution is part II of the Holloway board report providing for raising of transferees to a five-semester college level and assigning them at the earliest practicable opportunity to the general line school. The Navy, in its personnel distribution, is making great sacrifices in order to implement this program, which represents a moral commitment. The Navy recognized that many young men who obtained commissions and served well during the war and then have become career officers in the Navy, missed much of their undergraduate college work. The five-semester program is calculated as the optimum to restore to them a balance in this respect. By the same token, the general line school is calculated to round out professional education and to serve as an affirmation of practical experience in the field.

ULTIMATE SYNTHESIS

Professional competence, particularly in the role of command and in association with operations, is a sine qua non in the line officer. It is of paramount importance in the senior officer operating at policy level and exercising high command involving naval and military statesmanship and important administration. This is for two fundamental reasons. First, professional competence, acknowledged and confirmed by continued sea or field assignments appropriate to age and rank, is required to insure the confidence of the service as a whole. Secondly, and closely allied with the first, sea or field experience is essential for creation of balance and a sense of values, professionally speaking. And this last, in all matters of administration and policy, must be integrated at high level, if direction and implementing measures are to be thoroughly objective.

From the springboard of professional knowledge and ability, our officers, particularly upon and after attaining command rank, must operate effectively in manifold areas in addition to the technical, tactical, or operational. To mention a few, there are personnel research, public relations, foreign commissions, legislative and congressional liaison, organization and direction of research, instruction, and education, all types of administration, duty with Reserve components, fiscal control, and planning at high level involving historical, political, sociological, and economic perceptiveness of the highest order. All these are things to which a diverse intellectual input into the Line of the Navy should contribute, through creation of a synthesis of thinking, expression, and experience which will serve to improve the capacity of the corps of officers as a whole.

The Navy's extensive educational plan for officers is intended to combine and further develop professional competence, practical experience, and a capacity for original thought in attaining the over-all professional synthesis. The program extends throughout the officer's career, encompassing all the technical and operations phases and graduations of the Naval Service appropriate to his time, age, and rank. It progresses from the General Line School, previously referred to as the cornerstone of professional integration, through exchange with other Service schools up through the Armed Forces Staff College, the Naval War College, and finally to the National War College. In this field of education and development the graduates of no institution can be considered in competition with graduates of other institutions. Assignment and performance are entirely dependent upon the intellect, the character, the industry, and the enthusiasm of the individual officer.

Letter From Commandant of Soldiers' Home, Chelsea, Mass.

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 4, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I

wish to include herein a letter received from Mr. Lawrence F. Quigley, commandant of the Soldiers' Home, Chelsea, Mass., concerning H. R. 5180, a bill to increase the amount of Federal aid to State or Territorial homes for the support of disabled soldiers and sailors of the United States:

THE COMMONWEALTH OF
MASSACHUSETTS,
SOLDIERS' HOME,
Chelsea, February 26, 1948.

Hon. THOMAS J. LANE,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: On August 4, 1939, President Roosevelt signed a bill which increased the allowance made by the Federal Government to State soldiers' home and hospitals. The increase was from 33⅓ cents to 66⅔ cents per veteran per diem. The original bill called for an allowance of $1 per day; however, there was a compromise to 66⅔ cents. This was the first increase these State homes had received since their inception in 1888. At that time the 33⅓ cents from the Federal Government covered two-thirds of the total cost of maintenance.

The increased contribution of 66⅔ cents per day covered only 25 percent of the actual cost of maintenance of the Massachusetts Soldiers' Home, which I think was true of the 29 homes in the other 26 States that maintain them.

In 1943, another bill was introduced requesting $1 per day, approximately 36 percent of the cost. A compromise was again effected, and a bill was passed allowing 83⅓ cents per day per veteran, which was about 29 percent of our cost at that time.

Since that time, in view of rising costs and added demands on the services of the State soldiers' home, bills have been introduced for additional aid. Such bills came before the Congress in 1946 and 1947; however, the Veterans' Administration did not react favorably to them; and the Congress prorogued both years before any action was taken on same. Thus, in spite of ever-ascending maintenance costs, we are still receiving 83⅓ centes per veteran per day, which is approximately 15 percent of the present daily cost of $5.64.

Last year the expenses of the Soldiers' Home in Massachusetts were $716,500.05. We were reimbursed to the extent of $109,-264.10, by the Federal Government for the members on the Federal rolls as accepted by the Veterans' Administration. This left a net cost to the State of Massachusetts of $607,235.95 for the care of its veterans.

The 26 States that maintain State homes and hospitals for veterans care for a large number of veterans who come within the scope of the Veterans' Administration facilities. Their maintenance cost, on an average, is $8 to $9, in comparison with our $5.64. If these States were not caring for these cases, the entire cost would have to be borne by the Federal Government. The States should be reimbursed for at least half of the cost for the maintenance of veterans in the State home and hospital, particularly in view of our lower maintenance cost and the large saving to the Government.

A bill has been introduced in this session of Congress, H. R. 5180, for further reimbursement to the States, requesting an increase from the present allotment of $300 to $912.50 per veteran per annum (from 83⅓ cents to $2.50 per day). A companion bill is also being introduced in the Senate. These bills have a great deal of merit as the increase in cost of maintaining these homes and hospitals has been exceptionally large, with inflated prices and higher wages for employees, as well as greatly increased demands on our services from Spanish War veterans and World War I veterans, as well as the vast number of World War II veterans now in need of care and treatment.

Your assistance in the passage of this bill would be greatly appreciated by the States and the soldiers' home and hospitals. It would be much-needed relief to the State taxpayer for the Federal Government to assume a more equitable share of the cost of this essential service to our veterans.

Yours very truly,
LAWRENCE F. QUIGLEY,
Commandant.

Labor-Management Relations

EXTENSION OF REMARKS
OF
HON. WAT ARNOLD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 4, 1948

Mr. ARNOLD. Mr. Speaker, the March 6 edition of Collier's magazine contains an article by Senator ROBERT A. TAFT, entitled "Toward Peace in Labor"—sets forth the necessity for cooperation between labor and management, and the results thus far attained since enactment of the Labor-Management Relations Act. Under leave to extend my remarks in the RECORD this article is quoted in full:

TOWARD PEACE IN LABOR
(By ROBERT A. TAFT, United States Senator from Ohio)

Last September an enterprising new company purchased a few LST ships from the Government. It planned to carry loaded truck trailers from New York City to Albany. Since up to 50 trailers might be loaded on an LST, the new company was able to make a very attractive proposition to New York shippers. It meant a saving on gasoline, wear and tear on their trucks and the time of 50 drivers. The shippers readily took advantage of it.

It looked like a profitable business until the Teamsters Union demanded that the shippers pay its members "stand-by time" for the full time it took to ship the trailers to their destination. There would be no saving to the shippers if they had to pay both the new company and the teamsters for carrying their freight to Albany. The ships lay idle and the Trailership Co. found itself stopped before it had started.

The Longshoremen's Union had counted on the new Trailership venture to supply work for some of its members. It promptly struck the port of Albany, refusing to permit any ship in that port to be moved. The object of the strike was to force the shippers to use the new trailerships. Large quantities of perishable food, much of which was destined for European consumption, could not be moved.

The shippers immediately filed charges with the National Labor Relations Board alleging a secondary boycott on the part of the longshoremen and a feather-bedding practice on the part of the teamsters. The Board first proceeded against the longshoremen and at once obtained a restraining order in the Federal district court. The strike was over and the port opened the following day. The Board then prepared its complaint against the teamsters. That union, however, realizing that the Board meant business, rescinded its demand for "stand-in pay." The converted LST ships started to haul trailers from New York City to Albany.

Prior to June 22, 1947, no legal remedy existed for the shippers, the Trailership Co., or any other business confronted with similar difficulties. On that date the Labor-Management Relations Act was passed over President Truman's veto. Perhaps the most carefully drawn of any of its provisions were those outlawing the secondary boycott. This case is by no means an isolated instance of the operation of the new law.

In Pennsylvania the Rural Motor Express Co. operated as a connecting carrier between two large interstate terminals. This small company's employees refused to join a union of truck drivers. The union then resorted to the tactics used so successfully before passage of the new law. The drivers at the connecting terminals refused to handle the goods carried by Rural Motor Express.

The shippers had to divert their shipments by a longer route, and Rural Motor Express had no business. It filed a charge with NLRB. The drivers' union did not wait for the issuance of a formal complaint against it.

The boycott was stopped, and it agreed in writing not to reinstitute it. Rural Motor Express is again operating as a connecting carrier.

TEAMSTERS PICKET HATTERS

In New York City during the October strike at American Railway Express, a group of hat manufacturers hired independent truckers to haul their products to terminals outside New York City for shipment to their customers. The Teamsters Union sent pickets into the hatters' district of the city, who suggested to the independent truckers that they not load the hatters' products. The hatters' association filed charges with NLRB and instructed their lawyers to file a suit for damages under another section of the new law. The NLRB sent investigators into the district, and the pickets were removed before nightfall.

Are unions calling off their secondary boycotts and jurisdictional strikes because of possible court injunctions or cease-and-desist orders obtained by NLRB, or because the new law gives the injured party a right to sue and collect damages out of union treasuries grown rich by wartime dues? The unions aren't saying, but neither remedy would exist but for the Labor-Management Relations Act of 1947.

Hundreds of examples of such boycotts were presented to the Senate Committee on Labor and Public Welfare. Each of them imposed unjust hardships on innocent third parties. No witness appeared before our committee to defend this racketeering practice. Perhaps the best proof of the act's effectiveness is in the infrequency of such disputes in the news today. Where they have occurred, the filing of a charge with the NLRB, and the commencement of its investigations, has usually resulted in their elimination.

The Taft-Hartley law was passed over the President's veto by a vote of 431 to 83 in the House of Representatives, and 68 to 25 in the Senate. Not only did practically all the Republicans vote for the law, but more than a majority of the Democrats in Congress voted to override the veto of the Democratic President. This public opinion has been reflected in the attitude of many labor union members. I have countless letters from them, and many of them have come to see me personally to say that they approve the law because it protects them against the arbitrary actions and orders of those who control the unions.

Of course, after the bill was passed, there were plenty of protests, as witness these samples in my mail: "Today (May 13, 1947, the day the bill first passed the Senate) is just as much an infamy as Pearl Harbor."

"I am 100 percent against your slave labor bill."

The authors of the act were accused of attempting "to take away from workers" all the

gains and rights they have won in the last 10 or 12 years.

But all labor letters were not hostile when the bill was passed, and today I hear many commendations. For example: "The majority of the rank and file of labor endorses the Taft-Hartley Act." The law is described in another letter as "a guardian of the basic rights of every American." In personal conversation union men have spoken of the new law to me as labor's bill of rights. And so on.

The greater part of the new law's provisions have only been in effect since August 22, but it is already possible to assess their value. Hardly a day goes by without proving how wrong the law's opponents were in their dire predictions as to its effect. In order that the Congress might be kept informed on the day-to-day operation of the new law, we created a study committee and charged it with the responsibility of watching its administration. As a member of that committee, I have been able to observe how the new law has been meeting its objectives.

PUBLIC IS BETTER PROTECTED

I think it is fair to say that nearly all of the many amendments made to existing labor laws by the new act have worked satisfactorily to promote justice between employers and employees and between labor union leaders and their members. At the same time greater protection has been given to the public, and the number of strikes has decreased.

The committee has requested anyone who feels aggrieved to appear before it, state the case and suggest amendments, but at this time we see no reason for recommending amendments to the 1948 session.

The Wagner Act made it easy for employees to obtain representation by a union. They merely voted for the union at a Government-conducted election. If the union proved unsatisfactory, however, the only way for the employees to get rid of it was to vote in another union. The NLRB refused to recognize a petition for no union. We were assured by the union leaders that it was only the employers who ever wanted to discharge the union as bargaining agent, but we nevertheless provided that when 30 percent of the employees informed the NLRB that they no longer desired the union to represent them, an election would be held.

Apparently the union leaders were wrong. Statistical releases by NLRB at the end of the first 60 days of operation under the new statute disclosed that 18 percent of the petitions for elections were filed by employees to obtain decertification of the union that had been representing them.

After twice reversing itself on the issue, the NLRB on December 6, 1945, ordered the Packard Motor Car Co. to bargain with a union of its foremen, and a new source of dues dollars became available to the unions. Union after union rushed into the field in a national campaign to organize supervisory employees.

Foremen are, of course, management's representative on the production line. In addition to their duties of supervision, they occupy a key position in labor-management relation. They communicate management policies to the worker and in turn inform management of the worker's problems and grievances. Their unionization had the effect of aligning them directly with the workers they were paid to supervise.

This was especially true when they joined the same union as that to which their production employees belonged.

ADVERSE EFFECT ON PRODUCTION

The ultimate result of such a policy would be the socialization of industry. Not only would such a result bring a stop to the further investment of capital in productive plants, but it would have an immediate effect on the discipline of employees and, therefore, on the production so necessary for our prosperity and for the welfare of the workers themselves.

One example testified to before our committee was the experience of the Jones & Laughlin Steel Corp. After its mine supervisors were organized by the United Mine Workers, disciplinary slips issued by the underground foremen fell off by two thirds and the accident rate in each mine doubled. The new law neither prevents foremen from organizing nor an employer from bargaining with their organization. But in relieving the employer from the governmental compulsion of bargaining with them, the law removes the provisions of the Wagner Act which required a foreman to serve two employers. The foreman is responsible to the employer and not to the men whom he supervises.

We were told that by taking away the Government's protection of foremen's unions, we would encourage such employees to strike. The only strike of any importance involving supervisory employees in recent months was the one at the Ford Motor Car Co. That strike started before passage of the new law when the company declined to renew its contract with the foremen's union. The strike ended soon after the Congress voted to override the President's veto.

During recent years there has been an increasing demand by unions that employers contribute to a welfare fund. While many of such funds have had a laudable purpose, the need for some control to insure participation by the employees for whose benefit they were intended soon became apparent. The new law provides such protection by requiring that they be trust funds administered jointly by the employer and the union, with annual audits. Payments from such funds are further strictly limited to such purposes as medical care, pensions, and disability and sickness benefits.

All of the dire predictions that the act would destroy welfare funds have been completely disapproved. The only difference is that the rights of the individual employee in the benefits of the fund are now guaranteed.

In a number of ways the new law attempted to restore an equality of bargaining power between unions and employers. Under the Wagner Act only the employer was required to bargain in good faith and sign a contract covering the terms of an agreement when reached. That duty now exists on both sides of the bargaining table.

Unions were also made subject to suit in the Federal courts for violation of their contracts. Care was taken to protect union members from any personal liability. Judgments may only be collected from the union treasuries. The only argument advanced against this provision was that it subjected unions to harassment by suits. Of course this was always a specious argument. There has been no harassment by lawsuits.

A good deal of fear has been expressed that the law is being bypassed by contracts which exempt the unions from liability. Such a fear arises out of misunderstanding of the purpose of the law and of the contracts which have been made. Of course, a contract which entirely exempts the union from any responsibility at all is not a contract. A union which insists on such a clause is engaging in an unfair labor practice and the employer may file charges with the Board. On the other hand, I see no reason why a union should not protect itself against liability for which it is, in fact, not responsible, such as that caused by insurgent members entering into a "wildcat" strike.

There has been one extremely important development attributable to this provision. While seeking to exempt themselves from direct liability, they have undertaken expressly to do all they can to prevent the unauthorized "wildcat" strikes which have so much delayed the development of greatly needed postwar production. In return for the employer's promise to exempt the union from suit for violations of contract over which the union has no control, unions have agreed to take definite steps to end "wildcat" strikes.

For example, the International Harvester contract with UAW-CIO and the Murray Body Corp. contract with that union both provide that in the event of a strike unauthorized by the union, it will immediately so state in writing on the company's bulletin boards and direct the strikers to return to work.

TOO MANY DUTIES FOR THE BOARD

Under the Wagner Act the NLRB acted in a capacity of prosecutor, judge, and reviewing court. Its field lawyers tried the cases, its trial examiners heard them and made recommendations, and the Board itself reviewed the evidence and issued its orders. That such a many-sided role was productive of great abuse was clearly evident from the testimony presented before our committee year after year.

The new law created a General Counsel appointed by the President and confirmed by the Senate and gave him responsibility for the prosecution of cases. The Board now functions like a court.

The new law makes no attempt to regulate the internal affairs of unions except as they may affect the right of a workman to secure and hold a job. A union may still refuse membership for any reason it chooses or expel a member without governmental restraint. However, it cannot require the employer to discharge the worker denied or expelled from membership even if it has a union-shop contract unless the reason for such denial or expulsion was nonpayment of initiation fees or dues.

I am still receiving a considerable volume of mail from individuals all over the country who have been discharged pursuant to closed and union-shop contracts. Many of their cases are pathetic. They are from people who have been expelled from the union for conduct unbecoming a union member. Opposition to any plan of the union leader, supporting the unsuccessful candidate for union office, requesting an accounting of union funds, supporting a political party which the union has decided to oppose, turning out more production than the standard set by the union, and criticism of the government of Soviet Russia are among the many instances of conduct unbecoming a union member.

Investigation of such complaints discloses that the discharges were pursuant to contracts entered into prior to the passage of the new law. The law, of course, did not affect existing contracts. But none of these reasons can cost a worker his job after those contracts have expired. A closed shop cannot be renewed or now entered into. A union-shop contract must first be authorized by a majority vote of the employees to be affected by it.

At the present time a determined stand is being made by some unions which have enjoyed the closed shop in the past against any modification in their status. A printers' union has refused to bargain at all because no contract can legally provide for a closed shop. As a matter of fact, these same unions could by vote of their members provide for a union shop and they would get practically every protection for their union which they desire.

The closed shop has been prohibited by the railroad labor law for many years, but the railroad labor unions are among the strongest in the country. Suggestions have been made that a closed shop should be permitted by vote of the members, but I feel that this is a question of principle on which I, at least, would not be willing to compromise. A closed shop in a few industries has not done great harm, although it has undoubtedly limited apprentices and cut down the number of men available in the particular trades to a point which is contrary to the public interest, particularly when an increase in production is desirable.

If, under authorization of law, the closed shop continued to expand to cover most of American labor it would be a serious detriment to the freedom of the American people. A man no longer could start work in that particular occupation to which he was best suited unless some labor union was willing to admit him into the charmed circle. It would tend gradually to freeze employment just as did the guilds of the medieval cities, a condition which accounted largely for their decline in importance.

Many States have prohibited the closed shop by initiative or by statute. As long as we provide an effective substitute in the union shop without the restrictions on freedom, I do not believe we should compromise on the closed-shop question. I might say, however, that I don't think Congress intended that this provision extend to local building-trade unions whose work is, in fact, intrastate in character. The status of such unions ought to be left to the State law.

CONDITIONS TO SAFEGUARD DEMOCRACY

The Wagner Act provided many benefits for labor unions and not one of these benefits has been taken away by the new law. Congress has, however, conditioned the enjoyment of these benefits by requiring union officers to file certain information before they may seek the services of NLRB. It was believed that democracy in unions could best be achieved by making it possible for union members to learn how and by whom their unions were being run. Thus, unions are now required to make a detailed statement of the procedures used in the conduct of their affairs to the Secretary of Labor, and also furnish a financial statement to each member.

A third requirement which has received much attention in the press is the one making it necessary for union officers to make non-Communist affidavits. Unions having officers who cannot sign such affidavits are handicapped and many of their members are suffering hardships. They cannot go to the Government or the courts to obtain reinstatement and back pay when they are discharged for union activity.

The answer for them is obvious. Get rid of such officers. That is exactly what has happened already in a few cases. I am told by my Canadian friends that a number of the Communist officers of labor unions driven out of the United States have come into Canada, and are trying to get into the unions there.

Little attention has been given to that portion of the act establishing an independent Federal Mediation and Conciliation Service. The old United States Conciliation Service was a part of the Department of Labor. When a strike occurred, either the union or the employer frequently requested that a conciliator be sent in to help them work out a settlement. The conciliator usually first tried to find out the issues by talking privately to each side. He would then try to arrange a meeting of the parties and suggest middle grounds upon which they could agree.

The successful conciliator was one who could obtain the confidence of both the employer and the union. That is the only way for him to learn the real issues causing the strike. Since the Department of Labor was expressly created to advance the cause of unions, conciliators coming from that Department were frequently handicapped by the belief on the part of employers that they would not act impartially.

The new law gives them an independent status in an agency headed by a director appointed by the President and confirmed by the Senate. To advise and assist the director a panel of 12 members is created. To this panel the President must appoint 6 persons outstanding in the field of management and 6 outstanding persons in the field of labor.

The new law stresses the duties of the service in the prevention of disputes. Mr. Ching, the newly appointed director, expressed very well the intent of Congress when he recently stated that he wished to be judged not by the number of fires he put out, but by the infrequency of fires which occurred.

OBJECTIONS ARE NOT SPECIFIC

The CIO called it a "wreck labor bill," a "ripper law to get unions," "treason," "crucifixion," and "butcher shop legislation." The A. F. of L. has referred to it as "evil," "vicious," "offensive," "infamous," and "reprehensible." They have threatened to spend millions of dollars to defeat every Senator and Congressman who voted for it. Of course, they do not specify the particular matters to which they object because if they did their arguments could be easily answered and the union members themselves would be even more in favor of the specific provisions of the act.

Eighty percent of the unfair labor practice charges filed with NLRB since the new law went into effect are against employers under the sections retained from the Wagner Act. This demonstrates very clearly the ridiculousness of the charge that labor has been emasculated. It also indicates that employers are not rushing in to take advantage of the new rights given them. There has been no harassment of unions by lawsuits. On November 1 there had been less than 20 suits brought against unions in all of the United States since passage of the new law.

The union leader whose interest is in promoting the interest of his members has found nothing in the law to interfere with his proper and normal method of negotiating with the employer for them. There have been a number of contracts of high importance to the unions entered into since passage of the new law. A study of such contracts does not show that the employees have lost anything. Every union newspaper stresses new gains for their members. For example, newspapers of the United Rubber Workers, CIO, announcing the new contracts in the rubber industry carried this headline: "Master contract wins many gains."

"You can't legislate labor relations," the labor leaders told our committee. The same statement was repeated by many of the so-called experts who testified before us this year and in prior years. It became a sort of axiom advanced to meet the public demand for curbs of the many union abuses of power.

Of course, this overlooked the fact that labor relations had not been legislated in the Clayton Act, the Norris-LaGuardia Act, and the Wagner Act. The only difficulty was that these laws operated only against the employer, and for practical purposes were construed to protect labor-union leaders against action by anyone designed to prevent excesses in their demands or their actions. Naturally, extremists among the labor unions took advantage of the special privileges given by these laws, and even the more reasonable leaders had to follow them or lose their positions. Organized labor became a big business, without the responsibilities placed by law on all corporations and employers.

The arbitrary power asserted by many labor-union leaders created a strong public resentment against their action, which was reflected in the overwhelming demand for revision of the labor laws.

The Labor-Management Relations Act of 1947 has been in effect but a short time. It has been a period of comparative industrial peace. I am not enough of an optimist to believe that such is a permanent state of affairs. Most of the contracts expire during the next 6 months.

It must be remembered that the new act in no way interferes with the right of men to strike for better hours, wages, or working conditions. It is based entirely on free collective bargaining, which means that if an agreement cannot be reached there may be no work done.

Most of the public seem to feel that strikes should be prohibited by law. They do not realize that if strikes are prohibited some method must be found to fix a fair wage, by arbitration or otherwise. That means that in the long run the Government must appoint the arbitrators and must finally assume the responsibility of fixing a wage pattern. If the Government fixes wages, the argument for fixing prices cannot be fairly met. If prices are fixed it means rationing and a complete control of distribution. That is the end of a free economy.

Gandhi Paved Way for This

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 4, 1948

Mr. KELLEY. Mr. Speaker, under permission to extend my remarks I am including an editorial appearing in the current issue of Labor. The editorial really requires no comment from me, as it makes its point better than I could. However, we might do well to reflect on the fact that India, always considered so backward, has come forward with a constitution carrying social justice to such an extent, while certain expressly stated provisions of our own Constitution are given mere lip service.

GANDHI PAVED WAY FOR THIS

Perhaps we focus our eyes too much on Europe when we decide the world is slipping backward. If we look in the other direction we can see an inspiring sign of progress.

India, whose 330 million people about equal the population of all European nations put together, is adopting a new constitution, patterned after the American model, and in some respects going even further forward.

Gandhi, India's frail saint, is dead, but he paved the way for this charter of the nation for which he won freedom.

Long ago, Gandhi defied ancient and ironclad tradition and prejudice. He went among the 60 million "Untouchables," the outcasts of India, and pleaded their cause. If anyone but Gandhi had done it, he would have been torn limb from limb by the prouder "castes."

Now the new constitution forbids oppression of Untouchables. They can mingle freely with the other people of India, and rise in the social and economic scale, according to their individual abilities.

The constitution promises "justice, liberty, equality, and fraternity" to all Indians, regardless of caste, race, religion, or sex.

The American and other constitutions have made similar pledges, but India's adds something new.

It commits the government to see that all the people have a chance to make the kind of a living which will lead them out of the dire poverty they have suffered in the past.

In other words, India plans a constitution which will contain a "full employment" pledge, and more.

The government is to provide, in a vast country now sunk in ignorance, "free education for all children until the age of 14, within 10 years."

Americans can take pride in the fact that a man educated at Columbia University in New York, Dr. B. R. Ambedkar, headed the committee which wrote this constitution. It's the kind of document which would have gladdened the hearts of the forefathers of the United States.

What Is the Administration Policy?

EXTENSION OF REMARKS
OF

HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 4, 1948

Mr. RICH. Mr. Speaker, the record of Harry S. Truman as President is an astonishing series of contradictions and inconsistencies, which have spread, multiplied, and confounded the confusion in which his administration was begun. The same pattern of changes, contradictions and inconsistencies prevails in major policy matters and minor executive and administration actions. "Foot-in-the mouth," and "off again, on again, gone again" tactics are so frequent they seem typical of the Truman administration. In view of this record the question may and should be raised as to whether the Truman administration has any fixed policies. Truman policies are far too often like one-way railroad tickets—"good for this train and this day only." Such a condition in Government is dangerous to this Nation. It leaves Congress and the people confused and in the dark as to ultimate administration intentions.

In order to get a clear picture, or at least the clearest possible picture of these inconsistencies and this confusion, it actually is necessary to divide these inconsistencies into categories. I first want to deal with prices—rationing, inflation.

Let us consider price control and rationing:

After VJ-day in August 1945, rationing of most consumer goods was ended. On January 31, 1946, President Truman criticized a proposal of Mr. Henry Ford 2d that price controls be removed because they were stifling America's ability to produce. The proposal, said President Truman, could not be accomplished without inviting wild inflation.

On June 29, 1946, President Truman vetoed the OPA extension bill asserting it would lead to disaster. On July 11, 1946, in a statement on the OWMR seventh report, he asserted that the ground which we had won against inflation would be irretrievably lost without a workable price-control law. On July 25, 1946, after a 25-day hiatus without price-control legislation, President Truman signed the substitute OPA bill—reluctantly, he said, because it failed to assure maintenance of stable prices. If the measure failed to halt inflation, he said:

> I shall have no alternative but to call Congress back into special session * * * to enact * * * such legislation as we need to save us from the threat of economic disaster.

On September 5, 1946, President Truman said he had no intention of calling a special session of Congress to consider OPA or anything else. He said he thought Members of Congress were entitled to campaign without interference. Anyway, he said, no emergency existed which called for an extra session. On September 12, 1946, President Truman indicated that he had no intention of requesting additional legislation to support the administration's "hold-the-line" program. He also indicated that he had ample powers to combat inflation.

On October 3, 1946, President Truman and OWMR Director Steelman joined in issuing a solemn warning that another depression might be just around the corner, possibly as soon as early next year, if prices and wages continued to soar.

On November 9, 1946, President Truman summarily terminated all price and wage controls, except those on rents, sugar, and rice:

> I am convinced that the time has come when these controls can serve no useful purpose. I am, indeed, convinced that their further continuance would do the Nation's economy more harm than good.

On November 17, 1947, President Truman requested of the Congress, which he had called back into emergency session, authority to impose consumer rationing on products in short supply which basically affect the cost of living, end authority to establish price ceilings on products in short supply which basically affect the cost of living or industrial production.

Now let us look at Mr. Truman's police state policies—or should I say his supposedly antipolice state policies:

On October 16, 1947, President Truman said at his press conference that controls, including those over rents, represent police state methods even in wartime.

Yet on November 17, 1947, in his personal message to Congress, President Truman called for the renewal of the very types of controls which he had condemned as those of a police state.

In asking for renewal of price controls, consumer rationing controls, inventory controls, wage controls, and so forth, President Truman was advocating returning to the police-state methods of the Office of Price Administration, the War Labor Board, the War Production Board—with a bigger and more colossal Federal bureaucracy than had flourished in wartime, with hundreds of thousands of police agents prying into the daily lives of millions of American people.

Senator HARRY F. BYRD, Democrat, of Virginia, said President Truman was proposing the "greatest economic regimentation of our home affairs ever suggested in time of peace." He asked what assurance there was that the regimentation would not become permanent, with the result that free enterprise "will stagnate and die a slow but sure death if businessmen lose control of their own business, and competition is eliminated."

Now let us consider meat controls, and the President's shifting policy in connection therewith:

During the summer and fall of 1946, it was obvious the black market in meat, which was threatening the health and welfare of the Nation, was actually being protected by the administration's policies.

A White House statement of May 3, 1946, to clarify the confusion created by President Truman's remark in his press conference the previous day, made it clear President Truman stood for the continuance of price control on meat, regardless of the outcome of efforts to control the black market by reinstatement of marketing quotas.

Efforts by Democratic leaders to persuade President Truman to end meat controls were unavailing. On September 24, 1946, President Truman refused again to remove meat controls.

> I happen to know of my own knowledge something about the meat situation. * * * In July and August, when there was no price control on meat, meat was abundant. Now there is price control and meat is short. It is natural, therefore, for the people to blame the shortage on price control. This line of reasoning is wholly wrong.

On September 26, 1946, President Truman read to his press conference a long analysis of the meat situation in which he asserted that the Congress and not the renewal of price control was responsible for the meat shortage.

On October 10, 1946, at his press conference, President Truman refused to say whether Executive action in the meat situation was imminent.

On October 14, 1946, President Truman removed all price controls on meat, effective October 15. Admitting there were millions of cattle and hogs on farms and in feed lots, President Truman claimed the reason why there was a meat shortage was easily answered.

The reason was not price control. Said he:

> The real story is a simple one. The responsibility rests squarely on a few men in the Congress.

Let us now consider the strange and deviating policy on food prices:

On October 16, 1947, President Truman said the idea that exporting grain caused higher prices was misinformation. He claimed the country had always exported a third or more of its crops and that current export was not out of line with what it always had been.

The fact, as shown by crop export reports of the United States Department of Agriculture, is that in the drought years 1934–36 this country had to import wheat. In the years between 1936 and World War II, exports did not average as high as 10 percent of production. Last year, when the country had a record crop, 400,000,000 bushels were exported from a 1,156,000,000-bushel production.

Again on October 5, 1947, in a radio address on the food problem, President Truman claimed that "most of the upward pressure on prices is a result of competition among Americans for scarce goods. The success of our food-saving program will help to reduce these inflationary pressures."

But if the conservation of 100,000,000 bushels of grain, which was the administration's program, would reduce inflationary pressure, it is difficult to understand why the export of 400,000,000 bushels should be practically disregarded as a factor in the rise of prices.

Here is the strange shifting policy of the administration on the question of inflation:

In his personal message to the "emergency" session of Congress on November 17, 1947, President Truman presented an undefined 10-point program which he said was necessary to check inflation, including restoration of price control and rationing.

Yet most of the powers needed to control inflation are already in President Truman's hands and have been there all along.

What causes high prices? The causes are easily identified. Among them the most important are: insufficient production to meet demand; high governmental spending; governmental deficit spending, inflation of the currency; inflationary effects of war activities and abnormal exports which reduce the supply of available goods; and crop shortages.

The President twice vetoed tax-reduction bills which would have increased consumer purchasing power and which also would have encouraged maximum production.

He has had it in his power to reduce high Government spending but has chosen instead to recommend the biggest budget in any peacetime year of our history.

He has had full power to limit exports, but has not done so.

On November 21, 1947, when the President's attention was called to the fact that he had control powers which he had not used, President Truman replied that the administration never made what he called complete use of every power granted by Congress.

Now, what was his course concerning consumer-credit controls?

President Truman's views on continuation of consumer-credit controls were presented in a letter to Federal Reserve Chairman Marriner S. Eccles, dated June 5, 1947. The President stated that he desired legislation to permit continuing such controls, but—

> If the Congress does not see fit to provide the necessary legislative authority, it is my intention to vacate the Executive order because I do not believe that such regulation should rest indefinitely in peacetime on emergency or war powers after the Congress has had ample opportunity to consider the subject.

At his press conference on July 24, 1947, however, President Truman said that he might not necessarily lift consumer credit controls in case Congress refused to authorize their extension.

As Representative WOLCOTT, chairman of the House Banking and Currency Committee, said:

> If I can read the English language, the President said he would remove those controls unless he got specific peacetime authority from Congress. The President should not make such statements unless he is going to follow them through.

Congress enacted a law, which President Truman approved on August 8, 1947, terminating after November 1, 1947, the consumer-credit controls but providing that they might be exercised in wartime or any national emergency declared by the President.

On November 17, 1947, President Truman requested Congress to restore consumer-credit controls.

Mr. Speaker, labor problems still beset this Nation. How has Mr. Truman handled the labor situation?

President Truman's chameleonlike course on labor problems has varied from almost capricious light-heartedness to drastic severity.

On August 16, 1945, 3 days after Japan's surrender, President Truman, brushing aside the Little Steel formula, said:

> I am therefore authorizing the WLB to release voluntary wage increases from the necessity of approval on condition they will not be used in whole or in part as a basis for seeking an increase in price ceilings.

On September 25, 1945, President Truman expressed optimism on the labor situation and was sure Secretary of Labor Schwellenbach would succeed in ending the current wave of strikes.

On October 8, 1945, at a press conference near Tiptonville, Tenn., President Truman lightly dismissed the current strike wave as a reaction from the war effort—he was not worried about it at all.

On October 10, 1945, in his remarks at Gilbertsville, Ky., President Truman referred to the labor situation in these words:

> We are having our little troubles now, a few of them. They are not serious. Just a blow-up after a let-down from war. * * * Now let's all go home and go to work. Cut out the foolishness.

On October 29, 1945, President Truman canceled all his planned trips for the next 6 weeks so that he might deal with the pressing problems of the labor situation.

On November 1, 1945, President Truman told groups of delegates to the Labor-Management Conference that unless labor-management peace was established, the whole country would suffer and the country's leadership in world affairs would be imperiled.

On January 21, 1946, President Truman stated:

> We are having our troubles now as a result of turmoil and dissatisfaction with wages and hours and conditions of work. But I am not a pessimist. * * * I am not alarmed.

On January 31, 1946, as work stoppages in industry across the Nation grew, due to the strike of 750,000 steel workers, President Truman said that the general labor situation was improving all the time.

On February 7, 1946, deeply involved in confusion over the steel strike, which was already 18 days old, President Truman insisted the situation would not interfere with his plans for a vacation in Florida and a cruise in southern waters. He had not forgotten how to do business by telephone. Then, on February 8, 1946, President Truman canceled all plans for the vacation and cruise.

A rising tide of wage demands against an immovable price ceiling quickly doomed Mr. Truman's hopeless politico-economic philosophy which had persisted during the winter of 1945–46. With 1,400,000 persons on strike, including General Motors, and the steel strikes, the President was forced to contradict his boost-wages-hold-prices command.

On February 14, 1946, the President announced a new wage-price policy to settle the steel strike. In return for an 18.5-cent-an-hour wage increase he approved a $5-a-ton price increase.

On May 4, 1946, President Truman released a reconversion report which described the 34-day-old strike of 400,000 soft-coal miners as a national disaster damaging the reconversion program so seriously it would take months to retrieve the losses.

On May 25, 1946, President Truman appeared before Congress to demand immediate legislation granting him emergency powers to break strikes against the Federal Government, including authority to draft strikers into the armed forces.

Behind the President's extreme demand lay the following situation revealed by Senator WAYNE MORSE in the Senate on May 27, 1946—CONGRESSIONAL RECORD, volume 92, part 5, page 5801:

> Mr. MORSE. Is the Senator from California aware of the fact that before noon on Saturday (May 25) the White House knew that the railroad workers were willing to go back on the basis of the report of the President's own emergency board * * * that when the President of the United States spoke Saturday afternoon at 4 o'clock he did not tell the American people that fact?

On June 11, 1946, President Truman vetoed the Case bill, condemning the measure as hitting at symptoms and ignoring the underlying causes of industrial strife, and charging that it would force men to work under compulsion for private employers in a peacetime economy.

On January 6, 1947, President Truman in his State of the Union message called for legislation to outlaw indefensible jurisdictional strikes and require binding arbitration of disputed labor contract terms.

On June 20, 1947, President Truman vetoed the Taft-Hartley bill.

Now, Mr. Speaker, let us look briefly at the administration's changes of policy on the labor fact-finding boards.

On December 3, 1945, President Truman requested Congress to pass legislation authorizing the appointment by the President of fact-finding boards similar to the emergency boards provided for under the Railway Labor Act to make thorough investigation of all facts deemed relevant in labor controversies.

The President in the same message announced that he was appointing such fact-finding boards for the General Motors strike, and on December 31, 1945, he appointed a fact-finding board for the steel strike.

Although the steel fact-finding board was given until February 10, 1946, to submit its report, President Truman preempted its jurisdiction and, on January 16, 1946, the White House announced that President Truman would offer his own solution to the disputants.

By taking the decision out of the hands of the fact-finding board, President Truman made it impossible for the board to continue on the course he had outlined for it.

The inconsistency of the President's fact-finding plan was revealed in the President's own statement of January 18, 1946:

> The fact-finding board * * * has reported to me informally. It has not had the opportunity to go into the merits of the case very fully, as it would have done if there

were legislation now on the books for a cooling-off period. Nevertheless, after hearing the board and after long consideration, I believe that the suggestion made by me of * * * 18½ cents per hour is fair.

Then there was the Victory Day pay reversal.

In the flush of victory following the defeat of Japan, the President let himself in for another contradiction of orders.

On August 14, 1945, the White House issued this order:

The President amended Executive Order No. 9240 (issued by F. D. R., regarding holidays) to declare August 15 and 16 legal holidays for premium pay purposes under the order. (New York Times, Aug. 15, 1945.)

The confusion was so great, particularly for contractors operating on a cost-plus-fixed-fee basis, that the White House revoked it next day with the following explanation:

The President merely excused Government employees from work on those two days. The second statement, "making today and Thursday legal holidays for premium pay purposes," was issued in error. (New York Times, Aug. 16, 1945.)

Out of the confusion rose the millions of dollars question: Who should pay for the White House blunder? The answer was simple—the taxpayer.

Now, let us look at the ability-to-pay theory.

During the General Motors strike of 113 days in the winter of 1945–46, President Truman made a tragic blunder in lining himself up with a socialistic contention which turned out to be a hoax.

It was tragic because it showed clearly the President's confused economic thinking. It was tragic also because it undoubtedly lengthened the strike by supporting a rigged issue so absurdly false that both sides finally threw it out the window in order to reach a settlement.

To the consternation of many of his official family, President Truman fell completely for the canard that "ability to pay" should be the yardstick of wages, and that General Motors should open its books for the application of this yardstick.

On December 20, 1945, the President declared:

Ability to pay is always one of the facts relevant to the issue of an increase in wages. It is essential for the fulfillment of its duty for the board (appointed by him) * * * to examine the books of the employer. (New York Times, December 21, 1945.)

On March 24, 1946, when R. J. Thomas, then president of UAWA, added his doubts to a deluge of doubts at Reuther's ability-to-pay theory, Reuther publicly announced that his demand for General Motors to open its books "was just a maneuver to win public support and get the company over a barrel"—New York Times, March 26, 1946.

It was Mr. Truman who was left over a barrel. He slipped as unobtrusively as possible off the barrel, and never advocated the "arithmetic of the books" for any future wage settlements.

Now, Mr. Speaker, let us take up the case of that sterling New Dealer and friend of the Kremlin, Henry Wallace.

On September 12, 1946, a speech which was to be delivered by Henry Wallace at Madison Square Garden was read by reporters with surprise because, despite its assertions that our policy had been too harsh toward the Russians and that a more conciliatory policy was necessary, it stated:

When President Truman read these words he said that they represented the policy of the administration.

President Truman was therefore asked, at his press conference on September 12, 1946, whether this endorsement applied to the whole of Mr. Wallace's speech or just the paragraph in which it appeared. President Truman replied that it applied to the whole speech. He was then asked whether he regarded the Wallace speech as a departure from the policy of Secretary of State Byrnes. No, President Truman replied, he thought they were exactly in line.

On September 14, 1947, President Truman was forced to repudiate his endorsement of Mr. Wallace's speech. In a special press conference he attempted to explain that in expressing his approval of the Wallace speech he had not conveyed the thought he had intended to convey. What he had intended to express, he said, was that he approved the right of Mr. Wallace to deliver the speech. He did not intend to indicate, he said, that he approved the speech as constituting a statement of the foreign policy of this country.

President Truman's efforts to straighten out this mess soon became a farce. Mr. Wallace released to the press a letter he had submitted to President Truman under date of July 23, 1946, urging definite guarantees to Russia which would be tantamount to appeasement. President Truman had attempted to prevent the publication of this letter, but was not able to do so.

On September 18, 1946, after a conference with President Truman, Mr. Wallace reported:

The President and the Secretary of Commerce had a most detailed and friendly discussion, after which the Secretary reached the conclusion he would make no public statements or speeches until the Foreign Ministers' Conference in Paris is concluded.

Despite this understanding, on September 20, 1946, President Truman announced at a press conference:

I have today asked Mr. Wallace to resign from the Cabinet. It had become clear that between his views on foreign policy and those of the administration * * * there was a fundamental conflict.

It had taken an ultimatum from Secretary of State Byrnes to make it clear to President Truman how great the "fundamental conflict" was between Mr. Wallace's views on foreign policy and those of the administration.

This discussion now brings us to the problem of foreign affairs.

Let us look first at export control.

On April 15, 1947, President Truman requested that Congress revise the Neutrality Act so as to permit barring of exports to aggressors. Under existing law, he said, the Government is obliged to "treat aggressor and aggrieved, peacemaker and trouble-maker, alike in the matter of permitting American manufacturers to supply them with arms, ammunition, or implements of war." President Truman said such impartiality "is no longer consistent with this country's commitments and requirements."

Meanwhile, President Truman made no move to exercise the export controls he had had all along, to halt the export of food and other goods to Communist-dominated territory, while he asked millions of dollars to fight the spread of communism in other directions.

On November 21, 1947, President Truman said he saw no reason to stop the shipment of the United States' industrial equipment and heavy machinery to Russia. President Truman admitted that a Soviet Purchasing Commission in this country has been allowed to purchase heavy machinery—allegedly for the repair of Russian hydroelectric dams destroyed by the Germans during the war.

With regard to cancellation of lend-lease debts, on August 30, 1945, President Truman recommended to Congress the cancellation of nearly $43,000,000,000 due the United States for lend-lease materials supplied to the Allies during the war.

Senators VANDENBERG and TAFT, among others, pointed out that whereas termination of lend-lease operations on VJ-day had put the United States in a favorable bargaining position for coming economic negotiations, the President's statement on cancellation of lend-lease debts had destroyed that bargaining position.

On September 6, 1945, President Truman shifted his ground, stating:

We must recognize that it will not be possible for our Allies to pay us dollars for the overwhelming portion of the lend-lease obligations * * * but this does not mean that all lend-lease obligations are to be canceled.

The secret pledge to the Arabs is another phase of the administration's shifting foreign policy.

On September 26, 1945, President Truman vigorously denied that any commitment had been made for the United States by the late President Roosevelt at a post-Yalta meeting with King Ibn Saud, of Saudi Arabia, as claimed by Arab leaders. No such commitment had been made, said President Truman; he had looked carefully for it.

Then, on October 18, 1945, Secretary of State James F. Byrnes, confronted by Arab leaders with a facsimile of the document, which they threatened to publish, found and made public Mr. Roosevelt's letter to his great and good friend, King Ibn Saud, pledging that he, as Chief Executive of the United States, would take no action which might prove hostile to the Arab people.

In addition to these cases I have enumerated, there are several other miscellaneous instances, all pointing up the fact that the administration does not know one day what it will do the next. Take the calling of the special session.

On July 10, 1947, President Truman said at his press conference that he saw no necessity for a special session of Congress in the immediate future.

On August 14, 1947, President Truman again said at his press conference there were no circumstances on the horizon which would necessitate his calling a special session of Congress before the regular session in January.

As late as September 12, 1947, aboard the U. S. S. *Missouri*, President Truman was reported as still unconvinced of the need for a special session of Congress.

On September 29, 1947, President Truman met with congressional leaders and later held a press conference. He stated that while a special session of Congress was thoroughly discussed, he did not propose that one be called, and asked only that key congressional committees meet at the earliest possible date to consider problems of European relief.

On October 21, 1947, President Truman asked congressional leaders to meet with him on October 23 for "a further discussion of foreign aid."

At the October 23, 1947, meeting with congressional leaders, President Truman announced that he was calling Congress back into session. He did not consult with these leaders as to the advisability of calling Congress back to Washington. On the contrary, he was all prepared with a statement announcing his decision, with the date set and everything.

Government controls are another vital subject on which Mr. Truman swings about like a weather vane.

Out of one side of his mouth President Truman called for ending Government controls.

On October 30, 1945, in announcing a new wage-price policy, President Truman urged that we "get away as quickly as possible from Government controls."

His wage-price policy, however, moved in the direction of more rather than less Government controls.

Still pursuing the contradictory policy of pushing wages up while insisting that prices need not be increased, President Truman was forced to revise his wage-price policy again and again.

On February 14, 1946, in announcing still another wage-price policy, President Truman said:

> I trust that the Congress will: (1) Extend the stabilization statutes without amendment, and will do so with all possible speed * * *; (2) extend the subsidy program for another full year; (3) enact promptly the Patman bill to establish price controls over housing * * *; (4) extend promptly the Second War Powers Act.

After abandoning price and wage controls in 1945 and 1946, on November 17, 1947, Truman asked Congress for their restoration along with several other controls.

Subversive employees and communism offer still another example of constant Presidential vacillation.

On February 28, 1947, President Truman wrote in a letter to former Gov. George H. Earle, of Pennsylvania:

> People are very much wrought up about the Communist bugaboo, but I am of the opinion that the country is perfectly safe so far as communism is concerned—we have too many sane people. Our Government is made for the welfare of the people, and I don't believe there will ever come a time when anyone will really want to overturn it.

On March 22, 1947, President Truman issued an Executive order providing for the investigation of the loyalty of Federal employees. "The presence within the Government service of any disloyal and subversive person constitutes a threat to our democratic processes," said President Truman. He asked Congress for $25,000,000 which he said would be necessary to rid the Government of dangerous disloyalists.

A short time earlier, on March 12, 1947, President Truman had launched his Truman doctrine for the containment of communism, and had requested that Congress appropriate $400,000,000 to aid Greece and Turkey against totalitarian—Communist—aggression.

On April 3, 1947, at his press conference, President Truman confirmed the views he had expressed in his letter to Mr. Earle, saying again that he has no fear that the Communist Party will take over the American Government.

The Ickes-Pauley incident offered still another example of shifting Presidential policies.

After Secretary of the Interior Ickes had testified on the unfitness of Edwin W. Pauley for the post of Under Secretary of the Navy, to which President Truman had nominated him, reporters questioned President Truman at his press conference on February 7, 1946. President Truman asserted then that Mr. Ickes had not consulted him prior to his testimony on Pauley.

According to Mr. Ickes, Ickes told President Truman he had been called to testify on Pauley, and President Truman said:

> Of course you must tell the truth, but be as gentle as you can with Ed Pauley.

At his press conference on February 15, 1946, President Truman substantially confirmed the statement of Mr. Ickes and admitted that he had told Ickes to "be kind to him"—Pauley.

This vacillation of policy has continued up to the present time and there is evidently no reason to suppose it will not be so while Mr. Truman remains in office. On Thursday, December 11, the President flatly told a news conference the Republican proposal for partial regulated relaxation of the antitrust laws would never go into effect as long as he is President.

On Friday, running true to form, a White House spokesman told reporters the relaxation of antitrust laws is acceptable to the President.

Mr. Speaker, when the President of the United States issues such a succession of orders in conflict with one another in a storm-tossed world, how can the people have any confidence that he knows what he is doing, and where he is heading the Ship of State?

Mr. Truman's reversals have been so many and so glaring we would be risking the future of ourselves and our country if we should continue blindly and unquestioningly to follow his contradictory commands.

If he will not or cannot straighten out his thinking, we had better lose no time straightening it out for him—or we will all be on the rocks together.

Dr. Joseph F. Thorning

EXTENSION OF REMARKS
OF
HON. THOMAS L. OWENS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 4, 1948

Mr. OWENS. Mr. Speaker, I desire to place in the RECORD an article written by Dr. Joseph F. Thorning, associate editor of World Affairs, on Correct Terminology as an Aid to Peace. Dr. Thorning, or Father Thorning, as I am prone to call him, because he is a Catholic priest, is one of the outstanding authorities of the Nation on Pan-American relations. He has just returned, after having been invited to make an address at the inauguration of President-elect Romulo Gallegos of the Republic of Venezuela. By your gracious consent, Mr. Speaker, and with the approval of our wonderful Chaplain, Rev. James Shera Montgomery, Dr. Thorning will offer the opening prayer before the House on Pan-American Day, April 14, 1948.

I have had the extreme pleasure of reading Dr. Thorning's very excellent article, which discusses the habit which radio commentators, newspaper editors, lecturers; yes, also Congressmen, have of describing the Soviet Union as Russia." I suggest that the Members of the House read the message. It will be time well spent. I ask that the article be inserted in the RECORD at this point.

CORRECT TERMINOLOGY: AN AID TO PEACE

(By Dr. Joseph F. Thorning, associate editor of World Affairs)

"Words are weapons" is only a half-truth. Words are much more than weapons. Rightly used, they have a magic that can create understanding and good will. Above all, they should be employed in such wise that they can penetrate any artificial walls built up by governments against and around the people who are forced to exist behind curtains of misinformation and hate. Under such circumstances, the right words can develop right thinking and decent feelings toward millions of human beings who have no control over the totalitarian régimes which are exploiting them. In the contemporaneous world, words can and should be the building blocks of peace.

One of the most fundamental suggestions that can be offered in the domain of language is that radio commentators, newspaper editors, lecturers, and politicians forego the slovenly habit of describing the Soviet Union as "Russia." Geographically or politically, there is no such body politic as "Russia." Why not examine official maps for the correct designation? Across huge slices of territory in Europe and Asia the student can read the letters, "U. S. S. R." or "The Union of Soviet Socialist Republics." The obvious abbreviation is "The Soviet Union."

This truth is recognized in every official interchange of notes between the U. S. S. R. and the United States. Secretary of State George C. Marshall and the Assistant Secretary of State for political affairs throughout the globe, the Honorable Norman Armour, are careful to use the correct terminology. Indeed, State Department practice is firmly established in this regard. There is every reason why our citizens, who wish to be exact, should note standards of correctness which aim at better understanding among peoples.

In the United Nations, Messrs. Andrei Vishinsky and Andrei Gromyko are invariably introduced as the Soviet delegates, not as the Russian representatives. This is sound procedure, because there is no such entity as Russia listed on the roster of the United Nations. Reporters and newscasters from the world organization, therefore, have a special obligation not to change the record by introducing talk about Russia and the Russians. It is as easy as it is correct to say the Soviet Union and the Soviets. The New York Times correspondents at Lake Success do this quite consistently, although radio and wire-service correspondents are not quite so accurate. Generally speaking, the radio commentators are worst offenders.

Looking to the future, we should be anxious not to build up a bogey in the minds of the people of the United States. When radio listeners hear that "the Russians" or "Russia," which necessarily connotes "Russians," have denounced our Government at Lake Success or at Moscow, it is almost inevitable, it seems to me, that millions of people will jump to the conclusion that "Russia" and "the Russians" are our enemies. Actually, they deserve our friendship as we would like to merit theirs.

In this connection a recent piece in the New York Times Magazine: The Politburo Tries a New Tack, by H. R. Trevor-Roper, invites attention. This Oxford don leads off by mentioning "the Soviet Union" and "the Soviet Government." His single use of the term "Russia" is correct. He is writing about the pre-Soviet body politic. When Mr. Trevor-Roper employs the term "Russian," it is linked with "communism." To my mind, this is precise diction.

In another passage of the same article, the Oxford scholar indicates how unrealistic it is to speak about Soviet policy without a thorough consideration of the dialectical materialism of Karl Marx. Mr. Trevor-Roper writes as follows:

"Marxism after all is more than a theology and a political technique. It is a gigantic intellectual system that claims to explain and answer every problem. It analyzes the past and prophesies the future, and, it must be admitted, its analyses and its prophecy, although often erroneous in detail, have permanently affected the study of politics."

Marxism is the common bond among totalitarian followers of the party line throughout the world. The dialectical materialism of Marx constitutes the essence of the new religion, whose headquarters happen to be the Kremlin in Moscow. Just as there are millions outside the Soviet Union who profess their faith in Marxism, so there are millions of Russians who continue to believe in God and consequently are not Marxists. "Russian" and "Marxist" are not convertible terms. Indeed, it is safe to claim that the majority of people, victimized by the Soviet Politburo either in the Soviet Union or in the Soviet-dominated eastern European states, are not fanatical adherents of Marxian philosophy. Most of the farmers of the Baltic region and of the Balkans believe in the rights of conscience, freedom of speech, the right to own private property, and the traditional values of family life. It is wrong to classify them with the Soviet clique, temporarily in control.

The international character of Marxism, as contradistinguished from Russian culture, may be elucidated by a few simple questions. Is Eugene Dennis a Russian? Are William Z. Foster and Earl Browder Russians? Are Jacques Duclos, Maurice Thorez, and Marcel Cachin Russians? Can it be claimed that Gerhart Eisler, recently convicted in a United States court, is a Russian? Are Palmiro Togliatti and Luigi Longo Russians? Is Matyas Rakosi, who seized the Government of Hungary, a Russian? Or are the Marxist totalitarians in the Far East Russians?

Some radio commentators try to defend their use of the term "Russia" by claiming that "the aim of Soviet Moscow is precisely the same as that of Czarist Moscow and St. Petersburg—that of establishing a supreme central authority."

To be sure, numerous elements of Russian imperialism remain active in the Soviet Union. There is a line of historical continuity. The Soviet commissars, like the Czars, tend to expand their conquests toward the Baltic and the Mediterranean ports. The masters of the Kremlin, like Peter I and Catherine II, are eager to exploit the Orthodox churches for the purposes of territorial aggrandizement and political domination. One could easily give additional items in a catalog of policies that coincide as of yesterday and today.

Is this the whole story? Are not the most formidable elements those that have organized fifth columns in every nation on the face of the earth? Can it be contended that Peter I and Catherine II, autocrats of all the Russias, systematically trained nationalist leaders and agitators for Asia, Africa, Australia, Europe, and the Western Hemisphere?

Was it the aim of Czarist Moscow and St. Petersburg to establish a supreme central authority, not simply for all the Russias but for the world community?

Failure to calculate these facts has caused Mrs. Vera Micheles Dean, of the Foreign Policy Association, to produce an inadequate evaluation of Marxism and the Soviet Union. The very title of her book, The United States and Russia, is misleading. A true description of the U. S. S. R. is reserved for the subtitle. This clear subordination of the Soviet Union to a nonexistent Russia is no accident. Marxist sympathizers in the United States are prone to talk about "Russia" and "the Russians." Mr. Henry A. Wallace and Senator CLAUDE A. PEPPER are two spokesmen for appeasement who rarely, if ever, mention the Union of Soviet Socialist Republics.

Does any thoughtful reader imagine that this choice of language is not deliberate, although incorrect? With such radiant diction, Marxist apologists in our country try to plead the cause of the clique that runs the Soviet Union. The interests of the Soviet Politburo and the Russian people, it may be noted, do not often coincide.

Why not be realistic as well as exact in this sphere of semantics? The distinction between tyrants and their slaves can and should be recorded every time that we mention the Soviet Union and the Russian people. By precise language we can safeguard our own security and, at the same time, maintain a friendly attitude toward the non-Soviet Russians.

Truth depends upon accuracy of expression. Furthermore, fairness to all concerned demands that there be no name-calling. This is a case where the rulers of the Soviet Union have themselves chosen their own titles and their own descriptions. They are the self-proclaimed leaders of a federation which, avowedly, aims to embrace the world with its peoples. That is the gospel according to Marx, Lenin and Stalin. The constitution of the U. S. S. R. was drawn up with explicit provisions for the incorporation of all other political entities. Numerous people in Europe and Asia are already painfully aware of the operation of this doctrine. We are talking about a condition, not a theory.

The case was clearly put by Mr. Hanson W. Baldwin, of the New York Times. Explaining the peril of withdrawing United States troops from Europe, Mr. Baldwin wrote as follows:

"The assumption that evacuation is a solution stems from another erroneous assumption—that the Soviet Union as a national entity, rather than communism, as an international force, is the real opponent of the West."

Mr. Alexander Kerensky, whose Social Democratic government was overthrown by the Bolsheviks, should know something about Soviet techniques and Soviet foreign policy. On more than one occasion, he has called for an end to "this mischievous business of confusing the Soviet Union with Russia, the objectives of world communism with Russian national interests."

Although "soviet" originally meant "council" and, therefore, was a term without sinister connotations, it has gradually assumed new significance. Does not the verb, "to sovietize," mean "to collectivize"? Are not "the soviets" known today as "the collectivizers"? Forcible collectivization is the notion that soviet conveys in the contemporaneous world. Nothing of that kind is regarded as desirable by the Russian people. As Mr. Kerensky pointed out, "nowhere has hatred of totalitarian communism become as sharp as within Russia."

Since the Russian people are among our best allies, it is wrong, ethically as well as semantically, to confuse them with the Soviet oligarchy Mr. Cyrus L. Sulzberger, European correspondent of the New York Times, knows this. As a result you can search through his dispatches in vain for any loose talk about Russia or the Russians. In fact, Mr. Sulzberger is rather emphatic in his use of the complete title of the Soviet Union, "the U. S. S. R." He has seen enough totalitarian Marxists outside the U. S. S. R. to realize that Marxism cuts across all national boundaries and all racial groups.

Another writer who is conscientious about his language is Prof. Arnold J. Toynbee, director of international studies at the Royal Institute and professor of international history in the University of London. University and college professors in the United States could benefit by this example.

Neither educators nor radio speakers nor newspaper reporters can excuse themselves on the vague grounds of common usage. The good reporters and the best correspondents usually try to make the correct usage clear, exact, and paramount. Only when the accurate expressions have been established and emphasized do they have resort, for variety's sake, to any other phrase or term. Every one in the field of public relations has an obligation to strive for good usage, accuracy of expression, precise truth, and peace education. Good will, like truth, depends upon the right words.

America Trails Britain on the Road to Ruin

EXTENSION OF REMARKS

OF

HON. ROBERT J. TWYMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 4, 1948

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune of March 2, 1948:

AMERICA TRAILS BRITAIN ON THE ROAD TO RUIN

Britain as long as 35 years ago began a program of social betterment for its poorer people. The Government share of the cost was obtained by taxes on individuals in the higher income ranges. Professor Pigou, of Cambridge University, pointed out in a paper in 1927 that the savings available for investment in capital were 25 percent smaller in 1925 than in 1911. The reduction in the fund available for investment was almost the identical amount of the increase in the expenditures for social services.

The Conservative Party which came into power in 1931 did not interrupt the decay of

British industry. The first duty of a politician is to stay in office. The so-called Conservatives provided more and more social services and did it by raising taxes higher and higher, chiefly by levying upon the upper ranges of income and upon business.

When Franklin D. Roosevelt sought to soak the rich he could always show that the British were soaking the rich even harder. When Roosevelt proposed and obtained a heavy tax on earnings retained by corporations for development, he got the idea from Britain. Fortunately, it took only 2 years for Congress to perceive the lunacy of punishing companies which held back profits for expansion and development.

Although our undistributed profits tax was repealed in 1938, tax rates on personal incomes and on corporations were raised during the war to new peak levels. The wartime excess-profits tax has been repealed in the United States, but taxes on business and the upper brackets of individual incomes have been retained and are higher than those which before the war reduced the flow of capital into British industry to a trickle.

Employing British economic policies, the United States has choked off fresh productive investment. People who formerly would have bought common stocks each year now are obliged to sell part of their holdings to live. Last year only a little more than half a billion dollars of new risk capital was obtained by American corporations. The Government last year collected and spent $80 for every dollar that went into risk capital. In these taxes, especially upon the investing class and upon business, the Government eats up the money that would otherwise be available for expansion and improved production.

In Britain today can be seen the end result of the taxing and spending policies followed for some years in the United States.

So Runs the World

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 4, 1948

Mrs. ST. GEORGE. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I include an editorial from Plain Talk:

SO RUNS THE WORLD

It is difficult to resist the temptation to leaf through the New Year editorials of our great newspapers for 1944 and 1945 and 1946 and 1947, on the threshold of another decisive year in the continuing twilight of civilization, marked by the break-down of the London Peace Conference.

If you would explore the wilderness in which our mighty leaders of opinion and molders of policy have been wandering during these 4 years since the fatal Teheran Conference in December 1943, go and consult their writings and statements on the eves of each New Year. You will either be nauseated by the pollyanna praises sung to the "peace-loving" Kremlin or you will be crushed by the blindness of our pathfinders who thrive on dispensing optimism to the millions.

Now that the harsh truth is beginning to dawn even on the most deluded among our mentors, it is more than ever necessary to tell the people the one fundamental truth which has been carefully hidden from them all these years, and which is still wrapped in the foggy columns of our commentators and official spokesmen.

This truth is that we have not been engaged since VJ-day in the making of peace. We have in reality been engaged in the unmaking of the secret peace framed, signed, and sealed at Teheran, Yalta, and Potsdam.

This bitter truth must and will come out. The few who had the vision to see it and the courage to say it must get a hearing. The secret peace was made behind the backs of the peoples of the world, while men were still dying on the battlefields for its sake; it was made in an atmosphere filled with the propaganda fumes generated by the most massive and expensive propaganda machinery ever foisted upon a free world.

The secret peace, for which the Government of the United States must bear the major responsibility, cannot be matched in the long list of Carthaginian peace settlements in the history of man. Since the days of tribal chieftains, Parthian despots, Mongol invaders, and conquering Caesars, there has never been a peace as dishonorable, as treacherous, as irresponsible, as inhuman, and as short-sighted as the one negotiated by the little men with big names who crossed the Atlantic to meet the Moscow satraps and brought them ever-increasing offerings at the expense of humanity.

We sold sovereign and intrepid Yugoslavia, after encouraging her resistance against the Nazi invaders, into the bondage of Soviet totalitarianism;

We agreed to the dismemberment of Poland, in the absence of her legally constituted representatives, when her sons were falling by the hundreds at Monte Cassino;

We then betrayed the legitimate Polish Government, with which we had solemnly fraternized, to the new Tartary;

We surrendered to Stalin's executioners Bulgaria and the democratic, anti-Fascist leaders of her people, after they had negotiated a provisional peace with us before the fall of Hitler;

We let down, similarly, the liberty-seeking forces in Rumania and Hungary, condemning them to servitude under ruthless foreign dictatorship;

We turned over to the mercies of that merciless power the three Baltic nations, Estonia, Latvia, and Lithuania, whose independence we had proudly and publicly vouchsafed during the war itself;

We gave Russia the city Königsberg, which the Russian people had never claimed and do not wish;

We allowed the Red Army to occupy Prague, by the grace of diplomatic pressure and not because of military exigencies, so as to enable Moscow to hold a dagger at the vitals of Europe;

We nodded approval when the junta in the Kremlin dismembered and shackled the remainder of Finland;

We trampled upon the very soul of humanity when we consented to feed into the Soviet maw, by force if necessary, many hundreds of thousands of refugees and runaway Russians who, in their quest for freedom, had left or deserted the tyranny in their homeland;

We presented to Russia, gratis, the Kurile Islands, a vital link in the American defense system between the Aleutians and Japan;

We delivered, behind the back of our ally, China, control over two of her major strategic ports;

We encouraged the Chinese Communist satellites of Moscow to seize most of Manchuria, which contains more than one-half of the resources of all of China, and stood by when the Red Army had looted that province;

We betrayed the trust of the long-enslaved people of Korea by arbitrarily cutting their country in two and throwing the developed, industrial north into the lap of the new enslaver.

And in a supreme gesture of appeasement, we helped establish exclusive Soviet possession of eastern Germany as far as Berlin, arming Stalin with an ace weapon against us.

The American people were not consulted in the perpetration of this none-too-complete catalog of misdeeds which constitutes the framework of the secret peace we are now trying to dismantle, and many of those on our national scene who have had a hand in fashioning that monstrosity are continuing to befuddle the issue.

Already voices are being raised that the blame for the collapse of the London conference, convoked to draft peace settlements for Germany and Austria, must be laid upon the instrument employed—the Council of Foreign Ministers. Already the misleaders of yesteryear are putting the emphasis on the procedure for the settlement of the differences, and not upon the differences themselves. We are asked to believe that the Council of Foreign Ministers could not solve the differences in public, but that the time-honored diplomatic means of private negotiations could produce an enduring peace. Nothing can be further from the truth.

The real issue is: How can we unmake the secret peace by which we have let an incendiary loose in the premises of civilization? The real and only question facing us is: How can we drive the marauder out of Europe and make him return to his own preserves?

It cannot be repeated too often that genuine peace will not be established until the area of freedom is restored. We must dissolve the chains we have forged in the secret peace, chains in which a dozen nations are now languishing. We must undo the crimes of Teheran, Yalta, and Potsdam. We must liberate those whom we have helped to fetter. And we must do more than render lip service to the battle cries of justice and freedom before the light of a lasting peace will begin to glimmer on the horizon of a world in chaos.—I. D. L.

Power and Water Shortage in California

EXTENSION OF REMARKS
OF
HON. JOHN J. ALLEN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 4, 1948

Mr. ALLEN of California. Mr. Speaker, under leave to extend my remarks, I include a letter addressed to the members of the Oakland Chamber of Commerce by its president concerning the water and power shortage in California. The letter sets forth rather forcefully the severity of the situation and the measures which the people of California are taking to voluntarily meet the situation. Every person in the community is called upon to curtail his use of electrical energy at home and at work.

The tremendous need of California to conserve the water in its mountains for use for irrigation is again emphasized. The completion of present and future power projects must be hastened.

The letter from James H. L'Hommedieu, president of the chamber of commerce, is as follows:

FEBRUARY 11, 1948.

To Oakland Chamber of Commerce Members:

The power shortage is critical and you are urged to join in widespread plans to conserve electricity.

An appeal has been made to the public, and your chamber of commerce, upon unani-

mous action of the board of directors, is urging chamber members to make a special effort to assist during the indefinite period of crisis.

William H. Park, a vice president of this chamber and district manager of the Pacific Gas & Electric Co., appeared before the board at its latest meeting and explained that farmers, due to the lack of rain and snow, are now using more than 200,000 horsepower to pump water for the irrigation of crops. This immense load, to which is added increased population requirements, usually occurs in May instead of February, thus taking an unexpected drain at this time.

The recent light rains offered no appreciable relief, and how long the shortage will continue is entirely dependent upon the weather, Mr. Park said. He pointed out that the company is sacrificing income in urging power conservation, and added the observation that prosperity in California is dependent on crops, crops dependent upon water, and water takes from electric power. Cooperation now will accrue to the benefit of all later.

Therefore, I urge upon you the following voluntary means of curtailing power use:

1. Discontinue illumination of all outside signs and floodlights.

2. Reduce window lights by 50 percent by reducing window illumination wattage either by lamp or floodlights by one-third, and extinguish all window lights at 8 p. m. Avoid use of electricity as much as possible between 4 and 8 p. m., the peak-load hours.

3. Reduce inside lights to the limits of safe and efficient operation.

4. Light no unused rooms. Use appliances as briefly as possible.

5. Use electricity as sparingly as possible.

Yours sincerely,

JAMES H. L'HOMMEDIEU,
President.

Abide With Me

EXTENSION OF REMARKS
OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 4, 1948

Mr. KEEFE. Mr. Speaker, on February 14 I was privileged to listen to one of the most beautiful programs featured by the National Broadcasting Co. and its affiliated stations. This particular program was the one hundred and seventieth of a series entitled "Home Is What You Make It." The program dramatized the World Day of Prayer and was entitled "Abide With Me."

This program is sponsored in cooperation with the American Home Economics Association, the General Federation of Women's Clubs, the National Congress of Parents and Teachers, and the United Council of Church Women. The narrator on the program is Mr. Ben Grauer. The script for the program is written by Mr. Lou Hazam, and it is directed by Mr. Jack Kuney.

In my humble opinion this series, Home Is What You Make It, is making a very effective contribution to the solution of many of the perplexing problems that confront us. The specific program of February 14 was so impressive that I felt it should be preserved in the permanent records of the Congress.

Mr. Speaker, my thanks go to the National Broadcasting Co. and those cooperating with it in the presentation of this series. Under unanimous consent, I include the script of this program as part of my remarks:

Jesus: And I say unto you, ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you. For every one that asketh receiveth; and he that seeketh findeth; and to him that knocketh it shall be opened.

(Chorus)

"Holy, holy, holy! Lord God Almighty!
Early in the morning our song shall rise to Thee!
Holy, holy, holy! merciful and mighty!
God in three persons, blessed Trinity!"

Announcer: The sounds of prayer, spoken in myriad tongues throughout the world, have but a few hours ago faded away. The seventy-first World Day of Prayer, sponsored on the first Friday of Lent by the United Council of Church Women, has become history. And while the strains still echo in the hearts of those who knelt under shade trees to mark this day, in thatched-roof chapels, in kraals, in cathedrals, from the Fiji Islands at the edge of the international date line, to St. Lawrence Island in the cold Arctic, Home Is What You Make It, brought to you by the National Broadcasting Co., and its affiliated independent stations, pauses to salute the significance of this glorious day with a special program dedicated to the miracle of prayer, entitled "Abide With Me."

Narrator: With a chain of strength, the World Day of Prayer has linked the globe. On continent, on island, unnumbered people, in 1,068 languages and dialects, together proclaimed their trust in God. Thus on a day in February, in the third year of the Atomic Age, twentieth century, Anno Domini, modern man, creator of the machine which has made him self-sufficient in almost all things, admits, like the men who came before him, he cannot live by bread alone.

This is not strange. This is not new. It has always been so from the beginning. And if you will bear with us some 30 minutes, we will lift your heart with the glory and wonder of it.

We begin with a clap of thunder; because here, we are told, is where man began blindly to lift his eyes beyond himself and search for an ally against the things which thwarted him. To the rugged mountains, to the all-powerful sun, to the mysterious lightning, the roaring waterfall, and to that crashing thunder, man raised his voice in his first pathetic calls for help.

Man: O loud-voiced one, help me, help me.

Narrator: A kind of prayer, this a prayer born of ignorance and fear, but not less a prayer. And as man increased his dominion over the fish of the sea, and over the fowl of the air, and over the cattle, and over all the earth, he began attributing spirits to natural wonders. And in time named the spirits and endowed each with godhood. And to these he prayed.

In Egyptian.

Egyptian: Thy dawning is beautiful in the horizon of heaven, O living Aton, beginning of life. When thou risest in the eastern heaven, thou fillest every land with thy beauty; for thou art beautiful, great, glittering, high over the earth; thy rays, they encompass the lands, even all thou hast made. Thou art Ra, and thou hast carried them all away captive.

Narrator: In Assyrian.

Assyrian: In Heaven who is great—thou alone art great. On earth who is great—thou alone art great. When thy voice resounds in heaven, the gods fall prostrate. When thy voice resounds on earth, all the genii kiss the dust.

Narrator: In Aztec, to the corn god.

Aztec: Our mother the earth goddess, whose food is on the nine plains, goddess of the seven ears, arise, awake. The yellow blossom has flowered. The white blossom has burst open.

Narrator: In Indian, at the foothills of the Himalayas.

Indian: From unreality take me into reality, from darkness into light, from death take me into immortality. May the supreme Pranava gratify me with knowledge.

Narrator: Politely, in ancient Chinese.

Chinese: I, the Emperor, had respectfully prepared this paper, to inform the spirit of the sun, the moon, the five planets, the spirit of the stars and of the clouds, the spirit of the four seas and the great rivers, and the spirit of the present year: That on the first day of next month we shall reverently lead our officers and people to honor the great name of the god Shag-Ti. That you will exert your spiritual power.

Narrator: In Greece, where many gods peopled Olympus, the relationship between gods and men was close and familiar. From one of these gods, Euripides, the playwright, sought council thusly:

Euripides: O thou that stayest the earth and hast thy firm throne thereon, whosoever thou art, unfathomable to human knowledge, whether thou art Zeus or the necessity of Nature, or the mind of man, to thee I raise my voice.

Narrator: And Socrates prayed to the horned deities, before his friend Phraedus, thus:

Socrates: O beloved Pan and all ye other gods of this place, grant to me that I may be made beautiful in my soul within and that all eternal possessions be in harmony with my inner man. May I consider the wise man rich, and may I have wealth as only the self-restrained man can endure. Do we need anything more, Phraedus? For me, that is prayer enough.

Narrator: Many prayers to many gods, but perhaps none compared with the prayers that sprang from the heart of man when at last he found one God through Moses.

Moses: Thou shalt have no other gods than Yaweh.

Narrator: In the days that followed Moses, prayers to God—God whom we came to know better with the passing of years—were separately born to take their place as psalms in the Old Testament for men to echo to the end of time. And perhaps nowhere in the writings of man can words be found more beautiful and moving than these God-plucked ones. Listen:

Psalm 46.

Voice: God is our refuge and strength, a very present help in trouble. Therefore will not we fear, though the earth be removed, though the mountains be carried into the midst of the sea; though the waters thereof be troubled, though the mountains shake with the swelling thereof. The Lord of hosts is with us.

Narrator: Psalm 1.

Second voice: Blessed is the man that walketh not in the counsel of the ungodly, nor standeth in the way of sinners, nor sitteth in the seat of the scornful. He shall be like a tree planted by the rivers of water, that bringeth forth his fruit in his season; his leaf also shall not wither; and whatsoever he doeth shall prosper.

Narrator: Psalm 27.

Third voice: The Lord is my light and my salvation; whom shall I fear? The Lord is the strength of my life; of whom shall I be afraid? Though a host should encamp against me, my heart shall not fear: though war should rise against me, even then will I be confident. One thing have I asked of the Lord, that will I seek after: that I may dwell in the house of the Lord all the days of my life.

Narrator: Psalm 33.

Fourth voice: Rejoice in the Lord, O ye righteous; for praise is comely for the upright. Praise the Lord with harp; sing unto

him with the psaltery and an instrument of ten strings. Sing unto him a new song: play skillfully with a loud noise, for the word of the Lord is right, and all his works are done in truth.

Narrator: And then He came, Jesus the Christ. And He taught men not only a way of life to guide theirs, but taught them how to pray. For it is written in the Gospel of St. Luke, chapter II:

Bible voice: And when it came to pass that, as he was praying in a certain place, when he ceased, one of his disciples said unto him, Lord, teach us to pray, as John also taught his disciples. And he said unto them:

Jesus: When ye pray, say, Our Father which art in heaven, hallowed be thy name. Thy kingdom come. Thy will be done, as in heaven, so on earth. Give us day by day our daily bread. And forgive us our sins; for we also forgive every one that is indebted to us. And lead us not into temptation; but deliver us from evil.

Narrator: From His day until ours man has never ceased praying to Almighty God. In diverse ways and in all the many tongues, in poetry, in song, in sculpture, in painting, men, thirsty for His love, have prayed to Him. And found in prayer—

Woman: A way to lift up my heart to God.

Man: A sort of meeting place between God and me.

Second woman: A ladder I can climb to reach Him.

Second man: It's how I talk to God—in petition, for intercession, as thanksgiving, worship, in adoration, as meditation, prayer is a key to the Christian life, the fire we kindle by which we warm our soul.

It fell as nourishment for a hungry world from the lips of our Christian fathers—like St. Augustine—

Augustine: Watch Thou, dear Lord, with those who wake or watch or weep tonight, and give Thine angels charge over those who sleep. Tend Thy sick ones, O Lord Christ. Rest Thy weary ones. Bless Thy dying ones. Soothe Thy suffering ones. Pity Thine afflicted ones. Shield Thy joyous ones. And all for Thy love's sake. Amen.

Narrator: And as it did the saint, prayer clothed the warrior with invisible armor.

Second narrator: It is the year 1587. Sir Francis Drake prepares to dash into the harbor of Cadiz to put the strength of his English vessels against the armada might of Philip II. Aboard his vessel, to God and God alone, he raises his voice.

Drake: O Lord God, when Thou givest to Thy servants to endeavor in any great matter, grant us also to know that it is not the beginning but the continuing of the same until it be thoroughly finished, which yieldeth the true glory; through Him that for the finishing of Thy work laid down His life. Amen.

Narrator: This same prayer, in all the churches of England, was prayed during another crisis—the spring of 1941.

Oliver Cromwell, lying on his deathbed in 1658, sent one of the most unusual prayers to heaven recorded in history.

Cromwell: Lord, though I am a miserable and wretched creature, I am in covenant with Thee through grace. And I may, I will come to Thee, for Thy people. Thou has made me, though very unworthy, a mean instrument to do them some good, and Thee service; and many of them have set too high a value upon me, though others wish and would be glad of my death. Lord, however Thou dost dispose of me, continue and go on to do good for them. Teach those who look too much on Thy instruments to depend more upon Thyself. Pardon such as desire to trample upon the dust of a poor worm, for they are Thy people, too. And pardon the folly of this short prayer, even for Jesus Christ's sake. And give us a good night, if it be Thy pleasure. Amen.

Narrator: Lord Nelson gave the signal for the Battle of Trafalgar, and retired to his cabin to pray this way:

Nelson: May the great God whom I worship grant to my country and for the benefit of Europe in general a great and glorious victory, and may no misconduct in anyone tarnish it; and may humanity after victory be the predominant feature in the British Fleet. For myself individually, I commit my life to Him that made me; and may His blessing alight upon my endeavors for serving my country faithfully. To Him I resign myself, and the just cause which is entrusted to me to defend. Amen. Amen. Amen.

Narrator: Men have crystallized their prayers in the form we call poetry. Quiet men, like Thoreau, the hermit of Walden Pond.

Thoreau: Great God, I ask Thee no meaner pelf than that I may not disappoint myself; that in my action I may soar as high as I can now discern with this clear eye.

Narrator: Lord Byron.

Byron: Father of Light! To Thee I call; my soul is dark within; Thou who canst mark the sparrow's fall avert the death of sin.

Thou who canst guide the wandering star, who calm'st the elemental war, whose mantle is yon boundless sky, my thoughts, my words, my crimes forgive; and since I soon must cease to live, instruct me how to die.

Narrator: Shakespeare put this thankful prayer into the mouth of Henry V after the Battle of Agincourt:

Henry V: O God, Thy arm was here; and not to us, but to Thy arm alone ascribe we all. When without stratagem, but in plain shock and even play of battle, was ever known so great and little loss on one part and the other? Take it, God, for it is none but Thine.

Narrator: But to match the great poets—and they are numberless—who put their thoughts of God to rhyme, is a woman, whose name is lost but whose simple, disarming poem for grace perhaps strikes the most responsive chord of all:

Woman:

Lord of all pots and pans and things, since
I've no time to be
A saint by doing lovely things of watching
late with Thee,
Or dreaming in the dawnlight or storming
heaven's gates,
Make me a saint by getting meals and washing up the plates.
Altho I must have Martha's hands, I have
a Mary mind;
And when I black the boots and shoes, Thy
sandals, Lord, I find.
I think of how they trod the earth, what time
I scrub the floor;
Accept this meditation, Lord, I haven't time
for more.
Warm all the kitchen with Thy love, and
light it with Thy peace;
Forgive me all my worrying, and make all
grumbling cease.
Thou who didst love to give men food, in
room or by the sea,
Accept this service that I do—I do it unto
Thee.

Narrator: Just as poets have molded their praise of God in words, men have been moved to worship Him in music. William H. Monk was so inspired by these words of the Reverend Henry Leyte that in 10 minutes he was able to put them to a melody that has come down through a hundred years as one of the best-loved of all our hymns. Listen:

Leyte:

Abide with me; fast falls the eventide;
The darkness deepens; Lord, with me abide.
When other helpers fail, and comforts flee,
Help of the helpless, oh, abide with me.
Swift to its close ebbs out life's little day;
Earth's joys grow dim, its glories pass away.
Change and decay in all around I see;
O Thou, who changest not, abide with me.

Hold Thou Thy cross before my closing eyes;
Shine through the gloom, and point me to
the skies.
Heaven's morning breaks, and earth's vain
shadows flee.
In life, in death, O Lord, abide with me.

Narrator: Strangely enough, the reverse procedure has bequeathed us equal dividends. It was another minister—with a name as American as Smith—who, in 1832, when his eyes fell upon the British anthem, picked up a scrap of paper and wrote the words to the anthem we know as America. Perhaps you never realized it before, but when you sing America, you are actually singing a prayer. See for yourself:

Voice:

Our fathers' God! to Thee,
Author of liberty,
To Thee we sing:
Long may our land be bright
With freedom's holy light;
Protect us by Thy might,
Great God, our King!

Narrator: Truly in the words of the ninth psalm:

Psalmist: I will be glad and rejoice in Thee: yea, my songs will make of Thy Name, O thou Most Highest.

Narrator: Not only poets and song-makers, not only warriors of old, but all manner of men and women have turned to God in prayer. Ludwig van Beethoven:

Beethoven: We must praise Thy goodness, that Thou has left nothing undone to draw us to Thyself. But one thing we ask of Thee, our God, not to cease Thy work in our improvement. Let us tend towards Thee, no matter by what means, and be fruitful in good works, for the sake of Jesus Christ our Lord. Amen.

Narrator: Lady Jane Grey, who sought the throne of England before her execution on Tower Hill:

Lady Jane: O Merciful God, be Thou to me a strong tower of defense, I humbly entreat Thee. Give me grace to await Thy leisure, and patiently to bear what Thou doest unto me; nothing doubting or mistrusting Thy goodness towards me; for Thou knowest what is good for me better than I do. Therefore do with me in all things what Thou wilt; only arm me, I beseech Thee, with Thine armor, that I may stand fast. I am assuredly persuaded that all Thou doest cannot but be well; and unto Thee be all honor and glory.

Narrator: On the tomb of Livingstone, the famous missionary, are inscribed there, his words:

Livingstone: May Heaven's richest blessing come down on everyone, American, English or Turk who will heal the open sore of the world.

Narrator: Washington, concluding his farewell speech:

Washington: I consider it my indispensable duty to close this last solemn act of my official life by commending the interests of our dearest country to Almighty God, and Thou who have the superintendence of them to His Holy keeping.

Narrator: Abe Lincoln was a deeply religious man. From youth he was taught to pray by his stepmother, and spent hours reading from the Bible with her. An everlasting source of inspiration through the trials and troubles that were his fate. As he said himself:

Lincoln: I have been drawn to my knees many times by the conviction that I had no place else to go.

Narrator: The humbleness of Lincoln before God is best exemplified, perhaps, not in

his Gettysburg address nor his many speeches that have about them that biblical feeling, but in this simple prayer, uttered on the porch of the White House, when he could no longer stand the sound of the cannon from the second battle of Bull Run:

Lincoln: O Thou God, who heard Solomon in the night when he prayed for wisdom, hear me now. I cannot lead this people without Thy help. I am poor and weak and sinful. O God, who didst hear Solomon when he cried for wisdom, hear me, and save this Nation.

Narrator: And in our last great crisis, as our troops assaulted the beaches of Normandy on D-day, it is to the same God that President Franklin Delano Roosevelt asked the Nation to join him in prayer. Here, thanks to the magic of radio, is an actual recording of the beginning of the prayer he made on that fateful day:

Roosevelt: In this poignant hour, I ask you to join me in prayer.

Almighty God: Our sons, pride of our Nation, this day have set upon a mighty endeavor to preserve our Republic, our religion, our civilization, and to set free a suffering humanity. Lead them straight and true, give strength to their arms, stoutness to their hearts, steadfastness in their faith. They will need Thy blessing; their road will be long and hard. For the enemy is strong. They may hurl back our forces. Success may come with not rushing speed, but we shall return again and again and we know that by Thy grace and by the righteousness of our cause, our sons will triumph.

Narrator: And so it has ever been since the first time man raised his eyes from his food and wondered—

Man: Who has given me this sweet, and given my brother dust to eat?

Narrator: And found God. Since has man lifted his heart to Him. And because he does—in the words of Tennyson—

Tennyson: More things are wrought by prayer than this world dreams of.

Narrator: Sufficient testament of this is the life of the leader whose great soul was freed, just the other day, by an assassin's bullet—Mohandad Karamchand Gandhi:

Gandhi: Prayer has saved my life.

Narrator: There are his own words.

Gandhi (continuing): Without it, I should have been a lunatic long ago. Prayer came out of sheer necessity. The more my faith in God increased, the more irresistible became the yearning for prayer. Life seems to be dull and vacant without it.

Narrator: The conscience of Gandhi will never be stilled. Nor will the conscience of man as long as he, of his only will and volition, for the sake of all men, does as millions did a few hours ago, during the World Day of Prayer—raised a million voices to ask:

Voice: Father of all mankind, grant us faith to look with fearless eye beyond the chaos of our world and time, knowing that out of this shall rise, lifted by Thy grace, peace with justice and a time of brotherhood.

Narrator: And——

Second voice: Vouchsafe unto us the will to work together. May our deeds reflect the mind of Christ.

Narrator: And——

Third voice: Throughout the earth may that which we profess come alive in human relations. May we serve Thee better and love Thee more, that Thy kingdom may come on earth as it is in Heaven.

Narrator: On this 14th day of February—though the World Day of Prayer is over—it is still not too late to pray. It is never too late to pray. We have but to remember the Thief on the Cross:

Biblical voice: And he said unto Jesus, "Lord, remember me when Thou comest into Thy kingdom." And Jesus said unto him,

Jesus: "Verily I say unto thee, today shalt thou be with me in paradise."

Announcer: You have just heard the one hundred and seventieth program of Home Is What You Make It, saluting the World Day of Prayer and entitled "Abide With Me."

The Late Honorable Clarence E. Hancock

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 4, 1948

Mr. LYNCH. Mr. Speaker, it was a distinct shock to me when I learned of the death of our former colleague, Hon. Clarence E. Hancock, of Syracuse, N. Y. He was one of God's noblemen, possessing a charm of personality that was most unusual. His quiet manner and his unobtrusive way won him many friends. His ability was outstanding and his clear thinking and convincing speech established him as a debater of rare talent.

I met him when I first came to Washington in the Seventy-sixth Congress and our casual acquaintance developed into a sincere friendship which I shall always cherish.

Clarence Hancock was a splendid representative of the people in his community. The State of New York and the United States lost a truly distinguished citizen in his death.

Medical Care for Veterans Big Problem for Country

EXTENSION OF REMARKS

OF

HON. EDWARD H. JENISON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 5, 1948

Mr. JENISON. Mr. Speaker, without doubt one of the most serious problems facing the country at the present time, and a problem certain to grow more serious with the passing years, is that of providing adequate medical care for our war veterans. I desire to call the attention of the Congress and the country as well to a survey of the problem published in last Sunday's New York Times, together with an editorial on the same subject in the same issue:

[From the New York Times of February 22, 1948]

MEDICAL CARE FOR VETERANS BIG PROBLEM FOR COUNTRY—POLICY SET UP IN 1924 HELD UNREALISTIC TODAY—LACK OF PERSONNEL STRESSED

(By Howard A. Rusk, M. D.)

Periodically 25 of the Nation's top medical specialists meet in Washington as the national consultants' committee to the Administrator of Veterans' Affairs to determine policy and discuss problems of veterans' medical care. At their meeting in October and again in January two of the principal items on the agenda were the need for more personnel and the feasibility of placing a fixed ceiling on the number of hospital beds that the VA will operate.

Today, the VA operates a total of 103,189 beds, and has 5,649 beds closed because of inability to obtain personnel. Their patient census is 95,652 in their own hospitals and 13,949 in Army, Navy, State, and civilian contract hospitals. Of the 109,601 patients (as of January 15, 1948), however, 66 percent are non-service-connected, that is, the disabilities for which they are hospitalized have no relationship to their military service.

There are 18,026 veterans awaiting admission to VA hospitals, of which only 88 are definitely service-connected and 446 are presumed service-connected on the basis of available evidence. The remaining 17,492 have disabilities that were not incurred in service.

The hospitalization policy in VA hospitals, as dictated by existing laws, is that veterans with service-connected disabilities shall have admission priority, but that veterans with non-service-connected disabilities may be admitted if, by their own statement, they are unable to pay for hospital care and if a bed is available in an existing facility.

POLICY ESTABLISHED IN 1924

This policy was established by Congress in 1924 when there were empty beds in VA hospitals. A secondary factor was that a large number of veterans, especially those with mental disorders and tuberculosis, were unable then to obtain care in civilian hospitals within their own communities.

Since 1924, however, the picture has changed considerably. There were only 4,000,000 veterans then; today there are 20,000,000. Because of the quality of medical care at that time, fewer veterans sought admission; today more and more veterans, as they realize that the VA medical services are second to none, are applying for care. The VA had empty beds then and personnel to staff them; today VA hospitals are crowded, and Dr. Paul Magnuson, new VA Medical Director, has said it is impossible to staff more than 120,000 beds and keep the quality of medical care at its existing high level.

The VA now has 126 hospitals and Congress has approved the building of 91 more at a cost of $1,000,000,000. Many of these new hospitals are necessary to replace existing outdated hospitals situated in areas so geographically remote that it is impossible to staff them adequately. Others are necessary as replacements for the temporary wartime Army and Navy hospitals that the VA has taken over. Biggest factor in the building program, however, is the policy of furnishing free medical care to non-service-connected cases.

In defense of the VA, it should be made clear that this policy is not one developed

by the VA, but results directly from congressional action. Although a veteran with a non-service-connected disability to be admitted must sign "No" to the question, "Are you financially able to pay the necessary expense of hospital care?" and is liable to a fine amounting to $10,000 for swearing a false affidavit, the VA has neither the legal right to question nor the machinery to investigate such affidavits.

It is common knowledge that many non-service-connected cases now in VA hospitals have signed such statements, although they could well afford to pay for medical care. Not a single such case has ever been prosecuted. Of the few instances the writer has been able to find in which the Government has recovered funds to pay for hospital care, one was the case of a veteran who died in the hospital and was found to have left an estate valued in excess of $250,000.

"AVAILABLE BED" QUESTION

Nor has there ever been, from the VA's standpoint, a satisfactory interpretation of the words "if a bed is available in an existing facility." The policy, it appears, has been to permit available beds to be filled with non-service-connected cases and then to construct new hospitals ostensibly to accommodate veterans with service-connected conditions.

That the medically indigent veteran should receive care from the VA regardless of the origin of his disability seems logical, for it gives the patient a sense of dignity in that he feels it is a right he has earned, rather than charity. If he cannot pay for care nor receive it in a VA hospital he would, of necessity, have to be cared for in a local or State hospital as a free patient. It is merely a matter of the taxpayer paying from either his right or left pocket.

This is particularly true for psychiatric and tuberculosis patients who constitute 60 percent of all VA patients and approximately half of whom are not service-connected cases, for experience has shown that only a small percentage of such patients, either veterans or civilians, can afford the cost of care. Dr. Daniel Blain, chief of the VA Neuropsychiatric Service, has said that the neuropsychiatric services in VA hospitals have reached the saturation point. He pointed out that approximately the same number of neuropsychiatric cases were being discharged as were being admitted, but warned that even though more beds were made available, personnel could not be found to staff them.

The same need for personnel exists in all types of medical service. Another serious factor to be considered is that if the VA continues indefinitely to build more hospitals, civilian hospitals will be faced by even more serious personnel shortages than exist today. There is simply just not enough trained personnel to go round.

The fundamental question is whether the VA shall continue to build hospitals primarily for non-service-connected cases. The national consultants, pointing out that the present policy establishes an elastic ceiling that is subject to many diverse pressures, has said: "It is the opinion of this group of consultants to the Administrator of Veterans' Affairs that a definite ceiling should be put on the number of beds to be provided in VA hospitals, and that such a ceiling, in the opinion of this group, should not exceed the 140,000 beds already authorized by Congress."

PERSONNEL INADEQUATE

They further warned: "It will be practically impossible to find adequately trained personnel to operate this number of beds, when, at the present time, 5,649 beds are already closed solely because of lack of personnel. Secondly, to attempt to go beyond this ceiling would further deplete the number of trained individuals available to meet civilian needs."

Dr. Magnuson was even more conservative and said that 120,000 beds represented, in his opinion, the maximum number of permanent beds the VA could operate and give top-flight medical care without disturbing the balance between VA and civilian hospitalization.

Although Congress is appropriating funds for the building of new hospitals that will be filled primarily by non-service-connected cases, many of whom are able to pay for their medical care, it has never, by formal action, made the Federal Government responsible for complete care of all veterans. Nor does examination of congressional records indicate that such was ever the intent. The present situation has arisen as a result of a policy adopted in 1924, which was expedient then but unrealistic and unwise today.

It is a policy that should be examined carefully by Congress unless it is the express intention that the Government should assume full responsibility for medical care for all veterans regardless of service connection or the individual's ability to pay.

VETERANS' MEDICAL CARE

[From the New York Times of February 22, 1948]

In other columns of this newspaper today Dr. Howard Rusk, who is a member of the National Consultants Committee to the Administrator of Veterans' Affairs, discusses the crisis that daily grows more acute in VA hospitals resulting from the hospitalization of veterans with non-service-connected disabilities. Such veterans amounted to 66 percent of VA's 109,601 patients on January 15.

Non-service-connected cases are handled by the Veterans' Administration under an act of Congress passed in 1924, when there were many empty beds in VA hospitals and 4,000,000 war veterans on the rolls. At that time large numbers of veterans were unable to obtain adequate care in civilian hospitals near their homes. The medical service provided then also was not of a high caliber and there was no great demand from the veterans for admission to a veterans' hospital. Today the picture is entirely different. There now are 20,000,000 veterans on VA's rolls. VA medical service is equal to, or superior to, that of most private hospitals. There is a demand that far outstrips the VA's ability to supply the care. Yet the 1924 policy still stands.

It is time—we agree with Dr. Rusk—that Congress took a long look at the problem of hospital care of veterans and set a definite and realistic policy. Does Congress intend that the Veterans' Administration should assume full responsibility for hospital care of all veterans regardless of service connection or the individual's ability to pay? If it does, then many more hospitals will have to be built and private practice will have to be raided for the personnel to man them. If it intends only that service-connected cases be handled, or those and cases where the fundless veteran otherwise would have to enter some other public institution, then that position should be stated clearly, and the Veterans' Administration given the investigatory powers and means to keep out of its hospitals those veterans who could afford a private institution.

The problem is a complex one, involving a present shortage of medical personnel, the veteran's right to treatment in a veterans' hospital instead of the charity ward of a private hospital if he is ill, no matter what the connection with service of his illness, and the fact that long psychiatric or tubercular treatment is beyond the financial capacity of a large percentage of veterans. It is a problem that is the responsibility of Congress, not that of the Veterans' Administration, and one that should be faced promptly before the present strains become greater.

Slum-Clearance Activities of Hon. Robert F. Wagner, of New York

---

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Friday, March 5 (legislative day of Monday, February 2), 1948

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in yesterday's Washington Star about the activities of our colleague the Senator from New York [Mr. WAGNER] relative to slum clearance.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON THE OTHER HAND—SENATOR WAGNER UNDERTAKES ONE MORE SERVICE FOR SLUM DWELLERS

(By Lowell Mellett)

One of the grand old men of the United States Senate, ROBERT F. WAGNER, of New York, has just turned in one of his characteristic jobs. He was asked back in September by Chairman GAMBLE, of the Joint Congressional Committee on Housing, to undertake a study of the broad problem of slum clearance for the benefit of the committee.

He could have replied that he had been studying that subject the greater part of his adult life and that the results of his study are embodied in the Taft-Ellender-Wagner bill. This is a bill passed last year by the Senate, but never permitted by the House leadership to reach the floor.

The Senator, however, did not make that reply. Instead, he accepted the assignment and undertook to gather some further facts for Representative GAMBLE. His health these days not being as good as it might be, he conducted the study by mail. He sent questionnaires to the governors of all the States, to the mayors of all cities of 50,000 or more, and to a certain number of prominent citizens throughout the country.

SUMMARIZES REPLIES

His report, just made public, summarizes the replies received. It contains statements such as this from Mayor De Muro, of Passaic, N. J.:

"Slums wreck people and slums not checked can wreck a city. * * * It is hard to say in dollars what it costs a child to be raised in filth, disease, and vicious moral surroundings."

And this from Mayor Palmer of Miami, Fla.:

"After people have suffered long and unreasonably they lose faith. They also lose perspective. They reach the point of desperation, when they are willing to listen with sympathy to social orders incompatible with our democratic institutions."

When we think of slums we are apt to think only of the larger cities, particularly of New York. But the Senator received from the mayors these estimates of the families in their cities living in slum or substandard housing:

Los Angeles, 58,400; San Francisco, 38,678; Waterbury, Conn., 4,000; Jacksonville, Fla., 17,000; Atlanta, 40,000; Chicago, 100,000; Peoria, Ill., 4,500; Louisville, 25,000; New Orleans, 50,000; Baltimore, 50,000; Boston, 45,000; Fall River Mass., 6,200; Detroit, 68,000; Saginaw, Mich., 9,000; Minneapolis, 11,000; Kansas City, 42,000; Omaha, 10,000; Camden, N. J., 11,864 (of which 3,919 are unfit for habitation); Newark, 38,423; New York, 450,-

000; Utica, N. Y., 2,500; Fargo, N. Dak., 200; Cincinnati, 75,000; Cleveland, 25,000; Bethlehem, Pa., 4,400; Philadelphia 83,703; Providence, R. I., 12,000; Charleston, S. C., 6,200; Memphis, Tenn., 45,000; Dallas, Tex., 33,369; Fort Worth, Tex., 22,583; Charleston, W. Va., 8,000; Madison, Wis., 600.

HOW FIGURES WERE REACHED

The mayors reached their figures by various methods. Mayor Allen of Hartford, Conn., arrived at 10,000 by taking into account the 3,500 veteran families living in rented rooms, trailers, and tourist cabins, the waiting list of the local housing authority, and the lack of repairs in lower rental accommodations.

The Senator's questionnaires included this one: "In your opinion, is private enterprise in a position now or in the foreseeable future to provide decent housing, new or old, for all low-income families at rents or prices within their ability to pay?" Of the governors 3 said "yes" and 23 said "no." Of the mayors, 7 said "yes" and 70 said "no."

In the House, nevertheless, the disposition seems to be to pass the Taft-Ellender-Wagner bill—if the House leaders allow it to reach the floor—with all provisions for slum clearance stricken out. TAFT says he will fight to keep those provisions in.

Protection of Civil Rights

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Friday, March 5 (legislative day of Monday, February 2), 1948

Mr. JENNER. Mr. President, by request, I present and ask to have printed in the RECORD copy of a letter addressed by Mr. Clarence C. Smith, of Indianapolis, Ind., to the President of the United States.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

INDIANAPOLIS, IND., *March 2, 1948.*

His Excellency, the Honorable HARRY S. TRUMAN,
President of the United States of America, White House, Washington, D. C.

DEAR SIR: Constantine Consistory No. 25 AASRFM, NMJ, United States of America, Inc. (Prince Hall affiliation) deeply appreciates your official actions in favor of full civil rights to all citizens of the United States of America. The execution of your program will be the greatest advancement of democracy in this country since the emancipation of slaves and bestowing the right to vote upon women. Such an expansion of the application of the principles of equality will make it impossible for communism or any other un-American ideals of government to get a foothold in our great country.

We are proud of the firm, courageous and intelligent way you face and combat the foes of this righteous movement. The time will come when the significance of your actions will be understood more completely and appreciated more greatly than it is today.

You are right. The foes of your program are wrong. You demonstrate greatness. They demonstrate smallness. You are not afraid for all men to be free. They are. You have faith in all humanity. They don't. You know that if democracy continues to hesitate, to doubt the righteousness and wisdom of applying itself to all people right now, it not only stultifies itself before the whole world but the security of government of the people, by the people and for the people is greatly threatened at the most inopportune time in all history.

God bless you in your good work. We believe that He will keep you steadfast and crown your civil-rights program with victory.

As an additional token of our appreciation enclosed herewith is an invitation extended to you to attend our annual grande affaire on March 6, 1948. Also a program.

Very respectfully yours,

CLARENCE C. SMITH,
Thirty-third Degree, Commander in Chief.

Good Ways to Ruin

EXTENSION OF REMARKS
OF
HON. ZALES N. ECTON
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Friday, March 5 (legislative day of Monday, February 2), 1948

Mr. ECTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a short article by Wheeler McMillen entitled "Good Ways to Ruin," published in the Pathfinder of February 25, 1948.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOOD WAYS TO RUIN

(By Wheeler McMillen)

How dangerous is it to support good purposes? Is doing good really the road to ruin?

For long years the American people have supported public schools. They thought education was a good. They believed that literacy was essential to self-government.

At first, it was enough to provide schoolhouses and instructors able to teach the three R's. If parents chose to take advantage of what was offered to their children, that was their privilege; if not, there was no penalty. Because some parents were negligent and because education was good, compulsory attendance laws were passed.

Then, because a little education was good and more must be better, high schools were built. The age for compulsory attendance was pushed upward. The cost of education climbed upward.

Who can say whether 6, or 8, or 12 years of compulsory public schooling at public expense is exactly the right amount? How about 14 or 16 years? That very question is being asked now. Universal college education may not be many years ahead, free to all except the taxpayers. Then, no doubt, because it is good, some will wish to make it compulsory.

Certainly no one doubts that education is good. But at what point shall we cease charging this good thing to the taxpayer?

Health, also, is a good thing. So the United States and the States now spend increasing sums to insure that the public shall be healthy. This seems to be a good investment. The sick are not productive. They may become public charges. Perhaps much more should be spent for health.

But where does public health leave off and private health begin? All health must equally be a good; and since it is a good thing, should not everybody have it? Why not give free hospital and medical service to everybody, including the taxpayer?

Cleanliness, undoubtedly, is a very good thing. Why not free soap for everybody? A cake a week, sent postage-free from Washington and delivered by the postman? For that matter, since cleanliness is good, how about having the postman give free baths, too? Or, better yet, compel everybody to take the free baths?

Then, since soap is soap and dishes also get dirty, how about free soap powder too? Most women say they hate to wash dishes. Surely it would be a good idea to relieve them of this drudgery. So, why not have the postman who brings the soap powder wash the dishes, too? That would make a lot more good, steady Government jobs.

One can see that this idea has possibilities. Find enough good purposes that ought to be accomplished, pass laws to charge the costs to the taxpayers' and you can build up quite a lot of government. All this could be done without passing a single law for any bad purpose.

In addition to doing the things which must be done, Government is increasingly implored to undertake other things for the good of the country.

Taken individually, each such proposal might appear worthy. We might discover that if the things were done many would benefit, few or none would be harmed, and in the long run the Nation would be richer.

"This is not an expense; it is an investment." Ask any member of the Appropriations Committee how often he has heard those words.

Yet, to spend public money for all the good things, even for those which really might prove to be investments, could easily cost the taxpayer another day's work out of his week; or maybe his whole week.

Well-meaning people with the best of intentions can do infinite harm to their debt-burdened country now by demanding that Congress provide funds for more good purposes. They can push the United States on into bankruptcy.

No one needs to urge bad laws now to ruin the country. Just give us enough expensive good ones.

Pay Raises for Postal and Other Federal Employees

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 5, 1948

Mr. KING. Mr. Speaker, on Thursday, March 4, I appeared before the Committee on Post Office and Civil Service in support of legislation that would give our worthy postal and Federal employees a much-needed increase in salary of $1,000 per year.

My statement to the committee appears below:

Mr. Chairman, although I am the author of H. R. 4806 and H. R. 4807, which would provide a permanent increase of $800 per annum to postmasters and employees of the postal system and other Federal employees, I am here today to urge this distinguished committee to report favorably on H. R. 4704 and H. R. 4705, authored by the Honorable JOHN D. DINGELL, of Michigan. These bills are identical with S. 1848 and S. 1849, and provide for a permanent increase in salary for postal and Federal employees of $1,000 per annum.

I am advised that the Senate bills were introduced by the chairman and ranking minority member of the Senate Civil Service

Committee after appropriate hearings on the subject of increases in salary for postal and other Federal employees, by a duly appointed subcommittee.

Many Members of Congress have introduced bills providing for salary increases, but these bills were based upon information secured from sources available to individual Members. However, since the Senate bills represent the efforts of a committee of Congress, every respect should be given to its findings as a basis for legislation. For this reason, I appear here today in support of legislation other than my own.

The problem before this committee is tragically and fundamentally simple. Everyone agrees that the postal worker is the most underpaid employee in the country today. All that seems to be in doubt is the amount of increase in salary that should be given these worthy public servants to breast this tide of engulfing inflation.

The research of Senator LANGER'S subcommittee reveals that $1,000 per annum is a modest amount when we are confronted with the actual facts. He found that, all things considered, in line with what has taken place in industry, postal employees and other Federal employees should receive an increase of $1,160 per annum rather than $1,000.

It is not new to this committee that the starting wage for a letter carrier and postal clerk is $2,100 per annum, with take-home pay even less when we consider retirement deductions. The average gross salary for all employees in the field service of the postal system is approximately $2,708 per annum.

It does not take much research to determine that these postal employees cannot keep abreast of their economic needs with today's runaway prices—notwithstanding the recent commodity market adjustment, for the trend in prices is still upward as witness the recent increase in the price of steel. Yet, while it is generally agreed that there is a continuing rise in the cost of living, particularly in the cost of basic necessities, many people do not appreciate the full extent of the inflationary trend. When anyone says that the cost of living has risen, a certain number of percentage points, or that the index of the Bureau of Labor Statistics indicates a certain percentage of increase, we are very much interested. We tend, however, to counterbalance the price increase in our own minds by giving consideration to certain wage increases which others have received during the period when prices were rising, and on a basis of the figures, have a rather uneasy feeling as to the many conclusions that are drawn therefrom. Every housewife knows, for example, that despite Bureau of Labor Statistics figures, showing that the cost of living has risen only by some 64 percent since 1939, measured by her own purchases, the increase has been considerably greater. A dollar just hasn't the purchasing power that it should have, and all of the experts' figures will not convince her otherwise.

Just how true this is may be demonstrated from the following statistics gleaned from the Guarantee Survey for November 26, 1947. Let it first be understood that the Guarantee Survey is not a group of long-haired theorists, hired to prove a particular point, but a regular monthly business survey published by the Guarantee Trust Co., of New York, a banking institution with more than $2,000,000,000 of assets. If there is any bias whatever it certainly would not be in the direction of the average wage earner, either as an individual or as a group. Rather, the survey is a factual study prepared for the guidance of the business and investment world which must at all times have the benefit of accurate information. This survey then may be considered as reliable as human frailty will allow with a reasonable margin of error. According to this survey, "of special interest in connection with the President's observations concerning wage-price relationships is the latest official report on workers' earnings and the cost of living. This indicates that the average weekly earnings of factory workers rose from $24.54 to $46.32 in June 1945, but that the benefit to workers was halved by the rise that took place in the cost of living during the same period, despite wartime price controls. In terms of 1939 dollars, the average wage rose from $24.54 to $34.10. Between June 1945 and September 1947, money wages increased further, from $46.32 to $50.42; but the cost of living rose more rapidly, with the result that wages in terms of 1939 dollars declined from $34.10 to $29.46. During the entire period from 1939 to September of this year, money wages more than doubled; but four-fifths of the increase was offset by the rise in the cost of living, leaving an advance of 20 percent in real wages or purchasing power."

Thus it will be seen that despite an increase of almost 100 percent in weekly wages, the real wage of factory workers has increased only $4.92 or 20.4 percent during the period between June of 1939 and September of 1947. In the case of the postal worker, however, the story is altogether different. He not only fails to show an increase in real wages, but has actually suffered a reduction in real wages of $10.01 per week, or a decrease of more than 24 percent during the period between June 1939 and September 1947. Assuming the enactment of legislation to provide for an increase of $1,000 per annum, or $19.23 per week before taxes or retirement deductions, the actual increase in real wages contrasted to 1939 would be exactly $1.17 per week.

Postal workers, therefore, are not at all unreasonable when they request the Congress to take early steps to adjust postal salaries to present-day conditions. Even the increase of $1.17 per week would not restore post office employees to the positions enjoyed in June of 1939.

Cuts in the Veterans' Administration

EXTENSION OF REMARKS
OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 5, 1948

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include a letter which I have received as chairman of the Committee on Veterans' Affairs from the national commander, American Veterans of World War II, concerning the proposed cuts in the Veterans' Administration:

AMVETS OF WORLD WAR II,
Washington, D. C., March 4, 1948.

The Honorable EDITH NOURSE ROGERS,
Chairman, House Committee on Veterans' Affairs,
Old House Office Building,
Washington, D. C.

DEAR MADAM CHAIRMAN: As the chartered spokesmen for the Veterans of World War II, AMVETS are unalterably opposed to the pending butcher-knife blitzkrieg against Veterans' Administration personnel which Gen. Carl M. Gray, Jr., the Administrator of Veterans' Affairs has himself called drastic.

While sympathizing with the Administrator in his budgetary predicament, AMVETS believes that all other avenues of economy should be explored before resorting to meat-ax method that can result only in impaired service to veterans and even more chaotic morale within the Veterans' Administration itself.

In this connection, AMVETS wishes to commend heartily the constructive and humane action of the House Veterans' Affairs Committee for its forward-looking resolution of March 3, 1948, urging General Gray to hold his reduction in abeyance until such time as a more detailed review of the problem is possible.

By this action, the House Veterans' Affairs Committee has given a demonstration of thoughtful public service that is worthy of high praise as an example of congressional guidance and solicitude.

On the basis of reports from its own service officers throughout the country, AMVETS feels that if the present VA reduction program is followed it will create either tremendous backlogs of nonadjudicated cases or, worse, increase the volume of sloppy adjudication of veterans' claims.

For example, one VA official in the New York office has testified that the proposed slashes will reduce his vocational guidance staff for the aid of disabled veterans under Public Law 16, from 250 to 85, requiring each man to be responsible for a thousand cases in that area, an obvious impossibility.

AMVETS have long been convinced that the Veterans' Administration could better stay within its budget and better provide service to veterans by the outright abolition of its branch offices.

First of all, such a course would return death claims and insurance cases to regional offices where they would be more accessible to individual veterans with better service resulting.

Second, such a move would help preserve a larger staff, at less cost, on the adjudication and operational levels by ridding VA of high-classified administrative jobs of doubtful need in branch offices.

In many instances, the present personnel reduction plan contemplates weeding out Grades 6, 7, and 8 at regional office levels. It's the old story of lopping off the people at the point of contact with the veteran to preserve the job entities of higher-ups.

One example of this situation can be found in a regional office that has recently come to our attention: This office now has four rating boards; it has between 1,000 and 1,200 cases per month. Computing this on a 20- or 21-day month and an 8-hour day, the 4 boards now existing could give an average of only 10 minutes consideration to each case.

Under the present reduction plan one board would be eliminated from this office, leaving but three, although the case load will in no way diminish; therefore, the cases will get 7½ minutes consideration or, of necessity, a tremendous backlog will build up.

Considering that experienced service officers of the veterans organizations feel the average time for consideration of average cases must be 30 minutes in order to do full justice and to be sure the law and all facts are given consideration, it would be a rank injustice to the veteran clients to establish a condition in which average consideration cannot exceed 7½ minutes.

Therefore, AMVETS urges you to consider the non-essentiality of VA branch offices bearing in mind not only that such action would obviate the personnel economies envisioned and make death and insurance claims more accessible but also that such action, once and for all, would end the vicious practice of shifting every reduction in force onto the lowest and most functional levels to safeguard the jobs of remote administrative personnel in the higher grades.

All these proposals conform with mandates of the last AMVETS national convention in Columbus, Ohio, which condemned the financial mismanagement and unnecessary cost in branch office operations and urged establishment of three area offices having the same function and authority as the central office.

Copies of both resolutions are enclosed for your information.

Yours sincerely,

EDGAR C. CORRY, Jr.,
National Commander.

Resolution 31

AMVETS condemns the present financial mismanagement and unnecessary costs resulting therefrom at the branch-office level of Veterans' Administration, since this draws away from the operating levels funds which are necessary to the proper service to veterans. This is aimed, particularly, at the present conditions which are, in many instances, preventing the payment of transportation to veterans who require physical examinations, or counseling and guidance at Veterans' Administration regional offices.

Resolution 36

Be it resolved in AMVET convention assembled at Columbus, Ohio, October 2–5, 1947, That the Congress of the United States and the Administrator of Veterans' Affairs be memorialized to abolish Veterans' Administration branch offices, by returning the functions of same to the regional offices, and that in the place of branch offices there be established three area offices having the same functions and authority as the central office, these three area offices to be located as follows:

I. In the northern area, centrally located to serve the Northeastern States plus a portion of the Middle Western States.

II. To be located centrally to serve the Southern States and a portion of the Southwestern States.

III. To be centrally located to serve the far West States plus a portion of the Midwestern States.

ERP: It Is No Alternative to Armament Race

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 5, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an article by Mr. Wilbur J. Brons, writer in the Chicago Journal of Commerce, on February 28, 1948:

ERP WAS ASSUMED TO BE ALTERNATIVE TO ARMAMENT RACE

If the architects of American foreign policy had not carried over into the postwar period their wartime habit of cultivating a new international folklore, they probably would not now be up against the problem of explaining away some obvious inconsistencies.

In retrospect, it seems likely that we would have been a good ally of Russia without having propagated the fairy tale that Stalin had become a champion of a common brand of democracy. Having taken that line, however, our State Department is confronted with the current necessity of convincing us that the Soviet Man of Steel never really changed at all.

Similarly, official propaganda for the European recovery plan now turns out to be as full of holes as a blue ribbon Swiss cheese. For example, the major argument in favor of ERP has been that it was an alternative to something too horrible to contemplate. In other words, we were confronted with a choice.

We were told that by providing the sinews of the cold war we could prevent the hot war that would inevitably ensue when all of Western Europe had gone Communist. On that basis, $17,000,000,000 for a 5-year program of European economic aid was an A–1 bargain in any man's reckoning. Following this line, Army Secretary Royall even went so far as to intimate that ERP was about the only thing that could save us from immediate rearmament and another draft army.

Millions of American citizens sold themselves on ERP on the basis of that reasoning. They now learn, to their dismay, that military men do not believe we can underwrite European economic recovery without being prepared for trouble. According to Washington reports, these men have informed the Senate Armed Services Committee that ERP means we must also step up our spending for military preparedness about 100 percent.

The new budget with which Congress is currently wrestling calls for some $11,000,000,000 of military appropriations. To bring the figure to the level the military men regard as safe would mean to increase it to $22,000,000,000.

There is, of course, nothing sacred about military estimates of what will be needed for defense. The military arm is traditionally careless of dollars. But the fact that military men do not believe we have a choice between ERP and turning the country once more into an armed camp demonstrates that Congress has been on sound ground all along in not wanting to be pushed into the recovery program on a take-it-or-leave-it basis.

No other nations on earth, so far as we have been able to discover, apologizes for putting self-interest first. But in the United States intelligent self-interest seems to be as reprehensible now as it was before Pearl Harbor when it was pointed out that lend-lease was not an alternative to war, but a downhill road into the conflict.

Housing's Straw Man—The Taft-Ellender-Wagner Bill

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 5, 1948

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement entitled "Housing's Straw Man—The T-E-W Bill," Henry M. Propper, executive vice president of the National Committee on Housing:

The National Committee on Housing is a citizen organization of leaders in all related fields which devotes itself to constructive activity for the building of better homes and communities and to impartial and objective study of the many problems involved.

For 2 years Congress has been stalemated on housing legislation in the face of a persisting shortage of homes which for gravity and sheer magnitude surpasses anything in the Nation's history. At last count more than 100 housing bills are pending in House and Senate. For the most part they represent attempts to flank the Taft-Ellender-Wagner comprehensive housing bill—by now a sort of "West Wall" around which so furious a battle has been fought that any question of the bill itself or its current value has been overlooked in the heat of the struggle. It is no minor skirmish when Senator TAFT is accused of following the Communist Party line for sponsoring a piece of housing legislation and then the finger is put on his accusers by President Truman as a lobby which has shown a ruthless disregard of the public welfare. (Herbert U. Nelson, spokesman for the National Association of Real Estate Boards, has since apologized publicly for his crack at the senior Senator from Ohio, but the President's charge, while it did not produce the congressional investigation he asked for, probably had some connection with the indictment which the Department of Justice obtained a few weeks later accusing NAREB of conspiring to fix real estate commissions.)

These incidents more or less typify the sort of battle royal which has been fought over the T-E-W bill from the time of its first introduction in the fall of 1945. Conceived as a bipartisan measure to take housing out of politics, the bill was the product of much politics, the bill was the product of much more thorough-going study than is common with legislative formulations. It blazed a number of new trails. For the first time a genuine attempt was made to tackle the Nation's housing problem in its entirety, not just rehousing low-income families living in city slums, but also farm housing; the housing of moderate-income families; basic research into housing's many problems; rebuilding decaying older sections of cities; fostering investment in housing by large insurance companies and similar groups, and not least important, gathering together under one permanent central agency the Federal Government's money, diffuse, and frequently competitive housing interests and activities.

Battles have been waged over every one of these proposals and reached a peak of white-hot ferocity in the clash over the bill's provisions for continuing the Government subsidized public housing program initiated first as a PWA project in 1934 and formalized into a definite Federal program under the United States Housing Act of 1937. To the real estate and residential-construction industries, the mortgage bankers and the manufacturers of building materials, this is socialized housing. It spells the end of the free enterprise system and must lead inevitably to state socialism. To many labor unions, housing, civic, religious, and welfare organizations and liberal groups generally, it is the only way to make adequate, safe, and healthful homes available for low-income families.

A 2-YEAR FIGHT

So the battle lines were drawn when the bill was introduced more than 2 years ago. Each side has had its successes, the pro-T-E-W bill forces winning a favorable Senate vote in the closing days of the Seventy-ninth Congress in the spring of 1946 only to be blocked by the opposition when the bill came to the House. At the last session (the first of the 80th Congress) the bill barely got out of committee in the Senate by a 7 to 6 vote, and made no headway whatever on the House side of the Capitol.

Now those battle lines have grown fast. More than that, the T-E-W bill has itself become a symbol, a standard for rallying the forces of good and evil. To one side all who favor it are reds, bureaucrats, or long-haired visionaries who would destroy the American way of life; to the other, those who oppose

it are grasping, predatory, selfish individuals and groups of great power ready to thwart all human progress for their own enrichment.

BILL NOW A SHELL

The sad fact is that today they are fighting with undiminished fury over a straw man. As a comprehensive over-all housing program, the T-E-W bill is by now pretty much an empty shell. Of its 13 divisions, or titles, as they are called, only 3 can be said to have much point or purpose in dealing with the immediate emergency or the long-range need for housing. The other 10 titles either have been enacted into law or are obviously ill-advised under present conditions or no longer fit the situations with which they were intended to deal and therefore need comprehensive restudy.

No matter what the angle of approach, housing is a highly complex, technical subject and likewise any legislation dealing with it. Little wonder then that the T-E-W bill's 112 pages covering the entire housing front have proved too big a mouthful for popular digestion, leaving the battle to be fought with slogans, catch phrases, and name-calling.

Let's look at the bill, title by title:

Title I is really a preamble which sets forth a Government housing policy and purpose in broad general terms, and like most preambles, offers little reason for specific quarrels. For the purpose of this review, therefore, it can be rated of little importance.

SOME PROVISIONS ENACTED

Title II. This title would establish a single permanent agency of the Federal Government under which would be gathered rather loosely its many housing-related activities. Such a single agency had been set up on a temporary wartime basis in 1942 by executive order of President Roosevelt but would have lapsed within 6 months after the end of the war emergency. Substantially the same purpose has been accomplished under President Truman's Reorganization Order No. 3 which became operative in July 1947. Over the hard-fought opposition of real-estate, home-building, and other interests, a permanent central housing agency was established under the general procedure enacted by Congress for the reorganization of Government agencies when the Senate refused to join the House in disapproving the plan within the required 60-day period following its presentation. Watered down somewhat from the formula originally provided in the Taft-Ellender-Wagner bill and therefore not altogether acceptable to housing purists, the Housing and Home Finance Agency as set up by the President's reorganization order can accomplish the major intent of title II. Even the most ardent Taft-Ellender-Wagner bill supporter would be unwilling to fight, bleed, or die for what is left.

Title III. During the defense and war emergency periods a number of the Government's housing-related agencies were shunted around and new ones created to the point where their legal genealogies and relationships became pretty badly tangled. This title, largely administrative and legalistic, seeks to untagle these lines and reestablish the status of the agencies. President Truman's Reorganization Order No. 3 covered much of what title III undertook to accomplish and therefore this title, too, can be dismissed as unimportant.

ONE NONCONTROVERSIAL SECTION

Title IV is important but relatively noncontroversial. It provides for governmental research and studies in the housing field, where both are greatly needed. In the original version of the bill, the research title seemed to some building-material manufacturers and university research centers to threaten an invasion of their territories or a duplication of their efforts. Subsequent modifications allayed most of these fears, making title IV one of the very few over which there has been no knock-down and drag-out fight. The need for basic studies and research in housing is greater than ever.

Title V is another of those administrative and legalistic affairs intended in this instance to facilitate the mortgage-insurance operations of the Federal Housing Administration and the federally chartered savings and loan associations. Almost all of the modifications proposed have been enacted into laws in separate bills so that what remains of title V need give no one sleepless nights.

Title VI was intended to help supply an answer to the housing problem of that great in-between group which exists between the lowest-income families eligible for Government subsidized housing and the families that have enough income to buy or rent adequate housing in the open market—the so-called no-man's land in housing. Further liberalization of mortgage credit is the method proposed with special encouragement for so-called mutual or cooperative housing undertaken by trade-unions, limited-dividend companies and similar groups. However estimable in purpose, the idea of further liberalizing mortgage credit for housing economists, analysts and groups as soon as the bill was introduced. They contended that mortgage money was the one essential to a large-scale housing program which was in abundant supply. Title VI of the Taft-Ellender-Wagner bill, they said, would serve only to feed the inflation already evidencing itself.

OPPOSITION WELL FOUNDED

Events of the past 2 years have proved this opposition more than well founded. The Government's housing credit program of insuring 90-percent mortgage loans under the Federal Housing Administration and the well-intentioned 100-percent housing loans to veterans under the GI bill of rights, was capitalized promptly in the form of higher costs and thus contributed largely to the present inflation in construction. If the recent anti-inflation talk heard in Washington at both ends of Pennsylvania Avenue, is any criterion, this fact is now being recognized, if somewhat belatedly. In any event, put T-E-W title VI down as one section of the bill that we will do much better without.

Title VII—yield insurance——was intended to open the door to what has long been talked of almost as a housing nirvana—the building of moderate rental apartments on a long-term investment basis instead of as a speculation. The arguments in favor of the investment approach are unassailable whether from the standpoint of the tenant or the community except that we have been unable, so far at least, to develop a formula that will attract large-scale investors as distinguished from real-estate speculators. Under title VII, insurance companies were to be attracted on the theory that direct investment in apartment houses as owners, builders and operators would provide an unusually suitable outlet for their funds. Since they would be interested in the security of their investment and assured long-term income, they would produce better housing and be satisfied with a moderate but certain return instead of seeking quick speculative profits. The principal objection of insurance companies, savings banks, and similar institutions has always been that as trustees for the funds of policyholders or depositors they could not in conscience accept the risks involved in long-term real-estate investments.

PROVIDED GOVERNMENT INSURANCE

Title VII was designed to remove the risks by having the Federal Government guarantee under an insurance scheme that such investments would produce a return of not less than 2¾ percent annually. If not, it would make up the difference or take over the projects. But the plan also put a ceiling of 4 percent on the profit from such housing project investments and lodged fairly strict supervisory authority in the Government. In 1944 when the plan was worked out with insurance company representatives, it looked pretty good to a number of important companies. By 1946 and 1947 they had lost all interest and were going ahead on their own. Spokesmen for leading companies have stated flatly that they would not operate under the yield-insurance plan if enacted. Without the active interest of the insurance companies, yield insurance is a dead duck and so we can mark title VII off the list.

The next title, No. 8, deals with urban redevelopment, one of the most pressing and difficult problems confronting American cities—a problem that seriously burdens municipal finances and presents a very real threat to their future. Essentially, urban redevelopment is a problem in city planning rather than housing, although many confuse the two, particularly "housers." It arises from the fact that almost all American cities have grown and continued to grow on the edges in ever-widening rings while the older central areas suffer more and more from blight and decay. Older residential areas keep slipping down hill until they become slums. Older business districts go the same way. The disease is progressive and may in the end prove fatal since it saps real-estate values and tax revenues.

The only known cure is to replan and rebuild the blighted areas, but is almost impossible to apply in the ordinary course of economic events. Centrally located city land is high-priced land even though it is burdened with hopelessly antiquated or perhaps boarded-up buildings. These structures also add to the price. And it costs plenty to tear down the old buildings to clear the way for new construction. Put all these factors together and you have a land acquisition cost so high that it is virtually impossible to set up an economically sound rebuilding plan in terms of the current reuse value of the land. A number of States and cities were at long last beginning to face up to urban redevelopment in the years just before the war, but for the most part their efforts served only to demonstrate that no plan could accomplish very much without offering some way of absorbing the difference between the cost of buying up the blighted areas and their reuse value.

INVOLVES HUGE SUMS

The sums involved in urban redevelopment are so huge that few cities or States can even think in terms of the amounts required to write down the land cost to the point where rebuilding for residential, business, or any other use is feasible. Therefore, they looked to the Federal Government and title VIII was devised to provide loan funds and a subsidy of up to 50 percent of the land cost. Of course the subsidy grants would be hedged about with all sorts of restrictive conditions, Federal supervision, and requirements for matching local contributions of various kinds, all of which added up to one of the most involved and intricate formulas ever devised even in the housing field. Some State and municipal officials don't want Federal aid because of the "dictation from Washington" which it may involve, but many would welcome it as the only practical way out of their urban redevelopment dilemma.

At the moment very little can be done about actually clearing and rebuilding blighted city areas. Any plan that requires tearing down an existing dwelling, even the

poorest slum tenement, must be postponed until other housing is available into which to move the families that are to be displaced. But every urban redevelopment job is loaded with legal and technical difficulties and requires a tremendous amount of planning and preparation. It is none too soon to work out a program or formula so that cities may know what help they are to get, if any, and can start making definite plans though their execution may be 2, 3, or 4 years off. Title VIII then is still something to think about and merits prompt action.

Title IX is the villian of the piece in the eyes of the real estate, home-building, and allied industries. This is the title which would continue the public subsidized housing program initiated under the United States Housing Act of 1937 by which the Federal Government made loans and subsidy grants to municipalities and other local governments to provide housing for low-income families. About 200,000 family dwelling units of the Nation's total of 40,000,000 have been built under the program and the new bill proposes an additional 500,000 units to be built over a 4-year period.

This particular fight has been going on for years. It has its roots in the fact that historically, in good years and in bad, a sizable part of the population could not afford safe, healthful, adequate housing, including a substantial proportion of families who could stand on their own feet insofar as food, clothing, and other essentials were concerned—but not housing. As our standard of living progressed upward, so did our ideas of what was a minimum standard of safe, adequate and healthful housing. Inevitably the typical slum tenements of Boston, Chicago, Cleveland, New York, and other cities suffered more and more by comparison. Private enterprise never could and cannot now build new homes for this portion of the population as a straight business proposition. Its contention has been that the normal economic process by which it builds for those who can afford to pay makes the housing vacated by these families available to those lower down the economic ladder and so the process of upgrading the housing of lower income families goes on continually.

HELD TO BE NO ANSWER

That answer never satisfied the civic, welfare, religious leaders and others who kept hammering away at slum housing. They insisted that by the time housing came down within reach of low-income families, it was slum housing and as slum housing went on almost indefinitely. The social ill effects of substandard housing, its toll in lives due to fire and health hazards, its disease and crime-breeding potential, its crippling effect on family life, all were stressed along with the burdens, financial and social, which these ills imposed on the rest of the population. Government subsidy to make up the difference between what these families could afford to pay and the cost of adequate housing was the only rational answer to their view. In the progressive economic and social climate of the 1930's, the program was initiated which provided something less than 200,000 family dwelling units, but an attempt to extend the program in 1939 encountered mounting opposition which continued to grow during the war years.

WASTE AND INEFFICIENCY CHARGED

With the introduction of the T-E-W bill at the war's end, the fight really assumed major proportions and has continued unabated ever since. Behind the more generalized attack of the real estate, home building and other industries which labels public housing as socialistic or communistic, are specific charges of waste Government funds, competition with private enterprise, inefficiency in operation and administration, and using public housing for political purposes. These have been aired in congressional hearings and investigations, in the press and on the radio. Whether any of the charges have been proved or disproved depends pretty much on individual emotional slants and the will to believe. That there have been a number of instances of all these malpractices is undoubtedly true. It is equally true that many of the local housing authorities which plan and manage the public-housing projects have been efficient, economical and nonpolitical in their operations. (All building is done under contract by private construction firms.) These local housing authorities are in almost all instances agencies of the local municipal government and by and large it may be said that where local municipal administration is good, the work of the housing authority will also be of a pretty high order. The 500,000 additional units proposed in title IX of the T-E-W bill would be developed and operated by local housing authorities as under the United States Housing Act of 1937.

NEEDS PERSIST

To the building and real estate industries all the rest of the T-E-W bill is a cloak fashioned by the public housers to cover title IX coupled with the further villainy of trying to masquerade it as an emergency measure which will help house veterans in the current acute shortage. The latter half of that charge is not without substance. The T-E-W bill was devised as a long-range program and few of its provisions would have had any beneficial effect on the immediate situation even if it had been enacted promptly when introduced. Put that down as a tactical blunder on the part of the bill's supporters. It does not alter the basic fact that many thousands of low-income families—veterans and others—are unable to obtain adequate homes. And as the price spiral in construction continues upward, their chances become even dimmer. The low-income veteran in the northern half of the country wants to rent a house or apartment for somewhere between $30 and $50 a month. That is the most he can afford. Many nonveteran families can afford no more. This year's record home building provides nothing for either at anywhere near that price. Both the immediate problem of homes for veterans who cannot afford today's prices and the permanent problem of housing low-income families have to be faced. Sooner or later the issues present in title IX must be fought out and determined.

FARM HOUSING PROGRAMS

Titles X and XI deal with farm and rural nonfarm housing and were included to make good what was perhaps the most glaring omission in the United States Housing Act of 1937. That measure, while it spoke of housing generically, was framed in terms of urban conditions and needs—yes; even big-city conditions and needs—and offers no workable basis for extending public-housing assistance to the rural and farm population. When this lack became apparent, some attempts were made to provide subsidies for farm housing which produced a few houses but proved conclusively the practical impossibility of bending the big-city program to fit farm conditions. For the T-E-W bill the Department of Agriculture prepared a farm housing program while still another program was devised for rural nonfarm housing. Like the rest of the bill, these titles are the product of 1944 thinking in terms of prewar farm conditions which many thought would return after the war's end. Today's farmer is quite another person living under totally different economic conditions.

Not that all tenant farmers, share croppers, and tillers of scabby hillside patches have become wheat kings, but obviously farm housing needs now are not what they were before the war. Likewise the 1940 housing census statistics used in formulating the program are by this time completely meaningless. The very least that can be said about Titles X and XI is that they need complete restudy.

The two remaining titles, numbers XII and XIII, need not delay us long. The substance of Title XII providing regulations for the disposal of Government-built war housing has been covered in a bill passed at the last sessions. Title XIII consists of a series of perfecting and administrative provisions important to lawmakers and lawyers but scarcely to anyone else.

SHOULD SEPARATE ISSUES

Just where does that leave the T-E-W bill? Actually it leaves three titles which merit serious consideration: the research section, title IV; the urban redevelopment section, title VIII; and the public housing section, title IX. To speak of it as a comprehensive housing bill is obviously inaccurate. Worse than that is the confusion which is created in the minds of sincere people. At least two of the three remaining sections embody policies and programs on which there is sharp conflict of opinion, more or less reasoned in the case of urban redevelopment and highly emotional in the case of public housing. Decisions of some sort should be reached promptly—almost any decision would be better than the present stalemate. And the surest way to reach those decisions, to strip away much of the present lack of understanding and confusion would be to dump the T-E-W bill overboard. Then these three remaining sections could be fought out individually. The time, thought and painstaking effort that went into the preparation of the T-E-W bill have not been wasted. As nothing else could, discussion of the T-E-W bill hammered home the fact that housing is not a problem of low-income families alone but of all the housing of all the people; perhaps even more important, it stressed the relation of all housing to the growth and development of communities, and pointed up the need for long-range planning and programing. These ends have been served and the accomplishment can be put down to the credit of the T-E-W bill.

In the final analysis, the American electorate will decide how much, if any, public subsidized housing it wants; how much it wants the Federal Government to bail out our cities. These decisions can be made more soundly and more quickly if the issues are clear cut.

Coal-Mine Fatalities

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 5, 1948

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a very enlightening report from the United States Bureau of Mines which appeared in the March 1, 1948, issue of the United Mine Workers Journal:

SIXTY-FOUR THOUSAND ONE HUNDRED AND SIXTY-FIVE COAL MINERS KILLED AND INJURED IN 1947 WHILE SAFETY LEGISLATION IS STYMIED

American coal miners paid a terrible price in 1947 to provide the Nation with an abundance of coal, the highest peacetime production in history. A toll of 1,165 killed and

63,000 injured, with figures on the permanently and partially disabled still to be compiled, tells the story of the continued maiming and slaughter of American coal miners.

Nothing could be more obvious from the shocking record of 1947 than that the Federal Congress must enact police powers for Federal coal mine inspectors to enforce the standards of the Federal Mine Safety Code. The appalling toll of dead and injured reflects only too clearly the laxity of State enforcement and the 'nadequacies of State safety laws.

By way of comparison with previous years, the 1947 total of killed and disabled is the highest since the war year 1944, when 64,990 miners, or 825 more than last year, were casualties on the production front.

Revealing of the rampant negligence and laxity is the fact that there were 6 major mine disasters in 1947 which snuffed out the lives of 179 men. This ghastly record is worse than that of any of the war years, including 1943 when 8 major disasters claimed 175 lives.

Following the old pattern, falls of roof and face claimed the highest number of lives, 545. Haulage accidents, ranking second, resulted in 213 fatalities. Explosions—local and major—took 188 lives, compared to 32 in 1946.

Despite all the ballyhoo last year about 1946 establishing an all-time low as regards accident frequency in American coal mines, it now comes to light that while numerically, fewer miners were hurt and killed in 1946 than in the preceding war years, actually the fatality rate, based on man-hours of exposure, was the same as in 1945 and the nonfatal rate in fact was higher.

Preliminary figures of the United States Bureau of Mines, which take into account all time spent underground portal-to-portal, disclosed that the fatality rate per million man-hours of exposure was 1.1 in 1945 and 1946. The injury rate was 64.25 in 1946 compared to 60.32 in the preceding year and 59.06 in 1944.

Statistically, nearly two-thirds of the men employed in anthracite and bituminous coal mines have been killed or injured in the past 5 years. Following is the record of lost-time injuries and fatalities for the years 1943 to 1947 inclusive:

1943:
- Fatal accidents 1,451
- Nonfatal accidents 64,594
- Total accidents 66,045

Twenty-six permanent total disabilities; 1,287 permanent partial disabilities; 8 major disasters with loss of 175 lives.

1944:
- Fatal accidents 1,299
- Nonfatal accidents 63,691
- Total accidents 64,990

Seventeen permanent total disabilities; 1,293 permanent partial disabilities; 4 major disasters claimed 94 lives.

1945:
- Fatal accidents 1,079
- Nonfatal accidents 59,350
- Total accidents 60,429

Five major disasters, 68 lives lost.

1946:
- Fatal accidents 974
- Nonfatal accidents 56,800
- Total accidents 57,774

Two major disasters, 27 lives lost.

1947:
- Fatal accidents 1,165
- Nonfatal accidents 63,000
- Total accidents 64,165

Six major disasters took a total of 179 lives.

The United States Bureau of Mines announced that fatality figures for the years 1945, 1946, and 1947 are incomplete. In fact, like production figures, the Bureau apparently is never able to secure from State mining departments the complete totals covering fatal and nonfatal accidents.

1947 coal-mine fatalities, by State and cause

State	Underground									Shaft	Opencut	Surface	Grand total
	Falls of roof	Falls of face	Haulage	Gas or dust explosions	Explosives	Electricity	Machinery	Other causes	Total underground				
Alabama	18	5	5			2	3		33	1			34
Alaska								1	1				1
Arkansas			1						1		1		2

The Work of the Subcommittee for Displaced Persons

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 3, 1948

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

PREPARATORY COMMISSION, INTERNATIONAL REFUGEE ORGANIZATION,
December 1, 1947.

Hon. JAMES G. FULTON,
Foreign Affairs Committee of the House of Representatives, Washington, D. C.

DEAR MR. FULTON: A copy of your report to Congress giving your views and conclusions on the operations of IRO and, in the larger sense, the displaced-persons problem, has just been delivered to me. May I say that it is the most accurate, objective, and constructive statement that I have encountered in 4 years of work in this field. The shortcomings of our efforts are not high lighted for sensational purposes and our accomplishments are adequately and fairly recognized. It is not a sob document but a rational presentation of an intricate, moral and social problem worthy of consideration and action on the part of those who share our political creed.

It is only right that I should advise you that as of January 1, 1948, our United States zone operation will effect a further reduction in personnel. The present staff of 675 persons will be reduced to 590. We will not suffer particularly in operations but it does reduce the amount of manpower that can be devoted to such programs as Child Welfare and to supplementary services. We are reviewing the program assignments of the voluntary agencies in an endeavour to achieve more effective coverage of these areas of operations.

I enclose herewith a recent information product of our office and will send along others under separate cover. I believe this document has value and meaning for use in educating the people of our country as to who and what the displaced persons are.

May I again say that your visit, discussions and observations on the United States zone operations are a source of encouragement and satisfaction to those of us who live and work so intimately with this problem and these people.

Sincerely,

PAUL B. EDWARDS,
Chief of Operations.

The Poll Tax

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 5, 1948

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter on the poll tax which I have received from the Hon. Virgil H. Goode, Commonwealth's attorney of Franklin County, Va. Mr. Goode has served four terms as a member of the general assembly of Virginia and he knows from first-hand experience just how the poll-tax system works in a poll-tax State.

FEBRUARY 10, 1948.

Hon. GEORGE H. BENDER,
House Office Building,
Washington, D. C.

DEAR MR. BENDER: I wish to acknowledge your letter of February 3, 1948, relative to your bill, H. R. 29, which has for its purpose the abolishment of the infernal poll tax, now being imposed upon the citizens of seven southern States. I think if your bill could be enacted it would be one of the greatest blessings that could ever happen to the people of the South.

I represented my county for four terms in the general assembly of Virginia, and was recently elected Commonwealth's attorney of Franklin County, and as an office holder, I am in favor of abolishing the poll tax, but I would say that 90 percent of the office holders are not in favor of abolishing the poll tax, because it is used as a means of perpetuating themselves in office.

I certainly trust that your bill will be enacted into law this session so that the people of the South would have the privilege of voting for Federal officials under this new law.

Wishing you success with this bill, I am,
Yours very truly,

VIRGIL H. GOODE.

United Nations

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 5, 1948

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the gentleman from Maine [Mr. HALE] at Yale University on February 13, 1948:

Mr. Chairman, in the remote epoch before Adolf Hitler flung his Wehrmacht at the Poles, it was a favorite practice of rhetoricians to paint word pictures of gray and cynical old men sitting in Parliaments and Chanceries voting away the lives of brave and beautiful young men in the name of national aggrandizement or glory. The rhetoricians must now paint an entirely new set of pictures. The statesmen of the future may be as gray, as cynical, and as unprincipled as those of the past but, whatever else they will do, they will not sit safely in their parliaments and chanceries while young men fight wars. In the wars of the future they are going to be killed, and the chances are that they will be killed a little sooner than the brave and beautiful young men. And this, as far as I am concerned, is as it should be. Members of Congress would do well to consider that they can die atomic deaths fairly early in the course of another conflict.

If this were a class in constitutional law I would pose to you the question just how we would conduct a war if the President, all his Cabinet, and the majority of the Members of Congress were wiped out in one air attack over Washington. Who would vote the appropriations? Where would we get the new President if all his statutory successors were annihilated? Should we amend the Federal Constitution to provide for the eventuality of a virtual annihilation of the Federal Government? Can Congressmen function as such if dispersed in their home towns communicating only by radio and telephone and television? These visions of national anarchy flit through the mind of a Congressman when he contemplates future wars.

I have talked to very serious thinkers who seriously urge that our great American cities be fragmented and dispersed over the continent, the larger cities to be 30 miles long and half a mile wide, so as to be less vulnerable targets. I do not think that Congress would get much support in public opinion for a program so preposterous and so expensive. I just don't think that New York and Chicago, Pittsburgh, and Detroit can be transplanted in this way. It is true that we can put the aircraft industry underground and the munition factories in the mountains. We could have a score of blast furnaces in each of the Rockies. Mount McKinley would shelter a thousand, and there is always the Mammoth Cave. But you must still raise crops where the sun and the rain will reach them. Human beings have not yet conditioned themselves to a permanently subterranean life. What good would it do to put the aircraft industry underground if all the people who work in the aircraft factories have to live above ground and be killed? Man is still a supraterranean animal, and unless you can give him a supraterranean future he might as well have none at all.

The Romans had a phrase for this idea. They used to say that it was no use propter vitam causas vivendi perdere—for the sake of living to lose all the reasons for living. Our problem is to preserve not merely vitam but the causas vivendi as well. And the problem cannot be too often or too boldly stated.

And consider the budgetary aspect of the situation. Ten billion, in round figures, for defense this year. But the President's Air Policy Commission, writing of survival in the air age, correctly points out that we have no adequate air policy and are not beginning to spend enough on aviation. By 1952 we must be spending 18 billions annually for defense, three times the whole cost of government in 1939. I hear politicians reproached for being unwilling to face these simple facts. It may be that they are. Probably all leaders need a certain amount of leading. That is where you come in. Everybody would like to be living in the days not merely before Hiroshima but before Coventry and Guernica as well, but it will do no good. We have got to learn our history this time. It's the one course we can't afford to flunk.

There is no doubt a case for saying that that homo sapiens should follow the course of the great saurians and more recently of the marsh hen, not to mention the more familiar dodo. Without wishing to be cynical and without being cynical in fact, I might say that the case for man's survival does not seem to me today so good as it did when I was a college undergraduate. In the two wars and the period of the dictatorships in Europe, men have certainly exhibited an incapacity to deal with their problems which few men of my age suspected in their youths. When other great mammals have been unable to adjust to their environment, they succumbed and are remembered only as fossils. Perhaps man who is after all only an exceptionally gifted mammal can ask for no better fate. But if we were agreed upon the mood of despair, we shouldn't have taken the trouble to come here at all. We are agreed that we are going to try to do something

about it. We are still continuing the experiment of the man whose birthday we observed only yesterday, to see not merely whether any nation conceived in liberty can long endure, but whether men who love liberty can endure to compose such nations.

What is the remedy? It is no doubt world government. But that will not help us much unless we know what we mean by world government and how we propose to obtain it. Otherwise this resounding phrase will deceive and repel and not elucidate or persuade. Indeed I am rather afraid that the phrase has already done a good deal of harm. It suggests that somehow we can suddenly slough off national governments and substitute for them a parliament of man sitting I know not where, ordaining the future of all men everywhere. I do not believe anything of the sort. The people of the United States will not suffer themselves to have their domestic lives regulated by the vast majorities of the human race which live on the continent of Asia. I do not envisage any world society which in any foreseeable period will supersede all existing governments. I do envisage an authority supranational in character with powers adequate to the maintenance of peace. I mean by this the prevention of aggression, the disposal of armed forces, the control of atomic weapons, and of other instrumentalities capable of exterminating lives on this planet. And this supranational authority must be an authority acting upon individuals and not merely on nations.

How is such an authority to be brought about? Shall we begin now by suffering the United Nations to follow the League of Nations, and calling a convention to create a new supranational organization which shall succeed where these have failed? I do not think so. I think that we must take the United Nations as a basis and proceed to give it greater powers. This was the idea which animated a group of us in introducing a concurrent resolution (H. Con. Res. 66) which we introduced on the 9th of last July, "That it is the sense of the Congress that the President of the United States should immediately take the initiative in calling a general conference of the United Nations pursuant to article 109 for the purpose of making the United Nations capable of enacting, interpreting, and enforcing world law to prevent war."

I believe that action can be obtained on this or some similar resolution at the present Congress. The House Committee on Foreign Affairs has promised to give it consideration immediately after the completion of the hearings on the Marshall plan. In the meantime there is in the House a movement afoot to introduce a more concrete resolution specifically advocating the elimination of the veto right by a permanent member in the Security Council but only in matters of aggression and armament for aggression, the prevention of armament for aggression, and the establishment of an international but tyranny proof world police force. The contemplated definition of aggression is to be "an attack by weapons of violence by a state or its citizens against the recognized territory of a member state." Such a resolution might deal even more specifically with armament quotas, vote revisions in the Security Council, etc. In any legislative body one must be governed by practicalities but the more powerful the expression of opinion we can obtain, the better. This is not a matter in which we need fear a certain measure of opportunism. Since the introduction of House Concurrent Resolution 66 everything internationally speaking has gone wrong. The Council of Foreign Ministers broke up. Our relations with Russia have steadily deteriorated. If the Marshall plan does not lead toward a closer union of the 16 participants it will prove to be what its enemies have been calling it—"operation rat hole."

If by a determined policy the Politburo will cooperate in revising the Charter of the United Nations, it is so much the better. But with or without Soviet cooperation, we must strive for a world society. I am not at all hopeful of getting Soviet cooperation. Still if we can be firm enough to convince the Kremlin that we have the strength and the will to resist their aggression, its leaders might decide that it would be worth while to come along.

In the formulation of opinion in this country, and in the world at large, organizations like yours can do immense good. My congratulations go to Cord Meyer for his fine book, Peace or Anarchy.

The American Legion, which has sometimes been thought of as being on the chauvinistic side, has made a most constructive contribution on the subject. Its executive committee in November 1946 adopted a resolution recommending three amendments to the United Nations Charter: First, reorganization of the Security Council and the World Court with a more effective representation of the nations and a final decision by majority vote abolishing the veto in all matters involving aggression or preparation for aggression; second, delegation to the Security Council of adequate powers to suppress aggression and prevent preparation therefor; and finally the establishment of a strong world police force to support the powers of the Security Council.

Senator TAFT has commended the Legion's suggestions, and I should be pleased if the party platform of my party were to adopt proposals of this character.

I should like also to commend the good work of those citizens, notably in Massachusetts, who have caused various towns to recommend action along these lines. Several towns in Maine are, I believe, preparing to take similar action at town meetings next month.

An almost vulgar publicity is now given to the fact that time marches on. We cannot move too soon or act too firmly. The mobilization of public opinion is a great undertaking, but I believe that you will find it singularly responsive to effort. Let me say as a practicing politician that women are particularly good at any organization or mobilization of opinion. Most politicians will agree that they are better than men.

Help us in the Congress all you can, and we in turn will try to help you for the survival of our species in a world society that will justify its survival.

Palestine—Are We Going to War Over It?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 5, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, there has been considerable misunderstanding of the issues and implications involved in the Palestine partition matter. The Arabs and Jews today are at war as a result of a recommendation made by the United Nations Assembly on November 29, 1947. The purpose of the United Nations is to maintain peace in the world. The action by the Assembly has resulted in war. Mr. Speaker, there appeared in the Janesville (Wis.) Gazette a pertinent editorial in the March 1 issue of that paper. Under leave to extend my remarks, I am including it at this point:

WILL WE FIGHT FOR PALESTINE?

Are the American people prepared to send American soldiers, sailors, and airmen to Palestine to carry out the terms of the partition which the United States has forced upon the United Nations? Zionists declare that partition is a fait accompli, but new states are created in only two ways: by agreement of the populations concerned, or by force of arms. There is no agreement. Therefore, the projected Zionist state must be set up by force.

Will Americans supply the force? British forces are now leaving Palestine and will be out by May 15.

By our pressure-tactics we forced France, Liberia, Haiti, Greece, Ethiopia, and the Philippines to vote with us for partition of Palestine—against their will—and thus earned their disapproval and aroused opposition among our good friends. At the same time and by the same act the United States, which had been held in high esteem by the Arabs, has thus inspired hatred where we previously had friendship. And those same Arabs control the oil wealth for which the Soviet Union hungers.

Make no mistake, those Americans, Jew and non-Jew, who want the establishment of a new Jewish state are not backward in their insistence upon American money, American arms, American ships, and American men to guarantee peaceful partition of Palestine. They are short-sighted. They will not admit the inevitable consequences.

There are many facets to this distorted political picture, including the Greek problem, the British withdrawal from Palestine, the oil, the opposition now uniting the entire Arab League, and the UN powerless to carry out the proposition which we placed before it—powerless because it has no military force with which to enforce partition.

Zionism is the cause of a new political Jewish state. Zionists are those who are determined to establish it, regardless of the consequences.

Judaism is the ancient religion of the Jews, a great moral force which has influenced men for centuries.

Zionism is based upon the hope of a Jewish nation in Palestine, a national home for Jews of all nations.

To the non-Zionist Jew his patriotism, his allegiance is to his own homeland, wherever he is a citizen. His faith in Judaism is as the faith of other religious men in their own religions—it has nothing to do with the political concept of a Jewish national state.

We in the United States, however, have been put in a very precarious position by the action of the administration in forcing upon the United Nations the partition of Palestine. Since we insisted that the Jewish state be established by dividing up Palestine into Arab and Jewish territory, we are more responsible for its security than any other of the United Nations.

It must be remembered that 6,000,000 Jews were killed by the Nazis during the war and that thousands of others in Europe hope to find a home in Zionist Palestine. Many of these are in a hopeless condition, suffering, impoverished, dependent, hungry.

Among the agencies trying to help them is the United Jewish Appeal, now seeking $283,000,000. Part of this fund will be used for relief, but much will be used to transport Jews to Palestine, where they cannot enter legally. Part will be used to buy arms to fight the Arabs, part to establish the Zionist national state.

It argues that "establishment of a new Jewish state was not merely the plan of American Jewry but had become an integral part of the foreign policy of the United States."

Julian Venezky, national chairman for regions of the United Jewish Appeal, declared that development and defense of the new Jewish state were "not merely the expression of the will and hope of the Jewish people but a matter of the foreign policy of the United States Government."

"American leadership in the program for the partition of Palestine into Jewish and Arab states," he said, "placed the United Jewish Appeal's drive in the position of backing up the accepted and official policy of our Government in the same way that we have embarked on the Marshall plan and other policies to sustain democracy in other parts of the world."

Eliezar Kaplan, treasurer of the Jewish Agency for Palestine, declared that the appeal for American funds would cover the cost of transporting 75,000 immigrants to be sent to Palestine this year because he was "confident transportation would be supplied by the United States Government."

He added that "the United States will be asked for loans and for surplus arms for the defense of the new Jewish state in Palestine. A small token international force in Palestine would make the Arab states think twice before attacking the Jewish state." The Zionists expect that private contributions for the new Jewish state must be supplemented by public funds, that our Government "or some appropriate agency must make it possible for the Jews of Palestine to secure without delay the arms and equipment they need for self-defense."

Many Americans who have proved their racial and religious tolerance, including a minority of the Jewish community, do not accept these assumptions. They support the American embargo on further armament sales to Palestine. Those who oppose Zionism risk being called anti-Semitic, however sincere their sympathy in behalf of Jews and all other human beings.

We are solicitous for the welfare of all peoples, including the homeless Jews of Europe, but cannot see a solution in the Zionist program.

As the well-known Minneapolis editor, Carroll Binder, has said, "if such a state could be created without harm to the rest of the world, I would support rather than oppose the Zionist proposals."

The two political parties have paid lip service to Zionism, courting Zionist votes. Pro-Zionist resolutions have been passed in Congress. Mr. Truman and Mr. Dewey have tried to force the British to allow immigration of 100,000 Jews into Palestine, against avowed Arab opposition.

Now, however, British soldiers will be recalled. Will American armed forces replace them? Will American taxpayers pay for protection of Jew from Arab and of Arab from Jew?

Until now it was easy to non-Jewish Americans, both tolerant and intolerant, to pass the buck to the British who were in control of Palestine. Now it is the problem of the United States and the United Nations.

Career diplomats and our foreign consulars in the Middle East have warned our State Department not to take this fatal step, but we forced partition, willy-nilly.

It is a problem now before the UN. We have not made our position clear—for we insisted upon partition, calling for security in Palestine by UN armed forces when the UN has no such forces.

We have jeopardized the world position of UN. It is worth watching from day to day.

Hon. Pete Jarman

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 5, 1948

Mr. JONES of Alabama. Mr. Speaker, I have included in my extension of remarks a newspaper article, issued by the Daily News Bureau which appears in prominent newspapers throughout the country, making an appraisal of the fine work of my distinguished colleague the Honorable PETE JARMAN. It is my high privilege to offer this article for the RECORD in order that it might come to the attention of the Members of the House who universally hold him in esteem and value the great work he is rendering our Nation.

ALABAMA'S JARMAN IDEAL CONGRESSMAN

(By Mac Lowry, Atlanta Journal Bureau)

WASHINGTON, February 14.—PETE JARMAN, sixth-term Democrat from Alabama, is a Congressman's Congressman. The phrase would fit several gentlemen on Capitol Hill, but it fits none any better, at least, than JARMAN.

JARMAN has courage, charm, and political know-how. He is a winner. He is about an 85 percent regular on partisan votes. His position as president of the Jefferson Islands Club means that he is just about the best Democratic "mixer" in the House.

But he would not be a Congressman's Congressman if he did not have something else—the political security which enables him to represent, in his own words, "the best interests of my whole country." When his convictions are stirred, JARMAN scorns the silent gentlemen "running for reelection" at his side.

A veteran of many years in the House puts it this way: "Pete goes along until the pinch comes and then moves out in front."

Representative JARMAN moved out in front last November when the House Republican leadership took what he thought was an unnecessarily long time to get a vote on the interim aid bill.

How long, he asked, would the Foreign Affairs Committee "continue this laborious, boring, unnecessary tweedledee and tweedledum?"

PETE JARMAN "tweedledeed" and "tweedledummed" the House until Capitol observers began digging into the record of this 55-year-old Alabama Congressman who was already in his sixth term. How had they missed him before?

When the interim aid bill finally came up for debate, the ranking Foreign Affairs Committee Democrat turned much of the floor work over to JARMAN.

The Alabamian, with the South in his mouth, a broad smile, and an inexhaustible fund of charm, talked and laughed many of his Democratic neighbors out of the fertilizer amendment and other restrictions to the bill.

"Mr. Chairman," he said, "the farmers of Alabama also need great amounts of fertilizer. The farmers of Alabama are also confronted with the unfortunate shortage of fertilizer to which reference has been made. The farmers of Alabama have also been misled into believing that shortage of fertilizer results largely, if not entirely, from the relief program.

"I yield to no man in my desire to appropriately represent the farmers of my district, but let us assume they are men with four sides, square men, and the farmers of my district are as square shooters as there are in the world. I do not want to represent just one of those sides. I believe that in voting for this amendment to eliminate fertilizer and farm implements from this bill I would be voting for one of the four sides of that farmer only."

The Jarman charm and political skill are such that while this homily was being delivered the gentlemen from Mississippi, Georgia, South Carolina, and other Southern States did nothing but beam at their colleague from Alabama.

JARMAN'S confident support of the administration's foreign policy—his record since lend-lease days is 100 percent—and his ability to draw his colleagues along are the products of two separate developments in the life of a congressman.

One began in Tuscaloosa, Ala., in 1938, when JARMAN, then running for his second term in Congress, heard Adolf Hitler make a vitriolic attack on the Czech president, Eduard Benes. JARMAN returned to Washington the following January with the aim of getting on the Foreign Affairs Committee, something he had only vaguely considered when his fellow Alabamian, Speaker Bankhead, had suggested it the previous term.

In 8 years on the House Foreign Affairs Committee JARMAN has traveled around the world, represented the House in South American republics and been in every European country outside Russia, Yugoslavia, and Albania.

He has vigorously defended the State Department, not only in major foreign policies but in such unpopular efforts as its overseas information program. When the House "Taberized" the Voice of America last summer JARMAN went out of his way to support even the much-ridiculed circus ladies in the State Department's traveling art show.

"We have circus ladies like that in this country," he said, "without embellishment, without making propaganda of it, and without, of course, emphasizing the defects, too.

"The serious effort of this program is to present * * * to the rest of the world a true picture of America."

His colleagues listen to JARMAN in a wholly different frame of mind from that they accord official witnesses, because they see in him the proven product of native American politics.

JARMAN'S father, Peter Bryant Jarman, was sheriff, tax collector, and probate judge of Sumter County, Ala., for 30-odd years. In his last county race the elder Jarman said:

"I have been in politics for more than 30 years and, so far as I know, there has never been a vote stolen or bought for or against me—that is the strongest compliment I could pay to this county."

"My father would have known if one vote had been bought, too," Representative JARMAN says today, in speaking of the man who was a greater political influence on his son than such Alabama intimates as the late Speaker Bankhead and the State's present Senators, LISTER HILL and JOHN SPARKMAN.

After graduating from the University of Alabama in 1913, PETE JARMAN tutored under his father in the probate office of Sumter County. When World War I came he attended the first officers' training camp and went overseas as a first lieutenant. He returned September 2, 1919, having been wounded in France.

His veteran's status was one motive for his appointment as assistant examiner of accounts of the State of Alabama by a man his father had opposed, Governor Kilby. His American Legion and National Guard activities helped him again in 1931 when he beat two strong rivals for secretary of state.

In 1934 JARMAN made his one unsuccessful race for Congress, losing out by only 2,717 votes to the incumbent, who had not been opposed since he had beaten William B. Bankhead 20 years before.

His potency at the ballot box assured, JARMAN bided his time until the retirement of the encumbent, serving in the meanwhile as State comproller under appointment from Gov. Bibb Graves. In 1936 JARMAN snowed his opponent under, 7 to 1.

In 30 years of political experience JARMAN has been aided immeasurably by a fund of good spirits. The list of organizations he has joined reads like a cross section of American life. None, perhaps, is more revealing of his current status than the Jefferson Islands Club, sponsor of President Roosevelt's many "harmony" sessions down on Chesapeake Bay.

JARMAN is president of the organization, which now will use St. Catherine Island, 59 miles from Washington, its old clubhouse having burned down in 1945. Vice presidents include such Democratic notables as Sam Rayburn, Alben Barkley, Millard Tydings, Jesse Jones, Bernard Baruch, Leslie Biffle, and Breckinridge Long.

The tongue-in-cheek objects of the club form almost a poem on the Democratic political spirit of which PETE JARMAN is the congressional denominator:

"For the purpose of supporting, defending, and advancing the fundamental principles of government enunciated by Thomas Jefferson.

"To provide a clubhouse with suitable surrounding and comforts where members may assemble, discuss, and promote Jeffersonian philosophies, to the end they may become controlling in Federal and State Governments."

The Importance of the Marshall Plan and Strengthening the United Nations

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 5, 1948

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an editorial which appeared on February 25, 1948, in the Daily News of Los Angeles, Calif.

I wrote this editorial in response to an invitation from Mr. Manchester Boddy, the editor of the Daily News.

The title of the editorial is "The Importance of the Marshall Plan and Strengthening the United Nations":

(Perhaps no issue before the American public has been so widely investigated, explained, and debated as the Marshall plan. Practically every Member of Congress had an opportunity to study the implications and problems involved in it at first hand, both in Europe and behind closed doors in official Washington. There has been ample time for deliberation and mature consideration. Soon the hour will strike when our Representatives in Congress must stand where all can see them and vote in support of or for the defeat of the Marshall plan. Today we hear from the Honorable CHET HOLIFIELD, Member of Congress from Los Angeles' Nineteenth District. Congressman HOLIFIELD is a Democrat serving his third term in Congress, to which he was first elected in 1942.)

Why is the European recovery plan which is commonly called the "Marshall plan," important to the butcher, the baker, and the haberdasher, on the main streets of our Nation?

Why should we continue paying high taxes in order to send food, machinery, and medicine across the oceans?

First, I will define my conception of the type of assistance to be given, and the main purposes of the Marshall plan.

(a) A plan to furnish 16 western European nations such food, machinery, medicine, and supplies as we can spare from our economy. These 16 recipient nations are composed of nations who have voluntarily expressed a willingness to cooperate with each other and with the United States in a program of mutual economic assistance.

(b) The purpose of extending this aid to these war-ravaged nations is to (1) restore normal economic functions within each nation and to facilitate the normal commercial exchange of area surpluses between all cooperating nations; (2) to strengthen existing constitutional governing bodies within each nation, so that government based on the principle of majority rule may be maintained and developed along democratic lines.

Let me state at once that I would prefer that our assistance to other nations be channeled through a functioning United Nations. Until the United Nations adopts the democratic principle of majority rule in place of the absolute veto by a single member nation, its function is frustrated. In the absence of a functioning United Nations, and until several Charter improvements are made, I believe we are justified in joining with groups of nations in mutual assistance programs. While this type of mutual assistance is not within the formal framework of the United Nations, it is certainly in harmony with the spirit of regional assistance groups permitted by the United Nations Charter.

The attempt to classify the so-called Truman doctrine plan of intervention in Greece with the Marshall plan as being the same is both deceitful and unjustified. The difference is important.

The Truman doctrine bypassed the United Nations by sending both arms, soldiers, and civilian supplies to Turkey and Greece. It was a unilateral move on the part of the United States with the acquiescence of the Greek Government.

It was in direct contradiction to the principle of multilateral solution purposed in the Charter.

The Marshall plan is a civilian rehabilitation program (no arms, no soldiers) arranged by mutual agreement between 17 nations, and is clearly in harmony with the United Nations purpose of peaceful, multilateral solution of international problems.

I voted against the Truman doctrine, and shall vote for the Marshall plan, if it conforms finally to the principles outlined.

We spent over $200,000,000,000 to win the war against the totalitarian nations of Germany, Italy, and Japan. We won the war, but our goal of world peace has not been achieved. Neither do we have any assurance that a totalitarian ideology of another kind will not spring from the chaos of Europe's ruined cities to replace the ideology destroyed.

Until the goal of world peace is achieved, our task is not finished. Unless we press on to finish the job, today's cessation of active war will be only the interlude between World War II and World War III.

On VJ-day, the United States found itself the strongest military nation in the world. We also had become the greatest industrial producer of all time.

The rest of the world, both victors and vanquished, were either crippled by physical destruction or bankrupt. Most of the European nations were both crippled and bankrupt. The mantle of world leadership was, therefore, thrust upon us.

It seems to fit us poorly, and the "new look" is still a bit uncomfortable. We have been loath to wear our new mantle with either the ease of experience, or confidence in our ability to fill the new role.

We must not bury our heads in the sands of yesteryear isolationism, but we must accept world leadership, because in this shrunken world we live or die together. Universal peace is inextricably dependent on a stable economic world. Unless western Europe is rehabilitated, her nations cannot resume their functions in international commerce and she cannot maintain or develop free constitutional governments.

Without world trade between free nations, we shall soon find ourselves in a domestic depression. We exported $14,000,000,000 worth of goods in 1947, and we imported $5,000,000,000 worth of goods. A better balance is necessary for world stability. This balance can be attained only through increased production abroad.

Unless stability is reestablished in western Europe, we shall see a totalitarian ideology arise from the wreckage of World War II. First Europe and then Asia will be melded into the Soviet orbit. Free governments and free commerce will disappear from four-fifths of the world's surface. And we shall be alone.

We shall be, for a short time, a free enterprise, constitutional island in a totalitarian world. I specifically say, "for a short time," because our constitutional liberties and our free-enterprise economy would soon be forfeited in the attempt to defend ourselves against a hostile world.

The cost of the Marshall plan in dollars may be 2½ percent of our national annual income each year, for a few years. It may total 6 percent of the amount we spent in the recent war. In comparison with the cost of World War II, and the potential cost of a Third World War, the cost of the Marshall plan is relatively small.

Let us be truthful and admit that there is no guarantee that the plan will be successful. Our wisest statesmen and economists frankly said: "The Marshall plan is a calculated risk, a gamble for world peace."

The American people, through their Congress, must make the decision soon. If we fail to accept the responsibility of world leadership, what will be the evaluation of history? What will the alternative be?

We are reaching against time, and the unknown factor of psychological reaction of desperate people. Our philosophy of freedom is competing with the slave philosophy of totalitarianism which thrives best in the soil of economic chaos.

We are racing against the deadline of atomic discovery in foreign laboratories.

The Moral Crisis Facing Our World Today

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 5, 1948

Mr. BENDER. Mr. Speaker, it is commonplace to talk in terms of crisis today. The world has become accustomed to the use of scare words, and it has become hard-boiled and cynical about them.

Yet no other word than crisis will do to describe the circumstances in which we find ourselves at this moment in world history. We are passing into one of the most important periods in the records of mankind, and the traditional guides which have charted the course of human conduct in ages gone by are impatiently pushed aside. Those who worship science and ignore humanity are ruling the roost. Their emphasis upon materialism has turned the world toward a mad race to accumulate power and wealth, no matter what may be the ultimate cost.

This is the moral crisis which confronts us at the opening of the atomic age. It is the same challenge that was flung at the world when the industrial revolution broke upon western Europe at the end of the eighteenth century. We failed to meet the issue then, and unless we reshape our thinking and our living today, we shall fail to meet it now.

Gilbert Chesterton once said:

> Christianity has not been tried and found wanting. It has been found difficult and not tried.

It is time to try it and to practice it if we are to survive.

What is the situation which confronts us today? We stand at the dawn of an era when the struggle of man to obtain his daily bread will no longer be the burdensome task it has always been before. The hours of work for the average man have been reduced from the daily 16 they were in the seventeenth century, the 14 they reached in the eighteenth, 12 in the nineteenth century to 8 and less than 8 in our time. The scientists tell us that 1 pound of uranium 235 has the energy equivalent of 20,000,000 pounds of coal or 10,000,000 pounds of gasoline. They are looking forward to the release of vast quantities of this revolutionary fuel power within the next 25 years. The hours of work which must be performed by men with this new resource at their command may diminish still further, if we use our power wisely.

If we can harness the potential power of this energy to the task of making the world a better place in which to live, we may establish heaven on earth. But if we do with atomic energy what we did with TNT, what we did with aviation, we may well succeed in destroying the earth itself. The use we make of this great power will determine the future of our civilization, and the decision we make must be a moral and an ethical decision.

Where shall we obtain the insights to reach this wisdom? Where shall we find the guidance we need to create peace on earth? There is one place, and only one where men have found the eternal truths we must have. That place is in the realm of religious idealism. Brotherhood, love, equality, happiness, kindliness, consideration for our fellowmen, help for the hungry, the weak, the sorrowing, justice for all, mercy, humility—these are the messages of religion. These are the teachings of Christ and of the prophets. These are the lessons of the Sermon on the Mount. Blessed are the meek—not blessed are the powerful and the cruel; blessed are the poor—not the rich and the arrogant.

What are the ingredients of happiness which all men seek? Surely, we have seen enough of the superficially successful to realize that neither wealth nor power can lead to personal contentment. Surely, we have watched humble, simple men and women who devote their lives to helping others around them achieve the happiness and peace which are more significant than anything else in life. The motives of religion move these people to action.

What is true for individuals must come to be equally true for nations. No country has long survived with dignity and worth when it chooses to abandon the quest for human betterment and seeks to impose its will upon the world. The lesson of the Old Testament is as valid today as it was in the days when Assyria and Tyre and Babylon bestrode the earth. Those who live by the sword must perish by the sword. Those who wish to live must live in accordance with the laws of God.

We need today a religious reawakening. We need a reassertion of the religious yearnings we have noted in history. The spirit of men like Abraham Lincoln who drew his inspiration from the Bible, the courage of women like Joan of Arc who drew her strength from religious zeal can rebuild our world and lead us bravely into the atomic age.

Nothing less will fortify us for the world of the future. We must be prepared not only to die for the principles of humanity we cherish, we must also prepare to live for them, and by them. If we do, we shall create a braver, better world for our children. Only the wisdom of the ages, expressed in religious idealism, can point the way. If we are to survive we must walk in their paths and let Him teach us His ways.

Russia Still Has Our Ships

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. WEICHEL. Mr. Speaker, in the Times-Herald of March 5, 1948, under Associated Press dispatch from Yokohama, it is stated that two more lend-lease tankers have been returned to the United States by Russia at a time of critical world shortage, of such vessels, yet she had 95 American merchant ships. During the hearings last summer it was disclosed that the Commerce Department was rushing oil and petroleum products to Russia during 1945, 1946, and 1947, and that there was a great shortage of fuel oil, gasoline, and petroleum products in the United States, beginning in June 1947. At that time in June, seven of these tankers were loading gasoline and petroleum products at the docks on the western coast and at the same time the Department of Commerce was testifying of the great shortage of oil and petroleum products in the United States, especially during the coming winter of 1947–48. These were vessels paid for by the taxpayers of the United States, yet the President of the United States knowing through the Department of Commerce and from other sources and presently testifying of the great oil shortage, gave custom's clearance to these American-owned tankers to carry gasoline and petroleum products to Russia. These were the ships owned by the United States and there comes with poor grace at this time after the oil shortage of all winter, a dispatch from Yokohama saying the Russians had delivered two American tankers at Yokohama where American crews could get them and that others will be delivered in the near future.

However, I find from the Los Angeles Examiner of January 22 of this year, that a tanker paid for by the American taxpayer, the Russian name being *Kolhoznik* and formerly the *Charles Wilkes* of the United States merchant marine, is transporting petroleum products from the west coast of the United States to Russia. The ship was pictured in the California Los Angeles Examiner and the news item read:

> SHIPS OF A DIFFERENT COLOR
>
> Observers at yesterday's ceremonies dedicating California's milk ship noticed how different ship cargoes can be. While millions of cans of milk were being loaded on the *Golden Bear*, destined for Italy, Greece, and France to aid undernourished victims of World War II, not many yards away the *Kolhoznik* was taking on United States oil for Russia.

This is the American-owned ship *Charles Wilkes* under the authority of the President of the United States, carrying petroleum products to Russia making for the expansion of communism while petroleum products are short in the United States.

Mr. Speaker, for nearly 3 years this same program has continued on with the use of the American taxpayers' ships, carrying goods and machinery to Russia, paid for by the American taxpayer, all assisting to make Russia strong to build its empire of communism over the protest of American citizens.

Churchill's Speech 2 Years Ago Is Found Borne Out by Events

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 5, 1948

Mr. LeFEVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Mark Sullivan taken from the New York Herald Tribune of today.

Mr. Speaker, about 2 days ago I received a letter from a constituent of mine

reminding me of those good old days when on Main Street we found horses instead of jeeps and you never heard the words "Fascist" or "Communist." Of course, I believe all of us would appreciate such a calm and peaceful setting again—but the world moves on—and, unfortunately, not in the right direction. Our ambitions are to make the world such that our children and our grandchildren might have the same opportunities to live and develop in a free world, at least with opportunities equal to those that most of us and our parents enjoyed. I cannot believe that the ordinary, common run-of-the-mill people anywhere in the world want war, and certainly I do not believe that the American people would ever want what goes with an atomic war and experience here the destruction of our cities, homes, and industries, plus the death and suffering of our people.

That is why our people did not accept favorably the speech of Winston Churchill given 2 years ago in Missouri. To go back further than that, our Postwar Economic Policy and Planning Committee, after our return from Europe and visit to Russia in the fall of 1945, reported directly to President Truman and urged him, from information gained, to stop trying to appease the Russians and to deal firmly from then on. But no; the administration followed a be-nice-to-Russia policy, and the American people must know that the foreign policy of this Nation is the responsibility of the President.

The article follows:

CHURCHILL'S SPEECH 2 YEARS AGO IS FOUND BORNE OUT BY EVENTS—MARK SULLIVAN CITES MISSOURI ADDRESS COINING PHRASE "THE IRON CURTAIN," RECALLS HOW IT SHOCKED NATION, LINKS IT TO CURRENT NEWS

(By Mark Sullivan)

WASHINGTON, March 4.—This is written on the eve of March 5, and deals with that date. Only the year is not 1948, it is 1946. It is about the speech Winston Churchill made at Fulton, Mo., exactly 2 years ago, with the events that have taken place since—and especially the events taking place this very day which almost sensationally bear out much that Mr. Churchill said.

For recalling the Churchill speech, an easy identification is the phrase he there uttered. "The iron curtain," now made memorable by millions of quotations that have carried it into the common tongue and for recalling what Mr. Churchill described and forecast, to our then surprise and dismay, the best beginning is to quote the passage in which Mr. Churchill used his history-making phrase: "* * * an iron curtain has descended across the Continent (Europe). Behind the line lie all the ancient states of central and western Europe * * * all lie in the Soviet sphere and all are subject * * * not only to Soviet influence but to a very high and increasing measure of control from Moscow. * * * The Communist Parties, which were very small in all these eastern states of Europe, have been raised to prominence and power far beyond their numbers, and are seeking everywhere to obtain totalitarian control."

SPEECH SURPRISED UNITED STATES

For the effect of surprise that Mr. Churchill's speech had upon us, one reason was that he described something which had taken place without our noticing it. Another reason, for both the surprise and the dismay, was that the actuality he pictured was so contrary to the ideal for which we had fought the war, the ideal of liberation and independence for all countries and peoples.

Our emotion went beyond suprise and dismay, it included resentment. After Mr. Churchill had made his speech, as his train rolled eastward from Missouri, Time magazine recorded a poignant scene: "The old man read the papers that were brought him, his pink face lengthening, his blue eyes hardening at the angry editorial comment his speech had aroused."

For the unfavorable reaction to his speech, a reason given was his proposal for a continuance of the intimate relationships which during the war had existed between the British and American armed forces, amounting to a suggestion of permanent military cooperation. But neither that, nor even his suggestion of an ultimate common citizenship was the real reason for our resentful mood. Under ordinary circumstances, so far as we disapproved that, we would have laughed it off.

What really accounted for our resentment was the intrusion of Mr. Churchill's speech upon our comfortable feeling, common at the time, that we were going to cooperate with Soviet Russia, even appease her so much as might be necessary, to the end of peace in a unified world. That course was accepted by most of our people, was urged upon us by many spokesmen, was advocated as the proper policy of government—Henry Wallace was still in the Cabinet and 6 months later was able to persuade President Truman to approve a speech by him advocating a be-nice-to-Russia policy.

That easy-going comfort, Mr. Churchill's speech disabused. He further intruded upon our comfort by calling attention to our responsibility, never a popular thing to do:

"The United States stands at this time at the pinnacle of the whole world. It is a solemn moment for the American democracy. With primacy in power is also joined an awe-inspiring accountability to the future. As you look around you, you must feel not only the sense of duty but also feel anxiety lest you fall below the level of achievement."

ONE YEAR LATER

Almost exactly a year after Mr. Churchill's speech, the sense of responsibility caught up with us and accountability was accepted, in the address of President Truman to Congress in March 1947, in which he said we would give help to countries striving to keep their independence against aggression by totalitarian power, and specifically recommended aid to Greece and Turkey, then under acute pressure from Russian communism.

On the second anniversary of Mr. Churchill's speech, the chief activity of our Government, in the administration and in Congress, is centered about defense of western European nations against aggression by Russian communism. It was epitomized in the report of the news last Wednesday, March 3, on the radio program Three Star Extra. It is nearing approach to what Mr. Felix Morley expressed as a "show-down between the United States and Soviet Russia."

Civil Rights for All

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, March 5, 1948

Mr. PATTERSON. Mr. Speaker, the past few weeks have seen a great deal of public display and agitation because of the President's recommendations on civil rights.

On February 2, the President sent to Congress a message outlining his views on civil rights. Civil rights can only be interpreted as those rights which should be available to all of our citizens. Most of us seldom stop to realize that many of our people are deprived of the rights which the majority of us take very lightly. I speak, of course, of those of us who, because of race, creed, or national origin, meet different amounts of discrimination. Practically the entire southern delegation in the Congress has become aroused over the President's advocacy of equal rights for all. In essence, that is what the program is—equal rights for all of our citizens.

We read in our newspapers and hear over the radio almost daily the word "democracy" and the blessings which are provided by this system. The American people have become smug with the feeling that our Nation does provide equal justice to all. Such is not the case. Is it equal justice when a Negro is deprived of the sacred ballot? Is it equal justice when many of our citizens of various races or colors are delegated to slum areas? Is it equal justice when job opportunities are not available to some of our citizens for these same reasons? It would be nonsensical to continue evading the fact that this great Nation does not grant equal justice to all. We cannot remain as ostriches with our heads in the sand.

The program the President recommended is not new. It has been before other sessions of Congress and has failed of passage. In this Eightieth Congress there are bills covering all of the points mentioned by the President. It is my hope that favorable consideration will be given to them in the coming months. The three classifications which are the greatest bars to equal citizenship are these: The inability to get vigorous prosecution of persons suspected of lynching, the inability of many of our citizens to vote in various parts of the country, and the inability to attain employment commensurate with ability for many of our citizens.

These three practices can only be stopped by enactment of legislation by Congress. A bill to allow Federal prosecution of those accused of lynching has been favorably considered by a congressional subcommittee and will soon be before the House for action. The passage of this measure will grant protection to our colored citizens in the South who have been in the past years the subject of mob rule and thus deprived of their rights before a court.

The Senate will soon consider legislation setting up a Fair Employment Practice Commission. This Commission would operate along the lines of the one now in operation in New York State. We in Connecticut, have a similar agency for protection against employment discrimination. Surely the chance for employment, and the opportunity for advancement, is a part of any civil-rights program. This legislation is necessary to grant a greater share of our democ-

racy to those now deprived of many of its rights and privileges.

The third major bill being considered by the Congress is that concerning the abolition of the poll tax. Most of our Southern States require the payment of a poll tax as a requisite for voting in general elections. This device is used to bar the Negro from participation in elections because most of them in the South cannot afford to pay this tax. Injustice becomes greater as nonpayment each year makes for accumulation of the tax, so that it would be necessary for the southern Negro to pay large sums of money for the privilege of voting.

These are the three major legislative measures which, if enacted into law, would guarantee equal justice to all of our citizens. If such a program is not adopted by the Congress, we in America will aid in the growth of communism here in this country. Communistic tendencies are fed by flames of despair and injustice. During the past war thousands of American boys died to bring democracy to all the people of the world. It is pure mockery to deprive the families of many of those who died, of their share in democracy.

All during my service in the Marine Corps I worked and fought side by side will men of all races and creeds, and with many of our colored boys who fought so valiantly for the cause in which they believed.

We are currently engaged in a program of appropriating billions of dollars to combat the menace of communism abroad. This menace has grown and will continue to grow in this country if these conditions are not corrected. We, as the strongest and richest Nation in the world, can and must provide equal opportunities for all our citizens—opportunities for education and employment in particular.

How can a man truly represent the people of his district when less than 10 percent of them have had the opportunity to vote at the election in which he was chosen? This is not democracy. It is not fair play. It is not equal justice. We must abolish these practices in America if we are to remain free and remain strong.

Extend Hand of Welcome to Additional Greek Nationals

EXTENSION OF REMARKS
OF
HON. ROBERT TRIPP ROSS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 5, 1948

Mr. ROSS. Mr. Speaker, I have introduced a bill today to increase the immigration quota for Greece an additional 5,000 for each of the next three fiscal years. I believe it is in our national interest and in the interest of world peace and humanitarianism that we increase the Greek quota by this number at this time.

The United States has extended a helping hand to the people of Greece in their fight for economic rehabilitation. We have joined with Greece in her valiant effort to prevent outside forces from imposing a communistic regime upon the Greek Nation. Our economic and friendly relations should be and would be broadened by permitting this additional number of Greek nationals, the great majority of whom will be parents, children, or brothers and sisters of American citizens, to immigrate to the United States within the next 3 years. This friendly and humanitarian gesture on our part would stiffen the back of every Greek citizen in his fight against communism.

There are now in the United States approximately 300,000 persons of Greek origin. We all know that the Greek is marked by his thrift, industriousness, and self-sufficiency. Likewise, the Greek is established as possessing in the highest degree the most desirable qualifications of law-abiding citizenry. They have made fine citizens and have exhibited the highest degree of loyalty to the United States and its form of government and its institutions.

The people of America from its inception have been privileged to sense the needs of humanity and historically have dealt with them in the Christian spirit. This has been manifested by extending every reasonable aid to the maintenance of family ties of those who have come to our shores. Approximately 30,000 close relatives of American Greeks have filled visa applications to come to the United States. Under the present quota, only 308 will be permitted to enter yearly. Although the additional number proposed for admission is relatively small, it will bring together thousands of American-Greek families.

The paralyzing effect of economic distress following the havoc and ravage of war has been intensified by the deplorable internal civil strife now prevailing in Greece. Communist guerrilla depredations have made untold thousands homeless, helpless, and public charges on the already creaking economy. The effect of this measure would be to provide alleviation of such suffering where relief is mostly needed. That would be in harmony with our broad policy toward Greece, and should prove in a substantial degree a blow to Communist terrorism.

The Greek people have probably contributed more than any other to the arts and sciences and to the culture of the world, but, basically, they are a producing, a working people. These additional Greeks are needed in America today. Not only will broken families be joined, but as have those who have already made America their home, these industrious people will make invaluable contributions to the strengthening of our American way of life and to the progress of America.

The Flat Top Is Still a Handy Sort of Thing, Even in Modern Warfare

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 5, 1948

Mr. JENISON. Mr. Speaker, never in our peacetime history were the problems of national defense so important to our safety as they seem to be at the present time. For this reason I desire to call special attention to an article by William H. Harrison, published in last Sunday's Washington Star, entitled "The Flat Top Is Still a Handy Sort of Thing—Even in Modern Warfare." Mr. Harrison emphasizes a point vital to our security in what military strategists choose to call the foreseeable future. His conclusions are worthy of earnest consideration by those charged with the responsibility for maintaining our defense establishment at a level adequate to meet the demands of the uncertain world in which we find ourselves. Mr. Harrison's discussion follows:

THE FLAT TOP IS STILL A HANDY SORT OF THING—EVEN IN MODERN WARFARE

(By William H. Harrison)

In terms of the foreseeable future, aircraft carriers—large and small—are here to stay. Stated another way, although considerable doubt may be cast on the Navy's plan to build them on a super scale, ranging from 60,000 to 80,000 tons, they will be of vital importance to us in any war likely to break out within the next 10 or 15 years.

REVELATION OF HARD WORK

After that—after 15 years, say—conventional carriers conceivably may be as obsolete as the whalebone corset, made so by the development of intercontinental atomic rockets, guided missiles, supersonic space ships, and the numerous other horrendous devices being predicted by the push-button experts for the world of tomorrow. Meanwhile, through, until that world is more clearly in sight, we had better not neglect our carrier power. It is insurance we cannot afford to let lapse; it is the heart—as was once the battleship—of the great naval strength we must have for a balanced system of security in the troubled age ahead.

This conclusion is based on a wide variety of opinions expressed to the writer by some of the world's best and most experienced naval airmen during 10 days aboard the U. S. S. *Leyte* on the Atlantic Fleet exercises now nearing an end in the vicinity of Panama. The exercises, one of the largest since the close of the war, began on February 9 when the 27,000-ton Essex-class *Leyte* and its sister ship, the *Philippine Sea*, set out from Quonset Point, R. I., later to rendezvous with 15 destroyers and 3 cruisers for a majestic southward movement in support of amphibious Army and Marine landings on Vieques Islands, a few miles east of Puerto Rico.

To a landlubber observer the exercises were at once a revelation of the hard work involved in keeping the Navy trim in peacetime and a convincing demonstration of the carrier's overshadowing role in the employment of seapower. Nothing new—tactically or strategically—had any part in the exercises. The pattern was the same as that used against the Japanese in the Pacific.

The sole objective was training—to keep old hands from losing their touch and to give new oncs experience.

Ten days aboard the *Leyte* would be enough to persuade any relatively soft-living civilian that the operating Navy, even in peacetime, is no bed of roses. A carrier of this type is a beautiful thing, but it is not home. The food aboard is good; the officers' staterooms are comfortable; the crew's quarters are clean and sleepable; the medical, dental, and sick-bay facilities are excellent; libraries and soda fountains are available; there are frequent movies on the hangar deck, and every night the chaplain speaks a brief but impressive prayer over the public-address system. Yet to be a part of this is not like being in your own house with your own family. You are just one among about 1,800 individuals (the wartime complement is approximately 2,900), and a goodly portion of these—junior officers and men—are green hands.

NOT WITHOUT RISKS

Psychologically, such a way of life can be occasionally trying, especially when you have to spend 6 weeks or more at sea with perhaps only one short shore leave. As for the physical end of it, it certainly is not restful. There is always brain-and-muscle work to be done on every deck. During the exercises from Quonset to Puerto Rico, for instance, there were days when many officers and men averaged only 2 or 3 hours' sleep a night: there were days, too, when general quarters' calls—summoning all hands to battle stations—were sounded frequently, entailing on-the-double climbing, roughly equivalent to running up a skyscraper.

Further the exercises were not without risks. Over 11,000 postwar landings have been made on the *Leyte* without a single fatality or serious injury, but there have been some losses on launching and in the air, and a crack-up is always possible when the planes come in. The writer saw more than a few of the *Leyte's* 90-odd fighters and bombers crash on deck in a way that made the pilots' escape seem near-miraculous. And during the same period a flyer was lost from the *Philippine Sea* and another saved in the water by the *Leyte's* helicopter—a highly serviceable and reassuring machine, likely to be attached to all carrier task forces in the future for intership mail deliveries, personnel transfers, and rescue work.

These factors—the risks, the hard work, the boredom that can come during a long stay at sea—all are accepted as an inescapable part of peacetime Navy life. In spite of them, perhaps because of them, the morale is reasonably high During the exercises down to and off Puerto Rico, the spirit aboard the *Leyte* was a lively and cheerful one, expressing itself in many ways, not least of all in a progressive improvement in operations. At first, for example, owing to the rustiness of some and the inexperience of others, the movement and spotting of planes added up to a mediocre performance; but a couple of days later the picture was one of near-perfection, with flight-deck officers and crewmen working together with such swift grace and precision that planes were being launched at 10-second intervals—a rate the Navy says is faster than any land base can achieve with single takeoffs.

The *Leyte's* impressive showing is attributable to a long list of individuals, notable among them being Capt. E. R. Peck, the commanding officer; Comdr. J. R. Van Evera, executive officer; Comdr. W. E. Hastings, operations officer; Comdr. V. L. Hathorn, air officer; Lts. R. J. Zender and A. F. Francheschi, flight and hangar deck officers, and flying officers like Commander Al Boyd—all veterans of the Pacific war and all experts on naval air. These men and several others of equal rank and experience aboard, having lived and fought with carriers for a long time, speak with authority on the subject, and it is significant that their opinions vary, though there is common agreement that ships like the *Leyte* will be a security essential for many years to come.

One can find on the *Leyte* a few senior officers—none named here—who favor the earliest feasible merger of naval aviation and the United States Air Force, an arrangement that would place carrier and land-based operations under a single over-all command. Most others aboard, however, believe in a continued separation, but they do not deny that after the "foreseeable future" has come and gone, the present set-up may be senseless.

ADMIRAL DUNCAN'S VIEWS

As for super flat tops there is no fixed opinion, but there seems to be considerable coolness to the idea, with some holding that the 45,000-ton *Midway* class is less efficient than the *Essex* class, and that to build ones of 60,000 or 80,000 tons would be a dubious venture.

But to Vice Adm. Donald Bradley Duncan—aboard the *Leyte* with his staff as a kind of "guest" and over-all observer and evaluator of the exercises—it seems surprising that anyone should argue against the giant carrier. As former Deputy Chief of Naval Operations (air) and now commander of the Second Task Fleet, he is emphatically for it. He does not like to use the word "super" in describing it. As he told the writer, there is nothing fantastic about it; "it is simply the logical development of a proven weapon—the weapon of seagoing naval aviation." Moreover, "its sole purpose is to extend and improve upon the usefulness and power of that weapon; it is not meant to supplant, it is meant to complement, other services."

As one of the Navy's most competent and war-seasoned airmen, Admiral Duncan considers it "ridiculous" for anybody to set an arbitrary limit on the size of carriers or to get excited over the Nimitz thesis that they might be used to deliver atomic weapons against vital enemy targets many hundreds of miles inland. As he sees it, if the size-worriers had had their way in times past, the United States would have third-class ships today. Further, what sense is there in resisting the idea of the Navy's extending its attack-reach if to do so will improve the security and over-all striking power of the Nation?

Admiral Duncan is not a static thinker. He is quite willing to admit that the grim art of warfare is going through a period of revolutionary change. Nor does he rule out the possibility—the seemingly remote possibility—that in another 15 years or so something like submarine-carriers may have to replace the surface type. For the present, however, he has his feet on the ground. He wants flat tops of any size required to do the job that needs to be done to keep America safe—the job of offense and defense, of being ready at all times to support expeditionary forces, seize outlying bases, fend off transoceanic attack, carry the fight to the enemy, and keep the supplies and manpower flowing overseas wherever or whenever necessary.

The Duncan view, in essence, is the view held by virtually all naval airmen. After 10 days of seeing them in action aboard the *Leyte*, a civilian observer, no matter what his preconceived notions, finds it difficult not to feel and believe pretty much the same way.

Men, Take Hold

EXTENSION OF REMARKS
OF
HON. ELLSWORTH B. FOOTE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Friday, March 5, 1948

Mr. FOOTE. Mr. Speaker, it was my privilege on Sunday, February 29, 1948, to hear a sermon by the Reverend James Curtis Fahl, pastor of the Metropolitan Presbyterian Church, at Washington, D. C., his subject being Men, Take Hold. It deals with the problems of the day in a masterful manner. Under leave to extend my remarks in the Appendix of the RECORD, I wish to include the sermon of the Reverend Fahl, as follows:

MEN, TAKE HOLD!

Text: "For He has made known to us in all wisdom and insight the mystery of His will, according to His purpose which He set forth in Christ as a plan for the fullness of time, to unite all things in Him, things in Heaven and things on earth." Ephesians 1: 9 (revised standard version).

Events of the past week have caused many to search their hearts and to question the faith by which they have been living. Has our Nation been following an effective foreign policy since the cessation of hostilities? Can the democratic way of life stand up against the onslaughts of communism? Or have we simply seen a further demonstration of the ability of a disciplined minority to outmaneuver an undisciplined and apathetic majority? Certainly thoughts like these have run through the minds of many earnest Christians as they have learned of the bloodless communistic coup d'état in Czechoslovakia.

It was a vicious reminder to me of a conversation that I had with a former German soldier in the Saxony city of Bitterfeld in June of 1945. This big young man had lost a leg in the fighting on the eastern front so perhaps he did not have an unprejudiced mind where the Russians were concerned. Since he spoke English well and I understood a little German, we talked together several times in the drugstore where he worked. One day he said to me most earnestly: "If America and England are not very careful, Russia will be on the Rhine inside of 10 years." In the intervening 3 years, Russia has truly progressed a long way toward the Rhine. To straighten out her battle line she is now making demands upon Finland, the last of her neighbors from whom she has not gained the treaty rights she has desired. In such a situation what must be the response of Christian men and women?

As earnest Christian men and women, we may sincerely differ radically as to the necessary response. Dr. Wilbur LaRoe, Jr., moderator of our Presbyterian General Assembly, told 350 laymen and ministers on Friday night that "Our Christian culture is being threatened today as never before." Certainly, it is only the part of wisdom to recognize that we cannot be at ease in Zion. Opposed as any one of us is, instinctively—and for many of us through bitter experience, to a further trial of arms, we must recognize that such an outcome is not beyond the realm of the possible. Several months ago, a man high in the councils of our Nation—who had been given abundant opportunities for gaining knowledge upon which to make his observation made three statements to his colleagues in a closed meeting: (1)It is my firm convic-

tion that Russia does not want to fight soon; (2) I further believe that she is physically incapable of waging all-out war now, nor will she be able to do so in the immediate future; (3) but, after everything about Russia has been said, don't overlook the fact that Russia is partly Oriental and some day to save face, she might feel forced to fight.

To avoid such a possibility, should we as Christians then pull back behind our twin shore lines? On the face of it, any thinking man or woman would answer that query with a resounding "No." But we must remember that Let the Rest of the World Go By is a song whose sentiments are beloved by many Americans other than honeymooners. Despite the sometimes enchanting prospect of having no relationship with any other nations, it is a delusion at best that is worthy of our supposedly less-rational friends at St. Elizabeths and other mental hospitals. Isolation? The hard-headed realist must admit that there is no spot in America that is out of range of guided missiles which our probable enemies could conceivably construct and loose upon us. If matters of the spirit and the mind still appeal to us who have received the glorious heritage of freedom in America, then we cannot isolate ourselves from the sufferings and strivings of other peoples. Moderator LaRoe pleaded with us Friday night to be concerned about the 20,000 democratic, freedom-loving Poles who tried to flee from that dictatorship-ridden land, and who are now languishing in forced-labor camps and mines. He urged us to be sympathetic with the handful of Argentine students who recently published a manifesto of protest in which they asked for support to resist the efforts of the Peron government to dictate the course of study at their university. Isolation? No!

If not isolation, then what? At least two different responses can be made to the ideologies and nations that threaten our Christian culture. Conceivably, many people who are sincerely devoted to the cause of Christ, and actively endeavoring to live up to that cause, will choose each one. It would seem that many of the 2,000,000 Presbyterians (Reformed) in Hungary will adopt an attitude of acceptance and compliance toward the communistic government which has ruled that nation since early last summer. These Christians in Hungary and our Christian friends in Czechoslovakia, accustomed through long generations of being dominated, know that one can live a life of some usefulness despite unwelcome rulers. Making religion more a personal, interior, pietistic matter than we of activistic America can accept or understand, they can still be loyal to Christ according to their lights. Their faith is one reason why they can accept an unpleasant and antagonistic government. For they would accept with us the binding truth of Paul's statement to the church in Ephesus: "For He (God) has made known to us in all wisdom and insight the mystery of His will, according to His purpose which He set forth in Christ as a plan for the fullness of time, to unite all things in Him (Christ), things in heaven and things on earth." Who are we to insist that one can be a faithful Christian only if he can enjoy either the protection of the active nonintervention of a friendly government in his practice of his faith?

What then should be our response to the visible threat to our Christian culture? We cannot isolate nor insulate ourselves from it. Making our religion simply an interior matter of religious exercise and soul development and cultivation seems to be foreign to our nature. How about an active attack against these threats where we see them? Let us remember that the threat of our Christian culture of a completely secular and pagan culture is not confined to the efforts of communistic materialism under the sponsorship of the little men who make up the Politburo in Moscow. The seeds of decay of our Christian culture are present right here in America. Russia is simply more obvious in her attack upon our Christian culture. From recent events we should learn that the Communists mean what they say when they breathe out threats and slaughter. Twenty-nine years ago a rough young deputy headed the 30 Communists who had just been elected to the Czech Parliament. When Deputy Gottwald was asked what the Communists purposed to do now that they had received the recognition of public office, he replied in this fashion: "You ask what we purpose to do, I answer you that we mean to break your necks. I mean that literally, if we ever have the opportunity." Perhaps 29 years is not too long to wait for political triumph which enables the victor to become such a terribly accurate prophet. We should now be able to disabuse our minds of the easy fiction that there are different varieties and kinds of Communists. They all own one final allegiance and take orders from one headquarters. What can Christians do to effectively oppose the further encroachments in Europe which threaten to engulf the entire Western World?

As the best and simplest answer to the powers and persons who threaten our Christian culture, we can simply quit playing with being followers of Christ. In this line, the most significant promise our church has of truly going to work on this matter of being living witnesses for Christ lies in the newly organized national council of Presbyterian men. For generations we have unrealistically set aside the highest offices of our churches for our men and then they have been treated as purely honorary positions. During the late war, while I was serving in Europe with an armored division—and, incidentally wondering quite often what madness had led me to forsake the pleasures and comforts of my family—I received one letter from my wife which made a deep impression upon me. After telling me that I was missed daily, she wrote this: "But I know that you would be desperately unhappy if you were still here. This morning I looked around in church and the congregation was made up entirely of old people, mostly elderly women, and children."

Too often, that is the basic reason why our Christian witness is so ineffectual. There are not enough men sufficiently touched by the saving power of Christ to follow His imperious bidding to attempt great things for Him. It is, therefore, tremendously significant that this new Council of Presbyterian Men has been called into being under the permissive guidance of our dynamic and courageous moderator. February 12 to 14 will go down in Presbyterian annals as days of tremendous importance. During those days 370 laymen from every corner of our land met in the Palmer House in Chicago to organize the new council and elect its first officers, including Dr. Charles J. Turck, president of Macalester College, St. Paul, Minn. Moderator LaRoe sent the gathering off to a glorious start when he gave the keynote address the first night on the subject, What the Presbyterian Church Expects of Its Laymen. At the outset of his address, Mr. LaRoe said:

"We have come here for no light purpose. You and I are here because we are aware of what conditions are in the world and because we believe that the world is crying for spiritual leadership to rescue it from its present chaos and bring freedom and the abundant life to countless millions who have surrendered their freedom for bread or rice or who, without voluntarily surrendering their freedom, are nevertheless the virtual slaves of dictatorial governments.

"The alternatives which face us as we gather here today are so plain that we can all see them:

"1. Surrender to the dictators, which you and I will never do as long as there is a drop of blood left in our veins.

"2. War, that horrible un-Christian thing which produces such unspeakable cruelty and suffering and which often seems but to lay the foundation for more wars.

"3. The principles of the Christian religion. * * *

"The first thing that I would say to you as your moderator, therefore, is that you and I have got to take the church far more seriously than we have, looking upon each local church as a fortification on freedom's battleline, each minister as a general in the army of Christ, and each leading layman as an important officer in that army. * * *

"My second point, then, is that we must become convinced that our job is the building of Christian communities and that the church is the agency or instrumentality which we use to make more effective the building of Christian communities."

Men, take hold! Too long we have been content to think and act as though the church were composed of women, children, and a sprinkling of men. No war was ever won by a handful of men. We are engaged in a more desperate struggle today than at any time in our history. The Church of Christ calls out to the finest and strongest men that it has need of them. But these men need what the Church stands for, too. We all stand powerless in our own strength. It is our earnest faith that God in His wisdom purposes to unite all things in Christ. With that faith to sustain us, Christ to lead us, and the full unity of all men and women of good will as our goal, let us take heart and take hold. We need to quit fiddling around with being part-time followers of Christ. We simply cannot give Him sovereignty over a portion of our lives—reserving the rest for our selfish indulgences and self-satisfactions. To take the Christian faith seriously we need to outlive, outgive, and outbelieve those who would project ideologies and cultures that would destroy Christianity.

What we need is more men like Gov. Luther Youngdahl, of Minnesota. You who have Scandinavian blood in your veins and you who come from our great Midwest can be proud of this fine, stalwart governor. When he saw his State overrun by the gambling craze, he saw an opportunity for a tremendous housecleaning. The infamous one-armed bandits—slot machines to you—we don't follow the gambling vernacular, which were taking $7,000,000 a year from Minnesota were the object of his campaign. Early in the campaign in the legislature, the St. Paul Council of Churches sprang to his aid and through this council, the State Council of Churches got behind the campaign. The tremendous popular support of the Governor's antigambling legislations was so marked that the bills passed both houses of the legislature by overwhelming margins. Once the legislation was passed, it began to be strictly enforced. The Association of Sheriffs had the full backing of the Governor and his popularity so they cracked down wherever slot machines were found. One year after the clean-up Minnesota still has no slot-machines. The feeling is general in Minnesota that the slot-machines are out as long as Youngdahl is in. But Youngdahl is no negative person—as no true Christian is. His main aim is the enrichment of human lives. Agreeing with General MacArthur that our primary need is for spiritual regeneration, he believes this must take place through the home, the church, and the school.

The Governor has definite convictions about Christians. He believes that they must learn to work together. His second conviction is that Christians must apply their religion to life. Addressing the Minnesota pastors' conference not long ago, the Governor summed up his convictions in his closing words: "The church can have the kind of society it is willing to tolerate, or the kind of society it is willing to fight for."

This is a fight we are engaged in. Men, take hold, a good fight requires all the manpower that we can muster. This is our task—to live each day with the moral earnestness with which the reformed alcoholic prays, as he clenches his fists: "God, deliver me from alcohol for 24 hours." With that spirit, and abiding faith in God's rule, let us make each day a day for working and fighting that our Christian culture may stand up against all the onslaughts of all persons who would attack it.

Italian Immigration Quota Backlog Should Be Used Now

EXTENSION OF REMARKS
OF
HON. ROBERT TRIPP ROSS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 5, 1948

Mr. ROSS. Mr. Speaker, I have introduced a bill today which provides that the annual immigration quotas for Italy for the fiscal years 1949 and 1950 shall be increased by an amount equal to the unused Italian quotas for the past 10 years.

As is known, the Italian quota is fixed at a total of 5,802 immigrants a year—a quota which is less than that of any other of the European nations which have much smaller populations than that of Italy. During the war the quota was completely suspended. The suspension blocked the entry for permanent residence into the United States of approximately 34,000 Italians.

Because of the tragic conditions in which Europe finds itself, the United States has already liberalized its rigid immigration laws to help solve the pressing problem of the refugees. Legislation to permit additional large numbers of displaced persons to enter the United States is now under consideration. This bill would in a measure fall under this category and would give to Italian refugees the same facilities accorded to other refugees. The same humane considerations which have motivated the United States to open the doors of mercy of America to the disinherited who roam from nation to nation, should induce them to make the same gesture to the disinherited of Italy who go without any means from one region to another.

Among the resources of Italy, the greatest is her manpower which has raised the Italian worker to the pinnacle of productive ability. There are not fields of endeavor which the Italian worker cannot render fertile. There are not dangers which the Italian worker is not ready to meet with the audacity of the pioneer. For the Italian, work is a mission; better still, a religion to which he devotes himself with a fervor which has no equal.

Italians have been outstanding in the professions, but fundamentally they are workers, producers, and builders. American Italians have made notable contribution to the progress and growth of the United States. They are the best of citizens.

America is giving so much proof of seriously wanting to help Italy rehabilitate herself and take her place among the great democratic nations of the world. The proposed bill would contribute to integrate the program which America intends to carry out to help Italy and neutralize the diabolic influence which seeks to spread chaos in a nation of 45,000,000 inhabitants, which can render so many signal services to the cause of peace, to the order and security of the world.

The history of our country shows that the American people have had a phenomenal growth in the spiritual as well as the material, in the cultural as well as technical field because we have welcomed freedom-loving immigrants. By serving as a haven for these people yesterday, we helped ourselves to our fortunate position of today. By serving as a haven for them today, we will be strengthening our national democratic foundation for an even better tomorrow.

Let us admit now this relatively small additional number on the basis of using the backlog immigration quotas unused in the years of war. Let us be the first to welcome them, so that we will have the first choice of their skills and talents.

By permitting these additional Italians to immigrate to the United States, we will be helping our Nation's economy. The progress and prosperity of our country have always been inseparable from a growing population. Only by securing a substantial addition of fresh blood and new life will we insure the continued growth of our economy.

It is not proposed that immigration requirements be relaxed in any manner. Every applicant should be screened to prevent the infiltration of Communists. A preponderance of the admitted will be close relatives of American citizens of Italian origin. In all fairness and justice, and in the interest of the furtherance of Italian-American amity, this bill should receive favorable consideration by the Congress.

The Late Honorable Clarence Hancock

EXTENSION OF REMARKS
OF
HON. JOHN C. BUTLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 3, 1948

Mr. BUTLER. Mr. Speaker, it is with a deep sense of a great personal loss that I express my humble tribute to the life and character of my departed friend, the late Representative Clarence Hancock. It was my privilege and honor to know him and to have been associated with him. The people of New York State and the entire Nation lost the service of a true and able statesman when he answered the last call. Mr. Hancock served the Thirty-sixth District of New York with honor and distinction, and during his entire public service he kept the welfare of his constituency uppermost in his mind. He was held in the highest esteem by his colleagues and those who knew him well. He was one of the finest and noblest men it has been my pleasure to know. He was indeed a true and loyal friend and his memory will always be an inspiration.

Purchase of United States Patents by Russians

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 5, 1948

Mr. LANHAM. Mr. Speaker, it has been called to my attention that the Russians are still being permitted to obtain data on United States inventions.

The Congress has repeatedly requested that this information be denied the Soviets but for some unexplained reason it appears that it is still going on.

In this connection I am introducing into the Appendix of the RECORD a newspaper clipping by Edward Nellor and sent to me by Mr. Daniel Lee McWhorter, of Summerville, Ga. This article calls attention to the fact that the Reds can buy our patents but refuse in return to give us any information.

It seems entirely illogical and absurd when all the world stands in fear of the perfection of the atom bomb by the Russians, to permit them to have access to our inventions.

The article follows:

CONGRESS PROTEST IGNORED—REDS CAN BUY UNITED STATES PATENTS; GIVE US NO INFORMATION

(By Edward Nellor)

WASHINGTON, February 17.—Patent-hungry Russians still are raiding the American storehouse of industrial know-how with the latest order for data on United States inventions totaling 480, this reporter has learned.

Despite Congressional demands that the Reds be barred from buying United States patents for 25 cents each, the Department of Commerce continues to insist that present laws force officials to fill all Soviet orders which, according to a recent statement by Representative J. PARNELL THOMAS, Republican, New Jersey, often total 600,000 at a clip. The United States has received no patent information from the Soviets since 1927.

The latest order has not been completely filled, the Patent Office told this reporter. The order placed by the Four Continent Book Corp., of New York was honored to the extent of 80 patents, since the organization's credit totaled only $21.50. The corporation has been notified that its funds are exhausted and officials expect a new check to be forthcoming momentarily to cover the cost the remaining 400 patents desired.

The Four Continent Book Corp., exposed in March of last year as being sub-

sidized by the Soviet Government, masquerades as a rare-book importing firm. According to THOMAS, the corporation is engaged in "legalized espionage" and is a Red-front organization associated with AMTORG, the Soviet purchasing agency in the United States. A search of records at the time of disclosure showed that the corporation is registered as an agency of the Soviet Union and that vast sums of money reach it annually at the direction of the Kremlin. In one 6-month period last year $333,676 came from Moscow for the corporation's use.

One other subject is troubling the Office of Technical Service in Washington. This Bureau of the Department of Commerce handles patents and other technical reports, including declassified atomic-energy data, as well as wartime secrets wrested from the Germans and Italians. The Allies, with the exception of Russia, agreed to pool all of these discoveries. Blocking the Reds from sharing is difficult, the Office of Technical Service admits.

The Russians have already tipped their hand in circumventing the patent roadblock. Reports by the United States agency are printed once each month. A list of captured patents on foreign developments is available to anyone in the United States or in the other nations sharing in the program. The OTS states that it watches for requests from Reds for the data. "but you can't check every letter."

The number of patents and reports in the hands of American patent officials is staggering. Requests already have been made for 100,000 of them.

The atomic data, as it is declassified by the Senate Atomic Energy Commission, is transferred by the Office of Technical Information. Not all of this is released for publication by the OTI, but in most cases it is shared with Canada and Great Britain, codevelopers of the atomic bomb.

Salary Increase for Federal Employees

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, March 5, 1948

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

PORTLAND, OREG., *March 3, 1948.*
Hon. HOMER ANGELL,
Member of Congress,
Washington, D. C.

DEAR MR. ANGELL: I earnestly request you to support and vote for a salary raise for Federal employees when it comes up. I work in post office branch of the Federal service.

I am in hopes that we can make the goal of $1,000 per year increase without having the clause in a bill of a termination date for this increase in salary, like the one that was reported from the House committee which was a whole lot less than we should have of $1,000.

I believe that when high cost of living decreases to the extent justifying less salaries that should be time enough to think about any termination dates, or not any salary cuts unless by a bill and act of Congress.

I am sending with this letter a budget of our living cost. You can see for yourself that our present salaries are not anywhere near enough to keep up a home with a family and children in high school.

If it was not for my wife working my postal salary would not near meet the expenses, and I believe that there are many besides myself that has the same problem.

I believe that $1,000 is not too much to ask under the present living.

I again request you to do all in your power to bring about for passage of no less an increase above mentioned.

Yours very truly,

———— ————.
Clerk, Post Office, Portland, Oreg.

P. S. It is also my wish for you to show this budget to other Members of the House, whoever is against this amount of increase it might change their minds.

BUDGET

	Per month
Payments on home	$51.00
Groceries	95.00
Telephone	3.74
Electric (average)	8.50
Clothing (average)	15.00
Transportation	10.00
Paper	1.50
Music for children	3.50
Fuel	10.00
Milk	8.50
Car expenses	15.00
Payments on personal loans	27.70
Insurances, all types	26.95
Taxes on home	8.60
Miscellaneous	15.00
Total	299.99
My salary after Federal deductions (not including State income tax)	248.00
My wife's	83.60
Total salaries	331.60
Expenditures above	299.99
Balance left of 2 salaries	31.61

This leaves only $31.61 balance with both of us working and part of that is spent.

Social Security in Reverse

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 4, 1948

Mrs. DOUGLAS. Mr. Speaker, we passed a resolution last week, House Resolution 296, which should have been entitled "Social Security in Reverse."

The Washington Post and the St. Louis Post-Dispatch have this to say about the bill the Republicans offered to the House. The Eightieth Congress has broken faith with the promises made in campaign platforms on the all-important subject of social security.

Under premission to extend my remarks in the RECORD, I include the articles:

[From the St. Louis Post-Dispatch of March 1, 1948]

TURN THE CLOCK BACK?

By more than 5 to 1, the House has voted to exclude 500,000 to 750,000 workers from social security. The affected employees include door-to-door salesmen and persons who do piecework for industry in their homes—some of the least secure Americans against the hazards of unemployment and old age.

The House resolution purports to maintain the status quo, which led Representative HELEN GAHAGAN DOUGLAS to say: "We never need legislation to maintain the status quo. Legislation is required only to create change, which may be either forward or backward. * * * I have grown accustomed to the sight of this Congress turning back the clock—crippling where they dare not repeal, boring away like termites in an effort to undermine the progress of the preceding 14 years."

This highly industrialized and urban country is beset by lurking terrors of individual insecurity. Social insurance is one of the costs of maintaining such a society. It is also a stabilizing force and a source of purchasing power to prevent another collapse like that of 1929–33.

The House brushed all this aside. It is up to the Senate, which has shown much less desire to turn back the clock, to defeat the resolution.

[From the Washington Post of March 5, 1948]

SOCIAL SECURITY

The Gearhart bill, passed by the House on Friday, would have the effect of denying protection under the old-age and survivors' insurance program of the Social Security Act to about 500,000 to 750,000 employees and their dependents whom the Supreme Court recently held to be entitled to such protection. The employees involved are so-called outside workers—salesmen and others working on a commission basis or under contract—who, although perhaps not employees in the narrow, old-fashioned sense of the term, are, nevertheless, dependent upon employers for their livelihoods. The pending bill would nullify the Supreme Court's decisions and invite endless litigation over definition of the term "employee" in respect not only of the Social Security Act but doubtless of the Fair Labor Standards Act as well.

The expressed purpose of the bill, according to its title, is "to maintain the status quo in respect of certain employment taxes and social-security benefits pending action by Congress on extended social-security coverage." It would do this by excluding from coverage anyone who is not an employee under the "usual common-law rules applicable in determining the employer-employee relationship." But, as the minority members of the Ways and Means Committee pointed out in their report, the title is grossly misleading; so far from maintaining the status quo, the measure would deny coverage to persons assured it by judicial interpretation of the Social Security Act.

This would be a contraction of the act running directly counter to the expansion of its protection which Congress ought to legislate without any more delay. As President Truman said when he vetoed a similar bill last summer, it "proceeds in a direction which is exactly opposed to the one our Nation should pursue. * * * We must not open our social security structure to piecemeal attack and to slow undermining. We must, instead, devote our energies to expanding and strengthening that system."

The Republican Congress Has Failed the People

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 3, 1948

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert an address I made over radio

station WIND, in Chicago, Ill., on Friday, February 27, as follows:

Good evening, ladies and gentlemen, from time to time it has been my privilege to speak to you over the facilities of this station for the purpose of reviewing the trend of our national affairs.

As I do so again today I want to frankly emphasize the vital importance of the election of 1948. Seldom, if ever, have such crucial issues hung upon the decision of the people as those which will be resolved by your votes next November and intervening primary elections.

Speaking out of an experience in our Nation's Capitol that goes back for 42 years—longer than that of any other Member—I say to you solemnly that the citizens of our country, through the exercise of their privilege of franchise, hold in their own hands the power to determine not only their own well-being during the next 4 years, but the future state of our national economy and the peace of the world as well.

Some political sage once remarked that the people always get the kind of government they deserve; in other words, that the character of government reflects the interest or the neglect of their own welfare shown by the people in the only manner or means at their command, namely, through the ballot.

When voters fail to vote, when they do not make use of the sole weapon in their possession to influence the conduct of their public servants, they surrender the field of battle to their enemies. When the people fail in their duty to themselves then the special interests, the monopolists, the economic robber barons, the foes of labor and their army of lobbyists move in to take control away from the average man.

The present Congress is a perfect example of this truth. In the first place, the Republican majority came into control of both Houses by a vote of less than one-third of the electorate. Just think of that. At the last congressional election in November 1946 there were more than 91,000,000 potential voters in the United States, yet the fact is that only 34,000,000 voted. This means that more than 57,000,000 did not vote. This shameful neglect of citizenship responsibility explains—but it does not excuse—the conduct of the present Republican Congress. This is government by minority—supremely contemptuous of the will and rights of the majority of people.

The Republican Congress stands indicted today by its own record. It has consistently flouted the public interest. It has refused to legislate inflation controls to reduce the high cost of living. It has failed to stamp out the hoarding, black marketeering, and profiteering that blocks the construction of adequate, decent low-cost homes. It has failed to enact public-health laws that would help the average family meet medical and hospital expenses. This record of the Republican Congress was written, mind you, in the face of the Republicans' promises in 1946 to remedy all those conditions.

Instead of enacting a program of relief of the people, the Republican Congress has enacted the Taft-Hartley slave-labor bill. It passed the Knutson bill—drafted and forced through the House by big business. This Republican tax bill will put from $25,000 to more than $100,000 into the pockets of persons with very large incomes. But the only benefits to the litle fellows, with meager incomes of $2,000 or less, will be a mere $38 a year. This is one example how the Republican Party is betraying the average citizen. If they could be fair with the people, they would have passed a bill that would afford relief to those that need and deserve it most instead of giving it to the wealthy that need it the least.

REPUBLICANS ASSURED AMERICAN HOUSEWIVES REMOVAL OF PRICE CONTROLS WOULD REDUCE PRICES AND ELIMINATE BLACK MARKETS

And here is another even greater act of betrayal: During the 1946 campaign the Republican Party promised and assured American housewives that the removal of price controls would bring about an ample supply of meats, foods, and other living necessities at reduced prices and eliminate the black markets. They promised that private builders would be able to construct low-cost homes for exservicemen and hundreds of thousands of others in need of decent living quarters. You radio listeners know those promises were not kept; in fact, prices and the cost of living have increased by over 30 cents on every dollar since 1946.

President Truman, on the other hand, heeding the plight of the consumer, called the Eightieth Congress into special session and presented a 10-point program to relieve the cost of living—providing for the reenacting of the OPA and rationing in order that those of low incomes would not be deprived and prevented from obtaining needed foods and necessities of lifre.

Up to this time the Republicans did nothing to relieve the deplorable situation, except that some of their leaders suggested the people eat less, but instead authorized the manufacturers, producers, and big business to enter into voluntary agreements to control prices. It seems ridiculous to me to expect industry to voluntarily reduce their great profits. It is like the owner of a flock of sheep relying on a pack of wolves to protect them.

Yes; and at the same time they are exempting combines and corporations from the Sherman Anti-Trust Act, which will further encourage them to control and fix their prices to their heart's content.

BUSINESS ENJOYING ITS HIGHEST PROFITS AT THE EXPENSE OF 18,000,000 WHITE COLLAR WORKERS

In the meantime, the trusts, combines and industrial czars have and are enjoying an orgy of the highest profits in their existence at the expense of the consumer, particularly the 18,000,000 white-collar workers in this country earning $25 a week or less, the pensioners and others living on modest fixed incomes who are suffering the most. These men and women and their children are being deprived of a decent living and are being forced to exist on the barest and poorest of foodstuffs and necessities because they cannot afford to pay the high prices, while the profits of industry have skyrocketed as much as 50 to 100 percent during 1947.

Again during the current session the President urged relief for the American consumer, and again the Republican majority refused to take action. But the President's firm stand for an investigation of speculators and gamblers in grains and other foodstuffs finally resulted in the first break in the market. A few of these reductions have been temporarily passed on to the consumer, but there is no assurance that prices will go down to reasonable levels unless Congress will act, and, up to this day, the Republicans have not indicated that they intend to reduce the high cost of living or act against another rise in exorbitant prices.

COMPARE PRESENT-DAY PRICES WITH THOSE OF 1946

I invite you to compare present-day prices with those of 1946 on all kinds of meats, butter, milk, cheese; yes, on all foodstuffs as well as wearing apparel, shoes, and other commodities that the Republicans and the National Association of Manufacturers promised would be reduced.

The Republican Party has again proven that its platform pledges and campaign promises are worthless. They promised that so-called free enterprise and the natural law of supply and demand would eliminate the black markets and relieve the consumer. But instead they made a holiday for the professional manipulator, the speculator, and the hoarder. They opened the way and have encouraged a greater black market in steel, lumber, textiles, and in almost every major industrial field that existed under OPA. Actually free enterprise is not free. The distribution of commodities and materials, and their prices, are controlled by the big manufacturers and manipulators but, the small independent businessmen, who cannot afford to pay the unreasonable black market extra-profit charges, are frozen out of the market along with the average consumer.

The Republican Party's promises that "free enterprise" would be able to break the bottleneck in housing construction has been proven as false as all the rest of its promises. They bottled up the Wagner-Ellender-Taft Housing bill for nearly 2 years, which would make possible the building of low-cost homes on a large scale. And the Republican bankers have further restricted the construction of homes by demanding a higher rate of interest under title 6 of the Housing Act.

With no issues to go before the people, the Republicans are resorting to badgering politics in trying to mislead and confuse them by labeling and smearing every Democrat and Progressive with being a Communist. Instead of legislating relief from high prices so that people can buy sufficient and decent food, they are only interested in the big financiers and industrialists who have and are contributing lavishly to their campaign funds to enable them to repeat their deceptions of the 1946 campaign. But the people are awakened and by their votes, I am confident, will rebuke them in the coming election.

There you have the record of the Republican betrayal of the people. Now you know how little Republican promises are worth. I feel that the citizenry owe it to themselves as well as to the country to drive out of office all those Republicans who have shamefully betrayed them. They should start to register so that they will be in position to vote at the next election to elect men who have proven that they can be trusted and who will not lead them astray as they were in 1946 by the Republicans who are controlled by the avaricious Wall Street combines, trusts, and war profiteers who, in the last year—yes, in the last year alone—have extracted from your pockets $27,000,000,000 in profits, or nearly $200 from every man, woman, and child in the United States.

Hold That Crimson Tide

EXTENSION OF REMARKS

OF

HON. J. VAUGHAN GARY

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 5, 1948

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article printed in the January 1948 alumni bulletin of the University of Richmond, Richmond, Va.:

HOLD THAT CRIMSON TIDE

(By J. VAUGHAN GARY, '12, Congressman, Third District of Virginia)

You and I have an expression we sometimes use when we want to give emphasis to an opinion: "I'll tell the world."

That's what you and I, Mr. and Mrs. America, need to do today. Tell the world about the American way of life. Of free enterprise. Of equal opportunity. Of all the blessings that are ours in this land of the free.

Unfortunately, that is exactly what we are not doing. Like so many clams on the seashore, we remain mute while on another shore the exponents of another way of life, a political and moral philosophy foreign and repulsive to most of us, are sending forth a mighty chorus of propaganda and misstatement.

Unless the Voice of America is heard abroad—and soon—Russia will win, hands down, the cold war which is being waged relentlessly behind the iron curtain. And if Russia wins that cold war, we will have to fight with bombs and bullets in a World War III that will be more horrible than any holocaust the mind can imagine.

We must tell the world about America. We must combat Russian propaganda about our dirty capitalistic system with the true story of free enterprise, with accurate word pictures of the living conditions of free American citizens. If we can get the truth to the peoples of Europe we can hold back the tide of Russian domination. If we let the Communist program of misrepresentation and vilification go unanswered, all Europe will be in the embrace of the Russian bear.

During the current session of Congress I shall do everything in my power to win converts for the State Department's information and cultural program. I shall insist that we appropriate not less than the $31,000,000 asked last year to carry the Voice of America into oppressed nations of Europe. When the Congress last year cut the recommended $31,000,000 to $11,000,000, it for all practical purposes made an appropriation of $20,000,000—the amount saved—to the Russian Communist Party.

We must stop kidding ourselves. There's nothing subtle about the Russian way of spreading its dominion. The plan follows closely the pattern executed by the late and unlamented Adolf Hitler. The Soviet plan is simply to stir up strife and create chaos in smaller European nations, one after the other. Then, having created the chaos, the Russians make use of this unrest as an excuse for moving in. Doesn't that sound familiar?

Although the Russian intent is obvious, doubly obvious to persons who were privileged as was I to visit in Europe this summer, we in America are making little or no effort to curb the Red tide which is sweeping the Continent. And, let me emphasize this, whatever we do, if it is to be effective, must be done now. The United States must exert her leadership in bringing light into darkest Europe and in bringing food and warmth to peoples which are pitifully hungry and cold.

I visited 10 European countries this summer as a member of the House Appropriations Committee's Subcommittee on the State Department. Although the purpose of this trip was to visit United States embassies rather than to study economic conditions, I was constantly brought face to face with conditions of abject poverty.

These conditions applied even to our cousins in England, those conquerors who have not yet tasted the fruits of victory. For them I have only admiration and affection. Living frugally amidst the rubble of war, they are accepting their hardships with courage and are rigidly enforcing their rationing system. I was told there was no black market in England and I believe that statement to be true.

I saw nothing alarming in the "social experiment" in England. As a matter of fact, the nationalization of industry had not proceeded as far as I had been led to believe. As an American long accustomed to public ownership of utilities, and rigid control of other utilities not actually owned by the Government, I found nothing shocking or even revolutionary in the English program. The British frankly described Government ownership of the coal mines as an "experiment" prompted by the extreme shortage of this most necessary fuel and the inability of owners, because of lack of funds, to modernize the mines and step up production. There was no evidence of any intention to expand the program but, to the contrary, elections held while we were in London indicated a trend in the opposite direction.

Coal and steel hold much of the answer to the riddle of European recovery. But two other twins, hunger and despair, may crush Europe before the giants of the earth can produce the goods which will bring prosperity. In the Ruhr Valley, one of the world's richest industrial areas, I literally saw the spectre of hunger. The British are doing as good a job as they can under the circumstances, but it is not good enough.

It is true that 152 out of 157 coal mines which were in operation prior to the war are now being worked. But it is equally true, appallingly true, that production is only 30 percent of normal. Similar conditions exist in the steel mills. I saw men doing manual labor, the hardest kind of manual labor, who were weak, emaciated, actually cadaverous in appearance. I talked to one gaunt steel worker who told me he was 40 pounds underweight.

Give them food and the workers of the Ruhr and other hungry European countries will step up production almost to the prewar normal. If they remain hungry they will remain inefficient. Absenteeism will increase. So will the accident rate. Aside from the humanitarian motive, it is sound business to feed the starving.

Let me say, in passing, that I have no illusions about the Germans. They are by nature a militaristic people. Let them work. Make them work—but don't permit them to rebuild their war industries. I am in thorough sympathy with the French fear of German military resurgence and in accord with their insistence that the German Nation never again be permitted to build instruments of war.

Space limitations will not permit me to touch, other than hurriedly, on conditions I found in other countries visited by the subcommittee. In Italy I was assured by responsible spokesmen for the Government that "Italy will never go Communist, for the same reason the United States will never elect a Huey Long to the Presidency."

Although we have no Ambassador in Spain and do not recognize the Franco government, we maintain an embassy there. This Nation escaped the ravages of war and at the present time is engaged in a building program more extensive than that of any other nation visited by us.

Recovery would not be difficult in Turkey and Greece but for the fear of Sovietism, which is forcing these nations to spend 50 percent of their income for defense.

In conclusion, as one who has seen at first hand the effect of communistic doctrine on a weary, a hungry, and a misinformed Europe, let me urge that we make the voice of America heard in every land and that we bolster our story of prosperity with visual evidence—food for the starving. In this critical time in our history we cannot afford to do less.

If we would save ourselves, we must first save Europe.

Clarence Hancock

EXTENSION OF REMARKS
OF
HON. VITO MARCANTONIO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 5, 1948

Mr. MARCANTONIO. Mr. Speaker, Clarence Hancock was one of our ablest Congressmen. He had earned the respect of all of his colleagues irrespective of their political affiliations. Further, he was a good friend. I was fortunate to count him as my friend. I shall always remember his friendship as one of the most cherished rewards that I have received out of my service in the House of Representatives.

Palestine

EXTENSION OF REMARKS
OF
HON. ELLSWORTH B. FOOTE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, March 5, 1948

Mr. FOOTE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following editorial from the New Haven (Conn.) Journal-Courier, a newspaper founded in 1756, dealing with the present situation in Palestine:

A TOUGH DECISION

The technically sound but practically indecisive United States position on Palestine, as stated by Delegate Austin, can mean only one thing; asking a restudy by the Security Council indicates that President Truman still stalls in agonized indecision. This country, the statement said, will not impose partition by force, but will join in any United Nations effort to safeguard international peace and security.

There seem to be only three courses open now. The first and most obvious is enforcement of the partition decision, made largely through United States influence. The second is a continuation of UN trusteeship. The third is abrogation of the partition and reopening of the whole question, which would be to "eat crow," appease the Arabs and set in motion violent political repercussions.

There are considerations of policy and politics beneath the surface of the major powers' attitude toward enforcement. This Government, for example, has to think about such things as the oil that the Arabs sell us, and the possible result of Soviet participation in enforcement. It must weigh the demand for lifting the embargo on arms for the Jews against the opposition to such shipments by Britain, which is still the mandatory power.

But these considerations, and those of other countries, seem trivial compared to what will happen to Palestine and the UN if partition is not enforced. It is quite evident what will happen if nothing is done. The Jews will have a bad time of it, even if they are supplied with arms after the British leave. They will be greatly outnumbered by an international army of invading Arabs.

UN prestige will receive a heavy blow. The Palestine question finally found Washington and Moscow in agreement. That was encouraging. But if the UN is to bow before the first challenge of its first major decision, it may collapse like the League of Nations—only much faster.

It seems certain that the blustering Arab front would dissolve before any concerted show of power. By modern military standards, the Arabs' equipment is primitive. Their threats and saber-rattling are directed toward the nations that are their best customers. It is unlikely that, in a showdown, they would want to cut themselves off from their major source of revenue.

But any enforcement action must come through the UN. If individual governments should intervene, the present suspicions and ambitions would increase. They might sow the seeds of World War III. So there is only one choice. The UN must act, and act quickly.

We are not informed as to whether the UN has considered Sumner Welles' recent suggestion that a Palestine force be formed from the regular establishments of five or more intermediate or smaller nations. This solution, if practicable, would solve one United States difficulty—that our currently reduced forces are not adequate to send a sizeable contingent to Palestine. But whatever the Security Council's decision, it must be made quickly and it should be a courageous one. Further indecision and stalling can hardly mean anything but loss of face for the UN, division of opinion at home and a greater embroilment of clashing interests in Palestine.

Gasolines and Motor Fuels

EXTENSION OF REMARKS
OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 5, 1948

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from C. E. Paden, president, Lubri-Gas International, Inc., and an article from the National Petroleum News of December 17, 1941:

LUBRI-GAS INTERNATIONAL, INC.,
Chicago, Ill., March 3, 1948.

Hon. JOHN W. HESELTON,
House of Representatives,
Washington, D. C.

DEAR SIR: I have just noted a news item concerning your ideas regarding premium and regular grade gasolines and motor fuels, as well as the changing of motor oil every thousand miles or so. I want to compliment you on the fact that I think you have started an idea and proposition that should be thoroughly investigated—and the public thoroughly and fully advised concerning gasolines.

Without a question the biggest graft that has ever been put over on the American public is ethyl gasoline. No one could have put it over but the Standard Oil Co., and the only difference between ethyl and regular, if you get the truth of matters, is that in perhaps 15 or 20 percent of high-compression engines in automobiles, leaded gasoline will prevent the knock. However, if this percent of automobiles were properly timed they would not need ethyl. You are quoted as saying in the news article that I read, "Information from industrial sources show that premium is no better than regular for ordinary driving, and actually worse on hills." Oftentimes ethyl lead gas causes a chemical reaction in the fuel to which it is added, and actually makes for a poorer gasoline so far as quality and mileage are concerned.

To give you an idea of some of the graft and unfair charges connected with the Standard Oil Co. and the ethyl-lead proposition throughout the country—all through the OPA set-up the OPA permitted oil dealers to sell ethyl gasoline at a premium price, but there never was any genuine ethyl in any pump in the United States. Oftentimes there was no lead in the gasoline. There is a lot of gasoline being sold in the United States under the name of ethyl that is not genuine ethyl gasoline.

We ourselves use gasoline to convey lubricating oil to the piston rings and cylinders, and when we add our oil to the gasoline, which may be regular, ethyl, or Diesel fuel, we do not in any way change the specifications of the gasoline. But through lubrication, which is carried to the working parts of the engine by the fuel, we do, of course, give the consumer more for his money.

I have had Lubri-Gas for over 30 years. Since 1925 the Standard Oil Co. and the Ethyl Corp. have learned that by simply taking lead they could make from 1 to 1½ cents per gallon more on their gasoline. Years ago the public would not pay the price to suit these oil companies, so they put 1 cubic centimeter of lead into all gasoline, and this was known as Q gasoline. A lot of gasoline today contains lead, but the refiner uses this lead to bring his gasoline up to a regular grade, or a premium grade. He should not be allowed, and no retailer should be allowed, to charge a premium price, because a chemical, which in this case is lead, is added to the gas to make it conform with specifications of their competitors.

If all gasolines were the same when they were made, and then if the refiner wished to add something of value, or use the gas to carry something to the engine that would be of value, then he would be entitled to make a reasonable charge for it.

Now the major oil companies have two sources of supply for lead—the Du Pont Co., who have always manufactured the lead up until January 1, 1948, for the Ethyl Corp., and the Ethyl Corp. The major oil companies are taking down the name "ethyl" as trade name and setting up their own grades, leaving the independent refiner handicapped, because he will have to continue using ethyl as a premium name. If the public knew that this name "ethyl," and the name of the major oil companies, was just a name they were paying for, they would save millions of dollars yearly.

The value of high-octane gas in automobile engines today is absolutely nil, as any car manufacturer will testify. Ask any car manufacturer if the car he builds must have premium gas to operate, and he will tell you "No." They will operate on any grade of gasoline. You never see any of the automobile factories advertise. Finally the use of lead in any gasoline is very injurious to the working parts of the engine. I think the Society of Automotive Engineers would tell you that the use of Ethyl gasoline causes corrosion, causes a scale and crust around the valves causing them not to seat properly, and in many cases if there is too much lead in the gas, actually will destroy the working parts of the engine.

We have consistently fought the use of lead and leaded fuels, but we are not able to tell the public that they are being defrauded when they are buying premium gasoline. You understand that in aviation engines, high-octane gas is O. K., yet our Government did not allow the training schools of our Air Corps the price to buy premium gasoline. After all, when you come to figure the actual B. t. u. values of the fuel, there are no more miles in a gallon of gasoline than there is in a gallon of kerosene, but our carburetors do not handle it so easily, and the American public wants to get started in a hurry.

You will not get the oil companies to inform the public concerning the difference between regular and premium gasoline. It will take an announcement of some kind about gasoline through our Bureau of Standards, or something, to get the public to stop wasting their money.

I have a lot of material along this line, and if, at any time, it would be of value to you, same can be prepared and submitted to you.

Yours very truly,
LUBRI-GAS INTERNATIONAL, INC.,
C. E. PADEN, *President.*

[From the National Petroleum News of December 17, 1941.]

65-OCTANE GOOD 'NUFF TO RUN MANY LATE MODELS, OPA SAYS

"Many late-model cars can operate without undesirable knocking on gasoline with an octane rating as low as 65. Third-grade gasoline with an octane rating as low as 60 is quite satisfactory for older cars, and for several of the latest models."

This is the opinion of engineering consultants to the Consumer Division of the Office of Price Administration, which has issued the following press release:

"The Consumer Division of the Office of Price Administration today branded as exaggerated and misleading the recently circulated contention that reduction of the octane rating of regular gasoline from 75 to 70 would reduce gasoline mileage by as much as 10 percent.

"Engineering consultants of the Division termed 'particularly absurd' the statements that such an octane reduction would for the country as a whole increase gasoline consumption by 5 percent.

"The estimates of the industry that a reduction of regular gasoline from 75 to 70 would cost $250,000,000 should be turned around, engineers of the Consumer Division report. Motorists are now wasting millions of dollars every year in burning higher-grade gasolines than are required by their cars.

"They point out that octane ratings for most regular gasolines were increased from 70 to 75 within only the last 3 years. Only a few of the latest models require a gasoline with an octane rating as high as 75.

"In a very few cases a simple and inexpensive change in ignition timing would be required to eliminate objectionable knocking on 70-octane fuel. If this adjustment is correctly made, the resulting loss of power and economy would be too small to be detected by the drivers of these cars.

"Most cars will operate as efficiently on fuels with a 70-octane rating as they do on higher-octane fuels. Many late-model cars can operate without undesirable knocking on gasolines with an octane rating as low as 65.

"Third-grade gasolines with an octane rating as low as 60 are quite satisfactory for older cars, and for reveral of the latest models.

"Gasoline with an octane rating higher than needed by the car will not give added power or improved car performance in any respect, engineers state.

"Our tanks and military planes will require large quantities of gasoline with high octane ratings. This means that there will be a heavy war demand for high-grade gasoline and the tetraethyl lead used to increase octane, or antiknock quality, in gasoline.

"In addition, two materials—chlorine and lead—used in the manufacture of tetraethyl

lead are scarce, being in wide demand for essential military and other defense uses.

"Motorists may help relieve the pressure on tetraethyl supplies by avoiding the use of gasoline with octane ratings higher than necessary, the Consumer Division points out.

"A slight amount of 'pinging' on rapid acceleration or under heavy loads on hills is not harmful to a car, Division engineers comment. In fact, auto mechanics often listen for a slight 'pinging' to indicate that the spark is adjusted to give maximum gas mileage."

Address of Hon. William E. Borah, of Idaho, on January 7, 1938

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 5, 1948

Mr. DORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered in the Senate of the United States by Senator Borah on January 7, 1938:

Mr. BORAH. Mr. President, this measure, in a slightly different form but embodying the same principles, came to this body about 25 years ago. At that time I was a member of the Judiciary Committee of the Senate and was appointed by the late Senator Nelson, chairman of a subcommittee to pass upon the measure, particularly its constitutional features. I shall not at this time go into the history of the action of the committee at that time. It may be necessary to do so later in order to throw light upon some features of this matter. It is sufficient now to say that I reached a conclusion as to the merits of the bill, which conclusion I still entertain.

Heretofore I have confined my remarks upon this bill largely to the question of its constitutionality. Those questions still interest me, and probably I shall discuss them later. Today, however, I desire to address my attention for a time to the policy involved in this measure. Assuming for the purpose of the argument that we have the constitutional power to pass such a measure as this, I desire to invite the attention of the Senate to the wisdom of doing so. I think it only a little less important, perhaps no less important, than the constitutional question itself.

Notwithstanding anything that has been said or that may be said to the contrary, this is a sectional measure. It is an attempt upon the part of States practically free from the race problem to sit in harsh judgment upon their sister States where the problem is always heavy and sometimes acute. It is proposed to condemn these States and the people in them because it is claimed that they have failed properly to meet and adjust this most difficult of all problems. No more drastic condemnation could be offered by a measure than that which is offered by the measure now before the Senate.

It proposes to authorize the national Government to enter into the States, and to take charge of and prosecute as criminals the duly elected officials of the States, from the governor down. It proposes that the Federal Government shall be the sole judge of the guilt or innocence of State officials.

In my opinion that requires a review of some unfortunate history, and the recalling of some unpleasant facts. These States are not to be pilloried and condemned without a full presentation of the nature of the task which fate and circumstances imposed upon them, and not without a complete record as to the weight and difficulty of the task, what has been done, and with what good faith it has been met. I shall contend that the southern people have met the race problem and dealt with it with greater patience, greater tolerance, greater intelligence, and greater success than any people in recorded history, dealing with a problem of similar nature. Let us inquire what it is that the South has had to do, how it has done it, and what reason there is now, after 70 years of great effort, to pass censure or condemnation of those great States and that great people.

Paraphrasing the language of one of the most eloquent of men, when the Confederate soldier pulled his gray cap over his brow, and lifted his pallid and tear-stained face for the last time to the graves which dotted the hills of old Virginia, and started on his slow and painful journey home, what was he to find? What were the problems, what was the task, what were the conditions which confronted him? His home was destroyed, his plantation devastated, his help gone, his money worthless, his civilization imperiled. This was the condition in addition to the other problem with which we are more particularly concerned today, and which confronted the South as it entered upon its great task of rebuilding.

I shall not go into details as to the reconstruction period. I recall it sufficiently and only that we may understand something of the antecedents of this problem and something as to the good faith and the ability with which it has been met. I recall a single instance in the way of illustration. When Congress met in December 1865, the then leader of the House—perhaps the most complete master of the House of Representatives that history records—Thaddeus Stevens, outlined the program with reference to the then pending situation. Among other things, he said:

"The future condition of the conquered power depends upon the will of the conqueror."

He said further that the conquered provinces were to be admitted as States—

"Only when the Constitution has been amended so as to secure the perpetual ascendancy of the party of the Union"—

The Republican Party—

"Every government is a despotism. * * * The Constitution has nothing to do with it [the program]. * * * I propose to deal with you [the South] entirely by the laws of war. * * * The conquered people have no right to appeal to the courts to test the constitutionality of the law. The Constitution has nothing to do with them or they with it."

Thus they were to take up the work of rebuilding and of carrying the race problem with the threat of having all constitutional guaranties withdrawn.

Mr. President, I have always felt that in many respects the reconstruction period is the most regrettable page of American history. Had Abraham Lincoln lived through his second term, it probably would have been the most readable page, one of the noblest pages in all history. It would have been characterized by wide sympathy, by breadth of understanding, and by that wisdom which flows from the heart as well as the brain, which passeth all understanding. It would have been free from that blind partisanship which disregards constitutions and constitutional limitations as well as national honor and national unity.

A short time before the Great Emancipator was removed from the scene he had outlined his views on reconstruction. What a different story would have been written had those views prevailed. What a different national life would have been lived had those views obtained. But before his body had reached Springfield the committee had met and had determined upon the complete rejection of the entire policy theretofore announced by the dead President. Ben Butler's views superseded those of Abraham Lincoln; and a more tragic thing could not happen in a crisis confronting a nation. These measures with reference to reconstruction therefore were written from the standpoint of partisanship not unmingled with a desire to punish.

The measure now before the body embodies the same principle upon which those measures were founded. The same arguments are made in support of the pending measure, to wit, that the southern people are to be distrusted and are incapable of local self-government.

We know now what those measures in those days did. They retarded and frustrated the coming together of the people of the different States. They gave us the solid South. They separated us politically, which separation continues until this day. They implanted a sense of bitterness in the minds of those people, not because of what had happened upon the field but because of what happened in Congress.

It is not in the interest of national unity to stir old embers, to arouse old fears, to lacerate old wounds, to again, after all these years, brand the southern people as incapable or unwilling to deal with the question of human life. This bill is not in the interests of that good feeling between the two races so essential to the welfare of the colored people.

Nations are not held together merely by constitutions and laws. They are held together by mutual respect, by mutual confidence, by toleration for conditions in different parts of the country, by confidence that the people in the different parts of the country will solve their problems; and that is just as essential today as it was in 1865 and 1870.

In the beginning, Mr. President, I reject the pending measure as fundamentally not in the interest of the white people of the South, not in the interest of the black people of the South, not in the interest of national unity nor of national solidarity, not in the interest of eliminating crime. History has proven that it will be a failure, and those who suffer most will be the weaker race.

Mr. President, the race problem is the most difficult of all problems, and, in addition to the conditions which I have outlined briefly, the southern people had placed upon them the race problem under circumstances and conditions never before experienced by any people, so far as I know, in recorded history. In addition to and on top of all other problems the South had to grapple with the race problem. How well has it dealt with it?

At the close of the Civil War there were a little over 5,000,000 white people in the South; there were 3,500,000 Negroes. In Mississippi there were 100,000 more colored people than white people. In South Carolina there were something like 150,000 more colored people than white people. There were the two races, living upon the same soil, now equally free under the Constitution, one of them untrained and unschooled in the affairs of state, and untrained in citizenship. The problem had to be met. Was it easy of solution? Can one conceive of a more difficult problem placed before a people? I wish we could place ourselves in their position. It will help us to be sympathetic, sane, and just.

I call attention to some facts which lead up to the question of lynching. History shows that in the North in 1889, 1 Negro in every 185 was in jail; in the South, 1

in every 446. In the North the percentage of Negro prisoners was six times as great as that of the native whites, in the South four times as great.

Monroe S. Work, of Tuskegee College, has said:

"There is a much higher rate of crime among the Negroes in the North than in the South."

That speaks volumes for the southern Negro and no less for the whites.

Professor Johnson, of Fisk University, has said:

"The rate for Negroes is much higher in the Northern States than in the Southern States as to crime. Judging by the figures alone, for a 10,000-Negro population, the commitments were 88 in the South, 283 in the North."

In a volume entitled "Negro Housing" published in 1932, I find the following:

"The extent of property ownership by Negroes has in the past been greater in the South than in the North."

It will be disclosed that in some of the Southern cities the percentage of Negro ownership of homes runs as high as 45 percent of the Negro population; in other places as high as 30 to 39 percent of the Negroes own their own homes.

In a bulletin issued by the Department of Agriculture in 1930 we find the statement that the value of land and buildings of farm property owned by Negroes increased from 1910 to 1930 as follows, giving the round figures:

	Percent
Virginia	58
North Carolina	140
Georgia	11
Florida	29
Louisiana	142
Texas	97
Mississippi	68
Alabama	41
Oklahoma	54
West Virginia	37

I mention these figures to show the progress of the Negro throughout the South in an economic way, for, after all, only in proportion as he acquires property and economic power can he hope to be secure in his political rights. That is just as true of the white man as of the colored man. And in proportion that he advances in education, in the acquisition of property, and in the acquisition of economic rights, in that proportion he will come to be regarded as an essential factor of the southern civilization, and treated as such; and to accomplish that has been the aim of the southern Negro, encouraged and assisted by the white people of the South.

I shall now read from a little volume to which I called attention a few days ago during the debate on the farm bill, a volume written by Gerald W. Johnson, who, I have been informed, is one of the editors of the Baltimore Evening Sun. He has written a remarkable volume upon the questions which pertain to the southern portion of the country. On page 8 of the volume he says, referring always to the South:

"The problem of public education, for example, has not been solved. It is further from solution in the South than in any other region. But when one considers that the South has to teach more Negro children than there are children of all kinds in New England; and when one notes that it is spending far more of its total income on schools than is spent by any other region, its effort, even though but half successful, must command respect and admiration."

They must educate more Negro children in carrying this load than all the children of New England, and they are doing so; and by educating them they are fitting them for citizenship, schooling them against crime, and they are laying the only sure foundation there is for the extinguishment of crime among the Negroes. They are laying at tremendous cost the foundation for the good citizenship of the Negro, and while lynching can never be justified, nevertheless there is no more successful approach to the ending of lynching than through education, through bringing both races to understand their responsibility to society. I know of no finer sense of duty than that displayed by the South in the help it gives the Negro in bettering his condition as to property, as to economical strength, and as to education.

I read again from this able writer:

It has been the fashion in some quarters to assume that the Southeast has remained almost completely inert in the presence of its social problems. This is far from the truth. A mere glance at the educational statistics of the region is enough to dissipate the impression that the Southeast has been indifferent or lethargic in this respect. The State of Florida, for example, spends 5.76 percent of its total income for school purposes, and North Carolina 4.38 percent; this is the largest percentage that is spent for similar purposes by any other States save the Dakotas. * * * The Southeast spends 3 percent of its total income for higher education, the highest percentage in the Nation. It enrolled more high-school students in 1930 than the whole country did in 1900, and there are more accredited high schools in this region than there were in the United States at the end of the century. Its present army of 60,000 high-school graduates annually represents an increase of 500 percent within the last 2 decades.

I pause to say that if we knew as much about the South and what they have done and are doing as we pretend to know, we would not be so free to criticize. It is a horrible thing to see the body of a Negro burned to a crisp, swinging from the limb of a tree; it is a horrible thing to have a daughter or son, perhaps a mere child, snatched from your homes, carried into hiding, perhaps murdered. These are our problems, pressing for consideration, and they are making as determined an effort to clear the stain from the honor of the South as are we to rescue our honor in the North. "Why beholdest thou the mote that is in thy brother's eye and considered not the beam that is in thine own eye."

During the last session of Congress we had under consideration in the Committee on Education and Labor what is known as the educational bill, and, of course, it vitally affected the Negro people of the South, and they appeared in great numbers before the committee. At that time Senator Black, now Justice Black, was chairman of the committee. The most difficult problem was to work out absolute protection for the colored children in the enjoyment of the fund proposed to be set up. I must say that I never knew a person more meticulous, more determined, more vigilant to protect the colored students in the enjoyment of that fund than was Justice Black. I was impressed with the fact that there was a determination upon his part to reach the Negro at that point in his life where he could best serve him not only with reference to general citizenship but as to the reduction of crime. Mr. Johnson states further in this volume:

"The most conspicuous characteristic of the southern population, however, is its biracial character. A group of 8,000,000 people of a different color from the other 17,000,000 is a feature so startling that it may be expected to attract more attention than perhaps it deserves.

* * * * *

"The inevitable result has been enormous waste of the Negro's potential value to the social structure. Not all of this is the fault of the white South by any means. The hasty and ill-advised effort made in the sixties to project the newly emancipated slaves into a political and social position they were not prepared to occupy has made any realistic treatment of their position extremely difficult. Not only did it create appalling prejudices but it erected very substantial legal barriers against any direct and forthright approach and forced southern political and social polity into a sinuousness that has been productive of a thousand evils.

"This is, however, water over the dam. What confronts the Southeast today is the problem of making the best possible use of 8,000,000 blacks.

* * * * *

"Only comparatively recently has any considerable effort been made to treat the disease, rather than to alleviate its symptoms—or, rather, only recently has the idea begun to spread that perhaps there isn't any organic disease, but only a series of functional disturbances. Since the turn of the century the Southeast has been making real, if not always adequate, efforts in the field of Negro education. With the rise of the Negro in the cultural and economic scale there has come also an appreciable reduction of the rigor of civil and social disabilities. And with both there is a strengthening belief that perhaps the traditional approach to this situation has been faulty."

Everywhere we find a determination to find the right way. The Negro is there. He is there to stay. The South knows that he is there to stay, that he is a part of the wealth of the South. We in the North may be interested in the Negro politically. We care little about him economically. But he is an indispensable factor in the economic development of the South. They can and will do for him far better without our interference or advice than with it.

Mr. President, the Negro has had a hard road to travel ever since he was given his freedom. A hundred-and-odd years of slavery afforded poor training for citizenship in the most advanced of nations. Almost overnight he went from slavery to take up the obligations of a free man in a free country; but, everything considered, he has done well; his advancement has been marked. Restricted, not by the Constitution of his country or the decisions of its highest courts, but restricted, almost cabined and confined, by the iron laws of society, nevertheless he has made progress. And where has that progress been greatest? In the South. In spite of prejudice, and statements to the contrary, facts and figures show it has been greatest in the South. In the acquisition of property and economic advancement generally the Negro has fared better in the South than elsewhere.

It is true, as is contended here, that at times he has suffered from mob violence in the South, but it is equally true that he has suffered from race riots in the North. But in all things which make for the advancement of the race as a race, the North has no advantage over the South in the story of the advancement of the Negro. We have shown no greater patience, no greater tolerance, no greater ability to deal with this race than have our brothers of the South. And now, because there is the power, because there are the votes, because it is possible to do so, it is proposed to call these great States and these people before the bar of public opinion and, after 70 years of arduous effort on their part, condemn them as unfit and unwilling to deal with this great problem, condemn them for having failed in the essential principle of home government, of home rule. After these 70 years, and after 150 years, taking the Government's history as a whole, we now come to the time when we are asked to say that home rule or local government has

broken down in a number of the States of the Union. We call these States and these proud people to judgment before the whole world and spread upon the records of the Congress our condemnation, our judgment that in the most vital things of free government they have failed.

Broken down. Why? Because eight Negroes were lynched last year. There were 20 kidnaping cases in the United States last year. After all the efforts of the States and all the efforts of the Federal Government, taking charge of those who crossed State lines, we still had 20 kidnaping cases as against the 8 lynching cases in the South. Is that an indication that the South is not in good faith and with honorable effort trying to protect the colored race and to give it the same protection that it gives the white race?

Lynching is the one crime, Mr. President, that is distinctly and markedly on the decrease in the United States.

I shall take time to read briefly some facts and give some figures.

Prof. Charles S. Johnson, of Fisk University, says:

"Taking the period of 1889 to 1893 as 100 percent, it is of interest to note that every 5-year period has shown a decrease in the total number of individuals lynched."

He then gives the figures showing that from 1924 to 1928 there was a decrease of Negro lynching amounting to 84.8 percent. He concludes by saying:

"It will be discovered from the accompanying graphs and tables that at the present rate of decrease lynching will apparently cease to be a problem in race relations due to its disappearance."

Further, he says:

"In the 30-year period from 1889 to 1918, inclusive, there were 2,522 Negroes lynched.

That is about 84 a year.

He then calls attention to the fact that in 1924 the number had dropped to 16. Last year the number was 8. In many of the Southern States lynching has practically disappeared. Virginia had only 1 case in 10 years. West Virginia had none during the past 5 years. South Carolina had none during the past 3 years. Oklahoma had 1 in 10 years. North Carolina had 2 in 7 years. Arkansas had 3 in 9 years. Maryland had 2 in 10 years, and none for the past 3 years.

I call your attention to a statement from the great Tuskegee Institute located in the State of Alabama. It reads:

"There are a number of interesting features to be noted. From 1882 to 1885 there were more whites lynched than Negroes. Concerning the decline of lynchings in the United States, I call attention to sheet No. 2, 'Lynchings, white and Negroes, by periods, 1882–1936.' You will note that there has been a steady decline in the number of lynchings for each of the 10-year periods, 1887–96 to 1927–36. Judging from the trends shown in this table, there is every reason to believe that there will be a further decline in lynchings.

"There are probably three major factors that have contributed to this decline. The first of these is the tendency for frontier characteristics in the South to disappear (lynching was a special characteristic of the frontier in America, both in the West and in the South). Second, the breaking down of isolation in the South by increased facilities: (1) Rural free delivery; (2) more telegraph offices; (3) more telephones in small towns and rural areas, and (4) recently the radio and paved roads. Third, increasing agitation within the South during the past 40 years against lynchings. This has resulted in an increasing sentiment against the evil. This sentiment has expressed itself in the increasing efforts to prevent lynchings.

"From 1914 to 1919 the number of persons lynched was much greater than the number of persons prevented from being lynched. From 1920 to the present the number each year prevented being lynched has greatly exceeded the number lynched.

"These facts and trends seem to indicate unquestionably that there will continue to be a decline in lynchings in the United States. Not only in these statistics but in many other ways is there employed a growth in the humanitarian attitude of the American people. This growth, I believe, has paralleled the development of educational and social agencies, all of which bid fair to rid this Nation of the barbaric practice of lynching."

In other words, the problem is being met, the problem is being solved, and it is being solved in the way that America solves her problems when they are local and of a local nature; and that is through the activity and the cooperation and the determination of the people themselves.

Mr. President, suppose Congress passes this bill; suppose it becomes a law; where must we go for its enforcement? The bill may be passed by votes from other States, but for its enforcement we must go to the juries in those communities which we condemn. The bill may be passed in the theoretical atmosphere of Washington, but it must be enforced down among the people in the realistic atmosphere of the southern States. There will be the southern district attorney, the southern judges, the southern juries, and they must be depended upon for the enforcement of the law. Do Senators think they will more likely enforce the law when they have been condemned in the sight of all the world, and in face of such condemnation, than when they are appealed to from the standpoint of the sense of duty of their State and their sense of duty of citizenry?

We get back, after all, to the people themselves for the enforcement of the law. We have had an experience in this country showing that we cannot enforce a law when public opinion is not behind the law. The only way in which we can hope to have the law enforced is by the method that is now pursued by the southern people—that is, to educate the people up to an understanding that it is to their interest and to their honor to maintain law and order in their communities—and that they are doing.

Some years ago a great southerner discussed this question, and I cannot refrain from calling attention to some of his language. It seems to me fair, just, and so in accordance with the sentiments of the true patriot that it is worth while for us to stop and hear the voices of those who are wrestling with the problem at home.

Mr. Henry W. Grady said:

"Nothing, sir, but this problem and the suspicions it breeds, hinders a clear understanding and a perfect union. Nothing else stands between us and such love as bound Georgia and Massachusetts at Valley Forge and Yorktown. * * *

"I thank God as heartily as you do that human slavery is gone forever from American soil. But the freeman remains. With him a problem without precedent or parallel. Note its appalling conditions. Two utterly dissimilar races on the same soil—with equal political and civil rights—almost equal in numbers, but terribly unequal in intelligence and responsibility. * * * Under these, adverse at every point, we are required to carry these two races in peace and honor to the end.

"Never has such a task been given to mortal stewardship."

Is that not true? Can we find anywhere in history a task such as was assigned to the southern people at the close of the Civil War, with slaves for 100 years released, free as they should have been, but given the power to participate in politics without any training and without any experience? It was beyond their capacity, as it would have been beyond the capacity of any race immediately to assume in full, and properly discharge, the duties of citizenship. But those were the conditions which confronted the South, and with which they have been dealing.

"The resolute, clear-headed, broad-minded men of the South * * * wear this problem in their hearts and brains, by day and by night. They realize, as you cannot, what this problem means—what they owe to this kindly and dependent race—the measure of their debt to the world in whose despite they defended and maintained slavery.

"If you insist that they are ruffians, blindly striving with bludgeon and shotgun to plunder and oppress a race, then I shall sacrifice my self-respect and tax your patience in vain. But admit that they are men of common sense and common honesty, wisely modifying an environment they cannot wholly disregard—guiding and controlling as best they can the vicious and irresponsible of either race * * * admit this, and we may reach an understanding without delay."

Let us admit that the South is dealing with this question as best it can, admit that the men and women of the South are just as patriotic as we are, just as devoted to the principles of the Constitution as we are, just as willing to sacrifice for the success of their communities as we are. Let us give them credit as American citizens, and cooperate with them, sympathize with them, and help them in the solution of their problem, instead of condemning them. We are one people, one Nation, and they are entitled to be treated upon that basis.

Mr. President, I now turn briefly to another feature of this measure. I shall discuss it later in more detail, referring to court opinions. But I call attention to this feature now which must be of concern to every Member of this body, to everyone who believes in our dual system of government. This bill as it is drawn—observe my language—this bill as it is drawn strikes at the very heart, at the very life of local self-government. I ask Senators to reread the bill in the light of that assertion. It would place a construction upon the fourteenth amendment never contemplated by the men who wrote it—in fact, specifically rejected by them—and which, in my opinion, a fair construction in no sense sustains.

The bill openly and professedly declares in effect—and that is the theory upon which it rests—that the people in these States are either unwilling or unfit to maintain the most ordinary principles of organized society, and that in the face of the facts which I have shown, that they are really solving the problem.

Permit me to say here before I go further that I make no contention but that the fourteenth amendment has forever placed it beyond the power of any State to deny any person the equal protection of the laws, or to deprive any person of life, liberty, or property without due process. I recognize also that the State acts and speaks through its officers, legislative, judicial, and executive. I am not going to take refuge in technicalities, but I contend for what I believe to be a fundamental principle, and that is that while you may call a State thus acting and thus speaking to account, you cannot take jurisdiction over or deal with acts and deeds not done by the authority and by the direction of the State. It must at all times be State action. You cannot deal with acts under the fourteenth amendment not done by and under the authority and direction of the State. The dereliction of an officer in violation of the laws of the State, in disregard of the sworn duty exacted of him by the State, and subject to punishment by the

laws of the State, cannot by any possible construction, either in law or in conscience, be the act of the State. To establish any such principle would be to undermine and break down the integrity of every State in the Union. If a State may not be entrusted exclusively with the authority and relied upon to exercise the authority to punish those who violate its own laws, public or private persons, then there is no such thing as local government, because the State is deprived of the very instrumentality by which it maintains State integrity.

Since this proposition first came before Congress the Senators from the Southern States have borne the brunt of the debate. They have been made to feel the criticism of those who look upon opposition as mere local prejudice. We are all prone to consider the race question as peculiarly a southern problem, and we leave our southern friends to deal with it without very much sympathy or interest. But assuming that we are going to continue this narrow and selfish course, when we come to read this bill it is found that it goes an arrow's flight beyond any race question. The way it is drawn and its legal terms lift the bill out of the region of the race question into the region of governmental principles.

I do not contend, of course, that the authors of the bill or its supporters are taking advantage of the horror which we all feel toward the crime of lynching to strike a blow at our dual system of government, but that is precisely what is happening; that is precisely what will happen in view of the manner in which the bill is drawn. The constitutional feature of this bill under its terms is just as vital to Idaho as to Alabama; it is of just as much concern to Massachusetts as to Georgia. If the Federal Government can send a United States marshal into the State of Tennessee to arrest a sheriff because he has failed to protect a colored man from violence, it can, under the same principle, send a United States marshal into the State of New York to arrest a sheriff, or other officer on whom the duty is imposed, because he neglected to protect the life of a citizen against the violence of thugs. It is just as much the duty of the State to protect the citizen from violence not under arrest or not assailed by three but by two or one. The Constitution does not classify crimes. It does not say that lynching is subject to the terms of the Constitution and that death by the act of thugs is not.

What does this bill provide? There is not a word in it which indicates that the failure to protect in any instance was due to the fact that the prisoner was a Negro. There is no provision indicating that the States of the South or their officers maintain one rule of conduct for the Negro and another for the whites. There is nothing to the effect that the laws of the States favor the whites and do not favor the Negro. There is no indication or intimation in the bill that the failure of the officers to act was due to the fact that his prisoner was a Negro. This bill is not based in its terms upon discrimination against the Negro, because of unequal treatment of the Negro, but upon the theory the States have broken down in maintaining order and protecting life. That is not a local question but a national question. If the States no longer protect life and property not because of discrimination but because of failure to execute laws regardless of race then we have a great national problem to be met by constitutional amendment. The fourteenth amendment does not cover any such question.

In all the cases which are cited in the briefs sustaining this measure there will be found a specific provision in the statutes concerning the failure of the officer to act being due to the fact that the party in interest was a Negro. There is no such provision in this bill. This is a general proposition, dealing as much with one race as with the other. Let me read from the bill:

"SEC. 3. Whenever a lynching of any person or persons shall occur, any officer or employee of a State or any governmental subdivision thereof who shall have been charged with the duty or shall have possessed the authority as such officer or employee"—

That would include the Governor and all his subordinates in the executive department—

"to protect such person or persons from lynching and shall have willfully neglected, refused, or failed to make all diligent efforts to protect such person or persons from lynching and any officer or employee of a State or governmental subdivision thereof who shall have had custody of the person or persons lynched and shall have willfully neglected, refused, or failed to make all diligent efforts to protect such person or persons from lynching, and any officer or employee of a State or governmental subdivision thereof who, having the duty as such officer or employee, shall willfully neglect, refuse, or fail to make all diligent efforts to apprehend, keep in custody, or prosecute the members or any member of the lynching mob, shall be guilty of a felony and upon conviction thereof shall be punished by a fine not exceeding $5,000 or by imprisonment not exceeding 5 years, or by both such fine and imprisonment."

Where is the provision there that deals with the lack of equality between the races or discrimination as to the races? There are no provisions in the bill requiring a showing that the failure of communities to protect a person was due to the fact that he was a Negro. In all the cases cited, there will be found a statute specifically requiring a showing that the officer refused to act or failed to or did not act because of the fact that race was involved and that a Negro was the person involved.

Let us carry this a little further. It is the first duty of a State, is it not, to enact laws to provide officers to protect life, liberty, and property? That is the first duty of every State. Suppose that a man is killed by thugs, we will say, in one of the great cities, without mentioning any particular one—and while the South lost eight Negroes by lynching last year the North lost hundreds because of acts of violence committed by thugs—and suppose that the State failed to take proper action under its laws and by its officers to protect the citizen on the highway or in his home against the acts of thugs; may we not, under the principle of law invoked in this bill, send an officer into that State to take charge of those police officers? What is the distinction in this bill between violence committed by a combination of thugs and violence committed by those who are combined into a mob? We are somewhat at a disadvantage in discussing the bill, because its authors have been entirely silent in presenting those features, and I am having to present it upon the briefs which I have read.

I think it might not be out of place here to call attention to another matter. The proponents of the bill are undoubtedly maintaining that the Federal Government will protect men in the South better than will the local communities. They are undoubtedly basing the entire measure upon the proposition that the Federal Government will execute the law. Well, we have the Federal Government in control of the city of Washington, which now, if not the first, is at least the second capital city of the world which is most plagued with crime. Seventy-five people here have been robbed of their property in one night. How close the police were I do not know. I understand the police escaped being robbed.

We can all recall instance after instance published in the papers of young women disappearing and their bodies being found outraged and the criminals never being intercepted. Why is there any reason to believe that the Federal Government can enforce criminal laws better than can the State governments? The enforcement of law and the punishment of crime depends upon the will and purpose of the community where the crime is committed. Those advocating this bill are on a venture. They are going to take the responsibility away from the people in the South; they are going to say to them, "You are not qualified or willing to do the work; we are going to do it." Where is the record which shows that they will do it? What is the record?

We have now at the head of the crime department, if I may call it that, in the Department of Justice, perhaps the greatest specialist in the world in the running down of crime and criminals; we have a Federal kidnaping law by reason of the fact that kidnaping crimes generally pass State lines; but last year, 1937, there were 20 kidnaping cases in the United States, with the State and Federal Governments both working, and Mr. J. Edgar Hoover says that there never will come a time when there will not, in all probability, be kidnaping in the United States; that it is impossible to wipe out the crime; that so long as greed and the appetite for money are found in the human system, there will be kidnaping. Mr. Hoover very frankly states that it is impossible to wholly wipe out such crimes. They can be reduced to a minimum and lynching has been reduced to a minimum in the South.

Coming back to our Capital as an example of Federal enforcement, I read from a local paper:

"The criminals of Washington are taking $30,000,000 a year from the citizens of this city."

They are being deprived of life, liberty, and property, certainly without due process of law as that term is applied here. And the men in charge of the District seem to have thrown up their hands; they do not know how to deal with the situation. Yet, the Federal Government is in control here; the Federal Government is back of them. They are not by any means doing as well as are the people of the Southern States in meeting the crime problem.

Mr. President, we are dealing with the race problem. We need not blind our eyes to that fact. And the race problem is a problem which does not readily yield to legislative solution, to the rigid demands of the law. Take, for instance, the colored girl who, under great handicaps, has earned the right to be employed by her Government upon an equality with everyone else. She goes with a certificate of competency from the Civil Service Commission to one of the departments here in Washington—here in Washington, under the aegis of the Federal Government—and when she enters the door and her color is discovered, she is told that the place is filled, which is probably false. That happens not once but many times. She suffers injustice at the hands of her Federal Government. But that is a race question, and no law was ever made tight enough or strong enough to remove all its harshnesses and to eliminate all its injustices. Only the patient process of education, the uplifting power of religion, the tolerant, noble-minded men and women who give their thoughts to the cause, can remove or mollify such injustices or such harshnesses. And that is being done; it is being done in the South; that result the South is achieving; the record so shows; and the people of the South are entitled to our commendation and not our condemnation. They are entitled to our cooperation and support.

This, Mr. President, is another compromise with a vital principle of our dual system of government. It is bartering the future for the supposed and transient demands of the present, and at a time when the present is taking care of the problem. It is another instance in which our confidence in our scheme of government is not strong enough to say to all races, all creeds, all groups, and all factions: "Your problems, however serious, are subordinate to the principles of this Government; and you must work them out within the compass of the long-tested and well-accepted principles of democracy."

Every American must feel a slight sense of guilt, if not a sting of remorse, when he reads the Premier of Italy's reference to the bellowing herds of democracy, to free institutions as the decadent breeding grounds of insincerity and confusion. The fundamental principles and precepts of popular government are not in doubt. There is no confusion there. The confusion arises when we depart from those principles. It was the embodiment of the precepts and principles of popular government in the Constitution of the United States which put confusion to rout in this country, gave ordered liberty to the people, and strength and direction to government. For centuries prior to the declaration that the powers of government are derived from the consent of the governed, and the dedication of a new continent to that sublime conception, there had been nothing but confusion, nothing but turmoil and misery, nothing but brute force and enslaved masses. And all that will happen again if the advocates of arbitrary power, now inveighing against free institutions in the presence of their assembled slaves, have their way and the world again comes under their sway. Contrast the conditions of those periods with the period since the adoption of the Federal Constitution, with its establishment of law and order, the spread of contentment and happiness among the masses, with its unprecedented progress in the arts and the sciences, and you not only have your answer to those whose sole right to rule rests upon the law of force, but you have the most powerful appeal that can be made by mortal man to those who would compromise or weaken the safeguards of popular power.

I am perfectly aware, as we all are, of the tide which seems to be running against popular government everywhere, of the base betrayal of the people in many countries where they once had at least some authority and hoped for more, of that profound egotism which regards as of no significance the bitter experience of men and women in their long quest for liberty. But against all these things, if we have the confidence in our form of government which we profess, we can place, not theory, not hopes, not ideals merely, but 150 years of achievement, of demonstrated popular rule, with its wealth of human happiness and human progress. How puny and hollow and fleeting in comparison are the achievements of usurped power, every hour of whose existence depends upon the continued suppression of human liberty.

And, Mr. President, in conclusion, the progress, the development, and the advancement of the South, including the last 70 arduous years, her history from Washington and Jefferson down, rich with the names of leaders, orators, and statesmen; her soil, her sunshine, her brave and hospitable people, her patient and successful wrestling with the most difficult of all problems, are all a part of the achievements of our common country and constitute no ignoble portion of the strength and glory of the American democracy. I will cast no vote in this Chamber which reflects upon her fidelity to our institutions or upon her ability and purpose to maintain the principles upon which they rest.

Clarence E. Hancock

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. CELLER. Mr. Speaker, I knew Clarence Hancock well. His integrity and sincerity were impressive. Both on the floor of the House and in committee meetings, I found him always to be a man of understanding, a man with a well-tempered and disciplined mind. He richly deserved the high regard in which we all held him.

Now that he is gone we remember more vividly his acts of kindness and sympathy. We remember him with an affection which, though not always expressed, must nonetheless have been felt by him. It is more than the formal regret we feel at his passing; it is rather a sense of personal loss, a sense that life in some measure has narrowed.

Communism

EXTENSION OF REMARKS

OF

HON. WILLIAM C. COLE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, March 5, 1948

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast by Jack Beall, who is heard at 6:45 p. m., eastern standard time, each Saturday over the American Broadcasting Co.'s network:

For the past several weeks I have been discussing the topic of basic loyalties. I think I have shown rather conclusively, by its own documents, that the Communist International is the general staff of a mass conspiracy, in more than 60 countries of the world, to prepare the way for bloody revolution, when the time comes, and for setting up of revolutionary governments, which will be puppets of the Soviet Union. There is no doubt, from the documents which I have read you—the documents of the Communist International—that they expect and demand that the Communist parties, in the different countries, be subservient to the Comintern and that individual members of those parties do the will and bidding of the Comintern—even to the point of committing treason against their own countries.

I have shown the tight, centralized control of the American Communist Party and other parties by the Comintern, wherein they give up all autonomy and independence. They hand over to Moscow the complete power to annul and set aside any decision of a national party which Moscow may not like. I have shown how they slavishly follow all twists and turns of the party line from the Kremlin and even how Stalin could intervene in their own party elections, set aside the will of a majority and put in his own candidate, although that candidate was in a small minority. I have shown how, after one short, sharp struggle, the American party learned its lesson and agreed thereafter to accept the long-distance dictation of Stalin as transmitted through the mouth of the Comintern representative to this country. The titular heads of the American party and the decision formally reached by the party can be overturned by this single Comintern representative—a shadowy, behind-the-scenes character, who never, never exposes himself to more than a handful of the top leaders. Now, with all this apparatus for transmitting power impulses from the Kremlin throughout the world, there is one circuit which is still open. It may be presumed that the officers of the party obey the mandates from Moscow, but what about the rank-and-file party members themselves? Do they carry out orders? Do they follow through? Are they dependable fifth columnists of this world conspiracy?

I suppose the best answer to that is to look about you. If you can pick up a newspaper without seeing at least 5 percent of it devoted to the doings and activities of Communists all over the world it is a quiet day on the Red front.

Something you must hold in mind is the fact that in this country the actual party members are not very numerous. No figures exist as to the exact number of card-holding members, but I have never seen a larger number than 100,000 mentioned. Of course, for every card-holding member there are upward of 10 nonmembers—fellow-travelers, sympathetic liberals, confused intellectuals, who are willing to do the bidding of the party and who front for its various activies. Still, it is all moved by that nucleus of 100,000. How do they do it? How do they make such a huge splash in the news and in the affairs of this country; how are their activities and their impact so disproportionate to their numbers?

The main answer, to my mind, is in their discipline. The fact that they are backed with a leadership and almost unlimited funds, from abroad, is not to be discounted. But, without the party discipline, this would not mean so much. So let's take a look at this thing called party discipline.

It is party discipline which permits them to fulfill their boast that, given just 2 percent of the membership of almost any organization, they can take it over and control it. They all take orders from above; there is no dissent from those orders. They are not vulnerable, from the standpoint of listening to reason or argument. They have their orders, they know what they are supposed to do; their higher command knows what it wants and they go to it.

One of the major sins within the Communist Party is what they call deviation. The line is marked out for them—they toe that line, they follow that line, without having to think. All the thinking is done by somebody else. The dedicated Communist is almost never assailed by doubts; he is almost never torn by considerations of human decency, of honor, of morals. Robot-like, his energies are freed for the task in hand. Fanaticism, aided by lack of ordinary deterrents, contributes to an almost frictionless drive.

But it takes discipline, in the first place, to produce this. And that discipline is rigidly inculcated from above, almost exactly like a military organization.

The program of the Communist International states that the world Communist Party is a "revolutionary organization, bound by iron discipline and strict revolutionary rules of democratic centralism." And what sort of obligations does the Communist Party member take? The following statement appears on the 1938 membership card:

"The undersigned declares his adherence to the program and statutes of the Communist International and of the Communist Party of the United States of America and agrees to submit to the discipline of the party and to engage actively in our work."

Earl Browder, when he initiated 2,000 recruits to the party, back in 1935, had them take this pledge:

"I pledge myself to rally the masses to defend the Soviet Union, the land of victorious socialism. I pledge myself to remain, at all times a vigilant and firm defender of the Leninist line of the party, the only line that insures the triumph of Soviet power in the United States."

Please note this adherence to the program and statutes of the Communist International—which calls for treason against one's own government, in the interest of defending the Soviet Union and of achieving the triumph of Soviet power in the United States.

Benjamin Gitlow, one of the early organizers of the American party, says this, speaking of what it means to submit to the discipline of the party:

"When an American citizen joins the Communist Party he throws himself under the discipline of the party and he must do whatever the party directs him to do * * * It is like joining the marines. Those who join the marines are soldiers and whatever commands their superior officers give, the marines and soldiers must carry out * * * The Communist Party and the Communist International are not organized on a democratic basis; they are organized on a military basis. The Communist International runs the world Communist movement, from the top down. In other words, the leaders of the Communist International give the orders and the Communist parties, all over the world, must carry out those orders or be expelled."

Speaking of the American party, he added that once a decision is made by the leadership "that decision becomes law, becomes tantamount to a political command given by a general, and has to be carried out explicitly." If it is not carried out, then the disobedient one has to suffer the penalties of party discipline.

The penalties for breach of party discipline are about what they would be in the army. They range from bawlings out, all the way through expulsion from the party, down to sentence of death for high treason. And I mean just that. Death is the penalty, in many cases, where Communists in the secret apparatus, those engaged in the secret, illegal work of the party "turn sour," as it is called, and tell too much of what they know of the party, or threaten to tell. That's what happened to General Krivitsky, who had been in the intelligence service of the Soviet Army. He was found dead, right here, in a Washington hotel room. There was some mystery about it. Suicide was indicated, also. But there seems to be little doubt in leftist circles that he was killed by the agents of the Soviet secret police, right in the Capital City of the United States. If you doubt that these secret police agents are here, I refer you to the testimony of Louis Budenz, who says that he met and talked to them, on several occasions, when he was editor of the Daily Worker.

Incidentally, there are all sorts of rumors going around Washington that the Russian secret police have been active in this neighborhood recently and that the disappearance of certain people who knew too much was not accidental. Nothing has appeared in the papers. I am not prepared to state it as a fact. I can only pass it on as a rumor that killings on the order of the Krivitsky case have recently occurred.

But I can state on my own knowledge that Victor Kravchenko, the author of I Found Freedom, walks daily in fear of his life.

One of the prime mysteries of the day is the disappearance of Julia Stuart Poyntz, a former American school teacher, who had been drawn into the Communist Party, was very active in it, and had even gotten into the secret, illegal apparatus of the party. She was suspected of going "sour" and one day she simply disappeared, in thin air, while walking down a street in New York.

Sometimes, the offense is not so heinous. It can be simply that some leader guessed wrong on how the party line from Moscow might swing. That is why they hang on words of Pravda and Izvestia, searching it for hidden meanings. Otherwise they might suddenly find themselves out of power, or guilty of some minor heresy which could be used by enemies to undermine them in the councils of the party. Mr. Budenz says he has seen Earl Browder "look like he was struck with a most intense fright, on more than one occasion" and Jack Stachel "looks like somebody is chasing him all the time."

"This fear is not of America, it is not even a sense of fear of imprisonment in America" says Budenz. "It is this peculiar shadow in back of those people that puts fright into their hearts. Maybe it is a feeling of their obligation to the Soviet dictators. I am not going to analyze it, but it does represent a sense of fear."

Life magazine carried recently a remarkable piece about a Communist, how he got into the party, what made him tick, and what he expected to get out of it. If you read it you will probably remember the part about when he was on the fringes of the party, he was given laborious jobs, given things to do which were graded upward in difficulty and in ways of testing his undeviating loyalty, his unthinking obedience to those above him. When his leaders were satisfied that he could stand the gaff and never, never deviate, never try to think for himself, he was admitted as a party member. He had been seasoned by the process through which the Communist International hopes to test and season its members against the day when a strong, disciplined nucleus can lead a revolution in this country. They have no use for the summer soldier. They do not go out for mere numbers. They want seasoned, toughened fighters, who won't weaken, who won't let them down, when the going gets rough. And they expect it to get very rough, indeed, when "comes the revolution."

The article also described how difficult it was on those who did not measure up. Those who weakened were smeared with every known insult and accusation of depravity. They were cast aside into nether darkness; all former comrades turned against them. These are methods of party discipline, too. The Life article goes on to state that, usually, there are only two courses open to such a person who has been excommunicated from the party—a mental crack-up or going into very active opposition.

I know some former Communists who had to make the choice and they tell me how their lives had been almost wrecked by their expulsion. They felt the most intense pain from their changed mode of life—after their entire waking moments had been dedicated to revolutionary work, even forsaking family and former friends and living, sleeping, eating nothing but the party over many years.

It is all part and parcel of the discipline of the Communist Party to force those who become enmeshed to stay in, and to galvanize others into further activity so that they may escape disciplinary action.

And again I say, if you doubt the effectiveness of the party whip—look about you and consider whether the party members have been busy and have been carrying out their assignments from Moscow. Never, in human history, have so many been pushed around by so few.

Analysis of the Civil Service Retirement Act of 1948

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Friday, March 5, 1948

Mr. REES. Mr. Speaker, as chairman of the Committee on Post Office and Civil Service, I have been asked by Members of Congress to present for the RECORD an analysis of the Civil Service Retirement Act of 1948. This act, Public Law 426 of the Eightieth Congress, makes extensive revisions in the Federal civil-service-retirement system. In response to these requests, I am explaining the main provisions of the law.

INCREASED ANNUITIES

The new act increases the annuity of those already on the retirement rolls by 25 percent, or $300, whichever is less. The retired employee has a choice of taking the increase or keeping his old rate and naming his wife to receive upon his death an annuity equal to one-half of what he is receiving under the old law. The amount his wife may receive, however, cannot exceed $600. The married female annuitant has the same right to name her husband as survivor-annuitant.

AGE AND OPTIONAL RETIREMENT

The new law does not change the conditions in connection with age and optional retirement after certain periods of service. These remain as before, briefly:

The employee must retire at age 70 if he has at least 15 years of service.

The employee may retire at age 60 with 30 years of service.

The employee may retire at age 62 with 15 years of service.

The employee may retire at age 55 with 30 years of service on a reduced annuity.

Employees who are involuntarily separated after 25 years of service may retire and receive an annuity reduced by ¼ of 1 percent a month for each month the employee is under age 60.

Employees who leave the Federal Government prior to retirement age may not start receiving annuities until 62 years of age.

COMPUTATION OF ANNUITIES

A simple basic formula is provided in the act to be used in computing the annuity of each person. When the average salary for the highest five consecutive years of Federal service is $5,000 or more, the individual's annuity is computed by taking 1½ percent of that average multiplied by the total number of years of service. The product of that simple computation is the annuity. If the 5-year average salary is less than $5,000, take 1 percent, add $25, and multiply by the total years of service.

WIDOWS' AND CHILDREN'S BENEFITS

Husbands retiring under the act may provide an annuity for their widows equal to 50 percent of their own life annuity by taking a reduced annuity at the

time of retirement. This reduced annuity is equal to 90 percent of the regular life annuity to which he would be entitled, reduced by three-fourths of 1 percent for each full year, if any, his wife may be under age 60 at the time he retires. However, this annuity would not be reduced below 75 percent of the full annuity.

Unmarried employees in good health may, upon retirement, elect to receive a reduced annuity during their lifetime and provide a survivor's annuity to anyone having an insurable interest in them.

If the father dies while in active service and leaves both a widow and children the widow will receive an immediate annuity. Each child will receive an immediate annuity. This latter annuity will be one of the following, whichever is the least: (1) 25 percent of the amount which would have been due the father; (2) $360; or (3) the amount obtained by dividing $900 by the number of surviving children. If, however, the father dies as a widower, or the mother dies a widow, each surviving child will receive an immediate annuity amounting to one of the following, whichever is the least: (1) 50 percent of the amount which would have been due the parent; (2) $480, or (3) the amount obtained by dividing $1,200 by the number of children entitled to annuities.

When a retired employee dies and leaves a widow but no children who qualify for annuity benefits, his widow will receive an annuity beginning at her age 50 if he provided one for her when he retired by naming her as his survivor-annuitant. That is the only way this widow can get an annuity on the Government service performed by her husband.

If the deceased annuitant leaves a widow and one or more children who are entitled to benefits, the widow will be in line (like the widow of the man who died in active service) for a monthly check based on the existence of the children. She will receive this benefit until she dies, remarries, or reaches age 50. This annuity will be equal to 50 percent of her husband's basic annuity (excluding any portion purchased by voluntary contributions).

When the annuitant is survived by both his widow and a child (or children) the child who qualifies for such benefit with respect to age and dependency will receive an immediate annuity consisting of one of the following, whichever is least: (1) 50 percent of the annuity payable to the widow; (2) $360; or (3) the amount obtained by dividing $900 by the number of children involved.

When an annuitant dies as a widow or widower (the other spouse being deceased), each surviving child gets payments immediately. Each child will be entitled to one of the following, whichever is the least: (1) 50 percent of the basic annuity the deceased person was entitled to; (2) $480; or (3) the amount obtained by dividing $1,200 by the number of children involved.

Children's benefits terminate when the children reach age 18 (unless physically or mentally incapable of self-support), marry, or die. In cases in which several individuals (children, or widow-and-child combinations) are receiving survivor benefits, when the benefit to any one of the children ceases or the widow dies, the payments to the remaining children are recomputed on the basis of the new number of survivors involved.

When an employee member of the retirement system dies there will be money in the fund to his credit. Whether it can be paid right away to the beneficiary he has named—or to his estate—depends on whether he leaves a surviving widow or children entitled to immediate or future annuity payments.

If he does not leave a widow or children, his beneficiary will receive, in the form of a lump-sum payment, everything in the fund to the employee's credit with interest, regardless of how long the worker was employed. If the deceased person leaves a survivor entitled to an immediate annuity, or a future annuity at age 50, the question of a lump-sum payment of an unexpended balance cannot arise until we see, after all survivorship payments are made, whether anything remains in the fund.

If the employee dies leaving a widow or other survivor, or both, entitled to any benefit, there will not be a lump-sum payment due anyone if the annuities which are paid wipe out the total credited to the deceased worker. If, however, there is any balance left because the survivors' payments cease—on account of remarriage or death, for instance—that unexpended balance will go to the beneficiary or the estate.

REFUNDS AND DEPOSITS

If a person leaves, or is separated from the Government with less than 20 years of civilian service to his credit and before becoming eligible for optional retirement, he can get a refund of the money to his credit in the fund. If he served more than 1 year, he will also get the interest on his deductions; if he served 1 year or less, no interest will be paid.

Military service is not counted in computing this 20-year period for refund purposes.

If a person has served 20 years or more in Federal civilian work, he is not entitled to a refund of his account money; he is entitled to an annuity at age 62.

If a separated person has over 5 years' but less than 20 years' civilian service to his credit, he has a choice of either taking a refund or leaving the money in the system for annuity purposes.

If a person leaves the service and takes his refund, and then returns to the Government, he is not required to repay the money he withdrew.

If such a person wishes to repay his refunded money, there will be an interest charge.

GENERAL PROVISIONS

Employees' contributions are increased from 5 to 6 percent, effective the first day of the first pay period after June 30, 1948.

The tontine charge, which was a $1-a-month assessment against the retirement accounts of employees, is eliminated except in the cases of persons separated prior to April 1, 1948.

All years of Federal service may be counted toward retirement, including periods of service performed overseas under authority of the United States Government, and periods of service in the Army, Navy, Marine Corps, and Coast Guard. However, when some part of the Federal career was in work for which no deductions were made, that person's annuity will be somewhat lower if he does not make deposits covering that period.

The effective date of the act is April 1, 1948, except for: (a) increase in deduction rate which is the first day of first pay period after June 30, 1948; (b) interest rate, January 1, 1948; (c) survivor benefits, February 28, 1948; (d) involuntary separation after 25 years of service, July 1, 1947.

Colleges for Freedom

EXTENSION OF REMARKS

OF

HON. MAX SCHWABE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, March 5, 1948

Mr. SCHWABE of Missouri. Mr. Speaker, under leave to extend my remarks I include a significant portion of the chapter on education and government from the recent noteworthy book, Colleges for Freedom, authored by Dr. Donald J. Cowling, retired president of Carleton College, Northfield, Minn., and Carter Davidson. For many years Dr. Cowling has been recognized throughout the Nation as one of the foremost educators of our time. For this reason his views with respect to the dangers inherent in our educational system, if Federal aid is adopted, should be entitled to great weight. His views on Federal aid are as follows:

In 1918 there was submitted to Congress a bill proposing an appropriation of $100,000,000 a year for education, to be distributed among the States upon a plan involving a dollar of State money for every Federal dollar. This would have meant that a small group in Washington would control the spending of $200,000,000 a year in the field of education in this country. This was at that time about 20 percent of our entire national budget for education. The proposal was a menace to the future of our free institutions and sooner or later would have involved dictation from Washington. The sponsors of the bill, of course, disclaimed having any such thought, but they overlooked the inescapable law that the source of support inevitably becomes the source of control.

Having this situation in mind, President Nicholas Murray Butler in his annual report for 1921 to the trustees of Columbia University made the following statement: "One of the most noteworthy of recent developments in American life is the zeal with which machinery is designed and built ostensibly to serve various public interests and undertakings, but in reality to control them.

Perhaps in no other way is the decline of faith in liberty so clearly marked. * * * When anything appears to go wrong, or when any desirable movement seems to lag, a cry goes up for the creation of some new board or commission, and for an appropriation of public funds to maintain it in reasonable comfort. An infinite number of blank forms must be filled and an infinite number of records must be kept, classified, and audited at steadily mounting cost. * * *

"So far as education is concerned, there has been overorganization for a long time past. Too many persons are engaged in supervising, in inspecting, and in recording the work of other persons. There is too much machinery, and in consequence a steady temptation to lay more stress upon the form of education than upon its content. Statistics displace scholarship. There are, in addition, too many laws and too many precise laws, and not enough opportunity for those mistakes and failures due to individual initiative and experiment which are the foundation for great and lasting success.

"It is now proposed to bureaucratize and to bring into uniformity the educational system of the whole United States, while making the most solemn assurance that nothing of the kind is intended. The glory and the successes of education in the United States are due to its freedom, to its unevennesses, to its reflection of the needs and ambitions and capacities of local communities, and to its being kept in close and constant touch with the people themselves. There is not money enough in the United States, even if every dollar of it were expended on education, to produce by Federal authority or through what is naively called cooperation between the Federal Government and the several States, educational results that would be at all comparable with those that have already been reached under the free and natural system that has grown up among us. * * * It is universally acknowledged that the unhappy decline in German university freedom and effectiveness, and the equally unhappy subjection of the educated classes to the dictates of the political and military ruling groups, were the direct result of the highly centralized and efficient control from Berlin of the nation's schools and universities.

"For Americans now to accept oversight and direction of their tax-supported schools and colleges from Washington would mean that they had failed to learn one of the plainest and most weighty lessons of the war. It is true that education is a national problem and a national responsibility; it is also true that it has been characteristic of the American people to solve their most difficult national problems and to bear their heaviest national responsibilities through their own action in the field of liberty, rather than through the agency of organized government. Once more to tap the Federal Treasury under the guise of aiding the States, and once more to establish an army of bureaucrats in Washington and another army of inspectors roaming at large throughout the land, will not only fail to accomplish any permanent improvement in the education of our people, but it will assist in effecting so great a revolution in our American form of government as one day to endanger its perpetuity. * * * The true path of advance in education is to be found in the direction of keeping the people's schools closely in touch with the people themselves. * * * Unless the school is both the work and the pride of the community which it serves, it is nothing.

"A school system that grows naturally in response to the needs and ambitions of a hundred thousand different localities will be a better school system than any which can be imposed upon those localities by the aid of grants of public money from the Federal Treasury, accompanied by Federal regulations, Federal inspections, Federal reports, and Federal uniformities."

Since 1918 repeated attempts have been made to persuade Congress to appropriate vast sums for the current support of education along the general lines first proposed, except that the matching feature—a State dollar to go with each Federal dollar—has been dropped and repudiated as involving too obvious Federal control. The case for Federal aid to education has been admirably formulated and may now be regarded as having reached its final stage. It is doubtful whether any future presentation will be more convincing. The bills now submitted to Congress are based on surveys and studies conducted by competent persons who are close to the problems involved—a little too close, perhaps, for the widest perspective.

The claim that Federal aid is needed rests basically on the acknowledged inequalities of educational opportunities to be found in the various States. It is pointed out that many of the poorest States have the largest percentage of children and that the percentage of tax money that goes for education is largest in some States which notwithstanding this effort are able to maintain only substandard schools. It is further pointed out that the freedom of individuals to live where they please spreads the handicaps of poor education beyond State lines and involves every State in concern for the educational facilities of every other, thus creating a truly national responsibility.

In these presentations no emphasis is placed on the fact that, in spite of the inequalities pointed out and other weaknesses in our schools, the United States through its system of decentralized control and local responsibility has developed more widespread educational opportunities and has enabled a larger percentage of its population to profit by them and at higher levels than has been possible in any large nation under any other system. Nor do the proponents of Federal aid make clear that no State is devoting an impressive amount of money to education if considered as a percentage of its total income rather than of the tax dollar. If States and local school districts should become convinced that no Federal funds will be available, it is not unreasonable to believe that local interest and initiative would still continue to improve their schools.

The basic argument against Federal aid for schools is that it would place in the hands of those in political authority the power to transform our whole way of life. Certain controls are conceded to be necessary from the start—joint responsibility in the preparation of educational plans for each State with authority resting with the United States Commissioner of Education for final approval according to standards which he determines; for regional representatives of the Federal agency and for financial accounting to it of all money spent, and for annual reports covering the educational results achieved. These controls involve supervision not only of funds supplied by the Federal Government but of State funds as well. Dr. John J. Tigert, president of the University of Florida, formerly United States Commissioner of Education, for 8 years in charge of administering the funds of the Federal Office of Education, has pointed out the menace inherent in all proposals for permanent Federal aid to education:

"We have shown that Federal aid to the schools must be attended by Federal control under present conditions if we are to avoid general waste and misuse of these funds. We have also pointed out that Federal control will tend to become greater and that centralized operation of the schools is a menace to our institutions and ideals. * * * If we turn over to the Federal Government the responsibility of the operation of our schools, we have forged the weapons whereby some able and self-seeking individual may some day transform our political, social, and economic system." In a later statement (1940) he says: "There is grave danger that somewhere along through the years, in the oft-recurring crises that inevitably confront us, someone may be tempted to take up the weapons which have been forged by the entrance of our Government in the field of education and use them as a way of affecting the thoughts of 20,000,000 children in the elementary schools and 6,000,000 in the high schools, with the result that a new idea of government, a new social order and a new economic order will be formed far from our present ideals."

The recent proposal of the present administration that a universal training program (the word military to be omitted) be established to give our young people a background in the disciplinary approach of getting along with one another and to inform them on what this government is, what it stands for—its responsibilities—a national program for the indoctrination of all youth by the Army—would seem to leave little to the imagination as to what would happen now if those responsible for this proposal had authority over the schools of the country.

It would be nothing short of a national calamity to have a few men in Washington given the authority, in connection with this recent proposal or any other plan, to control the thinking of the people of this country. There is no man competent to think for the United States—no three or four men competent to do so, no fifty or a hundred—no thousand or ten thousand men who should be given the right to compel their fellow citizens to follow their modes of thought or to support their conclusions. The whole idea of having a few people do the thinking and having the rest become followers and loyal subjects is repugnant to the spirit of America and contrary to its fundamental ideas. All such proposals represent theories of social control diametrically opposed to those upon which this country was founded and upon the basis of which we have made such wonderful progress in the comparatively few years of our national life.

The fundamental assumption of our Government is that there is no sovereignty anywhere except the sovereignty of the individual. As Lincoln said, "No man is good enough to govern another man without that other's consent." Oswald Spengler, who profoundly disbelieves in our form of government, in his book, the Hour of Decision, written a few years ago, says that "this whole crushing depression is purely and simply the result of the decline of State power." Much of the political machinery set up in the world in recent years is based on the same conviction—a denial of the sovereignty of the individual and the assumption that a few people have the right to use the instrumentalities of government to force their ideas upon their fellows and compel their submission. There is nothing new in these procedures. They are based on old ideas which have been repeatedly tried and have always resulted in privileges for the few and in slavery, or at least submission, for the mass of the people.

The ideas upon which this country was founded have never yet had a fair trial, so far as the world as a whole is concerned. Even in our own country their application has been limited and in part thwarted by the rapid development of our industrial life, involving constant and in many respects radical changes in social relations and in the distribution of wealth. But in spite of

all this, a life of freedom and of reasonable prosperity for the masses of our population has been achieved to a degree beyond that attained by any other nation. We shall in time see more clearly than we do now the application of our democratic principles to the industrial, financial, and social problems that confront us, and with that increased understanding will come fresh confidence in our basic conceptions and a larger life for all our people.

In the meantime, let us not seek to find a solution of the material problems that confront us by reverting to ideas which have been tried out time and again and which have resulted not in the enlargement of life but in its degradation. The ideal of individual liberty and the rights that go with it—the right to think being the most important of all—are more precious than any material advantage that could possibly be secured by their sacrifice. We must not barter our freedom for any material prosperity, nor for any easy and quick solution of the problems that trouble us today.

Thinking based on integrity and good will is our hope for the future—liberal education based on religion and made effective through democratic society. The freedoms we have cherished—intellectual and spiritual, political and economic—are an essential unity, and the understanding of this unity and of its implications for ourselves and for the world is the concern of our American colleges—for freedom.

Father of Oregon Geology

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Friday, March 5, 1948

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Anita Hamlin from the Sunday Oregonian of February 25, 1948:

FATHER OF OREGON GEOLOGY—THOMAS CONDON, PREACHER-SCIENTIST, FOUND FAME 'MID ROCKS AND FOSSILS OF STRANGE, WILD LAND IN THE WEST

(By Anita Hamlin)

Everyone is agreed that childhood is a period glorified with sensations of taste, smell, touch, seeing, and hearing.

No doubt even small Thomas Condon, later to be known as the father of Oregon geology, poked tentatively at the limestone quarry near his home, more from boyish curiosity than scientific insight. Perhaps he even evoked scoldings from his parents for sucking on rocks like any other small boy. Assuredly his interest in geology, however vague, began early.

We are told that Thomas Condon was born in Ireland, later was transplanted to New York. He was goaded by an unceasing appetite for knowledge and was given to exploring the historic revolutionary fortifications near the city. He even went rabbit hunting in Central Park, at that time a wilderness, which proved he had all the tendencies of normal boyhood, despite the germinating seed of genius.

At 18 he was working, studying, teaching, and in his leisure hours devoting his energy to gathering fossils in the hills and quarries, as well as studying geological formations. He acquired theological training at Auburn Seminary, thereby establishing a "mental set" for the news that ministerial assistance was needed in Oregon. With youthful enthusiasm he packed up his bride and probably well-loved fossils for a clipper-ship journey around Cape Horn.

This was the year 1852, and when the Condons arrived in San Francisco, the gay little city was just beginning to put forth the tinsel for which it became famous.

Oregon beckoned. Trappers, miners, and formers were finding here a paradise of furs, gold, and fertile soil, but scientific resources had been overlooked. People were busy clearing land, felling trees, building homes, planting crops, starting schools, organizing churches, and subduing the Indians. The Condons of psychological extroversion and physical necessity participated actively in these endeavors.

For 10 years the Condons lived in western Oregon, and then, desiring a more needy field for his ministerial work, Condon brought his family to The Dalles, at that time head of navigation on the Columbia. There the rough-and-tumble mining crowd on their way to the gold mines of eastern Oregon and the Army boys from the local military post contributed a great deal to the local color, but probably did little to edify the solid citizens of the region.

Whether the intellectual Condon found conditions to his liking is a matter of conjecture. Nevertheless, during the years his friendships ranged from illiterate and necessarily profane teamsters to scientists and the cultured groups. He knew saloon keepers and gamblers by their first names, and upon these he could count for $20 gold pieces toward any charitable cause he sponsored. Dan Handley, Catholic proprietor of the plush Umatilla House, made provision in his will for a sum of $500 to be paid Condon's church at the death of the former.

"Thomas Condon's sermons were deep," recalled William Condon, nephew of the well-known minister-geologist. The nephew related that his uncle's exhortations lacked poetic fancy, but rather stressed the great and simple truths as he saw them. He spared neither effort nor words to make his point clear. His text usually followed the pattern of outline, with proper elucidation of each point. He would break his discourse into sections with the words 'firstly, secondly, thirdly,' and 'in conclusion.'"

Thomas Condon is said to have lived the gospel that he preached. His mission in life seems to have been the religious interpretation of science. As a scientist, he probed the geological history of the earth before the birth of mankind; as a minister he sought to explain creation, to supplement what we read in Genesis. He did his utmost to effect a marriage of the theory of evolution with religious concepts.

Professor Condon's daughter, the late Mrs. E. C. McCormack, had this to say of her father's scientific endeavors:

"An Army officer returning from an expedition against hostile Indians brought Mr. Condon his first eastern Oregon fossils from the Crooked River country. These fossils aroused the keen interest of the student of nature, and in 1862 or 1863 he obtained permission to accompany a party of cavalry carrying supplies to Harney Valley. They returned by way of old Camp Watson on the John Day River, and here Mr. Condon found his first fossils, in the now famous John Day Valley.

"These glimpses of this fossil field only served to make him eager for more, and as soon as the Indians had been subdued and it was safe to venture among those hills and ravines without an Army escort, Mr. Condon spent his vacations exploring in the John Day country. On one of these trips he found and named Turtle Cove, which has since proved to be one of the richest fossil beds in the valley. He employed young men to spend their summers collecting the fossils exposed by the wear of winter storms. He made friends with the rough teamsters who drove the great Government freight wagons from Fort Dalles to the Army posts in the wilderness. As these teamsters returned with empty wagons they often brought a few rocks or a fine box of fossils for their new friend at The Dalles.

"In a few years Mr. Condon found in his possession a large quantity of valuable material that must be classified and described. But he was without scientific books, was thousands of miles from the great libraries and museums of the East, and far from other scientists with whom to confer."

At the time the United States Government was making a geological survey of the 40th parallel (which includes an area 100 miles wide connecting the geology of the great plains to the east of the Rockies with that of the Pacific Coast and California). Clarence King, leader of the survey, reached The Dalles. Mutual interest brought the two geologists together, and one might imagine the friendly Condon playing gracious host and holding forth till the wee hours on the geological growth of Oregon, while his guest studied with enthusiasm the fossil collection now housed in the Condon Museum at the University of Oregon.

VISITORS BRING EASTERN VIEWS TO WESTERN ISOLATION

Another visitor to the Condon home was a Mr. Blake, an eastern geologist. The first specimens to reach the Atlantic coast were some fossil leaves which Condon presented to Blake, and which later fell into the hands of Dr. Newberry of Columbia College, New York, a specialist in fossil botany. Arnold Hague, also associated with the 40th parallel survey, brought to Condon's western isolation some of the spirit of scientific endeavor being carried on in the East.

The Condon home stood on the site now occupied by the Van Dellen Lumber Co. at Third and Laughlin Streets, The Dalles. In 1871 at the time of the fire which demolished a large section of the business district, Condon's many friends exhibited their affection for him when they converged on his house in order to save it, as well as the cabinet which contained his precious fossil collection.

William Condon remembers the human skulls with the mark of a scalping knife on them which terrified his boyish imagination. There was a wealth of Indian artifacts and arrowheads beautifully executed, so many in fact that he salvaged three-fourths of a five-gallon oil can of them for play purposes after they had been discarded by his uncle.

CONDON ENTERTAINS TRAVELERS WHO VISIT THE DALLES

Oregon was now coming into her own. The first transcontinental railroad sped at what was then considered an incredible speed to the Pacific Northwest. Large parties of ultra moderns from the East did the fashionable thing by coming on a sightseeing tour to the Columbia River. Often they were obliged to spend the night in The Dalles, and what could be more interesting than whiling away the hours in the home of the local geologist who made stories about earth formation and fossils so entertaining? And what good conversation it furnished these ladies and gentlemen of culture when they returned to their homes.

In 1870 Condon shipped his first boxes of specimens to the Smithsonian Institution at Washington and from there they were sent to the Philadelphia Academy of Sciences for examination by the experts. Other educational centers to receive mementos of Oregon's Paleozoic age were Columbia College, the recipient of fossil leaves; American

Museum of Natural History, shells; Yale, fossil mammals.

Well diggers discovered the first fossil horse in the Pacific Northwest in 1866, and this was announced in a lecture by Condon. Later an account was published in the Oregonian. Although Condon is credited with the discovery of a miniature three-toed horse by later geologists and historians, he makes no mention of this in his book, The Two Islands.

An amusing anecdote was related by Will Condon regarding one of his uncle's acquaintances. It seems that this Irishman had formed the habit of drinking often from a jug. When the geologist asked him the nature of his refreshment, the man replied that it was alcohol in which a scorpion was preserved. The drinker downed the remainder of the fiery liquid, then presented the scorpion to Mr. Condon for his natural-history collection.

Will Condon remembered pieces of white quartz and similar material containing brilliant gold fragments which fell into the hands of his uncle, but they had no value to him other than scientific.

Among Condon's published geological works are The Rocks of the John Day Valley, which appeared in the Overland Monthly, May 1871, and The Willamette Sound, printed in November 1871, in the same magazine. The Two Islands, a full-length book on Oregon geology, written for the layman, was published in 1902 when the writer was 80 years old. For nearly half a century this has formed the basis for study of Oregon's most ancient history.

Regarding the first two works mentioned above, Condon's daughter wrote: "These two papers fairly represent Mr. Condon's strength as a constructive geological worker. They indicate his ability to begin at ocean level and by means of mountain upheavals, marine and lake sediments, fossil leaves and bones, and volcanic outflows, to reconstruct and make wonderfully vivid the geological past of a new country."

She also wrote: "It gave Mr. Condon real pleasure to sit down beside a rough block of sandstone with only the corner of one glistening tooth in sight, to pick and chip and chisel until another tooth and part of the jaw were seen, to continue with careful skill until the beautiful agatized molars were laid bare, to work patiently on until there stood before him no longer the shapeless mass of stone but a fine fossil head to add its testimony to the record of the past. But it gave him greater pleasure still to work with rough unpolished human character and discover the glint of gold hidden under the rough exterior. The book of nature was indeed fascinating, but did not appeal to him as did the work with men. He had the artist's eye for seeing the beautiful in character and the enthusiasm of a sculptor for shaping rough, faulty, human nature until its beauty reflected the divine."

Mrs. McCormack summed up her father's theory of uniting the scientific with the religious in this way: "To Mr. Condon the theory of evolution presented to the human mind a wider conception of God than the world has ever known. It involved a plan of unthinkable grandeur, beginning with the smallest, simplest things gradually unfolding into more complex life, often interrupted by some great unturning of nature, but never losing the continuity of purpose, the steady progress toward the culminating glory of all: The spiritual life of man."

Condon longed to spread the truth (a relative matter in any circumstance) about the earth's creative process to the young people who had come with their parents to make a home in the wilderness. This missionary zeal in scientific clothing, together with the growing needs of a family ripe for education, led him in 1873 to leave his pulpit at the Congregational Church and accept a place with the faculty of Pacific University, Forest Grove. In 1876 he accepted the chair of geology and natural history at the University of Oregon.

Besides changing to a new teaching post in 1876, the year became memorable to Condon through his discovery of fossil bird bones in the Silver Lake region of southeastern Oregon. The same site has yielded some of the finest mammals in the State.

Oregon was now passing from the growing pains of pioneering to a more mature development. People talked of industrial development and statehood. The prospector shaking his pan of gold dust was becoming an important figure in the scheme of things. When the question of coal was broached, when families began to wonder if their land had the right geological formation for artesian well water, when cement rock, copper or limestone was needed, but no one knew where to find it, they said: "We'll ask Thomas Condon. He'll know." And he did. He shared his extensive knowledge with them. Advice was free for the asking. He analyzed specimens of everything sent him and in turn brought specimens to others when he traveled to fill lecture engagements.

LECTURES: OFTEN GIVEN STUDENT OF OREGON GEOLOGY

He was a frequent passenger on the old river boats and the snail-paced trains. His destination was often Portland, where he would address the cultured city fathers; or a college where the audience was eager and fresh and interested; or the State fair, where the farmers congregated with prosaic matters of livelihood on their minds.

His summers were spent at Nye Brook cottage on the ocean, and there on the beach he would hold an "informal" not unlike that conducted on the shores of Galilee centuries ago, though the text for discussion was slightly different. Members of his audience perched on rocks, on driftwood. His daughter said: "He with his tall alpenstock in his hand, his broad hat and loose raglan coat, made a picturesque figure standing in their midst. Perhaps he talked of the three beaches, the one upon which they stood, the two old geological beaches so plainly visible in the ocean bluff just behind them. * * * But the most common picture, the one that makes the Condon cottage at Nye Brook an almost sacred spot for some, was the party strolling homeward from a morning on the beach—especially at low tide. They always stopped beside his door to show their treasures. There were baskets, tin pails, and all sorts of packages filled with curios gathered on the morning walk; one had a rare shellfish, another an unusual fossil, some had sea moss, others only a group of bright pebbles, while a few proudly exhibited their water agates. All had their eager questions and his kindly helpful interest never failed. * * *

INTEREST OF CONDON SPREAD OVER MANY SUBJECTS

"Mr. Condon's love for knowledge was not confined to natural science, for his interests were broad as the universe. To him, human history began with the men of preglacial age, and he sought eagerly for every ray of light that archeological research could throw upon the old cave dwellers of prehistoric times. He studied all primitive peoples, their religion, industries, and social development, and endeavored to trace their relationship to common ancestry. There were but few obscure nations of the world in which he was not deeply interested: he knew their past history, their present political condition and struggles for liberty. He prized the history of our Aryan ancestors and treasured their old Vedic hymns as among the first bright glimpses of the human soul in reaching out for its Creator. The religion, art, and literature of the Egyptians, Arabians, Persians, and Greeks were to him a source of great pleasure. He followed the lives of noted statesmen. * * * All great religious movements, including the higher criticism and the relation of science were matters of absorbing interest. And yet there were but few who knew and loved Oregon's trees, shrubs, and wild flowers so well as he. * * *

"He was the pioneer geologist who by his own original research caught the first glimpse of Oregon's oldest land as it rose from the ocean bed; he saw the seashells upon her oldest beaches; watched the development of her grand forests; saw her first strange mammals feeding upon her old lake shores; he listened in imagination to the cannonading of her first volcanos and traced the showers of ashes and great floods of lava. He followed the creation of Oregon step by step all through her long geological history and then entered with enthusiasm into the industrial and educational development of her present life."

More than a scientist, Condon was, if the testimony of his associates may be accepted, an understanding person, who knew how to ally himself with his fellow human beings.

"Come in," he said once to a friend, "when your cup is effervescing and let us enjoy the overflow." That simple injunction expressed warmth and hospitality.

In the memorial bulletin issued by the University of Oregon in 1907 were these words written by Joseph Schafer: "He was by endowment a poet. It was nearly impossible for him to be commonplace for a moment."

His turns of expression showed a subtle humor. For instance when he was particularly happy over the arrival of the Rocky Mountain nautilus specimen he invited someone in to "help him hurrah." On this same occasion he whistled a happy little tune, then remarked. "Oh, the tune inside of me is too big for my whistle."

Condon's students, who, if they are living, are probably in their seventieth or seventy-fifth summer, must surely have found it difficult to believe that Oregan was once twin islands and an inland sea, but if he said so, it must be true as gospel, for the great man knew. "He was one convincing Irishman," they probably reminisce, as they pull on a long cigar and settle comfortably for an after-dinner doze.

Civil Service Booklet Text Explains New Retirement Act

EXTENSION OF REMARKS

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 5, 1948

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the first installment of a series of interpretative articles by an able Washington reporter, Jerry Kluttz, in connection with the recently passed Retirement Act. I shall continue these extensions until they are completed and then shall have them reprinted in a single article. If any of my colleagues wish to obtain some of these reprints for distribution, I shall be glad to have them advise my office, and I will arrange for such reprints.

I do want to take this opportunity of making a brief comment as to the title of the act, Langer-Chavez-Stevenson Retirement Act. I think all of us realize the immense amount of intelligent effort which our able colleague the gentleman from Wisconsin [Mr. STEVENSON] devoted toward the preparation and enactment of this law. This was true not only this year, when the other body approved the law, but last year when he pioneered in this field and obtained overwhelming support of his colleagues in committee and on the floor. It is due to no fault of his that the act did not become law in the last session. I think it could be justly stated that this is the "Stevenson act."

Jerry Kluttz's article follows:

CIVIL SERVICE BOOKLET TEXT EXPLAINS NEW RETIREMENT ACT

(By Jerry Kluttz)

The Washington Post today begins publication of the full text of the Civil Service booklet that explains in detail the new Langer-Chavez-Stevenson Retirement Act. The law affects in some way about 1,500,000 Government employees.

The booklet is eagerly sought by tens of thousands of Federal workers. More than 15,000 requests for it have been received by this writer. Each of them will be filled within the next week or 10 days.

Civil Service is overwhelmed by the demand for the booklet. It has the resources to print 50,000 copies, which it thought would be ample to fill the need. But it has had requests for upward of half a million copies. The individual written requests now on file for single copies will be filled, but Civil Service has been forced to turn down Treasury, Agriculture, Federal Security, Army, and many other agencies that sought a copy for each of their employees.

Because of the enormous demand for the booklet and because many persons who are seeking it may be disappointed, the Washington Post is glad to publish the text in installments beginning today. We suggest that Federal workers clip and save this and the installments to follow and make a booklet for themselves.

THE NEW RETIREMENT ACT

The Langer-Chavez-Stevenson Act changed some of the basic features of the original retirement act; it made some additions to the old system, and it also eliminated some of the former provisions.

The new law provides that for separations on or after the 1st of April, 1948, a minimum of 5 years of Federal civilian service is needed to qualify for any annuity benefits. Military service cannot be substituted for civilian work in connection with this minimum.

The new law increases the deductions from salary for retirement purposes from 5 to 6 percent, effective with the first pay period after June 30, 1948. Interest on deductions of active employees was lowered from 4 to 3 percent as of the beginning of 1948.

AGE CONDITIONS REMAIN

The new act did not change the conditions in connection with age and optional retirement after certain periods of service. These remain as before, briefly:

The employee must retire at age 70 if he has at least 15 years of service.

He may retire at age 60 with 30 years of service.

He may retire at age 62 with 15 years of service.

He may retire at age 55 with 30 years of service; in this case, however, his annuity will be scaled down from that which he would get if he were age 60, and, once set, does not change as time goes on.

An immediate annuity is available, under certain conditions, to employees who leave the Government after 25 years of service. This applies to a person who is separated through no fault of his own (in a reduction in force, for example).

As an illustration, an employee with 26 years of Federal service to his credit toward retirement is separated from the Government on account of a cut-back in personnel; he can get an immediate annuity regardless of his age at the time he is laid off.

A somewhat similar provision of law was in effect for a temporary period ending June 30 last year (the Forand Act). This portion of the new law was made retroactive to July 1, 1947.

The amount such a person receives will not be a full annuity if he is less than 60 years old. It will be scaled down at the rate of one-fourth of 1 percent per month (3 percent per year) for each full month under 60 at the date of separation.

After April 1, there is but one age at which annuity starts for those people who work for the Government for at least 5 civilian years and then leave before reaching retirement age. That age is 62. In the past, anyone who earned the right to a future annuity by virtue of 5 years' employment could elect to start getting his annuity payments at either age 55 or 62, depending on whether he had been dropped involuntarily or resigned. Now, the reason for separation does not matter, and the discontinued service annuity, as we call it, starts at age 62.

In connection with this, the Langer-Chavez-Stevenson Act says that if a person serves at least 5 civilian years, but hasn't reached the 20-year mark, he has the choice of taking a refund of all the money to his credit in the fund (including interest) or leaving it in the fund for annuity purposes when he reaches age 62. If he takes the refund, he is out of luck so far as the annuity is concerned.

DISABILITY RETIREMENT

One must have completed at least 5 years of civilian Government service to be eligible for disability retirement, but in this case the annuity payments start immediately, regardless of age. There are two good points under the new law, and one which is not so favorable, so far as the disability annuitants are concerned.

First of all, a good point is that any employee who is undergoing hospital treatment when he is separated from his agency, or who is hospitalized at any time during the 6 months after his separation, can delay making his application for disability retirement for as long as 6 months after hospitalization ends. This is a break for those folks whose illness or incapacities prevent them from making their annuity arrangements with us right away.

With respect to those who join, or are already on, the disability rolls, it is no longer necessary for any of them to have annual physical examinations after they get to be 60 years old. Under the old system, such examinations could be ordered each year until the annuitant reached 70. The Government will save money on this new provision, and we won't bother these annuitants after age 60.

The one new feature of the act which is not so attractive with respect to the disability annuitants is this: Heretofore, when such an annuitant made a recovery, and became employable but was not able to obtain Federal employment, that person could be treated as having been involuntarily separated. His disability annuity stopped, and he then became eligible for reduced annuity benefits at age 55, or regular annuity at age 62. The new act takes away this age 55 provision; hereafter, if such an individual is unable to get Government employment he must wait until age 62 for the regular annuity to start.

One of the nice thing about the 1948 act is the way it eases much of the figuring of the retirement income. There is now a simple basic formula which is used in computing the annuity of each person. This is it: When the person's average salary for his highest five consecutive years of Federal service is $5,000 or more, we merely take 1½ percent of that average and multiply by the total number of years of service. The product of that simple computation is the annuity.

If the person's 5-year average salary is less than $5,000, we take 1 percent of it, add $25 to that, and then multiply by the total years of service. The result is the annuity which is payable to the former employee.

Formula: When best 5-year average salary is $5,000 or more.

Example: Average is $6,000; all service after August 1, 1920, is covered by deposits; 30 years of service.

Take 1½ percent of salary	$90
Multiply by years of service	×30
Annuity	2,700

Formula: When best 5-year average salary is less than $5,000.

Example: Average is $4,000; all service after August 1, 1920 is covered by deposits; 30 years of service.

Take 1 percent of the salary	$40
Add $25	25
	65
Multiply by years of service	×30
Annuity	1,950

The Displaced-Persons Problem Cannot Be Wished Away

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 1, 1948

Mr. CELLER. Mr. Speaker, the Senate Judiciary Subcommittee recommends an emasculated immigration bill which only ostensibly appears to attack the displaced-persons problem. Its terms, however, are such as to indicate clearly that the bill is only being used as a gesture to answer criticism of inaction. It no more solves the problem than does inaction.

From the original proposal of the admission of 400,000 displaced persons in 4 years, 100,000 to be admitted yearly, the Senate subcommittee recommends the admission of 100,000 in 2 years, 50,000 to be admitted each year. It recommends that half of the displaced persons admitted under the bill be persons whose native countries have been annexed. What does annexation mean? Would it not exclude natives of Germany, natives of Poland, Rumania, Bulgaria, Hungary, though such natives may be in displaced-persons camps. Does it provide any assistance to those who are presently stateless or those who do not want to return to Russian-dominated countries?

Or are annexation and domination synonymous? This business of annexed countries—whatever it may mean—can

be used for deliberate racial and religious debarment.

Fifty percent must be farmers and be employed on farms in this country. In other words, 50 percent of the DP's are barred and penalized if they are not farmers. This is done, apparently, in a confused concept of self-interest. We need carpenters, lathers, tailors, plumbers, mechanics, domestics, doctors, dentists, scientists, and unskilled labor. Both the A. F. of L. and the CIO have testified in favor of the Stratton bill which contains no such restrictions.

The bill further permits entry of persons who have assurance of housing and jobs in the United States without displacing citizens. The labor organizations are not worried about loss of jobs. Their leaders testified that immigration creates jobs. Our immigration laws provide that applicants must give guaranty that they will not become public charges. Protection already exists and I cannot see how any declaration of secured homes and jobs is susceptible of proof. What does displacing a citizen mean? If a job is available, does that mean it must be offered first to a citizen? Does the same apply to available housing? The immigrant under the Senate bill must report quarterly—like a criminal on parole. If the immigrant loses his job for any cause is he subject to deportation?

Also, there appears to be a serious constitutional question involved in the requirement which makes it mandatory for the alien to report periodically after entrance to the country. This may conflict with the constitutional provision according to equal protection of the law.

It is further provided that if the 50,000 yearly allotment is not exhausted then the remaining number lapses. The intent is obvious to whittle down to even a smaller number than the 100,000 the bill calls for. If 50,000 DP's cannot be processed under the very restrictive conditions then the unfilled numbers lapse and are not carried over to the next year.

Referring to the matter of annexation in the proposed Senate bill, there is a grievous political mistake in the sense that preference is given, as I stated above, to DP's and displaced orphans whose place of origin or country of nationality has been annexed by a foreign power. This apparently is an attempt to recognize the annexation by Russia of the Baltic states of Estonia, Latvia, and Lithuania. It also recognizes politically the annexation by Russia of that portion of Poland east of the Curzon line. This inference is emphasized on page 55 of the report issued by the Senate Judiciary Committee.

There has never been any treaty or any agreement ratified by the Senate involving such territorial changes. As a matter of fact we still recognize these three Baltic States as independent and still have their accredited representatives in Washington.

The bill is not a solution. It does not even answer the question of why the American taxpayer must continue to pay for keeping large numbers of DP's in camps when the admission of 400,000 in a 4-year period could dissipate the problem without costing the Government any money at all. Under this bill, an unhealthy percentage will still remain in our camps; the taxpayer will still carry the burden of their support; the United States will not be taking its fair share; the rehabilitation of the DP's into useful, secure people remains academic. When the powerful United States so hems its humanitarianism with restrictions as to render it meaningless, then how will less economically favored countries respond?

It is sincerely hoped that the House subcommittee on immigration with the wealth of testimony before it given by General Eisenhower, former Secretary Patterson, Attorney General Clark, General Marshall, the A. F. of L., the CIO, the religious groups, including Protestant, Catholic, and Jewish will not produce so barren a bill that fails to meet even the edges of the problem.

Rent Control

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Friday, March 5 (legislative day of Monday, February 2), 1948

Mr. WHERRY. Mr. President, I ask unanimous consent to have placed in the Appendix of the CONGRESSIONAL RECORD a radio broadcast delivered this week by the Senator from Washington [Mr. CAIN] to his constituents in Washington State on the subject of rent control. The junior Senator from Washington State prepared his address in condensed version to explain both sides in the matter to his State over a network of 28 radio stations. The talk is worth the consideration of all of us.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

After an absence of several months from the air it is good to begin again a series of weekly reports to the State of Washington. During the first session of the Eightieth Congress I discussed with you each week some of the problems which confronted, and were being considered, and acted upon, by your Congress. I endeavored to keep partisan politics out of the discussions. As best I can I shall endeavor to pursue this practice on this coming broadcast and on those to come. There are so many interesting and important problems to think about, in a factual and objective way, that there should be little cause or need for spending time on their political aspects.

Before making some observations on several of the issues of the moment in which you have a particular concern, I want to express my appreciation, and that of my staff, for the happy and cordial and reasonable relationship which has been established between us and most of you. Your letters and telegrams and telephone calls, which come in ever-increasing numbers, are replied to just as rapidly as time will permit. I think, for example, that we have recently received more than 5,000 communications from Washington State on the subject of rents alone. Many of these inquiries have not yet received a reply. All of them will be acknowledged in due time.

Just a thought by way of preface. The longer we have been in the Senate the more conscious we have become of the distance which separates the Congress from you at home. Your representatives, both in the Senate and in the House, are 3,000 miles away. It is all too easy for us to lose some of the contacts at home which we treasure and respect. These reports will be of material assistance in bridging that gap which distance has created. If there are particular subjects and things you would like to have us talk about, please let me know. Some of us will often disagree about matters of policy and procedure but these differences will be the more easily compromised and satisfied if we have a personal interest and relationship with each other. Many of us will often be in complete agreement and the intended broadcasts will encourage and permit us to see eye to eye on matters which are of mutual concern to you and me and to our State and Nation.

Now for some business: From a score and more of big problems I should like to talk now about rents. This situation affects most of you, many of you individually and all of you collectively. We should probably first bring you up to date on what is happening to the question of, "Should there be continuing Federal rent controls in this country," and if the decision is affirmative, "What sort of a rent-control law ought to govern in American for the next year or 14 months?"

As most of you have read and been told, the Senate recently passed a Rent Act for 1948. This bill resulted from several weeks of intensive hearings and more than 11 hours of continuing debate on the floor of the Senate. The approved measure was forwarded to the House on Wednesday, February 25.

While the Senate was busy with its rent hearings and debate, the House was busy with other matters. The House passed a resolution which merely extended the Rent Act of 1947 for 30 days. The Senate necessarily concurred in this resolution because the Rent Act of 1947 would have expired on the last day of last month if the House didn't see fit to take any action on the 1948 Senate proposals. For the reason of this resolution you are still operating under the law of 1947, which was to have expired on February 29. The House is now considering what action it thinks ought to be taken after the extended 30-day period has run its course. The House can write its own bill or it can approve the Senate bill, or it can amend the Senate bill in any way the House sees fit. I hazard a guess that the House of Representatives will add some liberalizing amendments to the Senate bill. The amended measure will then go to conference and in turn be passed by both Houses of the Congress and probably signed by the President.

Everybody in America ought to be concerned by what your Nation does with the problem of rents, because the problem involves prevailing housing shortages and the field of private property. There are more than 14,000,000 housing units in more than 600 defense areas in America under rent control today. If the Congress continues a rent-control law, as there is every reason to believe that it will, these millions of apartments and housing accommodations will continue under control. Let us bear in mind also that some 8,500,000 individuals presently offer accommodations for rent throughout this Nation. These are factors that emphasize the impact of rent control upon the American people.

Ironically the American property owner represents the only segment of our society under control. How long shall we defend and support a system which is part slave and part free? Thinking people think this

an interesting question. The proposed law of 1948 is essentially a continuing improvement over the law of 1947. The coming law will undoubtedly continue the right of tenant and landlord to sign a voluntary lease for an increased rent figure not to exceed 15 percent.

Local advisory rent boards, of which there are a number in Washington State, will be urged to do a more thorough job of examining conditions within their respective areas of influence in order that these boards may intelligently recommend to the National Rent Administrator that given defense-rental areas promptly should be decontrolled or that the rent structures within their areas should be raised or that prevailing rent levels in certain areas are adequate and ought to be continued. If these local rent advisory boards do a thoroughly competent job and if the Federal Rent Administrator gives consideration to, and takes action on, their recommendations, I think that the 1948 law can be effectively administered.

The law presumes that local advisory boards and the Federal Administrator will move in the direction of decontrol as rapidly as conditions warrant. It has generally been admitted by everybody in authority that too little emphasis has been placed on decontrolling rent areas since the end of the war.

It is probably a fact that the subject of rent controls is as highly controversial as any problem which presently confronts your Congress. Special pleaders in most instances are either vehemently in favor of far more stringent controls than the Senate has recommended, or they are totally in opposition to controls of any character. These are natural positions for interested persons to take because those who speak for the average renter in America are only concerned with keeping rents at a low level, while those who have their money invested in the field of rental facilities are chiefly and naturally desirous of managing their own properties as they had always done in the years before the war.

There is yet another group which presently ought to be interested in the national rent problem, but this group either knows nothing about the subject or isn't very much interested by what it does know. These are mostly home owners who are not affected by restrictions placed on others. In part we direct these observations at them because in years to come they may become either tenant or landlord.

Rent controls possess one virtue. They can maintain rents at an artificially low level. The less a family pays for rent the more that family can pay for other things.

This virtue, however, can often possess a resulting vice. If the landlords of America can't take in enough in rent to pay for their cost of operation and maintenance, their properties depreciate in value and the services which tenants have a right to expect are often either diminished or cut off altogether.

The problem before the Congress is to endeavor to make certain that rents are adequate to provide upkeep and services of a reasonable character and that rent levels don't go up too rapidly or too far. This is no small task to attempt by legislation.

Regardless of the virtues which rent controls may possess it has become completely obvious that the prevailing shortage in rental accommodations will never be corrected for as long as this Nation continues rent controls. Building construction has been tremendously accelerated in the last year but not much of this construction has been for rental purposes. You are certain to be interested in knowing that we are and have been constantly losing ground in the national effort to place more and more rental accommodations on the market. The reason is clear and simple enough. Investors aren't willing to venture their capital in creating rental units which may have restrictions placed upon them, and far too many of those who have offered their facilities for rent in recent years have either converted their premises for commercial purposes or they have sold their rental properties outright to others who use them for other purposes. Since 1940 more than 4,000,000 rental properties have disappeared from the rental market for the reasons stated. However much someone may believe in the theory of rent controls he ought to be conscious of the obstacle rent control is to the creating of rental accommodations.

We speak of rent control as something which America has labored under since early in the war. That term is both misleading and inaccurate. In tens of thousands of cases America has suffered from a rent freeze which was anything but proper control. Control means that a property owner ought to benefit from a rent income which reflects the items included in his cost and maintenance, and he ought to have a fair return. A freezing of rents simply means that these necessary items aren't taken into consideration.

For the first time the Congress is actually concerning itself with a rent control problem. The proposed 1948 law declares that no property owner shall be required to operate his facilities at a loss and that every property owner is entitled to a fair return on his investment. It rather horrifies one to know and understand that we have thought it necesary in this country to pursue a contrary course in recent years.

It has never occurred to some people that thousands of our citizens have been expected to subsidize other thousands of citizens because of the rent freeze which took hold beginning in 1941. Generally people understand that hardship cases were to be given relief by the Federal Rent Administrator and his many agents. It is true that relief has been granted to thousands of property owners but other thousands haven't been granted relief commensurate with their losses. The reason is this: The Rent Administrator used 1939 as a base. In considering a hardship application he would let the property owner use the best of any two operating years since 1939 as the measure of relief which the property owner was entitled to. If there were not any two best years, and often the property owner has operated at a loss since 1939, he could only be given relief which would result in his losing no more money than he lost in his two best years. This vicious circumstance has actually operated in your country for years. The Congress is completely determined to see that it doesn't happen in the future.

I am among those Senators who think that rent controls have largely outlived their usefulness and who absolutely believe that we can't solve our rental shortage unless we get rid of rent controls. Nearly every Senator I know agrees with my latter premise, but a majority of the Senate and House of Representatives think the time isn't yet here when the controls can be taken away. All of us are therefore in agreement that if a rent-control law is to be continued for probably 14 months, that the law must be more pliable and more effective and more fair than any law we have had before this time.

History tells us that rent controls have practically wrecked and always depreciated the field of private property in the nations where it has been tried. It will do precisely for us what it has done for others if we permit it to continue too long. If there is to be a rent-control law in 1948, let us hope for a good law, but, more importantly, let us look for an end to the need for any rent-restrictive measures, and to the need for abusing property rights. In the long run we will suffer badly if these restrictive measures continue.

I hope you have enjoyed this conversation with me. Certainly I have enjoyed being with you again. Time having disappeared, I will keep the subject of post offices and the Marshall plan for a coming broadcast. At the moment I am going back to the floor to take part in that gigantic foreign-relations debate which is intended to help us understand how far America can go in helping other nations without visiting serious damage and lasting injury on the United States.

Federal Housing

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Friday, March 5 (legislative day of Monday, February 2), 1948

Mr. McMAHON. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD the transcript of a discussion between the Senator from Alabama [Mr. SPARKMAN] and New York City Housing Commissioner Robert F. Wagner, Jr., on the subject of housing, over the American Broadcasting Co. network.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

Mr. SPARKMAN. Today some 1,500 veterans of World War II were in Washington asking some very pointed questions of Congress.

These veterans wanted to know when they were going to have a chance for a decent home and a normal family life.

They wanted to know why the Republican majority of the Congress has not passed a comprehensive housing bill.

It all boiled down to this. For 2 years they have waited patiently for housing to become available at prices to fit a veteran's pocketbook.

Today they asked when something was going to be done to get that housing.

Robert F. Wagner, Jr., chairman of the city planning commission of New York City, a veteran, and the son of the distinguished New York Senator who has been a pioneer in fighting for low cost housing, was one of the leaders of that meeting.

Bob, can you tell us something about the veteran's housing conference?

Mr. WAGNER. Senator SPARKMAN, I'm glad to get the veteran's story across to the people of the country. To put the veteran's plight in its proper perspective let me go into a little ancient history on the housing problem.

America has had a housing shortage for a long time. By that I mean there haven't been enough decent homes to go around at prices that most people could afford. For more than a decade, the number of new families formed each year has been greater than the number of new housing units that were built.

Even during the depression we had a basic housing shortage, but we didn't realize it because families were so hard up that two or three of them moved into one place to save money. This was bad, but because these people couldn't afford to go out and try to

rent a separate home of their own, we didn't notice that we had a housing shortage.

Then the war came along. Millions of our young men were taken from their homes and into the armed services. The population shifted in many areas of the country. And people began to make enough money to be able to stop doubling up and move into separate homes of their own.

Meantime, new housing construction was held to the minimum necessary to the war effort.

Mr. SPARKMAN. That's right. We channeled all of our materials into the war effort. Outside of war housing, construction was stopped. And I remember that even with millions of our young men in barracks here and millions more serving overseas, housing was still mighty tight in the United States.

Mr. WAGNER. That's the story, all right. So when the fighting stopped and our servicemen returned to civilian life, they were greeted with huge banners saying, "Welcome Home," but after the welcome was over we found that the homes weren't there. Pretty soon the "Welcome Home" signs were taken down and all the veteran could see was that "No Vacancy" sign which greeted him everywhere.

Mr. SPARKMAN. We did make a start toward solving the problem, but it was a tremendous task. More than 2,500,000 families were formed faster than new homes were built.

Mr. WAGNER. One reason we didn't do more was that a major portion of the housing legislation requested by President Truman has never been passed. All during the Republican-controlled Eightieth Congress, the veterans have been given promises that the long-range housing bill, now known as the Taft-Ellender-Wagner bill would be passed. But nothing happened.

Mr. SPARKMAN. That's right. A bill which bears the name of the Republican Senatorial Policy Committee chairman has been bottled up by his own policy committee.

Mr. WAGNER. And that's why I am in Washington today and why those 1,500 other indignant veterans were here. We want to know why that measure isn't passed so that we can get more rental housing, lower cost housing, and public housing for the lower income groups that can never be served by private builders.

Mr. SPARKMAN. Well, the Democratic leadership wants that bill passed, but unfortunately, we don't have control of the Congress at this time. The Republicans are working on their own bill and I supposed you fellows talked about the Republican housing bill at your session today.

Mr. WAGNER. Yes; we did. In some aspects the bill is pretty good. It incorporates quite a few of the provisions of the Taft-Ellender-Wagner bill and the measures urged by President Truman in his recent housing message. But there are several important omissions, and particularly two which I feel should be emphasized now.

Mr. SPARKMAN. I think I can guess what you are going to say. The Republican proposal leaves out provisions to get better rural housing and it also does nothing about the 125,000 units of public housing for lower income groups which the Taft-Ellender-Wagner bill proposes to build each year during the next 4 years.

Mr. WAGNER. I suppose you're specially interested in rural housing, since you come from a predominantly rural area.

Mr. SPARKMAN. Yes; I am interested in rural housing; also in slum clearance. I'm interested in them both. Too many people forget that we do have rural slums in the United States as well as city slums. We should act to clean them both up. We have need for better rural housing in my State and also for more public housing projects in the cities.

Mr. WAGNER. I can certainly emphasize the need for it in the cities. I know how badly it is needed from my own experience in New York City.

Mr. SPARKMAN. Well, the report your father has just completed shows that it is badly needed throughout the Nation. He polled governors, mayors, and civic leaders all over the country and nine out of ten of them said the need for housing for low-income families is acute and that Federal aid is needed to get this housing. I hope that the report will have some effect on the Republican leadership. Why, the mayors of 78 cities representing 41 percent of the city population, estimated that 1,800,000 housing units in their cities need major repairs or lack decent plumbing facilities. And of 230 replies, 206 state that they do not expect private builders to be able to meet the needs of low-income families in the foreseeable future. That shows the need for Congress to act.

Mr. WAGNER. I agree with you. This public housing doesn't compete with private enterprise. But it's awfully important in making good, healthy citizens out of people who grow bitter and disillusioned from living in the slums.

Mr. SPARKMAN. That's what a lot of the mayors wrote your father. For example, Mayor David Lawrence, of Pittsburgh, wrote that every city is "endangered by the growth of slums and the failure to provide decent homes for our citizens." And Mayor Perrine Palmer, Jr., of Miami, Fla., wrote: "Let's stop for once and for all this understandable discontent that leads to even a consideration of philosophies strange to American ideals."

Mr. WAGNER. In my city many of the members of low-income groups have no immediate hope for decent housing other than public housing. Many live in festering slums and it is among people like them that communism and radical ideologies find a fertile recruiting ground.

Mr. SPARKMAN. I think that is one of the reasons why everyone should support the Taft-Ellender-Wagner bill.

Mr. WAGNER. Getting away from the problem of more and adequate housing for a moment, veterans who are lucky enough to have a place to live now are worrying about what is going to happen to rent control when the present temporary 1-month extension is over.

Mr. SPARKMAN. I am hopeful that we will finally get a bill which will keep a fairly effective control on rents until the pressure is eased. The Senate bill continues pretty much the present set-up until April 1949. But it does work one bad injustice on the tenants who signed the so-called voluntary 15-percent rent increase leases under the present law. These people are only protected until April 1949, while persons who sign such leases in the future will be protected until the end of 1949. I hope that the Republican majority will see fit to correct this injustice. I also wish that the Republicans would give the Housing Expediter more power to police the rent-control law. But I do believe that Congress will give tenants better protection than no rent control at all and considerably more protection than the original Republican proposals would have provided.

Mr. WAGNER. Of course, if the Republican Congress had passed the Taft-Ellender-Wagner bill last year we would be much closer to the condition all of us want to see—when the supply of housing is great enough to do away with the need for rent controls.

Mr. SPARKMAN. I think we would also be making progress on a matter which I believe is just as important as the volume of housing—and that is the cost.

Mr. WAGNER. That is certainly a major point. In 1947 nearly 1,000,000 housing units were added to the Nation's supply. But less than 15 percent was rental housing. And most veterans should be renting at this time and not buying a home until later.

Mr. SPARKMAN. That is quite true. Many of them are working on small salaries and have no idea what their future income is likely to be.

Mr. WAGNER. And veterans in general have no business buying a $15,000 house or paying $70 or $80 a month rent. They just aren't making that kind of money. In fact, it's not just veterans who find the prices of new homes too high today. Millions of others also see new housing selling or renting at prices far beyond their means.

Mr. SPARKMAN. President Truman warned against the danger of housing pricing itself out of the market in his message to the Congress the other day. He pointed out how construction fell off after the last war when prices got so high in 1925 that people just couldn't afford to buy.

Mr. WAGNER. The way to keep the building industry in a continued state of good health is for it to produce homes at prices which the mass market can afford. One of the important points of the Taft-Ellender-Wagner bill is the provision it contains to expand research on new housing methods and the other efforts it provides to lower housing costs.

Mr. SPARKMAN. The Democratic administration is in full support of those measures. What sort of session did you have with the Republican congressional majority at your meetings today?

Mr. WAGNER. Well, we got a lot of promises. What one Congressman or Senator didn't promise, another did. Senator TAFT said he was going to try to get public housing back into the McCarthy bill. The only trouble is that veterans have been getting those promises ever since the Eightieth Congress convened more than a year ago and yet the legislation never materializes.

I think veterans have been mighty patient. We've put up with a standing-room-only sign for two long years. We remember how the country spent money during the war and how it built barracks for us in a hurry. Now we're back in civvies and paying taxes to reduce the debt of those expenses necessary to win the war, and we're tired of being told that the Nation doesn't have the money or the energy to do anything about housing.

This Republican Congress loves to talk about economy. What sort of economy is it which squanders the hopes of veterans for decent lives in decent homes because it might cost a few million dollars?

The young people of the country made great sacrifies during the war. I don't think they should be asked to keep on making them forever.

And we want a better answer than the Republican real-estate lobby line that there is no housing shortage, just an overconsumption of existing space that could be ended by junking rent controls and letting rents go sky high. Many of our veterans are young, but they're not young enough to be fooled by that one.

I hope that this Congress passes an adequate housing bill. If it doesn't, I think veterans will see to it that the next Congress is composed of men who will do something about decent housing for veterans.

We're tired of promises. We want results.

Mr. SPARKMAN. You will get them if the Congress adopts the Taft-Ellender-Wagner bill. And if this Republican Congress doesn't do it, I think we'll have a Democratic Congress on the job in 1949 and then you'll see some real results in the field of veterans' housing.

Position of Hon. C. Wayland Brooks, of Illinois, on the Marshall Plan

EXTENSION OF REMARKS
OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, March 5 (legislative day of Monday, February 2), 1948

Mr. MARTIN. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a copy of the remarks of Mr. Cedrick Foster, the able radio commentator, delivered over the Mutual Broadcasting System, on March 3, 1948.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

This is Cedric Foster reporting to you from Boston.

Today in Washington, as the Ambassador from Czechoslovakia resigned in order to fight for the freedom of his country from Communist rule—as Secretary Marshall and Secretary Forrestal asked that financial aid for military purposes be given to Greece and Turkey—today in Washington, as these events occurred, the United States Senate was to receive an amendment to the Marshall plan—one which called for the United States to assume the initiative in the creation of a supreme international council apart from the United Nations.

This amendment was the result of a meeting by 14 revisionist Republican Senators. OWEN BREWSTER, of Main, called it an "offensive-defensive alliance," but the blueprint of it was drawn up by Senator BALL, of Minnesota. The gist of the duties of this supreme international council would be to call out armed forces in cases of aggression, cases which would be determined by a majority of the permanent members and a grand total of 7 out of the 11 members. Thus we have a proposal whereby the veto power is eliminated and whereby the United States is asked to sound out other nations as to their willingness to participate; with the Soviet Union, if possible; without the Soviet Union, if necessary.

One of the strongest opponents of the Marshall plan in its broad and unlimited scope is United States Senator C. WAYLAND BROOKS from the State of Illinois.

Despite the fact that he won the Distinguished Service Cross and the Navy Cross and was wounded seven times in the First World War, "CURLEY" BROOKS has long been known as an isolationist. He is not an isolationist in the commonly-accepted interpretation of the word which means that he is like an ostrich with its head buried in the sand. "CURLEY" BROOKS is an isolationist only in the sense that he does not believe that the Federal Government should pour uncountable millions of dollars into Europe when he is convinced in his own mind that the money will not be properly expended and that the whole venture will become, to use his own words, "operation rat-hole."

Through a curious line of reasoning, which many people employ, "CURLEY" BROOKS' isolationism has been characterized as appeasement of the Soviet Union. Those who assail his beliefs have charged that he is following the Russian line, but nothing could be further from the truth. In fact, it is so far from the truth that no less a person than Andrei Vishinsky named the distinguished Senator from Illinois as one of the leading anti-Soviets in the American political scene.

Some weeks ago, I reported on this broadcast that Senator BROOKS had laid particular emphasis, in a statement which he made on the Marshall plan, on the need for obtaining production in Europe if the continent is to survive the ravages of postwar inflation and ills. The Senator from Illinois believes, and firmly so, and I believe, that it is only right that his sincere views be presented to the American people. He believes there is no use in sending money to Europe unless that money will beget production of goods by European countries, and through that production, a revival of world trade—trade which will allow the countries of Europe to support themselves in years to come without a constant draining of American resources.

In a recent address "CURLY" BROOKS declared that the American people have been and still are the most charitable people on the face of the earth. "To be generous, even amazingly generous," he continued, "is magnificent. But to be stupidly generous is akin to sin." Senator BROOKS then pointed out:

"We must remember constantly that we are only 7 percent of the world's people; we occupy only 7 percent of the earth's surface; and in our bumper years we produce only 12 percent of the world's food supply. We are already carrying the largest national debt ever carried by any people supposed to be solvent—the largest debt in the history of mankind. The average American citizen today is already working 3 days out of 10 to pay his taxes, and he is working the other 7 days to pay the ever-increasing cost of living.

"This heavy burden," Senator BROOKS continued, "is carried not only to support our own Government but to support socialistic governments abroad—governments who foster and follow policies of socialistic schemes, price fixing, rationing, regulations, restrictions, unbalanced budgets, and false values of currencies."

In that statement, of course, you have the very nub and heart of the economic beliefs and political beliefs of the Republican Senator from the State of Illinois. You may agree or disagree with his thesis, but it is impossible not to take cognizance of some of his words because he strikes home through vulnerable spots in his opponents' armor. In amplification of his stand, Senator BROOKS declares:

"Since the Socialist government of Great Britain gained power, it has taken the mines, the railroads, communications systems, and other industries, including more than 2,500 farms, from their owners. If you add up the total amount that they paid these owners, it would just about equal the four billion four hundred million which we gave them in the British loan and in credits a little more than a year ago. They now announce that they are instituting their socialistic health and hospital program that will guarantee government hospitalization, medical and health care—literally from the cradle to the grave—at an annual cost of about seven hundred million a year.

"No one can complain about costly socialistic schemes being carried out in any country if their economy can support it. But to adopt programs at our expense which retard private initiative, while we are taxing our people to rehabilitate the sponsors of the programs, that is quite another matter. What we are actually engaging in is vast and far-reaching socialism at the expense of the American taxpayer. We are doing this at a time when our Veterans' Administrator declares that many of the badly needed veterans' hospitals in America could not be built because of the lack of essential material and the ever-increasing cost."

The clinching argument advanced by Senator BROOKS is simply this: "To consider the plight of these countries as temporary is the wrong approach. As long as we guarantee their constant deficits of 'balance payments,' they are not going to change their course, and they are not going to meet their own problems. Their problems are those of incentives to work and to produce to the maximum. Even that would not meet their difficulty completely, for no matter how much they produce, if they continue to take the proceeds of that production and devote it to the extension of their socialistic practices, they will never close the gap of their 'balance of payments,' and we will merely continue to pay for their trade deficit indefinitely."

Senator BROOKS has a solution to the problem which America faces in the rehabilitation of Europe. His criticism is not destructive analysis. He sees what he believes to be the way out. He is against the State Department and the military controlling the funds going to Europe under the Marshall plan. In condemnation of the State Department and the military, "CURLY" BROOKS declares they "stood startled, stunned, and confused when we were struck at Pearl Harbor, following the policies which they had advocated. Then it was that we had to call the experts of American industry, labor, and agriculture to provide the industrial genius, the labor, and the food to produce the essentials to bring our enemies to their knees. The creation of incentives to work and to produce in western Europe and to apply the proceeds of that production to support stable currencies, balanced budgets, and stable governments is a major operation like our operation in the war. It demands the leadership of the best brains in America in agriculture, industry, and labor to administer this program.

"We believed then, and we believe now, that American dollars will not save Europe. Production and hard work, plus the proper application of the proceeds of that work and production, will constitute the sound bulwark against the miseries of communism. We hear altogether too much talk about needing a third force in Europe, halfway between the totalitarianism of Russia and the free enterprise system of the United States. This is called democratic socialism.

"But if we continue our unprecedented undertaking of rebuilding our former enemies and many of our former allies by constantly paying the trade deficits as they develop their so-called democratic socialism—if we do this—it will mean a drain so constant and so heavy upon the free enterprise system of America that we, too, will finally be drawn into the depths of despair, we, too, will be bound by the mesh of rules, regulations, and controls that form the chains that presently bind the energies of the countries of Europe.

"None of us wants to see people starve, but since we are limited and cannot feed all the hungry, clothe all the naked, fire all the furnaces and hearthstones of the world, we want to help those who will intelligently help themselves. We want to help people who will work, produce, and take steps to meet their own difficult problems. It is to our advantage to have a strong, prosperous western Europe. But in our future contributions we must insist upon having intelligent, sound, constructive management so that, while helping them, we may preserve our own Republic, so that we may preserve our own way of life to which our forebears and we of the present, living and dead, have made such tremendous contributions.

"We hate oppression and we would like to extend human liberties. But we must remember that to preserve our own form of government, our own solvency, and our own security—these are the major challenges of this day."

As I said a moment ago, there will be many who agree and who disagree with Senator C. WAYLAND BROOKS of the State of Illinois, but his views command attention and serious consideration. Senator BROOKS poses a very

fine and exact question when he asks, in effect, what recks it if we pour money into Europe if in so doing we finance socialism and if the production attained is used to further advance that theory of government instead of closing the gap in the trade deficit? If in the asking of that question, "CURLY" BROOKS is labeled an isolationist, then he is perfectly willing to stand or fall.

While Palestine Burns

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1948

Mr. SABATH. Mr. Speaker, the procrastination on the part of our State Department on the recommendation of the United Nations is being severely criticized by nearly every outstanding newspaper in the United States.

I have read many of the editorials on this subject, but the one that I am inserting, under the leave granted me, appeared in the Chicago Sun-Times on March 5, 1948, and impressed me to a greater degree than most of the others.

Consequently, I am inserting this editorial and at the same time I hope the President and the Secretary of State will not permit the small inner clique, consisting of Secretary of Defense Forrestal, Loy W. Henderson, Director of the Office of Near Eastern and African Affairs, and a few others, who are more interested in two of the oil companies than they are in the destruction of the lives of hundreds of people, the future of the United Nations, and the peace of the world, to continue to misinform and mislead them and nullify the President's action and assurances.

The editorial follows:

WHILE PALESTINE BURNS

Now that the three big powers have spoken on Palestine, the need for immediate Security Council action on the General Assembly's recommendation for partition is urgent.

Not only the fate of Palestine, but the prestige of the United Nations is involved. If the Arab world, by force and threats of force, can successfully defy a decision adopted by more than two-thirds vote of the Assembly, then the future of the UN as a strong and effective peace organization will be clouded with uncertainty.

Unfortunately, the American delegation has not offered positive and clear leadership toward firm execution of the Assembly's partition plan. Even if there had been better plans there would have been strong reason for backing it up. Partition seems the fairest possible plan. It was accepted after months of impartial study by a UN commission. Our own Government took the lead in securing its adoption by the Assembly last fall.

Delegate Warren Austin told the Council that we still support partition, but his fuzzy approach to what the Council should do about it reflected the State Department's struggle with itself over the conflicting claims of middle eastern oil, strategy, rivalry, and loyalty to the UN.

While he proposed that the Council formally accept the Assembly's request that it implement the plan, Mr. Austin argued that the Council could implement it only by peaceful measures, which are now demonstrably inadequate.

Then he went on to suggest formation of a Big Five committee to do two things: (1) To determine whether peace is threatened and (2) to seek conciliation between the Jews and Arabs.

Under point No. 1, if the Council found that peace is indeed threatened, it could then consult on whether to supply armed forces. But meanwhile Palestine is burning. The leisurely pace set by the American policy left Russia an opening and Russia is taking advantage of it.

Mr. Gromyko says there is no need for another committee. He proposes that the Council accept the task of implementing partition. And that delays be short-cut by direct Big Five consultations on the question of peace enforcement. He rightly says that more talk about conciliation is futile, and urges that the Big Five decide within 10 days whether a threat to the peace exists.

If the American policy makers in Washington are wise they will now drop their doubts and hesitations and press for UN action with all possible speed. Time is running out in Palestine. Disorders increase daily. Every hour's delay increases the likelihood of utter chaos when the British lay down their mandate on May 15.

The debate at Lake Success over the Council's power to impose what Mr. Austin called a "political settlement" has been reduced to absurdity by Britain's own statement that she regards the UN's Palestine Commission as the legal successor government to her administration.

This is not a case of imposing political conditions on a sovereign state. It is a case of the world community assuming temporary jurisdiction over a trusteeship which the trustee has resolved to give up.

The purpose of UN administration is to make possible the peaceful transfer of sovereignty to the people of Palestine, organized in two independent states. The UN Commission declares that this cannot be accomplished without the aid of an outside armed force. The UN's moral and legal responsibility to supply that force is clear.

There might be objections if the people of Palestine were a sovereign state. But they are not. Until May 15 Britain will exercise that sovereignty. After May 15 nobody will exercise it unless the UN takes over.

Essentially, the Security Council is asked to do in Palestine what it already has agreed to do in Trieste. There the council accepted a request of the big powers that it govern and police an area of special international concern.

When Trieste came before the Council, doubts were raised about the legal position. They were resolved on the ground that the UN Charter clearly intended that the Council should exercise general peace-keeping powers so long as it acted in accordance with the basic purposes of the UN. The Council took jurisdiction over Trieste by a vote of 10 to 0, the United States voting in the affirmative.

If there was a good case for such action in Trieste there is a better one for it in Palestine. For in this case it is the General Assembly, representing the preponderance of world opinion, which requests action, and not merely the drafters of the Italian peace treaty. In this case the U. N. is asked to intervene in an area which has been an international responsibility for 25 years. The UN's obligations are reinforced by Britain's inability or unwillingness to carry the responsibility any longer.

The issue is not whether members of the Security Council have authority to intervene in Palestine. The issue is whether they have the will to do so. All who cherish the UN have but one possible course—to back to the limit the General Assembly's recommendation for partition.
